During the first three months of this year the quantity of raw cotton imported into Japan was 1,188,593 piculs, against 843,565 piculs for the corresponding period last year, the values of these quantities being 26,633,053 *yen* and 14,333,165 *yen* respectively. On the other hand, the market for cotton manufactures has been so dull of late that the mills are obliged to reduce their time of working, and mill-owners show great reluctance in taking delivery of the cotton imported to their order. It is stated that re-export is the only resource offering. The Mitsui Bussan Kaisha are alleged to have already re-sold in Bombay a considerable consignment of cotton brought over by them, the loss of the freight in each direction being less than that likely to be incurred by holding the cotton here. There is also talk of re-exporting cotton to the United States.

The Committee appointed to revise the penal laws are now engaged upon the Code of Criminal Procedure, having completed the Criminal Code. It is stated that the two questions chiefly occupying attention are the advisability of introducing trial by jury, and the advantage of holding preliminary investigations in public. We do not understand that there is any idea of adopting the jury system as it exists in Europe and America—namely, taking any ignorant man from the by-ways and high-ways and asking him to decide a question often of the most intricate character, and affecting the liberty, if not the life, of a fellow-national. Japan is rapidly drifting towards that pernicious outcome of Western systems, party cabinets, and she will do well to avoid the other deformity, trial by a jury selected hap-hazard. The proposition now on the tapis is, to have juries composed of legal experts. That, we should imagine, would be an excellent thing. It would secure the fine features of the jury system without adopting its defects. But we regret to learn that the balance of opinion seems to be against publicity in preliminary trials. The opponents of the measure declare that it would require recasting of the whole Code of Criminal Procedure. What if it does? Can any such argument be said to possess the smallest validity? It is as though a statesman should say, "Yes, our laws are bad, but truly we must be content with them since to amend them would involve their re-drafting."

THE NAVAL REVIEW AT KOBE.

The following is a list of the warships which will take part in the naval review at Kobe:—

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

Mr. Kawada Tetsuya has been discussing Japanese national propensities in the *Nippon Shimbun*. There is not much that is new in his articles, but the sentiments expressed, we have reason to think, are held by a large number of Japanese thinkers. The views of Mr. Kawada are, it will be seen, very pessimistic. Briefly stated, this is what Mr. Kawada has to say about his own nationals:—In Japan the climate is temperate and the scenery good. The country is a pleasant one to live in, so much so that foreigners have called Japan the public garden of the world. The Japanese character in the course of centuries has doubtless been much affected by climate and the physical peculiarities of the country. It is a fact that for a very long time we as a people have been satisfied with small attainments and temporary gain, and that the ambition to enter on great enterprises has been very rare in our midst. Our energies and our thoughts seem to be divided among a large number of small things. This characteristic appears even in our mythology. Like the Greeks we worshipped many gods, and like them amused ourselves with admiring nature's many beauties. Our religion had no set purpose connected with it, but was a desultory affair with no deep convictions as its foundation. . . We are, moreover, an emotional people. Our feelings change rapidly. We are naturally suspicious and are apt to harbour malice, as is shown by the length of time that the vendetta was practised by our forefathers. . . . There is a good deal of insincerity among us. There is a want of agreement between what we say and do and what we really think. This comes from our borrowing largely from China plausible speech that expresses fine moral sentiments, which it is our custom to utter on all occasions, though the feelings which these words presuppose are absent from our hearts. This language too often is used as a veil of thought instead of a vehicle. Our words and our acts are apt to become mere forms without any real meaning and to give no clue to our real characters. . . . . Work is distasteful to most of us. We work in order to be able to enjoy ourselves later on in life and the time of retirement is looked forward to with eagerness. Even the young are told that it is necessary for them to work in order to gain the means to enable them to live at leisure later on, so that the one idea of life is apt to be, how soon can I retire? . . . In seeking to improve national character, care has to be taken that all life and individuality are not crushed out of us in the process. There is such a thing as killing the cow in trying to straighten the horn.* But an endeavour ought to be made to suppress the emotional and to strengthen the rational side of our nature. The desirable proportion of the mental constituents would be 7 parts emotional to 13 rational. As we are now constituted we find it difficult to judge any question calmly. We are constantly led astray by our excited feelings. What is needed to improve our character may be briefly summed up under 6 heads. (1) The enlargement of our capacities. (2) The creation of religious feeling. (3) Greater interest in foreign affairs. (4) An enterprising spirit. (5) Greater strength of will. (6) More dogged persistence in the carrying out of undertakings.

* The proverb referred to is: *Tsuno wo tamete ushi wo korosu.*—(WRITER OF SUMMARY).

In the *Kyôiku Kôhô*, Mr. Yokoi Tokio has a good deal to say on "The principal object of learning," of which the following is the purport:—If students generally are asked what is the object they have in view in study the majority would reply, "We are preparing ourselves to serve the State." This is the orthodox answer, but does it represent the truth? Rather should we say that in nine cases out of ten the motive of study is either personal gain or personal reputation. And with a view of enabling students to realise these objects all manner of schools exist. Japanese education to-day aims at supplying the demands of the age, and is not endeavouring to carry out any one definite purpose connected with the welfare of the State. From this prostitution of learning to temporary interests we should expect the Imperial University at least to be free, but in reality it is not so. . . . As a proof that among the majority of students there are no fixed principles or ideas respecting the real object of education, I may refer to the recent renewal of interest in books that were discarded thirty years ago. These works are again being studied and quoted as authorities. Those who mourn over the country's shortcomings do so in language that was suggested by an entirely different situation to that in which we find ourselves. All this tends to show how few there are that have any definite idea of what is the chief function of education. Undoubtedly the chief object of education is full development of individuals, and all the prating about the existence of any other final object is delusive in the extreme.

* * *

Under the title of *Gwaikô no Shinkyokumen* (A new Aspect of our Foreign Relations) a writer in the *Sekai-no-Nihon* expresses some very sensible opinions regarding Japan's attitude to Russia. He begins by observing that most of the writing met with on the subject of Japan's foreign policy is utterly unpractical and reveals great ignorance of existing conditions. The controversy as to which country we should regard as friendly to us and which hostile and the talk about our allying ourselves with this Power or that are too academical to engage the attention of real statesmen. And as for many of the proposals made by irresponsible writers, there is no Power in existence that possesses the wherewithal to carry them out. . . The great thing it behoves us to do is to study the real situation of foreign affairs in their bearing on the future of the Far East. The salient features of the present situation are the great predominance of England and Russia and the attitude of Germany to each of these Powers. A few years ago Germany combined with Russia against us, but quite recently she has come to a special understanding with England. The question is, does this understanding include Far Eastern affairs? Report says, no. It is generally considered that both countries are to have a free hand in China. Now there is great talk in some quarters about our checkmating Russia by making an alliance with England. But those who know what is England's policy in foreign affairs realise that she will never consent to be a party to any such alliance. Her chief interests are connected with Africa and India. China occupies a very subordinate place in her Imperial affairs. England has far too big an empire to defend to allow of her taking part in quarrels of other nations. It is true that she combined with Europe against Napoleon and that she allied herself with France in the Crimean war and for the purpose of chastising the Chinese, but she is averse to offensive and defensive alliances that may involve sacrifices on her part in the interests of other nations. If Russia were to overrun Japan, we could hardly expect England to interfere. She would give us moral support, but she would not go further. The idea of relying on England had better be given up. Another and, in our opinion, a far better policy remains, which is to cease regarding Russia as our enemy and rival and to seek to make a friend of her. Our interests in China and Korea may not be the same, but why not arrange matters on the principle of give and take? And why not endeavour to look beyond China and Korea and think of the general relations of the two countries? The world is big and there is room enough for both States to develop to the full. By conciliating Russia we should draw France closer to us—a much to be desired achievement. The new way of looking at our foreign relations which I recommend, says the writer in the *Sekai-no-Nihon*, consists of regarding Russia no longer with suspicion. England is already our friend. Let us proceed to make Russia and France our friends also. Then we shall only have Germany to deal with, and her we must fight. It is my belief that we shall have to do so. (*Nihon wa Doitsu to tatakawazaru wo yezaru ni itaru; kaku shinzezaru wo yezu*). She is double-tongued (兩舌 *ryôzetsu*) and double-hearted and her manners when dealing with other countries are those of a low-class coolie (*kumosuke gaikô wo shu to suru*). It is not unlikely that occasions will arise which will make it impossible for us to remain at peace with her. In that case there is no reason why our Government should give way. We should proceed to turn her out of Shantung and take the Caroline Islands from her. England, France, and Russia all have an historical connection with the Far East, and it is reasonable that they should occupy a certain amount of territory. But Germany is an intruder. With no history to back her, she has by a high-handed policy obtained a footing in the East. That which she has won with the sword she may lose with the sword. She sows the seeds of strife wherever she goes. . The disturber of the peace of the Far East is not Russia, but Germany. And she is a foe that we can crush; she has only ships amounting to 35,000 tons. Whatever efforts she may make she can not increase her navy by more than 20,000 tons. The German Eastern fleet could be swept from the seas by Japan in 12 hours.

The essay concludes thus:—Some readers may be astonished at the open way in which I discuss such a stalwart policy as the above. But if there is one thing that the international intercourse of recent years has revealed it is, that in dealing with other countries there is everything to be gained and nothing to be lost by adopting a bold policy and letting the world know that it has been adopted.

* * *

To the *Shakai Zasshi*, Mr. Kure Bunsô contributes an interesting article on "The State of Society and Crime." He sets out by stating a well-known difficulty connected with human responsibility. The punishment of crime goes on the supposition that all members of society are equally responsible, that they all have free wills. But statistics go to show that this is by no means the case, that certain states of society are decidedly conducive to crime, and in the natural course of things the individuals who breathe polluted air

Digitized by Google Original from CORNELL UNIVERSITY

contract moral diseases therefrom and end by committing crime. Mr. Kure publishes tables of statistics to show that certain states of society produce about the same amount of crime from year to year, and among criminals the proportion of men to women is remarkably uniform. To quote a few of the figures given by him bearing on crime in Japan between 1874 and 1897, the annual number of betrayals of trust were committed by about 400 or 500 men and by about 300 women. Offences against the usages and customs of society were committed by about 5,000 men and about 300 women, while the figures for misappropriation of property stand at 80,000 or 90,000 men against 10,000 women. The regularity is very striking, says Mr. Kure, and the same thing occurs in the case of suicide, the proportion being about 62 males to 38 females every year. It would seem then, proceeds Mr. Kure, as though society were responsible for the amount of crime produced year by year, but this in no way absolves individuals who are under an obligation to obey the laws of the land. The fact is, responsibility is divided between the individual and society and the apportioning to each its share is a very delicate business. The theory on which all law is based is that men have freedom of will, but this theory requires modification to a certain extent. But the idea that crime is likely to be lessened by the diminution of punishment is contradicted by statistics. The proposal to abolish capital punishment in this country should find no support. For the fear of punishment is after all the great preventive of crime with a large class of people.

* * *

A series of articles on "The Fox in Japanese Literature," is appearing in the *Teikoku Bungaku*. The writer is Mr. Haga Yaichi. The general conclusion which Mr. Haga reaches is that in the main the qualities attributed to this animal and the symbolic expressions which Reynard has given to literature are the same in the East and the West. Mr. Haga gives a large number of examples, a few of which we quote:—Just as in English the fox is used as a symbol of craft in "foxy, fox-like, foxish, and foxiness," etc., so we have 狐疑 *Kogi*, suspicion, *lit.*, to suspect like a fox. A lattice door, because in Japan things are often hidden behind it, is called *Kitsune-do*. An arrow that glances off into the air without striking the object aimed at is called *Kitsune-ya*. False fires are called *Kitsune-bi* in Japan and "fox-fires" with us. Weather that is made up half of sunshine and half of rain is called in Japan *Kitsune no yome-iri* (a fox's wedding) and "fox-weather" in England. The word is used to describe certain plants in both England and Japan. There is in Japan the *Kitsune-bana*, the *Kitsune-mame*, the *Kitsune-azami*, the *Kitsune no chabukuro*, and others, as there is in English the "fox-glove, the fox-grape, the fox-tail," and so on. Æsop's fable about the fox deceiving the lion has its counterpart in the Japanese tale (borrowed from China) about the fox that made use of the tiger in the same way. Hence the Japanese expression *Tora no i wo karu kitsune*. Where the East differs from the West is in the wonderful transformations that are ascribed to the fox in China and Japan and the power to bewitch people said to be possessed by it. As far as my knowledge goes, says Mr. Haga, there is no instance in Western literature of foxes transforming themselves into human shape for the sake of obtaining human offspring. But this practice has constantly been resorted to by our Japanese foxes according to certain authorities. Mr. Haga is of opinion that most of Japan's fox lore is borrowed from China. In that country, however, Mr. Haga observes, the fox is by no means exclusively used as a symbol of various types of wickedness. It is often spoken of in terms of praise and a very high destiny is assigned to it. After 50 years it is said to transform itself into a woman and to beget children; at the age of a hundred it assumes the form of a very beautiful woman or becomes a man, according to fancy. It is said to have great foresight and in all matters to be far more knowing than man. At the age of 1,000 it is transformed into a god. Mr. Haga explains that in very ancient Japanese literature, though there is mention of almost every conceivable kind of transformation, there is no instance of a fox being described as transforming itself into a human being with a distinctly sexual object in view in the way that it is habitually said to do in China. This abomination of literature, ancient Japan was free from, according to Mr. Haga. But in later days these revolting transformations are constantly said to have taken place in Japan, and all the supernatural powers attributed to the animal in China were ascribed to it here. Religious teachers helped to perpetuate the superstitious awe felt for the animal and often represented themselves as possessing power to counteract its influence. Serious incurable diseases are often called *Kitsune-tsuki yamai*, originating with the story of a fox whose spirit entered the body of the man that had killed it and caused the man to contract a mortal disease. Mr. Haga has collected a very large amount of material bearing on the subject and his essay is well worthy of being published in pamphlet form.

* * *

The *Tenchijin* has an article on "The Future of China," in which various forecasts of the future are reviewed. The writer is of opinion that neither of the would-be reformers, San Yih-sien and Kan Yu-wei has the means at his disposal to effect anything of importance, and even if either of them should decide to head a revolution, it seems unlikely that he would have a large enough following to insure success. The writer we quote thinks that before very long the present dynasty will be confronted with a formidable rebellion and that the general who succeeds in quelling it will attempt to dictate his own terms to the astute old lady on the throne. She, as a last resort, will fall back on Russia, and Russia's armed intervention will give the two above-named reformers a chance of appealing successfully to the patriotism of provincial governors to combine against the foreign foe. Conjecture is heaped on conjecture in the article before us. To follow the writer further into the haze that enshrouds the future would tend to no profit.

* * *

The *Kyôiku Kôhô* reviews a new work by Captain Horiuchi, an Army Officer, on "The Mental Education of Military Men." From this notice we extract the following particulars concerning Captain Horiuchi's volume. It is now some eight years since the attention of the Japanese authorities was turned to the subject of the mental training of troops. It is fully realised that it is highly important that soldiers should be something more than machines, that they should to a certain extent think for themselves and should be actuated by the best motives and feelings in the performance of their work. The subjects treated are thus classified. (1) The responsibility of instructing the men should lie with the officers. (2) In developing the minds of soldiers the individual peculiarities of each should be considered. (3) Special care should be taken to develop the faculty of judgment. (4) Cheerfulness of spirit in all work undertaken should be enjoined. (5) Soldiers should be taught to be hopeful and should ever be reminded that upon their efforts the credit of the nation depends. (6) Emotion should be encouraged rather than repressed. Much is to be accomplished by strength of feeling and the cultivation of sympathy with fellow soldiers is highly important. (7) The idea of united responsibility in which every individual must take his full share must be instilled into the minds of troops. (8) Soldiers must regard their lives as having been put at the service of the country, and whether they live or die in that service should be a matter of no concern. (9) The deeds of ancient warriors should be recalled to the minds of the troops, and not their deeds only but the motives by which they were actuated in performing those deeds.

* * *

In the *Gwaikô Jihô*, Dr. Ariga calls attention to the great success attending Dr. Takahashi Sakuye's work on international law cases during the Chino-Japanese war. It has been reviewed in all the literary centres of Europe and has met with great favour everywhere. Dr. Ariga published some time ago a French work on the same subject. Dr. Ariga's treatise is on cases connected with the movement of troops on land, while Dr. Takahashi deals with naval movements.

A history of modern China has just been published in 4 vols. at the office of Hayashi Heijirô, Nihonbashi, 3-chôme, Tôkyô. The authors are Messrs. Ishimura Teiichi and Kôno Mitsuyuki. The title *Saikin Shina-shi* is misleading as Vol. I. deals with the Wan period (A.D. 1280—1367) and Vol. II. with the Ming dynasty, (1368—1661). Only the last 2 vols. treat of modern China. Dr. Ariga says that the work, though not without shortcomings, proceeds from the pens of scholars well versed in the subject on which they write, and contains a large amount of information on events which need to be specially studied by the Japanese at the present day.

Dr. Ariga publishes in the *Gwaikô Jihô* an epitome of a lecture delivered at Cambridge by Professor Westlake on the Transvaal war, in which the learned professor deals with the essentially legal aspects of England's demands prior to the outbreak of the war. He holds to the opinion that the convention on which England relied in pressing her claims did not in any way support those claims and adds that that was the reason for the Government's falling back on the rights England possessed in the capacity of a suzerain.

* * *

The *Shigaku Zasshi* announces that a society has been formed called the *Kosho hozonkai* whose object it is collect and republish old books. The members are required to subscribe 10 *sen* per month and at the end of the year the proceeds are to be used in publishing books, which will be distributed gratis among members and, we imagine, sold to the public. Whether such a scheme will succeed seems very doubtful. The idea seems to have originated with a Tôkyô bookseller called Yoshikawa Hanshichi.

A well-known dictionary called *Wakan Sansaizuye* is about to be issued in modern style by Hayashi Heijirô, Nihonbashi-dôri, 3 chôme, Tôkyô. It is a valuable book of reference that

Digitized by Google Original from CORNELL UNIVERSITY

hitherto has only existed in the old style of printing, in numerous volumes.

Two new magazines have made their appearance within the last few weeks. The *Kokuhon* (國本) and the *Kokuryoku* (國力). The first is a monthly, selling at 10 *sen* per copy. Its leading principle is the oneness of Oriental Countries. Agriculture and Politics are the chief topics to be discussed and special attention will be given to colonisation. The *Kokuryoku* is a weekly, selling at 5 *sen* per copy. The subjects treated in the first numbers are chiefly political.

* * *

The *Bungei Shimbun* has an article entitled "Newspapers and Literary Taste" which contains the following comments:—Some 5 years ago the chief newspapers all paid special attention to literature and regularly devoted considerable space to the discussion of purely literary subjects. But the practice has gradually been discontinued. In its place one or two of the newspapers have begun to publish articles on science or social subjects. The *Yomiuri* used to be noted as a literary organ in addition to discussing politics, but it too has changed and now only devotes a supplement published on Mondays to the discussion of literature. Even the punctilious *Nihon*, whose columns used to be so sedate, has of late condescended to discuss tea, checkers and animals. The recently issued *Niroku* (二六) *Shimpô*, although it devotes a good deal of space to social topics, pays more attention to literature than most of its contemporaries. The *Yorozu Chôhô* still professes to a large extent to be a literary organ, but its light seems to us to burn dim when we compare the present issues with those of the days when Morita Shiken and Hara Hôitsu were regular contributors. Coming to provincial newspapers, the *Osaka Mainichi Shimbun* in a quiet but very persistent manner endeavours to cultivate among its readers a taste for literature. The *Osaka Asahi* devotes a supplement on Mondays to a notice of books, but does it in a most perfunctory manner. The reviews all read alike and are evidently penned by the same men week after week as an onerous task. Now and again we find in these columns a few interesting remarks on current literature, but as a rule there is nothing to relieve the dull monotony of the duty columns. Compared with Tôkyô, however, Osaka at the present time accords a place of honour to literature. But low long this will last is another question.

The *Bungei Shimbun* calls attention to the fact that women are beginning to be employed in newspaper offices. It is said that both the *Jiji Shimpô* and the *Hôchi* have women on their staffs. The *Bungei Shimbun* welcomes the change and says that some of the writers employed have a great command of language and in descriptive writing are far more minute and impressive than men. Although if it were known by general readers that women were the authors of the paragraphs they were perusing, silly prejudice would destroy their effect, says the *Bungei Shimbun*. As things now are, however, it is not known, and the plan adopted is proving a success. If women were allowed a free hand in newspaper offices much of the indecent writing now indulged in would be discontinued, paragraphs dealing with women's affairs would possess value of their own, and newspapers would lose much of the bluntness that now disfigures them, concludes the *Bungei Shimbun*.

The deficiency of Middle School teachers is so great that at last the Mombushô proposes, says the *Jiji Shimpô*, to act on the advice given to it years ago, and admit outsiders to the ranks of Middle School teachers: by outsiders is meant the graduates of private schools. Middle School teachers are divided into two classes, namely, those who are appointed after examination and those who are appointed without examination (*Shiken Kentei* and *Mushiken Kentei*). Hitherto only graduates of the Science or Literary Departments of the Universities, High Schools, or the Komaba College have been allowed to take up appointments in Middle Schools without examination. It has been decided to extend the privilege to the literary graduates of certain private schools. The Waseda Semmon Gakkô, the Kokugaku-in, and the Tetsugakkwan are specially mentioned, but we imagine that several other establishments are likely to be included. This measure, it is worthy of note, when adopted will mark a new departure in Mombushô policy, which hitherto has consisted of the discouraging of private educational effort as much as possible.

THE LATE DUKE OF ARGYLL.

By the death of the Duke of Argyll, Scotland loses one of her most representative and distinguished sons. George Douglas Campbell was the only surviving son of the seventh Duke. He was born at Ardincaple Castle, Dumbartonshire, in 1823, and, before he succeeded his father, in April, 1847, had become known as an author, politician, and public speaker. As Marquis of Lorne he took an active part in the controversy in the Presbyterian Church of Scotland relating to patronage, and was looked upon by Dr. Chalmers as an important and valuable adherent. As early as 1842 he published a pamphlet which exhibited considerable literary ability, under the title of "A Letter to the Peers from a Peer's Son." His *brochure*, "On the Duty and Necessity of Immediate Legislative Interposition in behalf of the Church of Scotland, as determined by Considerations of Constitutional Law," was an historical view of that Church, particularly in reference to its constitutional power in ecclesiastical matters. In the course of the same year he published "A Letter to the Rev. Thomas Chalmers, D.D., on the Present Position of Church Affairs in Scotland and the Causes which have led to it." In this pamphlet he vindicated the right of the Church to legislate for itself; but condemned the Free Church movement then in agitation among certain members of the General Assembly; maintaining the position taken up in his "Letter to the Peers," and expressing his dissent from the extreme view embodied in the statement of Dr. Chalmers, that "lay patronage and the integrity of the spiritual independence of the Church have been proved to be, like oil and water, immiscible." In 1848, the Duke published an essay, critical and historical, on the ecclesiastical history of Scotland since the Reformation, entitled "Presbytery Examined." It was a careful expansion of his earlier writings, and was favourably received. His Grace was a frequent speaker in the House of Peers on such subjects as Jewish Emancipation, the Scottish Marriage Bill, the Corrupt Practices at Elections Bill, the Sugar Duties, Foreign Affairs, the Ecclesiastical Titles Bill, the Scottish Law of Entail, and the Repeal of the Paper Duties. During the administration of Lord John Russell he gave the Government a general support, at the same time identifying his political views with those of the Liberal-Conservatives. His Grace actively interested himself in all questions affecting Scottish interests brought before the Legislature, especially in the affairs of the Church of Scotland. In 1851 he was elected Chancellor of the University of St. Andrews. In 1852 he accepted office in the Cabinet of the Earl of Aberdeen, as Lord Privy Seal. On the breaking up of that ministry, in February, 1855, in consequence of the secession of Lord John Russell, and the appointment of Mr. Roebuck's Committee of Inquiry into the state of the British Army before Sebastopol, his Grace retained the same office under the Premiership of Lord Palmerston. In the latter part of 1855 he resigned the Privy Seal, and became Postmaster-General. In Lord Palmerston's Cabinet of 1859 the Duke resumed the office of Lord Privy Seal, which he exchanged for that of Postmaster-General on Lord Elgin being sent, in 1860, on his second special mission to China. He was re-appointed Lord Privy Seal in 1860, was elected Rector of the University of Glasgow in Nov., 1854; presided over the twenty-fifth annual meeting of the British Association for the Advancement of Science, held at Glasgow, in September, 1855; and was elected President of the Royal Society of Edinburgh in 1861. On the formation of Mr. Gladstone's Cabinet, in Dec., 1868, he was appointed Secretary of State for India, and he held that position till the downfall of the Liberal Government in Feb., 1874. In the ensuing session he warmly supported the measure introduced and carried by the Conservative Government for the transfer of the patronage in the Church of Scotland from individuals to congregations. He was appointed Lord Privy Seal for the third time in May, 1880, on Mr. Gladstone returning to power. That post he held till April, 1881, when he resigned it, in consequence of a difference with his colleagues in the Cabinet concerning some of the provisions of the Irish Land Bill. In announcing the circumstance to the House of Lords (April 8), he stated that in consequence of certain provisions of the Bill which in, his view, put the ownership of Irish property in commission and abeyance, he had felt obliged to resign his office in the Government, and his resignation had been accepted by Her Majesty. After that time he look an important part, by speech and pen, in political controversy, taking the Whig side; especially on the questions of Home Rule and those arising out of the Crofter agitation. His Grace was Hereditary Master of the Queen's Household in Scotland, Chancellor of the University of St. Andrews, a Trustee of the British Museum, and Hereditary Sheriff and Lord-Lieutenant of Argyllshire. In 1866 he published "The Reign of Law," which passed through numerous editions; in 1869 "Primeval Man; an Examination of some Recent Speculations"; in 1870, a small work on the History and Antiquities of Iona; in 1874 "The Patronage Act of 1874 all that was asked in 1843, being a reply to Mr. Taylor Innes"; in 1877 (for the Cobden Club) observations "On the important Question Involved in the Relation of Landlord and Tenant"; in 1879 "The Eastern Question, from the Treaty of Paris to the Treaty of Berlin, and to the second Afghan War," 2 vols.; and in 1884 "The Unity of Nature," a work on the Philosophy of Religion; being a sequel to the "Reign of Law"; "An Economic History of Scotland," 1884; "The Unseen Foundations of Society," 1893; Irish Nationalism, 1893; Volume of Poems, 1894; Philosophy of Belief, 1896; and a host of controversial tracts, pamphlets, essays, and articles. He married, first, in 1844, the eldest daughter of the second Duke of Sutherland (she died May 25, 1878); secondly, in 1881, Amelia Maria, eldest daughter of Dr. Claughton, Bishop of St. Albans, and widow of Colonel Augustus Henry Archibald Anson; and thirdly, in 1895, Ina Erskin, daughter of Mr. M'Neill, of Colousay. He was a member of the Privy Council; K. T., and K. G.; bore the Celtic title of MacCailean Mhor (from an ancestor knighted in 1286), while his Scottish and other titles were Marquis of Lorne and Kintyre; Earl Campbell and Cowal; Viscount of Lochow and Glenisla; Baron Inverary, Mull, Morvern, and Tiry, 1701; Baron Campbell, 1445; Earl of Argyll, 1457 Baron of Lorne, 1470; Baron Kintyre, 1633 (Scotland), Baron Sundrige, 1766; Baron Hamilton, 1776; Duke (Great Britain), 1892. By his death the husband of Princess Louise succeeds to the title.

RAILWAY TRAFFIC LAW.

In the sequel of the Private Railway Law another enactment for the control of railway traffic has been promulgated. It contains 45 articles, of which the most important are as follows :—

Art. III.—Measures relating to the increase of dues or alteration in the manner of transport shall not be carried into effect unless they have been advertised for more than two weeks at the station concerned.

Art. IV.—No person affected by a contagious disease shall be allowed to enter a railway carriage, except in conformity with the rules established by the Minister of State concerned.

Art. VI.—No railway company shall decline the transport of goods if the following conditions are complied with :—

1. The consignor shall adhere strictly to laws and ordinances, and other enactments relating to railway traffic.
2. No terms involving special responsibility can be enforced by the consignor with regard to the transportation of his goods.
3. Goods shall not be transported contrary to the provisions of laws or in a manner prejudicial to public welfare or morals.
4. Goods shall be of a character suitable for transport in accordance with the established rules.

Art. XVI.—In case of passengers abandoning their intended journey before entering the train, repayment of fares may be claimed by them in conformity with the Railway Traffic Regulations.

Art. XXIV.—Any railway official or employe guilty of indecent conduct towards passengers or the public, while on duty, shall be liable to a fine of not more than 25 *yen*.

Art. XXV.—In case any railway official or employe acts contrary to or neglects his duties, or commits acts dangerous to passengers or the public, he shall be punishable with a fine not exceeding 500 *yen*, or with major imprisonment for a term of not more than 3 months.

Art. XXVI.—Any railway official forcing passengers to enter the carriage, beyond the prescribed number, shall be liable to a fine not exceeding 20 *yen*.

Art. XXVII.—Any railway official attempting to evade a part or the whole of freight dues in collusion with a passenger, or consignor or consignee, shall be liable to major imprisonment for a term not exceeding 3 years and to a fine not exceeding 500 *yen*.

Art. XXVIII.—Any railway official or employe failing to open a crossing, or suffering any car or utensils to be placed thereon, in such a way as to obstruct traffic or communication, shall be punishable with a fine not exceeding 20 *yen*.

Art. XXIX.—Any person committing the following acts, with intent to evade freight dues or fares, shall be liable to a fine not exceeding 50 *yen* :—

1. Entering a carriage without proper tickets.
2. Entering a car superior in class to that indicated in the ticket.
3. Failing to alight at the station mentioned on the ticket.

Art. XXX.—Any persons making a false statement as to the class or quality of goods to be transported or committing fraudulent acts with intent to evade the dues, shall be punishable with major imprisonment for a term not exceeding 3 months, or with a fine not exceeding 500 *yen*.

Art. XXXI.—Any person entrusting to the company for transportation gunpowder or explosives or other dangerous substances, or carrying the same into a carriage, in contravention of the Railway Transport Regulations, shall be liable to a fine not exceeding 50 *yen*.

Art. XXXIII.—Passengers committing any of the following acts shall be punishable by a fine not exceeding 25 *yen* :—

1. Entering or alighting from a train while in motion.
2. Opening a side door while the train is in progress.
3. Entering a car other than those provided for passengers.

Art. XXXIV.—Any person committing the following acts in contravention of regulations shall be punishable with a police fine :—

1. The use of tobacco in a station or train or any part of the railway compound where smoking is prohibited.
2. Entry by a male into a carriage or waiting room exclusively provided for women.

Art. XXXV.—Any person guilty of indecent conduct in a carriage or station shall be liable to a police fine.

Art. XXXVI.—Any person altering, damaging, or removing signs or notices in the train, or station, or any part of the railway premises, shall be liable to a fine not exceeding 50 *yen*. Damage to signals is punishable by major imprisonment for a term of not less than three months and not more than 3 years, and a fine of from 5 to 50 *yen*.

Art. XXXVIII.—Any person obstructing railway officials or employes in the discharge of their duties, either by menace or acts of violence, shall be punishable by major imprisonment for a term not exceeding 1 year and a fine not exceeding 100 *yen*.

Art. XLI.—Any person allowing a person suffering from epidemic disease to enter a train shall be liable to a fine not exceeding 100 *yen*.

The same penalty attaches to patients concealing the fact that they are suffering from contagious disease.

LAW RELATING TO ASSOCIATIONS OF DEALERS IN THE PRINCIPAL STAPLES OF MANUFACTURE.

The following are some of the most important articles embodied in this law :—

Art. I.—Persons engaged in the manufacture or sale of staple products, or dealers having close business relations, may form themselves into a corporation according to the provisions of this law.

Art. II.—The corporation shall have for its object the extirpation of abuses and the promotion of mutual advantages among members by means of co-operation and combination.

Art. III.—In organising such a corporation the limits of the district in which combination shall be effected shall first be determined, and with the consent of more than two-thirds of the dealers of the same class, a general meeting shall be held to draw up regulations to which the sanction of the Minister of Agriculture and Commerce is necessary.

Art. IV.—In a district where a corporation is established any person engaged in the same occupation may be required to become a member except when specially released by the Minister of Agriculture and Commerce.

Art. VII.—In a Corporation or a Union of Corporations there shall be appointed one Director and a number of Assistant Directors and Councillors.

Art. XIII.—A Corporation or Union shall not refuse inspection by officials despatched by the Minister of Agriculture and Commerce or by a local Governor, and shall answer accurately questions put by such inspectors.

Art. XV.—In case the decisions of a Corporation or Union or the proceedings of the officials are contrary to laws and ordinances, or prejudicial to the public interest or inconsistent with the aims originally indicated, or in case the orders of the authorities are duly complied with, the Minister of Agriculture and Commerce may enforce measures as specified below.

1. Dissolution of a corporation or Union, or suspension of its business.
2. Dismissal of its officials.
3. Withdrawal of its decisions.

Art. XIX.—Violation of Articles IV. and XIII. shall be punishable by a fine of not less than 2 and not more than 100 *yen*.

Art. XX.—Any person who fraudulently affixes to his own articles of trade any labels or certificates used by the Corporation or Union, or who alters or counterfeits such labels or certificates, shall be liable to major imprisonment for a term not exceeding 6 months, or to a fine of not less than 10 or more than 100 *yen*.

Art. XXI.—These Regulations come into operation from the 1st of April, 1900.

Art. XXII.—Any corporation or union previously organised in accordance with the Law relating to Associations of Dealers in staples of Export shall be regarded as established according to the Law.

CATTLE PLAGUE REGULATIONS.

Following are the rules regarding cattle plague promulgated by the Department of Agriculture and Commerce :—

Art. I.—Any hides of cattle or sheep, bones, or other articles imported from the various ports of Korea, China, or Siberia as to which apprehension is entertained on the ground of cattle plague, shall be landed only after medical inspection.

Art. II.—The inspection shall be undertaken in Kobe and Nagasaki.

Art III.—Inspectors shall have access to ships, and may, if they deem it necessary, inspect the ship's log. The captain or his agent is required to sign a document in which all facts relating to the enquiries made are mentioned.

Art. IV.—The Inspectors, if they deem it necessary, may direct the owners of cattle or sheep, or their agents, or the captain or crew, to transport these animals to a place of detention, and to confine them for a proper period.

Art. V.—Any cattle or sheep attacked or suspected of having been attacked by plague, or any hides, bones, or other articles suspected of being infected, shall be dealt with according to the provisions of the Law for the Prevention of diseases of animals.

Art. VI.—Inspectors are required to give certificates on the completion of their inspection.

Art. VII.—The local Governor of a district where offices for inspection are established shall appoint subordinate officials or veterinary surgeons to act as Inspectors.

Art. VIII.—When inspection is to be made, the place of inspection shall be notified.

Art. IX.—These regulations come into operation from the 1st of April, 1900.

The rules regarding cattle plague as embodied in Ordinance No 18 of the Department of Agriculture and Commerce, issued in the 30th year of *Meiji*, shall be rescinded from the date of the operation of this law.

AMENDMENTS IN MINING REGULATIONS.

The following amendments have been introduced into the Mining Regulations now in operation :—

In Article II. the term bismuth is added after "lead mine;" "chromide of iron" next to "sulphate of iron;" "phosphorus" to "arsenic;" "sub-coal to "coal;" bitumen" to "petroleum."

Article III. is altered as follows :—No person other than a Japanese subject or a company organised in accordance with the laws of the empire is allowed to engage in mining enterprises.

Article XLVII. has had the 4th paragraph altered as follows :—"For the construction of a refinery or other buildings, or the laying of telegraph wires, iron chains or pipes, all necessary for the working of the mine."

The following three articles are added after Article XCII :—

Art. XCIII.—If any person who has been working mines of bismuth, chromide of iron, phosphorus, crude coal, or bitumen, prior to the 30th November 1899, shall apply for a special licence for the above mines not later than the 30th June 1900, he can obtain the licence in question exclusively for the limits under operation, in disregard of the provisions of Article XVI., and also of Article XLI. relating to the area of mining districts. Any person who has forwarded the aforesaid application for a special licence by the 30th June, 1900, shall be allowed to continue his mining operations without regard to the provisions of these regulations, until the date of receiving the Government's directions in connection with his application.

Digitized by Google Original from CORNELL UNIVERSITY

Art. XCIV.—Applicants for the special licence in conformity with the foregoing provisions are required to obtain sanction as specified in Articles XXII and XXIII.

Art. XCV.—When the area of a mining district for which a special licence has been obtained in accordance with Article XCIII. does not exceed 3,000 *tsubo*, the licence in question shall lose its validity after the lapse of five years.

APPENDIX.

These regulations come into operation from the 1st of April, 1900.

JAPAN INDUSTRIAL BANK LAW.

The following is a translation of the above law, which was recently promulgated over the signature of the Premier and the Minister of Finance:—

Chapter I.—GENERAL PROVISIONS.

Art. I.—The Japan Industrial Bank shall be a join stock corporation, with head offices in Tokyo.

Art. II.—The capital of the Bank shall be 10 million *yen*. This amount, however, may be increased or decreased with the sanction of the Government.

Art. III.—The shares of the Bank shall have a face value of 100 *yen* each.

Art. III.—The period of operation of the Bank shall be 50 years, which may, however, be prolonged with the sanction of the Government,

Chapter II.—PRINCIPAL OFFICIALS.

Art. V.—The Bank shall appoint one President and not less than four Managers and three Inspectors.

Art. VI.—The President shall act as the representative of the Bank. The President and Managers shall superintend the affairs of the Bank, and the Inspectors are charged with the duty of scrutinising the Bank's transactions.

Art. VII.—The President shall be appointed by the Government from among holders of more than 100 shares, and the term of his service shall be five years. Managers shall be nominated by Government from candidates elected at a general meeting of shareholders selected from persons holding more than 50 shares, and the term of their service shall be fixed for three years. The inspectors shall be chosen at a general meeting of shareholders from among persons holding over 30 shares each, and their term of service shall not exceed two years.

Art. VIII.—The President and Managers shall not engage in other occupations or commercial transactions.

Chapter IV.—BUSINESS.

Art. IX.—The following business shall be conducted by the Bank:—

1. Issue of loans on the security of national loan bonds, local debentures, company's debentures, or shares.

TEMPORARY CUSTOMS STOREHOUSES.

The above law, passed by the Diet and sanctioned by the Emperor, is published in the *Official Gazette* as follows:—

Art. I.—Bonded warehouses shall be established in Custom Houses for the temporary storage of foreign goods. The Custom Houses where such warehouses are to be established shall be determined by imperial ordinance.

Art. II.—The Minister of Finance is empowered to limit the class of goods to be stored.

Art. III.—Goods stored in the aforesaid warehouses shall not be regarded as imported.

Art. IV.—Alterations may be made in the packing or classification of goods, or they may be otherwise handled in the warehouses.

Art. V.—The period of storage shall not exceed three months, unless application is made for an extension of time and its necessity is recognised by the Customs Superintendent.

Art. VI.—The Customs Superintendent may, if he deems it necessary, direct the removal of the goods or adopt other measures.

Art. VII.—In case the prescribed time shall have expired or in case the removal of goods has not been effected within the period specified by the Customs Superintendent in accordance with the foregoing Article, the goods may be confiscated in accordance with the Customs Regulations.

Art. VIII.—The Customs Authorities are empowered to search the person of, or examine articles carried by, persons coming in or out of the warehouses.

Art. IX.—The government shall in no way be responsible for compensation for damages sustained by goods stored.

Art. X.—Any person desiring to transport goods to the customs warehouses must give notice to the Custom House.

Art. XI.—Goods stored shall not be removed or transferred to other places without special permission from the Customs Superintendent, or a permit for their importation, reshipment, or transportation by sea or for their storage in a bonded warehouse.

The following is a translation of rules promulgated for the enforcement of the above law:—

Art. I.—Warehouses for the temporary storage of goods shall be established in the districts within the jurisdiction of the Customs Houses of Yokohama and Nagasaki.

Art. II.—The limits of a district where warehouses are to be established shall be determined by the Minister of Finance.

Art. III.—Notice as to the transportation of goods into the aforesaid warehouses shall always be forwarded in the shape of a written statement showing the name and nationality of the ships on which the goods are loaded, together with marks, numbers, names, and amount or quantity, and value of the articles to be stored.

Art. IV.—If any person desires to secure an extension of the period of storage in accordance with the provisions of Article V, of the law relating to Bonded Warehouses, he must obtain special permission from the Custom house by forwarding a written statement showing marks, numbers, names, amount or quantity of goods, and the period of, as well as the reasons for, the extension.

Art. V.—The aforesaid warehouses shall be closed between sunset and sunrise, and on holidays observed by the Custom House. The Customs Superintendent, however, is vested with power to grant special permission for opening the same at any time.

Art. VI.—Any person desiring special permission to have the warehouses opened between sunset and sunrise or on Customs holidays, must forward an application to the Custom House, stating the period as well as the reason for such special opening.

Art. VII.—Applicants who have secured special permission as specified in Articles IV. and VI. must pay the specified fees.

Art. VIII.—Any person using the Bonded Warehouses must pay rent for the same.

Art. IX.—The amount of the aforesaid fees and rents shall be determined by the Minister of Finance.

Art. X.—Fees may be paid in revenue stamps. Any person desiring to pay fees in revenue stamps shall affix the same to the document connected with payment, and present it in that condition.

APPENDIX.

These regulations shall come into operation from the 1st May, 1900.

FEES FOR MINING OPERATIONS.

The revised scale of fees in regard to mining enterprises is published in the *Official Gazette* as follows:—

IMPERIAL ORDINANCE No. 150.

Any person desiring to engage in mining enterprises of any kind must pay the following fees in revenue stamps, which must be affixed to the application or petition:—

		Yen.
1	Alteration of the name of applicant for mining privileges	10
2	Application for an official certificate with regard to plans prepared after a practical survey of mines	10
3	Application for survey	5
4	Renewal of special licence	5
5	Special licence as specified in Article X. of the Mining Regulations	10
6	Renewal of a map of mining district or of a district licensed for trial borings	5
7	Correction or alteration of the same	5
8	Application for taking sand	10
9	Combination or division (?) of a district where sand is to be taken	5
10	Extension of such district	10
11	Alteration of a plan for the extension of the district	10
12	Relinquishment of place where sand is taken	10
13	Combination of persons for taking sand	10
14	Alteration of names of applicants for taking sand	10
15	Renewal of plans of the place where sand is taken	5
16	Alteration of such plan	5
17	Application for obtaining judgment of the Director of the Mines Superintendence Office	10
18	Application for judgment of the Minister of Agriculture and Commerce	10

With regard to applications specified in clauses 8, 10, and 11, additional fees must be paid for every two *ri* in extent in the case of river beds, and for every 100,000 *tsubo* in other places.

The above rules shall come into operation from the 1st of May in the 33rd year of *Meiji* (1900).

LAW FOR THE CONTROL OF DEALERS IN MILK.

The following is a brief translation of the law recently promulgated for the control of dealers in milk:—

Art. II.—The specific gravity of milk shall be from 1.028 to 1.034 in the case of new milk and from 1.032 to 1.038 in the case of skimmed milk; in both cases a temperature of 15° centi-grade shall be taken. In new milk the quantity of fat must exceed 2.7 per cent. and in skimmed milk it shall be not less than 0.5 per cent.

Art. V.—Dealers in milk are not allowed to obtain milk:—

1. From cows affected by contagious diseases, such as cattle plague, rabies, jaundice, dysentery, fever, &c.
2. From cows being medically treated with powerful or poisonous drugs.
3. From cows which have calved within the space of one week.

Art. VI.—Dealers in milk are forbidden to use porcelain vessels glazed with zinc, copper, bronze, or others injurious materials, or vessels of iron coated with materials containing lead.

Art. VII.—No milk dealer shall undertake the sale, transport, or preservation of:—

1. Sour milk.
2. Milk what is curdled or of bitter taste, or is of blue, red, or other unusual colour.
3. Milk mixed with other materials.
4. Milk obtained from cows as specified in Art. V.
5. Milk specified in the provisions of Article II.

Art. XII.—Dealers in milk shall not allow persons suffering from consumption, leprosy, syphilis, or other contagious disease, to handle milk or milk products or vessels used for holding or measuring the same, or to enter into the place where such articles are handled.

Art. XIV.—The local Governor may despatch officials to inspect the cows owned by milk dealers, and, upon finding any diseased animal, may brand or mark its horn or affix a ring to its ear.

Art. XVIII.—Offences enumerated below shall be punishable with a fine not exceeding 25 *yen*:—

1. Dealing in milk without obtaining official permission.
2. Contravention of Article V.

Art. XII.—Any person failing to inscribe the quality of milk on the vessels containing it, or to segregate a diseased cow or cows, shall be liable to a fine not exceeding 10 *yen*.

Art. XX.—These regulations shall come into operation from the 1st of July in the 33rd year of *Meiji* (1900).

2. Subscription to, or acceptance of, national loan bonds, local debentures, or company's certificates.
3. Receipt of deposits.
4. Operations of trust in connection with local debentures, or company's certificates or shares.

Art. X.—The Bank, whenever possessed of surplus funds, may undertake the purchase of national loan bonds, local debentures, or company's certificates.

Art. XI.—The Bank is not allowed to enter into any business not provided for in these regulations.

Chapter IV.—DEBENTURES.

Art. XII.—The Bank may issue debentures to five times the amount of its paid up capital. But the amount of issue shall in no case exceed the actual amount of loans issued, together with local bonds and company's debentures in its possession.

Art. XIII.—The Bank's debentures shall be over 50 *yen* face value each, with coupons, but not bearing the names of owners. The names, however, may be mentioned at the request of subscribers or owners.

Art. XIV.—In issuing debentures the Bank must obtain the sanction of the Minister of State concerned. The rules with regard to the issue of debentures in foreign markets shall be established by special law.

Art. XV.—The interest on debentures must be paid at least twice a year, while the principal must be redeemed by lot within 30 years from the date of issue.

Art. XVI.—The Bank need not necessarily conform to the restrictions named in Article XII. in case it undertakes the issue of debentures at a low rate of interest by way of a substitute for original debentures. In this case, however, the original debentures corresponding in amount to the total face value of new debentures must be redeemed by lot, within 3 months from the date of the issue of the latter.

Chapter V.—RESERVE FUNDS.

Art. XVII.—The Bank shall set apart as a reserve for each business year more than 8 per cent. of its profits for supplying the loss of capital and over 2 per cent. for equalization of dividends.

Chapter VI.—SUBSIDY AND SUPERVISION OF GOVERNMENT.

Art. XVIII.—The Government shall exercise control over the Bank's transactions.

Art. XIX.—The Bank must obtain the sanction of

Digitized by Google Original from CORNELL UNIVERSITY

the Minister of State concerned whenever it desires to alter its regulations.

Art XX.—The sanction of the Minister is also necessary on the establishment of a branch or agency.

Art. XXI.—The Bank must obtain the sanction of the Minister concerned for the declaration of dividends.

Art. XXII.—The Minister concerned may suspend the transactions of the Bank when the same are considered to be in contravention of laws and ordinances or of its own regulations, or prejudicial to public interests.

Art. XXIII.—The Bank is required to forward reports of various accounts and transactions in conformity with the directions of the Minister concerned.

Art. XXIV.—The Minister concerned shall appoint special Inspectors to scrutinize the Bank's transactions.

Art. XXV—The Inspectors so appointed are empowered to examine at any time safes, strong rooms, account books, and documents. They are also entitled to express their views at general meetings of shareholders, or other assemblies.

Art. XXVI.—In case the dividends of the Bank do not reach the rate of 5 per cent. each business year, the Government shall grant a subsidy sufficient to supply the deficiency, for 5 years from the close of the period fixed for preliminary arrangements. In no case, however, shall the amount of subsidy exceed 5 per cent. of the capital paid up.

CHAPTER VII.—PENAL PROVISIONS.

Art. XXVII.—In case the following offences have been committed, the President and managers, with the exception of those not directly implicated in the offence, shall be liable to a fine of not less than 100 *yen* and not exceeding 1,000 *yen*.

1. When sanction of the Minister concerned has not been obtained in cases where such sanction is necessary.

2. When business not specified by this law is undertaken in contravention of Article XI.

3. When debentures have been issued in contravention of Articles XII. and XVI.

Art. XXVIII.—Violation of article XIV. on the part of the President or Managers shall be punishable by a fine of from 20 *yen* to 200 *yen*.

SUPPLEMENTARY RULES.

Art. XXIX.—The Government shall appoint a committee of organisation for adjusting all the affairs relating to the institution of the Bank.

Art. XXX.—The Organisation Committee shall draw up the regulations of the Bank, and, after obtaining Government sanction adopt measures to secure subscribers.

Art. XXXI.—The committee shall forward to the Government all applications for shares, and on receiving official sanction shall adopt measures, without delay, for securing the first calls.

Art. XXXII.—The committee shall transfer its business to the President on the completion of the preliminary arrangements.

TELEGRAMS TO KOREA.

The *Official Gazette* publishes an Ordinance of the Communications Department to the effect that with regard to telegrams received at, or delivered from, Japanese Post and Telegraph Offices in Korea, the rules concerning Japanese inland telegrams shall apply from the 1st of May, with the following additional provisions:—

1. For telegrams written in Japanese, every seven characters in *katakana* shall be regarded as one word.

2. A fee of ten *sen* shall be charged for one word.

3. Any Government messages relating to military affairs shall be transmitted in precedence of other official telegrams.

4. No fees shall be collected for telegrams to be delivered in districts where Japanese Post and telegraph offices or Post Offices dealing with telegrams are established. This provision, however, does not apply to telegrams the delivery of which is to be effected by boat.

5. The names of places where telegrams may be transmitted by special messengers, and the rate of charges for the delivery by special messenger or by boat or other means, shall be indicated by a separate notification.

6. The sender of telegrams intended for delivery by boat must pay fees for such means of delivery.

7. Telegrams addressed to men-of-war at anchor in Fusan or Inchchon, but for which no method of delivery is clearly indicated, shall be transmitted as non-paid messages.

A MISUNDERSTOOD MAN OF LETTERS.

[READ BEFORE THE YOKOHAMA LITERARY SOCIETY BY MR. A. BELLAMY BROWN.]

Popular fallacies die hard. This hoary truism takes a well-earned place among the eternal verities. Long before Thackeray died the world had quite made up its mind that he was a cynic; and it has gone on thinking so ever since—perhaps the more shallow-memoried among us will continue to do so until the end of time. And yet nothing could have been farther from the truth, as the biographical edition of his works which his devoted daughter, Mrs. Ritchie, has just completed, very fully demonstrates. Perhaps it was excusable that those who only knew the man through the more famous of his writings should have formed this misconception of his character. The literary world has long known that it was Thackeray's half-expressed wish that no official biography should be written about him: he dreaded the fulsome flattery of the too fervent admirer as much as he disliked the irreverent airing of family skeletons by the unfeeling, unsympathetic scribbling ghouls who occasionally work such havoc among "the literary remains"—as our fathers pedantically loved to call them—of the world's famous men. So we have had to be content with occasional anecdotes and appreciations of a few intimate friends, with here and there a fragmentary sketch such as Trollope wrote for the "Men of Letters Series," or Menzies for another set of similar design; and consequently the ancient charge of cynicism has been perpetuated in the minds of the great majority. Mrs. Ritchie's reminiscences of her father and Mr. Lewis Melville's more recent "Life of William Makepeace Thackeray" will do much to dispel the wrong impression, however, for each in its separate way shows what manner of man he was—the true, gentle-hearted Thackeray, with almost a child-like soul and love for the good and pure and honest—who only donned a cloak of sardonic cynicism to hide from curious outsiders the fine, sensitive nature within.

I do not intend in the short space at my disposal to enter into any critical discussion of Thackeray's works, my wish is merely to drew attention to a few letters and stories of his home life which have lately been given to the world by his daughter, alluding necessarily here and there to his more famous books, and seeking thereby to make clear to you the sources of his melancholy, his sardonic humour, and his assumed cynical outlook on life. The main facts of his story are fairly well known. Born in Culcutta, July 18, 1811, the son of an East Indian official, he went home to England five years later with his young widowed mother, and at an early age was sent to the Charterhouse School in London. He had not very grateful recollections of that famous academy and in his earlier writings we find him referring to it as the Slaughterhouse, Smithfield. But as he became famous and the sun of prosperity shone more benignantly upon him, the memories of childhood softened and Slaughterhouse changed to Grey Friars and eventually became the setting for one of the finest pieces of prose in the English language—the death of Colonel Newcome. Thackeray's residence at Cambridge was short, but the University left its influence upon him, and, in the opinion of Leslie Stephen, his son-in-law, "fixed his social status." After he lost his fortune—principally in unfortunate newspaper speculations (of which he makes such good use in *Pendennis* and other quasi-biographical work)—and after he found that in the pursuit of art at Paris and Weimar, he could not realise his expectations, he turned to the profession of letters. While at Cambridge he had written some parodies for the ephemeral University Magazines—the poem in which he "took off" Tennyson's *Timbuctoo* is one of the neatest burlesques in the language—and at Weimar also he turned his pen to account; besides which he had done occasional editorial work of a lighter kind. Still, for all that, he entered the world of letters with everything to learn and no one to render any very influential assistance. *Fraser's Magazine* was his principal means of support when he married, in 1837, at Paris, an Irish lady, Isabella, daughter of Colonel Matthew Shaw. As we now know, the fond hopes formed of this union were but partially realised—or rather, after opening brightly, the marriage ended in gloom and cruel sorrow, for within a few years Mrs. Thackeray fell ill and the blight of insanity came upon her, to cloud and embitter the rest of her husband's days. It was one of the saddest of life's little ironies—the phrase seems sadly inadequate in his case—that this man, overflowing with the domestic affections, should be deprived of the hope of a happy home-circle just at that period of life at which a man generally makes a happy exchange in preferring his wife's drawing-room to the smoking-room of the Club, and assuming those domestic ways of living which are so becoming and pleasant as one tops the hill and begins to see the plain below across which the evening shadows will soon be falling.

That Thackeray's life was a happy one while his wife was with him is borne out by a letter which was written by him to her during a brief absence. It runs in part:—

"Here have we been two years married and not a single unhappy day. Oh, I do bless God for all this happiness which he has given me. It is so great that I almost tremble for the future, except that I humbly hope (for what man is certain about his own weakness and wickedness?) our love is strong enough to withstand any pressure from without, and as it is a gift greater than any fortune, is likewise one superior to poverty or sickness, or any other worldly evil with which Providence may visit us. Let us pray, as I trust there is no harm, that none of these may come upon us; as the best and wisest man in the world prayed that he might not be led into temptation. * * * I think happiness is as good as prayers, and I feel in my heart a kind of overflowing thanksgiving which is quite too great to describe in writing. This kind of happiness is like a fine picture; you only see a little bit of it when you are close to the canvas; go a little distance and then you see how beautiful it is. I don't know that I shall have done much by coming away, except being so awfully glad to come back again."

Was there already any foreshadowing of the evil days that were so soon to come? It almost seems like it. Mrs. Thackeray lived in entire seclusion up to within a few years ago, and her death then occasioned some surprise in many circles that had long since forgotten her. Thackeray had the best work of his life to accomplish when this disaster befel him. Such a blow would have completely crushed a smaller-hearted man. But Thackeray took up his burden without complaint, and did his best to keep the world from intruding upon his private griefs. In one of his ballads, he makes a pathetic reference to his loneliness:—

Ah me! How quick the days are flitting!
I mind me of a time that's gone,
When here I'd sit, as now I'm sitting,
In this same place—but not alone.
A fair young form was nestled near me,
A dear, dear face looked fondly up,
And sweet lips spoke and smiled to cheer me!—
There's no one now to share my cup.

To resume our brief story of his career. It proved for a considerable time uphill work; his connexion with *Punch* did not bring him fame, though some of his brightest work is enshrined in its pages, and we find him complaining to Mr. Fields, the American publisher, that he was nearly forty years old before he was recognized in literature as "belonging to a class of writers at all above the ordinary Magazinists of the day." But it must be remembered, when we read this complaint, that Thackeray was the most diffident of men; though aware of his own powers, he was always, to the very last day of his life, afraid that his deficiencies would be too strong for him, and while turning out the very best of his life's work, he "never felt certain of his market." In this he was the very antithesis of Dickens, the ever confident and self-reliant. Then again, he was seldom ready with his "tale of bricks," even in his most strenuous days, the printers' "devil" had often to wait in the hallway while the monthly instalment of copy for Messrs. Smith and Elder was being written; the most unmethodical of men, he was always putting off till to-morrow what should have been done to-day. He railed at the public for not recognising his genius earlier, forgetting the number of aliases under which he first

Digitized by Google Original from CORNELL UNIVERSITY

appeared. But the discovery was not to be much longer delayed. It was in 1846 that the first number of *Vanity Fair* appeared, and when the last of the 24 numbers was out the literary world knew something of the full breadth of his genius. The book took Thackeray into the foremost ranks of English men of letters and his title to the proud position then given him has never been challenged. He was just 37 years of age and full of thought for the future of his little ones, to whom he refers so lovingly in the *White Squall*:—

I thought, as day was breaking,
My little girls were waking,
And smiling and making
A prayer at home for me.

The great object of his life was to acquire a provision for his children, to replace his lost patrimony, and this was the principal cause of his appearing as a public lecturer. He made his first bow in Willis'-rooms in 1851, when he delivered his lectures on the *English Humourists*.

In the winter of 1852-53, our author visited America on a lecturing tour. A few years later he repeated his visit, and his letters home to the girls are full of interest. In one he comments upon the effect of the American air:—

"I have a difficulty in forming the letters as I write them down on the page, in answering questions, in finding the most simple words to form the answers. . . . I hardly know what is said, am thinking of something else, nothing definite, with an irrepressible longing to be in motion. . . . There is some electric influence in the air and sun here which we don't experience on our side of the globe; people can't sit still, people can't ruminate over their dinners, dawdle in their studies; they must keep moving."

In many letters he speaks of the kindness of the American people, who never tired of devising new means for his entertainment. As he laughingly told a friend on his return, he went out to dine so frequently that the tour "was one long indigestion." Another of his letters gives this picture of his visit to Washington Irving in December, 1855, during his second trip to the States.

"One day I went out to Yonkers, fifteen miles from here, on the Hudson river, and spent the pleasantest day I have had in the States; drove from the pretty village, a busy, bustling new place lying on the river banks, thrice as broad as the Rhine and as picturesque, to Irvington, nine miles, where good old Washington Irving lives with two nieces, who tend him most affectionately, in a funny little in-and-out cottage surrounded by a little domain of lawns not so smooth as ours, and woods rather small and scrubby—in little bits of small parlors, where we were served with cakes and wine—with a little study not much bigger than my back room, with old dogs trotting about the premises, with flocks of ducks sailing on the ponds—a very pleasant, patriarchal life. He is finishing the second volume of the life of Washington; he has other two to write; it's a bold undertaking for a man of 74. I don't know whether the book is good or not; the man is, and, one of the pleasantest things I have noted in American manners, is the general respect and affection in which this good old man is held."

Of Longfellow we read in another letter that "he is a kindly, pleasant gentleman, has pretty children; I liked him." In another communication, Thackeray says he has been reading "The Holly Tree Inn," which he regards as "in Dickens's best manner," "I am very glad to think," he adds, "that his girls and mine are friends." In one of the latest letters, dated April, 1856, he says:—

"How weary I am of this lecturing, I shall do no more of it, I think. What dreary journeys I have had. Forty hours from Cincinnati without stopping. . . . . How pretty the country was, albeit so wintry, coming to New York. But Europe is a prettier country still for me, and I long for it."

Thackeray had great success in the United States with his lectures on the *Four Georges*, but he records that his American audiences liked best the lecture on George III., because of the pathos in it. His American triumphs were all the more pronounced in that he visited the States at a time when Dickens had stirred them to wrath with his ill-natured American Notes and the caricatures in "Martin Chuzzlewit." Out of Thackeray's study of the Georges, by-the-bye, grew the novel of *The Virginians*. The book was begun soon after Thackeray's return to England, and Mrs. Ritchie gives a pleasant description of her father's joy over his pretty title and of his search for the hero's name in the Court Guide. Finally he found what he wanted in Lambert. She declares that much autobiography went into General Lambert, "who lived in the reign of Queen Anne, who loved Montaigne's Essays and Burton's Anatomy, and who enjoyed a kindly dallying and gentle joking at life as it flowed by." The *Virginians*, in a manner, is a continuation of *Esmond*, one of the finest things Thackeray ever did.

Though Thackeray tired of lecturing in America, with its long distances between place and place, he had no such objection to lecturing within the brief limits of the United Kingdom, and after the American letters which Mrs. Ritchie prints, come others from towns in Scotland, where, as he says, people who had old-fashioned notions about Church and King "had to listen to a sceptical Londoner's sneering at loyalty, courts, and king worship."

It was about this time that he sought a seat in Parliament, by contesting the University of Oxford. Concerning the prospect he writes to his mother:—

Just when the novel-writing faculty is pretty well used up, here is independence, a place in Parliament, and who knows what afterwards? Upon my word, I don't seem much to care, and Fate carries me along in a stream somehow. . . . . I shan't be happy in politics, and they'll interfere with my digestion; but, with the game there, it seems faint-hearted not to play it. "Retire and paint pooty little pictures," says Ease; perhaps Conscience, "Retire and work at literature, at history."

Mr. Melville prints some of Thackeray's speeches, but I have only space for his valedictory remarks after his defeat:—

Let me tell you a little story, but a true one. Some years ago, when boxing was more common in this country than it is at the present time, two celebrated champions met to fight a battle on Moulsey Heath. Their names were Gully and Gregson. They fought the most tremendous battle that had been known for many long years, and Gregson got the worst of it. As he was lying on his bed some time afterwards, blinded, and his eyes shut up, he asked a friend to give him something to drink. A person in the room handed him some drink, and grasped him by the hand. "Whose hand is this?" asked Gregson. "'Tis Jack Gully's," was the reply. Now, Gregson was the man who was beaten, and Gully was the conqueror, and he was the first man to shake him by the hand to show him that he had no animosity against him. This should be the conduct of all loyal Englishmen, to fight a good fight, and to hold no animosity against the opposite side. With this feeling, I go away from Oxford.

At Oxford Thackeray seems to have been a fluent orator. There were, however, occasions when he broke down. One of these is recorded by Mr. Melville in the words of Mr. James T. Fields, the American publisher and friend of authors. Thackeray was to make a great speech at the founding of the Manchester Free Library Institution, and Mr. Fields accompanied him thither. On the journey the novelist talked about nothing but the oration he intended to deliver, by which he would, he declared, totally eclipse the other speakers, Dickens, Bulwer Lytton, and Sir James Stephen. Mr. Field's story continues:—

Sir John Potter, who presided, then rose, and after some complimentary allusions to the author of "Vanity Fair," introduced him to the crowd, who received him with ringing plaudits. As he rose, he gave me a half-wink from under his spectacles, as if to say, "Now for it; the others have done very well, but I will show 'em a grace beyond the reach of their art." He began in a clear and charming manner, and was absolutely perfect for three minutes. In the midst of a most earnest and elaborate sentence he suddenly stopped, gave a look of comic despair at the ceiling, crammed both hands into his trousers pockets, and deliberately sat down. . . . He continued to sit on the platform in a perfectly composed manner, and when the meeting was over, he said to me, without a sign of discomfiture, "My boy, you have accidentally missed hearing one of the finest speeches ever composed for delivery by a great British orator."

Thackeray did not permit such accidents to trouble him. On the contrary, he made use of them. "The discomfiture will make a good chapter for *Pendennis*," was his philosophical comment.

In his 48th year, the *Cornhill Magazine* was started, with Thackeray as its editor. Thackeray did not take kindly to revising manuscripts and the rejection of articles was a great cross to his kindly spirit. The first number showed that he had a good idea of what people like to read, for it contained travel, reminiscence, fiction, and, what was a novelty in those days, popular science. Sir Henry Thompson, the foremost surgeon of his day, contributed a paper descriptive of the cutting off of a man's leg. In it was a detailed account of the new anæsthetic, and Thackeray very happily gave it the caption "Under Chloroform." Other articles in this initial number were "The Search for Sir John Franklin," from the private journal of an officer of the *Fox*; "The Chinese and the Outer Barbarians," by Sir John Bowring; "Our Volunteers," by Sir John Burgoyne; and the two serials, "Lovell, the Widower," by Thackeray, and "Framley Parsonage," by Anthony Trollope.

The new magazine proved a great success at the outset, no less than 120,000 copies being sold when the publishers only counted on selling an edition of 10,000 copies. One of the curious features of his editorial life was his letter conveying to Mrs. Browning the intelligence that he was forced to reject one of her poems, because it gave a strong picture of the lawless passion of a man for a woman. The conclusion of this letter is very happy and characteristic:—"To have to say no to my betters is one of the hardest duties I have, but I'm sure we must not publish your verses, and I go down on my knees before cutting my victim's head off, and say, 'Madam, you know how I respect and regard you, Browning's wife and Penini's mother; and for what I am going to do I most humbly ask your pardon.'" In a later number Thackeray published Mrs. Browning's poem, "The North and the South." It proved to be her last work, as it was printed the very month of Mrs. Browning's death. It was not editorial worries, his biographer thinks, that induced him to resign in April, 1862, the editorship of the magazine, but failing health. "I have taken too many crops out of my brain," he said to his cousin, and there was some truth in the remark.

About this time he wrote that charming little poem, from the German, of which I can quote only the closing verses:—

My hair is grey, and my sight nigh gone;
My sword is rusted upon the wall;
Right have I spoken, and right have I done,
When shall I rest me once for all?

Oh blessed rest, oh royal night,
Wherefore seemeth the time so long,
Till I see yon stars in their fullest light,
And list to their loudest song.

Thackeray had many warnings that life was not long for him, but he always wrote of death with peaceful resignation. The concluding sentences of a letter on Death, which he wrote to Mrs. Procter in 1856, are worth quoting here:—

"Thinking of it is thinking of God, inscrutable, immeasureable, endless, beginningless, supreme, awfully solitary. Little children step off this earth into the infinite, and we tear our hearts out over their sweet cold hands and smiling faces that drop indifferent when you cease holding them, and smile as the lid is closing over them. I don't think we deplore the old who have had enough of living and striving and have buried so many others, and must be weary of living—it seems time for them to go—for where's the pleasure of staying when the feast is over, and the flowers withered, and the guests gone? Isn't it better to blow the light out than to sit on among the broken meats and collapsed jellies and vapid heeltaps? I go—to what I don't know—but to God's next world, which is his and he made it. One paces up and down the shore yet a while—and looks toward the unknown ocean, and thinks of the traveler whose boat sailed yesterday. Those we love can but walk down to the pier with us—the voyage we must make alone. Except for the young or the happy, I can't say I am sorry for any one who dies."

Many incidents are now printed by his daughter referring to her father's last years. Sleeplessness increased, and the books which Thackeray was wont to keep by his bedside to while away the time and woo sleep were Montaigne and Howell's Letters. Of these he said:—

"If I wake at night I have one or other of them to prattle me to sleep again. They talk about themselves forever, and don't weary me. I like to hear them tell their old stories over and over again."

Thackeray cared nothing for the dress of his books. His Montaigne was shabby, and he pre-

Digitized by Google Original from CORNELL UNIVERSITY

ferred an old, battered Boswell with double columns; and shabby, worm-eaten copies of Johnson's Poets. Milton's sonnet to Shakespeare in Johnson's Poets was one of the last things that he read.

His affection, spasms of the heart, had been contracted shortly before he finished *Pendennis*. But he had so many recoveries from illness that even in 1863 his daughters could not believe he was so near the end. Death came to him on the eve of the Christmas of that year, perhaps as he would have wished it, just as it came to good old Colonel Newcome—peaceful as the close of a ripe autumn day. Though he was often prevented from writing by physical weariness, yet in those last years he produced the best of the *Roundabout Papers*, and he began an historical romance, *Denis Duval*, which makes one regret that it was left unfinished. Many anecdotes are given by Mrs. Ritchie of Thackeray's great pains to be accurate in his history and to give the very spirit of the age which he wished to bring out before his readers. He read a mass of documents and reports before beginning *Denis Duval*, and his daughter records the enthusiasm with which he described the fight of the *Serapis* and the bravery of her commander. Dickens regarded the few chapters of this last romance as the best work that Thackeray ever did, and Leslie Stephen has said that if completed it would have been the rival of *Esmond* in the finish of its style, its broader humanity, and the perfection of its art in making a past age real to us.

A few words more on the topic with which this short sketch opened—the charge of cynicism. I am glad to find that Mr. Melville refuses to take it seriously. "If it be cynical," he says, "to believe that 'wherever shines the sun you are sure to find Folly basking in it; and Knavery as the shadow at Folly's heels'; if it be cynical to declare that grief for a departed relative will not last for ever, or that if the deceased had left you a fortune you would be in some degree reconciled to your loss after the first mometary pang of grief is over—why, if these truisms be cynicism, then, and then only, Thackeray was a cynic." While writing of the world as he knew it—and he may have been unfamiliar with some sides of it which would have enabled him to take at times a sounder view—it is pleasant to remember that Thackeray never thought lightly of his influence and responsibility as a writer. "What man," he said, "holding such a place and knowing that his words go forth to vast congregations of mankind—to grown folk, to their children, and perhaps to their children's children—but must think of his calling with a solemn and a humble heart! May love and truth guide such a man always! It is an awful prayer and may heaven further its fulfilment!"

I will conclude by quoting a few verses from the poem of Shirley Brooks, which *Punch* printed as its tribute to the memory of its distinguished contributor:—

He was a cynic! By his life all wrought
Of generous acts, mild words, and gentle ways;
His heart wide open to all kindly thought,
His hand so quick to give, his tongue to praise!

He was a cynic! You might read it writ
In that broad brow, crowned with its silver hair;
In those blue eye, with child-like candour lit,
In that sweet smile his lips were wont to wear!

He was a cynic! By the love that clung
About him from his children, friends and kin;
By the sharp pain light pen and gossip tongue
Wrought in him, chafing the soft heart within.

ACCIDENT TO THE "KAGOSHIMA MARU."

The N.Y.K. Bombay steamer *Kagoshima Maru*, 4370 tons gross, formerly known as the *Port Albert*, ran on the shoal Misumi in Hizen Province on her way from Moji to Hongkong on Wednesday morning. She sustained some injury to her hull, her cargo being also more or less damaged.

The Hanyang correspondent of the *North-China Daily News* alleges that a local edict has been published, over the signature of the Viceroy Chang, condemning the reading of Shanghai newspapers.

GERMAN AFFAIRS.

The attitude of the German public towards the naval-extension Bill is developing some interesting phases. The agrarian interest has detected in the scheme an opportunity for making capital on its own account, and has declared that unless the Government agrees to impose prohibitory duties on all imported meats, it will oppose the Bill. This declaration has not been embodied in a special measure for presentation to the Diet. What has happened is that the Government having introduced a Bill providing for the better inspection of meat, in the interests of sanitation, the agrarians proposed an amendment in the sense of prohibiting the import of meat from abroad in any and every form, whether fresh, preserved, canned, or what not, and are believed to be adjusting their treatment of the navy bill to the acceptance or rejection of the amendment. Of course such action on Germany's part would provoke a tariff war with the United States. That, however, does not disturb the agrarians in any degree. They denounce as craven and pusillanimous the idea of being deterred by any apprehension of the kind—cheap courage on their part, seeing that the war would not inflict any casualties on their own enterprise. On the other hand, the representatives of German commerce, industry, and shipping take a very different view of the outlook. The value of German trade with America in 1898 was 1,212 millions of marks, or 12½ per cent. of her total foreign commerce. It consisted largely of imports, but the exports totalled 334½ millions of marks, thus exceeding Germany's aggregate exports to Spain, Portugal, Italy, Greece, Roumania, Bulgaria, Servia, Turkey, Canada, and Mexico added together. Besides, while America could easily dispense with, or procure elsewhere, the porcelain, toys, cement, leather goods, millinery, and various products of textile and chemical industries which she gets from Germany, the latter could not do without American petroleum, copper, maize and cotton. As for the shipping interest, the United States, under the Dingley Tariff, could immediately impose a differential duty of 10 per cent. on goods coming in German ships. Despite these considerations, and despite various protests formulated by German industrials and shipowners, a majority in the Reichstag seem to favour the prohibition policy. We cannot for our own part see, however, that the lines of resistance to the naval-extension programme coincide with the lines of support of the agrarian proposal, for whereas the National Liberals, the Conservatives, and the Centre are united in demanding the prohibition of foreign meat, the National Liberals and a great part of the Conservatives are said to be in favour of the Naval Bill. There does not appear to be much doubt that the Government could push the latter successfully if they would clearly indicate some acceptable source from which to defray the outlay. But they keep silence on that important point, and meanwhile the psychological moment for passing the Bill seems to be slipping away *pari passu* with the sentimental ebullition excited by the South-African war at the outset.

The correspondence that passed between Germany and England with reference to the seizure of the *Bundesrath* and other German vessels, on suspicion of carrying contraband of war, reveals German diplomacy in a very unfavourable light. Count Hatzfeldt, the German Representative in London, acting under instructions from Berlin, commenced by presenting a note to Lord Salisbury, in which he declared that "according to the recognised principles of international law there cannot be contraband of war in trade between neutral ports." Then in a second communication demanding the immediate release of one of the ships, he said:—"I am further instructed to request your Excellency to cause explicit instructions to be sent to the commanders of British ships in African waters to respect the rules of international law and to place no further impediments in the way of trade between neutrals." It would be difficult to be more dictatorial or more discourteous. Lord Salisbury's reply was this:—"I received with some surprise a communication from the representative of a Power, with whom Her Majesty's Government believe themselves to be on the most friendly terms, worded in so abrupt a manner, and couched in language which imputed to Her Majesty's naval commanders that they had shown a disrespect to international law and placed unnecessary impediments in the way of neutral commerce. There is no foundation for these imputations." The British Foreign Secretary had already shown that never before in the history of war had there been a case of a belligerent without a sea-port receiving supplies through neutral territory, and that, consequently, the principle of international law to which the German Government so confidently appealed, had not received the sanction of practice, whereas, on the other hand, the right of a naval Power to seize and search vessels suspected of carrying contraband to a neutral port for the use of an enemy had been emphatically asserted by high authority. Lord Salisbury maintained this view of England's rights as a sea Power, but, at the same time, he expressed regret for the inconvenience caused by the stoppage of ships which had not been found to be in the wrong. The German Government capped its strange action when Count von Bülow, ignoring Lord Salisbury's reservations, paraded his concessions only before the Diet, leading his hearers to believe, as *The Times* says, that the British Government had made a complete, not to say au ignominious, surrender." He added, "We trust that the British naval authorities will not again proceed, without sufficient cause, in an unfriendly and precipitate manner against our ships." *The Times* discusses this correspondence in an altogether unwonted tone. "We have always felt," it writes, "that this country and Germany ought to be good friends and that their amicable relations tend not only to promote the interests of both nations, but to secure the peace of the world. If the maintenance of such relations has been rendered difficult, it is not the fault either of the British Government or of the British people. International intercourse between civilized States is not possible without some respect for good manners and good feeling. Count von Bülow's admirers boast that he is the reviver of the Bismarckian tradition. But to imitate the *Grobheit* of the great Chancellor does not give his disciple any claim to the power or the insight of the original. At any rate, the Germans who think that unmannerly and dictatorial rudeness is the proper method of dealing with this country had better make up their minds that they are on the wrong tack altogether." There can be doubt that Lord Salisbury did not allow Count von Bülow's speech in the Reichstag to pass unnoticed, but the correspondence does not extend to that phase of the incident.

FRENCH AFFAIRS.

The Times has deemed it advisabie to write a leading article deprecating the idea which apparently prevails among a certain class of Frenchmen that, after disposing of the South African Republics, England intends to turn upon France. Such an idea is ridiculed by the great journal. It speaks with contempt of the Boulevard press of Paris, which is "as foolish and as ignorant as it is malignant"; it treats with equal indifference the "journals in the pay of the enemies of the Republic," and it emphatically differentiates the chatter of these newspapers and of the whole tribe of political adventurers from the sentiments of serious thinkers in France, and of the statesmen now in power, whose attitude towards Great Britain has been not merely "correct," but has "contrasted by its friendliness with that of other Powers." "We appreciate and are not ungrateful for the conduct of M. Waldeck-Rousseau and his colleagues," writes *The Times*. "They know quite well that we have no quarrel with them and that we have no wish to have any quarrel with them. They know, as we know, that a war between the two countries would be ruinous to both and that it is the *tertius gaudens* who would profit by it. The way in which both Governments have acted over the

Digitized by Google Original from CORNELL UNIVERSITY

unpleasant but trumpery incident at Bordeaux the other day shows that both desire to preserve the existing good relations between them undisturbed. So long as M. Waldeck-Rousseau's Cabinet remain in office, good citizens, we believe and trust, may sleep in peace on both sides of the Channel." These utterances of the leading British journal were well received in Paris. The *Débats* especially referred to them with satisfaction, and other journals, though more reserved in their tone, were frankly pleased to see that Englishmen distinguish between the organs of real French opinion and the gutter sheets which have been screaming in such malignant tones for the past few months.

Lord Salisbury's reply to the two Presidents' proposals for peace—if their extraordinary note can be properly called a proposal—elicited various expressions of opinion in Paris. The underlying tone was, as usual, hostile to England. There were exceptions, however, and we prefer to quote them. The *Débats* wrote:—

"We regret the reply of England doubtless, but the logic of British patriotism required it. This logic, also, is just what makes us sceptical of any pacific intervention. . . . The Afrikanders are trying to interpose, and their deputation is going to London to endeavour to smooth matters over. England is certainly conscious of all the difficulties which the discontent of the Cape Dutch might hereafter create, but she disregards them. Sufficient for the day is the evil thereof, and the task of the moment is to enforce on the two Republics the authority and unshakable resolution of the country."

M. Yves Guyot, writing in the *Siècle* with reference to Boer threats, said:—

"If the Boers fancy they can make the English flinch by such measures of intimidation they show a simplicity equalled only by that of the newspapers which defend them. The Boers will not destroy the mines, for that is impossible. They may destroy the plant and put them out of order, but this damage will be speedily repaired. The cost of this will be known, whereas it was impossible to foresee the extent of the exactions in which the Boers might indulge. Such measures, moreover, worthy of the confiscation decree of December 25, clearly indicate their character. The destruction of private property ashore in time of war is condemned by all European countries. The champions of the Boers, in saying that they will resort to them themselves, show that they are at the low-water mark of the civilization of white races."

The *Temps* and the *Liberté* endeavoured to strike a chord not unlikely to find an echo in many French breasts. They suggested that the subjects and citizens of neutral States might be seriously injured if the Boers were driven to desperation. "French thrift," wrote the latter journal, "has invested a good milliard in South Africa. What would become of it? Here are moral responsibilities for a great Power like France, and we really do not see how she could take no concern in it." These fears certainly were not without justification, looking to the tendency shown by the Boers to wantonly destroy private property, as in the case of the Natal coal mines.

The *Figaro* of March 11th contained an article which contrasts pleasantly with much that has appeared in French journals since the war began, It is thus epitomized by the Paris correspondent of *The Times*:—

"France for some weeks has been incurring a great danger, and the Press should have the courage to point out this danger in order to prevent cruel disillusions or terrible surprises. The war now being waged in South Africa, which might have been avoided, no doubt, by just concessions on both sides, has created in France for one of the belligerents a current of sympathy which proves how our chivalrous and loyal country is aroused at the contact of noble ideas. . . But we should avoid intemperate zeal in our expressions of sympathy, offensive remarks, obscene caricatures, or drawings in bad taste. This, unfortunately, is what has been done too often during the last few months. It is this noisy attitude that we should abandon . . ."

The article goes on to urge the propriety of the Queen being placed entirely outside all discussion. No doubt, it adds, in Germany the attacks on England have been just as violent as in France, but the Germans, being subjects of the Sovereign, are not in a position to give their anti-English demonstrations the same significance or weight as similar demonstrations inevitably obtain in France. William II. alone has the right to think, to speak, and to decide for his people, and whatever the Germans may do they cannot compromise the foreign relations of their country so long as the Emperor wishes otherwise. Not so in France.

"France is a Republic, and its citizens are responsible. That is why, as a reply to the obscene caricatures posted and sold everywhere under the shelter of impotent laws, the Queen one day ordered her Ambassador to absent himself from Paris. This order, it is now known, was given by the Queen herself to her representative. Sir Edmund Monson has since returned to his Embassy. But the Queen, who last year facilitated the settlement of the Anglo-French difficulties in Africa, has during the last few weeks considerably charged her view and wishes. The fact is indisputable and known everywhere in Europe. Was the lecture delivered at Bordeaux by M. Lorin, Professor of Colonial Geography at the University of that city, any better . . . ? Sir Edmund Monson, it is said, sent yesterday to the French Government the report of the British Consul with an expression of the hope that these manifestations, which had been reproved by the entire population of Bordeaux, will not be renewed at other points on French territory. Thus may M. Delcassé, our Minister for Foreign Affairs, be faced with new difficulties, although his loyal and prudent speech, applauded in December last by the entire Chamber, has already reassurred all good spirits across the Channel?

"Why all these pin-pricks? Are we going to smash windows, as they did those of the Consulate at Bordeaux, or do we want war without being able to select a favourable opportunity, without having prepared the means, and against a people already rendered stronger by the lessons just learnt in Africa? . . . . Let us reserve and husband our energy. Let us stand together and, confident in our own strength, confident in our superb army, as well as in the ties formed and recently made closer between two friendly nations, work without ceasing until the day when some just cause calls for action on our part."

CHINESE NOTES.

At last some perceptible progress seems to have been made in the work of river improvement at Tientsin. So much has been accomplished that that lighters can now ascend the river with a full cargo whereas hitherto they could not get up with more than half a load. It is expected that the next freshet will restore the river to the navigable condition of by-gone years.

A most interesting statement is made by a correspondent of the *North-China Daily News*. He declares, on the evidence of a Chinese employé, that a military B.A. having been killed in a recent faction fight near Wuchang, his slayers considered it necessary that two men should be handed over to the Authorities as the murderers. In order to procure the necessary individuals a sum of a thousand dollars was offered, and it speedily produced an opium-smoker who had squandered all his property and an invalid whose life did not seem likely to be much longer. These men were perfectly willing to die for the purpose of providing for their families. Certain complications have thus far prevented the consummation of the design, but the striking fact remains that in China a man can easily be found to lay his head on the block for five hundred dollars. The Chinaman who made the revelation seemed to think the performance quite as natural as that a thief who stole with his hands should pay with his buttocks, and he moreover alleged that there would not be the least chance of the Authorities' finding out the deception since perfectly clear and convincing testimony would be provided to accompany the two men's confession. The moral suggested by the correspondent is, how much was paid for the two men that have been put forward as the murderers of Mr. Brooks?

As to Mr. Brook's murderers, however, the above correspondent seems to be labouring under a false impression. The latest news is that fifteen men were arraigned on the charge of killing the unfortunate missionary, and that three were convicted of having actually done him to death. Of these three, the man that dealt the final fatal blow was sentenced to be beheaded and has already suffered the penalty. Another, whose guilt was scarcely distinguishable from that of the first, would have escaped capital punishment under Chinese law, but the British Consul, who was present during the trial, urged that he should expiate his crime with his life. He was therefore sentenced to strangulation. The execution is deferred, however. Two others among the fifteen were found guilty in a lesser degree. One was condemned to 10 years' incarceration, and has since died in prison—probably he suffered more than if he had been beheaded—and another was sentenced to two years' banishment. Everything seems to show that this was a *bonâ fide* trial. The further penalties were that four headmen from the villages to which Mr. Brooks had been taken should be flogged and dismissed perennially from office; that two village elders should pay Tls. 500 for a memorial tablet to be erected at the scene of the murder; and that the Governor should pay Tls. 2,000 to build a memorial chapel at Pingyin, Mr. Brooks' station; to place a memorial in his school in Canterbury, and to cover the losses incurred by the native Christians in the district.

The Boxers are very far from being quelled in Shantung. Everything tends to confirm the statement recently circulated that Peking is not anxious to deal severely with these men. The Governor, Yuan, is hampered on one side by Peking's instructions and on the other by a local judge who persists in passing lenient sentences on the Boxers brought before him.

The German commissioners now visiting Shangtung in the interests of the railway say that the line can not be finished before three years. As the same thing was said two years ago, people now conclude that the delay will be five years.

There is a very clever letter from "A Hankow Resident" in the *North-China Daily News*. The theme is ancient, the failure of Her Majesty's Government to assert and protect British rights in China. But the writer, instead of confining himself to general declamations, as is usually the case, gives chapter and verse in support of his views. He alludes to the case of the *Kowshing*, which, after six years' delay, remains still unsettled, and he very pertinently asks whether there would be any doubt about the responsiblity of the British Government if one of the ships chartered by it for the conveyance of troops to South Africa was sunk by the Boers, and if the disaster was due to the conduct of the British troops on board. It is indeed very wonderful and inexplicable that the Chinese Government was not compelled long ago to make due compensation to the owners of the Kowshing. The writer further adduces the case of Messrs. Jardine, Matheson & Co.'s land at Hankow which, after it had been in possession of the firm for 40 years, the Russian Government was allowed to include in its new concession; and he describes how the Russians, after themselves employing Cossacks to prevent Messrs. Jardine, Matheson & Co. from fencing the land, made diplomatic representations because English marines were ultimately used to protect the fencers. With such experience before them, the subjects of the Queen in China cannot be blamed, says "a Hankow Resident," if they hesitate before launching out upon new enterprises. But we are disposed to think that neither the land question nor the *Kowshing* question is quite so simple as this writer appears to believe.

The German steamer *Sibiria*, *en route* from Kobe to Shanghai, picked up 12 Koreans from a disabled junk. A high sea was running at the time of the rescue, and the operation presented grave risks, the chief officer having to make several trips to bring off the men.

It is stated that the salaries given to certain members of the Imperial Chinese Customs on the occasion of their recent promotions to the rank of Commissioner and Deputy Commissioner were fifty per cent. below the sums hitherto granted, and there is much uneasiness lest this should prove the beginning of a new system.

Colonel Denby, formerly United States Representative in Peking, says, at the conclusion of an article headed "Our Relations with China":—"The Empress Regent in all her actions is influenced solely by what she conceives to be the welfare of China. She is one of the great

Digitized by Google Original from CORNELL UNIVERSITY

women of the world, and will go down to history as the compeer of Catherine, Elizabeth and Victoria." Elsewhere he writes about the Emperor Kangsii, "he has always been a devoted son to her, and she has repaid him with a mother's affection. It is not conceivable that she is influenced toward him by any other sentiments than those which are friendly and kindly."

The Boxer movement is reported to be spreading to northern Chihli. It is anticipated that the insurgents will find many recruits there, since the slaughter carried out by the Chinese Government in 1889 at the instance of a foreign Power, has never been forgotten.

Two British gunboats, the *Woodcock* and the *Woodlark*, left Ichang on the 15th of April, bound for Chungking. There is much curiosity as to whether they will succeed in making the voyage.

The *North-China Daily News* characterizes these statements as impudent, and winds up a strongly denunciatory article with the following words:—"This ignorant, timid, self-willed, avaricious, sanguinary usurper the compeer of the best and greatest queen that ever reigned! Colonel Denby, nothing that you have done in the past or can do in the future will atone for such a gigantic—misstatement as this." There are two sides to every story. Our Shanghai contemporary may be interested to learn that more than one Japanese statesman would endorse Colonel Denby's verdict in preference to that of his Shanghai critic. The Empress-Dowager is an enigma. We do not believe that any one has fully solved her character yet, and still less do we believe that the materials furnished by rumour are sufficient for the purpose.

It is alleged that secret instructions were recently sent to the Viceroy Li from Peking desiring that Admiral Yeh of the Peiyang squadron should proceed with two of his fastest ships to cruise in the neighbourhood of Singapore in order to assist the men sent to assassinate Kang Yu-wei, and that, in spite of Li's objections, the cruisers were sent. It is exceedingly difficult to credit such a story, for the cruisers could not possibly have been expected to render any assistance.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense, responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

ST. GEORGE'S DAY.

(To the Editor of the "Japan Mail.")

Sir,—On behalf of the above Society I beg to inform you that a T.T. for £180=¥1,781.45 at ex 2/-0¼ has been remitted by the Hongkong and Shanghai Bank to-day to the *Daily Telegraph* Fund in aid of our soldiers' widows and orphans.

The members of the St. George's Society contributing ¥875 to this amount in lieu of their annual ball.

I am, dear Sir, yours faithfully,

HARRY J. SHARP,
Honorary Secretary.

St. George's Society of Yokohama and Tokyo.
April 23rd, 1900.

THE FUKUI FIRE.

To the Editor of the "Japan Mail."

Sir,—Please allow me to present to your readers some facts concerning the fire which destroyed one-fifth of Fukui city on the morning of the 19th inst. Several days without rain preceded and on the night of the calamity there was a strong wind. From about midnight on Wednesday, for five hours, the fire raged, cutting a wide swathe through the south-western part of the city extending even to adjacent villages, four of which were partially destroyed. For the city itself, more than two thousand houses, two hundred *godowns*, thirty temples, twenty-two shrines, and one school building were totally destroyed. Nine pesons were killed; fourteen seriously and three hundred and forty less seriously injured. Some of the stories we hear of the suffering are heartrending.

Of the buildings destroyed, not one in twenty was insured. This catastrophe following so closely the floods of last September, when four-fifths of the houses of the city were innundated, certainly calls for sympathetic consideration. This need is emphasized by the fact that the silk industry, upon which a very large proportion of the people rely for support, has been for some time in a greatly depressed condition.

In view of this need, should anyone feel like contributing to the sufferers, Mrs. Jones and myself will gladly personally superintend the distribution of any monies that may be sent.

Yours truly,

WILLIAM YATES JONES,
Amer. Pres. Miss.

Fukui, Echizen, April 21st, 1900.

XXXIII. YEARS OF JAPANESE FINANCE.

A member of the *Nichi Nichi* staff recently interviewed a well-known statistician in the capital, and has been furnished with various tables which show clearly the financial position of Japan from the 1st period till the 33rd fiscal year of *Meiji*. One of these gives the gross total of revenue and expenditures for 33 years at 3,287,827,022, *yen* and 3,019,892,489 *yen* respectively, leaving a balance of 367,934,532 *yen*. The table given below shows clearly the ratio of expansion up to the current fiscal year:—

A COMPARATIVE TABLE OF REVENUE AND EXPENDITURES FOR 33 YEARS.

Period.	Revenue. Million Yen.	Expenditures. Million Yen.	Rates borne to the 30th years account (1,000). Revenue.	Expenditures.
1st	33	30	146	136
2nd	34	20	152	92
3rd	20	20	93	90
4th	22	19	98	86
5th	50	57	223	258
6th	85	62	378	280
7th	73	82	324	368
8th	86	66	381	296
Fiscal year.				
8th	69	69	307	309
9th	59	59	263	265
10th	52	48	231	227
11th	62	60	276	272
12th	62	60	275	270
13th	63	63	280	282

33rd	254	254	1,124	1,138

REDEMPTION OF PUBLIC BONDS.

During last month the Government purchased 5 per cent. Imperial bonds to the amount of 1,422,400 *yen* face value, at 90.50 *yen* per bond. This is the first attempt made by the Government, remarks the *Keizai Zasshi*, for the redemption of bonds by purchase. The accounts now stand as follows:—

	Yen.
Amount of issue (for public undertakings)	41,129,050
Same (for railways)	17,907,350
Same (for Hokkaido railways)	1,419,950
Total	60,456,350
Redemption by purchase	1,442,400
Balance (unredeemed)	59,013,950

NEWS OF THE WEEK.

A man fell from the third story of the Kabukiza, Tokyo, on the 24th inst. He was picked up dead.

The Osaka Shosen Kaisha's steamer *Miyajima Maru*, which was sunk in Kagoshima Bay, was floated on the 23rd instant, and will be taken to the Mitsu Bishi Dock at Nagasaki for repairs. Six thousand tubs of unrefined sugar were salved.

The last meeting of the Yokohama Literary Society for the present season, is fixed for Friday, May 4, when Mr. Otis A. Poole will deliver a lecture entitled Wakai Japan. Mr. Poole will illustrate his remarks with stereopticon views taken by himself.

Mr. H. J. Sharp, Manager of Messrs. Kelly and Walsh, Ltd., No. 60, Yokohama, has instituted a an action in the Chiho Saibansho against a man calling himself Hilton, for the recovery of a sum of money loaned to the latter a few weeks ago. Mr. Sharp gave his evidence on Thursday before a Procurator.

In the Yokohama Chiho Saibansho on Thursday, judgment was given in the case of Kato Shimazo *v.* Messrs. Oppenheimer Frères, No. 13, Yokohama. Plaintiff claimed the delivery of a certain quantity of alcohol, alleged to have been purchased by him. Judgment was given in favour of the defendants, Messrs. Oppenheimer Frères, the costs to be borne by the plaintiff.

Another case of plague was reported on Wednesday morning from Osaka. This is the case of a child of one year who died on the 21st inst. Plague germs were located in the blood and the case was established as one of plague. This is the fourth, says the *Kobe Herald*, since the renewal of the plague this month.

One goes abroad to learn news of home. A writer in the *Shanghai Mercury* says that the Yokohama Foreign Chamber of Commerce are taking the lead in an endeavour to cut down the tiffin interval to half an hour and to restrict Saturday half-holidays! And on this strange perversion of the facts, he naïvely draws a moral.

A bill to construct a large hotel in Okaka out of city funds will shortly be introduced in the City Assembly. The reason given for the introduction of the bill is that it is necessary to make preparations for an influx of visitors when the exhibition is held in the city in 1902. As it is held to be impossible for a private individual to undertake the work, it is proposed that the city funds shall be drawn upon for the purpose.

The Nippon Bicycle Club road race for the Kirin Beer Cup and other prizes takes place at 2.30 p.m. to-morrow. The route is from Fujisawa to Kodzu, a distance of about 19 miles, under sealed handicap, all riders starting at scratch. In case of rain the race will be postponed till Sunday. The following is a list of entries:—W. N. Wright, E. Powys, Jr., W. B. Mason, H. Y. Irwine, J. Helm, Jr. The cup, which has to be won thrice to become the absolute property of a competitor, has already been won once by Irwine and Mason.

We have received the Report of the Commissioners of Education, 1897-98, of the United States, a most voluminous volume packed with statistics and articles dealing in an interesting fashion with every subject having connection with the science of education, both in America and elsewhere in the world. The late Mr. Consul-General Gowey has an admirably lucid article in the book, on the "Practise of Professions in Japan," dealing with lawyers, veterinary surgeons, medicine, dentistry, pharmacy, etc.

The *Shogyo* says on the 21st instant a conference was held of representatives of the various steamship companies in Yokohama engaged in the American trade and it was decided that freights for tea should be raised to 1½ cents (American currency) per pound. Competition had reduced freights so low as not to yield a profit, and the rate has now been doubled. It is said that some

Digitized by Google Original from CORNELL UNIVERSITY

of the American railway companies are also contemplating a conference in order to further lessen the excessive competition. The Yusen Kaisha is said to have signified its willingness to join this conference. The revised scale of freight will be enforced in Yokohama from the 1st of June.

The Italian Government has purchased the Borghese Museum and Gallery of Pictures for a hundred and forty-four thousand pounds, which is to be paid to the family in ten years by annual instalments. Every great collector in the world has been urging the Borghese trustees to sell these collections for many years past, and twenty-four thousand pounds was offered for a single picture. The law forbids the trustees to sell the collections outside of Italy, and if a foreigner had purchased any of the pictures they could not have been removed from the country. It is therefore a forced sale, and the Government has made a wonderful bargain, for if the collection had been disposed of at Paris or in London they would have realised at least three hundred thousand pounds.

LAW CASES.

The hearing of the case of Hosomi Gentaro v. W. Schroth was resumed the other day in the Kobe Chiho Saibansho. The question was as to whether a bargain relating to 35,000 lbs. of tea had been arrived at. Plaintiff claimed that the bargain had been completed as the godown man had given the receipt for the tea, but defendant protested that the man was only entitled to receive or send for goods by order, and was not authorised to make a bargain.

Counsel for defendant admitted that delivery had been taken of the tea, but said a disputed point was as to whether the tea was sold or sent in to be sold on commission. He contended that the latter was the case. He said, moreover, that plaintiff was about to become a bankrupt, and was not able to offer a guarantee to meet any deficit that might result on the sale.

The Judge announced that judgment would be given on the 30th inst.

Judgment in the case instituted by Mr. Yegawa Chojiro against Mr. H. Lucas, claiming payment of a promissory note for *yen* 300, was delivered at the Kobe Chiho Saibansho on Thursday.

The defence was that the note was untransferrable, and that plaintiff, who had obtained it from the person to whom it was originally given, was therefore debarred from suing on it. It was also claimed that the note was invalid, as bearing no address. The Court gave judgment for plaintiff, with interest at 7 per cent. and costs.

The hearing of a case instituted by Mr. Ishihara Inosuke, a wholesale dealer in clocks, at Osaka, against Mr. F. E. Barto, Manager of Messrs. Vantine & Co., No. 112, Kobe, took place before Judges Oshima, Kamada, and Hiyama at the Kobe Chiho Saibansho recently. Counsel for the plaintiff stated that he claimed *yen* 2,930.77. On the 27th June, 1898, plaintiff entered into an agreement with the defendant for the supply of clocks to the value of *yen* 2,930.77. Delivery was to be made in two lots, the first shipment being due at Kobe in November.

Counsel for defendant admitted that the contract was made, and said the matter was reported to the head office in the United States immediately. The head office wrote out saying that the Kiston Clock Co. was very busy and was not able to fulfil the order, and the matter was thereupon referred to the plaintiff, but he refused to listen to the representation made and instituted this action. Plaintiff knew well why defendant had been unable to carry out the contract, the 2nd clause of the contract containing the explanation. The clause states:—"Delivery of the goods may be delayed if due to a strike or other unavoidable cause." That being the case, he submitted plaintiff could not insist on his client carrying out the contract.

Evidence was called on both sides, and the case was adjourned.

A case instituted by Mr. Shinagawa Chojiro, Kobe, against Mr. H. Lucas, No. 24-A, Harima-machi, claiming payment of a promissory note for *yen* 300, came on before Judges Oshima, Kamada, and Hiyama in the Kobe Chiho Saibansho, on Aprli 18th.

It appeared that plaintiff had the note from a party named Ueda, to whom defendant had given it. Defendant now refused to pay.

Defendant's counsel pointed out that it was definitely stated on the back of the note that it was not transferable. Plaintiff had therefore taken it over at his own risk, and defendant was not liable to be sued by him. He also pointed out that the note bore no address, and was therefore invalid.

Judgment will be given next Wednesday.

In the Yokohama Chiho Saibansho, on Tuesday, Judge Fujise resumed the hearing of the claim instituted by F. N. Upton against H. Ahrens & Co., No. 29, Yokohama, for the payment of *yen* 742.96 salary. Mr. Akiyama asked the judge if the plaintiff had furnished security for costs, as ordered. Judge Fujise replied in the negative. Mr. Akiyama asked that the case should be dismissed at once, as plaintiff had failed to comply with the order of the Court. Judgment was given in favour of the defendants, costs to be borne by the plaintiff.

Judgment in the case of Kaneko v. Koch and Co. was also delivered by Judge Fujise. The petition of the plaintiff was dismissed with costs.

Judge Fujise further delivered judgment on the claim brought against Messrs. Oppenheimer Frères, by a Japanese merchant, for the fulfilment of a contract concluded with the merchant by a Japanese *banto* of the firm, without obtaining formal permission of the firm's representative. The case was dismissed, the costs to be borne by the Japanese merchant.

THE LOSS OF THE "IRANIAN."

Naval Court of Inquiry.

A Naval Court of Inquiry was held on Tuesday morning in the British Consulate, Yokohama, into the circumstances attending the loss of the British ship *Iranian* and the death of William Smith. The Court consisted of the following:—Mr. E. M. Hobart-Hampden, H.B.M's. Vice-Consul; Lieut. P. Nelson Ward, H.M.S. *Barfleur*; Mr. Tocque, master of the P. and O. steamer *Rohilla*, and Mr. W. S. Thompson, master of the *Argyll*; Mr. Hewlett, acting as clerk.

The order for the opening of the Court, issued by Rear-Admiral Bruce, second in command of H.M. Squadron on the China Station, and other formal documents were read, including the protest of the master and his written statement of the facts.

Andrew Watt, master, was then called. He said that between noon and 5 p.m. on the 3rd April he steered a northerly course. From 7 a.m. to noon it was calm; shortly after noon it came on to blow from west north west. He had good observations, and found it to be 138.51:30 East. He then steered north by east half east by the compass. About 8 p.m. he shortened sail, and about 8.30 p.m. sighted Redfield Rocks, about half a mile to the west. He ran the ship off to East about two miles and then hauled her up again, to N. E. by N. He then went in the charthouse to lay out the course, and as he was in the act of doing so the man on the look-out reported a rock on the port bow and one on the starboard bow almost at the same time. He got on deck immediately, but by that time she was on the rocks. In about a minute afterwards the current swung the ship round south and west, bringing the wind about two points on the starboard quarter. He ordered the lifeboats out, as the ship was settling down quickly. The starboard watch manned the starboard lifeboat, which was put out first, the second and third mates being in charge. The port lifeboat was then got out. He then went to the cabin to get the papers, but found the place full of water and could not get hold of them. He immediately went on deck again and found all the men in the boats except William Smith, an able seaman. Witness told him several times to jump into the lifeboat, but he did not make any attempt to do so. By that time the water was in the lee scuppers of the poop, and witness had to jump into the port lifeboat himself. He passed Smith an oar from the port lifeboat, and called to him to catch hold of it, saying he would pull him on board, but he did not make any attempt to do so, or even get over the railing. As the sea was very rough he considered it not safe to stand by the ship, as they could not do anything and were in danger of getting the boat broken. It was then dark. They pulled away from the ship a little distance, and witness then went from the port to the starboard lifeboat, giving the mate instructions before he left to steer north. He then took charge of the starboard lifeboat and proceeded on a northerly course. About 7.30 a.m. they landed at Shikimajima. During the night they had experienced a very rough sea running about 15 feet high, water coming into the life-boat occasionally. He had only been able to save the ship's register, a chart, epitome, work book, and a few other books, and two chronometers there were in the chart house. The official log was in the cabin, and he could not get it, as the place was full of water. He had taken up the chronometers from the cabin at the first alarm. There was a difference of 3 seconds between the two chronometers. The ship was five miles to the westward of the position given by the chronometer. He had read in the Admiralty Sailing Directions all about the Redfield Rocks and the set of the current. This was his third time this way. He thought he was sailing a safe course. There was a clear moon at the time and any land of any height five miles off could have been seen easily. The moon set about 10 o'clock as far as he would tell. They were with the wind abeam when he altered his course, and they were going about 10 or 11 knots an hour. The rocks might have been 11 feet high when he saw them last Sunday week. He did not see the rocks before the accident, but there was a heavy sea breaking after she struck. The fore part of the ship was on the rocks, and she was then swung round. She listed over perhaps six or seven degrees to port. He expected the bottom forward was greatly damaged, for the hold was full of water within five minutes. There was only one water-tight compartment forward. He expected the damage extended aft of that. He did not think the stern touched the rocks at all by the feel of it. He believed the ship was torn from before the foremast nearly as far as the main mast, about sixty or seventy feet. The man Smith would not move at all. Witness had seen him in the starboard boat before she left the skids, but he apparently got out again, and witness could not get him to jump in again. He was fairly active and a very quiet man. Witness supposed he might have been afraid of the boats being swamped. After witness was on the boat he held out an oar to Smith. He remained there three or four minutes. When he left the boat was not shipping much water; but it would not have been safe to remain there longer.

By Mr. Hobart Hampden—The crew behaved well. He did not think the rocks struck were properly marked in the chart.

By Mr. Thompson—He had told the men to keep a sharp look-out for rocks in case there should be any error. He was on deck from six o'clock till the vessel struck. Witness described the amount of sail he had on and the speed and course. From noon up to the time the vessel struck nothing had been seen. The witness was further closely questioned by Mr. Thompson with regard to various technical points. He had corrected his chronometers the last time he saw land. He thought the islands were placed too much to the eastward on the chart.

By Lieut. Ward—The ship was not heavily laden. She was drawing about 23 ft. 5in. aft. It was quite impossible to save any more of the papers than he did save. The look-out man's name was Nash. When he revisited the rocks he could see no trace of the ship. There was a smooth place near the most northerly rock which looked as if there might be oil escaping from below. This spot was about 30 feet across. When he left the ship all hands were sober. Smith was sober. He had no idea why Smith did not leave the ship; he might have been afraid that the lifeboat would be swamped. Witness had never had occasion to find fault with him.

The Court then adjourned for tiffin.

The evidence given by the first mate, John Jameson, was taken at length, and was practically to the same effect as the Master's. The second and third mate and the boatswain also gave evidence. The boatswain, questioned about the man Smith, said very emphatically that no member of the crew was under the influence of liquor.

The ship's carpenter, named Otto, said the starboard bilge was ripped open about 50 feet when the vessel went on the rocks.

Michael Nash, the look-out man, said the man he relieved told him to look out for rocks. Witness soon after reported a light, and the Captain came forward to look at it. He said it was a burning mountain, and that he (the Captain) knew where he was. The Captain went down the ladder, and had hardly got down when witness reported a rock on the port bow. The Captain ran up, and shouted out for the helm to be put hard up. The ship was kept before the wind a little and then brought hard up to the wind again. Witness then reported another small rock on the port bow, and they were almost on top of it directly afterwards. The Captain again shouted for them to put the helm hard up, and witness almost directly after reported another rock on the starboard bow, and

Digitized by Google Original from CORNELL UNIVERSITY

shouted for the helm to be put down again, thinking they might pass between them, as they were striking the other one. The vessel then struck. He ran aft, where the crew were getting the boats out. The vessel was going down by the stern.

By the Court—The light which the Captain said was a burning mountain was very high up. It looked like a furnace.

Another able seaman named John Lehy also gave evidence, and the inquiry was adjourned till this morning.

JUDGMENT.

The Naval Court of Inquiry into the loss of the British ship *Iranian* and the death of William Smith, able seaman, was resumed at the British Consulate on Wednesday morning.

Charles Richardson, the third mate, was recalled, and said the Captain was sober throughout the voyage. Witness had never seen him under the influence of liquor on board ship.

This witness was given leave to take a position on board the *Sikh*.

John Tunny, able seaman, gave evidence as to the circumstances of the wreck, but did not add much that was new. He said Smith appeared dazed and looked frightened. He had "funny ways."

During this witness's evidence several of the crew interrupted from time to time, and the Chairman had to order them to withdraw.

The Captain was recalled, but had practically nothing to add to his previous statements. He was quite sure he had had no drink on the day of the wreck. This was his first ship as master. He had joined her as mate, and had been in command a little over three years.

The Court adjourned, and on reassembling at 4 o'clock judgment was delivered as follows:—"That the Master of the *Iranian* made an error in judgment when he elected to stand on towards the Redfields Rocks after dark, instead of putting the ship on the other tack for a few hours to thus prevent the chance of nearing this dangerous locality during the hours of darkness.

The strong currents which may be experienced in this vicinity make it a dangerous proceeding to approach the rocks unless absolutely certain of the ship's position, and under most favourable circumstances.

That the loss of the *Iranian* was due to overestimating the strength of the current and its direction in the neighbourhood of the Kedfield Rocks.

That owing to the speed of the vessel at the time of the accident, the Master's decision to instantly abandon her was amply justified. That it was extremely unfortunate that the log and other ship's records were unavoidably lost, as their corroborative evidence would have been of considerable value.

The discipline appears to have been very good, and to have been maintained throughout.

The vessel was apparently well found, and in all respects seaworthy.

The death of William Smith, A.B., which must be presumed, is a question of great importance.

It appears that the responsibility rests entirely with the man himself, and yet the Court cannot but express its regret that more strenuous efforts were not made to save him from what must have appeared to them all as almost certain death.

The apparent lack of interest evinced in the fate of their missing shipmate can only be explained by imagining all present over-estimated the danger of remaining a little longer by the vessel.

Finally, the Court decides that the certificate of the Master will not be dealt with, but recommends that more cautious practice be pursued in future.

The Court is of opinion that the officers and crew are entirely free from all blame in connection with the loss of the vessel and cargo.

The mates' certificates are accordingly returned."

The Master was also ordered to pay the costs of the Court, fixed at £12 5s. 1d.

The President of the Court, for the information of the Master of the *Iranian*, stated that the Japanese Naval Department had despatched two vessels to the scene of the disaster. The *Yokosuka Maru* was prevented by the state of the weather from reaching the spot, but at 9.20 on the morning of the 16th instant the *Takao Kan* arrived within a mile or so of the Sambontake rocks and made a circuit of them. No traces of the vessel were seen. Broken water here and there revealed the existence of sunken rocks, some of which were not on the chart, and the vessel therefore did not venture to approach nearer; but a cutter was sent to make a closer inspection and reported no vestiges of the wreck.

RUSSIA.

The Odessa correspondent of *The Times* telegraphs, under date of March 11th:—

Last week upwards of 1,500 men left here for the Far East by one of the Volunteer Fleet cruisers, and we are informed that next week another contingent will leave in the same manner from this port for the Far East. Some time ago, when the British were meeting with reverses in South Africa, orders arrived here from St. Petersburg countermanding the previous order for the departure of these cruisers to the Far East during the current year and ordering that of the five fastest cruisers the only one to keep its engagements would be the *Saratoff*, while the *Orel*, *St. Petersburg*, and *Kherson* were to perform only one voyage to the Far East and back and then to lie up for the rest of the year in order to be ready for emergencies. The *Moscow*, the latest addition to the fleet of cruisers, has been ordered to remain at Sevastopol. Much comment on this order arose, and it was generally believed that these cruisers were to be employed, if necessary, in transporting men from this port, Sevastopol, and other ports of the Black Sea to Batoum *en route* for the Transcaucasus. In previous despatches I have called attention to the extensive transport of men from this part of Russia to her Asiatic possessions in the Far East, and the despatch of troops is likely to be still more considerably increased, especially since the late dispute between Russia and Japan respecting Korea, when the position became so acute that in St. Petersburg an outbreak of hostilities was quite expected.

We quote the following from the St. Petersburg correspondent of *The Times*:—

The Russian Press continues, in a helpless and hopeless sort of way, to mislead its readers with the idea of intervention. The observation of *The Times* that no responsible statesmen in Europe are prepared to turn the South African war into a world-wide conflagration is taken up by the *Russia*, which replies by asking if there is any responsible statesman in Europe at the present moment with power and authority enough to attempt to stem the seething tide of popular indignation. This query, as far as it applies to Russia, is easily answered. A mere scratch of the pen, with no more power than that which is wielded by the ordinary Russian authority in such matters, would be quite sufficient, as the *Rossia* well-knows, to put an end to the newspaper agitation against England, and no one would dare to raise a murmer. The fact that this has not yet been done, in view of the official correctness of the Government, is a plain proof that the latter does not regard the agitation in question with any degree of displeasure. Journals are gagged and reprimanded here every week for much less important and even trivial matters. The Press is not allowed to attack other European Powers, with which this Government is on friendly terms, when it does not suit the purposes of the Russian Foreign Office, as more than one case in point goes to prove. Not long ago the editors of the St. Petersburg newspapers were forbidden to agitate against Austria, and the desired result was, of course, immediately attained. There is a still more recent and more striking case in connexion with the Press propaganda against England, which clearly discloses the attitude of the Imperial Administration. The other day the editor of the Jewish organ, the *Voskhod*, was severely taken to task by the chief of censorship because his paper formed the sole exception among its contemporaries in being strongly pro-English. The answer, I am told, was that England had been too good to the Hebrew race, all the world over, to allow of any anti-English sentiment in a Jewish paper. The incident is an instructive one which clears away almost the last vestige of doubt.

The effects of the newspaper agitation against England are beginning to show themselves in many absurdities. A letter to the *Novoe Vremya* from Saratoff makes a proposal to boycott English manufactures, and another correspondent writes to advise readers to boycott English literature by purchasing only Russian translations. The translation of English works is to be encouraged in order to restrict as much possible the sale of the originals. "Hatred of the English and parallel sympathy with the Boers," says to-day's *Northern Courier*, "is spreading ever wider and wider in Russian society and is now making its appearance in forms of higher culture." The office of this newspaper has received many letters on the subject from different parts of the interior. One epistle, signed by "nineteen haters of the English," insists upon Russian theatres and actors striking out of their *répertoires* all the plays of Shakespeare and other English authors. Seven booksellers of Moscow send to say that the detestation of England is so great that the sale of English books has almost ceased and sharing this feeling they strongly recommend their fellow tradesmen to do no more business in English works, which will redound to the benefit of their own native writers and publishers. Another correspondent actually wishes to propose a monument in St. Petersburg to General Cronje, instead of sending him a loving cup, for which a subscription list has already been opened.

SILK PROSPECTS.

The *Jimmin* publishes reports received in Yokohama from silk producers in various localities. Their gist is as follows:—

Tatsugasaki, Joshiu, and neighbourhood.—Silk rearing was commenced on about the 20th ultimo and the total output is expected to be 20 per cent. larger than last year. The weather continues chilly, but the supply of mulberry leaves is abundant. They are now quoted at 1.50 *yen* for 36 *kwan*.

Hamatmasu, Enshiu.—The fickleness of the weather this year has considerably obstructed the growth of mulberries, though the climate is now somewhat more settled. Wages of rearers are fixed at 35 *sen* for men and 18 *sen* for women.

Okawamachi, Mikawa.—The number of silkworms reared is estimated at 30 or 40 per cent. higher than the previous year, The appreciation of silk has induced speculators to engage in sericulture in a larger scale than usual, in some cases to a dangerous extent. The difficulty of procuring good silkworm egg cards is experienced in all parts of the district.

Yamada, Ise.—The season is some 7 or 8 days behind last year, and the mulberries have just begun to sprout. An increase of 20 per cent. in worms is noticeable in comparison with the previous year. The price of mulberries has risen by 10 per cent.

Makawa, Enshiu.—The thermometer stands at about 60 at noon, the weather generally being a little colder than last year. Still a 30 per cent. increase is anticipated in the rearing of worms this year. Mulberry is 20 per cent. higher than it was last year, 15 *kwan* being delivered for one *yen*.

DREGS.

The fire is out, and spent the warmth thereof,
(This is the end of every song man sings!)
The golden wine is drunk, the dregs remain,
Bitter as wormwood and as salt as pain;
And health and hope have gone the way of love
Into the drear oblivion of lost things.
Ghosts go along with us until the end;
This was a mistress, this, perhaps, a friend.
With pale, indifferent eyes, we sit and wait
For the dropt curtain and the closing gate;
This is the end of all the songs man sings.

ERNEST DOWSON.

RAJAH BROOKE.

Reviewing the Life of Rajah Brooke, by Sir Spencer St. John, G.C.M.G., which Mr. Fisher Unwin has brought out in that admirable series, "Builders of Greater Britain," the *Spectator* says—The benevolent despot has long been the dream of political enthusiasts. The very best of Governments, as we know to our cost, does but hinder the administration of a country, and the truth that liberty and order cannot be assured without a free and representative Parliament is the heaviest indictment of human frailty. Man is a creature only to be trusted with efficient safeguards. Give him untrammelled power, and he either falls below it or uses it unworthily. Yet now and again the impossible happens; there have been a few benevolent despots, and of these none was more benevolent, and at need more despotic, than Rajah Brooke.

James Brooke was born in 1803, and educated at Dr. Valpy's school at Norwich where George Borrow and James Martineau were among his contemporaries. His ambition was clearly defined even in his youth. "Could I carry my vessel," he wrote, "to places where the keel of European ship never before ploughed the waters; could I plant my foot where white man's foot had never before been; could I gaze upon scenes which educated eyes had never looked on, see man in the rudest state of Nature, I should be content without looking to further rewards." This ambition was fulfilled to the letter. Rajah Brooke planted his foot on the secret, unexplored places of the world, and so little reward did he win, that he ended his life in a house purchased by the meagre result of a public subscription. But from the beginning he followed his destiny without thought of the future, and the work that he did was never prompted by any other motive than philanthropy and self-sacrifice.

For a while he took service in the East India Company, which, he knew well, would never afford him the career he wished. And no sooner did he come into his patrimony—it was in 1835—than he purchased a ship, and, after a three years' trial, he equipped an ex-

Digitized by Google
Original from CORNELL UNIVERSITY

pedition to Borneo. The ship was the "Royalist" and here is Brooke's own description of the craft:—"She sails fast; is conveniently fitted up; is armed with six six-pounders, and a number of swords and small-arms of all sorts; carries four boats, and provisions for four months. Her principal defect is being too sharp in the floor. She is a good sea boat, and as well calculated for the service as could be desired." In this boat, then, he paid his first visit to Sarawak—the first of how many!—and before long he had joined Muda Hassim's army, and brought the civil war to an end. Even with his small experience he knew perfectly well how to deal with savage races. "Good temper, good sense, and conciliatory manners are essential," said he, "to the good government of natives," and with these qualities he was richly endowed. He ameliorated the condition of the people, he suppressed piracy, he encouraged trade of all sorts, he devised a practical method of despotism, and he enriched everybody but himself. Indeed, after the chief rebel Makota had been sent away, Brooke was the only true Governor of the country. But so scrupulous was he of honour, that he forbade even a tinge of exaggeration in his agent's reports. "I will become no party," said he, "to a bubble; or gain, or accept any negotiation from Government upon false grounds." Unhappily, the Government did not treat him with the same fairness which he extended to the Government. No sooner was he firmly established in Sarawak, than the politicians at home began their intrigues, and henceforth the life of Rajah Brooke was marred by harassing suspicion and unworthy reproach.

The intrigue was contrived by a discarded agent named Wise, to whom Messrs. Hume and Cobden lent a too willing ear. These gentlemen neither attempted to discover the truth, nor do we hear that when the truth was discovered to their discredit that they offered the smallest apology to their victim. Cobden's account of Rajah Brooke's position is a masterpiece of disingenuousness:—"Sir James Brooke," said he, "seized on a territory as large as Yorkshire, and then drove out the natives, and subsequently sent for our fleet and men to massacre them." Every point in this vague indictment is false, but the politicians did not deem it their duty to inquire; on the contrary, they listened at home to the slander of a discharged servant, while Brooke was doing his country's work abroad. And when at last the Government did issue the commission of inquiry, which the Rajah demanded at the first breath of suspicion, it was issued secretly, and Brooke himself heard of it by accident.

The inquiry was held, and Brooke was entirely cleared. But, as we said before, Messrs. Hume and Cobden offered no public apology. Indeed, no man comes well out of the difficulty, save the victim of Radical narrow-mindedness. And Rajah Brooke's protest remains an eloquent condemnation of Parliamentary intermeddling. "Do not disgrace your public servants," said he in the thick of the agitation, "by inquiries generated in the fogs of base suspicion; for, remember, a wrong done is like a wound received,—the scar is ineffaceable. It may be covered by glittering decorations, but there it remains to the end." But if at home he was regarded as a criminal, his return to Sarawak was hailed with universal enthusiasm. Was he not the country's saviour? And had he not suppressed those terrific pirates, who threatened Sarawak with their huge boats, eighty feet long, propelled by seventy oars? Of course Mr. Hume neither knew nor cared aught of the Rajah's exploits. The pirates were pronounced harmless fishermen, done to death by the avarice of an English adventurer. Nor did Brooke's splendid conduct in a war with the Chinese endear him to his countrymen, though he drove back the invaders with his own troops and his own money. But he did not bring the war to a successful termination without incurring a debt of £5,000. And then, indeed, his plight was serious. He had spent every penny of his fortune, and all that was left him was a pension of £70, given for a wound received in Burmah. Truly, it seemed like a triumph for Messrs. Hume and Cobden.

"I am weary," he wrote, "weary of heart, without faith, without hope in man's honesty." Nor was the most foolish step taken yet. Merely to prove a bold distrust in Brooke, the Consul-General in Borneo was directed "to send to the nearest English Colony all British subjects accused of crimes and misdemeanours within the Sultan's dominions, including Sarawak." Not only was this order in direct opposition to existing treaties, but it proved that the Government know not where Sarawak was situated. But rather than support the rule of Rajah Brooke, the English statesmen would have spent hundred of pounds in sending prisoners and witnesses to Singapore, that the theft of a shilling should be avenged! However, the Government received correction, and the benefits of Rajah Brooke's rule are not yet abolished.

Sir Spencer St. John's biography, an admirable number in an admirable series, is a proper panegyric of a great man. The biographer's enthusiasm is heart-whole and loudly expressed. And not a word of praise is forced or misapplied. Sir James Brooke was not only a great ruler he was a man of singular taste and charm. His library, unhappily destroyed by the Chinese, was sufficient proof of his many-sided learning; his house was a miracle of elegance. "I like couches," he once wrote, "and easy chairs, and newspapers, and clear streams, and sunny walks." And that which he liked himself, he would have put within the reach of his subjects. Nor did intrigue wholly destroy his pleasure. He said at the end: "I have been a happy man, and can pillow my head with the consciousness of a well-spent life and devotion to a good cause." Upon such a conscience as that not even the memory of Joseph Hume could throw more than a passing shadow.

NAVAL SQUADRONS IN THE FAR EAST.

The *Jimmin* gives the following comparative figures showing the strength of the Oriental squadrons of Japan, America, and other Powers:—

JAPAN.

Classification.	Number.	Tonnage.
Battleships	5	50,894
Cruisers	16	72,176
Vessels for coast defence	14	18,044
Gunboats	14	10,665
Despatch boats	3	4,273
Torpedo boats	7	4,113
Torpedo destroyers	7	2,049
Total	66	162,214

GREAT BRITAIN.

Battleships	3	35,900
Cruisers	8	55,890
Gunboats	9	5,763
River gunboats	4	404
Sloops	3	3,240
Despatch boats	1	2,200
Torpedo catchers	4	1,105
Store vessel	1	1,640
Surveying ship	1	620
Guard ship	1	5,650
Vessel for coast defence	1	2,750
Total	36	113,662

RUSSIA.

Battleships	3	29,316
Cruisers	7	58,666
Gunboats	7	7,148
Torpedo boats	2	800
Total	19	95,930

AMERICA.

Battleship	1	10,288
Cruisers	3	17,265
Gunboats	13	14,482
Vessels for coast defense	2	8,128
Cruiser, unarmed	2	6,095
Transports	5	14,113
Sloop	1	1,020
Distliling ship	1	2,716
Total	28	74,507

As to Germany, the numbers of cruisers and gunboats are given at 6 and 2, with a gross tonnage of 33,784 and 1,760 tons respectively. Italy is represented as possessing 5 cruisers, aggregating 18,518 tons; Portugal has only 1 gunboat, 558 tons. Austria has only 1 cruiser of 4,064 tons.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER WAR.

HEAVY RAINS.

Shanghai, April 20.

Torrential rains in the Free State are delaying transport work, though securing the water supply.

SICKNESS.

The *Standard's* correspondent telegraphs from Bloemfontein that there are 1,000 sick in the field hospitals.

CARRINGTON.

The *Daily Mail's* correspondent telegraphs that a force of Boers have started to intercept Carrington.

THE WEST COAST TROUBLE.

A force of bluejackets and Houssas has landed at Accra. The Governor asks for all available forces. Coomassie is closely invested.

THE BOER DELEGATES.

Later.

The Boer delegates are still at the Hague. They have had an audience of the Queen. It is understood that their mission is futile, and that no Power will intervene.

AWAITING A BRITISH ADVANCE.

Reuter's agent telegraphs from Ladysmith that Boer commandos, estimated at 15,000, are scattered over the fortified ridges between Sunday's River and Dundee, vainly awaiting a British advance.

THE CHINA SQUADRON.

The *Argonaut* has been commissioned to replace the *Undaunted* on the China Station.

BRABANT.

Shanghai, April 21.

Gen. Brabant has arrived at Aliwal North.

ROBERTS READY.

The *Daily Chronicle's* correspondent telegraphs from Bloemfontein that the remounts and equipment have arrived, and that Roberts is ready.

THE GOVERNMENT'S INTENTIONS.

Sir Michael Hicks-Beach, speaking at Bristol, said that if the war did not extend beyond the natural life of Parliament the Government would not appeal to the constituencies before they were able to judge of the Government's policy.

Shanghai, April 21.

The statement that Brabant had arrived at Aliwal North is contradicted. The censorship is temporarily increased in consequence of the movements of troops.

THE PRINCE OF WALES.

The Prince of Wales, on his return to London, had a great ovation all the way to Marlborough House. While he was passing Altona the Kaiser arrived unexpectedly for the express purpose of greeting the Prince. The German papers regard this as a renewed evidence of the Emperor's Anglo-phile sentiments.

FOR VALOUR.

Surgeon Galtie has received the Victoria Cross for gallantry in the Battle of Colenso.

FIGHTING NEAR DEWETSDORP.

Shanghai, April 22.

The Eighth and Third Divisions encountered the enemy at noon yesterday near Dewetsdorp. Fighting continued until dark. It was principally an artillery engagement. Two of the enemy's guns were temporarily silenced. The British command the hills for miles around. It is stated that the Boer position is strong. The casualties were slight.

WEPENER.

News from Maseru, dated the 10th,* says that the Boers were then moving freely round Wepener, and that parties of them were proceeding in all the directions whence British re-inforcements were expected. There were desultory cannonading and rifle-firing all day. The besieged were almost silent. Boer reinforcements had arrived.

[* On the 18th April, Reuter wired that the losses hitherto telegraphed from Wepener were "anterior to the 14th instant." Two days later we had news, presumably up to the 17th, as Tuesday was specially mentioned, that "5 of the enemy's guns were disabled." The above message therefore seems belated.—ED. *J.M.*]

THE WEST COAST TROUBLE.

Reuter's agent telegraphs from Accra that H.M.S. *Widgeon* has left Fetoh with an additional force of Houssas.

Digitized by Google Original from CORNELL UNIVERSITY

The Governor telegraphs that other tribes are rising, and again asks for assistance. The loyal Bekivais have been attacked by the Ashantees and 500 of them were killed.

FIERCE FIGHTING NEAR BOSHOF.

Shanghai, April 23.

Reuter's agent, telegraphing from Boshof on Saturday, says that Methuen's Field Force, occupying an advanced position at Dwarkokjef-fontein, was ordered to return to Boshof. While his force was retiring, 2,000 Boers, with 3 guns, fiercely attacked the column. The Colonials and Yeomanry occupied a kopje and held the enemy in check till the column and convoy passed safely. There were some British casualties. It is believed that the enemy's losses were heavy, as they advanced within 300 yards of the kopje.

DEWETSDORP.

The fighting near Dewetsdorp was renewed on Saturday under the command of Gen. Rundle, who expelled the enemy from the heights.

WEPENER.

Reuter's agent, telegraphing from Maseru on Saturday, says that Wepener is still closely invested.

ELANDSLAAGTE.

There was desultory fighting all Saturday at Elandslaagte. A thousand Boers crossed the Sunday River bridge, and advanced to a crest which our Infantry had recently occupied. They retired on seeing the British Mounted Infantry. The enemy afterwards shelled the collieries.

DEWETSDORP.

Later.

General Rundle's divisions continued the fighting at Dewetsdorp on Saturday. It was mainly an artillery engagement. The Boers are tenaciously holding their position, which is well entrenched. Our casualties were light.

WEPENER.

The Boers heavily cannonaded Wepener on Saturday and the garrison replied.

BRABANT'S FORCE.

Gen. Brabant has reached Bushman's Kop, 20 miles south of Wepener, and the Boers are preparing to resist him.

RUNDLE'S DIVISION.

Shanghai, April 24.

Reuter's agent, telegraphing from Wakkerstroom, under date of the 22nd inst., says that the Boers on that day attempted to turn Rundle's right flank. The Yeomanry and the Mounted Infantry detected the movement and their guns drove off the enemy. Many of the Boers are moving southward.

THE BOERS' STRENGTH.

Later.

Reuter's agent telegraphs from Lorenzo Marques that the two Republics had at one time 105,000 men in the field and that they still muster 80,000. The lists of burghers were deliberately falsified for the purpose of deceiving the British Intelligence Department.

BRABANT.

Brabant is engaging the Boers at Bushman's Kop. There was cannonading for several hours.

WEPENER.

Dalgety reports all well at Wepener.

THE BRITISH ADVANCE.

Shanghai, April 25.

The Boers have evacuated Bushman's Kop, and Brabant and Hart are pushing on. They are now within 8 miles of Wepener.

NEAR BLOEMFONTEIN.

On the 22nd inst., Pole-Carew's Division advanced, the two portions starting simultaneously from the E. and S. of Bloemfontein, with the object of driving the Boers from the line of defence on the South of the Water-works, which Dewet is reported to be holding strongly.

DEATH OF THE DUKE OF ARGYLL.

The Duke of Argyll is dead.

DALGETY REPORTS ALL WELL

Later.

Roberts telegraphs from Bloemfontein under date of the 24th that Brabant and Hart yesterday turned the position of the enemy, who tried to prevent them moving northward. They opened telegraphic communication with Dalgety, who reported that all was well.

POLE-CAREW.

Pole-Carew's Division and French's two brigades reached Tweedegeluk yesterday afternoon without encountering any serious opposition.

AFFAIR AT SANNASPORT.

The mounted infantry under Ian Hamilton yesterday occupied the waterworks at Sannasport. As the enemy were holding neighbouring hills in some strength the Brigades of Smith-Dorrien and Macdonald were despatched to support Hamilton.

AN IMPORTANT POINT.

Maxwell yesterday seized without loss two hills covering the wagon bridge at Kranzkraal over the Modder River, an important line of communication much used by the Boers.

WEPENER.

Shanghai, April 26.

Reuter's agent telegraphs from Maseru under date of the 24th that, under the covering fire of four guns, the Boers made a determined attack on Dalgety that morning. They were repulsed. Thereafter they maintained a fusillade at long range for several hours.

A later message from the same source says that the Boers who retreated before Brabant yesterday, advanced several miles during the night and occupied a good position at Strauss Farm, while Brabant was awaiting Hart's Brigade, which was still some miles distant.

DEWETSDORP OCCUPIED.

Later.

Chermside has occupied Dewetsdorp unopposed. Pole-Carew's Division has reached Rooneskop. It is unlikely that there will be more trouble round Wepener now that Dewetsdorp has been occupied.

HART AND BRABANT.

Intelligence from Maseru dated the night of the 24th says that Hart and Brabant encountered determined opposition that day and made small progress. There were no signs of Rundle's column.

MAFEKING.

Reuter's agent, telegraphing from Gaberones under date of the 14th, says that Mafeking is provided until the middle of May, but that there is only one ration daily.

THE CITY AND SUBURBAN.

The City and Suburban has been won by Grafter. Innocence second and Goblet third.

BOER RETREAT FROM WEPENER.

Later.

The Boers have retired from Wepener and fled northeastwards along the Ladybrand road.

(Telegrams Received at the Legation of France.)

THE EXHIBITION.

Saigon, April 20.

The Minister of the Colonies has given a gala dinner in honour of the Exhibition Commissioners.

SOUTH AFRICA.

It is stated in London that Warren has been recalled. The Boers are still surrounding the English at Wepener. General Brabant is marching to the relief of the place, but his advance has been arrested by De Wet.

THE INDIAN FAMINE.

Saigon, April 21.

It is announced from Simla that the suffering increases in India. Five millions of natives are receiving aid from the English Administration.

THE WAR.

News from Bloemfontein says that two thousand of the English are sick in hospital.

THE EXHIBITION.

Saigon, April 22.

The final installations at the Exhibition are being rapidly achieved.

The daily average of visitors is a hundred thousand.

SOUTH AFRICA.

Saigon, April 24.

Two thousand Boers attacked the convoy of Lord Methuen's column as it was returning to Boshof.

The English continue their attempt to relieve Wepener, but their advance is retarded by the rain.

There have been some combats of an unimportant character.

THE FRENCH NAVAL STAFF.

Saigon, April 26.

Vice-Admiral Bienaimé has been nominated Chief of the Head-Quarter Staff of the Navy in place of Rear-Admiral Caillard, who has been appointed to command of the Divisions of the Mediterranean Squadron.

WEPENER.

Skirmishes continue around Wepener. The Boers prevent the British columns from advancing.

SERIOUS EXPLOSION AT KOBE.

FIVE COOLIES INJURED.

(From Our Correspondent.)

Kobe, Wednesday evening.

This afternoon a serious explosion occurred on a lighter alongside the Norddeutscher Lloyd steamer *Preussen*. The lighter was loaded with cases supposed to be full of chemicals, and one out of nine discharged suddenly. A terrific explosion resulted, seriously injuring five coolies and setting fire to the lighter, besides doing other damage. Luckily the fire was soon extinguished. The injured men were taken to the hospital. It is feared that in the case of two the injuries will prove fatal.

At a general meeting of the shareholders of the Osaka Railway Company, held on the 22nd instant, at the Osaka Chamber of Commerce, the following accounts were presented and passed :—

Net profit for the current term	¥196,832
Rewards to officials	8,200
Reserve	10,000
Dividends (at the rate of 11.2 per cent. per annum)	178,080
Carried over to next account	552

The question of alteration of the Company's regulations was held in abeyance. The contemplated amalgamation with the Kwansei Railway was opposed by many on the ground of the serious disparity between the shares of the two Companies.

16 R Ksq	KR Ksq	32 K Ktsq	Q R6
		Resigns	

5. B to Kt 2 is premature, the correct move being 5. KKt to K 2, because Black replying Kt takes Kt, White could then retake with the Knight. After this omission so early in the opening White gets the inferior game, and it is not surprising that White should have had no chance from his fifth move right to the end, especially against Pillsbury as the opponent. We merely publish the game for theoretical purposes in the first instance, and as a specimen on the part of Black, showing how to take decisive advantage of a simple transposition of a move in the opening. There is another important point to be mentioned—viz, instead of 5. B to Kt 2, White could play 5 Q to R 5, winning a pawn eventually; but Black gets a compensating temporary attack. Whether it is advisable for White to venture upon this variation is at present not quite decided. Our opinion is that White might try for it.

GAME 584.

17 Kt B3	P QKt4	Resigns	
18 P QKt4	B Kt2		

This game is also instructive, showing the advantage obtained by Black simply by superior generalship, as White did not lose any material all through the game. He was simply out manœuvred. White omitted to play the usual P to QB 4 before bringing out the QKt; he developed 6. B to Q 3 when 6. B to K 2 would have been better in view of Black's threat of 6—P to B 4, and 7—P to B 5. Afterwards Black's attention was in the first instance directed to prevent White's advancing of the KP, and eventually advancing the KP himself in a fine strategical position. After twenty-five moves, Black's position may be carefully surveyed. He is ready to strike, whilst his opponent's forces are mostly inactive. Consequently, the final attack, commencing with 25—P to Q 5, cannot be repelled, and a few moves later White has to surrender.

Newark (12), U.S. cruiser, 4,098, Capt. ——, 24th April,—Manila.

LATEST COMMERCIAL.

IMPORTS.

There is almost complete stagnation all round. the Japanese buyers are in want of money, and thinking rather of disposing of their surplus stocks than of buying new, consequently prices still lag behind values prevailing at home, and even re-export is being seriously considered by some dealers.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 5TH, 1900.

MARRIAGE.

On Wednesday, the 2nd May, 1900, at Trinity Cathedral, Tokyo, by the Rt. Rev. John McKim, D.D., JULIA WOOD MILLER, of Milwaukee, Wis., U.S.A., to FRANCIS BRINLEY HEBARD PAINE, of Tenafly, New Jersey, U.S.A.

SUMMARY OF NEWS.

THE war news from South Africa deals with a series of small engagements between Wepener and Thabanchu.

IT is stated that in the interval of 21 days from the 5th to the 25th of April, the amount of gold drawn from Tokyo by foreign firms in Yokohama and exported was 4,650,000 *yen*.

AN attempt was made on the 26th April to assassinate Colonel Kumagaye at Hirosaki. The would-be murderer attacked him as he lay in bed, but fortunately failed to inflict a serious wound.

A TELEGRAM received by the *Asahi Shimbun* says that Liu Hsiao-hsüu, who came to Japan last year as the envoy—according to rumour—of the Empress Dowager, was shot as he was disembarking at Canton from a steamer by which he had travelled thither from Macao. He died very shortly.

IT is said that the Russians are anxious to sell for 250,000 *yen* the Ulneung timber which they obtained for 50,000. Very likely, especially as the operation of shipping the timber presents great difficulties.

MR. PRITCHARD MORGAN is reported to be leaving Korea for England, his purpose being to form a syndicate with a capital of a million pounds sterling to work his recently acquired mining concession.

THE concession obtained by Russia at Masampho is now said to measure 250,000 *tsubo* (200 acres) and to run down to a part of the shore where is deep water. It is apparently a growing concession.

INVESTIGATIONS completed by the Home Department and published in the *jiji* show that at the end of December last the populations of Sapporo, Hakodate, and Otaru stood at 40,575, 89,751, and 61,892 respectively.

ANOTHER case of suspected pest is reported from Osaka. The malady continues to be little more than sporadic in character, but it may at any moment defy the measures adopted by the sanitary authorities to check its spread.

THE Japanese Consul telegraphs from Vancouver that 4,500 Japanese have flocked into Canada during the present month, and that an anti-Japanese-immigration agitation is almost inevitable unless some check is put upon this movement.

WE read in the *Mainichi Shimbun* that the Japanese Authorities have twice rewarded charitable acts on the part of the Yokohama Temperance Association by gifts of *sake* cups! The Society has returned the second of these tokens.

THE Ota Railway (Mito to Ota) is likely to become the property of the Fifteenth National Bank, to which it is mortgaged for a sum of 250,000 *yen*. The paid-up capital of the line is 347,919 *yen*. It seems to have been in difficulties from the time of its inception.

IT is stated that the cost of the Tientsin tramway in which the Mitsui firm is interested will be from two to three hundred thousand *yen*. The Mitsui intend to invite foreign cöoperation, for, although the outlay is insignificant, they deem it wiser to have the association of the foreign residents.

THE Nara Railway Company has held its meeting, when the following figures were submitted:—Net profit, 61,928 *yen*; reserve, 3,150; redemption of loans in connection with preliminary outlays, 500; rewards, 1,850; dividends (5 per cent.), 55,238; carried over to next account, 1,190.

THE Governor of Akita has applied to the Home Department for a grant for the commencement of Harbour Works at Funakawa, as approved by the Diet last session. The programme involves an outlay of 3,120,828 *yen*, of which 2,685,003 are for earthworks and 435,825 for interest on loans.

IN the Yokohama Chiho Saibansho, on Tuesday, Sobajimo Jirokichi and his wife were sentenced to death, the former on the charge of murdering his wife's father and the latter's servant early in September last, at his house in Yotsuya, Tokyo, and the latter for instigating and conniving at the crime.

THE carp in the well-known Tenjin lake at Kameido have been attacked by a disease analogous with that which recently proved fatal to so many fishes in the Maru-no-uchi moat. It is alleged that from 500 to 600 fish have died, and that special arrangements have been necessary to dispose of their carcases.

THE Emperor inspected, on the 28th ult, the ships engaged in the Naval Manœuvres, and addressed to the officers and men a rescript applauding the progress that had been made, and recommending further diligence in view of the state of the world. A levée was held on board the *Shikishima* on the 29th ult.

RAILWAY building is said to be proceeding apace in Formosa. The Takao-Tainan section will soon be opened, and on other sections the work is well in hand. Another item of news from the island is that the rebels of Banshi-zan have surrendered unconditionally in the sequel of the recent operations undertaken against them.

ACCORDING to the investigations of the Mines Superintendence Office the amount of gold dust collected in Esashi, Hokkaido, during last year was 120 *kwan* approximately. It appears, however, that the amount purchased by the Mint alone did not fall short of 600 *kwan*, and the actual output, therefore, says the *Shogyo*, must have been larger than even the latter figure.

THE loss of the *Winchester*, with a cargo of 800,000 *yen* worth of raw cotton for Japan, seems to be regarded as rather a fortunate event from the point of view of Japanese spinners, who can not find a profit in yarns manufactured from cotton at present prices. The principal importers of the *Winchester* cotton were the Mitsui firm and the Nihon Menka Kaisha.

DURING the first three months of the current year 780 Japanese subjects landed in San Francisco, against 371 for the corresponding period of 1899, and 278 for 1898. In one month—March—there were 569 arrivals; namely, 195 by the *Gaelic* on the 14th, 205 by the *Hongkong* on the 21st, and 129 by the *China* on the 31st. Among the *Hongkong Maru's* passengers 8 were sent back by the local officials, and among the *China's*, 3. There is a good deal of journalistic writing on the subject, and it is feared that an anti-Japanese demonstration may be organized.

A TRAGIC affair is reported in a special telegram to the *Manila Times* to have occurred at Victoria, B.C. A hot argument arose between Lieutenant Burns, of the Canadian Artillery, and Lieutenant Scott, of the British Navy, as to the authority of the latter in the dock. The Canadian officer disputed the authority of the British naval officer. High words passed and the argument carried the Canadian officer into such a state of excitement and frenzy that he suddenly drew his revolver and fired on Lieutenant Scott, with fatal results.

SOME few months ago, Nakagawa Kanewo, aged 41, murdered a saké-seller and three other persons in Hanazaki-cho, Yokohama, but was acquitted by the Yokohama Chiho Saibansho, on the ground of insanity. On Tuesday the man committed suicide, by *seppuku*, in the grounds of the house rented by Mr. Geo. Hood at Kurakigori, Nakamura. The suicide was found by a passing foreigner lying in a pool of blood, not quite dead. Before the police arrived he had expired. The brother of the deceased, it appears, had being making arrangements for the lunatic's detention in the Tokyo Asylum—but he escaped from his custody before the removal could be effected.

OFFICIAL APPOINTMENTS.

Saturday, April 28.

Some three years ago an agitation was commenced by party politicians in favour of adding a clause to the Official Appointment Regulations. As they then stood, the Regulations virtually closed the door to the party politician, for they prescribed that in order to be eligible for office a man must pass an examination which demanded special study and preparation. It was therefore urged that some offices ought to be excepted from the general rule, so as to be available for occupation by party politicians, who considered that they possessed exceptional qualifications for certain posts, and that their exclusion under the operation of a hard-and-fast law had the effect of depriving the country of valuable services. This question assumed quite conspicuous dimensions for a time, but in the face of quiet though steadfast opposition on the part of the Government, the matter drifted out of the field of public observation. Now, however, the result of the agitation has made itself apparent. A special clause has been added to the Official Appointment Regulations, in the sense of removing certain officials beyond their purview. The gist of the clause is that a nominally new post is created, namely, that of *Kwambo-cho*, of which the suitable translation seems to be "chancellor," and the duties are apparently identical with those hitherto discharged by Departmental Councillors (*Sanyo-kwan*). In fact, since the office of *Sanyo-kwan* is abolished simultaneously with the creation of the *Kwambo-cho*, there can be no doubt that the latter merely replaces the former. The *Kwambo-cho* is to assist the Minister of the Department and is to be independent of the Official Appointment Regulations, just as the *Sanyo-kwan* has hitherto been. There will be one in each Department, a *chokunin* official, and he will rank next after the Vice-Minister and above the Heads of Bureaux. It is also provided that the Chief Secretary of the Cabinet shall be appointed without reference to the Regulations. So far as he is concerned, the new clause makes an innovation, but the creation of the office of *Kwambo-cho* is merely a perpetuation of the system of Chokunin Councillors. Possibly the *Kwambo-cho* may prove a more useful official than the Councillor was. It is to be hoped that he will, for the Councillor was unquestionably a mere figure-head, and there were virtually no relations between him and the permanent officials of the Department to which he was attached. For our own part, we regard this new clause as a measure of exceedingly doubtful utility. We fail to see what the *Kwambo-cho* can do that was not alrealy done by the private secretary. Possibly the idea is that he should be a kind of parliamentary under-secretary. If so, he may, of course, discharge useful functions, but the definition of his duties is so vague that we can not speak with any certainty.

Another change made is the creation of the office of *Somu-kyoku*, or bureau of general business. This is to take the place of the post of Vice-Minister of a Department, so that it can not be called an addition to the official organization.

Further, a Bureau of Temples and Shrines (*Jinja-kyoku*) has been established in the Department of Home Affairs, and a Bureau of Civil and Criminal Law (*Minkei-kyoku*) in the Department of Justice. The Bureau of Prisons (*Kangokn-kyoku*), also, is transferred from the Home Department to the Department of Justice.

Monday, April 30.

It appears that the newly created office of *Kwambô-chô* is a reproduction of the European *Chef de Cabinet*. The terms correspond exactly; indeed the former is an exact translation of the latter.

One result of this new creation is that the Vice-Ministers of Departments will no longer follow the Ministers when the latter go out of office. The Vice-Minister will henceforth enjoy fixity of tenure. He will have charge of all the routine business of the Department, so that even though a change of Cabinet during some exceptional crisis should leave a Department for some time without a chief, there will be no interruption of its functions. It has happened more than once during recent years that, a Minister going out of office and being followed by the Vice-Minister, the Department has found itself without a recognised head. That inconvenience, at all events, will be obviated in future, and so will the very much greater inconvenience entailed by the disadvantages under which a newly appointed Vice-Minister labours in being almost entirely unacquainted with the affairs of the Department to which he is appointed.

The *Chef de Cabinet* will enter and leave office simultaneously with the Minister. He will, in fact, be the latter's nominee and lieutenant; not necessarily a party politician, but certainly some one who has an intimate knowledge of the Minister's policy, and whom the Minister has learned to trust.

This re-distribution of functions must more or less exclude the Vice-Minister from the counsels of the Minister. The *Chef de Cabinet* will be the repository of all the latter's confidence, and will represent him in the Diet. The Vice-Minister, as his new title suggests, will have charge of the general business of the Department. Apparently that title, *Somu-kyokucho*, finds its nearest equivalent in *Chancelier*.

We were mistaken in saying that the new bureau organized in the Home Department, the *Jinja-kyoku*, is to be a bureau of temples and shrines: it will have to do with shrines only; in other words, its functions will be limited to *Shinto* affairs. The affairs of other forms of religion, including Buddhism, will be under the *Shukyo-kyoku*, or Bureau of Religions. We may add that Mr. Shiba Junrokuro has been appointed to be chief of the *Jinja-kyoku*, aud Mr. Rika Yuji (hitherto Governor of Tokushima Prefecture) to be chief of the *Shukyo-kyoku*. Formerly both *Shinto* and Buddhism have been under the jurisdiction of the *Shajï-kyoku* (Bureau of Shrines and Temples) in the Home Department. But the *Shajï-kyoku* in now abolished as an entity, being broken up into two bureaux, namely, the *Jinja-kyoku* and the *Shûkyo-kyoku*. It will thus be seen that the main result of this change is to separate *Shintô* and Buddhism. The public will doubtless conclude that since the affairs of *Shintô* are to be under a special bureau, while those of Buddhism, in common with Christianity and all other forms of faith recognised by law, will be grouped together for purposes of official supervision, *Shintô* thereby receives a kind of administrative *imprimatur*. We are not in a position to say whether any such intention underlies the arrangement, but we apprehend that it will scarcely be agreeable to the Buddhists.

On the whole the vernacular press approves of the new organization. Some papers are careful to point out that the post of *Chef de Cabinet* will not necessarily become a prerquisite of party politicians. Departmental Ministers will appoint men who enjoy their confidence, men from whose aid they foresee valuable results. It very often happens that a statesman has by his side some one who know his views exactly, has helped him to form them, and has become indispensable for many reasons. Evidently the statesman's usefulness as a portfolio-holder will be augmented by having such men at his side in recognised official positions, and by being able to employ them as his accredited representatives in the Diet or before the public.

We need scarcely say that some voices are raised to demonstrate that these changes will not prove acceptable to the Liberals. It is alleged that the latter's original list of officers which, they considered, ought to be excluded from the operation of the Official-Appointment Regulations, included the post of Prefectural Governor, but that they eventually yielded that point, in view of the Cabinet's willingness to ear-mark the remaining posts on the list, namely, those of Vice-Minister, Departmental Councillor, Chief of Prefectural Bureau, Chief of Police, Chief of the Legislative Bureau, Chief Secretary of the Cabinet, and some others. The new scheme of organization, however, excepts the *Chef de Cabinet* and the Chief Secretary of the Cabinet only, and it is asserted that there is much dissatisfaction among the Liberals. These rumours must be received, we imagine, with all reserve.

A CURIOUS CASE OF PETTY LARCENY.

Mr. Sato, Inspector of Police in Hakodate, has been arrested on a charge of petty larceny, or rather a charge of inciting to larceny. It is a strange story. Some time ago, the *Hakodate Nichi Nichi Shimbun* commenced a violent crusade against Baron Sonoda, Chief of the Hokkaido Administration, and also against the Inspector of Police. The latter determined to find out the writer of these diatribes, and with that object he employed two reporters of the newspaper, Messrs. Takashima and Inouye, promising that, if they abstracted the manuscript so as to assist identification, they should receive posts in the police, as well as small monetary rewards. They acceded to the proposal, made away with the manuscript, received 5 or 10 *yen* each, and were then sent to Sapporo, where they were to undertake a similar operation with regard to the *Hokumen Shimpo*, which had been engaged in a similar crusade. But, the manuscript having been missed, suspicion fell on the reporters; they were apprehended when about to leave Hakodate, and a full confession was obtained from them, after which a warrant was procured for the apprehension of Mr. Sato himself. Such is the story, but we can not say anything about its truth. The Hokkaido newspapers have of late shown themselves particularly virulent. One case recently came under our own notice where they organized an assault upon a man of unimpeachable probity, probably one of the most distinguished civil engineers Japan possesses, charging him with corruption of which he could not possibly have been guilty. We can well understand Mr. Sato's desire to trace the authorship of the brutal slanders circulated by these unprincipled sheets. The only pity is that he resorted to such methods. It will probably occur to our readers that not much can be expected of journals employing reporters of such a class that the position of chief constable in the Hokkaido police seems to them a prize to be struggled for.

HAWAII AND THE UNITED STATES.

Wednesday, May 2.

Telegrams received in Tokyo announce that the United States Senate have passed the bill for reorganizing the system of Government in Hawaii, and that it will probably receive the President's approval and be promulgated in a few days, after which it will become operative within six weeks. Its most direct effect will be to invalidate all contracts for the supply of foreign labour, concluded subsequently to the 12th of August, 1898. Further, the laws of the United States will become applicable to Hawaii in the matters of labour immigration, cabotage and tariff. Japanese newspapers, in reporting this news, predict the immediate collapse of all emigration companies in Japan. In other respects, too, the situation created will be serious for this country. The operation of the United States tariff will render it difficult and costly for the Japanese now in Hawaii to obtain supplies from Japan, as they have hitherto been in the habit of doing, and the coasting-trade restrictions will make it impossible for a Japanese vessel to call at Hawaii *en route* for America. The last difficulty will be immediately felt by the steamers of the *Toyo Kisen Kaisha*, now working in combination with the P.M. S.S. Company and the O. & O. S.S. Company. No adjustment appears to be possible. To transfer the Japanese steamers to the American flag is impossible, for they would thus forfeit their title to a Government subsidy. Apart from the more-than-questionable wisdom of extending to America's new and distant possessions hard-and-fast systems which find their only justification in the special conditions of her home territories, there is no excuse that we can perceive for this violation of the engagement given to Japan at the time of the Hawaiian annexation, that her interests, as secured under existing arrangements with the Hawaiian Republic, should not be in any way impaired by the annexation. They will be impaired, most seriously impaired, ignored altogether indeed, under the proposed system. How such a course can be reconciled with the United States' pledge, we do not see, but it is impossible to suppose that the Washington Government will be guilty of any breach of faith, and we therefore look with confidence for some adjustment of the difficulty.

Thursday, May 3.

It is anticipated that the first trouble arising out of America's decision to incorporate Hawaii completely will be in connection with the security money held by the emigration companies in Japan. The arrangement hitherto has been that each emigrant should put up a sum of $35 by monthly installments. This money is held by the emigration companies in order to secure employers against breaches of contract on the part of labourers. Under ordinary circumstances it would be held until the termination of the labourer's period of contract, when it would revert to him, supposing that no claims existed against it. But in consequence of the American Government's recent decision as to the status of Hawaii, the unexpired contracts of all Japanese labourers in the islands will become void. What, then, will be done with the guarantee fund, which now amounts to about six hundred thousand dollars? Tokyo journals speak of its accruing to the emigration companies, and anticipate objections on the part of employers in Hawaii. But it seems to us that the money belongs to the labourers. We cannot perceive any process of reasoning by which the emigration companies would be entitled to appropriate it unless there is some special compact in that sense.

The number of Japanese that have emigrated to Hawaii since the annexation of the islands by the United States is said to be thirty thousand. These will all fall within the purview of the new system, since it becomes applicable from the date of annexation, having thus retrospective effect. Twenty thousand among the thirty thousand are contract labourers. The agreements between these men and their employers will now cease to have binding force. It is presumed, however, that some new arrangement will be made for securing their services, since the loss of them would greatly inconvenience their employers.

Possibly the suspension of emigration to Hawaii will not be an altogether unmixed evil to Japan. Complaints come from country districts that the exodus of able-bodied men to the United States and Hawaii is inconveniently thinning the ranks of the agricultural classes, and that, even if political considerations did not suggest the advisability of imposing some restriction, the interests of the country itself would point in that direction.

KOREAN AFFAIRS.

It is stated that the purpose of M. Pablov's visit to Europe is to get married, but whether he will return or not seems uncertain. He has succeeded in creating a great deal of commotion in the Far East, and we can not think that the benefits he has secured for his country are commensurate. The land obtained by him at Masampho might have been secured without any friction whatever, as Russia had a right to claim such a concession under the most-favoured-nation clause. If his original purpose did not point to anything more than that, it was a work of injudicious supererrogation to ask for something entirely different; and if his purpose was really what it seemed to be, namely, the acquisition of a special concession quite outside the range of the treaties, he has merely impaired his country's prestige by not preparing means more adequate to his end. Such, at any rate, must be the verdict of the general public. It may be mentioned in connexion with this that the Masampho concession is said to measure 83 acres of level land, 300 acres of hill-land, and 25 acres of foreshore, making 208 acres in all. These figures are approximate.

The title deeds of the land acquired by Russia at Masampho have been duly handed over, it is said. The land will be applied to the uses of the Volunteer Fleet. In other words, it will be a coaling station, much after the fashion of Inasa at Nagasaki.

With regard to the much-rumoured secret treaty between Russia and Korea concerning the non-alienation of Koje Island, it remains still secret. Newspaper correspondents telegraphing from Söul aver that there is no prospect of its contents becoming known unless the Japanese Government presses the Korean for an explanation, and that the Japanese Government is not likely to do so unless the Diet becomes inconveniently inquisitive. The treaty begins to assume a mythical character, we think.

The Korean Government's attempt to secure a loan of silver for the purpose of coinage is said to have been unsuccessful, the conditions being prohibitive, but it is anticipated that no difficulty will ultimately be experienced in getting the money.

Rumour says that the Korean Government has agreed to take twenty thousand *yen* worth of stock in the Söul-Fusan Railway.

ENGLAND AND GERMANY.

Truly one would imagine that England was a great robber if one estimated her character from the writings of some Continental critics. Dr. Hartmann published in the *Gegenwart* an article which the *North German Gazette*—which is said to be the organ of the German Foreign Office—reproduced with apparent approval. The article had for caption "The Earth in the Twentieth Century," and for principal object the creation of a strong public opinion in favour of the Navy Bill. The learned doctor's view is that in the 17th century wars were raged for religion; in the 18th for policy, and in the 19th for national causes, but that in the 20th they will be waged for colonies and commerce. All the smaller States with oversea possessions will be plundered by the Great Powers, and unless Germany hastens to become strong at sea, she will forfeit her colonial possessions "as soon as it becomes worth while for England or America to take them." Has Germany any colonies that England or America can be supposed to covet, and when, during the past century, has England shown any tendency to despoil her European neighbours of their property? On the contrary, it will seem to unsophisticated folks that Germany, as represented by Dr. Hartman, wants to annex Holland's colonial territories as quickly as possible. Besides, there has been published in Germany a *Pan-Germanic Atlas* in which the political geography of the future is shown, and it there appears that the whole of Holland and also a portion of Belgium, including Antwerp and Brussels, are coloured in the same tint as the existing German empire and are supposed to enter the sphere of Pan-Germanic aspirations.

Sir Rowland Blennerhassett, writing in the *National Review*, says that Germany's hostility to England had its origin in the days of Frederick the Great, when, after the resignation of Pitt in 1761, England abandoned Frederick during the Seven Years' War, and when Lord Bute was guilty even of the treachery of intriguing with the enemies of Frederick, then England's close ally. Thenceforth Prussia never trusted England. Frederick advised caution and circumspection in dealing with her; his brother, Prince Henry, became the representative of an anti-English policy; Prince Hatzfeld and Marshal Kalckreuth preserved the tradition; von Stein gave expression to it during the Vienna Conference, and it was passed on to Gneisenau, Grolman, Clausewitz, Mommmsen, Haüsser, Bernhardi, Bismarck, Moltke and Goeben. On the eve of the war between France and Germany, Lord Lyons, the British ambassador in Paris, assured the French that they might always count on the good-will of England whether they went to war or not, and during the last days of the war it was discovered that French levies were armed with weapons from English Arsenals—weapons which had not, indeed, been sold to the French Government direct, bnt which ought not to have been sold even to private French purchasers. "I know as a matter of fact," says Sir Rowland Blennerhassett, "that Moltke never could be persuaded to the day of his death that the Administration of Mr. Gladstone was not culpably negligent in the matter, and wilfully assisted French resistance to the German armies. Bismarck thought so too, and from that he became firmer, if possible, than before in his Anti-English policy." Sir Rowlanp insists that Bismarck's policy has been in the main adopted by those in charge of Germany's affairs, and that persons in the highest

Digitized by Google Original from CORNELL UNIVERSITY

authority in Germany are largely responsible for the hostility now shown towards England by the press. As for the immediate object in view, he says that it is to be sought, in part at any rate, in Germany's relations with Holland. We quote his words :—

Those who have followed with care German political literature, or who happen to have been at all intimate with German politicians, can hardly have failed to observe that the idea of obtaining a firm footing on the shores of the North Sea has been present to the minds of political thinkers in Germany for generations. The settlement at the Congress of Vienna, with respect to the north-east frontier of Holland, was a bitter disappointment to the Prussian National Party of that day. Men like Gneisenau and Grolman imagined that the German cause had been seriously injured. Blucher was thinking of Holland when, after Waterloo, he prepared the famous toast, *Mögen die Federn der Diplomaten nicht verderben was das Schwert der Völker mit so grossen Anstrengungen errungen.* There is, of course, at present no desire to make Holland a State of the Germanic Confederation. But the idea of obtaining concessions as regards customs to be followed as time goes on by a regular Customs Union, and then ultimately by a Naval Convention which would practically destroy the independence of Holland, is certainly widely entertained in influential circles in Germany. This is one reason why sympathy with the Boers and hostility to the English is encouraged by persons in high places. When Holland is brought within the sphere of German influence it is hoped that Germany may obtain a considerable position in the Malay Archipelago, and perhaps also at the Cape, should England be so fatuous as not to secure now real and undisputed supremacy in South Africa. Another obvious reason why the German authorities encourage hostility to England is the desire to obtain a more powerful Navy. The Kaiser well understands the truth of the old French proverb, *Qui a mer a terre.* He aspires to do for the Navy what his grandfather did for the Army. But the true reason why an increase of the Navy is supported by Ministers and politicians is to prepare for a struggle with England. This has been almost openly avowed by Admiral Tierpitz, who presented the Imperial proposals to the Reichstag. The Ministerial statement shows how steadily the conviction is growing that England is the country which Germany should endeavour to overthrow. And the more ignorant Germans are becoming persuaded that our position in the world is undeserved, artificial, and cannot be maintained if seriously threatened. This view has been fostered for many years past by the most brilliant writers in essays and articles, and by leading journals and periodicals which, in their turn, shape the policy of the cheap newspaper, which is the gospel of the village inn.

In reproducing this explanation, we do not wish to be understood as endorsing it, but the writer's position and experience entitle his utterances to consideration.

SPIRITS OR TELEPATHY.

The old old question whether "spirits from the vasty deep" hover around us and are prepared to act as media for communicating human thoughts, has been seriously taken up by Mr. J. H. Hyslop, Professor of Logic and Ethics in Columbia University. This gentleman recently conducted a number of experiments which form the basis of the theories he now advances. A Mrs. Piper was the medium employed, and the methods were of the stereotyped nature. Having been thrown into a condition declared by medical experts to be wholly anæsthetic and unconscious, this lady was asked to give various information about persons upon whom her questioners fixed their thoughts. She did so, and moreover she furnished details which, in many cases, were wholly unknown to her questioner. For example, Professor Hyslop's father, who, we need scarcely say, had long been in his grave, inquired through the medium whether his trouble with his left eye was remembered by his son; but the Professor had never heard of any such trouble, though he subsequently ascertained that it had existed during the last year of his father's life. Again, the medium made allusions to a controversy carried on between the Professor's late father and a man named Cooper. This, too, was quite unknown to the Professor, and had occurred when he was only four years old. Many other similarly mysterious communications were made from beyond the grave, but we have said enough to indicate their nature. Professor Hyslop then sat down, and, in his capacity of an expert in logic, proceeded to analyse the value and import of this testimony. First, he considered its triviality. A constant complaint against these revelations is that they relate to utterly petty and unimportant matters, and that no really valuable information is ever obtained. The Professor's view of that difficulty is that trivialities are the most convincing parts of circumstantial evidence; and that intelligent men, when left to their own devices, spontaneously choose trivial incidents to establish their identity, since incidents of importance are likely to be duplicated in general experience. He then examines what is involved in the hypothesis that communications are obtained by telepathic connexion between the mind of the medium, the mind of the questioner, and the mind of the person giving the information sought. This chain of telepathy is obviously composed of the following links; first, discovery of the thoughts passing through the mind of the questioner; secondly, discovery of the particular individual in the wide world who can give information concerning the doings, sayings, and experiences of the dead person on whom the questioner's thoughts are fixed; and thirdly, the discovery and interpretation of the things stored up in the memory of that individual. Professor Hyslop cannot induce himself to conceive these things. He calls them a supposition of tremendous magnitude, and declares that there is no parallel in anything short of infinity. Thus his conclusion is that, from the point of view of logic, it is easier to believe in the agency of spirits than in any conceivable process of telepathy. Indeed, he does not hesitate to assert that any one who can find in telepathy a sufficient explanation of these phenomena should experience no difficulty in accepting the theory of spirits.

THE FISH PEST.

The malady that has attacked fishes in the Tokyo moats and ponds is likely to prove a great calamity to the rats of the city. It has been proved by experiments conducted in Europe that the bacillus responsible for the sickness of fish under such circumstances does not assail human beings or any creature except rats. On the other hand, rats are now known to be great generators of the Pest, and medical experts are convinced that the extermination of rats would be a most important step towards the stamping out of the Pest. This problem, therefore, presents itself to be solved, namely, to find some poison which, while destroying rats, will not hurt any animal that chances to eat it and will not prove deleterious to human beings after it has been administered to rats. The bacillus of the fish plague seem to be the very agent required. It does not attack human beings or any member of the non-human species except rats. Nothing is needed then except to mix it with some edible and feed it to rats. That has been accomplished successfully in Europe, and Japanese experts recently endeavoured to adopt a similar precaution, but they found that the supply of fish virus obtained from Europe lost its efficiency owing to the heat encountered in passing through the Indian Ocean. The fishers of the Tokyo moats and lakes have now furnished the necessary material, and the rats are on the eve of a fatal banquet.

THE IMPERIAL WEDDING.

The 10th May has been fixed, it is said, for the Imperial Wedding. Apparently the celebration at the Palace is to take the form of an afternoon party, to which all holders of Third-Class and higher decorations will be invited.

With reference to this matter, we may observe that the foreign residents of Tokyo have doubtless decided to associate themselves with the Japanese for the purpose of erecting a Commemoration Museum. Yokohama intends to present an address, which, from some points of view, seems a desirable measure. But the impression in Tokyo appears to be that the most graceful and suitable method of procedure is to avoid any differentiation from the Japanese themselves. We have reason to know that such identity of action will be acceptable to the Japanese, and that it is, in fact, the plan advocated by them.

It is said that the number of invitations issued in connexion with the celebration at the Palace on the 10th instant will be about two thousand, including ladies.

The subscriptions for the Commemoration Museum have reached a total of 216,760 *yen*. The Tokyo newspapers have all subscribed a hundred *yen* each, doubtless by arrangement among themselves.

The Imperial-Wedding pink stamps have been completed and issued to the various post-offices. They are all three *sen* stamps and they number 3½ millions. Though now on sale, they will not carry letters until on and after the 10th instant. If, prior to that date, any letters bearing these stamps be posted, the officials will lay them aside for despatch on the 10th.

It is stated that at 6 a.m. on the 10th instant, the day fixed for the Imperial Wedding the officials of the Board of Ceremonies will proceed to the Palace to make preparations. At half-past seven, the Prince Imperial and Lady Saka will leave the Aoyama Palace and the Kujo Monsion, respectively, and drive to the Emperor's Palace, where they will together repair to the *Kashiko-dokoro* (*Shinto* chapel) and perform the religious rights prescribed on such occasion the Prince himself reading the words addressed to the spirits of his ancestors to invoke the guardianship and blessing. This *hakcku-shiki*, or ceremony of announcement, being concluded, the sacred *sake* will be drunk, which brings the nuptial rites to a close. The Prince and Princess will then drive together in a four-horse to Aoyama Palace, where they will receive the congratulations of there privileged to present themselves. Leaving the Aoyama Palace at 3.20 p.m. they will proceed to Phœnix Hall of the Imperial Palace, where audience will be given to distinguished personages, Japanese and foreign. Finally, at 6 p.m., the general body of person invited to the celebration will attend in the Hall of but what the nature of the entertainment will be there is as yet no information.

THE STANDARD OIL COMPANY.

Coming on the heels of the announcement that the Carnegie Factory was clearing a profit of forty millions dollars annually, the colossal dividend of twenty millions declared by the Standard Oil Company has startled the public.

It appears that although there are about three thousand holders of Standard Oil stocks, eighty per cent. of the stocks are own-

Digitized by Google Original from CORNELL UNIVERSITY

ed by less than a dozen persons, and to these the dividend brought over sixteen million dollars, or more than a million each on the average. Many American journals have been shocked by these figures, and very irrationally shocked, we venture to think. Were the three thousand stock-holders divided into ten companies, each declaring dividends of twenty per cent., newspaper editors would have nothing to say except that transactions in oil were evidently profitable. But the ten returns added together make a total which disturbs the imagination, and creates a thoughtless impression that the public is being unduly exploited. To us the remarks of the *Evening Post* seem altogether sensible :—

"So far as the Standard Oil Company is concerned, however, the public may take to itself the solace that the people have shared somewhat in the profits, for the company is serving to the consumer cheaper and better oil than he could get before. The methods of developing the oil-fields have cheapened the product as well as added to the wealth of the men interested in the corporation. Huge capital has enabled them to do the work on a larger scale and consequently at a less expense for each gallon produced, and they have both lowered the price and improved the quality. However, that fact is likely to be forgotten in contemplating the vast wealth thus distributed, although it surely is worthy of some consideration. The figures hold the eye and dwarf all else by comparison."

Meanwhile an incident has occurred very disquieting for the Company. The Texas Courts have forbidden one of the firms connected with the Company to transact business in that State, and the Supreme Court has confirmed the veto. This decision of the Supreme Court does not touch the question of the legality or illegality of trusts. It merely affirms the right of a State to enact laws which must be respected by every one doing business there. The company requires that any firm connected with it shall buy exclusively from it and from no other source, and shall not sell to any person handling competing oils or at any price except that fixed by the Company. Such contracts are forbidden by the laws of Texas State, and it follows that business can not be transacted there on the Company's lines. Evidently any other State may similarly legislate against contracts in restraint of trade, and in that way the trusts may be ruled out of existence. It would be a misfortune, we think, from the consumer's point of view if they were rendered impossible. The only really intelligible argument against them is that they wield a power so great as to be dangerous; but, as yet, they have not abused it.

THE BARLEY CROP.

The barley crop this year is estimated by the Department of Agriculture and Commerce at 19,317,978 *koku*, against an average crop of 18,748,421 *koku*. The figures for the ten years ending with 1900 are thus given:—

1891	...	...	...	18,088,373 koku.
1892	...	...	...	15,941,276 ,,
1893	...	...	...	16,625,229 ,,
1894	...	...	...	19,809,965 ,,
1895	...	...	...	19,526,123 ,,
1896	...	...	...	17,329,317 ,,
1897	...	...	...	18,005,490 ,,
1898	...	...	...	20,462,053 ,,
1899	...	...	...	19,337,868 ,,
1900	...	...	...	19,317,978 ,,

The average for seven years, omitting the worst year and the best among the seven, is 18,748,421 *koku*. Thus the anticipated yield this year is 3 per cent. better than the average, though slightly below last season's crop. The cold snap in April is believed to have impaired a yield which would otherwise have been quite exceptional.

THE ECONOMICAL SITUATION.

Tuesday, May 1.

Speaking at a meeting of the National Economic Society on the 25th April, Mr. Sakatani, of the Finance Department, deprecated the idea that any cause exists for taking a gloomy view of the economical outlook. Having pointed out that the Government's *post-bellum* decennial programme is rapidly approaching completion, and that the sum of 30 million *yen*, which is required this year in connexion with the prosecution of the various works, can be obtained without recourse to foreign markets, in the manner already explained in these columns, he invited his hearers' attention to the following figures :—

	1893.	Figures for present time.
Goods carried by railway	four million tons.	eleven million tons.
Mercantile Marine	200,000 tons.	700,000 tons.
Capital of commercial, industrial, &c., Companies	¥230,000,000	900,000,000
Clearing House Transactions	¥200,000,000	1,700,000,000
Loans made by Bank of Japan	¥50,00,0000	150,000,000
Mail matter	320 millions.	610 millions.
Telegraphic messages	13 millions.	31 millions.
Foreign trade	¥170,000,000	430,000,000

These figures must be supplemented by other facts; namely, that the fleet and army have been nearly doubled; that the tobacco monopoly has proved a success, and is producing a net revenue of 8 million yen, with a capitalized value of 200 millions; and that the State undertakings upon which considerable sums have been spent will soon begin to be productive. Moreover, there was good ground to hope that a great part, if not the whole, of the sugar required for home consumption could be grown in Formosa and Satsuma, and that a sufficient supply of kerosene oil might be found in Echigo and elsewhere. Baron Tajiri, Vice-Minister of Finance, was devoting attention to the development of these resources, and hoped that in time they would materially affect the volume of foreign imports. Meanwhile, the only resource available to check the flow of specie was to raise the Bank of Japan's rate of interest. Such a measure could not have very much efficacy under the circumstances existing in Japan, but there was nothing else to be done. At the same time, Baron Tajiri reminded the meeting that there was nothing in the state of the specie reserve to cause uneasiness. It was only 8 million *yen* less than it had been at the corresponding period of last year.

Thursday, May 3.

Mr. Inouye Kakugoro has joined in the attack on the Government. Little has been heard of this redoubtable orator for some time, but he has apparently now found a topic worthy of his eloquence. Speaking at a recent meeting of the Tokyo Chamber of Commerce, he charged the Government with having no definite policy of any kind towards finance. His line of argument is this :—During the past thirty years, various industrial and commercial enterprises have been started in Japan, and their total paid-up capital now amounts to some 370 million *yen*, exclusive of the banks. But during the past four years, 350 millions have been spent upon unproductive purposes, mainly the expansion of armaments. The Government, when they invited the country to give its consent to this great programme of unproductive outlays, declared most emphatically that their purpose was to simultaneously encourage the development of productive industries. Have they adhered to that declaration? Can it be said that they are adhering to it now when, in their alarm because imports temporarily exceed exports, they have raised the rate of interest at the Bank of Japan, and so effectually deprived the industrial and commercial classes of accommodation that everything is languishing?

Such is Mr. Inouye's indictment. It will occur to thoughtful persons that a difference of one or two per cent. in the price of money ought not to be potential in checking enterprise in a country where the rate of dividends habitually declared ranges from 10 to 30 per cent. With one part of Mr. Inouye's thesis we are nevertheless inclined to agree thoroughly; namely, his analysis of the cause of the nation's buying mood. The Government, during the past four years, has been pouring out money among the labouring and industrial classes. We shall not be over-estimating when we say that 150 million *yen* have thus been added to the purchasing power of the nation by altogether exceptional processes. It is that money which has raised the price of commodities and is now leading the people to spend freely. A paltry addition of five or ten millions to the volume of the currency, or an insignificant increase of the Bank of Japan's note-issuing power, is not to be mentioned in the same breath with such a factor of expansion.

DEATH OF SIR NICHOLAS HANNEN.

It is with the most sincere regret that we learn of the death of Chief Justice Sir Nicholas Hannen, which sad event took place at Shanghai on the 26th April. Sir Nicholas had been ailing for some time, and the hopelessness of his condition was recognised some days before the end by those in immediate attendance on him, but to the general public the intelligence will come with shocking suddenness. Our readers, of whom the great majority had the happiness to count Sir Nicholas Hannen a friend, and all regarded him with respect and admiration, will find any tribute that we can pay to his memory inadequate to express their estimate of his worth. In his private life he satisfied the truest ideal of an English gentleman, and his public career fully merited the high position to which he rose and the distinctions conferred on him by his sovereign.

Born August 21, 1842, Sir Nicholas was the youngest son of the late Mr. James Hannen, J.P., of Kingswood Lodge, Dulwich. He was educated at St. Servais College, Liège, Belgium, at the City of London School, and at University College, London. He took his B.A. (London) in 1864, with honours in Logic and Moral Philosophy; was called to the Bar at the Inner Temple in June, 1866, and was appointed acting Deputy Judge at Yokohama on June 10th, 1871. He proceeded to the scene of his duties in the following month, and continued in charge till May 7, 1874. In 1873 he acted as British arbitrator to adjudicate upon claims made by certain British subjects against the Japanese Government, and so ably did he discharge this duty that he was specially thanked by Her Majesty's Government. The appointment of Crown Advocate at Shanghai was conferred on him on October 30, 1878, and he became Judge of H.B.M.'s Court for Japan on December 21, 1881. During his tenure of this position he made himself both highly respected for his eminent legal abilities and impartial justice, and greatly beloved by his amiable personal qualities. He was one of the British delegates to the conference at Tokyo for the Revision of the Treaties, from December, 1886, to July, 1887. On April

Digitized by Google Original from CORNELL UNIVERSITY

1, 1891, he was appointed Chief Justice of the Supreme Court for China and Japan (he had before been for some time Acting Chief Justice at Shanghai) and also Consul-General at Shanghai. These posts he held up to the time of his death. He was knighted by the Queen on July 18, 1895, and received the Jubilee Medal in 1897. He was a member of Convocation of London University. Sir Nicholas married, in 1869, Jessie Maria Harriette, eldest daughter of the late Mr. James Woodhouse, of Henley-on-Thames.

Had he lived three weeks longer, he would have been on his way home *via* Yokohama, when it was arranged he and Judge Wilkinson should meet about 20th instant, prior to the latter's taking up the position of Acting Chief Justice at Shanghai.

GERMAN AFFAIRS.

Naturally the German press resents the expressions of journalistic indignation evoked in England by the publication of the language employed by the German Representative in London when addressing Her Majesty's Ministry on the subject of the mail steamers' seizure. The English press is accused of "behaving in an unmannerly way," which is certainly a quaint charge coming from journals that have treated England as the German journals have treated her throughout the war. It is conveniently forgotten that Lord Salisbury himself, in replying to the German Representative's despatch, was compelled to express surprise at receiving a communication "worded in so abrupt a manner and couched in language which impated to Her Majesty's Naval Commanders that they had shown a disrespect to international law." The Berlin correspondent of *The Times* justly says:—"The fact that anti-English feeling in Germany is so strong as to give the undoubted neutrality of the German Government a very unfriendly aspect in dealing with so ordinary an episode of international intercourse in time of war as the detention of neutral ships, ought to be carefully noted and remembered in England."

The excesses committed in Dresden against the British residents there have surprised and grieved Englishmen not a little, not merely because Dresden has always been such a favourite resort of tourists, but also because King Albert commands the respect and esteem of all Her Majesty's subjects. Unfortunately the Dresden press has been peculiarly bitter and violent towards England of late, its inspiration being derived, it is supposed, from the Anti-Semitic element of Saxony's floating population.

It was considered probable in the middle of March that the discussion of the Meat Inspection Bill in the German Reichstag would not take place before Easter. We have already explained that an amendment to this measure has been proposed, the effect of which would be to exclude all imports of American meat. Meanwhile another bone of contention has been found in the Lex Heinze, a bill introduced by the Government for the purpose of regulating the exposure and sale of objectionable books and pictures and placing public entertainments under stricter supervision. The bill is said to have provoked much indignation in Germany, where it is regarded as imposing restrictions on the freedom of art and literature. The Socialists, by a somewhat curious exercise of parliamentary tactics, succeeded in deferring the discussion of the measure, and it will now come up almost simultaneously with the Navy Bill and the final debate on the Meat Inspection Bill, so that a political situation of some difficulty is apprehended.

"BLUEBEARD."

"Bluebeard" was performed for the fourth and last time in the Yokohama Public Hall on the 28th instant to a crowded and most enthusiastic house. As might have been expected, the actors and actresses showed to even greater advantage than on any of the previous occasions, and the whole piece went with a swing and *verve* that delighted the audience. Mr. Brady (*Bakemono*) showed himself incomparably the finest comic actor that has ever appeared on the stage in China or Japan. His power of facial expression, his perfect harmony of gesture and sentiment, the singular versatility that enables him to pass, without the slightest apparent effort, from emotional intenseness to the very confines of comical levity, indicate talent such as we have never before seen in an amateur and very rarely in a professional. The scene between him and *Cyclona* (Miss Lloyd Thomas) in the third act was a piece of inimitable burlesque; not mere buffoonery such as constitutes the ordinary farce, but a kaleidoscope of swift transitions from profoundly tragic pathos and fierce passion to the most mirth-provoking drollery and ridicule. Such a success needed high excellence on both sides, that of Mr. Brady and that of Miss Lloyd Thomas also. A superb presence, singing deliciously, and moving with the utmost grace, Miss Thomas added to these attractions a really large measure of histrionic skill, and the law of contrasts, which is one of the too-often neglected principles of true art, was strikingly illustrated in the pictures presented by *Cyclona* and *Bakemono*—on the one hand an imperial mien, a dreamily magnificent costume, and queenly reserve; on the other, sombre homeliness, the apparel of a coolie, and the insistence of a clown. A similar though less prominent contrast was presented between *Kartos* (Mr. Eric Irwine) and *Kabos* (Mr. Edward Kilby): the twin Greeks, whose identity of costume and close similarity of roles would have made a note of monotony had not the earnest, grave, solemn-voiced, and almost mechanically ingenuous *Kartos* found a complete foil in the airy, insouciant and fantastic *Kabos*, an actor, for the rest, of evidently much capacity. These things, though their art is so cleverly hidden as to escape easy detection, are of vital importance to the general effect produced by a play. They do not stand solely or even chiefly to the credit of the performers, for they belong rather to the domain of the stage-manager's triumphs. They show, and their evidence is supported by a hundred other features, what an expert study Mr. Beart must have made of the piece, and how successfully he contrived to give effect to his conceptions. He has certainly established a new standard of Yokohama capacity. But it must be confessed that he had splendid material to work with. *Fatima* (Miss Strome) and *Sister Anne* (Miss K. Page) not only were a delight to the eye, but also sang and acted admirably. In their case, too, the opposition of characters was cleverly emphasized; romance and sentimentality against most business-like directness of purpose and bluntness of method. Many points in the acting of each young lady would call for special praise in a detailed criticism. *Widow Kus-kus* ("Mrs. P. de Tomkyns") left her audience in a state of perplexity. They did not know whether to admire most the sincerity of her representation, the high quality of her acting, or the grace of her dancing. As the authoress of the burlesque she had, of course, the greatest claim to applause, but the part she took on the stage subjected her good-will to a test scarcely less notable. Then there was Mr. Somerton's singing, a sufficent attraction in itself to fill the Hall, and there were also the dances performed by a troupe of young ladies amid scenery that harmonized most happily with their graces of person, music of motion, and deliciousness of costume. We are not writing a criticism, however, and therefore, with an apology to *O'Dearo* (Mr. H. Kilby) we conclude by stating what we set out to write, namely, that it seems really a pity not to repeat "Bluebeard" in Tokyo. Nothing of the kind has ever been seen there, and that a good audience would assemble, there can not be any doubt.

In noticing Saturday's performance it should be mentioned that many more local allusions and puns were introduced than on the first occasions, and while all seemed to tickle the audience immensely, perhaps the most successful innovation, next to Mr. Brady's skit and song "The Doctor," was the following topical ditty, sung by the "inimitable, illimitable, and irresistible" one himself:—

A person who holds an official position,
Your pity may very well claim,
The praises of men are his highest ambition,
And yet he gets nothing but blame.
Now what shall I do for a coup that is striking:
To make me a favourite strong,
If I pull up the roads to prevent you from biking,
Will that make me popular long.

Chorus.

For I want to be popular, popular, popular,
Worshipped by women and men,
If with brickbats I stuff,
All the roads on the Bluff,
Oh sha'n't I be popular then!

Or p'r'aps I might win your profoundest affection,
At least it is worth while to try,
By doubling the taxes in every direction—
Though now they're most terribly high.
What say to a duty on all ladies' tiffins?
A tax on the top cricket scores?
A crushing impost on the Negishi griffins?
Or Strokes of the Interport Fours?

Chorus.

For I want to be popular, popular, popular,
Worshipped by women and men,
If each guest that is axed
By a lady is taxed,
Oh, shan't I be popular then!

I've one happy thought on the tiffin hour problem,
I'll issue a solemn ukase,
For meals you shall have 20 minutes to gobble 'em,
And after, 10 minutes for grace.
A solid two hours is quite out of the question,
I'm going to divide it by three,
And as bolting rich food may promote indigestion,
I'll give you just half salaree!

Chorus.

For I want to be popular, popular, popular,
Worshipped by women and men
'Stead of good, honest chow,
We'll have sandwiches now.
Oh, shan't I be popular then!

Now lately I've noticed my people are shirking,
Our Choral Society's shows,
Conductor and Chorus have found their hard working
Is useless, for nobody goes.
Next season I think I will try other pleasure,
And some that may suit you perchance,
We'll go in for Shakespeare, say "Measure for Measure,"
Admixed with a rollicking dance.

Chorus.

For I want to be popular, popular, popular,
Worshipped by women and men,
I'll mix up each show
With an odd waltz or so,
Oh, shan't I be popular then!

Original from CORNELL UNIVERSITY

The audience cheered this song to the echo. A new duet, with local allusions, also fell to the *Widow* and *Sister Anne*, and it won instant recognition.

The ballet dance was greatly improved by the introduction of Miss N. Strome as *premier danseuse*. She is a most graceful exponent of the art of Terpsichore, and had time permitted the audience would have liked a repetition of the dance. The band of H.M.S. *Centurion* contributed some attractive musical selections throughout the evening. At the close innumerable baskets and bouquets of flowers were handed up to the ladies; nor was Mr. Brady forgotten.

INSURANCE IN JAPAN.

The extraordinary course pursued by the Nippon Kaijo Hoken Kaisha (Japan Marine Insurance Company) has greatly disturbed its colleagues. The Japan Marine Insurance Company has its principal office in Osaka. Last year, the Directors decided to open a branch office in San Francisco. They made arrangements in that sense with a Mr. Newhall, and from the commencement of the year he began to issue policies without waiting to conclude a written agreement with the Company. Meanwhile the Directors changed, and the new Board, not understanding how far their predecessors had carried the arrangement with Mr. Newhall, were surprised and startled at receiving numerous communications from the latter, giving accounts of the policies issued by him. Without full consideration they took the exceedingly ill-advised step of repudiating his action, and he was consequently obliged to advertise in the San Francisco journals in the sense that the various policies granted must be cancelled, and that the premia would be restored to the insurers on application. The incident evoked much severe criticism in San Francisco journals. It was insisted that Japanese business-men did not know the value of a promise and were not to be trusted. Three other Japanese companies have branches in San Francisco, namely the Tokyo Kaijo Hoken Kaisha, the Teikoku Kaijo Hoken Kaisha, and the Nippon Kairiku Hoken Kaisha. These three, justly apprehending that the incident would prove fatal to their business unless some remedial course were adopted, are now said to be strongly urging the Osaka Company to recognise the engagements entered into by Mr. Newhall in its name. We should imagine that such a question ought to be taken up earnestly by the whole insurance interest in Japan, for, unless the Osaka Company corrects the gross blunder committed by it, fatal injury will be done to the reputation of Japanese insurance companies in general.

WORKING OF THE TREATIES IN JAPAN.

The *Independent* has the following:—

A year has passed since the treaties with Japan came into operation, giving the Japanese courts control over offences committed by foreigners, which had before been under consular courts. Important testimony on the effect of these treaties was given on February 22nd, in Kobe, in the report of an advisory committee, composed of foreigners, who have had their interests in charge. This report stated that under the new treaties things have worked very much more smoothly than was expected by most a year ago. Formerly an almost impassable barrier existed between officials and ordinary individuals. The advisory committee has done much to relieve this difficulty and to protect the interests of their fellow citizens. Testimony was given that the Japanese officials have shown an earnest desire that foreigners, under Japanese jurisdiction, should find life just as comfortable and free from inconvenience as they found it under consular jurisdiction, so that things have worked with general smoothness, and pleasant relations have grown up during the past year. The various entertainments which preceded and followed the organization of the new treaties did much to bring both classes together, and the readiness of the foreigners to pay respect to his Imperial Majesty created a profound impression among the Japanese generally. Meanwhile relations of social friendship between the Japanese and foreigners have considerably increased, and have been of advantage on both sides.

We fear that this can not be endorsed in its entirety. There is no concealing the fact that the land question in Yokohama has created and is creating a great deal of uneasiness and inconvenience. There can not be any reasonable doubt that the intentions of the Japanese Government have been entirely sincere in this matter, nor need there, we think, be any doubt that the tenure of land under the new arrangements as to registration will be just as secure as it was under the old. But nothing can possibly persuade the average foreigner that the introduction of the term "superficies" into the registration column has no meaning. He persists, and will for all time persist, in regarding that innovation as more or less injurious to his title, and he maintains, and will always continue to maintain, that no innovation of any kind is warranted by the treaties. It would be idle to conceal that the arrangements with regard to the land question have been unfortunate. Needless discontent has been created, as well as an uneasy impression that the sacredness of international promises is not fully respected. Nothing is more desirable than the discovery of some satisfactory exit from the present situation.

PROTESTANT MISSIONARIES IN CHINA.

The following letter, which appears in the *North-China Daily News*, will be understood when we state that it is the reply of the Foreign Office in London to an application addressed by the Rev. W. Muirhead to the British Legation in Peking on the subject of claiming for Protestant Missionaries in China the rights and privileges extended to their Roman Catholic colleagues:—

Foreign Office, February 27th, 1900.

Sir,—I referred to the Archbishop of Canterbury, for His Grace's observations, Mr. Bax-Ironside's dispatches No. 306 of the 30th, and 317 of the 31st of October, on the question of claiming for those Protestant missionaries in China, who are British subjects, privileges similar to those recently granted, by an Imperial Edict, to members of the Roman Catholic hierarchy in that country.

His Grace approves the conclusion arrived at in regard to this question by the Anglican Bishops in China, as stated in the resolution enclosed in Mr. Bax-Ironside's dispatch No. 317, and considers that both as a matter of principle and of policy it is undesirable that Protestant missionaries in China should claim the privileges referred to.

Her Majesty's Government concur in the opinion expressed by the Archbishop, and you should take no further action with a view to obtaining for British Protestant missionaries in China the privileges conferred on the Roman Catholic clergy by the Imperial Edict.

I am, etc., (Sd.) SALISBURY.

THE ANTI-SMOKING BILL IN JAPAN.

There has been issued from the Methodist Publishing House in Japan an account of the passage of the anti-smoking Bill through the Japanese Diet. The translation is by the Rev. Ukai Takeshi, and the frontispiece is a portrait of Mr. Nemoto Sho, by whom the measure was introduced. The publishers suggest that this pamphlet will have interest for foreigners who sympathise with missionary effort in Japan. It can be obtained for 10 *sen* at the office of the National Temperance League, No. 20 Nishikonya-cho, Kyobashi-ku, Tokyo.

THE WAR.

Hout-nek, where Hamilton's Division forced a passage on April 30th and May 1st, is 13 miles due north of Thabanchu, on the road to Winburg, which is 56 miles from Thabanchu. The country around Thabanchu is mountainous and difficult, as is also the country around Winburg. Hamilton's Division may either form the right wing of Roberts' army for a general advance northward, or may merely have been assigned the task of clearing the Boers from the country around Thabanchu. It is impossible to arrive at any definite conclusion. What is certain, however, is that the Boers have no hesitation about dividing their forces. They are fighting in genuine guerilla fashion, and if Lord Roberts breaks up his force to pursue them hither and thither, his advance may be indefinitely delayed. Meanwhile we do not hear of any movement from the south for the relief of Mafeking. Our own belief holds that that task has been assigned to General Carrington, whose advance from Beira has now definitely commenced. Marendellas, to which point he had pushed the depôt of his camp on the 28th of April, is not marked on any map in our possession, but we conjecture it to be some point between Salisbury and Bulawayo.

NORTH AFRICA.

Mr. Threlfall, writing in the *Nineteenth Century*, predicts that there is great trouble in store for the white man in North Africa. The Mahdi has been conquered, the Khalifa killed, but at the head of a great revival of militant Mohamedanism stands Sidi Senussi, who may prove himself a foe more formidable than any of his predecessors, if he unfurls the Mohammedan banner for a holy war. Senussi's name sounds quite strange. The world has heard nothing of him hitherto. Here is what Mr. Threlfall says of him:—

Sidi Senussi is at the present time about fifty-five years of age. Save to his Mokaddem, who confer with him once a year, he is never seen unveiled by his followers. During his lengthy residence at Jerabub, from 1,500 to 2,000 students were regularly taught at the great convent with a view to their becoming Senussi missionaries as well as Mokaddem and Wekils. He had also an armoury and an extensive factory for the manufacture of arms and ammunition, while weapons were constantly being transported thither from all parts of Africa. In addition, he always had 5,000 camels ready at a few hours' notice to transport his most valuble effects to a more secure retreat; for although Jerabub was within 150 miles of the Mediterranean seaboard, the proximity of the hated English in Egypt and the French in Tunis ever threatened the heart of the great brotherhood. A few years ago, therefore, Sidi Senussi betook himself to the Kufra oasis, where, in the town of Joffo, he can educate and arm his disciples as well as accumulate vast stores of arms and ammunition without any possibility of interference from the great infidel Powers of Europe. The Kufra oasis is 500 miles as the crow flies from the Nile, and considerably more than this from the Mediterranean. Surrounded by the inhospitable desert, with wells sixty and seventy miles apart, and the route only known to experienced guides, every one of whom would suffer a thousand deaths rather than give the slightest information concerning him, he can safely plot, and plan, and work—for what? For the holy war which myriads of his followers have been for years longing to hear him proclaim.

Satisfying in every respect the Mohammedan conception of the true Mahdi (for not only is he stated to be directly descended from the great Mohammed's favourite wife, but he has one arm longer than another, as well as blue eyes, and the infallible mark between his shoulders), it is not surprising that he possesses a remarkable fascination for the imaginative and credulous races of North Africa. His colonies are found in Tripoli, Tunis, Algeria, and Morocco. His great secret brotherhood extends over the mysterious oases which dot the Great Sahara, embraces the strange tribes of the Tibesti highlands, controls the robber Tuaracks, and takes in the great states of Wadai, Borku, and Bagharmi, as well as the numberless tribes occupying the rich lands to the north of

Digitized by Google Original from CORNELL UNIVERSITY

Lake Chad, and can even be found in Somaliland on the east, and Senegambia on the west. Nor is this all.

Mohammedanism is making marvellous progress in the interior of Africa. It is crushing paganism out. Against it the Christian propaganda is a myth. And wherever Mohammedanism goes there goes the Senussi brotherhood. It is a beacon on the top of a hill waiting for the master hand to apply the spark. It is obviously difficult to give an approximate idea of the number of Senussi's affiliated members, inasmuch as that is alone known to the Mahdi and his lieutenants. In 1883, however, M. Duveyrier estimated them at three millions; but since then the movement has grown enormously, so that there are now probably nine millions. This, however, only represents a fraction of the force which will be available when Senussi proclaims the jehad. As those connected with powerful organizations well know, the moral force of the associated members often represent more than treble the total membership.

THE LEX HEINTZE.

The Lex Heintze, which was rejected by the Reichstag on the 18th of March, contained clauses penalizing immoral books, pictures, and plays, together with such literary and artistic works as might be deemed offensive to the sense of modesty without being actually immoral. It was against this latter provision that public opinion declared itself. Evidently such a law would have placed in the hands of the police and judiciary almost unlimited power to suppress publications and works of art which are now admitted into the best galleries. Artists and literati complained bitterly that their productions should be classed with immoral works. Who was to draw the line, they asked, on the permissible side of immodest paintings and sculptures? Every study of the nude is by some folks considered offensive to the sense of modesty, and that the creations of art should be submitted to the criticisms of the police is evidently extravagant.

THE COTTON-SPINNERS OF JAPAN.

At a general meeting of Japanese cotton-spinners held on the 2nd instant in Osaka, it was decided that the capital of the Union should be increased by three quarters of a million *yen*, representing 15,000 shares of 50 *yen* each. Three thousand of these shares are to be taken by foreigners. Messrs. Tata and Company of Bombay take a thousand, another Parsee firm—we cannot identify the transliterated name,—takes a hundred, and it is expected that the remaining nineteen hundred can be disposed of abroad.

The attention of the cotton-spinners has been directed to insurance rates. The cost of marine insurance by foreign offices from Bombay to Kobe is only 14 *sen* per 100 *yen*, whereas the cost of insurance from Kobe to Osaka is 12 *sen*, evidently a preposterous figure. A ten years' agreement has therefore been concluded with the Tokyo Kaijo Hoken Kaisha to correct this anomaly—though what the new terms are we have not learned—, and the Osaka Hiki-fune Kaisha has been entrusted with the business of carrying the cotton between Kobe and Osaka. These arrangements have probably been suggested, in great part, by the foreign firms which have joined the confederacy. They confirm our often-expressed idea that in such combinations is to be found the best prospect of Japanese commercial development.

A dead rat, having been found in the kitchen of Prince Komatsu's residence in Aoicho, Tokyo, was handed over to the Police, and the body is now undergoing examination at the Sanitary Bureau.

THE BOOKSHELF.

From Capetown to Ladysmith, by G. W. STEEVENS. London, Blackwood and Sons; Yokohama, Messrs. Kelly and Walsh.

THIS little volume is made up of despatches written by Steevens during the earlier part of the campaign in South Africa. The clever but unfortunate young journalist died in January, and most of the time he spent in the country he had been shut up in Ladysmith. As a sketch of the war at large, therefore, the book is not of much value. Its real worth is in the singular vitality of the narrative, the marvellous manner in which events and scenes are photographed, and the vivid and picturesque language, seldom distorted into mannerism, which seems to have been a natural gift with Steevens. He was undoubtedly the most literary of war correspondents of the present day, and here his gift of impressionism, his power of seizing vital points, is as conspicuous as ever. The sketch of life in the beleaguered town of Ladysmith is the most interesting piece of writing we have seen concerning the present war.

A short memoir concludes the book. It shows how strenuously Steevens worked in the short space of his 30 years, and what a position he held in the esteem of his contemporaries as a scholar, *litterateur*, and companion.

Harmony—Its Theory and Practice.

We have received from the Yokohama Piano and Ogan Warehouse a copy of Dr. Ebenezer Prout's work on Harmony. Dr. Prout is an Hon. Musical Doctor of Trinity College, Dublin, and of Edinburgh, and Professor of Music in the University of Dublin. His work has reached its twelfth edition, a fact sufficiently indicative of the appreciation in which it is held by the public. The learned author does not believe in the finality of musical rules. He holds that the science of music, like all other sciences, is progressive, and that what was approved fifty or a hundred years ago is not necessarily infallible. Hence, when it is found that a great musician like Wagner, Brahms, or Dvorak violates an old-text-book rule, the proper inference is, not that the composer is wrong, but that the rule needs modifying. "The inspired composer goes first and invents new effects; it is the business of the theorist not to cavil at every novelty, but to follow modestly behind, and make his rules conform to the practice of the master." Dr. Prout declares that "even in the most recent developments of the art, nothing has yet been written by any composer of eminence which a sound theoretical system cannot satisfactorily account for; and the objections made by musicians of the old school to the novel harmonic progressions of Wagner are little more than repetitions of the severe criticisms which in the early years of the present century were launched at the works of Beethoven." This book is founded, therefore, "not on any abstract system, but upon the actual practice of the great masters," and it contains more than three hundred illustrative examples selected from their compositions. There are twenty-one chapters, and an analytical index as well as an index to musical illustrations are added. We should say that the work contains as full and lucid an exposition of the theory of music as the most earnest student could desire.

Japan—Country, Court, and People.

The Rev. Dr. I. C. Colhoun Newton has published, under the above title, a volume small in dimensions but containing a great quantity of useful information about Japan and the Japanese. We can not find that the work shows many evidences of original research. It is rather a clever and careful compilation of material selected from numerous sources, more or less familiar, the whole judiciously arranged and set forth in plain, terse language. On the whole, our perusal of the volume inclines us to say that it offers the best opportunity yet provided for obtaining a succinct understanding of everything relating to Japan. Scarcely any of the subjects discussed, in fact, we may say, none of them, is treated from the point of view of the expert; the author has judiciously drawn the line so as render his book thoroughly useful to the general reader without taking him beyond the range of ordinary inquiry. It is a frequent complaint of the every-day visitor to Japan that he finds himself among objects of which no explanation is furnished by available books, some being too recondite to deal with such common matters, or too ponderous to invite research, and others too superficial to be of any service. We should say that Dr. Newton has cleverly avoided both extremes and that with his book in hand one can obtain all the information required. It has the advantage, also, of being exceedingly cheap—only 2 *yen*—and of containing several interesting illustrations.

NOTES ON CURRENT EVENTS.

The Police Department has considered it necessary to forbid the sale and circulation of M. Bigot's *Album Humoristiques de la Vie Japonaise*. We regret that a publication by a foreigner should thus fall under the ban, but we cannot pretend to query the justice of the action. These books are not fit to find a place in any household. Coarseness is their characteristic and immodesty their salient feature.

It is pleasant to see that the reviewers are beginning to revolt vehemently against Tolstoi and his brutal coarseness. A genius the man certainly is, but his last work, "Resurrection," has elicited the comment that, like Ibsen and Zola, he chooses "rottenness, debauchery, and all the disgusting incidents of human shame, out of which to make stories to be read for recreation or for instruction at the home fireside, to be absorbed by the innocent minds of youth and maiden for the making of character." In "Resurrection" the author's special sin is that he attempts to draw from the teachings of Christ justifications for the vices of which his heroes and heroines are the victims. Maidens descend to the lowest abysses of vice, matrons lose all respect for the dictates of morality, and men abandon themselves to a life of degradation, and, at the close of these shocking pictures, Scriptural quotations are appended to show the inevitableness at least of such incidents. Tolstoi is a Nihilist at heart. He hates the law, hates its punishments, hates everything that subjects human beings to restraints, and his gospel of love is that no crime should be considered to render a human being unamiable.

The Imperial Inspection of the ships engaged in the Manœuvres seems to have been brought to a conclusion without a hitch of any kind under most favourable circumstances as to weather. But apparently the public is not to have any information about the doings of the squadrons or the details of the mobilization. Newspaper correspondents having been excluded, there will not appear any accounts like the minute and exhaustive

Digitized by Google Original from CORNELL UNIVERSITY

analyses by experts that English journals publish on similar occasions. The Emperor entertained the commanding officers of the squadrons, several of the Princes of the Blood and Ministers of State and the Foreign Naval and Military *attachés* on board the *Shikishima* on the 30th April. To each guest a wine-cup was presented, bearing the inscription *shimbu no mei* (in commemoration of armaments expansion). The Naval *attachés* of France and Germany received Fourth-Class Decorations of the Rising Sun; the Russian Naval *attaché* received the Fourth-Class of the Mirror; and the German Military *attaché* received the Fifth-Class of the Rising Sun.

The head of a large shipping house in Manila, a man described as standing at the top of the mercantile community in the Far East, told Poulteney Bigelow that he thought the American officials in the Philippines were worse than the Spanish because the latter were "content with smaller bribes." That is a disagreeable charge. It will be bitterly resented in America. The same authority writes thus to Mr. Bigelow:—

The rule Americans have now established of putting a customs officer at each province port, and clearing local steamers with more circumstance than the Spaniards ever used against foreign-going vessels, is, it is to be hoped, only a war precaution. If they intend to continue it after peace it will be a horrible nuisance and play the mischief with inter-island traffic. It takes all the morning to clear a small steamer to a province port—triplicate manifests and numerous oaths and various offices—and all for what? There are no duties between this (Manila) and the provinces, and *vice-versa*. Think what it might be in the hands of a disagreeable man, working small craft for short runs! The present state of things eclipses anything we have suffered from the Spaniards, whom we were accustomed to look upon as first-class obstructionists. In the time of the Spaniards we could get to work at 6 in the morning, but now it is nearer 8. Again, the American officials don't take their midday meal at the usual hour when natives knock off at noon, when heat is greatest, and the upshot is we only get 8 hours' work out of 24. The American officials charge overtime for any work done after 11 o'clock a.m. on a Saturday and after 6 p.m. on any other day of the week.

The latest case of lynching in America ought to rouse public opinion. It occurred in Virginia. A white man and a negro were apprehended for having been implicated in the murder of two officers who had tried to arrest the negro for burglary. No doubt existed as to the speedy conviction of the negro, at all events, for he had confessed his guilt. Nevertheless, there was talk of lynching, and the sheriff obtained the services of a company of soldiers. The mob, however, was not deterred: it grew larger and threatened the troops. Then the sheriff and the county judge summoned a meeting of twenty leading citizens to discuss whether the soldiers should be sent home. The officer commanding the soldiers said that he could protect the jail but that it might entail some bloodshed and that he would have to telegraph for more troops. Nevertheless, the great majority of the twenty citizens voted to send the troops home. The officer in command telegraphed to the Governor for instructions, saying that if the soldiers were removed the negro would certainly be lynched, and the Governor's reply was that if the sheriff ordered the withdrawal of the troops, they must withdraw. The sheriff gave the order; the troops withdrew; the mob, led by an ex-judge, entered the jail unresisted, took out the negro, hanged him, emptying their pistols into his body, and then, since the negroes of the place demanded the hanging of the white prisoner also, he too was taken out and executed in the same way. These are the plain facts, incredible as they sound. It is wonderful that such incidents should occur in a civilized country. If they happened in any Oriental State, Occidentals would not hesitate to denounce it as barbarous.

The *National Review* for March devotes much space to reproducing, and commenting on, the sentiments expressed by the Japanese press with regard to the South-African war, as translated in the column of *The Times*, and concludes its references with these remarks:—"These friendly utterances in a time of need cannot fail to make a deep impression on the British people, to which we hope our public men will give expression. Should the "England of the Far East" at any time find herself in trouble, the "England of the Far West" will not fail to reciprocate her sympathy and appreciation. The existence of a powerful Japan is, after all, a vital British interest. We believe that she is more than competent to take care of herself against any probable enemy, but no European coalition must be permitted to crush her. It is satisfactory to know that an increasing number of Frenchmen already regret the pitiful part their country played in ousting Japan from Port Arthur. On the other hand, Germany is more anxious than ever to do Russia's dirty work in the Far East. In the competition of France and Germany for the favours of Russia lies the chief danger to Japan and the general interests of civilization."

The latest device is a mechanical method for registering the hour when employés attend an office. It is called the "photographic time clock," and the essence of the idea is that, by looking into a species of window and pressing a button, a man has a photograph taken of his face as well as of the dial of a clock, and thus his likeness appears in company with the picture of a clock showing the exact time of the photographic process. The initial expense of procuring the apparatus is considerable, and the cost of keeping it going is not small, but the inventors claim that it is far cheaper than a flesh-and-blood time-recorder.

The recent boom in Japanese kerosene enterprise was over-done, and a reaction has now set in. It does not appear that the reality of good supplies being available is questioned. The trouble is that fraudulent speculators endeavoured to make too big a haul, and that the public has found them out. They floated companies on a preposterous basis, the promoters putting the value of the well districts at three or four thousand *yen* per *tsubo*, and crediting themselves with a corresponding quantity of stock. The bubble has now been pricked and there is said to be great indignation. Several foreigners thought of investing, but they found the terms altogether deterrent and happily refrained. It is added that Mr. Asano's attempt to form a trust has failed.

The Democratic State Convention in Nebraska has adopted a platform with some remarkable planks. For example:—The fortification of the Nicaragua Canal by the United States; an unceasing warfare against all the trusts; the immediate restoration of the free and unlimited coinage of gold and silver at the legal ratio of 16 to 1, without waiting for the aid or consent of any other nation; independence for the Filipinos with protection from outside interference; sympathy with the Boers, and the abolition of the Dingley tariff as "a trust-breeding and extortion-inviting measure." With the exception of the last of these projects not one of them seems worthy of the intelligence of a great party. We do not suppose that the Democrats, even if they got into power, would seriously attempt to stand on such a platform. It appears to have been constructed solely for the feet of the unthinking and prejudiced elements of the population.

JUNKER CONCERT.

The third and last Junker Concert for the present season was given on Monday, the 30th April, in the Van Schaick Hall. The attendance was not good, and it would seem that the Yokohama public prefer light extravaganza to good solid music.

We were glad to see Mr. Poole back at his post and the string *ensemble* was benefited thereby, the general effect of the Mozart number being distinctly good.

Mr. Richter was the pianist of the evening and, with the able assistance of Messrs. Junker and Davis, made a success of the Mendelssohn trio. Mr. Richter is an able executant, with considerable power and technique, but he has still much to learn before he can worthily interpret even fragments of the great Tone-poet, Beethoven.

Herr Junker played, as his solo, Händel's well-known Sonata in G major, and received a double recall, for his performance.

Madame Henkler varied the instrumental programme by a pleasing rendering of Max Bruch's "Ingeborg lament," and with a movement from Dvorák's quartet in Op. 51, the concert and the season was brought to a close. Appended is the full programme:—

1.—String Quartet in..."B Flat major".....,Mozart.
2.—Soprano Solo....."Ingeborg's lament from the Frithjof Legend".....Bruch.
Madame HENKLER.
3.—Trio in....."C minor".....Mendelssohn.
for Piano, Violin, and Violoncello.
Mr. RICHTER, Prof. JUNKER, and Mr. DAVIS.
4.—Violin Solo...Sonata in G major.....Händel.
Prof. JUNKER.
5.—Piano Solo.....Largo and Menuetto (Op. 10) [Beethoven.
Mr. RICHTER.
6.—String Quartet...in E Flat major op. 51...Dvorák.
First movement.

THE INCOME TAX.

With regard to the forwarding of reports of incomes, for which purpose forms and remarks thereon have recently been distributed among foreigners, we have already indicated the principal points to be observed. We are now asked by the Revenue Authorities to draw attention to the following remarks.

Some persons appear to think that a foreigner who has not been in Japan more than one year is under no obligation to pay income tax. This condition as to length of residence is, however, only applicable to persons temporarily staying in Japan, as tourists, travellers, commission agents, etc., visiting the country for some special purpose and taking up a temporary place of abode during such time as their object requires their presence in Japan. This provision, is not applicable to those who have take up a fixed place of residence, with or without their families, with the object of permanently living here and carrying on business, or of going thence to other places for business purposes. All who belong to this latter class are under obligation to pay income tax irrespective of the length of their residence.

Again, some appear to consider that they are not under obligation to report their income if they are not present at the place of residence during the period in which reports should be made, or if they intend to move their residences during the year. The Law, however, requires reports in such cases, if in other respects the persons concerned are liable to taxation by the provisions of the law. Reports must, therefore, be forwarded; and if the parties are absent they must appoint a representative to arrange the matter.

Those who have not yet forwarded reports are required to present them without further delay. With regard to persons who have failed to do so, without justifiable reason, the authorities will be compelled to take proper steps as prescribed by Law.

Digitized by Google Original from CORNELL UNIVERSITY

DO TRUSTS INJURE THE WORKING MAN?

SOME leaders of thought in Japan are strongly advocating the organization of trusts in this country, on the grounds that intelligent cō-ordination of labour and economy of methods, which are precisely the factors of success most needed in Japan, can not be effectually secured by any means except trusts. Count INOUYE is a conspicuous supporter of that theory. Several Tokyo journals, while not questioning the advantages offered by trusts, declare them unfeasible in this country because merchants can not, or will not, place confidence in each other. Persons advancing such an objection seem to us to ignore the history of their own country. Japan in feudal times was the very nursery of trusts. From 1770 until 1841 virtually the whole business of the country was in the hands of confederations of merchants working on precisely the bases of the American trusts. In that respect there should be no difficulty. But many people imagine that trusts injure the working classes by decreasing the demand for labour. Concerning that Mr. I. A. ARCHBOLD, writing in the *Independent*, denies the truth of such a criticism. He shows from actual experience that a similar charge, brought against other agencies, was uniformly rebutted by facts :—

"When steam-looms and spinning jennies began to be adopted in England, spinners and weavers travelled the country destroying the implements which were robbing them of their opportunity to labour. At that time the number of spinners and weavers in in England was less than 8,000. Ten years later 350,000 persons were employed in these industries, and to-day they furnish labour, directly or indirectly, to over two millions of the people of England."

The cotton and printing industries illustrate the same truth :

"The effect of combination and the utilization of machinery has been particularly evidenced in the cotton manufacturing industry. One man will now do the work which required several men seventy years ago. Yet the number of laborours in this industry has increased from 62,000, in 1831 to 220,000 in 1890. And this is not solely due to increase in population, but largely to the fact that the consumption of cotton cloth increased over one hundred per cent. per capita by reason of a reduction of sixty per cent. in its cost price.

"The printing-press furnishes another illustration. I do not know how many men it would require with a hand-press to equal the production of a modern Hoe press. I think many hundreds. Yet the number of printers has been wonderfully increased by the improved press, because it has cheapened the production and thereby increased the number of readers.

"The rule is invariable. Whatever cheapens production increases consumption, and increased consumption creates increased demand for labour."

Concerning the Standard Oil Company he says :—"It has reduced the price of its products, it has paid the best wages to its employees, and payment has been constant and certain. It has increased the number of employed, and a more faithful and better contented army of employees never existed. A great number of small concerns could never have created the costly machinery and plants, constructed the pipe-lines, built the tanks, tank-cars, and tank-vessels, opened the markets of the world, and built up the present oil business. That required combination and capital, without which there would not be to-day 35,000 workmen drawing $100,000 per day in wages, thousands of persons of moderate means interested in the business, and cheaper light in the palaces and huts of every continent."

CHINA AND AMERICA.

MR. WU TING-FANG (NG CHOY), Chinese Representative in Washington, has published in the *Independent* an interesting article on the relations between his country and the United States. He points out that China is now beginning to buy largely from America, the principal objects of purchase being flour, which is widely used in the northern districts; kerosene, cotton, and iron. He suggests that more sincere efforts should be made to ascertain the wants of the Chinese markets in the matter of cotton fabrics. These are made at present to suit American convenience only; so many yards in a piece of such and such a definite width. But "We Chinese," says the Minister, "are a very practical people, and if we buy a piece of goods and find that it does not cut to advantage, that there is a waste of two or three yards in every piece, it is not encouraging for trade." This is a point that has often been urged already.

In connexion with the subject of iron, Mr. WU explains that railway construction in China owes its initiative to him. "With the permission of his Excellency LI HUNG-CHANG, about 15 years ago, I procured the construction of the first railway in China." Opinions were so divided among Chinese statesmen as to the utility of the undertaking that it was not possible to build outside LI's jurisdiction. But no sooner was the first line built than "the people jumped at it." "The first road had to be constructed through a country where there were few houses and the people were poor." It could not be brought near the towns and villages on account of popular prejudice. Nevertheless, it now pays 50 per cent. Mr. WU's inference is that an object lesson alone is needed to open the eyes of the Chinese. Hence his advice to American manufacturers . is :—"You must have a show house in Shanghai and in the great ports of China, a large depot, a museum, and you should send specimens of articles or manufactured goods, with the prices attached. Let the Chinese merchants come and see for themselves. Let a fair, honest price be attached. The first transaction is important. American agents must be careful. They must be obliging and must not expect great profit on first transactions. It may even be worth while to lose a little in the beginning, but in the long run they will gain a great deal. When confidence is once inspired there is no telling what it will lead to."

Naturally Mr. WU enters a strong protest against the treatment given to Chinese subjects in America. What he says is so just and moderate that we quote it :—

The Chinese question has not been studied thoroughly by the American people. A great deal of misapprehension exists in regard to the Chinese, and the subject is not looked at broadly and impartially. The Chinese who come here, whatever class they may belong to, do not come to steal American money; they come to work for it. They give an equivalent and do it honestly. They are excluded not because they are bad, but because they are too good. The chief reason, I suppose, for the agitation against the Chinese coming to the United States was because our workmen came here and competed with the white labourers and worked cheaper. Is that a good reason for excluding them, and are Americans consistent? Why should the Chinese be singled out and excluded when others are allowed to come and compete? Of course the American people are free to adopt any restrictive policy that they like, but to be consistent they ought to exclude all classes of labourers who come here to compete with American labourers. But Chinese labourers are singled out because our Government has not exercised its privilege of opposing this discrimination. The Italians and Hungarians who come here are not better than Chinese labourers, and it is hard to see why they should be admitted and the Chinese excluded.

The avowed object of the exclusion bill was simply to exclude Chinese labourers, but the restriction has now been extended to other classes. There was some reason, perhaps—I do not say *just* reason—for excluding Chinese labourers, based on the treaty negotiated in 1880 for the purpose of limiting the coming of Chinese labourers to the United States. It is expressly stated in that treaty that this restriction was to apply only to Chinese labourers. No other classes were aimed at. It is in black and white in the treaty and the meaning of the words is as clear as daylight. But because in that treaty it says that "officials, merchants, teachers, students, and travellers" shall not be excluded; because these five classes are mentioned, new interpreters of the law say that only these five classes are exempt, and all other classes are excluded. For fifteen years American officials held that according to law only Chinese labourers were to be excluded and that all other classes might come here. This was the practice up to September, 1898, when a new interpretation was substituted, and it is now said that no Chinese have a right to come here except those specially exempted from exclusion. I think that is the last straw on the camel's back. What is the consequence? The Chinese banker, the Chinese doctor, the Chinese missionary, the Chinese lawyer, or private gentleman, are not admitted because they do not come within the five classes mentioned in the treaty.

Americans want to develop their trade with China, want to be good friends with China. That is very natural; we are glad to hear it, but is the present state of things satisfactory? How can you expect Chinese merchants to give you much business in the face of these facts?

KERAMIC ART.

At the eighth general meeting of the Keramic Art Association held at the Nihonbashi Club, Tokyo, on the 29th ultimo, Mr. Teshima, Director of the Tokyo Industrial College, made the following remarks :—According to statistics lately issued, the output of porcelain during 1899 was 4,965,000 *yen*, against 2,180,000 *yen* in 1891. As to exports, the figures for 1891 did not exceed 1,280,000 *yen*, but by 1898 the amount had increased to 1,990,000 *yen*. Still, comparing the figures for 1896, with those of 1897, it will be observed that not only is a diminution of 200,000 *yen* shown in the value realized, but also a serious decrease in the number of manufacturers and artisans even in such prominent districts as Owari and Mino. The decline in porcelain may not be so serious as that experienced in the lacquer trade, but in comparison with textile industry the result is discouraging. The fact is that porcelain is still manufactured by cottage industry, and no combination exists as in the case of textiles. This is the true source of the lack of development.

STUDENTS TO BE SENT ABROAD.

The Department of Agriculture and Commerce has been selecting students to send abroad this spring for training in various branches of art and industry. The following have been chosen :—

Name.	Destination.	Studies.
S. Mori	New York	Copper plate engraving.
K. Naganuma	Lyons	Silk weaving.
K. Sasahara	do	Designs for weaving.
Z. Suge	do	Variegated silk weaving.
S. Iwamoto	do	Silk manufacture.
R. Abeno	Vladivostock	Tea Trade.
S. Yamaguchi	New Haven U.S.	Miscellaneous trade.
G. Kudo	Brooklyn, U.S.	Silk dyeing and sizing.
K. Natsuaki	St. Petersburg	Miscellaneous trade.
K. Inayoshi	Shanghai	do
K. Isshiki	Philadelphia	Silk export trade.

Digitized by Google Original from CORNELL UNIVERSITY

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the *Rikugô Zasshi* Mr. Yamagata Tôkon reviews the history of Protestant Christianity in Japan during the past ten years. The following is the gist of what he has to say:—Ten years ago Christianity was in such favour in Japan, owing largely to the pro-foreign tendency of Japanese thought, that there was talk of opening the Diet with prayer. Reaction set in with results on the public mind in general that are too well known to need notice here. The effect of the nationalistic movement on Christians was to make them feel the importance of establishing self-supporting Churches and of carrying on evangelistic work independent of foreigners. The Kirisuto Kyôkai was founded with these objects in view. Missionaries were treated as visitors and not as part and parcel of the concern, and consequently foreign pecuniary support was gradually withdrawn, with the result that before very long the work of the Church was greatly hindered for want of money. But members of the Japan Church had the satisfaction of being able to think freely. Under the pressure of pecuniary distress Christians were obliged to turn their attention to business, dividing their time between secular pursuits and religious work. About this time a lively discussion was carried on in reference to the tendency of Christian teaching in schools, and in certain quarters educationists took a decided stand against Christianity, which rendered mission schools temporarily unpopular . . . . One of the results of our war with China was to bring into prominence the many benevolent actions of Christian Societies and to create throughout Japan a good impression of Christianity. After the war a strong feeling in favour of trade and industry set in. The nation became intensely practical and was in a mood to appreciate active work of any kind. Both Christians and Buddhists made use of this tide for floating all kinds of benevolent enterprises. But the religious element in these efforts was not generally appreciated, and charity pure and simple was all that most people admired. The next event affecting Christianity was what is called the Nippon Shugi movement. It is perhaps impossible to deny that the supporters of this agitation have considerably influenced educational circles. . . . . It is true to say that in the history of the past ten years what has impeded Christianity has helped Buddhism. At the beginning Christianity basked in the sunshine of public favour, but when the reaction set in Buddhism at once came to the front. The agitation in the educational world over the effect of Christianity in the schools did Buddhism as much good as it did Christianity harm.

Coming to recent years the following facts seem to be worthy of mention. Christian lecture meetings of the class that used to be held in such large numbers have grown very rare. The speakers at such meetings as are held preach morality rather than religion. The anticipations of both Buddhists and Christians as to the result of mixed residence have been falsified by the course of events. The Buddhists feared a large influx of Christian workers from abroad. No such influx has taken place. Christians feared that numbers of godless Occidentals would settle in the interior and bring dishonour on the Christian name by their conduct. These black sheep of the Christian fold have not yet revealed themselves. Things go on since mixed residence much as they did before it was inaugurated. . . . The action of the Education Department some months ago in regard to private schools undoubtedly dealt a blow at Christianity. But more important than this is the absorption of the strength of the church by business. Some of the best Christians spend most of their time in gaining a living and give little assistance to the work of the church. The study of comparative religion has become popular in recent years, but it cannot be said to have yielded any practical results.

Mr. Yamagata thus sums up the present situation and its requirements:—(1) The number of Christians among business men, though from one point of view a loss to the church, should make Christianity known far and wide. (2) The general feeling in educational circles is decidedly anti-religious. While this is so, it is acknowledged on all hands that the morals of the young are utterly corrupt. There is a great need of the formation of Young Men's Societies and for the holding of friendly gatherings of all kinds, with the object of elevating the general tone of thought among the young. (3) Books and articles demonstrating the necessity of religion and explaining in what true religion consists are specially needed at this crisis. Christians cannot but regard with aversion the attitude of the Meiji scholars of Japan to religion of every kind. Together with the free-thought of revolutionary France they have rendered our young men acquainted with the philosophical objections to Christianity of Bentham, Mill, and Spencer. Then politicians like Marquis Ito, in teaching German nationalism and the preeminence of State interests, have increased the coldness felt towards religion. A few leading scholars hold that religion is a necessity; and it is important that their views should be more widely known. (4) It might be expected of scholars engaged in comparing various religions with each other that they should take part in the work of impressing on the public the importance of religion. But nothing of this kind takes place in Japan. Our scholars investigate religion merely as a subject of study and have no ulterior object in view. They feel no concern for the present fate of religion. No help is to be expected from the labours of such scholars.

Buddhism, it is said, concludes Mr. Yamagata, has been killed by possessing too much money. Christianity, on the other hand, seems to owe its decline in recent years to its poverty. The severance of the Church from foreign control has proved to be a very difficult undertaking. The churches that led the way in the matter of independence and self-support were the *Kumiai* and the *Itchi Kyôkai*. But though undoubtedly these churches possess some of the finest types of Christians, it cannot be said that as churches they occupy the most prominent positions to-day. They are surpassed by the Methodists and the Episcopalians, both of which are most successful in their work. As regards the Episcopalians, it is a remarkable fact that the prosperity of that body dates from the decline of all other Protestant Associations. (*Koto ni Kantoku Kyôkai wa, ta no Kyôkai no otorôru koro yori, hajimete okoru no miye wo tei suru wa chûmoku subeki koto nari*).

* * *

We have received from the Rev. George G. Hudson, of Osaka, a copy of his recently published *Kyôkai Rekishi* (Ecclesiastical History). We take this occasion of saying that it would greatly facilitate the preparation of these summaries if all the publishers of religious books would favour us with copies of their works. Mr. Hudson's book consists of about one hundred pages, divided into two parts, one dealing with Church History as it is given in the New Testament, and the other with history culled from the writings of the early Fathers. We judge from a remark in the preface that the work is to a certain extent based on Burton's "Records and Letters of the Apostolic Age." It is divided into 28 chapters, but there is no index giving the subjects treated in each chapter. The book is evidently designed for Christians who have not been highly educated. It is liberally supplied with *kana* throughout, and the style is extremely simple. It is furnished with a small map. The *Kyôkai Rekishi* is for sale at 5 *sen* per copy at the Fukuinsha, Osaka.

* * *

L'Abbé Francois Ligneul bids fair to exhaust the subjects connected with the religion of which he is so stalwart and accomplished a champion. A new work from his pen consisting of 250 closely printed pages lies before us. The subject of it is "Secret Societies." It opens with an introduction by M. Ligneul and another from the pen of Mr. Maeda Nagata, his able translator. In the former we are told that the topic discussed in the work was suggested by an article in the *Nihon-jin* urging the necessity of establishing secret societies in Japan. M. Ligneul says that he doubts whether the writer in the *Nihon-jin* has any distinct notion of what secret societies are, and certainly, he adds, it would be no insult to this writer's Japanese readers to say that they are profoundly ignorant on this subject. It being a topic on which the public needs information, M. Ligneul has taken it up and discussed it with his wonted zeal and thoroughness. The book may be recommended to students of the Japanese language for several reasons. The style is at once easy and lucid, the subject is decidedly interesting from many points of view, and the work is characterised by that philosophic insight which M. Ligneul has so conspicuously displayed on former occasions. M. Ligneul in the 32 short chapters of which the work consists states in a most concise and interesting manner all that an inquiring mind would certainly wish to know about those substrata of political, religious, and social life called secret societies; their variety, their constitution, their principles, the objects they have in view, good or bad, their political views, their rules and ceremonies, their modes of working, their system of education, their effect on society, their future, and a number of other subjects receive the attention of the author of the *Himitsu Kessha*. But the work is controversial, and hence one-sided, throughout. It may represent certain phases of French Free-masonry, but of English Free-masonry it would be considered by competent critics to be a caricature. M. Lignuel seems to see nothing but evil in Free-masonry.

* * *

In the *Tetsugaku Zasshi* Mr. Katô Genchi propounds the question, "Ought not Buddhism and Christianity to harmonise with each other and become one religion?" which question is answered in the affirmative, on the ground of expediency and on that of similarity of teaching. The writer seems to have no conception of the enormous difficulties that would present themselves should an attempt be made to carry his theory into practice. We do not propose to summarise his article, though it contains a good deal that is true enough in its way, because the proposal made is felt by all who

Digitized by Google Original from CORNELL UNIVERSITY

have thought out its details to be quite impossible. The idea of uniting the two great religions of the world has been repeatedly discussed, but with no practical results as far as we can see.

We turn to another article in the same magazine, by Mr. Fujii Kenjirô, which asks, "Is it a condition of morality that it should be always changing?" Mr. Fujii attempts to reply to the well-known theory that ethical notions change with the age, a theory that in this country is stoutly defended by Dr. Katô and Mr. Fukuzawa. The comments of Mr. Fukuzawa on this subject in the preface to the *Shûshin-yôorei* are thus quoted by Mr. Fujii. "It is one of the conditions of ethical teaching that it should daily change so as to keep pace with the general progress of man. It is essential that enlightened society should listen to doctrines that are adapted to the stage of thought through which it is passing. This it is that makes change in teaching absolutely essential." To this Mr. Fujii replies that it is only the outward forms of morality that change, that its fundamental principles always remain the same. He thinks that Mr. Fukuzawa and his followers have gained a reputation in the country for the skill with which they have dealt with practical questions of everyday life, that, in helping men to make a judicious choice between various courses of conduct open to them, they have shown great common sense. But Mr. Fujii considers the fundamental principle of Mita morality, independence and self-esteem (*Dokuritsu, jison*) an insufficient and even a dangerous foundation whereon to erect a system of ethics. He is of opinion that the view of life given by Mr. Fukuzawa errs on the side of flippancy, and further that the effect on the minds of the young of the adoption of this view is distinctly demoralising.

The *Tetsugaku Zasshi* announces that Mr. Anezaki Masaharu, whose writings have been so often quoted in these summaries, has been sent to Germany to study religion. He will be away three years and is to visit India on his way back. The *Tetsugaku Zasshi* expects great results from this new departure on the part of the Japanese Government, for we take it that the Government is providing the necessary funds, and thinks that the measure shows increased appreciation of the importance of religion. Mr. Anezaki left Yokohama on March 16th.

* * *

Writing on the Unitarians of Japan and America, the *Tôkyô Maishû Shimpô* (No. 863) says that in America the term "Unitarian" conveys little idea as to the belief of the person to whom it is applied. There are Unitarians that differ nothing from orthodox Christians, and there are Unitarians that do not believe in the Bible, nor in Christ; and some that do not even acknowledge a personal God. But the general tendency of thought among American Unitarians, says the organ we quote, is towards increased orthodoxy. The Unitarians of Japan are an Association whose objects are purely moral. The Unitarians have Buddhists, Christians, and sceptics in their ranks. Regarded as a religious sect they have undoubtedly failed, but as an Association they have succeeded and still enjoy great popularity. The Unitarians are now without foreign superintendence, though they still receive pecuniary support from abroad.

The *Tôkyô Maishû Shimpô* states at some length the views of Mr. Kataoka Kenkichi, the President of the Diet, on Christianity. Mr Kataoka, as is well-known, is a Christian, and he expresses his conviction that just as Japan accepted Confucianism and Buddhism and assimilated them in a very thorough manner she will assimilate Christianity. Japan's success in adopting western civilisation, Mr. Kataoka thinks, is wholly attributable to the fact that she had a code of honour and morals known as *bushidô*, but that has now almost gone, and in its place Christianity must be adopted.

* * *

In the *Fukuin Shimpô* the Rev. K. Ibuka, writing on Christian marriage, says that the approximate equality in the number of males and females born in every country is a proof that monogamy is of divine origin. The numbers he gives for Japan are about 102 males for every 100 females. Writing of divorce in Japan for the year 1892, he gives the following figures: 361,319 marriages and 114,436 divorces. For the year 1893 the totals are 358,389 marriages and 116,775 divorces. This shows that for every 3 marriages there is one divorce. This state of affairs, Mr. Ibuka says, is quite unique.

Writing on the work of the Bible Societies in Japan, the *Fukuin Shimpô* says that they have circulated about 2 million copies of the Bible and have for a long time employed some 200 colporteurs and other distributing agents. The demand for copies of the Scriptures being still very large, involving heavy expenditure, the British and American Bible Society has applied to the Japanese Churches for pecuniary help. The application is, the *Fukuin Shimpô* thinks, reasonable enough, but it has its doubts as to the ability of the native churches to respond in an adequate manner, and in that case foreigners resident in Japan are asked to contribute to the funds of the Society.

* * *

The *Koye*, the Roman Catholic organ, says that it is only the people who have no experimental knowledge of what real religion is that talk about reforming religion. It is their own hearts that need reforming. No new religion can effect what the old ones fail to do. Those who really believe in Christianity are quite satisfied with it. Those who talk about its imperfection know very little about it.

The same organ discusses Mr. Fukuzawa's system of ethics as propounded in the *Shûshin Yôrei*. While admiring Mr. Fukuzawa's earnestness in the cause of moral reform, the *Koye* thinks that the one defect of his scheme is the want of motive power. The trouble from which the country is suffering is not ignorance of moral precepts or of the superiority of virtue to vice, but the lack of inducements to lead a virtuous life and deficiency in the necessary moral courage and resolution. It is no use, continues the *Koye*, to talk of self-esteem as a motive power that makes for virtue without defining the qualities in human beings that are worthy of esteem. What part of self is it that should be honoured? If human nature is noble, why is it so? These questions Mr. Fukuzawa does not answer, and consequently there is considerable vagueness attached to his standard of virtue. From the point of view of materialism there is very little difference between human beings and ordinary animals. Whence then comes the reason for man's self-esteem? Is not his life utterly insignificant? Dust he is and to dust he shall return. What is there in him that is worthy of honour? The view of human nature adopted by Mr. Fukuzawa ill accords with the elevation of self-esteem into a basis of morality. If the immortality of the soul be denied, man ceases to occupy a preeminent place in the universe. The Christian can appreciate all Mr. Fukuzawa says about self-esteem, because his view of the origin and of the destination of man ennobles human nature. But in the absence of Christian belief self-esteem is meaningless and ineffective as a motive power. Mr. Fukuzawa has adopted the conclusion to which Christians have come, namely, that human nature is noble and worthy of high honour, but he denies the premises on which that conclusion rests. Hence his system of morality is illogical and can never effect much good.

* * *

In the *Bukkyô* (No. 158) appears an article by Mr. Kiyosawa Mitsuyuki entitled *Kitô wa meishin no tokuchô* (Prayer is a clear proof of superstition), of which the following is the gist. Prayer is founded on a misconception of the infinite and brings gods and divinities (*hotoke*) down to the level of human beings. Since all our wants are known to God as well as the wants of millions of other human beings, for us to try and attract his attention to us by calling on him or to ask him for this and that special thing shows that our conception of him is entirely false. A human parent may need reminding of the wants of its child, though where real affection exists this does not often occur, but the all-knowing and the all-powerful needs no prompting. To cease praying and to rest content with all Heaven's decrees—this is true piety as distinguished from superstition. There is no such mental composure as that which proceeds from entire submission to the Divine will. . . . There are those who say that prayer continues to be offered up to God on account of its effect on the mind of the suppliant. But this is a poor argument. If prayer cannot change the mind of God, if the requests of suppliants can have no effect on the course of events, is it not a confession of culpable weakness to go though the formality of offering them on account of their solacing effect on the mind of the devotee? Is it not far nobler in every way to do what is right and bow to nature's law without resorting to any such pretence as attempting to suspend or to alter these laws by means of prayer? The practice is superstitious to the core, and ought to be recognised by religious people as such, says Mr. Kiyosawa.

* * *

No. 159 of the *Bukkyô*, when discussing Buddhist reform, laughs at the notion of any great man appearing in modern times who during a short life time should revolutionise religious thought and put new life into the dry bones of Buddhist rites and ceremonies. Old, conservative Buddhism is dying out. New Buddhism is vigorous, but has not yet assumed its final form. Buddhism is now suffering from the effects of the entrance of a new civilisation. She must make good use of all that is valuable in Western thought. The notion that filial piety, loyalty, and patriotism are deficient in the west is a delusion. The great desideratum for all Buddhists is that they should possess an accurate knowledge of the existing state of affairs and in every way adapt themselves to the altered situation.

The following number of the *Bukkyô* to the one just quoted contains an amusing article entitled "The Modern Gentleman," the purport of which we give below. The term 紳士 *Shinshi* is a translation of the English word gentleman, but the Japanese word really conveys a different

Digitized by Google Original from CORNELL UNIVERSITY

meaning to us from that borne by the English term. Our version of gentleman (*zentoruman**) is 銭取人 *zenitoru-hito** (the money-making man). Money controls all things in our modern world. Whatever we may have worshipped in the past, it is certain that we are now gold-worshippers. Religious teachers and moralists alike denounce the love of money as the root of all evil, but all to no effect. Mr. Fukuzawa, who many years ago set the fire going, is now attempting to quench it with his *Shûshin Yôrei*. Vain hope! Even our new constitutional government has been debased by bribery and corruption, and many of our very moralists have turned their teaching to pecuniary account and have made large sums of money by denouncing the love of it in others. . . . . Japan is a country which was dependent on a woman for her first daylight.† Woman has always played a prominent part in this country. But in ancient times she was worthy of honour. The modern woman is a mere toy, born into the world and trained principally for one purpose only, namely to minister to the inordinate desires of the opposite sex. And it is the men who call themselves *shinshi* that take the most prominent part in debasing women and bringing dishonour on the nation.

* * *

There is a great stir among the Buddhists over the King of Siam's offer to present to a representative deputation of Japanese Buddhists a certain portion of the remains of Shaka-muni, said to have been discovered by an Indian Civil Service officer some little time ago, along with a number of other relics. The King of Siam, we are told, objects to the remains being appropriated by any one sect, and here the difficulty comes in. If these sacred bones, for as such the remains are spoken of, are brought to Japan where will they be placed? And what priests will be chosen to take charge of them? Devout Buddhists would no doubt crowd to worship them, and they would become a great source of profit to any sect that had them. Notwithstanding all the difficulties in the way, we are told by the *Bukkyô* that a sum of 200,000 *yen* has been subscribed towards the expense of sending a deputation to Bangkok. The fact of the willingness of the King of Siam to entrust to the Japanese Buddhists certain of the bones of the founder of the sect was communicated to the Buddhist authorities by Mr. Inagaki Manjirô, the Japanese Minister in Bankok. The deputation is to consist of Buddhists of learning and reputation who are able to speak English. There are some, the *Bukkyô* tells us, who predict that one effect of the discovery of these bones will be the union of Buddhists all over the world in the closest bonds and a revival of interest in the creed. Some have doubts of the genuineness of the relics, and are afraid that the sect may be imposed on and bring ridicule on itself. Altogether the dead bones are furnishing a very lively subject of discussion in the Buddhist world.

* * *

In the *Kyôiku Kôhô*, Mr. Honda Yôichi discusses Mission Schools in the following terms: As it is my aim to show the position occupied by Mission Schools as educational establishments, I will begin by referring to the Aoyama Gakuin. This institution is divided into three departments, namely, (1) the Kôtô-futsûgaku (High Class General Learning department (2) the Chugaku (Middle School) department and (3) the Shingaku (Theological) department. In the first two departments the education imparted is of a general character, only differing from that given at secular schools in the matter of ethical teaching, which is based on Christianity. This is a fair type of the class of school known as a Mission School. If the origin of such schools as the Meiji Gakuin, the Aoyama Gakuin, and the Dôshisha be inquired into, it is found that the earliest of them date from about the 3rd or 4th year of Meiji, and what called them into existence was the great demand for foreign instruction at that time and the almost total want of suitable secular schools for teaching western learning. After a number of boys' schools had been established, girls' schools began to spring up here and there, and they all met with great encouragement. Many of the young men and young women trained in these schools made names for themselves in the world, and consequently the public began to regard mission schools as a valuable asset of the nation's intellectual and moral wealth. During the first two decades of the *Meiji* era there was no slackening of the pace with which the nation travelled in the direction of Western thought, and hence even a man like Mori Arinori felt it to be his duty to encourage mission schools in every way on general grounds. He expressed sympathy with Mr. Niijima's work at the Dôshisha, and even helped to found the Sendai Tôkwa-gakkô. Thus at the time of which I write we see that prominent Japanese combined with the missionaries in establishing and rendering efficient mission schools in various parts of the country. It may be well to state in figures the results of these efforts. Reckoning those institutions only which aim at reaching a higher standard than that of ordinary middle schools, there were last year 20 boys' schools, with 2,916 pupils, and 48 girls' schools, with 3,538 pupils. In addition to these there were 136 primary or special schools, with 9,394 attendants. This gives us a total of 204 mission schools, with 15,846 pupils. These schools are a necessity to the country. They fill a place which no existing institution could fill so well. What is most wanted in Japan to-day is not a knowledge of mathematics, physics, and the like, but practical morality. The men engaged in teaching in Government schools have studied various religions and various systems of ethics; but only as branches of learning. They have not made up their minds to adopt or to follow the teaching of any religion or system of moralily. Hence their moral influence on the young is very slight. But in mission schools the pupils receive impressions from the teachers that are of great benefit to them. The value of the training given at these establishments is recognised by the outside world, as is evidenced by the fact that of late there has been a great demand for teachers of English who have undergone special training at mission schools. Mr. Honda, we observe, is to continue the discussion in the next number of the *Kyôiku Kôhô*.

* This is the Japanese way of pronouncing the word.—(WRITER OF SUMMARY.)

† *Onna nara de wa yo no akenu kuni.* This is the last part of the famous verse,

"Hinomoto wa,
"Iwato kagura no
"Hajime yori,
"Onna narade wa,
"Yo no akenu kuni."

The reference is to the hiding of Tenshô, the sun-goddess, in a cave, and to the woman's dancing which brought her out and gave light to a world enshrouded in darkness. The verse emphasises the prominence of women in all human affairs. (WRITER OF SUMMARY.)

MISCELLANEOUS ITEMS.

Two additional volumes, 4 and 5, of M. Bigot's albums are placed under the official ban.

The Russian marines have been withdrawn from Sôul, it is said, with the exception of seven men.

Mr. Suzuki Manjuro and seven other persons, who were accused of violating the Imperial Ordinance for the control of elections, have been acquitted.

The *habutaye* manufacturers of Kanazawa are said to be discussing the advisability of reducing production in view of the very unfavourable state of the market.

Mr. Liu, who was shot by an assassin when landing at Canton on his way back from Macao, has died of his injuries. It was found impossible to extract the bullet.

The *Kokumin Shimbun* thinks that the South-African war has furnished most conclusive evidence of England's immense strength and wealth, and that there is not the smallest probability of any European Power attempting to interfere between her and the Republics.

Owing to the large influx of Japanese that has taken place of late at Seattle, the white labourers of that district are reported to have held a meeting at which it was decided that all the eating houses should be closed to Japanese subjects. The legality of such a boycott is very questionable.

The attempted assassination of a Colonel at Hirosaka is said to have had the proverbial woman at the bottom of it. A beautiful maid servant unites her efforts to those of an ancient beldame for the arrangement of the gallant officers' domestic affairs. The rest is easily conjectured.

The torpedo-boat *Oboro* arrived in time to be inspected by the Emperor. She left England on the 29th of January and encountered very rough weather in the Bay of Biscay. Owing to some unexplained reason she came round by Fusan in Korea, arriving there on the 23rd April. Her commander, knowing that the naval manœuvres were in progress, left Fusan on the 25th, without waiting for orders, and reached Kobe on the 29th.

The following figures are published with regard to the foreign trade of Osaka during April:—

	Yen.
Exports	503,816
Imports	611,458
Excess of Imports	107,642
Exports of Specie	12,726
Imports of Specie	222,750
Excess of Imports	210,024

At a general meeting of the shareholders of the Osaka Railway Company, held on the 22nd April, at the Osaka Chamber of Commerce, the following accounts were presented and passed:—

Net profit for the current term	¥196,832
Rewards to officials	8,200
Reserve	10,000
Dividends (at the rate of 11.2 per cent. per annum)	178,080
Carried over to next account	552

The question of alteration of the Company's regulations was held in abeyance. The contemplated amalgamation with the Kwansei Railway was opposed by many on the ground of the serious disparity between the shares of the two Companies.

On the afternoon of the 22nd April a general meeting of the shareholders of the Naniwa Bank and the Osaka Union Bank (Kioritsu Ginko) was held, the former at the Osaka Club and the latter at the Osaka Chamber of Commerce. A resolution for amalgamation was passed. The Union Bank has a capital of one million *yen*, of which 600,000 *yen* is paid up, and the Naniwa 2,700,000 *yen*, of which 1,932,000 *yen* is paid up. The total available is thus 3,700,000. The 20,000 shares of the Union Bank are to be converted into shares of the Naniwa, 30 *yen* being allowed as paid for each share. The amalgamation is to take effect

Digitized by Google
Original from CORNELL UNIVERSITY

on the 1st of July next. An honorarium of 3,500 *yen* was voted to Ex-President Toyama Shiuzo.

At a general meeting of the Yokohama Japanese Chamber of Commerce on the 24th April, resolutions were passed on the following subjects:—(1) A memorial to be forwarded to Government with regard to the establishment of offices for the inspection of silk textiles. (2) Investigations to be made as to the harbour at Yokohama. (3) Alteration of the site of buildings for the chamber. (4) Election of a committee for the 9th session of the United Chambers of Commerce. It had been decided to locate the Chamber's new offices on the site formerly occupied by the *Kencho*, but as the latter lot has recently been transferred to the Silk Conditioning Office, it was now resolved that a portion of land belonging to the Yokohama Machigaisho should be leased for the purpose.

The annual general meeting of the Hoshiu Railway Company was held on the 24th April. The figures for the latter half of last year are as follows:—

	YEN.
Net profit	250,373
Reserve	24,800
Rewards to officials	12,400
Dividends (7 per cent. per annum)	212,800
Carried over	373

As to the losses, amounting to 167,487 *yen*, in connection with the Tagawa coal mine, it was determined that the same should gradually be redeemed with the interest on the money realized by the sale of the mine. Another resolution of some importance referred to the extension of the company's lines, the increase of its capital by ½ a million *yen*, and the diminution of the number ofoverseers from 9 to 6.

According to the latest investigations of the Finance Department, the profits realized by the tobacco monopoly last year amounted to 7½ millions of *yen*. The Government has now determined, says the *Osaka Asahi*, to secure the monopoly of manufacture with a view to increasing the revenue to 10 million *yen*. From the reports of the Central Tobacco Association it appears that over 30 per cent. of the proceeds of leaf tobacco have been pocketed by dishonest merchants. Our contemporary therefore suggests the formation into a corporation of all tobacconists within the jurisdiction of each Monopoly Office, so that no sales can possibly be made to dealers other than to members of the corporation, upon whom suitable restrictions may be imposed in regard to the establishment of factories. With State control on these lines, a profit of 10 millions may be compassed, our contemporary thinks, without having recourse to manufacture or monopoly on the part of the Government.

The twelve articles of a secret convention said to have been recently concluded between Russia and Korea, are published by the *Mainichi Shimbun*. They bear the mark of a canard on their face, but it may interest our readers to know the kind of concessions that the newsmongers think abborlep under such circumstances. They are these:—(1) There shall be perpetual peace between Russia and Korea. (2) Korea shall be under the protection of Russia and Japan. (3) Limits shall be set to the rights and privileges enjoyed by the Japanese in Korea. (4) The Empress of Korea shall be chosen from among the Russian princesses. (5) The Greek Church shall be the State religion of Korea. (6) A Russian subject shall be employed in the capacity of adviser to the Korean Finance Department, and (7) A Russian subject shall be similarly appointed to the War Department. (8) The consent of the Russian Minister in Söul shall be obtained with respect to all appointments, removals, or changes of Korean officials. (9) The settlement of Russian subjects in Korea shall be encouraged. (10) All mining and forestry concessions in Korea shall be given to Russian subjects. (11) Russia shall have a naval port in Korea. (12) That all Korean subjects shall remove their top-knots. These fantastic provisions are said to have been published by a Korean newspaper and to have elicited a denial from the Emperor. The *Mainichi Shimbun's* correspondent adds that there is back-entrance communication between the Russian Legation and the Palace, and that the Emperor often visits the Russian Representative privately. That touch alone was wanted to finish off the burlesque picture.

Imports during the second half of last month totalled only 7,530,000 *yen*, whereas it had been expected that the total would reach ten million. Twelve millions' worth having been imported in the first half of the month, the total for April was 19,530,000 *yen*, against 31 millions during March. On the other hand, the exports during the first half of April totalled only 5 millions, whereas they rose to 6¾ millions during the second half. It is therefore hoped that the exodus of specie will soon be arrested.

Vigorous measures are being taken to promote the development of the school recently established in Nankin under the auspices of the *To-a Dôbunkai*, assisted by His Excellency Liu Kun-yi. At the recent assembly of Provincial Governors in Tokyo, it was urged that two students at least should be sent from each prefecture to study at the school, and several of the Governors, since their return to their districts, have succeeded in giving effect to the suggestion.

A consular report from Korea published in the *Nippon* says there is growing demand for Echigo kerosene in various parts of the kingdom. Japanese kerosene, it may be observed, was first exported to Inchhon in 1894, and the trade was extended to Pyong-yang in the 1886. Since then the business has increased year by year. Below are comparative figures for the past four years:—1896, 1,000 casks; 1897, 2,400; 1898, 5,000; 1899, 2,900. As to exports from America and Russia, the figures stand thus:—

	American oil. Cases.	Russian oil. Cases.
1896	—	—
1897	3,172	1,150
1898	17,894	—
1899	14,822	—

From the above figures it may be perceived that the import of petroleum is rapidly increasing in Korea. Even the trade in Echigo oil seems to have increased over 100 per cent. every year, except in 1899, when a sudden decrease is noticeable. As to American oil, the growth of the trade is truly wonderful, the amount imported having quadrupled during the past three years. The following points are suggested in regard to Japanese kerosene:—(1) The necessity of decreasing the odour and smokiness of the oil, (2) Uniformity in quality, and trade marks for different brands. (3) Extensive advertising.

The *Jiji Shimpo* ridicules the idea of attempting to check imports, or even of complaining because they exceed exports. It says that Japan has been buying more than she sold ever since the beginning of the *Meiji* era and that she is incomparably richer now than she was then. She will stop buying when her wants are satisfied, and, unless she is to go back to the rags and wretchedness of old time, there is no use preaching economy to her.

The *Jimmin* thinks that our arguments about Russia and Japan in Korea point to war and war only. We have said that, unless Russia gives up Vladivostock or Manchuria, she can not consent to see Korea pass into Japanese possession, and for that reason we can not believe in the stability of any compact assigning Manchuria to Russia and Korea to Japan. But it does not follow that Russia and Japan must fight. There is an alternative; namely, that they should both leave Korea alone.

Count Goto has become bankrupt, it is said. The extravagant licence of his life has been proverbial for some years. After the death of his father, Count Goto Shojiro, the Household Department purchased the family's Shinagawa estate for 500,000 *yen*, which should have paid all the debts and left the Count in fairly comfortable circumstances. But he is said to have squandered the whole, with 200,000 *yen* into the bargain.

That the area of land acquired by Russia at Masampho measures 250,000 *tsubo* (200 acres) is confirmed by subsequent intelligence. Within the space there are said to be included lots previously purchased by Japanese subjects to the extent of three thousand *tsubo*. The question of dealing with these lots is now under consideration.

Japanese newspapers publish a translation of the protest adressed by the Japanese and Chinese residents of Hawaii against the constitution of the court organized to inquire into the losses said to have been incurred in connexion with the recent destruction of property for sanitary reasons. It appears to have been a very strongly worded document, and it evidently produced the effect desired, for Mr. Dole speedily dissolved the tribunal.

Daigo Kakutaro, who was recently sentenced to imprisonment for life for the murder of his uncle Marquis Daigo, and who appealed against the sentence, has withdrawn his appeal, doubtless hoping to profit by the amnesty which will probably be granted in connexion with the marriage of the Prince Imperial. Had his case been *pendente lite*, he could not have come within the purview of the amnesty.

There have been various changes in the personnel of local officialdom. The Governors of Iwate, Ehime, and Tottori have been relieved of office, and are replaced by Mr. Hôjô Mototoshi (hitherto serving as public procurator), Mr. Motobe Tai' and Mr. Kagawa Ki (hitherto Secretary of Ibaraki Prefecture), respectively. Mr. Arita, hitherto Secretary of Okayama Prefecture, becomes Governor of Tokushima, and there are thirteen changes of minor officials.

A police-constable ran amok in the Kanda district of Tokyo on the 28th instant. He was not on duty at the time, but he had his sword at hand, and, armed with it, he sallied from his house, attacked any one he could reach, and succeeded in wounding six persons more or less severely before he could be arrested. He had been drinking heavily on the preceding night, and it is believed that he is out of his mind. After his murderous onslaught, he entered a house and asked for water, saying that he had slashed six of his friends who had insulted him at a wine-party on the previous evening. A woman was among his victims.

A Mr. Matsugame is stated to have invented a new kind of man-motor car to which he gives the name *Jindo-kwai-shinsha*. Trials were made on the 27th instant in the Hongo district of Tokyo. A circular track measuring 360 yards was used, and portions of it were laid with sharp turns and steep hills to make the test more conclusive. The car, which resembles a tram-car and is capable of accommodating 15 people, is said to have easily attained an average speed of 8 miles an hour when worked by three men. The working gear occupies a position in front, so that the drivers are placed as they would be on an ordinary carriage.

The Meiji Fire Insurance Company continues its prosperous career. It has just declared a dividend of 14 per cent. for the past year. The figures shown by its accounts are:—

	Yen.
Net profits for the year	136,676
Brought over from last account	154,554
Total	291,230
Placed to Reserve	80,000
Dividend at 14 per cent.	35,000
Carried to next account.....	176,230

The reserve had previously stood at 420,000 *yen*. It now amounts to 500,000, or to 676,230 *yen*, if the amount carried over be added.

There is a remarkable *penchant* in Japan at present for casting statues of public men, and even of persons who have no title to be regarded as "public." When a leading merchant or some other magnate celebrates his fiftieth or sixtieth birthday, or when his career offers any opportunity for a demonstration, his friends and relations combine to have him "done in bronze." It is very agreeable for the artist

Digitized by Google Original from CORNELL UNIVERSITY

fraternity, but the *Jiji Shimpo* raises its voice loudly against the fashion, denouncing it as silly and extravagant. We do not altogether share our contemporary's views in this matter. Whether a man be a great celebrity or not, it is a very pleasant thing for his family to have a statue of him, and a gift of that kind assumes, in our opinion, a graceful form. If the art of painting in oils were more advanced in Japan, people might, perhaps, choose to have pictures rather than statues. But even that is doubtful, for whereas a painting in oils cannot be conveniently hung anywhere in a Japanese house, a bronze statue will stand appropriately in any alcove, and it thus appears that the statue merely takes in Japan the place of the picture in Europe or America. We certainly think any disposition to create a new demand for the products of the country's art, suffering as it does from lack of patronage, is to be applauded rather than deprecated.

INSURANCE LAW.

The above law consists of five chapters comprising 115 articles, together with supplementary provisions. We give the more important.

Art. II.—No insurance business shall be carried on except by a joint stock company or corporation.

Art. III.—The same company is not allowed to issue insurances on life and insurances on property.

Art. IV.—An application for the organization of a company for the insurance of property must be accompanied by the following documents :—

1. Regulations of the company to be organized.
2. Programme of operations.
3. General rules for insurance.
4. Statement concerning insurance fees and reserve funds.

Art. XI.—In case the authorities concerned shall come to the conclusion that an insurance company has a difficulty in continuing its business, orders may be issued for its suspension or for alterations in the management of its affairs or the basis of its constitution. Other necessary measures may also be taken to protect the interests of persons insured and those who are entitled to receive money under contracts.

Art. XIV.—In the regulations of a joint stock company organised for carrying on insurance business, the following items must be inserted in addition to those specified in Clauses II. or VIII. of Article 120 of the Commercial Code :—

1. The class of insurance and limits of transactions.
2. Method of redemption of preliminary expenses.

Art. XV.—Each company is required to indicate in its name the class of insurance it undertakes.

Art. XVI.—The capital of a company shall not be less than 100,000 *yen*.

Art. XVII.—Application for shares must contain items specified in Article XIV., together with those indicated in Clause II. of Article 126 of the Commercial Code.

Art. XVIII.—The company is required to effect registration with regard to items specified in Article IV. and those indicated in Clause I. of Article 141 of the Commercial Code.

Art. XX.—The provisions of Articles X. of the Commercial Code shall not apply to any insurance company.

Art. XXVI.—The projector of a corporation is required to draw up regulations in which the following items shall be mentioned, and to attest same with his own signature, or to state his name and affix his seal thereto :—

1. Class of insurance and limits of business to be carried on.
2. Name of corporation.
3. Place where business offices are to be established.
4. Gross amount of share capital.
5. Rights to be enjoyed by subscribers to the same.
6. Nature of the members' responsibility.
7. Method of redemption of capital and of preliminary outlays.
8. Method of distribution of surplus.
9. Means of advertisement adopted by the company.
10. Period of operation, or, in the case of provision being made for dissolution, the period as well as the reason of such dissolution.

Art. XXVIII.—The capital of a corporation shall not be less than 100,000 *yen*. Neither shall it be paid or subscribed otherwise than in money.

Art. XXIX.—No corporation shall be organised with less than 100 members.

Art. XXXI.—When the proposed membership has been secured the projector or originator of a corporation shall at once take steps to convene a general meeting. At a meeting thus held the attendance of more than half the number of members and the consent of over three-fourths of them is necessary for decisions of all descriptions.

Art. XXXIV.—The Overseer of a corporation is required to effect registration of the following items in places where business offices are established, within two weeks from the date of a general meeting :—

1. Items specified in paragraphs 1, 2, 4, and 10 of Article XXVI.
2. Business offices.
3. Names and addresses of Overseers and Auditors.

Art. LVI.—The share capital of a corporation shall in no way be redeemed except by surplus at the end of each business year.

This provision applies also to interest payable to subscribers.

Art. LVIII.—A portion of the preliminary expenses as well as working expenditures for the first five years of organisation may be redeemed every year within a period not exceeding ten years, in accordance with the provisions of the company's regulations.

Art. LIX.—The redemption of capital or the distribution of dividend shall not be undertaken until preliminary expenses and working expenditures for the first five years have been entirely redeemed, and reserves set apart as specified in Article LVII.

Art. LX.—When the capital fund is to be redeemed, a sum equal to the amount of redemption must be set apart as a reserve.

Art. LXIII.—The alteration of the company's regulations shall only be effected by the decision of a general meeting. Such changes, however, as are considered necessary for obtaining government sanction to the decisions of the company may be made at the discretion of the overseer with the approval of the general meeting.

Art. LXIV.—In case the company desires to diminish the responsibility of its members with regard to its liabilities, the provisions of Articles 78 and 80 of the Commercial Code must be complied with.

Art. LXXII.—A corporation shall be dissolved in the cases specified below :—

1. Expiration of the fixed term of operation, or other causes specified in the regulations.
2. Diminution of members below 100 in number.
3. Decision made at the general assembly.
4. Amalgamation.
5. Bankruptcy.
6. Withdrawal of licence or charter.

Art XCI.—No business tax shall be imposed upon a corporation.

Art. XCVII.—Any person engaging in insurance business without obtaining permission of the authorities concerned shall be liable to a fine of not less than 10 *yen* and not exceeding 1,000 *yen*.

Art. XCVIII.—The overseer, auditor, or liquidator of any insurance company shall be punishable with a fine of from 10 *yen* to 1,000 *yen*, in cases mentioned below :—

1. When any business other than that of insurance is undertaken.
2. When business connected with life insurance and insurance of property is conjointly carried on.
3. When the ordinances of the authorities concerned are not duly complied with.
4. In case of obstruction being offered to official inspection.
5. When original documents, or copies or extracts, that should be submitted to inspection according to this law, are withheld without justifiable cause.
6. When profits are distributed in contravention of Article XIX.
7. When amalgamation is effected contrary to the provisions of Article XXII.
8. When accounts of reserve funds required by law are not duly entered at the close of each business year.

Art. XCIX.—Offences specified below shall involve liability to a fine of from 5 *yen* to 500 *yen* upon the Projector, Overseer, Auditor, or Liquidator of a corporation :—

1. When registration is not effected according to the provisions of this law.
2. Where notices or advertisements, as prescribed by this law, are not issued, or when false notices are given.
3. When applications for membership, specified in Clause II. of Article XXX., are not prepared, or when necessary items are not mentioned in such applications or fraudulent statements are inserted.
4. When account brooks and other important documents are not provided in each office, or necessary items are not mentioned in them.

Art. C.—In the cases enumerated below the Projector, Overseer, Auditor, or Liquidator of a corporation shall be liable to a fine of from 10 to 1,000 *yen* :—

1. When false statements are made at a general meeting or to the Government, or when facts are concealed.
2. When capital fund is redeemed, or interest paid, or surplus distributed in contravention of the provisions of this law.
3. When property belonging to the corporationis disposed of in contravention of the provisions of this law.

Art. CIV.—These regulations shall come into operation from the 1st of July in the 33rd year of *Meiji* (1900).

Art. CIII.—Any insurance company which, being organised prior to the operation of this law, does not indicate by its name the kind of insurance undertaken, is required to alter the name and register its head offices, as well as branches, withing three months from the dates of the enforcement of the law.

Art. CIX.—Any company which does not provide a proper amount of reserves as prescribed by this law, is required to devise means of supplying the deficiency, and obtain sanction of the authorities concerned, within three months from the date of the operation of the law. The period of such scheme shall not exceed ten years.

Art. CXIV.—Violation of Articles CIV. and CIX. on the part of members or overseers of an insurance company shall be punishable by a fine of from 5 *yen* to 500 *yen*.

Art. CXV.—Rules relating to insurance business carried on in Japan by agents of foreigners or branches of foreign firms shall be determined by Imperial Ordinance.

JUDICIAL DELAYS IN JAPAN.

An eminent lawyer, interviewed by the *Tokyo Asahi*, has made some interesting remarks with regard to the law's delays in Japan. The enquiries he has made lead him to the conclusion that judicial matters in Japan are not so bad, in comparison with other countries, as has been alleged, and that the reports of the Japanese Judges who have returned from abroad in regard to the frequency of appeals in consequence of want of confidence on the part of suitors, are entirely groundless. In support of this assertion he adduces the following statement :—

Digitized by Google Original from CORNELL UNIVERSITY

JAPAN.

Period of preliminary examination.	Number of cases.
Less than 15 days	5,770
Less than 30 days	6,279
Less than 2 months	5,215
Less than 3 months	1,953
Over 3 months	1,740
Total	20,957

The above figures refer to crimes and misdemeanours tried during the 31st year of *Meiji* (1898).

FRANCE.

Period.	Misdemeanours.
Less than 15 days	13,738
Less than 30 days	11,614
Less than 2 months	7,823
Less than 3 months	2,901
Over 3 months	2,766
Total	38,842

	Crimes.
Less than 1 month	2,656
Less than 2 months	136
Less than 3 months	71
Over 3 months	32
Total	2,895

The intervals between the first trial and the date of judgment in regard to misdemeanours in Japan, as compared with France, stand as follows:—

JAPAN.

Period.	Misdemeanours.
Less than 5 days	48,970
Less than 10 days	37,172
Less than 15 days	16,029
Less than 20 days	7,704
Less than 1 month	7,209
Less than 2 months	5,169
Over 2 months	1,667
Total	123,920

FRANCE.

Less than 1 day	1,776
Less than 2 days	7,890
Less than 3 days	22,263
Less than 8 days	29,600
Less than 15 days	40,568
Less than 1 month	49,825
Less than 2 months	36,839
Total	188,761

With regard to serious crimes the following are the figures:—

JAPAN.

Period.	Crimes.
Less than 1 month	1,040
Less than 2 months	684
Less than 3 months	204
Less than 6 months	179
Less than 1 year	37
Over 1 year	0
Total	2,625

Period. FRANCE.	Crimes.
Less than 1 month	69
Less than 2 months	455
Less than 3 months	583
Less than 4 months	623
Less than 5 months	330
Less than 6 months	166
Over 6 months	362

In the case of appeals the record was 6,637 for Japan and 14,302 for France, and the figures representing appeals to the Court of Cassation for the two countries were 1,432 and 3,008 respectively.

The following table shows the period of detention of persons awaiting trial:—

JAPAN.

Period.	Number of prisoners.
Less than 1 month	31,054
Less than 2 months	2,669
Less than 3 months	1,092
Less than 4 months	485
Less than 5 months	235
Less than 6 months	203
Over 6 months	298
Total	36,037

FRANCE.

Less than 1 day	8,333
Less than 3 days	37,393
Less than 8 days	28,847
Less than 15 days	14,650
Less than 1 month	11,004
Over 1 month	11,162
Total	111,378

If the above statistics are correct, no great difference can be said to exist between the two countries in connection with the interval between preliminary examinations and delivery of judgment upon crimes and misdemeanours, or the period of detention of suspects awaiting trial. As to the last point, it is to be observed, however, that at last year's assembly of judicial officials resolutions were passed in favour of granting bail, as far as possible, in the case of criminal defendants awaiting trial. As to appeals of various descriptions it is worthy of notice that France shows a greater proportion than Japan.

In the face of the above figures, the wholesale condemnation of Japanese law courts on the ground of unreliability, as shown by the frequency of appeals, is unwarranted. The numbers of law courts in Japan, France, and Germany stand as follow:—

Classification.	Japan.	France.	Germany.
Local Courts	302	2,866	1,914
District Courts	49	359	172
Appeal Courts	7	26	28
Courts of Cassation...	1	1	1
Commercial Courts...	—	223	—

The ratio that the above courts bear to the average population is as follows:—

	Ratio to Population.		
Classification of Court.	For Japan.	For France.	For Germany.
Local	140,000	13,000	23,000
District	910,000	104,000	260,000
Appeal	6,370,000	1,440,000	1,610,000
Cassation	44,590,000	37,490,000	45,230,000
Commercial	—	160,000	—

As regards the number of judges the contrast is still more striking. While Germany has 6,982 judges and 4,536 Public Procurators, the corresponding figures for Japan are 1,244 and 473 respectively (unfortunately the figures for France are not at present available). It may be asserted, therefore, that judicial matters in Japan progress with a rapidity beyond any expectation based on the numerical returns of Courts and Judges. But it is desirable not only that expedition should be exercised in the conduct of judicial affairs, but that judgments should be characterized by justice and equity, and should be free from all avoidable error. Too much solicitude for mere rapidity might be very prejudicial to the interests of justice.

The same critic urges the necessity of improving the present system relating to counsel. The following statistics, compiled by the Judicial Department, may be taken as an illustration of the fact that trials in law courts are frequently prolonged for the convenience of the bar. The number of civil cases in which counsel were required during February, 1899, was 3,336, while that of criminal cases was 1,428. Of these the number in which adjournments were made for the convenience of the courts did not exceed 72 in civil cases and 57 in criminal cases, whereas adjournments applied for by counsel numbered 1,057 and 417 respectively. The ratio, therefore, between the adjournments of the law courts and those of the barristers at law is as follows:—

Civil cases—
Delayed at the convenience of Courts..... 2.2
Delayed at the convenience of Counsel 31.7
Criminal cases—
Delayed at the convenience of Courts..... 4
Delayed at the convenience of Counsel 29.2

Although it cannot be inferred that these delays are entirely attributable to negligence on the part of counsel, yet without doubt the conduct of the latter has largely contributed to procrastination. In Germany no counsel attached to ordinary courts of law is allowed to appear professionally in the appeal court, and provincial counsellors are only allowed to engage in their profession within the jurisdiction of the courts to which they belong. In Japan, however, a barrister in Tokyo is at liberty to appear in Osaka or any other place at his own convenience.

Delay in judicial trials is an inevitable result of the system as it now stands.

IMPERIAL WEDDING STAMPS.

(To the Editor of the "Japan Mail.")

Sir,—I beg to inform you that the postage stamps specially issued for the commemoration of the Imperial Wedding can be obtained at Post Offices as well as Postal Agencies after this date.

The public, however, is strictly cautioned not to use them before the date, 10th May, and should mail matters bearing the stamp be posted before the above-mentioned date, they will be treated as unpaid or insufficiently paid matter.

The postage stamps can only be used for the domestic mail and are invalid on foreign mail packages, except for China and Korea, where Japanese Post Offices are established.

Yours respectfully, N. NARITA,
Supt. of Foreign Mails.

Yokohama, April 28th, 1900.

THE COMMERCIAL SITUATION.

To the Editor of the "Japan Mail."

Sir,—For some weeks past a growing feeling of distrust has been evident in commercial circles. Stocks and bonds of undoubted value and showing excellent returns are depreciating, credit is restricted, advances are difficult to obtain, except at increasing rates of interest, and as a consequence traders who had just overcome the difficulties of a similar state of affairs in 1897 and 1898, and were looking forward to an era of some prosperity, see their hopes crushed in the bud.

The reasons given by our Japanese friends for this state of affairs are the excess of Imports over Exports and the outflow of gold. The following tables will therefore be of interest at the present time.

Imports and Exports of Merchandise.

	Imports.	Exports.	Excess Imports.	Excess Exports.
1892..	91,100,000	71,300,000	19,800,000	—
1893..	88,300,000	89,700,000	—	1,400,000
1894..	177,500,000	113,300,000	4,200,000	—
1895..	129,300,000	136,100,000	—	6,800,000
1896..	171,700,000	117,800,000	53,900,000	—
1897..	219,300,000	163,100,000	56,200,000	—
1898..	277,500,000	165,800,000	111,700,000	—
1899..	220,400,000	214,900,000	5,500,000	—
			251,300,000	8,200,000
			8,200,000	
	Net Excess Imports...		243,100,000	

Imports and Exports of Gold and Silver.

	Imports.	Exports.	Net imports.	Net exports.
1892.				
Gold.	400,000	8,500,000		
Silver.	22,500,000	1,200,000		
			13,200,000	—
1893.				
Gold.	500,000	2,300,000		
Silver.	10,700,000	10,000,000		
			—	1,100,000
1894.				
Gold.	600,000	3,600,000		
Silver.	26,200,000	30,800,000		
			—	7,600,000
1895.				
Gold.	1,000,000	2,800,000		
Silver.	4,800,000	24,500,000		
			—	21,500,000
1896.				
Gold.	10,200,000	2,000,000		
Silver.	28,900,000	9,600,000		
			27,500,000	—
1897.				
Gold.	64,300,000	8,900,000		
Silver.	17,100,000	10,400,000		
			62,100,000	—
1898.				
Gold.	37,000,000	46,300,000		
Silver.	5,500,000	40,700,000		
			—	44,500,000
1899.				
Gold.	20,200,000	8,800,000		
Silver.	100,000	2,400,000		
			9,100,000	—
			111,900,000	74,700,000

Net Imports and Exports of Gold and Silver.

	Net Imports. Gold.	Net Exports. Gold.	Net Imports. Silver.	Net Exports. Silver.
1892...	—	8,100,000	21,300,000	—
1893...	—	1,800,000	700,000	—
1894...	—	3,000,000	—	4,600,000
1895...	—	1,800,000	—	19,700,000
1896...	8,200,000	—	19,300,000	—
1897...	55,400,000	—	6,700,000	—
1898...	—	9,300,000	—	35,200,000
1899...	11,400,000	—	—	2,300,000
	75,000,000	24,000,000	48,000,000	61,800,000

Thus—

In a period of 8 years, Imports of Merchandise show an excess over exports of Merchandise	243,100,000
In a similar period, Imports of Gold show an excess over Exports of Gold	51,000,000
	292,000,000
Against which, Exports of Silver show an excess over Imports of Silver	13,800,000
Net excess of Imports, Merchandise, Gold, Silver	278,200,000

The Exports of Silver may be dismissed from further consideration, as they are probably due entirely to the change of currency from a silver to a gold basis.

If the Customs Returns are correct, there should be almost as much silver, and much more gold, in circulation than in any year up to 1895, so that the present drain might continue for some months, before the country would be worse off in this respect than in those years.

So far as the present is concerned, there seems no cause for the prevalent feelings of alarm, on account of the exports of specie. But if we take a wider view of the subject, we shall see that the situation is a serious one. During the years under review, Japan has imported over 240,000,000 *yen* in excess of Exports, and these figures would be largely increased if we included the value of Government purchases in the shape of men-of-war, etc.

While it is very evident that Japan has been a large buyer, the above figures appear to show that, up to 1897/8, the account was settled by drafts upon the Indemnity obtained from China. As this was absorbed, a period of stringency set in, which was not really relieved until the Government obtained credit abroad, by the issue of a loan in London in 1899. The proceeds of that loan have apparently been appropriated, and we are now facing another period of stringency, and, so far as can be seen, with no signs of relief in the immediate future.

It must be admitted, that the present situation is due to an excess of imports, and that unless some immediate steps be taken, the country will be relieved of all its specie.

The only remedies tried so far have been an increase in the rate of interest, and a general exhortation against the purchase of imported articles, but, as already mentioned in your columns, such exhortations cannot be expected to have any real effect. The rise in the rate of interest is a different matter, and is a measure which would be adopted in similar circumstances in Western financial centres.

It is in evident imitation of the policy successfully pursued in the face of an outflow of specie by Western countries, but it is apparently forgotten that the commercial interests of Western financial centres are intimately related, that their assets have an international character, and respond at the slightest call to the requirements of any particular country, the rise in the rate of interest at any given centre forming an immediate attraction for the removal of funds to that point and having a powerful effect upon the rates of exchange.

In the case of Japan, there is no commercial connection with the money markets of the world, and under such circumstances, an increase in the rate of interest will not cause the current of gold to turn back in its course, nor will it alter the fact that Japan must pay for all the imported articles now on order, or to arrive in the course of the year, and it is a question for the statesmen of Japan to consider whether it is desirable that the people should have to encounter these constant checks to their enterprise, while the effectiveness of such measures is so meagre.

In short, the increased rates of interest, and restriction of facilities, can only act by crippling the traders of the Empire, and reducing their purchasing capacity, and even so the result cannot be effected until some months have elapsed. Further, it is very certain that the same situation will recur again at a very early date.

To make this last point clear, it is necessary to bear in mind that, commercially speaking, Japan is a new country. She requires fitting out with the appliances and requirements of modern civilization, and until these are fully installed, she must be a purchasing country. Some recent speakers on this subject consider that Japan should manufacture her own requirements. Even were this feasible, the machinery and materials have to be imported, and as there is so much to be done in this work of equipment, Japan must, in any case, face an excess of imports for years to come, unless she reverts to an isolated life of her own.

Such being the case, there are only two ways in which the excess of Imports can be paid for:—

Either the Government must raise further loans abroad—or foreign capital must be attracted to Japan in such a way that the money markets of the world will come to the relief in times of expanding trade or periods of necessity.

The lack of the second alternative at the present time shows that the commercial life of Japan is still separated from that of the Western world, and until channels are provided for an interchange of benefits, this separation will continue. In the West, there are large amounts of capital seeking investment, but the fact that in Japan there are opportunities for investment, is not in itself sufficient to attract capital. Our Japanese friends must recognize that capital is timid and nervous, and requires much persuasion before it will venture in untried places. It requires evidence of a scrupulous regard for the rights which it obtains in its own countries. As a rule, capitalists are influenced by general impressions, and it must be confessed that the present deadlock respecting the titles to land in the foreign settlements, the difficulties of obtaining full security in all cases where land is in question, and recent judicial decisions, are all tending to the formation of a general impression, which is not favourable to the investment of capital in Japan, and unless this feeling is soon removed it will be a long time before Japan is able to turn the course of foreign exchanges by an increase in the rate of interest, a course which, if available now, would afford an immediate solution of the problems and difficulties of the present time.

Yours, etc., C.

THE FAMINE IN INDIA.

To the Editor of the "Japan Mail."

Sir,—The account enclosed is by an Eye-witness. He says:—India is now entering upon the greatest famine of the century. The viceroy and Imperial Council, surveying the entire country, have said officially "We are now face to face with famine of water and food and cattle which is unprecedented in character and intensity. No Government can undertake at such a time to prevent all suffering. The aggregate famine area will be about 300,000 square miles," (or five times that of England) "with a population of 40 millions. There is a further population of 21 millions in which more or less general scarcity and distress prevail. The crisis is one which demands the loyal co-operation of all who love India. To that co-operation in the months of trial that lie before us, on behalf of the Government of India, I unhesitatingly appeal." With ability and heroism the Government is trying to meet this crisis, but their revenues are reduced by the very famine they are trying to relieve. Already there is a

Digitized by Google Original from CORNELL UNIVERSITY

population equal to that of Ireland on the relief works, and they are increasing at the rate of several hundred thousand a week. Government feels forced to reduce the wages to one penny a day for a man, and three half pence for a woman, with grain rising every day, and a population nearly equal to that of the United States in the famine areas!

IN SOUTH INDIA.

I saw a veteran missionary who went through the famine of '76. He says that this will be even greater than the "Great famine" then. Already the crowds of hungry people were beginning to gather about his door. I saw one group of gaunt spectres, who had walked 75 miles, stalk silently in from the dusty road. "Sir," they said "We have no work, no food, no water; how can we live?" The missionary could only point them on, 30 miles farther, where there was a little work at a penny or two a day. "But what will become of our wives and children?" The old man could not answer. In his own field are 10,000 Christians already suffering. He told me they were living on berries, and cactus; and these could last but two weeks longer. As we drove through the fields the cattle were gone, the streams were dry, the wells often empty, the parched farms deserted; the villages were quiet, the people silent and gloomy. The glaring heaven seemed brass, and the earth burnt like brick, as the silent judgment of God hung over the land.

In the next mission station half of the 18,000 Christians were destitute. In some places disease was following the famine. In one little village the people in 40 houses had small-pox. And these people were starving. Some had eaten nothing for days. The missionary could not buy them a handful of grain in that village, for there was none to sell. The old man had fought through the war, but his face was wet with tears when he told me what he had seen in the villages. And these starving people are our fellow-men, each one your "mother or sister or brother." They are laid, for there is nowhere else to lay them, laid at your gate, "full of sores and desiring to be fed with the crumbs that fall from your table." Now, if ever, is the time to help India. Cannot collections be taken in every church, and Sunday School? How much will this famine cost you?

IN WESTERN INDIA?

On arriving in Bombay, I met an old acquaintance. He had just come in from his station in Gujarat. I noted down his statements in pen and ink. Gujarat was a fertile country thickly populated. Now every blade of dry grass is gone. Every leaf was long ago torn from the trees for cattle, and now the trees themselves have all been cut down for wood. The whole country, once green as an English Park, is now a blasted waste of barren stumps and burnt fields. Eight or nine months more of famine lie before us, even if the rain comes next monsoon. The cattle are dead. The Government officials say they find men dead along the road-side. As I passed the poor-house I saw two men lying dead in the street. They had arrived just too late. The streets were filled with children winnowing the dust and even the manure for particles of grain to allay the pangs of hunger. Every day women come to me crying and ask me to take their children from their arms, or from their empty breasts and save them alive. Some of the poor little skeletons died after I took them. They were too far gone to be saved by food. Repeatedly the parents have offered me their children for one rupee (about a shilling) and they love them as we love ours. Children are now being offered as low as two pence each, or for a measure of grain. The Mohammedans are buying little girls at this price." One has to live in a heathen land to know what they will do with them. And to-day my friend goes back to fight the famine almost empty-handed for lack of money, and there are hundreds like him. One missionary told me she lost her own little girls in the last famine by going a little too far in trying to deny themselves and share their food with the natives. The missionaries are waiting and praying. The people are waiting. They are at your door. There are children still innocent who can be saved from heathenism for Christ: there are men who can be saved from the horrors of starvation; there are women and girls still pure who can be saved, in their desperation and helplessness, from what is worse than death. They are waiting. And our Master is waiting. It is a time to test the reality of our relationship to Him and to our fellow men. „Simon, son of Jonas, lovest thou Me? Feed my sheep." "Verily I say unto you, inasmuch as ye did it unto one of these my brethren, even these least, ye did it unto Me. For I was an hungered, and ye gave me meat: I was thirsty and ye gave me drink."

HOW TO HELP THE FAMINE.

As a College Secretary of the Student Volunteer Movement my work has taken me through the famine districts of India. I have never thus asked before for help. I need nothing for myself or my own work. But in all my life I have never seen such need or such an opportunity for doing good with money. Five shillings will save a child in an orphanage in South India for a month. Two pounds ($10) will rescue a girl during the famine. Five pounds could save a family. Twenty pounds might relieve a small village, or build an orphanage of mud or thatch, for deserted and starving children. You can send the money through the treasurer of your Missionary Society. I have made a list of thirty of the neediest missionaries I know, of all denominations, and of isolated faith missionaries and orphanages. If you know of nowhere else to send it, I will place the money where I see the greatest need, and where it will do most good, sending you a receipt and rendering an account to you when the famine is over. Donations may be sent through V. W. Helm, Y.M.C.A., 3, Sanchome, Mitoshirocho, Kanda, Tokyo, or direct to me.

G. S. EDDY, Sec. Y.M.C.A.,
Madras, India.

February 28th, 1900.

ASAMA-YAMA AND THE KUSATSU SHIRANE-SAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—So many reports have been circulated concerning the eruption of Asama-yama on the 22nd January of this year, that some of your readers may possibly be interested to know what were the effects observed on the mountain when the first ascent of the season since that eruption was made; namely by an English traveller and myself on Friday, the 27th April. Stones up to about two inches square and nearly half a pound in weight had fallen as far as Karuizawa,—and on the mountain much larger ones, up to about half a ton, as nearly as we could judge. Many of these have partially buried themselves by the violence of their fall, others have gone several inches below the surface, leaving the "pot-holes" so often noticed on active volcanoes. The cone is covered with fine dark-coloured ash to an average depth of six inches; and, as the eruption took place during the coldest time of year, this ash fell on the top of hard snow, which has thus been preserved unmelted. Many large stones, ejected last of all, have fallen or rolled on to the surface of the ash. The crater has apparently suffered no change; but there are new vapour vents on the dyke by which the ascent from Karuizawa is made. Dense white sulphurous vapour filled the entire area of the crater.

Proceeding to Kusatsu on the following day, we then ascended Shirane-san, to verify how far the eruption of 1897 had altered the aspect of that volcano, and we found from the villagers that yet another eruption had taken place in January of the present year. The boiling lake and the sulphur refining works mentioned in Murray's "Handbook for Japan" were destroyed by the former of these eruptions. None of the villagers had made the ascent since the eruption of January last, and our guide (so-called) endeavoured to dissuade us from attempting the final climb through mud more or less liquid except where covered with a recent coating of somewhat harder snow. The quantity of this mud ejected since January is very considerable, coating as it does the whole cone to a depth varying from half-an-inch to over twenty feet. It, too, fell or poured over on the top of snow that had been hardened to the consistency of ice, so that, where the superficial mud coating is thickest, the ice below will probably be permanently preserved. But the most interesting feature is the re-formation of the boiling lake which is now in progress. Whether it be pure boiling water, or water above only and mud beneath, there was no means of ascertaining, the only place to view it from being the crater rim, as the barrier of liquid mud which slopes down to the edge of the lake could not be crossed. It will be interesting to learn whether, as this mud dries, access to the lake will be restored. The inhabitants of Kusatsu believe that the eruption of 1897 was caused by the digging for sulphur which had gone on for several years previously. There is, therefore, little probability that this industry, which formerly gave employment to 500 or 600 men, will be resumed. Works on a smaller scale are, however, contemplated at a place in the vicinity called Sai-no-kawara.

I am, Sir,
Your obedient Servant,
B. H. CHAMBERLAIN.

Kusatsu, 30th April, 1900.

THE BOERS AND TEMPERANCE REFORM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Knowing that many of your readers are interested in both the Boer War and Temperance work I venture to ask you to publish the enclosed clipping. It is part of a letter from Mrs. Sprigg, sister-in-law of Sir Gordon Sprigg, the ex-Premier of Cape Colony. The letter was sent by Mrs. Sprigg to Miss Agnes Slack, Hon. Sec. of the World's W. C. T. U., and was given out for publication by Miss Slack. It affords light to those who wish light on the Africander Bond question.

My husband's duty as magistrate is just to keep the thousands of natives in the district quiet. So far there has been no difficulty with them. They are only anxious to hear that we have beaten the Boers, for they all dread Dutch rule. While there are good men on both sides, we do truly believe that ours is the side of justice, and so can conscientiously ask God's blessing on it. We did not want the war we could not believe it would ever come, we were not prepared for it, we have to suffer much as a Colony on account of it, but we believe that good will come out of it. The prayer I should like to send to the Convention is this: "That God will grant that one of the results of the sad strife may be that Temperance work in South Africa may have many hindrances taken out of the way." The Boer party in the Cape Colony is the Liquor party. Their political organisation, the Bond, has opposed all Temperance legislation in behalf of the "Dutch Brandy" farmers in the Western Province. And here in the Native Territories we have not been able to get even the existing laws enforced, because of the influence they exercised over the Government to keep an open market for their productions. I have often wondered if there was ever such a drink-ruled country in the world. Now our hope is that this war will break the power of the Bond, and that Temperance legislation and Temperance work will have a better chance.

It is grand to see how the Colonies are helping each other. We realise as we never did before the unity of the Empire, and the enthusiasm of the Australians and Canadians is wonderful. Did not the Jubilee demonstrations prepare the way for this? If so, their cost was money well spent. On the other hand, we are also beginning to find out that it is not the simple Boers that we are fighting, they seem to be led and backed by men from half the nations of Europe, so that this is virtually a European war, though fought in Africa; and Natal and Cape Colony are suffering as Belgium did a century ago, by being made the battle-field for the dreadful struggle. I can hardly believe it is true that such a thing has come upon us, though it is so close to us. We can never live our quiet, old-fashioned life again, we have got to come into the rush and whirl of the twentieth century:

Till like a bell, with solemn, sweet vibrations,
We hear once more the voice of Christ say, 'Peace.'

With kindest regards, yours sincerely,
"E. J. SPRIGG."

I had intended not to write again upon this question, especially after the letter signed "Justice" appeared in your issue of March 29th. I had read all that I could find on the side of the Boers, not omitting Stead's vagaries in the February number of the American *Review of Reviews*, for I felt sorry for the Boers and believed that there ought to be some justice and

Digitized by Google Original from CORNELL UNIVERSITY

right on their side. When I read the letter of "Justice" in your columns I said to myself, "surely it cannot be that there is nothing at all to be said for the Boers." I read and re-read the letter and noted that "Justice" contradicted statements that have been made by competent and reliable authorities, corroborated by missionaries, and Church Synods in South Africa, that he made the monstrous assumption that Americans living in the Transvaal are "unfair and one-sided" and that necessarily their advocate is not to be believed, that he treated with contempt all who have anything to say against the Boers, but that he was unable to adduce any proof in support of his contradictions or give anything in rebuttal. It is hard for me to believe that the case for the Boers is as bad as it seemed to be after a careful perusal of their *friend's* letter.

However, I have received new light on the question and so I wished to beg space in your paper once more.

The new light is not simply the enclosed copy of the letter to Miss Slack. It is in regard to the nature of much of the evidence upon which the Boers are condemned by British sympathizers. In *The Ethical World* of Feb. 24th, a Mr. Hobson comes out as an advocate of Kruger's cause. Mr. Hobson says that much of what has been said and written against the Boers is based upon the statements of missionaries, and that since they believe in the supernatural they are outside the pale of intelligence. To give his own words, as printed in *The Ethical World*, the missionary, as well as the Christian minister, "is a man of so inherently credulous a nature that we have a right to suspect every statement bearing upon matters relating to his mission. The missionary is a man whose relations with the natives are based upon views of their nature and their needs which to readers of *The Ethical World* will appear fundamentally unreasonable, and some of this unreason will vitiate his views upon all aspects of the native question." I do not understand how Mr. Hobson is able to accept without question everything that Mr. Kruger chooses to say but I suppose that men who hold his (Mr. Hobson's) views of the supernatural are not troubled by any little apparent inconsistency such as believing the statements of the Boers and rejecting the statements of missionaries on the ground of their belief in the supernatural. I suppose Mr. Hobson would say that the Boer is a man whose relations with the natives are based upon views of their nature and their needs which appear to those who reject the mass of evidence given by men who have lived in South Africa full of reason, justice, and truth!

I may be very "gullible," but still I think that statements of such men as Rev. J. R. Cameron, a much esteemed missionary who has spent many years in South Africa, are to be received in preference to mere contradictions and sneers about the credulity and prejudice of men who believe in the supernatural. Mr. Cameron writes that the Boers have been more wanton in their destruction of property in Natal than the natives used to be during the wars with the native tribes. He speaks of an uprising some years ago when Umhlonhlo, the chief, restrained his men from injuring missionaries and mission property, but says that in the present war the Boers, "lineal descendants of the men who smashed up Livingstone's Mission," as he describes them, have plundered and destroyed mission property after taking possession of it. Mr. Hoskin, President of the Johannesburg Chamber of Commerce, is responsible for the statement that "two years ago that section of the Dutch Church which is most numerous in the Transvaal, passed a resolution unanimously in their synod in Pretoria forbidding any minister or official of their communion to preach Christianity to the coloured races, under pain of expulsion from their church." "Justice" may say that this is "rot" and that to believe it "calls for a credulity simply amazing," but it is confirmed by Rev. R. F. Appelbe, of Johannesburg. This is a question of fact and on one side is the testimony of two men, one of whom is a prominent and reliable man who is an official in a church and the other a minister, but since they both believe in the supernatural we may, thanks to Mr. Hobson's brilliant idea, discard their statements and simply ask you, Mr. Editor, "if you believe that?"

I could give a quotation from a recently published letter from an Irish Catholic nun in South Africa, but her testimony, being against the Boers, is vitiated by her belief in the supernatural. Some fifteen years ago Dr. Kilner published a pamphlet in which he gave a detailed statement of the wrongs and sufferings of the coloured peoples under the control of the Boers. It was a terrible indictment containing many things worse than the incident related in the quotation you made from the *Christian Guardian* which "Justice" calls "rot," and this pamphlet has never been combated or contradicted but was circulated by at least one of the larger Missionary Societies in America. Dr. Guinness Rogers has written a calm, thoughtful letter in the *London Daily News* of Feb. 26th, 1900, in which he says "Englishmen are far from being perfect, but they are indignant at being held up to the gaze of the world in the light in which some of their more excited critics present them. They have no desire to extend an empire already too vast; and, if jealous of their own rights, they are not slow to recognize those of others. Looking at the whole spirit of Boer administration I am at a loss to understand how any man of Liberal sympathies can contemplate its triumph with any other feeling but one of dismay." Dr. Rogers speaks of the Boers as "a people who, however gallant and courageous, have been the enemies of civilization and progress." He declares that "there may be little difficulty in tracing the war back to the Jameson Raid, but there is a history even before the Raid; and the keenest condemnation of Mr. Rhodes and Dr. R. Harris does not mean the acquittal of the Boers for the remarkably stupid and unjust manner in which they have treated the Uitlanders and so engendered the angry discontent without which the Raid would never have been attempted."

Was the war "unnecessary," as "Justice" says? If so, then the heavier condemnation rests upon the Boers who planned, thoroughly prepared for, and brought on the conflict. I wonder if "Justice" knows that in the Transvaal the native peoples—the real owners of the soil if we regard natural rights—can hold no land, cannot embark in trade, not even as a huckster, cannot be legally married, except at an almost prohibitive cost and are therefore encouraged to live in immorality, receive no State aid for the education of their children, though they outnumber the Boers many times, and pay heavy taxes? Does he think there is justice is not allowing the natives to walk on the side-walks which they build themselves? But with apologies for such trespass upon your valuable space, allow me to say in conclusion that I have no desire for the extermination of the Boers. I would that the war were ended, and I believe that just as soon as the Boers are willing to accept—not what they have measured out to others—equal rights and justice for all, this foolish, hopeless, wicked struggle will come to an end,.

I am, Sir, Yours sincerely,
CANADIAN.

Tokyo, April 30th, 1900.

NEWS OF THE WEEK.

Admiral Sir E. Freemantle is visiting the capital.

Sir Ernest Satow and Count Orfini left for Europe on the outgoing C. P. R. steamer.

The yacht *Norna*, which has had such an eventful history under the guidance of Mr. N. J. Weaver, has finally been seized in Auckland Harbour under a bottomry bond for £1250 given to Mrs. Hettie Wallace of San Francisco. Judgment was entered and an order was made for the sale of the yacht.

Fire broke out at 2 o'clock on Wednesday morning in a Japanese hotel known as the Kawachiya, Kodenmacho, Sanchome, Tokyo. The building was destroyed and the premises adjoining were damaged. A guest named Watanabe Tomohachi (45), who only arrived that night, and a maid-servant named Furukawa Naka (20), were burnt to death.

With regard to the late Dr. Mivart, about whom we have been hearing a great deal lately, an Indian telegram announces that Cardinal Vaughan has "prohibited the burial of Dr. Mivart or his relatives in the Roman Catholic portion of Kensal Green, and the remains have been deposited in unconsecrated ground without religious rites. General indignation is expressed at this proceeding and litigation is impending."

American papers report a terrible flood in Texas. The great dam on the Colorado River gave way, and water rushed with terrible force over the adjoining country, sweeping away houses and factories, and drowning many of the inhabitants. The loss of property is great, one light and power house that was destroyed alone costing 1,500,000 dollars.

The emigration from Germany to foreign countries has attained large dimensions again. During the first two months of the year no less than 12,618 persons left the Continent by way of Bremen (against 7,384 in the same period of 1899), and Hamburg is not far behind. The emigrant boat of the Hamburg-American Line, which left Hamburg on 11th March, had on board no less than 1,684 passengers of all classes, and another boat was leaving within a few days.

The *Kreuz Zeitung*, in a remarkable article, dealing with the South African War, says:—"The War has demonstrated the unanimity of feeling among the English. They are all standing together, through good and evil report, and are compelling the admiration of the world. It also has shown in a most amazing manner the strength of the Imperialistic idea, having done much in welding the Colonies into a veritable Empire."

Messrs. Browne and Co., local agents, send us a copy of the Tourist Guide of the Eastern and Australian Steamship Company. It is a well printed and copiously illustrated publication, and gives a mass of most interesting information concerning China, Japan, the Australian colonies and other places accessible by the company's routes. The pictures of Australian city and country scenes are sufficient to tempt the leisured and moneyed reader to take a holiday in that continent.

The University Boat Race was one of the hollowest recorded. From the first stroke Cambridge led. Thenceforward the race was a mere procession, the gap ever widening to the end. There were five lengths between the boats at Hammersmith, nine at Chiswick, 200 yards at Barnes, the winning margin being estimated at twenty lengths, Although outclassed, the Oxonians struggled pluckily throughout, but were exhausted, while the winners apparently scarcely turned a hair. Time, 18 minutes 47 second, equals the record, but there was a fast tide and perfect weather.

The brigantine *Navarro*, belonging to Messrs. Mendezona & Co., of Manila, left Sorsogon on the 1st March with a full cargo of hemp for Manila, and was not again heard of until now, says the *Manila Times* on April 10. Two days out from Sorsogon the crew mutinied under the leadership of the boatswain, and cut to pieces Captain Acosta, his wife, and the mate of the ship. Then they ran the vessel into the river Lucol, in Mindoro. Here, two women servants of the murdered woman gave information to the native authorities who, after trial, executed the ringleader and imprisoned the rest of the crew. It is said the boatswain had a grievance against the mate, and arranged the mutiny solely for that reason.

Fujiwara Tamiji, Manager of the Hiogo Unyu Kabushiki Kaisha (forwarding agents), and seven others—clerks—have been arrested by the police. It is alleged, says the *Kobe Herald*, that they came to an agreement among themselves to abstract goods during transportation from vessels in port to shore. A secret storing place was built at the end of a floating wharf at Hiogo, where their company generally land goods, and the stolen material was concealed there until they could dis-

Original from CORNELL UNIVERSITY

pose of it. The value of the goods thus disposed of amounted to about 3,000 *yen* when the affair was discovered by the authorities. After the men were arrested a search was made and seventeen bags of rice and beans were found in the place of concealment and nineteen bags in the yard of the company.

Messrs. Dodwell and Co. forward us a pamphlet relating to the services of the Northern Pacific Steamship Company. It contains a good deal of information regarding the Far Eastern lines, but is largely devoted to the traffic to Alaska, Klondike, and the new gold fields at Cape Nome. These are spoken of as the greatest placer gold diggings known in the world's history. Though discovered late in 1898, it was not until last summer that the development of the camp commenced. In a few weeks, during July, August and September, between two and three thousand men, just scratching the surface, secured $4,000,000 or more from the famous beach claims and a few dozen creek claims. The *Tacoma*, well-known in the Far East, has been placed on this service.

The precarious position of some of the minor banks in the capital evokes vehement criticism. There has been a constant increase of banking institutions since the war. In 1894 the gross amount of capital of various companies stood at 249 million *yen*, of which 129 million were in the hands of banks and the remaining 120 millions held by other corporations. At present the banking capital is 455 millions, while that of the other companies is only 325 millions, leaving a balance of 130 millions in favour of the former. Below are comparative figures for the past five years:—

Year.	Number of banks.	Capital in yen.
1896	1,312	239,015,544
1897	1,603	321,593,014
1898	1,807	384,876,334
1899	2,032	438,189,469
1900 (up to March)	2,116	453,817,669

Thus the capital of banks has increased by over 100 million *yen* during the past three years.

Emigration has of late become the fashion, remarks the *Nichi Nichi*. Innumerable companies have sprung up, but their organisation has been based, not on the promotion of either individual or national interests, but on the prospect of enormous gains for the projectors. The increase of these corporations is really surprising. In 1894, the number of companies for which charters were granted by the Government did not exceed four. In 1896, 1897, and 1898 there was an increase of two each year, and in 1899 five more were added. In the current year applications have been received by the authorities for the institution of twelve new companies, of which eight have already received charters. The most objectionable feature of these corporations is the manner in which deception is resorted to for securing a great number of applicants; the result being that in the two prefectures of Hiroshima and Yamaguchi, where the mania for immigration is most conspicuous, petty farmers have been imposed upon to such an extent that they have abandoned farm work wholesale. Some restrictions are needed.

At the monthly meeting of the General Committee of the Hongkong General Chamber of Commerce, held on the 18th ult., the Secretary read a letter from the Government, received on the 6th April, transmitting a suggestion by the Acting Harbour Master that, in view of the fact that two fires had occurred on board vessels in port in consequence of spontaneous combustion of so-called Japanese "safety matches" among the cargo, these matches should, when the New Merchant Shipping Consolidation Ordinance comes into force, be classed, under its provisions, as dangerous goods. Considerable discussion ensued on this proposal, which it was thought was calculated, if carried into effect, to divert an important trade from the port, and it was decided to write to the Government deprecating immediate action in the direction indicated. It was also resolved to bring the matter to the attention of the Chambers of Commerce at Kobe and Yokohama, with a view to get them to urge upon the manufacturers the desirability of making the matches genuine "safety matches."

The strange hallucination of the French that we desire war with them induced the *Gaulois* to "circularise" a number of English notabilities, and a recent issue contained answers, amongst others, from Cardinal Vaughan, the Bishop of London, Lord Russell of Killowen, Lord Rosebery, Sir Frederick Carrington, Sir John Colomb, and Mr. Arnold Forster. Needless to say, the writers are unanimous in repudiating the notion that England wishes for war with France. Sir Frederick Carrington does not exaggerate when he says, "I share the belief, which is that of every reasonable Englishman, that nobody dreams of so astounding an act of madness as a declaration of war with France;" and Lord Russell of Killowen understates the truth when he declares that any "public man in either of the two countries who uses expressions calculated to create or excite feelings of animosity between the two peoples is acting contrary to the interests of the two countries." The appearance of these letters in the *Gaulois* is all the more creditable because of the reactionary and anti-English bias of that journal.

CHINESE NOTES.

The Yangtsze Insurance Association has held is annual meeting in Shanghai, and declared at dividend of 20 per cent. on its paid-up capital.

Kiukiang has sent Lady Hannen $500 to be devoted to the establishment of a bed in the Imperial Yeomanry Hospital at the Cape to be known as the "Kiukiang" bed.

The Empress Dowager is said to have selected a Manchu named Kuei Ch'un, a sub-Chancellor of the Grand Secretariat, as Chinese Minister at St. Petersburg, to succeed H.E. Yang Ju, whose three years' term of office expired in March.

It would appear that M. Gonion, the owner of the Chinese Junk *Fleur de Lotos*, which left Hongkong some time ago to sail to France, has abandoned his intention of voyaging to the Paris exhibition by such a small craft. On April 10, the French junk owner left Singapore by steamer for Colombo, leaving his junk to be towed to that port.

Dispatches received recently by Shanghai mandarins from Moukden report strong hostility and armed opposition to the Russians in Liaoyang prefecture, near Moukden, on the part of the inhabitants, and that in a fray which occurred between the two parties the Russians had seven men very severely wounded and a few others slightly injured. The country people lost one killed in the fight and five slightly wounded.

The *Universal Gazette*, a vernacular journal published in Shanghai, reports that a missionary was recently mobbed and had to flee for his life at a country village in Huangkanghsien, Hupeh province. It appears that he went to the village for the purpose of buying a piece of ground for the erection of a chapel, but that, the news being bruited abroad, the people from the countryside got up a mob and attacked him. He had his clothes torn off his back and had to flee to the district magistrate of Huangkanghsien for safety. The name of the missionary is not given nor the date of the alleged attack.

This is what the Rev. Gilbert Reid says in *The Forum* of the Empress Dowager and reform:—"The attitude of the Empress-Dowager to reform is not as reactionary as the political events of the past year and more would indicate. When previously holding the Regency she was more favourable to progress than many of her ministers. She always supported Li Hung-chang, who for a quarter of a century was the unflinching advocate of progress. She favoured a foreign-trained army and navy, the telegraph, railways, steamships, and other improvements. These she favoured more as additions to the existing systems than as alterations of established usage. She was therefore more a progressive than a reformer. But her reforms have been material rather than moral. She sought changes that would increase revenue rather than such as would destroy corruption."

The Viceroy Li has established what is called a "commercial bureau" in Canton. His Excellency has chosen for site the pleasure house of Liu Hsiao-hsiu, who came to Japan last year as the emissary of the Empress Dowager. The committee of the new institution includes Liu, who is spoken of as "notorious," and its other members, with one exception, are said to be men of unsavoury reputation in Canton. The belief is that the bureau will have no real connexion with commerce, but that it will busy itself solely with scrutinizing the doings of the Reform Party. In short, its simulated commercial character will be simply a cloak for undertaking inquisitions into people's private affairs.

There is a project on foot in Shanghai to construct a "road to the hills." It is news to us to learn that there are any hills, and we read without surprise that when one of the advocates of the road spoke of the advantages of opening up a fine high and dry country for the benefit of equestrians, his words elicited an explanation that, in Shanghai parlance, "a fine high and dry country" meant a district eight or nine feet above sea-level instead of one only three or four feet. As for the so-called "hills" there appears to be much uncertainty whether, when the road is finished, any part of them will be available for residential purposes, seeing that the Jesuit Fathers have fenced off one hill, and the Buddhists are putting boundary stones on the others.

The question of carrying on the so-called Mandalay-Kunlon Railway to the actual crossing of the Salween at the Kunlon Ferry is one that must come up for decision next year. The line as far as Maymyo, forty miles from Mandalay, will be opened in a few weeks; and beyond this a good deal of work has been done. The bridging of the Gokteik Gorge is in hand, the necessary preparations for the girders having been made; earth-work has been thrown up on the section to Thibaw and various bridges built; while still further on, towards Lashio, the engineers have made their final surveys and alignment. The point is really where the terminus of the railway should be. The enthusiasts at home, who believe that an immense trade with Szechuan and Yunnan is awaiting development, will of course say that the line should be built right up to Kunlon and that the Salween should be bridged with a view to a further extension into Western China. Practical-minded men who have closely examined trade statistics hold that no trade of any great value exists, and that it cannot be created by the railway; while engineers and explorers have pronounced against a railway across the big ranges of mountains which are found beyond the Salween. Further, recent surveys have shown that the country immediately west of the river is most difficult, and that the expenditure in this last section would be enormous. In certain places it would amount to several lakhs per mile, and there is no local trade whatever to be developed, as the district has scarcely any inhabitants, though the Was lie near at hand—a savage tribe who have recently given much trouble. The conclusion, therefore, is drawn that the railway should be built to Lashio, or rather to a point some ten miles beyond, as a valley runs this distance beyond the town, and the country so far is easy. We do not know if the decision of Government will be that the line should be built so far and no further; but it would be wise to pause before sanctioning work on the Salween section. Burma has several internal lines which need building, and which would pay, and it would be better to give money for these than sink it in expensive rock cuttings and tunnels in order to link Kunlon with Mandalay.—Allahabad *Pioneer*.

THE KIRIN BEER BICYCLE CUP.

The race for the Kirin Beer Cup in connection with the Nippon Bicycle Club took place on Saturday afternoon on the Fujisawa-Kodzu course. There were four starters, W. N. Wright, J. Helm, jun., W. B. Mason, and H. Y. Irwine, the sealed handicap being as follows, all starting from scratch :—

H. Y. Irwine	allows.
	m.s.
W. B. Mason	0.25
J. Helm, Jun	4.40
W. N. Wright	12.00

The start was effected at 2.38 p.m. by the Secretary, Mr. George Hood. The sky was then black and threatening, and there was frequent lightning and thunder. By the time the riders were well started the rain came down in torrents. rendering the roads very unpleasant. Despite this drawback, however, a very fine race resulted, Helm being first, with Mason second and Irwine third. Mason secures possession of the cup for one year, and also the special prize given for the fastest time made over the course. Helm, Mason and Irwine have now each won the cup once.

THE IMPERIAL WEDDING.

A meeting of the foreign residents of Yokohama was held on Friday afternoon at Keil's Building to consider the question of presenting a wedding gift to the Prince Imperial.

Mr. H.J. HOLM, who presided, said the meeting had been called by the International Committee, but since it was very desirable that all the community should take part in the matter, he would propose that the meeting elect its own Chairman, and that the International Committee should step back.

Mr. FLINT KILBY proposed and Mr. PORS seconded that Mr. Holm take the chair. This was carried.

The CHAIRMAN said the desirability of taking cognizance of the Imperial wedding was first discussed at a meeting of the International Association. The general idea was that certainly some step should be taken, and that an address accompanied by some work of art of foreign design would be the most appropriate form the present could take. This opinion was later on endorsed by the general meeting of the International Association and at the same time the incoming Committee was charged with the duty of taking further steps in the matter. In consequence of that resolution the present meeting had been called, after further discussion at a Committee meeting the other day. Their recommendation would be that that meeting elect a committee of all nationalities to do what remained to do in the matter, in the first place to draw up an address and have it presented in the proper way, then to make arrangements for the acquisition of a work of art, to be presented later, and also to collect the necessary subscriptions. If they agreed he would propose that the meeting approve of the programme as explained.

Mr. PORS thought they could do nothing better than follow the suggestion. He would second the proposition.

Mr. KAUFMANN—Would it not impair the effect to present an address now, while the present would arrive many months later?

The CHAIRMAN said that could not be helped. He thought they must present something of foreign design, and a suitable gift could only be obtained in Europe.

It was pointed out that it would be the same case with many of the Japanese presents.

The motion was carried unanimously.

The next business was the election of a Committee. After a short discussion Mr. STIRLING proposed and Mr. W. F. MITCHELL seconded that the members of the International Committee be appointed as a Committee of the meeting, with power to add to their number, in order that some nationalities at present not represented on the International Committee might be included.

This was carried.

The question of subscriptions was next discussed. Mr. KILBY made a proposal that lists for signature should be circulated among the members of the Chamber of Commerce and International Association and exhibited at the Chamber of Commerce, the banks, and other places.

Mr. STIRLING, however, thought this unnecessary, as the matter had already been placed in the hands of the committee, and Mr. KILBY agreed to withdraw his motion.

The meeting shortly after terminated after a discussion of various points of detail. The opinion was expressed that the subscription ought to be thoroughly representative, everyone contributing according to his means.

THE KOBE NAVAL REVIEW.

The *Kobe Herald* gives the following description of the review :—

The vessels ranked in four lines from west to east, the lines commencing abreast of the Ono beach. The new battleship, *Shikishima*—had the place of the honour at the head of the first or outermost line. The first class battleships, *Yashima* and *Fuji*, lay behind her in the same line, with the *Tokiwa* (cruiser); *Chinyen* (2nd class battleship); *Fuso* (battleship); *Matsushima* (coast defence ship); *Itsukushima* and *Hashidate*, coast defence ships, continuing and ending the line of nine in all. The second line, also of nine vessels, was headed by the *Kasagi*, cruiser, and continued by the *Chitose*, *Takasago*, and other cruisers and heavy ships. The two ranks next the shore were made up of the torpedo-boats, the destroyers, and other smaller vessels, whose perky forms always seem insignificant, yet in their manner impressive, near the huge battleship fabrics of floating metal.

In all, the ships in the Review were these :—five battleships; three coast defence ships; thirteen cruisers; one torpedo tender (the *Toyohashi*, containing the press representatives); one torpedo gunboat, ten torpedo destroyers; and seventeen torpedo boats.

The first movements on the vessels of the Fleet occurred at eight o'clock when the bugles rang the call to "dress ship," and promptly as the notes and their echoes floated from ship to ship on the motionless air the banner lines ran from masthead to masthead and from there to stem and stern. From the stern flagpoles hung the standard of the Imperial Japanese Navy with its red rays radiating from the central red sun of the national flag.

As the time for the arrival of the Emperor approached attention was drawn westwards towards the Wada Point corner, on rounding which the *Asama* with the Emperor on board would first come into the view of the Fleet. The *Akashi*, cruiser, detached as one of the escort for the Imperial ship, had been in harbour all the morning, and she left about nine to go to meet the convoy of ships from Maiko. By and by—shortly after nine—the ships of the Imperial escort came into view in the bluish purple haze beyond Wada point, but it was some time before they were seen to come into line, with the *Asama* leading, the *Akashi*, which had left the harbour an hour previously, in her wake, and the *Miyako*, (2nd class cruiser), *Yayeyama* (3rd class cruiser) and the *Kagero* (the newest torpedo-boat) following.

The crews of the ships of the Fleet were "piped" on deck and ranged shoulder-to-shoulder round the decks.

The approach of the Emperor's ship brought the great scene of the day—a scene which had all the impressiveness of a great ceremonial, heightened by adventitious circumstances contributed by the prevailing calm and the sunshine and the surroundings of the theatre of its enactment. The preliminary firing of the salute likewise aided the real and imaginative effect of the spectacle. The guns were manned and the first shot fired while the *Asama* was still a mile or more away, and a five or ten minutes continuous cannonading followed. The pandemonium of sound gave the piquancy of sharp contrast to the dead hush which ensued as the *Asama* and her escort moved slowly towards the assembled Fleet. This indeed was the climax of the scene. The only sounds that followed the gun discharges were the rounds of cheers taken up successively by the crews of the ships, and the notes of the bugles going through the rise and fall of the Japanese national anthem on most of the vessels. These, however, were but as echoes in the great area covered by the Fleet and as the *Asama* came nearer they ceased and absolute quiet prevailed as she moved ahead and brought the *Shikishima* abeam. Her progress was limited to a slow deliberate speed and the scene gained as much in impressiveness by this as by the complete absence of distracting clamour near and far. The Imperial ship, followed by the *Akashi* only (for the three others of the escort dropped from the procession while the *Asama* went through the Fleet) took a line, as pre-arranged, outside the entire Fleet, and, at the same slow speed with which she had approached, went the whole length of the line of vessels from west to east, and made a wide semi-circle to port to pass from east to west along the central avenue of the four ranks of ships. This was accomplished with beautiful success, the *Akashi* still lapping faithfully in the wake of the Emperor's vessel. The vessel passed slowly out of the wide "street" of warships and, wheeling slightly to port, came to a stop ahead of the *Shikishima*.

The Review had been completed with magnificent success. The Imperial ship had entered the reserved area almost at ten o'clock precisely and she was brought to her station adjacent to the *Shikishima* shortly after 11 o'clock, an hour thus passing during the tour of the Fleet. From the firing of the salute of 21 guns to the time of the *Asama's* passing out of the Fleet's lines, the crews had blackened the ships' decks in motionless ranks, and in the twinkling of an eye they had dispersed and there was bustle and coming and going on every deck again.

After the Review the Emperor proceeded from the *Asama* to the *Shikishima*, where he received the admirals of the Fleet, the foreign military attachés and consuls and leading Japanese officials. These gentlemen afterwards dined on the *Shikishima*. His Majesty returned to the *Asama* at 3 p.m. and left for Maiko at 3,30, the royal salute of 21 guns being repeated on his departure. The *Akashi*, *Miyako*, *Yayeyama*, and *Kagero* again accompanied the *Asama* as the escort.

The foreign military attachés, who were on board the *Yayeyama* during the review were :—

German, Captain Guhler, Baron de Richthofen; British, Captain Charles L. Ottley, Lieut. Colonel Churchill, Mr. Alfd. Pattison; French, Baron Corvisart; American, Lieutenant Key; Russian, Lieutenant Commander Roussien.

The Consuls and other foreign guests invited by the Minister of the Navy were on board the *Akashi*.

The day was generally observed as a holiday among Japanese and foreigners in Kobe, and there were elaborate flag and other decorations throughout the harbour and in the town.

Y. M. C. A. IN TOKYO.

The Sixth Anniversary of the dedication of the building of the Tokyo Young Men's Christian Association, located at 3 Mitoshirocho, Kanda, will be celebrated to-day and to-morrow. During the past six years the Association has had a history of steady growth and substantial development. It is an organization of young men working for young men. Its work is varied and appeals to young men from many standpoints, seeking as it does their development physically, socially, intellectually, morally, and spiritually. The variety and extent of the work may be partly shown by the following figures from the General Secretary's report for 1899.

Total number of visits to the Building, by young men	18,000
At 104 recitations of the evening classes, attendance	4,892
At 42 Saturday afternoon lectures, attendance	3,620
At 42 Sunday gospel meetings	2,652
At 104 Bible class sessions	1,248
At 14 receptions and socials	1,085
Meals and lunches served in the restaurant	6,670
Employment bureau :—	
Applicants for positions	140
Positions secured	59
Volumes in Library :—	
English, over	1,000
Japanese	2,744

The work for the first four months of this current year has far exceeded the past year. At the Saturday afternoon lectures during this period the attendance reached the phenomenal record of 6,092 young men, a gain of more than 50 per cent. over the total for the entire year preceding. One of the most conservative missionaries in Japan, who has been in this country over a quarter of a century, within the past week made the statement in writing concerning these lectures and the Sunday meetings of the Association, that they are "probably the most notable Christian gatherings in Tokyo." Health talks and practical talks on economic, financial and social subjects have recently been inaugurated, to be given by some of the leading business and professional men of Tokyo. In January the Association assumed entire control of *The Shinseiki* (the New Century), which it plans to continue as one of the leading religious and literary magazines in Japan. aiming especially to appeal to young men. The Association owns property which it conducts as a Christian boarding house for students, having accommodation for 23 young men. This home is overcrowded with applicants for admission. There should be a chain of such homes throughout the city.

The Association has become a permanent feature. The conditions demanding its special work are multiplying. The increasing interest of the past six years indicates that its success is not due to novelty. However encouraging the work may be, it is very limited when compared with the larger scale demanded, and with the new lines of work opening up before it. The Young Men Christian Association is the only Christian organization in Japan giving its entire attention in this practical manner to the problem of reaching young men.

The scope and value of its work are enhanced by its interdenominational character, and the fact that its services and privileges are extended to all young men regardless of rank or religion; while the right of control is reserved for its active members, who must be communicants in some Protestant Evangelical Church. The entire problem of Japan's future lies in her young men. No work can be more important than thus specializing in reaching the determinative class.

PEACE REGULATIONS.

LAW No. 36.

POLICE LAW IN REGARD TO THE PRESERVATION OF THE PEACE.

Art. I.—The Director of any political association or society (in the case of a branch, the director of the same) is required to forward within three days from its organization a report addressed to the Police Office of the district where the Society's offices are established, stating the name and regulations of the association, the location of its offices, and the name of its director. The same procedure must be observed in case of any change being made in regulations, &c.

Art. II.—In holding a political meeting it is necessary to nominate some person as the projector of such meeting. The projector in question must report to the Police Office of the district where the meeting is to be held, the place and date of meeting, three hours before it is actually held. With regard to meetings which are to be held by persons eligible as candidates for Parliament, or by those exercising the franchise as a preliminary towards the election of members of the Diet, a report as specified in the 2nd clause of this article may be withheld for 50 days from the time fixed for voting.

Art. III.—Even in the case of an association or meeting which, though dealing with public affairs, has no connection whatever with politics, the provisions of Articles I. and II. may be applied by Ordinance whenever a report is considered necessary for the preservation of peace and order.

Art. IV.—In case a number of people are to be assembled in the open air, or in case of a procession, the projector is required to report to the Police Office concerned, the place, date, and hour of assembly, or the roads to be passed through; this provision, however, is not applicable to operations connected with religious services or funerals, religious associations, students' exercise parties, and other things recognised by custom or usage.

Art. V.—Persons enumerated below are not allowed to be connected with any political society:—

1. 1st and 2nd reserves of the Army and Navy, including officers on actual service or under orders.
2. Police officials.
3. Shinto and Buddhist priests, whether Government or otherwise, and clergymen of all sects.
4. Teachers and students of Government, public, and private schools.
5. Women.
6. Youths under full age.
7. Persons under deprivation or suspension of civil rights.

Women and youths under age are not allowed to attend any public political meeting, or to be its originator or promoter. Any person under deprivation or suspension of civil rights can not become a projector of a public meeting for the discussion of political affairs.

Art. VI.—Any person other than a Japanese subject is not entitled to become a member of a political society or the projector of a public meeting for the discussion of political affairs.

Art. VII.—No political society can establish regulations by which members of the Diet are held responsible for their utterances and decisions even in places other than the Diet.

Art. VIII.—In cases where it is absolutely necessary, for the maintenance of peace and order, the police are empowered to restrain, forbid, or dissolve any assembly or demonstration in the open air, or even to adopt measures for the dissolution of indoor meetings. Any society falling within the purview of the foregoing provisions may be prohibited or suppressed by the Home Minister; but in case measures taken by him are considered illegal complaint may be lodged in the Administrative Court.

Art. IX.—In no assembly shall a speech be made or debate conducted upon criminal offences under preliminary examination, until the same are submitted to public trial. The same restriction must be observed with regard to law suits in respect to which the trial is conducted with closed doors. No person is allowed at a meeting to deliver a speech, or enter into a debate, calculated to incite or condone crimes, or to express sympathy with or advocacy of culprits or criminal defendants.

Art. X.—In case a speech is given or debate held at any meeting in contravention of the foregoing provisions, or in case apprehension is entertained that the speech or debate in question is likely to disturb the public peace, or to be injurious to public morals, measures may be taken by the police to suspend the same.

Art. XI.—Whenever enquiries are made by police officers as to a society or meeting or public demonstration, replies shall be given by the director, president, or projector, or any person regarded by the police as a principal member or partisan. The police authorities are empowered to despatch officials in uniform to exercise control over a political assembly to which the public is admitted. Similar procedure may be adopted even with respect to non-political meetings, whenever apprehension is entertained that the same are likely disturb the public peace. In such cases, the projector of a meeting, or any person regarded by the police as the principal member or partisan, is required to provide the police with seats.

Art. XII.—In case any person at a meeting or demonstration purposely creates a disturbance or commit acts of violence, the police officers may order him to desist, or remove him from the place on his refusal to obey.

Art. XIII.—No person is allowed to carry about him at a meeting or demonstration any arms or dangerous weapons. This provision, however, does not apply to persons carrying arms in conformity with laws and regulations.

Art. XIV.—It is forbidden to organise a secret society or association.

Art. XV.—Articles I. and V. of these regulations are not applicable to an assembly or union organised as a preliminary to Parliamentary debate by the members of the Diet.

Art. XVI.—In case any writings, pictures, or poems are put up, or distributed, or read, or sung, or any indecency is committed by words or gesture, in streets or other places open to traffic or the passage of the public, the Police may prohibit such proceedings if they entertain apprehension that the same are likely to disturb tranquillity and order, or to be injurious to public morals.

Art. XVII.—Violence or intimidation, for purposes indicated in the following paragraphs, is forbidden:—

1. To induce any person to participate in or prevent him from participating in, a combination organised for securing cooperation in matters connected with employment or remuneration.

2. To cause any person to dismiss any of his employes, or to refuse to accept their application for work, with the intention of bringing about a strike or general dismissal from employment; or to induce labourers to suspend work or to refuse to apply for such. No person is allowed to instigate such action in any form.

3. To force any person to accept terms proposed by another in connection with employment or remuneration.

No person is allowed to commit violence or to intimidate or insult others openly with a view to obtaining their consent as to the hire or lease of land for cultivation.

Art. XVIII.—The administrative authorities may, if they deem it necessary for the preservation of peace and order, prohibit the carrying of arms or explosives, or any article containing the same.

Art. XIX.—Any person violating Article I. shall be liable to a fine not exceeding 30 *yen*. Persons making reports as specified in Article I., but not stating the truth, shall be liable to a fine not exceeding 50 *yen*.

Art. XX.—Violation of the 1st and 2nd paragraphs of Article II. shall be attended by a fine not exceeding 20 *yen*. The presentation of a report as specified in the 2nd paragraph of the said Article, but in which facts are misrepresented, shall render the offender liable to a fine not exceeding 30 *yen*.

Art. XXI.—Contravention of Article IV. shall render the offender liable to a fine not exceeding 20 *yen*. Any person misrepresenting the facts in a report as prescribed by Article IV. shall be liable to a fine not exceeding 30 *yen*.

Art. XXII.—Violation of Articles V. and VI. shall render the offender liable to a fine not exceeding 20 *yen*, and the same penalty is provided for persons admitting others into their society in contravention of the provisions of the said articles.

Art. XXIII.—Any person contravening the restriction specified by the 1st clause of Article VIII., or failing to retire from the place of meeting after an order for its dissolution has been issued, shall be liable to minor imprisonment for a term not exceeding 2 months or a fine not exceeding 30 *yen*.

Violation of the prohibitory order specified in the 2nd clause of Article VIII. shall render the offender liable to minor imprisonment for a term not exceeding 6 months or to a fine not exceeding 100 *yen*.

Art. XXIV.—Any person acting contrary to the provisions of Article X. shall be liable to minor imprisonment for a term not exceeding 3 months or to a fine of not less than 10 *yen* and not exceeding 50 *yen*.

Art. XXV.—Any person failing to answer questions as specified in the 1st clause of Article XI., or giving a reply in which there is gross misrepresentation of facts, or refusing to accept the supervision of police officers, or declining to provide them with seats, shall be liable to a fine not exceeding 50 *yen*.

Art. XXVI.—Any person failing to leave a place of meeting after he has been ordered to retire in accordance with Article XII. shall be liable to minor imprisonment for a term not exceeding 1 month or to a fine not exceeding 20 *yen*.

Art. XXVII.—Offenders against Article XIII. shall be liable to minor imprisonment for a term not exceeding 3 months or to a fine not exceeding 50 *yen*.

Art. XXVIII.—Any person secretly forming an illegal association, or becoming a member of any such society, shall be liable to minor imprisonment for a period of not less than 6 months and not exceeding 1 year.

Art. XXIX.—Contravention of Article XVI. as to the order of prohibition shall render the offender liable to minor imprisonment for a term not exceeding 1 month, or a fine not exceeding 30 *yen*.

Art. XXX.—Violation of Article XVII. shall render the offender liable to minor imprisonment for a term of not less than 1 month and not more than 6 months, and to a fine of not less than 3 *yen* and not more than 30 *yen*. The same penalty attaches to persons committing violence, or attempting to intimidate, or insulting openly those who have refused to participate in an attempt to bring about a strike of labourers or employes.

Art. XXXI.—Infringement of Article XVIII. shall be punishable by major imprisonment for a term not exceeding 6 months.

Art. XXXIII.—The former laws relating to public meetings and political associations shall be rescinded.

METHODS OF FIGHTING.

An Australian officer now in South Africa has sent the following interesting comments to the *Sydney Morning Herald*:—

"I have been over the battlefields of Belmont, Graspan, and Enslin (or Rooilaghte). The fights were on the enemy's part simply rearguard actions, in which they held on to the line of kopjes in succession. Our men were sent straight at them without artillery preparation, without even a heavy rifle fire, and suffered heavy loss, the Boers retiring leisurely across three or four miles of open veldt to the next ridge, and so on. Although we had horse artillery and cavalry, no attempt was made to outflank or pursue. At Modder River our troops simply fell up against the enemy's position, Lord Methuen himself having expressed the opinion that the Boers were miles away. The heaviest loss was at the commencement of the fight. One of our batteries opened at 2,000 yards and did splendid execution, but, being ordered to advance to 1,100 yards, it then came under such a rifle fire as speedily silenced it, and a machine gun also coming to close range was silenced. Of course you know that General Buller's artillery suffered through the same rashness, showing a complete failure to grasp the lessons taught by previous wars. In none of the actions named did the enemy retire in confusion or suffer heavy loss.

"The battle of Magersfontein was fought the day after we reached here, and we had a fine though distant view of the bombardment, which unfortunately succeeded instead of preceded the infantry assault. There is no doubt that our Army suffered a complete and disastrous repulse. As you know, the Highland Brigade were moved out before dawn in mass of quarter columns. Without advanced guards or scouts they marched serenely up to the base of the ridges. Their first intimation of the enemy was an outburst of musketry from practically three sides. The result of the war thus far along the whole line shows that the training of men and officers is defective. The men are not taught to have complete confidence in their rifles. They have an idea that accuracy of shooting is of small account, and that the bayonet will settle the matter. Then the officers do not appreciate the effect of their own or their foes' rifle fire, and officers of high rank advance light-heartedly without the smallest attempt at reconnaissance—instance Lord Methuen at Modder and Magersfontein, and General Gatacre at Stormberg. The orders and instructions we are now receiving show that our leaders are waking up to the fact that we are not fighting Dervishes. Does it not strike you as peculiar that we are employing against the Boers the same tactics that the Dervishes used against us—that is, wild and desperate attempts to get to close quarters, comparatively of course?

"I will give you a rough idea of the attack as being practised now. First, scouts well out. Next, a thin extended line, five to eight paces intervals; next, an extended line as support at about three paces intervals, then another line at two paces intervals, and another extended to one pace. These form the first line, and may be got by forming the companies in line of section columns. This is the most convenient form, and facilitates reassembly. Reinforcement is straight to the front. Officers are armed and equipped in exactly the same way as the men and form part of the extended line. Firing is entirely independent, orders are passed from man to man, advances being made as far as possible simultaneously for a few yards, the whole throwing themselves down flat. The standing and kneeling positions are absolutely abandoned. We have awakened to the fact that they will win the battle who can pour in the bullets straightest and fastest upon their enemy. To me it seems wonderful that modern officers could for a moment imagine there was any other way. Of course I am not considering the question of outmanœuvring, &c. Neither do I believe an infantry attack as above

Digitized by Google Original from CORNELL UNIVERSITY

outlined could succeed against an enemy protected by head cover. Even in the open the attackers want to be atleast two to one, and develop their fire to the utmost. There must be no rushing, except to drive off the last desperate survivors."

IMPORTS OF ALCHOHOL AND TOBACCO.

Since the revision of the Customs tariff and the consequent augmentation of taxes upon alcohol, Chinese liquors, and foreign tobacco, a marked dimunition has been manifest in the import of these commodities, remarks the *Nichi Nichi*. The demand for alcohol and other spirituous liquors considerably increased in 1898 and the early part of 1899, but in consequence of the heavy increase of taxation last year a great decrease has been since noticeable. Following are the figures for the past three years :—

Year.	Amount in catties.	Value in yen.
1897.....	11,992,102	969,360
1898.....	29,730,048	2,699,982
1899.....	17,450,578	2,060,800

The amount imported before and after the revision of the tariff, stands as follows :—

	Amount in catties.	Value in yen.
From Jan. 1 till Aug. 14, 1899 ...	17,384,528	2,053,203
From Aug. 15 till Dec. 31, 1899..	66,050	7,596

Alcohol was formerly used in the manufacture of mixed *saké*, a very small portion being for industrial and medicinal use. The heavy taxation, however, has rendered the manufacture of mixed liquors practically unprofitable, and hence the reduction in imports. A similar shrinkage is noticeable in the liquors belonging to Class XV. in the scale of duties appended to the Tariff. It may be observed that in the case of Chinese liquors the rate has been increased from 40 to 80 per cent. The following are comparative figures for the past three years :—

		Amount in *sho.*	Value in *yen.*
Chinese liquors ...	1897...	896,729	64,323
	1898...	919,121	162,656
	1899...	19,620	4,512
Refined liquors ...	1897...	521	80
	1898...	—	8
	1899...	—	13
Distilled liquors...	1897...	—	10,460
	1898...	—	33,159
	1899...	—	16,813
Brewed liquors ...	1897...	—	13,839
	1898...	—	63,996
	1899...	—	4,568

There has been no large demand for the above commodities. The sudden augmentation in the import of Chinese liquor to the amount of 162,000 *yen* in the 31st year of *Meiji* is simply attributable to the unusual purchases made in anticipation of the increased tariff. Classified as before and after the revision of the tariff, the figures stand as follows :—

		Value in *yen.*
Chinese liquors	From Jan. 1 till Aug. 14...	3,854
	From Aug. 15 till Dec. 31.	658
Refined liquors	From Jan. 1 till Aug. 14...	13
	From Aug. 15 till Dec. 31.	—
Distilled liquors	From Jan. 1 till Aug. 14...	16,063
	From Aug. 15 till Dec. 31.	749
Brewed liquors	From Jan. 1 till Aug. 14...	4,367
	From Aug. 14 till Dec. 31.	200

A further tendency to decrease in the import of these liquors is noticeable. As to the various kinds of tobacco the following comparative figures for the past three years are given :—

		Amount in catties.	Value in *yen.*
Cigars.....	1897.....	84,614	151,220
	1898.....	107,088	198,574
	1899.....	51,009	146,732
Cigarettes..	1897.....	368,598	987,237
	1898.....	721,847	1,720,827
	1899.....	264,513	760,594
Cut tobacco	1897.....	107,796	104,259
	1898.....	176,657	172,796
	1899.....	15,834	20,700

The scale of taxation for tobacco was raised from 40 to 100 per cent., and the comparative figures before and after the revision stand as follows :—

	Amount in catties.	Value in *yen,*
Cigars—		
From Jan. 1 till Aug. 14, 1899	49,954	144,150
From Aug. 15 till Dec. 31 ...	1,055	2,582
Cigarettes—		
From Jan. 1 till Aug. 14	246,981	726,082
From Aug. 15 till Dec. 31 ...	17,532	34,511
Cut Tobacco—		
From Jan. 1 till Aug. 14	15,282	20,352
From Aug. 15 till Dec. 31 ...	552	348

Of late a tendency to patronise the goods of Japanese manufacturers has manifested itself, and cigars and cigarettes have improved in quality. The enterprise of Murai Brothers and Co. in conjunction with the American Tobacco Company especially promises well for the future of the industry and the reduction of imports.

FRANCE AND ENGLAND.

Paris, April 3.

In the Senate to-day, during the debate on the foreign Budget, Comte Daunay drew attention to the relations of France with Great Britain and pointed out that, in the negotiations respecting the French concession at Shanghai, Great Britain was at first obstinate, but on the outbreak of difficulties in South Africa changed her tone and became more conciliatory. "The war in South Africa," said the Senator, "has shown England that her policy of splendid isolation is certainly not the best safeguard for her interests. I, therefore, consider the moment opportune for France to raise the question of Egypt. A rupture between France and Great Britain will be a misfortune for civilization and the mutual respect of the two nations s the best means of averting it."

The Minister of Foreign Affairs, M. Delcassé, replied :

"Both nations have many reasons to consider their rights and dignity in the questions they have to solve. It is not the time to speak here of ridiculous threats. The time has not yet come to tell all the truth of the Fashoda episode, but neither France nor the Government has anything to fear from the publication of the facts. History will say the last word. All I can say now is that the Government took into consideration the disproportion between the end and the effort necessary to attain it. The treaty of 1889 secured for us serious advantages. Since then we have had to negotiate grave external questions. The treaty of commerce concluded with the United States is advantageous to our industry and agriculture, and the negotiation respecting Shanghai has secured a recognition of our rights. The incident in the Antilles was settled to our satisfaction and in Africa we are beginning a methodical development of our domination.

"In Egypt we have received a renewal of the mixed tribunal law. These results are excellent and they are so recognized abroad. They are questioned in France with the ulterior motive of overthrowing the Cabinet, even though the country should succumb at the same time.

"You have seen the odious campaign against our foreign policy. As Tartuffe took the mask of virtue, so a certain party takes the mask of patriotism. But it will not succeed any more than did Tartuffe.

"France, gentlemen, is a great European Power. Our extension has been marvellously rapid, but we must exploit the riches of our new colonies with the capital of old France. We must defend them with our own resources. Among the Powers which formerly disputed our supremacy some have grown greater and others of more recent growth are striving to reach the first rank.

"We must struggle. We must form virile generations. We must develop our economic organization. France by intelligent work must be maintained as the great road of the world. Our fleet must regain the necessary strength. I trust the Senate will agree with me that such considerations are not out of place in making explanations regarding our foreign policy."

M. Delcassé resumed his seat amid the heartiest applause.

TELEGRAMS.

DEATH OF SIR NICHOLAS HANNEN.

(From our own Correspondent.)

Shanghai, April 27.

Sir Nicholas Hannen died yesterday.

(Reuter's Special Service.)

THE BOER WAR.

THE BOER RETREAT.

Shanghai, April 27.

The chances of intercepting the retreating Boers are regarded as doubtful. The Boers admit that they lost heavily in artillery and men during the operations at Dewetsdorp and Wepener.

Col. Dalgety's casualties were 33 killed and 132 wounded.

General Rundle has arrived at Dewetsdorp.

WARRENTON.

News from Warrenton on Tuesday says that the bombardment of the Boers' camp drove the enemy from their position with considerable loss.

THE QUEEN.

The Queen has left Ireland. Her Majesty had a splendid farewell ovation. Her visit was an unqualified success.

METHUEN.

Shanghai, April 28.

Lord Methuen is still at Boshof, where the enemy are opposing him. The Boers seem to be mid-way between Boshof and Kimberley.

THABANCHU.

Hamilton expelled the enemy from a strong position at Israels-poort by a well conceived turning movement, and is now advancing towards Thabanchu.

REWARDS FOR IRISH OFFICIALS.

The Lord Mayors of Dublin and Belfast have received baronetcies, and the Mayors of Cork and Londonderry have been knighted.

FIRE AT OTTAWA.

There has been a great fire at Hull, opposite to Ottawa. Only the cathedral and twenty houses remain in Hull. The fire crossed the river to Ottawa, where a number of sheds, factories, and foundries were destroyed. Many thousands are homeless. The damage is estimated at upwards of two millions sterling.

SIR CHARLES WARREN.

Shanghai, April 29th.

Sir Charles Warren has been appointed Governor of Griqualand West.

THE CAMPAIGN IN THE FREE STATE.

The Times' correspondent telegraphs from Bloemfontein under date of the 26th that there is little chance of inflicting effective punishment on the fleeing commandos.

Roberts telegraphs from Bloemfontein under date of the 27th that French has reached Thabanchu with the cavalry. He met the brigades of Hamilton and Smith-Dorrien there. The enemy were still holding the eastern outlet of the town whence French and Hamilton were proceeding to expel them. Rundle is eight miles south of Thabanchu.

THE BOERS IN THE SOUTH.

Later.

Reuter's Agent telegraphs from Aliwal North, under date of the 27th inst., that there are still several small commandos, totalling 1,000 men, with five guns, at Smithfield and in the Lower Caledon districts.

SHIPPING GOLD FROM THE TRANSVAAL.

A French steamer has shipped a quarter of a million sterling in gold at Lozenzo Marques. It is consigned to Paris by a French bank in Johannesburg.

H.I.H. PRINCE KANIN.

Prince Kotohito, of Japan, has had a cordial interview with King Leopold at Brussells. He lunches with His Majesty at the Palace to-morrow, and proceeds to London on Tuesday.

Shanghai, April 30.

In view of contingencies orders have been given to clear all the hospitals in the Cape Colony.

Digitized by Google Original from CORNELL UNIVERSITY

A BOER DEFEAT.

It is reported that Hamilton, while marching from Thabanchu, defeated a considerable body of Boers.

HEAVY FIRING.

Reuter's agent telegraphs from Maseru, under date of the 28th, that the Boers are taking cross country roads northward. There was heavy firing this morning in the direction of Thabanchu.

BOERS DISPERSING.

Reuter's agent, telegraphing from Bloemfontein under date of the 28th, says that the commandos round Thabanchu are dispersing and returning singly to their homes. Many who had previously sworn allegiance declare they were compelled to fight.

A CRAFTY DEVICE.

Intercepted letters prove that many submissions were a cunning device to enable the Boers to create trouble from the rear.

GEN. POLE CAREW.

Later.

General Pole-Carew's Division has arrived at Bloemfontein.

FAILURE OF THE BOER PEACE DELEGATES.

The Boer peace delegates are returning to South Africa without visiting any further European capital. They are sailing at once for home.

ACCIDENT IN PARIS.

A bridge in the grounds of the Paris Exhibition collapsed, falling on the crowd below. Seven persons were killed and many injured.

BLOEMFONTEIN.

Shanghai, May 1.

The *Standard's* correspondent telegraphs from Bloemfontein under date of the 29th that the cavalry sent in pursuit of the fleeing commandoes is returning to Bloemfontein.

WARRENTON.

The Boers at Warrenton have re-occupied the position from which they were shelled on Tuesday.

MAFEKING.

The Times' correspondent telegraphs from Mafe king under date of the 11th of April that the Boers on that day celebrated the completion of the sixth month of the siege by a heavy bombardment, which did much damage but did not cause any casualties.

THABANCHU.

Reuter's agent telegraphs from Thabanchu that, on the 29th of April, French sent the Third and Fourth Cavalry Brigades to make separate reconnaissances round the hills on the east of the town. The enemy were holding the hills strongly but were evidently only a rear guard, having no transport.

THE "ASAHI" ASHORE.

A telegram from London dated the 1st instant says that the Japanese battle-ship *Asahi* ran ashore at Southsea this afternoon. The tide is falling and the situation is precarious.

THE EXHIBITION.

The casualties caused by the falling bridge at the French Exhibition were 10 killed and 63 injured. A scaffolding in the gallery of machines also collapsed, killing 2 and injuring 2.

THE UGANDA RAILWAY.

Shanghai, May 2.

The House of Commons has voted a grant of £1,930,000 (the figure is uncertain) to complete the Uganda Railway.

THABANCHU.

Reuter's agent telegraphs from Thabanchu that on Sunday the Boers made a determined attempt to seize a pass over the mountains and capture a convoy. French attacked their flank, sending the troops over precipitous mountains. Darkness enabled the Boers to withdraw. The Boer position is almost impregnable.

KIMBERLEY.

A considerable force of Boers have arrived at Windevorton on the north of Kimberley and arrested a number of loyalists.

JOHANNESBURG.

Owing to the explosion at Begbies all Britishers except a few have been ordered to quit Johannesburg within 38 hours.

THE "ASAHI."

The *Asahi* has been floated.

THABANCHU.

Later.

The Mounted Infantry under Hamilton and the brigade of Smith-Dorrien, marching northward yesterday from Thabanchu, were opposed by a strong force of Boers at Hanney, under Botha. Reinforcements were sent by French for the purpose of strengthening Hamilton, from Thabanchu, where the Boers have decreased.

Maxwell's brigade occupied Vlaksenters and Schomskraall kopjes unopposed, but the Mounted Infantry were engaged for 4 hours.

PRINCE KANIN.

H.I.I. Prince Kanin has arrived in London.

CARRINGTON.

Shanghai, May 3.

Reuter's agent telegraphs from Beira under date of the 28th ultimo that Carrington has advanced his depot and camp to Marendellas.

THABANCHU.

Reuter's agent telegraphs from Thabanchu under date of the 1st instant that Hamilton's division was engaged yesterday and to-day forcing a passage northward at Houtnek. The enemy in force held a line of hills commanding the side of the Nek. They were attacked and fled, and the passage was cleared. The Boers on the mountains are now shelling the outlying camp, necessitating its removal to a safer place.

FATAL EXPLOSION.

An explosion of blasting powder in a mine at Schofield, in Utah, has taken place. Over 200 persons perished.

THE TWO THOUSAND GUINEAS.

Later.

The Two Thousand Guineas was won by Diamond Jubilee, with Bonarose second, and Sidus third.

HAMILTON'S CASUALTIES.

The casualties in Hamilton's force in the fighting on the 30th of April were 8 officers and 20 men of various regiments killed, wounded or missing.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

WEPENER.

Saigon, April 27.

The Boers were obliged to evacuate Wepener and pass northward, in consequence of the arrival of several English Divisions. The latter were powerless, however, to cut the retreat of the Boers.

THE OTTAWA FIRE.

Saigon, April 28.

A large part of the town of Ottawa in Canada has been destroyed by an incendiary fire. It is feared that many lives have been lost.

EXPLOSION IN JOHANNESBERG.

An explosion has taken place in Johannesberg. There were about 50 victims.

THE WAR.

Saigon, April 29.

No important news of the War has been received in London.

THE OTTAWA FIRE.

It is estimated that the number of houses destroyed at Ottawa by the fire is 2,000, and that the losses total 60,000,000 francs. There have been very few casualties to life and limb. The disaster was not caused by *malice prepense*.

THE SENATE.

Saigon, April 30.

M. Repiquet has been elected Senator for the Rhône by 373 votes against 361 for M. Chevenet.

M. Peroy has been elected Senator for the Pas-de-Calais.

THE EXHIBITION.

A foot bridge, used for the purposes of a private establishment in the neighbourhood of the Exhibition, but entirely independent of the Exhibition, has collapsed. Nine were killed and twelve injured.

THE WAR.

It is announced from Brandfort, under date of the 27th, that the Boers from Dewetsdorp and Wepener have arrived safely. Other detachments of Boers still occupy strong positions near Thabanchu.

THE PALACE OF FINE ARTS.

Saigon, May 2.

The President of the Republic yesterday inaugurated the Palace of Fine Arts at the Exhibition.

THE 1ST OF MAY.

May day passed in a very tranquil manner in France. The working classes continued work everywhere, in Paris and in the provinces alike.

CHESS.

(All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

SOLUTION OF PROBLEM No. 470.

Key-move _____ Kt to B 3.

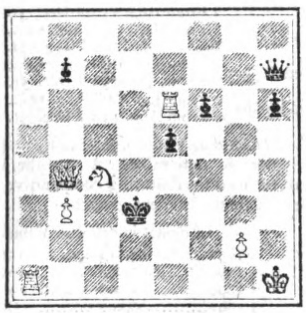
Correct solution received from W.H.S., who points out an error in the diagram, namely, that there should be a White Bishop, not a Black, at R 5.

PROBLEM No. 472.

BY COL. W. VON WALTHOFFEN.

From *Wiener Schachzeitung*.

Black.



White.

White mates in three moves.

GAME 585.

The brilliancy prize in connexion with the recent "Kolisch Tournament" in Vienna has been awarded to Herren Schwarz and Albin for the following two games. The first is a pretty "skittle" game, badly played by Popiel, but the second is a remarkably fine

Digitized by Google Original from CORNELL UNIVERSITY

game all through, as the reader will see. Both, however, are characteristic of the styles of Schwarz and of Albin.

QUEEN'S GAMBIT DECLILED.

White—A. Schwarz. Black—J. V. Popiel.

WHITE.	BLACK.	WHITE.	BLACK.
1 P Q4	P Q4	14 Q Kt4ch	K Rsq

11 B R4	KtxKt	24 KtxB	QxB
12 PxKt	P KKt4	25 PxP	Resigns
13 PxKt	PxB		

There is a plausible reason for White's 6—P to B 5, because if 6—B to Q 3 Black might reply 6.....P takes P, rendering the initial development of the Bishop wasted. Still, we should not recommened the advance of BP with White's present undeveloped state, as Black has various means of obtaining a counter-attack. He might even venture upon 6.....Kt to K 5, or 6.....P to QR 4, with the threat of P to QKt 3, or 6.....P to QKt 3; 7—P to QKt 4, P to QR 4; 8—P to QR 3, RP takes P; 9—RP takes P, R takes R; 10—Q takes R. Kt to QB 3, with a number of threats, White's King being in a comparatively exposed position, or at least an even game. He made matters worse with 9.....B to B sq., which allowed 10—Kt to K5. He should have made an effort to get some elbow-room at any cost; for instance, 9.....Kt to B sq, followed by 10.....KKt to Q 2, so as to be able to advance P to B 3 and P to K 4, whereas he permitted White to smother him altogether. 11.....Kt takes Kt is immediately fatal. The lesser evil would have been 11.....P to KKt 4; 12—B to Kt 3, Kt takes Kt, followed by Kt to Q2. Herr Schwarz has exactly the position suitable to his "skitting" style, and such games he plays to perfection. His 16 Kt to K4 is a very pretty move (Black could not play 16.....P takes Kt because of 17—Q takes P), and the remainder plays itself, Black being paralysed. The ending is very neat.

GAME 586.

QUEEN'S GAMBIT DECLINED.

White—A. Schwarz. Black—A. Albin.

WHITE.	BLACK.	WHITE.	BLACK.

2.....P to Kt 4 is a favourite variation of Albin's. It cannot be recommended. White may continue with 3—P to K 3, which places him in the position of the Frence Defence with a move ahead, or he may continue as in the text up to White's 8—Kt to K B 3, which is a bad move, the correct continuation being 8—P to K 4, B to K 3 (8.....P takes P e.p. is inferior); 9—Q to Q 3, P takes P; 10—P takes P, R takes R; 11—B takes R, P to K Kt 4; 12—Kt to K B 3 with a pawn ahead and a good position. Obviously, after permitting 8.....P to R 6, driving back the Bishop, he had the inferior game, which he could have somewhat improved with 10—P to K 3 (in fact, the latter move was imperative). Black's splendid final attack commenced with 11., Kt to R3 and Kt to Kt 5, and the beautiful 17, B to B 7, which compelled White to sacrifice the Queen, for Black threatened 18.....Kt to K 6 ch; 19—K to K 2, Q to Q 6 ch; 20—K takes B, Kt to Kt 5 ch; 21—K to K sq, Q to K 6 ch; 22—B to K 2, Q to B 7 ch; 23—K to Q sq, Kt to K 6 mate. Of course, after the sacrifice of the Queen, he might have resigned. Black, eventually giving back the Queen, remained with the Exchange ahead—more than sufficient to win. This is really a fine and brilliant game, deserving the whole of the brilliancy prize instead of having to share it with the above.

Nos. 2/80, Plain	300.00 to 325.00
Nos. 2/100, Plain	425.00 to 435.00
Nos. 2/60, Gassed	300.00 to 310.00
Nos. 2/80, Gassed	575.00 to 400.00
Nos. 2/100, Gassed	500.00 to 510.00

RAW COTTONS.

American Middling	$25.50 to 26.00
Indian Broach	2.450 to 25.00
Chinese	23.00

METALS.

	PER PICUL.
Round and square ½ inch and upward	6.00 to 6.50
Iron Plates, assorted	5.90 to 6.40
Sheet Iron	6.40 to 7.00
Galvanised Iron sheets	12;50 to 14.00
Wire Nails, assorted	8.00 to 8.50
Tin Plates, per box	8.20 to 8.50
Pig Iron, No. 3	2.95 to 3.10
Hoop Iron (⅝ to 1½ inch)	7.00 to 7.40

KEROSENE.

Prices show a further decline.

American	$2.95 to 2.98
Russian	2.95
Langkat	No Stock

SUGAR.

Market quiet for best refined, for lower grades a good enquiry.

	PER PICUL.
Brown Takao	$5.00 to 5.90
Brown Manila	5.40 to 6.70
Brown Daitong	4.40 to 5.50
Brown Canton	5.50 to 6.80
White Java and Penang	6.90 to 8.50
White Refined	7.90 to 9.70

EXPORTS.

RAW SILK.

A fair amount of buying as the market declines. Fine sizes are scarce, and there is not much reduction in quotations. In full sizes holders are still anxious to be moving. New crop prospects are so far favourable and new filatures for July delivery are quoted cheap upon the Silk Exchange.

QUOTATIONS.

Filatures—Extra, Fine	1,070 to 1,080
Filatures—Extra, Coarse...	990 to 1,000
Filatures—No. 1, Fine	1,060 to 1,070
Filatures—No. 1, Coarse...	970 to 980

FOR GOLF RASH

Heat Rash or any itching, irritation, inflammation, or chafing, produced by exercise or heat, for undue or offensive perspiration, and for many sanative uses, a bath with

Cuticura SOAP

the most effective skin purifying soap in the world, as well as purest and sweetest for toilet, bath, and nursery, when followed by gentle anointings with CUTICURA, the great skin cure and purest of emollients, is most cleansing, cooling, purifying, and refreshing.

SAVE YOUR HAIR Warm shampoos with CUTICURA SOAP, followed by light dressings with CUTICURA, purest of emollients, will clear the scalp and hair of crusts, scales, and dandruff, soothe irritated and itching surfaces, stimulate the hair follicles, and produce luxuriant, lustrous hair, with clean, wholesome scalp, when all else fails.

SAVE YOUR HANDS Bathe and soak the hands, on retiring, in a strong, hot, creamy lather of CUTICURA SOAP. Dry thoroughly, and anoint freely with CUTICURA, greatest of emollient skin cures. Wear during the night, old, loose, kid gloves. For sore hands, itching palms, and shapeless nails, this treatment is simply wonderful.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 12TH, 1900.

DEATHS.

On 8th inst., WILLIAM BOURNE, aged 69, born in Birmingham, England, and for 38 years a Resident of Yokohama.

The funeral will take place from the General Hospital at 8.30 a.m. to-day, 9th May, and friends will please accept the intimation.

At No. 114, Creekside, on Thursday, the 10th May, 1900, FRANCISCO ABELLA, aged 61 years.

SUMMARY OF NEWS.

THE Spring Race meeting at Yokohama will be held next week.

THE foreign community of Yokohama presented an address to the Prince Imperial on Wednesday, in honour of his marriage.

THE Marriage of the Prince Imperial was celebrated in Tokyo on Thursday. The weather was beautiful and the open-air rejoicings were on a large scale everywhere.

THE Boers are retreating before Lord Roberts' rapid advance. A big battle is expected at the Zand River.

TELEGRAMS received in Tokyo say that the President gave his sanction to the Hawaiian Administration Bill on the 30th ult.

A JAPANESE traveller from Newchwang to Moukden was detained by the Russian officials last month on suspicion of being a spy, but was eventually released.

THE Japanese Fine Arts Hall at the French Exhibition is said to have attracted most favourable notice in Paris. It was visited by the President on the 1st instant.

THE man who was arrested for breaking into the enclosure of the Meguro Powder magazine has been released. The police satisfied themselves that he did not partake in any respect of the character of a military spy.

A THIEF broke into the villa of Mr. and Mrs. Showler, near Kamakura, the other night, and stole a silver watch, a lady's gold watch, a purse containing *yen* 4 in cash, and a knife with a pearl handle.

THE statement that Mr. Liu had died of the wound inflicted on him by an assassin at Canton is contradicted. According to the latest information, the wound was not serious, and Mr. Liu is progressing towards recovery.

THERE appears to be little question that Mr. Takahira, Vice-Minister of Foreign Affairs, will be appointed to represent Japan in Washington, and that Mr. Kurino, the present Representative in Italy, will return home in July.

INTELLIGENCE from Amoy is to the effect that the two ring-leaders in the disturbance last autumn have been sentenced to two months of the cangue and two years' imprisonment. This punishment is not very severe from a Chinese point of view.

WE are informed that Mr. Kent, late of the *Tamba Maru*, who has left for home, received from the Chamber of Commerce a cheque for *yen* 550, subscribed by members of the Chamber, and a letter from the Chamber in which his case was fully explained.

FIRE broke out at 8.30 p.m. on Thursday in Bentendori, Ichome, at the house of a lacquer dealer named Kobayashi. The Police Brigade soon extinguished the flames. The damage was small. The fire is believed to have been due to the carelessness of a servant.

THE Tanko Railway Company and the Kobu Railway Company are both said to be anxious to obtain loans abroad. In fact, this season of great stringency in the money market is likely to impart renewed vigour to the agitation for the import of foreign capital.

A PICNIC was held by the students of the Yoshida Gakko on Friday, when some 2,500 boys and girls attending the school proceeded to Negishi, near the Race Course, and played various games, baseball, jumping, tugs-of-war, etc. Afterwards the *Kimi-ga-yo* was sung in chorus, and the scholars marched back.

A STATE visit was paid by Prince Kanin, envoy of the Emperor of Japan, to President Loubet at the Elysée on March 29th. The band of the Republican Guard played the Japanese hymn on the arrival and departure of the Prince, whose visit the President returned later in the day.

ACCORDING to a naval authority, the new ships which will soon be added to the Japanese Navy and the order of their arrival are, the *Asahi* (line-of-battle ship, 15,200 tons), the *Yakumo* (first class cruiser, 9,800 tons), the *Azuma* (first-class cruiser 9,400 tons), and the *Izumo* (first-class cruiser, 9,800 tons).

THERE is talk of a trust being formed by the 22 cement companies of Japan. They are tired of cut-throat competition, and the representatives of the Tokyo, Osaka, Kiushiu, and Hokkaido Companies have held a meeting in Tokyo to discuss preliminaries for the organization of a trust with a capital of 7 million *yen*.

LORD ROBERTS has had a newspaper started for the edification of the troops, and Mr. Rudyard Kipling contributed to the issue on 17th March some stirring lines about "Erin's Badge by Law." The Commander-in-Chief has requested most of war correspondents on the spot to form the temporary staff.

SURVEYS have now been completed of the Fusan and Söul sections of the Söul-Fusan Railway, as far as Yösan at the Söul end and Tampoh at the Fusan end. It is said that the survey of the part between Yösan and Tampoh will not be undertaken until work has been commenced on the end sections.

Two Russian admirals, and 42 other Russian Naval officers of high rank, have been arrested at Sebastopol, owing to irregularity in the construction department, and to the embezzling of millions. All the ships in the Black Sea Harbour were ordered to Sebastopol for inspection. To this movement is attributable the recent rumour of Russian Naval mobilization in the Black Sea.

THE children—boys and girls—attending the Motomachi School had their annual drill on Sunday afternoon at the Cricket Ground, which had been lent for the occasion. Races in European style formed part of the programme, and the obstacle races especially were very amusing. The rifle drill of the boys and the marching of the girls to the music of a band were also pretty features.

THE man that robbed an officer of the *Oregon* of a watch valued at $150 has been arrested. He is a tailor named Imura, 19 years of age. It appears that in his professional capacity he obtained access to the officer's cabin, and, seeing the watch, purloined it, subsequently pawning it at Asakusa in Tokyo for 30 *yen*. The watch has been recovered and placed in the hands of the United States Consul.

FOUR coolies have been arrested on the charge of stealing from the inflammable goods godown at Nakamura, Ishikawa, 48 cases of alcohol, valued at some *yen* 351, 13 of which belonged to Mr. H. Grauert, No. 92, Settlement, and the rest to Mr. Takase Saburo, of Honcho Shichome. The stolen goods had been sold at a very low figure to one Hara Hyokichi, employed by a foreign firm, who has also been arrested.

THE IMPERIAL WEDDING.

The marriage of H.I.H. the Prince Imperial and Princess Sadako, took place in Tokyo on Thursday in brilliant weather. There were great rejoicings throughout the empire, a general holiday being observed.

Pictures are published by the *Jiji Shimpo* of the robes and ornaments that the Crown Princess wore at the wedding. The hair-pins and combs are of silver with gold decoration, pure gold being too heavy, and the robes are of the richest silks, embroidered and otherwise decorated. For foreign observers, and indeed for the Japanese themselves also, the most interesting part of the ceremony was the departure of the bride and bridegroom from the Emperor's Palace to the Aoyama Palace at half-past eleven in the forenoon, as the Imperial couple then wore Japanese costume, whereas they afterwards dressed in foreign style.

In the grand ceremony of presentation Marquis Ito, as representative of the holders of titles and orders, Marquis Yamagata, as representative of officialdom, and Baron d'Anethan, as representative of the Foreign Corps Diplomatique, delivered addresses to their Majesties the Emperor and Empress.

About thirty vessels of the Navy assembled in Tokyo Bay for the ceremony, and dressed ship and fired salutes just as on the Emperor's birth-day. The same rule was followed at Yokosuka, Saseho, Kure, and the open ports.

We translate from the *Official Gazette* the programme of the ceremonies, as it is not probable that an Imperial Wedding in Japan will ever again come under the notice of the majority of our readers :—

6 a.m. The decorations and dispositions are made in the Palace, after which the officers of the Board of Ceremony repair to their places in the Hall of Imperial Shrines.

The door of the Imperial Shrine is opened, music being performed at the same time.

The food to be offered at the Shrine is spread, music being performed at the same time.

The Sacred Ritual is read.

The food is removed, music being performed at the same time.

The door of the Shrine is shut, music being performed. All retire.

7.30 a.m. The Prince Imperial leaves the Aoyama Palace and repairs to the Hall of Imperial Shrines. The Princess Sada leaves Prince Kujo's mansion and repairs to the same place simultaneously, escorted by an officer sent by the Prince Imperial.

The Prince Imperial; the Princess; one representative each of the Holders of Grand Cordons, the *Shinnin* Officials, the Princes, the Marquises, the Peers of the Musk and Golden-Pheasant Chambers, and their wives, the *Shinnin* Local Officials of the First and Second Classes and their wives, assemble in the Hall of Imperial Shrines.

The door of the Shrine is opened, music being performed.

The *go-hei* are offered at the Shrine, music being performed.

The Sacred Ritual is read.

The Imperial Princes take their places.

The Prince Imperial and the Princess worship at the Shrine, and bow to the Sacred Jewel.

The Prince Imperial reads the Sacred Address.

The Prince Imperial and the Princess receive the Sacred *Sake*.

An Imperial Salute is fired on Sea and on Shore.

The Prince Imperial and the Princess again worship at the Shrine, and, bowing to the Jewel, retire.

The sacred offerings are removed; music.

The door of the Shrine is closed; music.

All retire.

9 a.m.—The Prince Imperial and the Princess repair to the Palace, are received by the Emperor and Empress, and drink *sake*.

11 a.m.—The Prince Imperial and the Princess leave the Palace and return to the Aoyama Palace.

The Prince Imperial and the Princess exchange cups.

11 a.m. to 2.30 p.m.—The following persons assemble at the Eastern Kuruma-yose, repairing thither by the Sakashita, or Tsuyô, Gate :—

The *Kwanchô* of each Buddhist and Shinto Sect.

Sonin officials, and persons ranking as *Sonin* officials, of and above the Fifth Class.

All persons of and above the First Class of the Fifth Grade.

All persons holding decorations of and above the Fourth Class.

The *Monzeki*.

The Mayor of Tokyo.

3.30 p.m. The Prince Imperial and the Princess leave Aoyama Palace and repair to the Emperor's Palace.

Simultaneously the following repair to the Palace :—

Holders of Grand Cordons, *Shinnin* officials, Princes, Holders of First Class Orders, First-class officials, Marquises, Persons of the First-class of the Second Grade, Second-class officials, Peers of the Musk and Golden Pheasant Chambers, Counts, Persons of the Second Class of the Second Grade. Holders of Second Class Orders, Viscounts, Persons of the First Class of the Third Grade, Barons, Persons of the First Class of the Fourth Grade, Foreign Employés ranking as *Chokunin*, Foreigners holding Third-Class Orders and upwards and their wives, Officials from the Third to the Fifth Class, Local *Shinnin* and *Sonin* officials and their wives.

The Emperor, the Empress, the Prince Imperial and the Princess Imperial repair to the Phœnix Chamber and give audience to those assembled.

6 p.m. The Emperor, the Empress, the Prince and Prince Imperial, the Princes and Princesses of the Blood, the Princes and the Princesses, having dined with the company in the *Chikusa* and *Homei* Halls, retire.

YOKOHAMA'S PRESENTATION.

The address to the Prince Imperial, which the foreign community of Yokohama proferred on the occasion of his marriage, was presented to the Crown Prince on Wednesday afternoon by Mr. H. J. Holm, Chairman of the International Committee, and Mr. E. Flint Kilby, Chairman of the Yokohama Foreign Chamber of Commerce. These gentlemen were received in audience by H.I.H. Prince Yoshihito at Aoyama Palace, being first introduced to Viscount Inaba, Master of Ceremonies and General Baron Kuroda, Chief Aide-de-Camp, by His Excellency, M. Asada, Governor of Kanagawa Ken. The following address was read to the Prince Imperial by Mr. Holm :—

TO THE MOST
HIGH AND EXCELLENT PRINCE YOSHIHITO,
Prince Imperial of Dai-Nihon.

Your Imperial Highness:—The foreigners who are residing in the City of Yokohama approach Your Imperial Highness, the one hundred and twenty-second in direct succession from the great and illustrious Progenitor of a Sovereign dynasty of unparalleled duration, craving permission in common with the subjects of this Empire, to offer their united and heart-felt felicitations on the occasion of Your Highness' marriage.

They do not forget that one of the earliest public acts of the first year of the enlightened and auspicious era of *Meiji* was the promulgation of an Edict by which His Imperial Majesty was graciously pleased to decree the safety of foreigners within the dominions of this realm; and it is to this manifestation of the Imperial Solicitude that they owe the protection and security of their lives and property, and which awakened and preserves in their hearts feelings of warm attachment to His Majesty's person, and an earnest desire for the happiness and welfare of every member of the Imperial House.

They will constantly pray that Your Highness may long live to add lustre to so noble a descent, and so to maintain the national honour abroad, and the pure and impartial administration of justice at home, as to command the continuance of the homage of their esteem, and the obedient and affectionate devotion of the people of this great Empire.

Dated at Yokohama on the 9th day of May, 1900, and signed on behalf of the foreign residents of the city by members of the committee appointed for that purpose.

H. ABEGG, Swiss.	H. KLINGEN, Dutch.
V. BLAD, Danish.	O. LORD, Peruvian.
G. W. BRAMHALL, U.S.A.	JOHN LINDSLEY, U.S.A.
J. H. BROOKE, British	J. F. LOWDER, British.
JOHN C. BUDD, British.	GEO. W. MIDDLETGN, U.S.A.
EÇA DA SILVA, Portuguese.	WM. T. PAYNE, U.S.A.
L. DEWETTE, Belgian.	M. PORS, German.
A. GERDTS, Swedish.	J. PUIG, Spanish.
A. GROENER, Russian.	G. REIFFINGER, French.
C. GUISSANI, Italian.	FR. RETZ, German.
H. J. HOLM, German.	P. SARDA, French.
J. D. HUTCHISON, British.	F. TOWNLEY, British.
J. M. JENSEN, Norwegian.	EDWIN WHEELER, British.
E. FLINT KILBY, British.	ALF. WOOLLEY, British.

Viscount Inaba having translated the address, His Imperial Highness replied in Japanese, Viscount Inaba again translating :—

"His Highness accepts with pleasure, the cordial congratulations of the Foreign Residents of Yokohama on the occasion of his marriage, and requests you, as representing the Yokohama community, to convey his thanks to them for their address."

SOUTH AFRICA.

Monday, May 7.

Windsorton, where General Hunter has crossed the Vaal apparently for the purpose of marching to the relief of Mafeking, is 28 miles north of Kimberley. The Vaal at Warrenton takes a sharp turn southward, and runs thenceforth nearly parallel to the railway as far as Barkly. Some time ago, an attempt to cross at the latter place, or a feinted attempt as it seems to have been, disclosed the Boers in force, prepared to dispute the passage. The British troops were then recalled, and, with the exception of some skirmishing at Warrenton, there have been no evidences of any operations from the south to relieve Mafeking. Probably the explanation is that Roberts was resolved to make the march of the relief column synchronise with his own general advance. It is obvious that the Boers can scarcely remain in force to defend the Warrenton-Vryburg-Mafeking

Digitized by Google Original from CORNELL UNIVERSITY

line while the main British army is advancing direct from Bloemfontein to Brandfort, Winburg, and Kroonstad. Thus by his own forward movement Roberts hopes to relieve the pressure in the regions through which Hunter will have to march. It is possible, indeed, that the Boers, hearing of the Field Marshal's operations, may raise the siege of Mafeking, where they have wasted six months in one of the vainest essays ever placed on a military record. At all events, the situation now produced is similar to that which existed originally in Natal; with this difference, that, whereas Buller had to strike again and again at the besieging Boer army before the invasion of the Free State lessened the pressure in front of him, Hunter commences his attempt to relieve Mafeking simultaneously with Roberts' diversion to the north of Bloemfontein. The distance from Windsorton to Warrenton is only 16 miles, and, as the Boers were in force at Warrenton when we last heard of them, Hunter will probably have to fight soon. It is very likely that a direct advance against Warrenton, or Christiana, will be made by Methuen, so as to assist Hunter. One or two days will suffice to elucitate the plan of campaign.

Lord Roberts having again resumed his forward movement, the following account of the country between Bloemfontein and the Transvaal Border is of great interest. It is contributed to *The Times* by an officer:—

"The railway, which runs N.N.E. from Bloemfontein to the Vaal River, passes with scarcely a curve or a cutting, an embankment or a tunnel, through a monofony of 175 miles of rolling plains, occasionally diversified in the more northern districts by comparatively low ranges of hills, which are themselves surmounted by singular replicas of the crags about Cape Town known as Table Mountain, the Devil's Peak, and the Lion, only much less elevated. Here I may remark that, as regards the mountains, most maps of the Free State are nought; the ranges audaciously indicated are often little more than rising ground. The level areas are treeless, save for scrub; riverless, save for the temporary streams of the rainy season; untilled save for nature's pasturage of square miles of luxuriant, waving grass: houseless, save for a very few isolated homesteads or kraals; and foodless, save for the sparse cattle and the unattainable game. Lord Roberts must therefore rely upon his own transport for supplies. The population, and hence, also, the traffic, are little more than nominal. Not a yard of metalled road did I see during the whole course of my journey through the Free State and the Transvaal. Yet locomotion is by no means difficult. The straight line of railway will be easily repaired. Cart tracks may be struck out almost at will on the fairly firm pasturage, and as soon as these become rutty the difficulty is immediately obviated by a small semicircular divergence of route.

"It appears, therefore, improbable that Lord Roberts in his advance towards the Vaal River will meet with any lion in the path in the shape of a formidable defensive position from whence the Boer forces could for any length of time bar his way. There are no vital strategical features corresponding to the Tugela River, to the Majuba-Langs-Nek heights, to the Drakensberg, or to the ranges south of the Orange River between Hopetown and Norval's Pont. The Table Mountain-Devil's Peak heights, which a non-soldier critic might suppose formidable, are illusory as tactical obstacles. They are generally *en l'air*, are never *en poience* with a marsh, a road, or a river, and can always be shirked. Groups of kopjes may occasionally induce the retreating Boers to attempt a stand, and even to fight a rearguard battle, but Lord Roberts has shown us over and over again that these can be turned by tactical skill; the firm pasture plains are especially suitable for our mounted infantry and any such stand would melt away after a short delay. Of more importance, as threatening loss through rearguard actions, are the numerous spruits or streams, which in no case are spanned by bridges, and in every case have their beds 'bouldered' with formidable granite *débris*. During the rainy season the spates occur so suddenly that in a few hours a trickling thread is converted into an unfordable torrent, which, however, subsides with equal rapidity. When the beds are dry, our enemy's opportunies of punishing an overhardy pursuer would be increased. The waters have ploughed out long lines of deep chasms, with banks so overhanging that they constitute formidable parapets from behind which an unsuspected enemy could devastate his foe, advancing over the open plain, as effectually as the valiant Highland Brigade was devastated at Magersfontein.

"An advance north along the line of railway brings under consideration the possibility of co-operation by our troops from Natal, the shortest perpendicular distance from Ladysmith being about 150 miles. A toil across the Drakensberg range by Van Reenen's Pass has vividly impressed me with the difficulties and hazards of any attempt to force the defiles against such an enemy as the Boers. Although neither the main ridge nor the subsidary spurs are alpine in their character, the zigzag routes across them are suggestive of the Simplon and the Bremer on a modified scale, especially those on the eastern aclivities. One long gradient, which I measured, represented an average rise of 2,000ft. in seven miles, and for short lengths the incline was double and treble in steepness. The road itself, well engineered and admirably constructed, incessantly skirts precipices, twists found projections, tapers up kloofs, and doubles on itself along superimposed terraces. At every angle there would be a liability to an inevitable surprise; at every chasm, to an unforeseen calamity. The forcing of these passes would doubtless be practicable, but the operation would probably be tedious and the losses would be severe unless Lord Roberts were first to shake the Boers by threatening their rear from his line of railway. Once arrived at the top, the westerly advance towards Harrismith and Bethlehem would be easy. Harrismith itself I found to be a substantially built, large village suitable for a camping ground, well supplied with water and not without its own conveniences of shelter and supplies.

"There remains an alternative circuitous route *via* Glencoe, Newcastle, and Standeraton. Here the Drakensberg Passes have broadened into gaps, and the crags have been sloped down into steeps, up which a team of eight horses sufficed to drag our cart at a merry trot; but the more I gazed on, the more I pondered over, the Ingogo, Majuba, and Langs Nek heights, the stronger grew the conviction that should an army of 10,000 Boers fail to arrest here an invader of 30,000 men, the teachings of history are vain."

Wednesday, May 9.

Smaldeel Junction, whence Lord Roberts telegraphs on the 6th instant, is the point where the railway from Winburg joins the main road to Pretoria from Bloemfontein. Winburg is just ten miles east of Smaldeel, and from the fact that the Boers are reported to be in full retreat towards the Zand River and Kroonstad, we may infer that no resistance is to be anticipated at Winburg, though that was one of the points where the Boers were expected to make a strong stand. Smaldeel is 60 miles from Bloemfontein and 50 from Kroonstadt. Roberts is therefore advancing with remarkable rapidity. He commenced his forward movement on May 1st, and by the afternoon of the 6th we find his headquarters at a point 60 miles beyond Bloemfontein. A march of 11 miles will bring him to the banks of the Zand, where it may be presumed that the Boers will dispute his passage. If his progress continues unchecked a little longer, his troops will sever the communications of the Boers guarding Van Reenan's Pass. It is possible, however, that the latter have their basis of supplies at Harrismith.

THE LAND QUESTION.

A correspondent writes from London:—"The question of the perpetual leases appears to be greatly agitating the Yokohama community, and a speedy and satisfactory settlement is much to be desired. I gather from what appears in the *Mail* that the transfer fee, as originally demanded, has been done away with, not in so many words by the Ordinance itself, but because the Ordinance provides for transfers at the office of the *Chihosho*, instead of at the Registration Office, registration, you contend, being unnecessary. Is this correct, because it does not seem to be so understood among the old Japan residents at home? Even if it is so, there still remains the question of confirming the perpetual leases. Assuming that your contention is correct, that they have already been confirmed by implication through the Ordinances and by the general action of the Imperial Government, it seems to me that the wording of the Treaty is responsible for a good deal of the misunderstanding. The Treaty says 'shall be confirmed,' which seems to imply that some special act of legislation was necessary to the confirmation, whereas had the words been 'are hereby confirmed,' nothing more would have been required. As a matter of fact nothing was done towards confirming the leases until the desirability or necessity was brought to the attention of the Japanese Government, and the Ordinance which followed this representation is still considered incomplete and unsatisfactory. I hope a mutually satisfactory settlement will soon be reached, as it is a serious question to leave open."

The points here raised have already been pretty fully discussed. As to the transfer fee, it has undoubtedly been abolished with regard to lands in the former Foreign Settlements. Transfers are registered by the Prefectural Authorities, and since the parties to the transfer have nothing to do with the registration, they naturally pay no fee.

The point raised by our correspondent with respect to the wording of the Treaty is scarcely of vital importance, we think. Reference to the Treaty shows that all the Articles are couched in future terms. "The subjects of each of the two High Contracting Parties shall have full liberty to enter, travel or reside in any part of the dominions and possessions of the other Contracting Party, &c.;" "shall enjoy in the dominions and possessions of the other the same privileges &c., as subjects or citizens of the most favoured nation, &c.;" "shall be exempted from all compulsory military service, &c." It is every where "shall be," nor can we see how any other form of phrascology would have been suitable, seeing that the Treaty was not to take effect until at least 5 years had elapsed from the time of its signature. The formula "shall be confirmed," as applied to the perpetual leases, can only be interpreted in the sense of the other promises embodied in the document, namely, that from the moment of the Treaty's operation they all acquire binding force. The perpetual leases, therefore, obtained their confirmation *de facto* on July 19th, 1899: no act on the part of the Japanese Government was required in confirm them. The difficulty that has occurred is in connexion with the manner of registering them; a very unfortunate difficulty which might easily have been avoided. But truly we fail to see why there should be any uneasiness on the part of the land-holders. So long as the Courts of Law recognise their titles, they need not be at all concerned because the Japanese Authorities have chosen a formula of registration which derives its validity from the good faith of the Government. If the Government, as we have often said, can not be trusted to observe its treaty obligations, then no formula of registration would improve matters. It has been clearly shown that the course adopted by the Japanese Government places the foreign titles entirely beyond legal interference of any and every kind, and bases them on the country's sacred pledge to observe its treaty obligations. This method has already received the definite approval of the Representatives of several of the Great Powers, and to agitate against it now is vexatious and futile. But assuredly the failure of the Government to complete the necessary arrangements for mortgaging lands held by foreigners under perpetual lease, is incomprehensible, and the losses and inconvenience thus entailed constitute a legitimate subject of complaint.

PROTEST OF FRENCH LAND-HOLDERS.

French citizens holding land in the Settlement of Yokohama have addressed to their Consul a remonstrance against being required to pay income tax on the rental of lands held by them within the limits of the Settlement, or the rental of houses standing on the lands. Their point is that, according to the Revised Treaty, "existing leases in perpetuity under which property is now held in the Settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property." It will be observed that this protest at once raises the old question, are houses as well as land included in the terms of the original leases. If they are not, then, as a matter of course, no privilege of exemption from taxation is guaranteed to house property by the Revised Treaties. That question, so far as we can learn, has been practically settled; foreign owners of houses, with a few exceptions, have paid the house tax, and such being the case, it would appear that they are plainly liable for the income tax in respect of house property also. But the rental derived from the land demands fuller consideration. It is not denied by any one, and can not be denied, that landed property is explicitly protected by the Revised Treaty against any and every fiscal impost which was not levied upon it under the old system. Is that protection limited to the land itself, or does it extend to revenue derived from the land? The distinction seems difficult to draw; one palpable source of perplexity being that, unless the land is sub-let, no income can be said to be derived from it. Suppose that *X* has purchased a lot of land in Yokohama and built for himself a residence and warehouse there. What is the income derived from the land? How is it to be assessed? If *X* lets the residence and warehouse to *Y* and receives a certain rental for them, then the amount by which that rental exceeds his land tax obviously becomes an income derived from the land. But so long as *X* himself remains in occupation, there is no income. It results, then, that any attempt to levy income tax on such property produces this anomaly, namely, that a man who is sufficiently wealthy to use the land for his own purposes, escapes the tax altogether; whereas a man who derives gain from it by letting it to tenants, has to pay to tax. We do not doubt that the question will receive just and liberal treatment at the hands of the Japanese Authorities. Our own conviction, however, is that the framers of the Treaty can not have intended to extend the exemption to income derived from land. When one side stipulated, and the other agreed, that "no conditions other than those existing in the leases should be imposed in respect of the property," both referred solely to the land rent and the land tax included in it, and neither party conceived for one moment that holders of land were to be exempt for all time from every other impost to which their tenure of the land might render them incidentally liable. If the principle advanced in the French memorandum be admitted, a factor of almost illimitable elasticity is introduced. Suppose that a man lays out a park with tennis lawns, bowling greens, rare shrubs, and beautiful vistas, and suppose that he lets the whole to some enterprising individual who derives an income by charging fees for admission. Here we have two persons obtaining yearly returns from the land, but according to the French theory neither of them would be liable for income tax. The fact is that land-renting and house renting are money-making operations, just as are hotel-keeping or warehousing, and there is no better reason for exempting the former than the latter from income tax. The land itself is conventionally guaranteed against any additional tax, but the revenue derived from it seems to us to belong to quite a different category.

DEFAULTING TAX-PAYERS.

It is stated that the Governor of Kanagawa has been instructed not to have recourse to legal remedies against foreigners that have failed to pay their prefectural and city taxes, but to confine himself for the present to serving them with the usual notices. We are at a loss to understand what the defaulters hope to gain by delay. That the taxes will have to be paid sooner or later goes without saying, and the hesitation shown has therefore no result except to create needless friction. It has been a very pleasant thing to live for many years entirely untroubled by the obligation of satisfying the tax-collector's demands, but those palmy days are past and we must now bow to the inevitable. If the taxes to which we are subjected were particularly heavy, complaints and defalcations would be more comprehensible. But they are not heavy on the whole, though the income tax hits men with small revenues harder than they would be hit at home. Even those that advance the most vehement objection to paying, must know well that they would be called on for much larger total contributions were they living in their own country. We learn on inquiry that the great majority of the foreign residents have paid the house tax which was disputed at first, but that some are still holding back for reasons which, in the face of their fellow-residents' acquiescence, do not appeal intelligible. The French residents have now raised a question about their liability for taxes on incomes derived from land rents. We can not find that there is any solid ground for such an objection, seeing that a guarantee as to the taxes imposed upon the land itself can not reasonably be interpreted in the sense of a guarantee as to the taxation of the income derived from the land. So long as the taxes on the land are deducted from the revenue it yields, the remainder only being considered taxable income, it does not appear that any principle of justice is violated. The theory of the French protest, if universally applied, would exempt nearly all incomes derived from business, since, in the great majority of cases, the implements and staples of the business man have already been subjected to special taxes. The income of the livery-stable proprietor would escape since his horses and carriages are taxed; the income of the lumber-merchant would escape because the forests whence the timber is obtained have already paid imposts; and the income of the steam-ship company would escape because tonnage-dues have to be defrayed by its vessels. Nevertheless, the French residents having raised a question which they sincerely deem debatable, delay, pending its settlement, may be claimed. But there is nothing to be gained by refusing to pay the urban and prefectural taxes. The attitude of the defaulters will merely furnish fresh material to Japanese critics who denounce the arbitrariness of the alien.

Perhaps we may add a word here about the remarks of the Rev. E. Snodgrass on the subject of the income tax. Mr. Snodgrass discusses the anomaly that a man occupying his own land does not pay income tax on its rental value, whereas he does pay income tax if he lets the land to some one else, and Mr. Snodgrass infers that to assess the rental value of the land and charge income tax on it in the former case would be contrary to treaty. We do not think so by any means. On the contrary, we are entirely of the opinion incidentally expressed by Mr. Snodgrass that when the framers of the Treaty agreed that a certain tax, neither more nor less, should be levied on the land itself, they never intended to exempt the income derived from the land. What appears to us is that there is a hole in the meshes of the law's net. If a man is rich enough to occupy for residential purposes the whole of a large lot which he owns, that certainly is not a valid reason for excusing him from income tax leviable from his less opulent neighbour who lives in a corner of a lot and lets the rest to tenants. Persons carrying on business do not come within the scope of the anomaly, inasmuch as their business tax is proportionately larger if they have not to pay house rent, and thus what they gain in one direction they lose in another. But there certainly should be some way of taxing an occupying owner as well as a renting owner.

Mr. Snodgrass, towards the conclusion of his letter, asks:—"If, when a man occupies the land himself, no income tax is imposed, why should he pay this tax when he permits another to occupy it and derives the same income? Especially, why should he pay this tax when the tax he already has to pay covers it?" We do not understand the last query. How does it appear that the tax already paid by foreign land-holders covers the income tax? If Mr. Snodgrass can establish that proposition, which he inserts in such a casual manner, we shall all be grateful to him.

OSAKA MARINE INSURANCE COMPANY AND MR. NEWHALL.

The President of the Osaka Marine Insurance Company has explained to a representative of the *Jiji Shimpo* that there is another side to the story of the company's relations with their agent, Mr. Newhall of San Francisco. In the short space of two months, Mr. Newhall granted policies representing 800,000 *yen*, a great part of the goods insured being of a very unacceptable nature. This was done before he had received a power of attorney from the Company and even before he had been definitively appointed agent. Hence the Company had no choice but to suspend his operations, and disavow responsibility for what he had already done. Such is the explanation. It is supplemented by a statement that a satisfactory settlement is pending. We do not venture to express any hard and fast opinion on the strength of such meagre evidence, but it does seem that although the Company may have been wise to suspend the further issue of policies by Mr. Newhall, it should not have repudiated responsibility for those already issued. We imagine that its action has effectually destroyed all Japanese insurance prospects in San Francisco.

The *Matin* thus gives its opinion of one Little Englander:—"This Stead, who has nothing but words to offer when his country is being beaten; who writes prefaces to books by the Secretary of the State with whom his country is at war, troubles me somewhat—makes me think; and I believe that, were I English, I would detest him."

IN AFFECTIONATE REMEMBRANCE OF "JACK" FRASER.

(COMMUNICATED.)

A recent mail carried to Japan the news of John A. Fraser's death; sad news it must have been to many in Yokohama, for to knows "Jack" Fraser, as his friends called him, was to love him, whilst those who did not enjoy his personal friendship, could not but recognise the sterling qualities and high moral character that made him such a widely esteemed resident of Yokohama for more than 30 years.

Jack Fraser came out to Shanghai early in 1865 to join the important American firm of Augustine Heard & Co., and the writer was fortunate enough to make his acquaintance soon after his arrival there, so that he feels qualified to speak of him with all the candour and reverence that an intimate and uninterrupted friendship of 35 years fully justifies. Jack Fraser was transferred to the Yokohama branch of Augustine Heard & Co., in 1865 or 1866, then under the management of Mr. A. O. Gay, and remained with them until the break-up of that firm. He then started the firm of Fraser, Farley & Co. along with the late Mr. Gustavus Farley, and was connected with it until the day of his death. Throughout that long period he was a familiar figure in Yokohama, being always keenly solicitous for the well-being of the Community, and unsparing of his time and exertions in furthering objects for the public good, alike in the Chamber of Commerce and on the Church Committee, Cemetery Committee, or what not In fact, no committee was considered complete of which he was not a member, and being a man of sound judgment and grave temperament, small wonder that his views were always listened to with profound attention and treated with the greatest respect even by those who differed from him on the point in question.

Outside of business Jack Fraser will be remembered by the kindly hospitality which he dispensed with such open-hand and delightful spontaneity at his home on the Bluff, whilst his genial and generous nature and the charm of his companionship, will not soon be forgotten by those who enjoyed those qualities in many an up-country trip in the days of long ago.

His health had been failing for some years past; an affection of the heart giving his family and friends much cause for anxiety, and he left Yokohama at the close of 1897 in the hope that the change home would be beneficial. But although there were times of betterness, they proved only temporary, and his friends could not but see that he was steadily on the decline. After the turn of this year, there was a marked change for the worse, and from the end of January, he never left the house.

Later on, the doctors ordered him to bed, and he never left it, passing away quietly and peacefully at one o'clock on the morning of the 15th March—one of the best fellows and truest friends that ever lived.

He was buried on Saturday, the 17th March, in the old Perivale Churchyard, near Ealing, and it was very gratifying to see the number of old Yokohama friends at the graveside:—John Rickitt, C. J. Melhuish, A. Winstanley, F. D'Iffanger, J. P. Reed, Jas. Walter, A. C. Read, E. B. Watson, Hunt, R. G. E. Forster, and James P. Mollison.

Amongst them the deepest sympathy was felt and expressed for Mrs. Fraser and her family, as I am sure that the same sentiment will animate all friends in Yokohama.

THE FINANCIAL SITUATION.

According to the *Hochi Shimbun*, many of the small Japanese banks and some of the large are contending with great difficulties at present owing to the extreme tightness of money and the decline in the market price of shares. All banks that have taken shares as security for loans are specially embarrassed. The *Hochi* further alleges that the Mitsui Bank is somewhat straitened, having large sums invested in Tanko Railway shares or lent out on account of raw cotton, yarns and rice. It is for that reason that uneasy rumours circulate with reference to the great bank. None of the small banks have yet succumbed, but it is supposed that if one goes, several will follow suit. Such are the statements made by the *Hochi*. We reproduce them with reluctance, for we greatly doubt whether our contemporary appreciates the responsibility of circulating such stories. At the same time, we have no special information enabling us to contradict them, and it is right that our readers should know what is said in Japanese circles, though truly we believe that the Mitsui Bank is one of the very last concerns in Japan about which such rumours should be circulated.

A STRANGE ALLEGATION.

We take the following from the *San Francisco Call*:—

Tacoma, April 15.

Yokohama advices brought to-day by the steamer *Riojun Maru* indicate that charitable societies and, probably, the municipal governments of Japanese cities, are taking a hand in the shipping of a large number of Japanese pauper labourers to this country. The *Japan Mail* says that destitute Asiatics are not allowed to congregate at Yokohama and Tokyo, but are sent across the Pacific as fast as possible.

Frequently this is done by one of the numerous Japanese emigration companies, which appeal to friends or relatives of destitute Japanese for assistance in sending him to the United States, where he is certain of getting work at comparatively good wages from railroads and other corporations. The emigration societies are chiefly interested, of course, in obtaining their regular fees. Friends and relatives of the mendicant, on the other hand, are willing to contribute liberally toward placing him where he can support himself and thus rid them of further concern in his behalf.

The *Japan Mail* also relates the case of two Turks who are about to be shipped from Yokohama to San Francisco with the sum of 200 *yen* in their pockets, contributed by persons who have assisted in supporting them during their stay in Yokohama. The Turks have been supported largely by Mankichi, a diver, who became interested in them through his connection with the wreck of the Turkish frigate *Etorgoul*. He has contributed money for shipping them to California.

Not infrequently Yokohama receives from the United States items of news about Japan which are remarkable for the inventive genius of their authors, but it does not often happen that a Japanese source is deliberately assigned for these canards. In the above paragraph, however, the *Japan Mail* is represented as having said that "destitute Asiatics are not allowed to congregate at Yokohama, but are sent across the Pacific as fast as possible." The *Japan Mail* has never made any such statement. Destitute Asiatics are not in the habit of congregating at Yokohama, and we can not recall a single instance of such persons being sent across the Pacific by the Japanese. The two Turks are not a case in point, for men with 200 *yen* in their pockets can not be called "destitute." The whole tale is either mere "copy," manufactured by a sensational paragraphist quite indifferent to facts; or is inspired by a deliberate desire to create a prejudice against Asiatics, and incite the people of the Pacific Slope to a further extension of the exclusive legislation which reflects so much discredit on American civilization.

THE PEST.

Two fresh cases of pest are reported from Osaka; a woman in the Western District and a man in the Eastern. This, we believe, is the first case in the Eastern District.

From Kakegawa-machi in Shizuoka also comes news that a young man of about eighteen, whose name and address are unknown, has been attacked by the disease. He appears to be a traveller, and it is not unlikely that he contracted the malady in Osaka.

The man who was attacked by pest at Kakegawa-machi in Shizuoka Prefecture, turns out to be a native of Iyo province who had proceeded to Shizuoka as a representative of his village. Doubtless he passed through Osaka *en route*. At Osaka the medical experts are said to be quite convinced that the pest originates with rats, and that to them also its propagation is due. They are therefore making strenuous endeavours to destroy the rats, but as yet they have not met with much success.

Two fresh cases of Pest are reported from Osaka. One, that of a woman aged 40, declared itself on the 30th of April and ended fatally on the 3rd of May; the other, a man whose age is not mentioned, was diagnosed on the 29th of April and resulted in death on the 3rd of May. Hitherto every case recorded in Osaka has taken place in the Nishi-ku (Western district), a fact significant of the localization of the disease. Meanwhile nothing more has been heard of the rat found dead in Prince Komatsu's kitchen in Tokyo, and we may assume that the bacillus was not discovered in its body. Another rat found in the residence of Marquis Nakayama has been examined but there were no disquieting indications.

Another case of pest is reported from Osaka. A woman of 22 was atacked on the 3rd instant and expired on the 4th. The disease must have developed great virulence to prove so rapidly fatal.

Further plague cases are reported from Osaka since Saturday. A fisherman living at Nishi Kujo, Nishiku, was slightly ill on the 3rd inst. and became worse on the following day. The case was certified as plague. An old woman at Furukawa Machi, near the former Concession, Osaka, became ill on the 3rd inst. and sent for a doctor. The case was certified as one of plague. These cases are the tenth and the eleventh since the renewal of the outbreak. The sixth patient has died.

THE BOOKSHELF.

Things Chinese, by J. DYER BALL, M.R.A.S.; Hongkong, Kelly and Walsh, Ltd. Third Edition, revised and enlarged.

WHAT Mr. Basil Hall Chamberlain's witty, scholarly, and all embracing though by no means impartial "Things Japanese" is to Japan, Mr. J. Dyer Ball's "Things Chinese" has become for the Middle Kingdom. Since it first appeared in 1891, the book has commanded a ready sale and a second edition having been rapidly disposed of, it reappears in a third edition considerably revised and enlarged. "Things Chinese" now fill a portly volume of 666 pages, not including the copious index at the end, and the additional matter comprises articles on "Ascending on High, Agriculture, Arms, Banks and Bank Notes, Bethrothal, Birth (customs connected with), Buffalo, Camphor, Cosmetics, Cotton, Dogs, Doctors, Ginger, Ginseng, Kites, Larks and other Songsters, Plague, Tenure of Land, and Tigers,"—requiring

Digitized by Google Original from CORNELL UNIVERSITY

nearly 200 extra pages. Naturally a book of this kind lends itself to quotation, but we refrain from filching from its interesting pages, all save a paragraph in the Preface to the Third Edition:—

China has come so much into evidence of late years that the apathetic indifference to the country and its teeming millions is giving way in our Western nations to a desire for a knowledge of the land and its people; and an interest is being aroused as events, pregnant with weal and woe to the future progress of the world, are rapidly developing in the Far East; all trending in the direction of a closer knitting of the ends of the earth. Whether we will or not, every day shows that the peoples who are in the van of civilization must lead the way in the development of the Middle Kingdom, the erstwhile centre of Eastern Asia, and direct the incipient strivings of her foremost spirits in the direction of truth and righteousness, which alone will exalt the nation to a position commensurate with her size, population, ancient traditions, and future aspirations. Opinions are divided at present as to the best way to accomplish this vast programme for the betterment of a third of the world's inhabitants, and rival interests seem often to paralyse action. In recent years, what to some appear hazy spheres of influence are discussed, and open doors, which to many appear closed and locked, have their advocates, while missioners of progress and advancement have for long striven to leaven the nation with the principles which have been the making of the West. These efforts are beginning to show fruit, visible to those who look behind the scenes, though the inert mass to be moved is so great that results appear almost insignificant when all the facts are taken into consideration. The question in many minds is whether the regeneration of China is to be a gradual process, or whether a mighty cataclysm, overturning the whole Empire to its foundations, shall sweep away the corruption, cleanse "all under heaven," purify the atmosphere, and prepare the way for a "new heaven, and a new earth."

Mr. Dyer Ball does not venture on any political predictions; rather does he make additionally attractive to us the real Chinaman of to-day by describing the motives that influence his actions in working hours as well as during his too infrequent playtime; his ideas on birth, boy-hood, girl-hood, courting, marriage, or death; the origin of some of his superstitions, the manner of his dress and speech, the products of his land, and a thousand and one other things that we want to know about. The book is clearly printed, but the page would have been more attractive had the binder been allowed a little wider margin to work into the back. As it is, the sheet bears a skimpy appearance, while the mixture of old-style and roman faces in the type rather offends a discriminating eye. But these are minor faults. The book should have a ready sale everywhere.

"*Japan and its Regeneration.*"

The Rev. Otis Cary is the author of a volume bearing the above title. It is, as the preface tell us, "one of a series of text-books primarily intended for mission study classes in institutions of higher learning." Keeping that object in view, the author has compiled a work which, in its form and arrangement, bears a considerable resemblance to "Things Japanese." Each of the eleven chapters is divided into sub-chapters, and these again into numbered paragraphs, so that in the chapter on "The People" we have nine sub-chapters, headed respectively I. Origin of the Japanese; II. The Ainu; III. Possible Relation between the Japanese and the American Indians; IV. Physical Characteristics of the Japanese; V. Mental Characteristics; VI. Japanese Standards of Morality; VII. The Position of Woman; VIII. Classes of Society; and IX. The Language. Again the sub-chapter on "Mental characteristics" consists of eleven paragraphs devoted to establish or contradict the following propositions:—(1) "The Japanese are keenly intelligent;" (2) "The people are cheerful and good-natured;" (3) "It is often said that the Japanese are imitative, but do not have inventive power;" (4) "Japanese often lack steadfastness of purpose;" (5) "The Japanese are changeable;" (6) "Some one has wittily said that the Japanese are great in little things, and little in great things;" (7) "The Japanese are very appreciative of beauty;" (8) "The Japanese are hero-worshippers"; (9) "A very valuable study of Japanese characteristics is to be found in *Scribner's Magazine*"; (10) The Idea of Personality among the Japanese; and (11) The Japanese and the Chinese. We do not pretend to agree with all Mr. Cary's views. Our object here, however, is not to analyse his opinions, but to convey to our readers an idea of the scheme and scope of his work, and when we say that the sub-chapter on Mental Characteristics with its eleven paragraphs occupies only four pages, or 1,500 words—the length of an ordinary newspaper article—it will be at least gathered that brevity has been earnestly aimed at and successfully achieved. We must point out, however, that although, owing to the purpose of its compilation, this little volume necessarily has a good deal about missionaries and their work, it is mainly secular in the nature of its information, and we can not but think that it will prove very useful to those who desire to obtain the pith of much of the literature hitherto published about Japan without wading through the somewhat formidable library in which it is contained. Mr. Cary's book does not seem to be on sale in Japan. It is published by the "Troy Directory Printing and Bookbinding Company, New York, under the auspices of the "New York Student Volunteer Movement."

NOTES ON CURRENT EVENTS.

The police have arrested a youth, aged 21, who had effected an entry into the Powder Magazine at Meguro. He performed this curious escapade during the storm and rain on the night of the 3rd instant, and his explanation was that he had left Kobe two weeks previously and had lost his way. He declared himself an American citizen; gave his name as Andres (?); was very shabbily clad; had only one *sen* in his pocket, and is described as a tall, handsome youth. The incident seems to be considered mysterious, but in all probability the unfortunate man, finding himself utterly destitute, thought that to enter the powder magazine would be an effective method of getting official succour of some kind without committing any crime.

The Gymnastic Society held its inaugural ceremony on the 6th inst. in its newly erected premises at Ushigafuchi in Tokyo. It is an association of considerable importance, having Prince Kanin for President, and including among its members several other Princes of the Blood, as well as Count Kabayama, Viscount Nozu, and many notables. Three thousand persons attended the opening ceremony, and a speech was read from Prince Kanin—who is absent in Europe—insisting on the necessity of promoting physical training in Japan, and congratulating the Society on its prospects.

News from Lima, dated the 9th of April, is to the effect that the troubles among the Japanese immigrants there have been satisfactorily settled, and the men are now quietly at work. Their employers are said to be much pleased with them. There is also a prospect of emigration to Madagascar. Two French delegates have arrived from that island in order to concert measures for procuring Japanese labour. Favourable accounts are given by them of the climate and productions of the island, and it is represented as a place eminently adapted to Japanese workmen.

Glowing accounts are again published of the affairs of the Futayama Shokai, which is engaged in sulphur mining in Hokkaido. The firm has now put up, near Hakodate, machinery capable of refining 70 tons daily, and has made arrangement for the employment of three steamers to ply between that place and Moyoro, where the mine is situated. It has also engaged the services of three foreigners, of whom Mr. Fraser is the principal.

The *Hochi Shimbun* ministers to the appetite of gold-seekers by publishing pictures of three nuggets found at Esashi. The largest weighs 75 *momme* (10 oz.); the second, 23.8 *momme*, and the third, 14.3 *momme*. The second of the three has been presented to the Museum of the Imperial University.

The threatened panic at Ashikaga is said to have been averted. Particulars are not published, but the *Shogyo Shimpo* alleges that, according to its information, the Sekida firm will be saved and further trouble avoided. Sales have been effected of 4,500 pieces of *chijimi*, though prices are low and money is exceedingly tight.

Tokyo newspapers speak of an association formed by Messrs. Fujishima and Toyama in conjunction with Messrs. J. R. Morse and Edwin Dun, which has for its object the import of fertilizers from Peru and the export of Japanese products to that country. This is regarded as the first genuine example of a coalition between foreign and Japanese merchants, after that between the Murai Brothers and the American Tobacco Company.

It appears from the correspondence published in the last English Blue Book that America's proposals with regard to the Open Door, took the form of asking that a declaration as to the treatment of foreign trade and interests within the "spheres of influence" in China should be made by the Powers possessing such spheres. Lord Salisbury took a month to consider the proposal in conjunction with his colleagues, and then announced that Her Majesty's Government would be "prepared to make a declaration in the sense desired in regard to the leased territory of Wei-hai-wei, and all territory in China which may hereafter be acquired by Great Britain by lease or otherwise, and all spheres of influence now held, or which may hereafter be held, by her in China, provided that a similar declaration is made by the other Powers concerned." It is pertinently remarked with regard to America's attitude in China, that the "Open Door" in that part of the world does not signify any corresponding policy in the Philippines, Hawaii or Puertorico, or any relaxation of her extreme protection at home.

At the parish church of St. Andrew's, Holborn, the wedding took place recently of Mr. Edmund Pallister, an old resident of Japan, and Miss Amy Emity Lavell, eldest daughter of Mr. Alfred Lavell, proprietor of the Rosherville Hotel, Gravesend. Captain Trennt, of the Nippon Yusen Kaisha, officiated as best man. The subsequent reception was held at the Holborn Restaurant, and was attended by about sixty specially invited guests, amongst whom were Captain A. R. Brown, the Japanese Consul at Glasgow; Mr. and Mrs. Negishi; Captain T. R. James, Y. N.; Captain Trennt, and Mr. Malcolm Kearton.

FOREIGN CAPITAL.

OF late a spirit of marked liberality has made itself manifest in Japanese business circles with regard to the ownership of real estate and the working of mines by foreigners in Japan. The latter question, indeed, has been practically solved by the Government's action, the Diet being a consenting party; for since foreign juridical persons are now permitted to engage in mining enterprise, the old obstacle may be said to have been effectually removed. As for the ownership of real estate and of railways, there are many indications that these privileges will not be long withheld. It is disheartening under such circumstances to read an article such as the *Nippon* has just published. The plain purpose of the writer is to invest the advent of foreign capital with vague terrors, and thus to defer the removal of the last barrier between Japan and Occidental nations. The three great forces of aggression, he says, are morality, wealth and militarism. These are the powers that conquer the world, and their potency is in the order here given. Russia represents strength. England, America and France represent the power of wealth, but there is at present no representative of moral influence, since Christianity seems to be unable to make any large conquests. China and Korea are the fields where foreign wealth is steadily pursuing its campaign, and no one is blind to the dangers consequently threatening those two countries. Their railways, their mines, and their land are all passing rapidly into foreign possession, and their independence will by-and-by become illusory. Yet with these things before their eyes the Japanese are not only indifferent to the perils connected with the coming of foreign capital to their own country, but are even longing for its advent. One of the main objects of Treaty Revision was to encourage Occidentals to make investments here, and since mixed residence has not had the desired effect in that sense, people are now looking around for other means of invitation. Meanwhile the Government's policy works in a vicious circle. For whereas military armaments are expanded with the object of protecting the national independence, their cost bears so heavily on the people and involves such heavy expenditures that a longing for foreign capital is created, and thus, for the sake of militarism, which is the weakest force of all, an opening is afforded for the invasion of wealth which is much more potent.

Such, in brief, are the arguments of the *Nippon*. As the representative of Japanese chauvinism that journal's utterances often take an extreme form, but among the Japanese newspapers it should be the last to publish an article in the above sense. Does not the *Nippon* perceive that by postulating for foreign capital in Japan the same aggressive potentialities as it possesses in China and Korea, the three Oriental empires are placed on the same level? Without pausing to inquire whether the investment of foreign capital in Chinese or Korean railways, land or mines constitutes, in itself, any real menace to the independence of the Middle Kingdom or the peninsular empire, we desire to ask the *Nippon* whether it deliberately intends to tell its readers that Japan's capacity to protect herself is no greater than the capacity of China or Korea. And we desire also to ask it why it carefully refrains from explaining the processes by which the perils it predicts are to make themselves tangible. What reasonably conceivable series of incidents, springing from foreign ownership of real estate in Japan, could culminate in the loss of Japanese independence? We defy the *Nippon* to answer these questions. If it deliberately brackets its country with Korea, if it seriously means to affirm that Japan is debilitated by unpatriotic intrigues and corrupt and incompetent systems similar to those that have reduced Korea to a moribund condition, then indeed the argument need not be pursued. But in our opinion the chief danger for Japan lies in the existence of vague alarmists like the *Nippon*. They talk about the aggressive power of wealth but they are blind to its defensive strength, and for the sake of guaranteeing their country against the onsets of foreign capital, they would have her shrink from one of the most efficient means of developing her own resources. Yet it is in the columns of the *Nippon* that we are accustomed to find the loudest outcry whenever any evidence is visible of Japan's failure to assert herself stoutly *vis-à-vis* foreign States. Wealth may be a great weapon of offense, but it is also the finest of all defensive panoplies, and if any perils threaten Japan, they are perils arising out of the conservatism which interferes with the inflow of cheap money and with the development of material resources.

THE KOBE WATER WORKS SUIT.

THE full text of the judgment in the Kobe Water Works suit has been published by Tokyo newspapers. It is a very remarkable judgment. We have read it attentively several times, but we find no possibility of appreciating the reasons by which the Court was influenced. The plain facts are that Mr. J. R. MORSE purchased from the Mayor of Kobe a number of bonds on the face of which their value in Japanese currency was entered, namely 1,000 *yen*, together with a statement in Japanese of the conditions of redemption; while on the back, under the heading of "translation," there was an English rendering of the Japanese text with an additional explanation that the sterling value of the bonds was £103 7s. 8½d. The question to be decided by the Court was whether the issuers of the bonds were bound to redeem them at the rate of exchange mentioned on the back, namely, £103 7s. 8½d.; or whether their obligation would be discharged by paying a thousand *yen* in Japanese currency. Let us put aside all considerations of collateral evidence, and answer that simple question. Can there be any doubt about the answer? If the English legend on the back of each bond had any meaning whatsoever, it meant that the value of the bond for the purposes of redemption was £103 7s. 8½d., neither more nor less. Further, according to the agreement between Mr. MORSE and the Water Works Authorities, the rate of exchange was to be mentioned on the bonds. These facts were clearly established. The Court admitted them. Yet the judgment was that the Water Works authorities had fulfilled their agreement by merely making the desired entry of the rate of exchange; that they were not, in any way bound by the entry; that the English phrases on the reverse of the bonds, which purported to be a "translation," were not necessarily a translation; and in short, that the explicit mention of a rate of exchange had nothing whatever to do with the manner of redemption. These curious conclusions do not represent the whole puzzle. Mr. MORSE produced a witness who swore that there was a promise as to the redemption in English money. But the Court held that there could not have been such a promise since it was not mentioned explicitly in the Agreement. Yet the 4th article of the Agreement distinctly provided that the sterling price of the bonds was to be mentioned on them, and as a matter of fact it was mentioned. Further, Mr. MORSE produced a written statement of an American citizen to the effect that the Water Works authorities intended to redeem the bonds in sterling at the time of concluding the Agreement, but that, failing to obtain the Government's permission, they had to abandon that intention. This statement also the Court dismissed as incredible because the Agreement did not contain any explicit pledge of redemption in sterling. In other words, all the evidence adduced by Mr. MORSE to establish the intention of the parties to the Agreement was declared unworthy of credence simply because that intention was not plainly entered in the agreement. The Court apparently failed to perceive that if the intention had been plainly stated in the Agreement, no collateral evidence would have been required; and failed also to perceive that in the eyes of ordinary individuals the sterling entry on the bonds themselves dispensed with all need for any further pledge. The judgment is quite bewildering. We have entire confidence that it will be reversed on appeal, for if the Municipality of Kobe deliberately issued bonds carrying a promise in English which they had no intention of fulfilling simply because it was in English, and if the Law Courts support them in such procedure, then it will be impossible to repose confidence in any Japanese pledge.

The season of the Yokohama Yacht Club was opened on Saturday afternoon with a race for the 39-Raters. The course was from opposite the French hatoba, through the harbour entrance, round a flagboat off Tsurumi, round the Honmoku lightship and return to starting line, in all six miles. Four yachts started at 2.15 p.m. and the race resulted in a win for *Maid Marion*, with *Kingfisher* second.

MISCELLANEOUS NOTES.

It is stated that the Mitsui Bussan Kaisha will re-export four thousand bales of cotton to England on the 10th instant, and will follow it by 2,000 bales on the 29th. The cotton has been laid down here at a price considerably less than it now commands in foreign markets, and as the demand for yarns is so dull, re-export promises to be the most paying operation.

The six-horse carriage in which the Prince and Princess Imperial proceeded from the Emperor's Palace to the Aoyama Detached Palace on the conclusion of the ceremony on Wednesday, was a very magnificent affair. With the exception of the axles and springs it has been made altogether in Japan. The colour is dark red and the decoration is a scheme of chrysanthemums in gold.

Apparently the wedding gift made by the Yokohama community to the Prince Imperial is to be obtained from America. It is to take the form of a silver casket, inlaid with gold, and will probably cost eight thousand *yen*. We presume that Tiffany will be the manufacturer, and as Tiffany has for many years employed Japanese craftsmen, the casket will have a Japanese flavour after all.

We read in a Tokyo contemporary that the foreign employés of the Korean Government comprise 11 Japanese, 4 Americans, 3 English, 2 French, 2 Russians, 1 German, 1 Chinese and 1 Swiss. But although the Japanese have the numerical superiority, the positions they occupy are comparatively insignificant. Mr. Brown is, of course, the man of the moment. His power is very great. After the English, the Americans are most influential, but the French will receive a considerable access of power, from the contemplated employment of another of their nationals.

The *Hochi Shimbun* devotes two articles to demonstrating that a signal failure has been made in carrying out the Revised Treaties in such a manner as to satisfy foreigners and comply with the injunctions of the Imperial Rescript. The land question, recent judicial decisions, and other matters are referred to by our contemporary, and a stick is thus obtained for beating the Foreign Office and the Judicial Department, whose Ministers are declared to have seats but not voices in the Cabinet.

The trouble in connexion with the Echigo oil wells seems to be growing larger. It is freely charged against promoters of companies that they have assessed the land at enormous figures, swallowing up nearly the whole of the contributed capital, and leaving only a fraction for working expenses. Very likely these accusations must be largely discounted, but there remains enough to show that the mania for money-making has carried some of these gentlemen entirely beyond the limits of integrity, and that the kerosene industry will receive a set back.

The *Jiji Shimpo* urges its nationals not to be discouraged by the unfavourable state of business affairs that prevails at present. There are hills and hollows to be negotiated in every advance. Because the nation is now passing through a valley, the public must not lose sight of its general progress, which has never been really checked, and is not now in any genuine danger of suffering a check. The growth of the foreign trade is sufficiently significant—from 26 million *yen* in 1867 to 50 millions in 1887; 96 millions in 1887; 382 millions in 1897 and 435 millions in 1899. There has not been anything like retrogression any where, and the momentary depression of the present time should not constitute any solid cause of alarm.

It is anticipated that the export of sugar from both Manila and Java this year will be less than it was last year, and that there will be a considerable rise of prices. The difficulty about bags for packing the sugar seems to be still serious in Java owing to failure of the supply of material. The Batavia Company's offer of a reward for some invention providing a suitable substitute for the material hitherto employed has not elicited any reply, and it is suggested that a good opportunity offers to Japanese inventors.

Rumour says that the Minister of Foreign Affairs has decided to establish an Oriental Bureau and an Occidental Bureau in the Foreign Department. It is recognised in Japan that the affairs of these two sections demand special study, and that diplomatists with adequate knowledge of Western conditions can scarcely be expected to be well versed in Eastern also. But we are disposed to think that good reason exists—sentimental reason, it is true, but none the less substantial—for avoiding these distinctions in Japan.

The Ainu who came from Chikabumi in Hokkaido to petition the Authorities against being obliged to remove to Teshiwo and give up their lands to Messrs. Okura and Yao, have gone home satisfied. They were summoned to the Department of Home Affairs, and informed that if they objected to leave their present abode, there was no idea of moving them. Evidently the arrangement made by the agents of Messrs. Okura and Yao was either based on a misapprehension, or obtained the approval of a minority of the Ainu only.

It was apparently incorrect to say that the title deed of the large area of land acquired by Russia at Masampho had been actually handed to M. Pablov. The latest intelligence is that seven thousand *tsubo* (6 acres) of the land had previously been purchased by a Japanese subject, Mr. Sekoma Reitaro, and although in his case also the title deed had not been obtained, his claim is valid and must be disposed of before the land is transferred to Russia. The Japanese Representative in Söul is said to be moving in the matter.

We described in a recent issue how two reporters of the Hakodate *Nichi Nichi Shimbun* had been arrested on a charge of purloining manuscript, and how Mr. Sato, a Police Inspector, had been made the object of an accusation of inciting to theft. It now appears that the reporters, in turn, preferred a complaint of robbery with violence against the proprietor and one of the staff of the newspaper, who had arrested them and taken from them a private letter. The Public Procurator has refused to proceed upon the latter accusation, and has also rejected the charge against the Police Inspector. The two reporters have therefore raised a new plea, imprisonment under false pretences. The issue of this last complication is not yet announced.

It appears that an actor called Segawa Michinosuke died recently from lead poisoning, caused by the too copious use of pigments for the complexion, and another actor, Nakamura Matagoro, barely escaped the same fate and is now recuperating at Hakone. The *Jiji Shimpo* writes very strongly on this subject. It insists that the Government's attitude towards deleterious substances is dangerously inefficient. Strict rules exist as to the use of lead in however small quantities for closing the apertures of vessels containing edibles or potables, whereas the people are allowed to apply *oshiroi* (powder) to their faces and bodies *ad lib.* But *oshiroi* is obtained from lead, and its employment as a cosmetic can not fail to be injurious.

It is stated that a programme of third-period naval expansion will be submitted to the Diet next session. Vice-Admiral Baron Inouye's idea as to the great utility of torpedo-destroyers seems to have been adopted, partly because the recent naval manœuvres demonstrated the great power of this class of craft, and partly because the cost of building them is comparatively small. A destroyer can be procured for five hundred thousand *yen*, whereas a line-of-battleship costs from 7 to 10 millions. Three million *yen* annually are available as interest on the Naval Maintenance Fund, and if the Finance Department appropriates 2 millions more, it would be possible to make an addition of 20 destroyers to the fleet, which addition would be as strong as a battle-ship and a first-class cruiser combined. Such is said to be the idea at present.

It is pleasant to observe that the *Chuo Shimbun* estimates European honesty very highly, but we confess that our contemporary's ideas on the subject are scarcely consistent with facts. It says that whereas in Europe a parcel too big to be put into a pillar-post may be deposited on the top without any fear of thieves, nothing of the kind could be safely done in Japan; and that whereas valuables, as gold, silver and jewels, may be exposed in shop windows all night in European cities, all kinds of precautions have to adopted to guard such things in Japan. We should like to think that the *Chuo* was correct, but unfortunately facts are against it. The chief objects of its condemnation, however, seem to be the vandalism of Japanese holiday-makers, who break trees, trample turf, and bring dogs into gardens; and the greed of Japanese petty tradesmen, who see in the foreign tourist only a person to be robbed.

According to intelligence transmitted telegraphically to the Minister of Communications in Tokyo in answer to enquires formulated by him, the accident at the French Exhibition occurred in the Astronomical section, where a monster sphere has been constructed in such a manner that people can enter it, and observe the motions of the celestial bodies exactly as they take place in nature, with such modifications as are necessary to render them easily apparent. There is a circular stair leading to the top of the sphere, whence a bird's eye view of the whole Exhibition and of a large part of the city of Paris can be obtained. The foot-bridge which collapsed seems to have been connected with this ascent, but that point is somewhat obscure. The telegram received by the Minister says that no Japanese were injured, and that the casualties were 9 killed and 10 wounded. These figures tally with those telegraphed to the French Legation in Tokyo, and are much smaller than the figures telegraphed by Reuter.

The owners of oil-wells, or of lots supposed to contain oil-wells, in Echigo are said to be very anxious to dispose of their interests to foreign capitalists. They speculated too eagerly and are now plunged in unpleasant reflection. It is very

Digitized by Google Original from CORNELL UNIVERSITY

likely that the Standard Oil Company and the Shell Transport Company might be disposed to think seriously of this investment, but the first point is to determine what are the real oil-yielding capacities of the district. That palpable precaution does not seem to have yet been taken, at least not in a thorough manner; and competent experts are now said to have been despatched to the place.

The *Jiji* has a strong article condemning the want of circumspection shown by the elder statesmen in their provincial tours; declaring that such an example is most demoralizing, and adding that in future it must depart from its hitherto-observed rule of silence, and expose these abuses in plain terms.

According to the *Asahi Shimbun*, the N.Y.K. steamer *Awa Maru* carried 2½ million *yen* worth of gold ingots from London to the order of the Treasury in Tokyo. The ingots were packed in 23 boxes. Nothing is known as to the uses to which the metal will be applied, but the natural conjecture is that it will be sent to the Osaka Mint to be coined.

A new sensation has been unearthed with reference to the Koyasan forests, a property valued at seven million *yen*. The forests contain magnificent specimens of *hi-no-ki* and *sugi*, and the immediate vicinity of a river affords excellent transport facilities. The story is that Messrs. Motoda Hajime, Kikuchi Takeo, and Hatoyama Kazuo, having come to an agreement with the people of the locality, made application to the Authorities for the purchase of the property, but that evidences have been discovered of a prior claim on the part of the Koya Monastery. The law declares that when the people of any locality can show just cause, they shall be entitled to purchase the forests and moors held by the State. On the strength of that provision the Koya-san folks entered into the above arrangement with Mr. Motoda Hajime and his friends. From the manner in which the facts are related by Tokyo journals, one would imagine that some fraudulent scheme was on the *tapis*. But we fail to detect anything of the kind. It is simply a question whether the monastery or the people have the prior claim. What lends an element of sensation to the tale is that Messrs. Motoda, Kikuchi and Hatoyama occupy prominent positions in the political world.

The *Nichi Nichi Shimbun* publishes a highly eulogistic article on Sir Ernest Satow and Baron Hayashi. The former left Tokyo on the 5th instant and proceeds to England on leave of absence; the latter started on the 6th to take up his duties as Japanese Representative in London. In the *Nichi Nichi's* opinion the good relations that exist between England and Japan are largely due to the exertions of these two gentlemen. Sir Ernest Satow's knowledge of the Japanese language, his profound acquaintance with Japanese history and the conditions existing in Japan, and his sympathy with this country make him a *persona grata* in Tokyo and enable him to conduct the relations of the two States with a degree of success attainable only by one so exceptionally qualified. With regard to Baron Hayashi, he was one of the earliest among the distinguished students of English. A class-mate of the late Professor Toyama and of Professor Kikuchi, President of the Imperial University, he distinguished himself many years ago by literary skill, especially by his translations of the works of John Stuart Mill, and in his position of Vice-Minister of Foreign Affairs during the China-Japan war, he rendered signal service which the Sovereign recognised by conferring a patent of nobility. He has contributed materially to draw England and Japan into that friendship which can not be too close for the interests of both.

The system of collegiate courts of law is condemned by the *Jimmin* on the ground that it divides responsibility and thus leads to a perfunctory discharge of duties. Some hostile criticism has been evoked by the report of the judicial officials that recently returned from a tour of inspection in Europe and America, but the public recognises that they spoke justly and wisely in the main. Judges in Japan do not enjoy either status or emoluments such as are likely to attract first-class men. The chief Judge of the Supreme Court gets 5,000 *yen* annually, and there has not been one instance of a title conferred on this official. The people have no confidence in the tribunals of justice. It is for that reason that appeals are so numerous. Our contemporary instances the Kent case as an illustration of the blunders made by courts of first instance, and says that even in the Miller case, although the ends of justice were satisfied, the terms applied to the convict in the judgment were altogether out of place.

The *Jiji Shimpo* continues to denounce abuses connected with Buddhism. Its latest subject is the relations between the temples and their parishioners. In Tokugawa days every Japanese subject had to be enrolled among the parishioners of a temple, that being the method adopted by the authorities for providing against the practice of Christianity. The priests, in short, performed detective duties. Thus there was established a traditional conviction that to be borne on the roll of a temple was a matter of necessity, and though the circumstances underlying the idea have changed, people are still wedded to the habit. They belong to a particular parish, not because they are really solicitous about the safety of their souls, but because their parents and parents' parents belonged to it. Be the priest what he may, he can reckon on retaining his parishioners. If people are dissatisfied with their doctor, they do not hesitate to change him, but although their peace of mind is just as important as the health of their body, they are contented to leave their spiritual affairs to the care of the most unworthy pastor merely because they have been accustomed to do so.

BURGLARY IN THE SETTLEMENT.

About 1 a.m. on Saturday last Dr. Stuart Eldridge, who resides at No. 167 Settlement, was awakened from his slumbers by the sound of some one moving in his bed room. There was a light in the room, and, sitting up in his bed, the doctor saw a Japanese crawling on his hands and knees towards the dressing table, on which were the doctor's pocket-book, watch and chain, and other valuables. Dr. Eldridge gathered himself together and made a spring over the foot of the bed right on to the intruder's back, temporarily knocking the wind out of him. He then, after a pretty severe struggle, dragged the burglar downstars to the office, and, with the assistance of the servants, whom he had roused, tied him up with cord and sent for the police. The officers were fortunately very handy on this occasion, as the burglar had hired a *jinrikisha* to take away his plunder, and the *'rikisha* man waiting outside had aroused the suspicions of two constables, who were questioning him when they were summoned by the doctor. It was discovered that the culprit was a boy who had been in Dr. Eldridge's employ at the end of last year, and a duplicate key of the back door of the house found upon him explained how he had obtained entrance. We understand from Dr. Eldridge that this is the third time that the house has been entered by former servants on robbery intent by means of duplicate keys.

BOER TACTICS.

The war correspondent of the *Berliner Lokalanzeiger*, who is with the Boers in South Africa, gives some interesting observations on their tactics. We translate the following:—Every Boer is, as soon as he takes part in a battle, his own general. He says:—"I am my own officer, no one has anything to say to me." If the Boers are weak in numbers they will let the enemy come within 200 metres, or even closer without firing a single shot. Then they will open a well-directed and murderous fire upon the closed ranks of the approaching forces, and after that the artillery, with the few guns at their disposal, open fire. The English bombarded the whole Boer position for seven days without ceasing, without eliciting a single reply from a Boer gun. The object of the Boers was not to betray their position, and the consequence was that a whole week's bombardment caused only four deaths. The Boers became so reckless that they sometimes ran after the shots in order, as they said, to catch them. "As an individual marksman the Boer is exceedingly well trained, sure of his aim at a great distance, and a master in utilizing the lay of the land." A uniform direction does not exist. There are different generals without definite "commandos" who are sent wherever they are supposed to be needed. Here General Burger commanded, if, indeed, it can be called commanding. His whole work consisted in trying to ascertain where a strengthening of the forces was necessary, and, in case no men were at his disposal, to request other generals to furnish him a supply. Such increase, usually, does not consist of more than 20 or 30 men. Whoever does not wish to take part in an action will simply not take part. Besides, the general there is an assistant-general, who is the so-called "fighting-general." He is in the front line and takes part in the shooting, but keeps the general in the rear informed of whatever he deems necessary. Everyone takes part in firing, whether he be a general, a commandant, or a *fieldkornett*, one is as much as the other. Every individual gunner will go where he thinks it is necessary and will begin to fire when convenient. A general direction of the artillery does not exist.

To utilize a victory is something the Boer does not understand. He does not know how to pursue the enemy. His guard system and intelligence service is extremely defective. For the latter service, General Botha has now formed a so-called *Skantingkorps* with very good resnlts. When I said in the beginning that the Boer will let the enemy come within 200 to 300 metres I meant, of course, in individual cases. I have noticed that the men sometimes fired at a distance of 1,800 metres, in spite of the fact that the *fieldkornett* called out to them, "You are shooting too, far, you hit nothing."

Very interesting and significant is the conduct of the individual Boer in the front rank. When a Boer gets tired or feels the need of refreshment he will quietly slip to the rear, where, behind some shelter, he will take a rest, have a chat, and then when he thinks it is time he will again go to the front. Generally there is a lively conversation kept up in each individual group, with regard to the distance and everything else concerning the battle. The task of the *fieldkornett* consists in concentrating the forces where they are most needed and giving orders accordingly. Under such circumstances there is no excitement and every one is as cool and collected as though he were out hunting. Of course, if possible, the Boer keeps his enemy as far from him as possible. Thus on the 29th of January the fighting was done mostly at a distance of 800 to 900 meters. The guard at night is performed by the so-called "Fire-watch," and when they are close to the enemy they are usually well on their guard. That the English succeeded, on the night of January 24th, in ascending Spionkop was altogether the fault of the fire-watch which was posted there. "If the Boers had had a uniform command of the artillery on the 25th of January, when 3,000 English with six guns were at the foot of Spionkop, they might have been successful. I told them so, but they paid no attention, for after the victory, they wanted to take a rest."

EPITHALAMIAL ODE.

ON THE MARRIAGE OF H.I.H THE CROWN PRINCE OF JAPAN.

Ye gracious Sisters Nine, regard a voice,
Not strange to lyric note, that bids ye leave
Your tuneful springs and rapt Thessalian joys,—
Though sacred toil for distant flight disuse;—
And, thrilled with rare occasion, deign to cleave
Earth's crystal fires of twin reflected blues,
That sky and ocean fuse;
Until, at last, the rolling globe turn up
A new-found island Greece, embalmed in rainbow hues!
Here rest, and gaze! How strange, that silver cup
Inverted! Strange, these streams, that glance along
Ungloomed by mossy bridge, or carven dome,
That echo Arno's song!
Nor yet like Mulla's voice, that laughed in foam
To hear ye charge her best beloved bard
With music, in your third, your other island home!
Yet here hath song appealed to your regard
In half-forgotten dreams. Sure, Moschus knows
The ghost of Hitomaro in the stars,
And burning Sappho chants the very bars
The fair Komachi played where Kamo flows.
So, deign to sit, and help me tune my pipe
To music doubly ripe!
And thou, O Eastern Mount, where poets throng,
O snow-white Silence hear, and consecrate my song!

Ye, too, ye weird and shy existences,
That share your elements with budding wood
And tingling streamlets' ichor, with the bliss
Of cooling summer cloud and soothing rains;
Small genii of the rocks, and gods that stood
Athwart these mounds still dripping on the plains;
Bring here your native strains!
Draw near, and, unafraid, rest foot or wing!
For these are sisters, worshipped, too, in sylvan fanes.
Bring flute of winds, and teach me how to sing!
Bring Benten, rapt and musical with tides
That bellow through her organ-caverns! Bring
The voice of vanished brides;
And them that dip the salt on Suma's shore;
Add them that stretch their limbs in gnarled pines,
And all the faery realm of Murasaki's lore!
For this is your own happiness. My words
The sympathetic mood of morn divines,
And whispers wild enchantment to the birds.
And ye well clothed in rustic garb of leaves,
And ghostly scent of old embroidered sleeves;
Come, kneel beside me, press your finger tips
Against my eager lips!
And, that I worthy be to greet your throng,
O sacred snow-white Silence, consecrate my song!

But, more than all, on this your festal day,
Great Presences august, of myriad shrine!
Leave not your ancient groves of branches gray,—
For what this wretched flute to claim such ear?—
But greet in your still depths the Imperial Line!
Or, if ye come, hang o'er your white lawn sheer
A mirror, silver clear!
And waving wands before your snowy brows,
Come gliding down the mossy halls of Time
To wrap in awful breath these living prophets here!
From Hiuga's mount, Yamato's sunny clime,
Give echo, that the eagle of their house
May wing the Victor's bow, as once of yore!
Unebi's summit hoar;
And Kaminabi; and the Field of Oak;
And Yoshino, whose clouds of fragrant snow
Shall heap the lilied thatch of faithful folk;
And where the virgin priestesses invoke
That mystic Hunter whom the tame deer know;
And where the East winds blow
The Sound of Feathers soft o'er Kujo's vale:
And never-ceasing prayers from Ise's grove
That awe the soul to silences ye love!
Greet this young couple here that stand with faces pale!
Nor may I dare an alien glance to raise
That trembles with their praise;
Of which no careless word profane that throng!
O snow-white Priestess, hear, and consecrate my song!

Now hath the royal couple entered in
That Household Shrine, where their own souls must sleep.
Let no one dare inhale the breathing thin
Of Them that sleep, but these, who take the Vow
Upon their very blood, and in the darkness deep
Commune with Pasts so awful that the brow
Is wet and pallid now!
For They that founded cities, They, the gray
Lords of Heian and Nara, move and sway
Until the chamber rocks, and futures clear
Dawn masterful upon the eye and ear;
And many hundred Twilight Presences
Come, one by one, and touch with sad caress
This flesh that kneels, infusing mystic Life
That makes it Man and Wife.
But hence with sacrilege! What right hath thought
To penetrate such veils? Is't not enough
To list with outward ear where Engi's lord
Hath thundered music down the centuries?
To that great subtle vow Go-Daigo wrought
Across the hilt of Masashige's sword?
What surer prophecy can lips afford,
Of modern accent rough?
So let my voice be stilled before such throng;
And thou, O snow-white Priestess, consecrate a song!

Now all is done. The hour of joy is here,
For which this loyal people pause and wait.
And we, the alien guests within the gate,
All doffing private aim, stand strong to cheer,
And in one human voice congratulate.
But, stay! Whose due felicity comes first,
Before the great outburst?
The august father, loved to very tears,
And she who years ago in other halls rehearsed
This tragedy of joy; Imperial peers
Of shining hosts that beckon from the Sun;
Yet Man and Woman; Father, Mother; One
With all this sweet and glad humanity
That gave their very blood of sons to die!
These, wrapped in solemn pride, let moist eye greet
With fond affection sweet!
For he, whose lineage crowns itself to-day,
Did found the Line of Yedo; swept away,
At one vast blow, your gilded feudal chains,
And webs of doubt that veiled you from the world;
And that dear sun-shield banner first unfurled
Across the castled pinnacles of years.
He took upon himself your human fears,
To guide, restrain, and bridge the vast abyss
Of froward treacheries.
So raise one grateful voice, ye loyal throng!
And, snow-white guardian Presence, consecrate their song!

Now break the lines, and throng the reeling streets,
Ye people, mad with holidays and joys!
Let feasts be spread, and games and counterfeits
Monopolize the squares, where kerchief's stain
And mask of mummer terrify in vain
The omnipresent chorus of the boys;
Who shout derisive noise,
And pelt with flowers the paste-board effigies
That nod o'er creaking carts in doubtful equipoise!
Let this be paradise for *kozo* small,
Who crowd and gorge at every candy stall,
And block the ways o'erhung with branches green;
Where lobsters may be seen,
And every door befringed with Bounty's straw,—
As if New Year forgot and came too soon,
Deeming "Sho-Chiku-Bai" unbroken law!—
Now let the theatres gape, and Danjuro,
Pale from his recent pain, be lifted on the stage!
Let doughty wrestlers rage!
Let Kagura be rung; and country-dance
With comic attitude and clownish blow;
And all the ancient masking of the trained baboon!
Drink! For the poorest shall this morn receive
New garments meet, and wine in endless sups;
Till the vast city heave,
And all the air grow blue with tossing cups!—
O Muses! Saw ye greater holiday
At your Olympian play?—
Nay, nay! Such joy hath voiced this motley throng,
That snow-white Fuji laughs, and consecrates their song.

The afternoon has come. Why pause these crowds
As if a bell had struck? Why gaze?—See! See;
The distant streets are hurled in broken clouds
As down the moats a storm of lancers rushes,
Their plumes and pennons foaming to the lee;
And floods of charioteers 'twixt swaying crushes
That choke their cheers to hushes.
For, sweeping Sakurada's pine-clad bank,
With generals, scarlet-capped, thick as azalea bushes,
A dark blue cloud of veterans, rank on rank,
Has turned the fickle mob's careening flank,
And pressed with serried steel about the throne.
There chiefs of honour throng, and, zone on zone,
The gilded nobles, and all gentle-hood
Of pure Yamato blood—
Now bow, all heads, as rice before a wind!
And fill, all eyes, as if the floods of love
Had overflowed their brims! For they that come
Are your own Future, fleshed, and crowned with Mind;
And yet recrowned with Love.—O hearts, be muffled drums!
See, through the purple vault that blows above,
Your Dragon soar to Heaven! The world's at peace;
The star-eyed flowers are smiling; virtue reigns;
And harmony of social gladnesses,
Music that thrills along life's fountain veins,
Shall never, never cease;
But, year by year, these memories prolong,
If thou, O tented Minstrel, consecrate the song.

And what of her, the sweet unconscious bride,
Unused to public pomp, or love, or power,
Who walks among us simple, wonder-eyed,
As if some cherry-bud, just blown to flower,—
An elemental grace embodying
The innocence of Spring,—
Were plucked a-sudden from her pearly stem,
O perfect gem well worth a nation's dower!—
And set aloft upon a prince's diadem?
Thus Maya must have lain in soul-amaze,
Whom coming mother-love had sanctified,
When, bursting through her side,
A golden man-child stood in blinding rays;
Then knew herself the mother of all Time.
O Joy undreamed! O ecstasy sublime,
For this sweet soul to feel in her own blood
The motherhood of kings,—her people's mother,
Her home the home of homes, her sun-love sun
Of all divine and loyal womanhood!
This is the dearest lesson, this the one
She learns from her who reigns,—no wisdom other,
An empress needs, than sweet solicitude
For all that love, the perfect selflessness
That deems it blest to bless.
Weep human sympathy, ye voiceless throng!
And thou, O snow-white Silence, consecrate her song!

The bride-groom comes; joy sounds. But in his heart
A brooding wonder sits, that faintly blurs
All tendered pageantry of loving art,
The garnished halls, the loyal faces dear,
And e'en that simple dignity of hers;
For his strong soul a mystery would clear
That haunts the atmosphere.
No, not for him this homage; not, as man,
This joy that crushes self in majesty;
This heavy throne, this matchless crown of praise:
But for that mighty patriarchal span
Of sad imperial service, ministry
That deemed resplendent lives but sacrificial days.
"Rejoice, ye congregations! Let no weight
Of anxious care becloud your happy brows;
Nor thine, beloved spouse!
Behold, I lift from them the iron crown of Fate,
And press it down on mine. Be careless birds,
Disporting, buoyant, in my crystal air!
For I am not alone; I hear their words
Whose lightest thought was but a living prayer,
Bidding my youthful feet
Walk, brave and calm as theirs, from throne to throne.
'Tis sweet,' they say, 'to die for man; more sweet,
Though hard, to live for man.' Ah, sweeter yet,
Even in love's last rapture, to forget,
And love for man alone!"——
O what a Prince is this, how pure, how strong!
A nation's soul hath heard, and consecrates his song.

THE SPRING SPORTS.

The annual sports of the Yokohama Cricket and Athletic Club took place on Saturday afternoon at the Cricket Ground. The weather was, on the whole, pleasant, though unfortunately a slight thunderstorm occurred during the afternoon. It was not sufficient, however, to spoil the turf to any great extent or to drive away spectators, and after a short retirement to the pavilion the programme was proceeded with. There was a large attendance, and the presence of a great number of ladies added to the pleasure of the gathering. Several Japanese officials, including Governor Asada and Mr. Rinoiye, the Secretary of Kencho, as well as officers of H.M.S. *Endymion*, were also present. Some very good sport was witnessed. Libeaud distinguished himself by winning four events, half mile, quarter mile, 100 yards, and 50 yards. He is a pretty runner, and appears to have had the advantage of excellent training. Drummond, as usual, showed well at the high jump, but failed by one inch to reach the record. Onderdonk could not tie his previous record in putting the shot, in consequence partly of the wet, which rendered the shot slippery, and also because he had not trained for the event. H. W. Kilby won the Dare challenge cup, which had generally been considered a fairly safe thing for his brother, but the latter was not, for some reason, in form. The prizes were distributed by H. E. the Governor, who was introduced by Mr. E. Flint Kilby in a few appropriate words, Mr. Kilby expressing thanks both to Governor Asada and to Mr. H. A. C. Bonar, H.B.M. Consul, for consenting to become patrons of the Club. The ladies' prize for the quarter mile was presented by Miss Kilby.

Tea was provided in the pavilion during the afternoon, the arrangements being under the care of Mrs. Kilby, Mrs. Blake, and Mrs. Merriman. Music was discoursed by the Town Band and the excellent string band of H.M.S. *Endymion*, the performance of the latter being especially appreciated.

The officers were as follows :—

Messrs. E. Flint Kilby, K. F. Crawford, Judges; D. H. Blake, Clerk of the Course; E. I. Dyer, Starter; E. Mendelson, H. Gunn, Time-keepers; L. C. Putnam, Scorer; B. H. Pearson, J. H. Bathgate, F. H. Bugbird, W. L. Merriman, A. H. Dare, Stewards; F. O. Stuart, H. A. Stewart, Measurers.

Details :—

100 YARDS DASH.—Club record 10½ secs., Oct., 1884, E. Abbott. First prize presented by Mr. H. A. C. Bonar.

FIRST HEAT.

J. F. Drummond, Scratch	1
E. W. Kilby, 3 yards	2
F. W. Pettitt, 2 yards	3
P. B. Clarke, 3 yards	0

SECOND HEAT.

C. E. Libeaud, 2 yards	1
M. Mendelson, 3 yards	2
K. Van R. Smith, 2 yards	3
J. A. Hayes, 1 yard	0

FINAL.

Libeaud	1
Drummond	2
Mendelson	3

Time, 11⅕ secs.

The final was a capital race, but Libeaud managed despite hard pressing or the part of Drummond, to keep his distance, though the result was very nearly a dead heat.

HIGH JUMP.—Club Record 5 ft. 6 in. 1897, H. K. A. Onderdonk. "Insurance" Prize.

E. W. Kilby, 6 inches	1
J. F. Drummond, scratch	2
C. H. Thorn, 6 inches	3
H. K. A. Onderdonk, scratch	0
W. S. Moss, 4 inches	0

Kilby cleared 5 ft. ½ in.; Drummond, 5 ft. 5 in.; and Thorn, 4.10½ in.; Onderdonk fell out after 5 ft. 4 in.

QUARTER MILE.—Club Record 55½ secs., Nov., 1892, J. Eyton, Jun. Ladies' Prize.

C. E. Libeaud, 5 yards	1
M. Mendelson, 15 yards	2
E. G. Fradgeley, 20 yards	3
J. F. Drummond, scratch	0
F. W. Pettitt, 10 yards	0
E. Irwine, 15 yards	0

Time, 54 4/5 secs.

Drummond fell out soon after the start. Libeaud quickly worked his way through the field, and was leading on entering the straight. He won with about three yards to spare. About a yard between Mendelson and Fradgeley.

PUTTING THE SHOT.—Club Record, 36ft. 7in. May 13, 1893, H. K. A. Onderdonk. First prize, presented by Mr. H. J. Sharp.

H. K. A. Onderdonk, Scratch	1
H. Goddard, 6 feet	2
E. Irwine, 6 feet	0

Onderdonk's best throw was 35ft. 11in., and Goddard's 23ft. 10in. The slipperiness of the ground and ball were against Onderdonk's tieing his own record.

120 YARDS HURDLE RACE (hurdle 3ft. 6in. high).—Club Record 17½ secs., May 18, 1899, E. Y. Dyer.

FIRST HEAT.

J. E. Moss, 20 yards	1
J. F. Drummond, 5 yards	2
A. T. Hellyer, 15 yards	3

SECOND HEAT.

E. W. Kilby, 15 yards, (1 hurdle removed)	1
C. H. Thorn, 20 yards	2

FINAL.

Drummond	1
Moss	2
Kilby	3

Time 18 secs.

Drummond was an easy winner.

50 YARDS DASH.—"Steamship" Prize.

C. E. Libeaud, scratch	1
K. van R. Smith, scratch	2
M. Mendelson, scratch	3
F. W. Pettitt, ½ yard	0
P. B. Clarke, 1 yard	0

Time 6⅕ secs.

Libeaud only won by a touch. A very close thing for second.

POLE VAULT.—Club Record, 9 ft. 0 in., April, 1898, A. J. SMITH. "Brokers'" Prize,

E. W. Kilby, scratch	1
E. Powys, Jr., scratch	2
H. S. Goddard, scratch	0

Goddard could only negotiate 7ft. 10in., Powys did 8 ft. Kilby cleared 8ft. 6in. and tried to beat the record with the bar at 9ft, 2in. but did not succeed.

HALF MILE RUN.—Club Record, 2 min. 9 sec., May, 1876, A. H. Dare. First Prize, "Union Assurance Society.

C. E. Libeaud, scratch	1
E. G. Fradgley, 15 yards	2
J. A. Hayes, 5 yards	3
G. C. Allcock, scratch	0
F. W. Pettitt, 10 yards	0
J. E. Moss, 15 yards	0

Time 2 min. 15 secs.

Libeaud made an easy win. He kept his men well in hand till the last lap, when he spurted and came in hands down several yards ahead of Fradgely. Moss made rather a strong bid for third.

THROWING THE CRICKET BALL.—Club Record 106 yards 2 ft. 11 in., Nov. 1891, E. B. S. Edwards. Club Prize.

H. R. Barnard, scratch	1
H. S. Goddard, 5 yards	2
H. Goddard, 5 yards	3
J. F. Warren, 5 yards	0
G. R. Chipman, 5 yards	0
A. T. Hellyer, 5 yards	0
A. W. Read, 5 yards	0
E. H. Morse, 5 yards	0
E. H. Irwine, 6 yards	0
A. Kingdon, 10 yards	0
H. W. Kilby, 15 yards	0

Barnard's throw was 98 yards 2 ft. 3½ in. H. S. Goddard threw 91 yards 1 ft. 8 in.

LONG JUMP.—Club Record, 20 feet 4½ in Nov. 1891, J. Eyton, Bankers' Prize.

E. G. Fradgley, 6 inches	1
E. W. Kilby, 1 foot	2
J. F. Drummond, scratch	3

Fradgley jumped 19 feet, Drummond 18 feet 6 in., and Kilby 17 feet 8 in.

MILE RACE.—Club Record, 4 min. 45 secs. May 1896, A. H. Dare. First prize, Dare's Challenge Cup.

H. W. Kilby, 50 yards	1
E. G. Fradgley, 40 yards	2
E. W. Kilby, Scratch	3
H. A. Poole, 20 yards	0

E. W. Kilby was expected to make a good show for this coveted trophy, but he was unable to catch his brother at the limit or Fradgley at 40 yards. H. W. Kilby and Fradgley led throughout, the former being an easy first.

Time 5.4⅘ min.

THE JAPAN BREWERY COMPANY, LTD.

The second annual general meeting of the above Company was held at the Brewery Offices, No. 123 Bluff, on Wednesday afternoon. There were present, Messrs. J. D. Hutchison, W. R. Bennett, T. B. Glover and O. Haynemann, Directors, and Messrs. R. A. Wylie, M. Kirkwood, E. Berger, Z. Wheeler, F. Cummins, J. Diack, D. Jackson, L. J. Healing, H. C. Litchfield, C. Kayser, and F. Knapp.

Mr. BENNETT proposed that in the unavoidable absence of the Chairman—Mr. Jas. Dodds—Mr. Hutchison take the chair.

This was carried unanimously.

On the proposal of the Chairman the minutes of the first meeting, held in July last, and the statement of accounts and report now before the meeting were taken as read.

The CHAIRMAN, in introducing the report and accounts said :—

GENTLEMEN.—This is the second ordinary General Meeting of Shareholders of the new Company, and as you have called upon me to take the place of our worthy Chairman, who is unfortunately unable to attend to-day, I can only say that I will do my best to give you all the information you may require regarding the accounts or working of the Company. The Report and Statement of Accounts having now been in your hands for about a week I have no doubt you will consent to take them as read. In connection with the Report, I will endeavour to make such comments as I think are called for. The working account shows a nett profit of *yen* 72,225.19. This, but for the high cost of interest and extra advertising (which together amounted to over *yen* 21,000) would have shown a much better result. The large item for revaluation of stock does not, as may perhaps be imagined, represent any depreciation in values. It arises from the adoption of a different and more correct method of carrying forward beer stocks from one year to another, with which the Directors have thought proper to commence the new company's accounts. The balance of working account, after deducting the ¥48,477.82, has been carried to a new Reserve fund, which you will notice stands at ¥23,747.37.

The Old Reserve fund, I must mention, is made up of the outstanding balance on 31st March, 1899 ¥77,882.16
with 48,228.05
amount brought forward from old Co.'s Profit and Loss account added thereto, making together 126,110,21

This sum, less reconstruction expenses (¥3,859.60, and Interim Dividend paid November last (¥45,000) accounts for the sum of ¥77,250.61, from which the Directors have proposed to pay the final dividend of 15 per cent., which will leave a balance of ¥9,750.61 to be carried forward belonging to the Old Reserve fund.

New Brewery :—As mentioned in the Report, this is rapidly approaching completion and the Directors expect brewing to commence about the end of this month or early next. Considerable difficulty has been experienced in obtaining a sufficient number of skilled workmen necessary for fitting up the machinery, and some delay has resulted in consequence.

The cost of the new brewery, as shown in the accounts, has so far reached ¥293,058.66, and some ¥,30,000 more is estimated to complete it. This agrees very closely with the original estimates, with the addition of certain expenses for foundations, etc., which could not be properly calculated beforehand. The new cellars undertaken in advance of the Brewery, have cost ¥71,808.34.

Depreciation of Buildings, Machinery and Plant.—The main portions of these are practically new and therefore require no writing down, The other portions have been written down freely in previous years and stand at about their actual value. It is however uncertain what may be the proceeds of the sale of the machinery etc., now being advertised. I will now conclude my remarks by moving that the Directors' Reports and Statement of Accounts for the year 1899-1900, as presented, be adopted.

Mr. WHEELER asked what proportion the discounts and advertising bore to one another; they were grouped together in the accounts. He had never seen in any accounts presented by any company with which he had been connected such a hotchpotch as these accounts presented.

The CHAIRMAN suggested that he could get all the particulars he desired from the office, on application.

Mr. BENNETT said he would propose, to satisfy Mr. Wheeler and other shareholders, that an addenda, or detailed account of the old and new debentures, be made out.

Original from CORNELL UNIVERSITY

Mr. WHEELER, however, declined to second this proposal, when asked to do so, and the motion was withdrawn.

The CHAIRMAN then proposed that the report and accounts as presented be adopted.

Mr. WYLIE seconded and the resolution was carried. The Report and Accounts were as follows:—

The Directors have the pleasure to present herewith the accounts for the year ended 31st March—the first working year of the Company in its reconstructed form.

The sales for the year have been satisfactory and the prospects of the year now entered upon are good.

The Working Account shows a profit of *yen* 72,225.19, which has been carried to a "New Reserve Fund," the balance at credit of which, after deducting *yen* 48,477.82 for revaluation of stock, etc., stands at *yen* 23,747.37. From this will be deducted *yen* 535.70 which the Directors propose to pay by way of bonus to the Japanese staff. Interest on outlays in connection with the new Brewery and special advertising expenses incurred to enable the Company to cope with rivals and to provide a market for the increasing output of beer have absorbed about *yen* 21,000, which in ordinary circumstances would have gone to augment these profits when they would have amounted to some *yen* 93,000.

The "Old Reserve Fund," consisting of balances from the old Company's Accounts, less sundry reconstruction expenses and less the 10 per cent. interim dividend paid in November last, stands at ¥77,250.61, from which the Directors propose to pay a final dividend of 15 per cent., making a total of 25 per cent. for the year, which will absorb ¥67,500 and leave a balance of "Old Reserve Fund" of ¥9,750.61 to be carried forward to next year.

To cover cost of extra cellars and their fittings necessitated by the new Brewery, debentures to the extent of ¥100,000 have been placed at a profitable figure, but as they run only from 1st April, 1900, the amount received for them is included in these accounts under the item "Sundry Creditors."

The new Brewery is rapidly approaching completion and is expected to be at work by the end of May. The Directors look for much economy from its working as compared with that of the old plant.

The present Directors of the Company are Messrs. J. Dodds (Chairman), W. R. Bennett, T. B. Glover, O. Haynemann, J. D. Hutchison, and S. F. James. Under the Articles of Association two of these gentlemen, viz: Messrs. W. R. Bennett and J. D. Hutchison, retire, but, being eligible, offer themselves for re-election.

JAS. DODDS, J. D. HUTCHISON, JAMES STEWART, } Directors.
Manager and Secretary.

JAS. DODDS, J. D. HUTCHISON, JAMES STEWART, } Directors.
Manager and Secretary.

We have examined the foregoing accounts and compared them with the Books, Vouchers and Securities in the possession of the Company and find them to be correct.

R. S. SCHWABE, F. J. HALL, } Auditors.

The CHAIRMAN—The next question before the meeting is the election of two directors in place of Mr. Bennett and myself who retire in accordance with the Articles of Association.

Mr. WYLIE proposed that the two retiring Directors be re-elected. This was seconded by Mr. Wheeler and carried unanimously.

The CHAIRMAN—The next question is that of the Directors' fees, which were fixed for the past year at the meeting held in July last.

Mr. HEALING proposed that the Directors' fees remain as at present, viz 2,500 *yen*, until changed at another general meeting.

This was seconded by Mr. Wylie and carried.

The CHAIRMAN—We now come to the election of auditors. You will notice that Messrs. Schwabe and F. J. Hall have for several years past undertaken these duties, but the former gentleman having left for England the Directors have much pleasure in suggesting the re-election of Mr. Hall and the election of Mr. Guinness to fill the place of Mr. Schwabe, but it is for you to decide the matter, and fix the remuneration.

Mr. WYLIE proposed that Mr. Hall be re-elected and Mr. Guinness be elected to fill the place of Mr. Schwabe, at the same rate of remuneration.

This was seconded and carried *nem. con.*

The CHAIRMAN, in conclusion, mentioned that in the month of April, they had a larger sale than in any previous month, and the present month also showed well up to date.

A taste of the Brewery's product and an inspection of the newly added premises and works concluded the proceedings.

THE HOKKAIDO HERRING FISHERY.

The *Shogyo* publishes the result of investigations carried on by the Section of Marine Products of the Hokkaido Office in regard to the catch of herrings during the first term of this year. The annual output is something like one million *koku* approximately. The first fishing period is from the beginning of the season until the 15th April, and the amount of capture during that space of time this year is estimated at 428,000 *koku*, an increase of 17,000 *koku* as compared with the previous year. Of this amount the greater portion is to the credit of Shiribeshi and Teshio, where an increase of over 30 per cent. above the ordinary yield was secured. In other districts, there was more or less decrease, the chief deficiency being noticeable in Ishikari, where hardly one-third of the ordinary catch was made. Below are comparative figures:—

	Total capture for 1st period of this year. *koku.*	Amount of capture in the corresponding period of last year. *koku.*
Oshima	51,894	66,632
Shiribeshi	263,732	203,190
Ishikari	16,445	47,500
Teshio	60,300	44,600
Kitami	36,550	49,152
Total	428,921	411,074

IMPERIAL MARRIAGES.

The following Ordinance has lately been published in the *Official Gazette* over the sign-manual of the Emperor and counter-signature of the Minister of the Imperial Household:—

ORDINANCE RELATING TO MARRIAGES IN THE IMPERIAL FAMILY.

CHAPTER I.—IMPERIAL NUPTIALS.

Art. I.—The nuptials of the Emperor shall be celebrated after he has attained the age of seventeen.

Art. II.—In nominating the Empress the choice shall be confined to Princesses of the Imperial family or daughters of nobles specially designated, who have attained the age of fifteen.

Art. III.—When the matrimonial engagement is made, the fact shall be announced at the Imperial Ancestral Shrine (*Koreiden*) as well as at the shrines for the *Kami* (*Shinden*) placed in the Sanctuary in the Palace (*Kashikodokoro*), and imperial messengers carrying special offerings shall be despatched to the Jingu Temple, and the mausoleums of the emperor Jimmu and of the Emperor and Empress immediately predeceasing the reigning monarch.

Art. IV.—When the engagement has been concluded, the fact shall be announced by the Minister of the Imperial Household.

Art. V.—The date for the performance of the ceremony shall be announced by the Minister of the Imperial Household.

Art. VI.—On the day of the ceremony a solemn announcement of the fact shall be made at the Shrine n the Sanctuary.

Art. VII.—The ceremony shall be performed in front of the Sanctuary (*Kashikodokoro*) in accordance with the rites specially determined.

Art. VIII.—An Imperial Rescript as to the nomination of the empress shall be made public on the day on which the matrimonial celebration takes place.

Art. IX.—The Emperor, accompanied by the Empress, shall, at the close of the wedding ceremony, appear (for worship) at the *Koreuden* and the *Shinden*.

Art. X.—The Emperor and the Empress shall, at the close of the ceremony, wait on his grandfather, and grandmother, and the Empress Dowager.

Art. XI.—The Emperor and Empress shall, at the conclusion of the ceremony, hold a banquet in the Palace.

Art. XII.—The Emperor and the Empress shall, after the conclusion of the ceremony, proceed to the Jingu shrines and to the mausoleums of the emperor Jimmu and of the last Emperor and Empress for devotional purposes.

Art. XIII.—The President of the Imperial Archives shall, on the promugation of an imperial Rescript connected with the nomination of the Empress enter the fact in the Records relating to the imperial genealogy.

All the records concerning the imperial marriage shall be preserved in the Archives Bureau.

Art. XIV.—No wedding ceremony shall be performed during a period of imperial mourning.

CHAPTER II.—MARRIAGES OF THE IMPERIAL FAMILY.

Art. XV.—With regard to marriages in the Imperial family application shall be made for the sanction of the Emperor before an actual engagement is made.

Art. XVI.—The nuptials of the Prince Imperial, or the Imperial grandson, or the Princes of the Blood retaining the title of *Shinno* or *O*, shall be conducted in front of the Sanctuary in the Palace.

Art. XVII.—The Prince Imperial, or the grandson of the Emperor or Princes of the Blood holding the title of *Shinno* or *O* shall, at the close of the wedding ceremony, appear in state before the Emperor and the Empress, the Emperor's father and mother, and the Empress Dowager.

Art. XVIII.—In the case of the marriage of the Prince Imperial or the Emperor's grandson, the provisions of Articles III., IV., V., VI., IX., XI., and XII. shall apply.

Art. XIX.—In the case of the marriage of a *Shinno*, Articles V. and IX. apply, and in the case of an *O* Article IX. only shall be enforced.

Art. XX.—With regard to marriages relating to the Princes of the Blood, the fact shall be announced by the Minister of the Imperial Household on the day of the celebration.

Art. XXI.—The nuptials of any of the Princes or Princesses of the Blood shall in no case be celebrated before the age of seventeen in the case of the former and of fifteen in the case of the latter.

Art. XXII.—No wedding shall be concluded among Princes or Princesses of the Blood between relatives of direct lineage or between those belonging to the 3rd grade of connection.

Art. XXIII.—The nuptials of Princes or Princesses of the Blood shall not be performed during a period of imperial mourning or during a period of mourning for principal personages directly connected with them.

Art. XXIV.—Any form of marriage concluded by

Digitized by Google Original from CORNELL UNIVERSITY

a Prince or Princess of the Blood in contravention of the statutes of the Imperial House shall be invalid.

Art. XXV.—Any divorce or separation on the part of a Prince or Princess of the Blood requires the imperial sanction, and, in default, such separation shall be declared invalid.

Art. XXVI.—Affairs connected with the marriage of Princes or Princesses of the Blood shall be put on record by the President of the Imperial Archives.

THE SOY BEAN.

The Japanese soy bean is finding much favour in the United States. The bulletin of the Kansas State Agricultural College says:—

The Kansas experiment station began raising soy beans in 1889, and has raised them every year since—in 1899 having seventy acres in this crop. We have found the soy bean to stand the drought as well as Kafir-corn or sorghum; it is not touched by chinchbugs; the grain is a richer feed than linseed-meal, and the plant enriches the soil on which it is grown. The bean is an erect-growing plant, one and one-half to three and one-half feet in height, with a stiff, woody stem, having numerous branches like a miniature tree. The foliage is heavy and the plants start to branch close to the ground. The branches are thickly covered with pods, which usually contain two to three beans to the pod. The bean was brought from Japan, where it is extensively cultivated for human food, taking the place of beef on account of its richness in protein. Because of its peculiar flavour but few Americans like it.

The following table shows the digestible nutrients of soy beans and several of our common feeds:

	Digestible nutrients, pounds per 100 lbs. fed.		
Feed.	Protein	Carbo-hydrates.	Fat.
Soy beans	29.6	22.3	14.4
Flaxseed	20.6	17.1	29.0
Linseed meal—old process	28.8	32.8	7.1
Bran.....	12.3	37.1	2.6
Oats	9.3	48.3	4.2
Corn	7.8	66.7	4.3

Kansas farmers who have tried soy beans on a large scale report that with ordinary prices for farm labour it costs forty cents per bushel to raise them. This includes all expense from preparing the ground for planting to storing the thrashed beans in the bin, but does not include rent.

NEWS OF THE WEEK.

From a statement made in a private letter from a trooper in the Composite Regiment of Household Cavalry, it would appear that two privates were recently shot at the Modder River for being asleep on sentry duty.

Below are comparative figures concerning traffic on the Tokaido, Hokuriku, and Shinetsu lines for the past two years:—

Goods.	1900 yen.	1899 yen.	Increase yen.
March	154,100	126,440	27,660
April.....	147,573	121,058	26,515
Passengers.			
March	321,434	260,977	60,457
April.....	296,019	243,878	52,141

In the Yokohama Chiho Saibansho on Tuesday morning Judge Fujise commenced the hearing of the action of Bruhl Frères v. Takashima. The claim was for breach of contract. The case for the plaintiffs was that they had agreed to sell defendant a quantity of velvet and plush, and defendant had given a promissory note for 250 *yen* as bargain money. He had, however, failed to take delivery. Defendant denied making the contract, and said the promissory note was drawn by a clerk without his knowledge and consent. The case was adjourned.

The Yokohama Literary Society brought a very successful season to a close on Friday evening with an illustrated lecture by Mr. Otis A. Poole, entitled "Wakai Nippon." Mr. Poole's skill and success with the camera are well known to majority of our readers, and the humour of his descriptions proved equally happy. The large audience evinced their pleasure by giving rounds of applause both during the progress and at the close of the *séance*. The musical items were equally enjoyable. Dr. Russell, an old-time friend, renewed his acquaintance with the Society, and was warmly received. Mrs. McIvor played a "Caprice Espagnol" by Moskowski, in her own happy manner, while Miss Hayashi's rendering of "The Holy City" was one of the most charming things of the evening.

The Chief of the Weather Bureau of the Department of Agriculture at Washington has issued an order forbidding the smoking of cigarettes by all employés under his direction, not only during working hours, but in their hours of leisure. The prohibition, is based upon the chief's conviction that cigarette smoking impairs efficiency and discipline, and that by indulging in it the most competent become careless and unreliable. He does not, however, seek to interfere with the smoking of cigars and pipes.

Lyddite seems to have satisfied all reasonable expectations, writes the South African correspondent of the *Engineer*, though coming far short of the exaggerated ideas some people had formed of it. Actual experience of the explosive shows that a 4.7in. shell will breach a 4ft. earthen or rubble rifle parapet, but as it bursts on impact it is doubtful whether it would prove of much use against the 6ft. masonry of a fortress or against naval armour. The picric acid fumes which arise from the exploded shell do not possess the deadly power ascribed to them. They are simply non-respirable.

In the Belgian Chamber of Deputies on April 11 the Premier, M. de Smet de Nayer, read a communication from King Leopold in which His Majesty presented to the nation the whole of his real estate. Prolonged cheering greeted the reading of this document. The King in his letter announced that he desired on the occasion of his 65th birthday (he was born on April 9th, 1835) to present the country with all his estates, which will contribute to the beauty and charm of the localities where they are situated. He pointed out the necessity for open spaces and gardens near growing cities for the benefit of hygiene and artistic effect, and expressed the hope that these naturally-adorned spaces would not be allowed to deteriorate. A Bill has been introduced in the Chamber to permit the country to accept His Majesty's offer.

According to the *Jimmin* the traffic receipts of the three Government railways—Tokaido, Hokuriku, and Shinyetsu—for the 32nd year of *Meiji* amounted to 10,705,526 *yen*. The total mileage opened to traffic during the year from April, 1899, to March, 1900, was 36 miles 23 chains in the case of railways under the direct control of the Railway Works Bureau, and 37 miles 17 chains in the case of those under the supervision of the Hokkaido Railway Office. As to private railway companies organised during the same period, the total is given at 17, with a mileage of 153 miles 70 chains. Of this number 16 have already commenced work with 129 miles of railway. Provisional charters have been granted to five companies already organised, for extensions of 82 miles, and 11 new companies have received sanction for the laying of 219 miles of line.

The following telegram from the Earl of Ranfurly to Mr. Chamberlain is an indication of the spirit which prevails in the Colonies in connection with the war:—People of New Zealand wish to express their endorsement of the position taken up by the Imperial Government declining to allow the intervention of any Foreign Power in the settlement to be arrived at with the Transvaal Republic and Orange Free State, and not to assent to either State being independent. My Government assures Her Majesty's Government that New Zealand will support to the last the Mother Country as far as lies in their power in maintaining that position which has been taken up irrespective of consequences. I am desired to add there are large numbers of men volunteering who are good riders and shots willing to go to South Africa for relief of the Imperial forces if the services of the latter will be required elsewhere.

A Japanese regatta organised by a society of which Mr. Otani Kahei is the president took place in Yokohama Harbour on Sunday afternoon. The committee of the Rowing Club lent the Boat house for the occasion, and the premises were crowded with Japanese and foreigner sightseers. A large crowd of Japanese also lined the railings along the greater part of the Bund. The proceedings commenced early in the morning, and lasted practically all the day, about seventeen races being run. The competitors were chiefly employes of the banks and big Japanese firms and also Japanese employes of foreign firms. Several handsome prizes were presented, among them being a fine silver cup given by the *Jiji Shimpo* office. One foreigners' race was included in the programme, but only two crews competed, one being composed of J. J. M. Carst, E. Levedag, Strome, and M. F. Stephens, and the other of W. Goddard, T. Abbey, H. S. Goddard and C. H. Abbey. The former crew won easily. The weather was beautifully fine, and a very enjoyable time was spent. Fire-works were let off at intervals during the day.

Some interest was excited on Friday morning by the presence of a number of policemen and a large crowd of loungers round the office of Messrs. Carl Rhode & Co., No. 70. All kinds of wild rumours—as usual in the case of rumours the exact opposite of the truth—were afloat, but it eventually proved that what was going forward was a visit from one of the Judges of Preliminary Examination connected with the Chiho Saibansho, who was making an examination of the contents of the godown. It appears that the question was one of trademarks. Messrs. Carl Rohde have long imported chemicals under a trade-mark representing a *torii* coloured red. This was registered in Europe, but in 1896, on applying to register it in Japan, the firm were informed that it had already been registered by Mr. Iwasaki, an Osaka merchant, as far as certain classes of chemicals were concerned. Messrs. Carl Rohde and Co. then applied for and were granted registration for the remaining classes of chemicals, and also applied on various grounds for the cancellation of Mr. Iwasaki's certificate. This was refused. Mr. Iwasaki offered to relinquish what he considered his rights for a large sum of money, but his proposals were declined, and he thereupon brought a suit against the firm for an alleged infringement of the Trade Marks Regulations. The visit of the Judge on Friday morning was in consequence of the institution of these proceedings. A number of cases and parcels were opened, but we believe that nothing was found which the firm were not perfectly justified in having under their trade mark.

An interview with Mr. Rhodes appeared in the *Daily Mail* recently in which grave charges were levelled against General Buller and Colonel Kekewick. The delay in relieving Kimberley was, in Mr. Rhodes's opinion, inexcusable. General Buller's instructions to Lord Methuen were "scandalous"; it would have been a "disgrace to England" had they been carried out. As regards the siege, Mr. Rhodes went on:—"I found plenty to do. We organised a troop of eight hundred horse, we built a cannon, we supplied water from the mines when the Boers cut off the water supply, we set up a soup kitchen and distributed ten thousand rations a day, and—ah! there was enough to do. The military worried us about all these things. They did not believe in them.' After giving various instances of alleged vexatious interference and unwarrantable neglect on the part of the military authorities, Mr. Rhodes actually contended that they had exaggerated the number of the enemy "simply because by doing so we account for bad generalship without confessing it." The *Spectator* has no desire to minimise the services undoubtedly rendered by Mr. Rhodes during the siege, and above all, the generosity which his worst enemies have never denied him; but it may be pointed out first, that his efficiency as a military expert is somewhat discounted (*a*) by his historic remark before the war about the Boer military resources being the greatest unpricked bubble in existence (*b*) by his connection with the humiliating fiasco of the Jameson Raid; and second, that there is a general consensus of opinion in quarters by no means hostile to Mr. Rhodes that Colonel Kekewich and his Staff grappled with the very serious problems of the civil situation in Kimberley with conspicuous tact and ability.

DEATH OF MR. WILLIAM BOURNE.

The death of Mr. Wm. Bourne, announced in to-day's issue, removes one of the oldest residents of Yokohama and a once familiar figure in the community. Mr. Bourne came to Japan 38 years ago, to the firm of Aspinal, Cornes & Co., and for a few years before that was a resident in China. For many years he was in business as an auctioneer and public tea inspector, but of late had not taken an active part in business pursuits. Since first leaving England he had not had the opportunity of revisiting his native land, and indeed, except for a short visit to Vladivostock a few years ago, had scarcely been beyond Treaty limits from Yokohama. For some time he had been in failing health and for the past few months confined to his bed, so his death was not unexpected by friends and relatives. One of the first foreigners married in Japan, he has lived in Yokohama to see children grown up and married, and leaves two sons in Canada, and a daughter in England, besides one in Japan, who was a most devoted attendant on her father during his lifetime.

The mortal remains of the late Mr. William Bourne were laid to rest in Yokohama Cemetery on Wednesday in the quiet hush of the early morning. There was a very large attendance of the older residents of Yokohama, as well as a number of the leading members of the great benevolent society of which the deceased had once been an active officer. The Rev. E. C. Irwine officiated, and at the close of the service made a few touching valedictory remarks. The chief mourner was Mr. C. G. Coningham, son-in-law; the pall-bearers were Messrs. H. C. Litchfield, G. H. Allcock, E. Flint Kilby, J. Winstanley, Geo. Hay, and Andrew Patterson. The coffin was covered with many beautiful floral tokens of respect and sympathy.

GERMAN NOTES.

The Crown Prince will not begin his academic studies in Bonn before the Spring of next year. He will meanwhile remain in Potsdam to complete his military course.

The German Post Office in Constantinople, which recently celebrated its twentieth anniversary, has opened a Branch in Pera. It is the intention to establish six or seven additional German Post Offices in the principal cities of the Turkish empire.

In the city of Stuttgart, Wurtemberg, an organization has been formed which has for its object the encouragement and aid of German settlements in Palestine. The Kaiser gave a subscription of ten thousand marks.

The distinguished traveller and explorer, Dr. F. Jagor, has died in Berlin at the age of 83. The greater part of his valuable private museum he had already given to the "Museum fur Wölkerkunde" and the remainder, it is believed, he has bequeathed to the same institution.

In Mayence an interesting discovery was recently made in the form of an ancient tombstone of a Roman soldier. According to the inscription he was from the city of Verona, and belonged to the first legion. The men of the First Roman Legion, according to the tombstones found heretofore, all hailed from Dalmatia, Pannonia, or from Thrace. The above is the first instance showing that one, at least, came from Italy.

The two great establishments which have supplied the Boers with guns are at present at war with each other. The *casus belli* is a gun-patent, and the battle-ground is the Palace of Justice in Paris. Krupp, of Essen, has made the "charge," and Schneider, of Le Creusot, is on the defence. According to German papers, the Court room had a somewhat warlike appearance. Even the day before the trial began heavy parts of siege guns were placed in "position," and instead of legal *plaidoyers* bombshells were presented, and described by expert engineers. The result has yet been reported.

A Japanese Commission, consisting of Dr. J. Yokoi, of Tokyo, Prof. J. Kozai, of the Agricultural Institute in Tokyo, and Prof. S. Hashimoto, of Sapporo, says *Das Echo* of Berlin, is at present in Germany for the purpose of studying the entire educational system of that country with the view of introducing the same into Japan as far as it may seem practicable. The Commission has received the necessary permission from the German Minister for Education, to inspect various schools, the common as well as the higher institutions, and also agricultural schools. It is the intention of the Commission to make an extensive and thorough study of the whole subject.

Mr. Ilg, a Swiss, who has for years been the most trusted adviser of King Menelik of Abyssinia, has recently returned to his native land on a year's furlough. In an interview with a representative of the *Neue Zuricher Zeitung*, he made some interesting statements with reference to the condition of things in that far-off Empire. He said one of the most difficult tasks during his late stay was the boundary delimitation between England and Abyssinia, after the late war in the Soudan. He speaks very highly of the present British representative at the Court of Menelik. Touching upon the reports about the attitude of Russia and France, he said that Russia's influence in Abyssinia has been greatly over-estimated. Moreover, Russia is too strongly engaged in Eastern Asia to pay much attention to Africa. The oft-named Leontieff has no close relations to the Government in St. Petersburg. He belongs to that type of adventurer whom Count Benyovesky represented in the last century. Leontieff is in the employ of a trading association whose headquarters are in Brussels, and whose object it is to explore the country around the Rudolph Lake, south of Kaffa. In order to secure him an "existence," Menelik entrusted him with the management of district No. 1 of the so-called Equatorial province. Mr. Ilg thinks that neither Russia nor France could induce Menelik to attack England in Africa, and the talk that he was marching to the frontier with 40,000 men was entirely without foundation. That the French endeavoured to induce Menelik to go to the Paris Exhibition is true. The Eiffel tower is evidently no longer a special attraction and Menelik was to be the clou de l'Exposition. It is not likely, however, that he will go.

CHINA NOTES.

The *Tokio Maru*, which was wrecked on the Miaoto Islands, Gulf of Pechili, was sold by auction by Messrs. Hopkins, Dunn, & Co., at Shanghai. There was a large attendance and the bidding was brisk. Finally the ship was sold for Tls. 11,250 and the cargo for Tls. 6,250 to Chinese purchasers.

Captain Deasy, who recently returned to England after two years' exploration work in Central Asia, was invited to describe his experiences before the members of the Royal Geographical Society at their meeting on April 2. Captain Deasy, whose health completely broke down under the hardships which he endured, especially at the hands of the Chinese authorities, did altogether about 5,200 miles of caravan work, his sphere of operations including Chinese Turkestan and Tibet.

Mr. M. Boyd Bredon, who was Commissioner of Customs at Chefoo during the China-Japan war, died at Swatow on the 19th April, in his forty-fifth year. A relative of Sir Robert Hart, the deceased entered the Chinese Imperial Maritime Customs in 1884, taking the position of Private Secretary at the Inspectorate, Peking. In 1884 he was the assistant in charge at Hoihow, and he advanced by promotion until appointed commissioner. The Chinese Civil Rank of the Third Class was conferred on him on 2nd July, 1893, and the Order of the Sacred Treasure, Fourth Class of Japan, in July, 1896.

At the Hongkong Magistracy on April 24th Ruben Carr, boatswain's mate on the *Empress of India*, J. Adamson, T. Shay, Geo. Murray, and T. Collins, A.B.'s on board the same vessel, were charged with stealing $900 odd, the property of a Chinese money-changer named Yuen Fai, in Yokohama Harbour on the 9th April. As our readers remember, it is alleged that when the Chinaman went on board the money was taken from him and the prisoners subsequently divided it among themselves. The vessel was detained at Yokohama for three hours, during which time an investigation was made by the Japanese authorities, but their investigation was fruitless. Subsequently certain information came to the ears of the officers of the *Empress* which led to the arrest of the men named. Then Carr promised to turn Queen's evidence. After several witnesses had been heard, including Carr, who gave a circumstantial account of the robbery, and the division of the spoil, the men were remanded until the arrival in Hongkong of the prosecutor.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense, responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE INCOME TAX.

To the Editor of the "Japan Mail."

Sir,—We have observed some timely remarks in your issue of to-day in regard to the forwarding of the statement of incomes. We wouldask you to add one thing more. There are some foreigners who have not forwarded statements of incomes because they receive salaries from their own countries and not from Japan, and therefore consider themselves not liable for Income tax. This is, however, a misinterpretation of the Law, which demands that every person who, residing in Japan, enjoys an income of 300 *yen* or upwards per annum for service rendered in this country shall pay tax whatever the source of the payment. Such persons should report at the earliest convenience.

Your respectfully,

TAX ADMINISTRATION BUREAU.

Tokyo Tax Administration Bureau.

May 4th, 1900.

[It appears regrettable and useless to delay the forwarding of these returns. The taxes have to be paid sooner or later, and nothing is gained by unwarrantable reluctance.—Ed. *J. M.*]

CHARACTER OF THE INCOME TAX.

To the Editor of the "Japan Mail."

Sir,—In regard to the matter of imposing the Income Tax on money derived from renting lots in the former Concessions, we have this to say:—

Suppose a man owns a lot. Under the Income Tax Law should he pay an income tax on money derived from the land? Is not the tax already paid levied for the use of this land? If he must pay the Income Tax while he permits another party to use the land, then would it not seem consistent for him to pay the tax while he himself occupies it? On general principles the land is as profitable to him while he himself occupies it as it is while another occupies it.

Suppose he goes into business on his lot and derives an income of, say 5,000 *yen*. He goes into business on other premises which cost him 1,000 *yen* a year, and his income is still 5,000 *yen*,—net income being 4,000 *yen*. But he has rented out his own lot for 1,000 *yen*. On what will he pay the Income Tax? In the first case, 5,000 *yen* have passed into his hands. In the latter case, 6,000 *yen* have passed into his hands, but 1,000 *yen* of it have passed out. In both cases he has cleared just the same. In the first case, if he pays a tax on 5,000 *yen*, he will pay nothing on anything derived from the land. In the second case, if he pays on 6,000 *yen*, he will be paying on 1,000 *yen* derived from his lot, But in the first case his lot has been worth as much to him (1,000 *yen*) as in the second case.

If the rental value of his land should be assessed, and an income tax imposed while the owner occupies it himself, would that seem contrary to the Treaty? It seems to be conceded that it would. But the owner has derived an income of 1,000 *yen* from his land. Now, if he permits another to occupy it, and

Digitized by Google Original from CORNELL UNIVERSITY

derives exactly the same income, but in a different way, would it be in harmony with the Treaty to impose the Income Tax in this case and not in the other? We confess our mind is too abtuse to see the difference.

Again, was it understood by the Treaty Making Powers that the taxes imposed by treaty were on the basis that no income was to be derived from the land? Can such a supposition be possible? But is not that supposition involved in the non-imposition of the tax while the owner occupies the land himself? Does not the owner, however, derive a true income,—the rental value of the land? And if while he occupies the land himself, no income tax is imposed, why should he pay this tax when he permits another to occupy it and derives the same income? Especially, why should he pay this tax when the tax he already has to pay covers it?

The very principle of an income tax is antagonistic to sound philosophy. It has given endless trouble wherever tried. It is a demoralizer of the human conscience,—an exhaustless source of deception. Some better method of taxation ought to be adopted.

Very truly, E. SNODGRASS.

Tokyo, May 7, 1900.

AMERICAN NOTES.

Admiral Dewey is said to be beginning to regret that he ever adventured on the stormy sea of party politics.

The United States Supreme Court on April 16th handed down a decision stating that Ashland, Wis., is the terminus of the Northern Pacific Railway instead of Duluth, Minn. Through the decision the road comes into possession of large tracts of valuable timber and agricultural lands.

United States Minister Irwin, at Lisbon, has reported to the Department of State that the Portuguese Government has made all necessary arrangements for the payment of the judgment (amounting to almost $5,000,000) on account of the award of the Delagoa Bay arbitration. As stated in the House of Delegates by the Portuguese Minister for Foreign Affairs, the money can be realized upon the Northern and Eastern Railway bonds, and the Lourenzo Marquez Railway will remain in the possession of Portugal.

The new Brooklyn bridge will be larger and stronger than the present one. All underground caisson work, pier foundations, and the anchorages on both sides of the river are now completed. The width of this enormous structure when complete will be 118 feet over all, including foot-walks of twelve feet each, two bicycle-paths of seven feet each, elevated railroad and trolley-car tracks. The entire length of the bridge from terminal to teriminal will be 7,200 feet.

Complying with a resolution of inquiry, President McKinley sent to the Senate on April 16th an itemized statement of the expenditures of the Philippine Commission. The statement includes the following items:—Compensation of $10,000 each to Commissioners Schurman, Worcester, and Denby, $30,000; per diem allowance to Commissioners after their return to the United States, $5,285; secretary to commission (compensation $8,500, per diem $3,660), $12,200; transportation, $13,687; household expenses in Manila, $9,252; clerical services, $31,701; miscellaneous, $14,988; total, $117,185. The President also transmits with his indorsement a recommendation from Secretary Hay that provision be made for payment to the naval and military members of the commission (Admiral Dewey and General Otis) at the same rate as that paid to the other members. He says they have received nothing for their services in excess of their regular salaries.

Dr. William R. Harper thinks that the league of representative colleges formed recently at Chicago is "the most important movement that has taken place in higher education in this country in fifty years." The objects of the association are declared to be all matters of common interest relating to graduate study. It will also consider the advisability of requesting foreign universities not to admit American students to the examination for the degree of Doctor of Philosophy unless they have already presented a bachelor's degree from an American college or university. The chief aim of the organization, therefore, is to enable American institutions of learning to work in harmony and to raise and make uniform the requirements for higher degrees. It is thought that such united action will raise the standard of many colleges which otherwise now do not meet requirements for graduate work. Yale, Harvard, Princeton, Columbia, Cornell, Johns Hopkins, University of Pennsylvania, he University of California, the University of Chicago, Leland Stanford University, the Catholic University of America, the University of Michigan, the University of Wisconsin, and Clark University have thus far cooperated in the movement, and it is hoped that other institutions will seek admittance into the association. Such united action will have a twofold influence, not only making a Doctor's degree mean more, but also keeping the graduate student abroad in touch with the university at home.

Within the present year a considerable addition in numbers and tonnage will be made to the steamships owned by the great transatlantic lines. It is stated that five new vessels will be placed this spring on the service between New York and other Atlantic ports and those of Europe, while there are other ships contracted for or building which will bring the number up to fully twenty-five. It is noted that some of the new steamships are intended for freight traffic exclusively, and in other instances the new liners will take the place of older ships. The fact that the transfer of part of the fleets of the English lines to the British transport service has crippled those companies temporarily at a time when passenger business is on the largest scale and freight transportation from America to Europe is liable to make new records, has naturally stimulated this movement. At the same time, it may be said that none of the new vessels, except possibly those of the German lines, are being constructed with a view to record-breaking speed.

Administration leaders have agreed upon the issues and articles of Republican faith which will be incorporated in the national platform to be submitted to the Philadelphia Convention for ratification. A rough draft of the Republican party creed has been accepted by Republican leaders of the Senate and Republican national committee-men. The opening declaration will be a hearty endorsement of President McKinley and a tribute to his personal management of the most brilliant military and naval achievement of the close of the century. Unqualified approval will be accorded to all the administrative acts. The establishment of a gold standard will be dwelt upon, and a plank will be devoted to renewed allegiance to the gold standard. The keynote of the platform will be the expansion issue. A strong, clear utterance in favour of the retention of the Philippines and of a vigorous foreign policy will be delivered. There will be no positive affirmation of the right of the U.S. Government to govern the Philippines, as that must be left for future adjudication. The policy of protection will be affirmed and the platform will pledge the party to the support of the doctrine of reciprocity. A greater merchant marine and liberal pension laws will be demanded, and the Monroe doctrine reasserted. The Nicaraguan canal will be supported if no action is taken at this session of Congress. The developments of the near future in Cuba and the outcome of the municipal election next month will largely shape the policy toward that island. Among other planks in the platform will be one in favour of an augmented navy, others in favour of civil service, free homestead, restriction of immigration, and temperance, and woman's suffrage will also have a place in the platform.

During March the record of new companies incorporated with $1,000,000 capital or more was very heavy, the total for the month aggregating $502,000,000. The incorporations were distributed as follows: New Jersey, $296,900,000; Delaware, $21,5000,000; West Virginia, $28,500,000; Maine, $4,500,000; other States, $151,500. The large total may be partly accounted by the incorporation of the Carnegie Company with a capital of $160,000,000.

Major-General Arthur MacArthur, who succeeds Gen. Otis in the Philippines, has been one of the three great fighting leaders in the Philippines, the other two being Loyd Wheaton and the late Henry W. Lawton. General MacArthur was the last of the Brigadier-Generals ordered to the Philippines when General Merrit was organizing the Eighth Army Corps there. His knowledge of tactics is extensive and he is looked upon as an authority on field movements, and the ability with which all his campaigns in the Philippines have been carried on has won him the highest praise. His reckless personal bravery and dash make him exceedingly popular with his men. Gen. MacArthur was born in Massachusetts on June 2, 1845. He went into the Civil War as a First Lieutenant of the Twenty-fourth Wisconsin Infantry in 1862. At the age of 18 he was decorated with a medal of honour, and was the permanent commander of a fighting regiment at 19. When the Civil War was ended he received an appointment as Second Lieutenant in the regular service, and reached the grade of Captain five months later. For twenty years he fought Indians in the West. During the early part of the Spanish war he was at Tampa and Chickamauga, where he assisted in the mobilization of the Army. Until just before his departure he was a Lieutenant-Colonel in the Adjutant-General's Department. He was promoted Major-General of Volunteers for his services at the capture of Manila from the Spaniards August 13, 1898.

The civil government, with the Taft Commission in supreme control, is to supersede the present military government in the Philippines on July 1st. The comt mission is to have plenary authority, and one of its firs- acts preliminary to, or simultaneous with, the inauguration of a general civil government, will be the issuance of a proclamation granting amnesty to all natives who may still be in insurrection on the condition that they lay down their arms and pledge their allegiance to the new government.

TAMSUI AND TAIPEH.

A correspondent of the *Hongkong Telegraph* writes:—At the present time we have two most interesting object lessons we might say almost at our gates, the first attempts of two young countries at colonization; Japan in Formosa and America in Manila. It would be inviduous to draw comparisons, so I will only give an idea of the progress that has been made by the Japanese. When taking a bird's eye view preparatory to criticism on this subject it must always be remembered that Japan, as a factor in the world's calculations, is extremely young; scarcely fifty years having elapsed since her first reception of western ideas. Again it must be borne in mind that Formosa is not a colony but more correctly a conquered island. This makes a great difference. The Chinese themselves had formerly conquered the land, but had never been able to make themselves absolute masters of it; in this the Japanese have had far greater success, as the whole of Formosa may now be said to be in a settled state. There are still some savages, who have not tendered their allegiance to the Government, but they are comparatively few and living in the interior of the island. Actual rebels there are none, but an occasional robbery with violence still takes place. The Japanese must therefore be complimented on having attained so much good in a little over five years. There is a peculiar superstition among the aborigines (not savages) that has operated against the conquerors. It is not generally known that some 250 years ago the Dutch occupied Formosa and made their presence very beneficially felt among its inhabitants. They built forts and introduced trade; the old red brick building now occupied by the British Consulate in Tamsui is one of these old forts. Around Anping their remembrance is still venerated by the natives. They were eventually expelled by the Chinese admiral or pirate Koxinga, but they left the impression that they would some day come back again to be the saviours of the Formosans from their Chinese conquerors. This idea is still strong, and though these

Digitized by Google Original from CORNELL UNIVERSITY

natives have since adopted Chinese dress and manners, until very recently it was feared that, should a hostile man-of-war come into a Formosan port, the natives would mistake her for the Dutch come back and would rise to a man against their present rulers. I need hardly say that the Chinese do not love their former victors, and it is a well known fact that the relations between Japan and Russia are strained. Taking all these considerations into account it is not fair nor honest to expect too marked an improvement by Japanese rule, but still there is a great improvement and one that shows unmistakeable signs of future growth.

To a Britisher perhaps much of the system of taxation, officialism,and red-tapeism calls for unfavourable comment, but it must be borne in mind that Japan is ambitious, her Government is fostering trade extensively all over the world, and they are spending immense sums of money. "Money is the root of all evil" and when a country has to pay ten per cent for capital it is not hard to imagine that there will be some grumbling at the taxation by which the money has to be repaid.

To thoroughly understand the progress made in Formosa a knowledge of China and Chinese rule is necessary, a country without any of the western requisites of civilization, with a government that is no government, taxes levied in the shape of squeezes, and the people allowed to do very much as they pleased as long as they were not found out. The Japanese have altered all this. There is a government and it makes itself felt; taxes are levied on all alike; there is a strong police department, everybody's circumstances being well known. Roads are built, embankments erected, railways constructed and kept in working order. This costs money, and as it is not done by private enterprise the Government is obliged to maintain a large staff of officials. There is no doubt of the necessity for these improvements, but it is greatly to be feared that Japan has been rather too premature. The money raised in the island is certainly spent there, but that does not have very much effect in making John Chinaman any more contented with the paying of taxes; by nature he strongly objects to pay, is endowed with a vast amount of passive endurance, and is able to live where others would starve; the consequence is that many of the tea farms are going out of cultivation. I am not acquainted with the taxes levied in Ceylon and India, but in Formosa they are $2.70 per picul transportation tax, or *lekin*, if to Kelung, to Kobe $1.00 habour dues, but if to Tamsui to Amoy $1.60 export duty. The two last taxes are not finally settled, the foreign Powers maintaining that they mean preferential rates. Any way the tax amounts to $3 a picul or $1 a chest. Other countries impose import dues. The manufacture of tea is expensive and the freight heavy, so it can easily be seen that the actual farmer gets very little for his share in the production. He certainly gets greater facilities for transportation, but he would far rather put the money into his own pocket.

Japan has made a mistake; with true Oriental spirit she has started at the wrong end. Instead of opening up her harbours, removing the bars, etc., so that ships could enter at all times and find safe anchorage, she has started in the interior building fine Japanese cities and maintaining too many official and guardians of the law; this, besides other great drawbacks, has left the coast practically open to invasion, so she cannot be secure in furthering her good work in the interior. Tamsui can only be entered once a day at high tide; communication between Taipeh and its port, Tamsui, though only separated by twelve miles of river, can only be obtained twice daily for the same reason. Immense sums of money have been spent in Taipeh, and still nothing done as regards dredging. In Anping matters are far worse; ocean steamers cannot enter the port at all, having to anchor about four miles off in the roadstead, and in stormy weather not even that, while communication with the port is totally interrupted.

M. H. W.

RUSSIAN AFFAIRS.

The extraordinary interest taken by Russians in the South-African War, and their absolute condemnation of England in connexion with it, continue to be a source of profound astonishment. It is alleged that if any one, a few years ago, had ventured to predict such excitement among the provincial Russians about so remote an event, he would have been considered insane. The press, doubtless, is chiefly responsible for the state of affairs, for in Russia there is no corrective to the press—no public discussions, no frank utterances of statesmen, no parliamentary explanations. Speaking of the Sphinx-like silence always maintained by the Russian Government, the St. Petersburg correspondent of *The Times* says:—

To a great extent this is due to the fact that the Russian Government is not a Cabinet, but one of separate Ministers without cohesion and with widely differing aims. This is a terrible organization, and a powerful and useful method of procedure as regards foreign relations. It makes Russian policy so much easier and puts every other European country at a great disadvantage. When the Imperial intentions are in fact made known to foreign Powers through their representatives in St. Petersburg, as in the recent case of the Tsar's sympathetic assurances to the British Ambassador, the foreign Governments receiving such information seem to be seized by the same Russian desire to keep it dark in spite of the good effect that its disclosure would often produce. We may be pretty sure that had the Emperor's remarks to Sir Charles Scott been openly repeated in an authoritative way or made the subject of a communication in the official or semi-official journals the tone of the Russian Press in regard to the South African war would have been very different from the actual one, and certain lamentable incidents between Englishmen and Russians, the latter wearing his Majesty's uniform, would most probably have not occurred. In no other country is *suprema lex regis voluntas* as true and applicable as it is in Russia when once the will of the Monarch is properly made known.

The same correspondent makes the following interesting comments with regard to the rumours which recently attributed warlike intentions to Russia and credited her, at the same time, with having taken the initiative in refusing to hamper England's action in South Africa:—

It is difficult to understand what can be meant by the statement, published in London and reproduced here, pointing out that England is indebted chiefly to Russia that there has been no diplomatic interference in South African affairs. This is specially absurd after the declaration of a French Minister that Russia had taken no steps whatever in the matter. There has certainly been some reason for mistrust in the suspicious military movements and preparations in Southern Russia and near the Afghan frontier, but this may in a great measure be due to the peculiar circumstances which I have tried to explain above. In any case the name of General Kuropatkin, the War Minister, has in consequence become almost synonymous with hostility towards England.

This is, of course, an exaggeration like certain other circumstantial details about the same personage which have gone the round of the London Press. What is certainly true is that General Kuropatkin's whole career has been intimately connected with Russian advances and military plans in Central Asia. Having been the *alter ego* of Skobeleff, he inherits all the traditions of that famous officer, while possessing a much cooler and more calculating temperament. He has the most definite schemes for the future of the territories bordering on the Indian Empire, and his chief attention appears to be turned in that direction. Of all the War Ministers that Russia has ever had he is the most important as regards England, either for peace or war on the Indian borders. People here now talk of the defeat of the Kuropatkin party—that is, the military party—since it is seen at last that nothing serious was ever intended. What, however, many persons fail to appreciate is that Russia is a far more military State than even Germany. Russian writers, who formerly complained of German militarism, always ignored the fact that there was much more real militarism in their own country. This they were bound to do by the Press regulations, but in support of the truth of the assertion I need only point to the circumstance that the whole of the civil administration, in nearly all the principal Russian provinces in Europe as well as in Asia, is under the supreme control of military governors. In such a state of things there are nearly always military movements and experiments going on somewhere over the vast expanse of the Empire, and those are very liable to be misinterpreted by persons who take too narrow a view of Russian affairs. The other day a friend showed me a letter from a very large employer of labour at Moscow, stating with some expression of alarm that over 1,000 of his workmen who belonged to the army reserve had received orders to be ready to rejoin the ranks. He had evidently not seen a recently-published order calling out certain classes of reserve men for annual training. In the same way the military movements southward, and consequent delay caused on the railway, are, no doubt, preparations in view of the approaching manœuvres on a large scale in which General Kuropatkin himself is to take a command. They may also have something to do with the visit which the Emperor and Empress will probably make to Livadia, in the Crimea, after Easter. At the present moment the Paul Regiment of Foot Guards in St. Petersburg is fully mobilized, and the space in front of their barracks is crowded with carts loaded with baggage and fodder for their marching out in complete campagning equipment.

Concerning Russia's answer to the appeal made by the Boer Republics, *The Times* correspondent says:—

The Russian Foreign Office has sent an answer to the Boer appeal for intervention in terms very similar to these used in the replies of the other Great Powers. I understand that it most resembles the reply of Holland. It endeavours to show the greatest possible sympathy with the Boers and the greatest possible regret at being unable, in the circumstances, to comply with their request. Had Presidents Kruger and Steyn applied to the Powers first before telegraphing to Lord Salisbury, there is some reason to believe that the British Government would have been approached on behalf of the belligerent Republics. Undoubtedly the result would have been the same, but after the categorical and irrevocable statement made in Lord Salisbury's answer to Mr. Kruger it was impossible for any of the Governments to take the matter up in the face of that decision.

The *Vostotchny Viestnik*, a Vladivostock journal, publishes the following:—

"About the end of December last the various station authorities received written instructions to examine and *viśé* the permits of residence of all Chinese living at the stations and in the various small villages near them, and to detain and conduct to the headquarters of the district all who were unable to produce the necessary papers. A large number of dwellings occupied by Chinese workmen engaged in the construction of roads are scattered throughout the district. Acting on the instructions received by them, the authorities caused several of these dwellings to be completely surrounded, after which 130 Chinese who were found to be without passports were summarily arrested and escorted to the chief of the Cossack district in Poltavka. The matter would apparently have ended there had not the local Cossacks determined to make the most of the opportunity presented them by the enforced absence of the rightful owners, who had just been drafted off under arrest. The Ataman of the village of the Andrevka, in company with a band of Cossacks and a Tchinovnik, made a nocturnal descent on the dwelling of a comparatively well-to-do Chinese contractor on the very evening of the day of the arrest of its owner, and, after demanding and obtaining spirits and beer, took possession of the house. Under the pretext of searching for arms, the Cossacks then broke open a chest, demolished everything that they could lay their hands on under the very eyes of the Chinese, who stood by helpless and terror-stricken, and eventually took their leave. The same thing was repeated in other places, with the result that the predatory conduct of the Cossack band had at last to be brought to the notice of the chief Russian judicial authorities in the Far East.

The methods of Nihilism are very terrible. Recently the Russian police discovered the secret printing press of the Nihilist journal *Rabotonik* at Lodz in Poland. The plant was seized and seven arrests were made, five being labourers, one a student, and one a woman. Nevertheless a new number of the journal appeared. It gave the name of the working man who had betrayed the hiding place of the paper. Shortly afterwards he was found stabbed to death in the street.

We have so often had occasion to refer to utterances of the European press hostile to Great Britain that it is pleasant to be able to reproduce the following from the *Novosti*:—

"It is only a few short weeks since the leading papers on the Continent were demonstrating that, as sure as twice two are four, the English must prepare themselves for serious misfortune in the shape of the capitulation of Ladysmith and Kimberley, since the catastrophe was unavoidable. After the relief of these fortresses, however, and the surrender of Cronje and his army these same strategists undertook to show that the difficulties awaiting the English force between Kimberley and Bloemfontein were so great as to be insuperable, *ergo* Great Britain would be only too glad to come to terms before reaching Bloemfontein. How far these predictions have been verified by results may be judged from to-day's laconic telegram announcing that French has already entered Bloemfontein. We are certain that the cost of the campaign between Bloemfontein and Pretoria will be a heavy one to the English, but we decline to give ourselves up to illusions merely on this score. That the Boers themselves are now thoroughly undeceived with regard to the final result of the war is shown by the telegram announcing that Kruger has put himself in communication with the Consular representatives of Germany, Holland, and the United States with the object of obtaining the interference of their Governments in order to hasten a conclusion of peace. As far as Germany is concerned, it is evident that the Boers have nothing to hope for in that quarter, and as for interference on the part

Digitized by Google Original from CORNELL UNIVERSITY

of President McKinley, or Queen Wilhelmina, it is difficult to conceive how the request can lead to anything, for the very simple reason that the proposal emanated from only one of the belligerents. The German Emperor, at any rate, reasonably supposes that it is a *sine qua non* before offering his services that both sides should be parties to the proposal. But England has no intention whatever of referring herself to any outsider in the matter, and reckons on concluding peace only on such terms as it will suit herself as conqueror to ratify. Kruger's efforts on the one hand, and the readiness of the neutral Powers to meet his wishes on the other, will hardly stop the march of events. England's wish is to conclude peace nowhere short of Pretoria, and just at the moment we have good ground for supposing that she will get what she wants."

Another leading Russian journal says :—

"The reply of the British Government to the telegram of Kruger and Steyn is the event of importance at the moment. It was not difficult to forecast what its tenor would be. In the British Ministry are men for whom the prospect of a fight "to the last drop of blood" has no terrors, just as the prophecy of President Kruger that the Boers would experience final defeat only after sacrifices which would "stagger the whole universe," failed to strike terror into them. They are men who know the value of oracular bombast and have not forgotten how the French would entertain the idea of peace with the Germans only on the imperative condition that the latter should appropriate "neither a single mètre of French territory nor a stone of a French fortress." They are firm in the belief that now, as in the time of Napoleon I., God is on the side of the big battalions, and refuse to allow the very idea of the continuity of the independence of the South African Republics to enter into their reckoning. "Ground arms, and ground them unconditionally," is the demand of the English nation. It is quite possible that the demand will, for a time, at any rate, rouse the Boers to a vigorous opposition, and that blood will continue to be shed with a lavishness born of exasperation. But in the end the big battalions will accomplish their task, and accomplish it, in all probability, with despatch. What the Boers are capable of we have seen already, and the fact is undeniable that the universe has so far marvelled alike at their valour and their ability. At the same time we must not forget the object lesson we have received of British capacity. A demand for unconditional surrender, if really tendered, will, without a doubt, evoke an outburst of anger throughout the whole of Europe. Moreover, it would deserve it, for such a demand would be tendered without any necessity, and solely with the object of smoothing the ruffled plumage of an egotistical, though by no means numerically significant, section of the British community."

As an example of the aspirations of the forward party in Russia, the following is translated from the *Sviet* by the Odessa correspondent of *The Times* :—

"The settling down of English subjects in Baluchistan and Southern Persia only serves as an indication of the supreme shamelessness of the English nation, which desires to appropriate everything to itself. The English forget that the stretch of territory to the south of Russia right down to the Persian Gulf and the Indian Ocean, between the degrees of longitude corresponding to the position, on the west, of Batum, and on the east, of Samarkand, is a sphere of influence indubitably Russian. In this region whole kingdoms, such as Persia, Afghanistan, and others, might exist and continue with us in the closest bonds of friendship. Besides ourselves no one can preserve these possessions, and neither the English nor the Germans can in any circumstances be permitted entrance into this region, a sphere of influence which is absolutely and naturally ours. In spite of this, cases of arbitary incursion and tent-pitching in these localities are constantly being brought to our notice; for example, according to information recently received, the English agents in Nuski, in Baluchistan, and in Kirman, in Persia, have established a postal service between these towns, and are now engaged in the construction of a telegraph line in addition to despatching caravans and making preparations for the construction of a railroad. It is really impossible to countenance other people's disposition of themselves in territory which at an early date in the century will constitute the principal outlet for the whole of the economic life of Russia and the fount of all her international relations.

"It is no longer a matter for doubt that the *rôle* which will be played by the Indian Ocean in the very near future is the *rôle* which up till now has been played by the Mediterranean. There will be found the great highway of the world; there will be found the main artery of the world's traffic, and can a huge State remain on the byroad? The expulsion in a determined manner of the English who are attempting to root themselves in Baluchistan and Southern Persia is imperative. It is high time to found in these regions a free Cossack settlement which will allow no arbitrary action on the part of the British, and which will open out new national paths for the future, as was opportunely done in Siberia, Central Asia, and the Caucasus. It was in this manner that the dwellers in the regions beyond the confines of the Empire made a road for themselves to the Black Sea, the inhabitants of the Don region to the Sea of Azoff, the inhabitants of the Urals to the Caspian, and the Cossacks of Siberia to the great Pacific Ocean. At the present moment a consciousness of its national requirements is deep-rooted in the Russian people, whose vital activity, far from exhausted, seeks only a straightforward and valorous issue."

AN OPINION FROM WITHIN.

As a contribution to the discussion that has taken place, and is still taking place, with respect to the responsibility for the South-African War, the following may be commended to the attention of some of our recent correspondents :—

Mr. H. M. Arderne writes from Cape Town :—"The public of England, especially the religious public, have such erroneous ideas on the subject of the Boer war that any genuine statement of the real facts of the case coming from a trustworthy source should be hailed with satisfaction, more especially when the facts come to us not from one of ourselves, but from the enemy's camp. I have much pleasure, therefore, in enclosing a remarkable letter from the Rev. A. A. van der Lingen, the pastor of the Dutch Reformed Church of Harrismith, in the Orange Free State, who some time ago was a candidate for the President's chair of the said State. The letter appeared in a late issue of the *Cape Times*, and created considerable impression here and was read with deep interest. It may be of some interest to your readers to know that nearly every minister of the Gospel in South Africa, numbering over 600 (excluding the Dutch Church), and representing Anglo-Episcopal, Scotch Presbyterian, Wesleyan Church, Baptist Church, Congregational Church, and the London Missionary Society, including the Rev. Dr. Stuart, of Lovedale, and the Rev. J. S. Moffat, of Kuruman, cordially endorse the sentiments of this letter and strongly support Sir A. Milner in his policy."

The following passages from Mr. van der Lingen's letter, which is dated February 2, will show the character of the advice he gave. Their leaders, he told the Free State burghers, were bringing them to degradation and ruin :—"They never consulted you, and they alone are responsible for this unholy and wicked war. Without just cause they made you go forth and fight, and then left you without the bare necessaries of life to endure untold hardships and suffer sacrifice and death. Why? You know full well that your country's independence was Great Britain's holy bond. Your leaders, however, wilfully treated her with the utmost contempt and insolence. But she loved you, and fain would not believe you could be so ungrateful as to hate her. She is in sorrow for you. Her shelter and protection she has ever extended to you, and her heart bleeds from the ingratitude with which you have so unkindly stabbed her. You had Sir Alfred Milner's assurance—or, rather, it was given to President Steyn—that in the event of neutrality your country would be respected. But, forsooth, it was your Government that declared war; and be it remembered that without your Government's co-operation war would, no doubt, have been averted. No! Your leaders had not the welfare of your country at heart. They were victims to the influences of motives of individual gain. Greed of filthy lucre represented their better parts. . . . Do you not know that thousands of your own kith and kin are enjoying in Natal and Cape Colony a full and perfect measure of equity and justice which, as administered by Great Britain, is unparalleled in the world for perfection? . . . The President is reported to have said 'that the Lord will never permit the subjection of the Afrikander by the English.' Subject, indeed! In all fairness I ask you has England ever threatened the Afrikander with subjection? When, where, and how? I should need have to pause for reply. Truly the reverse of subjection has been my happy experience. Has England put any obstacles in the way of your kith and kin entering Parliament in Natal or the Cape? Politically the English and Dutch are on the same footing entirely. Free liberty of the Press is given alike, and in every walk of life there is no preference given to the Englishman over the Afrikander. The Chief Judge of Cape Colony, Sir Henry de Villiers, is an Afrikander, and, moreover, is a Privy Councillor of her Majesty Queen Victoria. England has never suppressed the Afrikander. His schools, colleges, and seminaries are properly supported by England all round in the Cape Colony and Natal. Alas! in the face of England's magnanimity and liberality President Steyn turned his back and in his inferences as respect that country the shameful mendacity of the man is glaringly revealed. . . . Fellow countrymen and burghers, it is in your interest and it is your holy duty as burghers of the State, as members, too, of a Christian Church, and so responsible to your God for your manhood, to repudiate the action of your leaders, who are daily leading you further to the brink of total disaster. Take the friendly hand that Great Britain will for your shaking never withdraw. The greatest civilizing Power that the world has ever seen is built on the foundation of peace and good-will among men. Come to her and all will be well with you."

THE EDITOR AND THE LITTERATEUR.

Professor Mathews, in the *Forum*, writes thus to prove his thesis that journalism and literature are incompatible and almost hostile the one to the other :—

"The man of letters is almost the exact antithesis of the newspaper man. He seeks above all things to express himself—to give form to a something within him that is striving to be born, to body forth his own vision of life, to record once for all his own understanding of the universe. He toils joyfully, without haste and without rest, never quitting his work till he has done his best by it, until at last he knows it to be as perfect as he can make it, however dissatisfied he may remain with his final achievement. The object of his effort may seem but a trifle—a little lyric or the briefest of short stories; yet he never relaxes his standard, believing that the Tanagra figurines called for as keen a conscience in the artist as the Attic marbles themselves. Though he may work swiftly when the mood is on him and the Muse inspires, he is never in a hurry. And where the journalist writes every night what must be forgotten before the next new moon, the man of letters may keep to himself what he has done, even for seven years, as Horace advised; and in all that time again and again he may bestow on it ungrudgingly the loving labour of the file.

"Thus we see that journalism is a craft while literature is an art; and that the two callings are almost irreconcilable. The practise of one of them tends to unfit a man for the practise of the other. There are journalists, not a few, who have become men of letters, and there are men of letters who have gone on newspapers; but I can not recall the name of any man who won equal fame in both vocations. Bryant was a poet who was also the chief editorial writer of a daily newspaper; and one of his biographers tells us how careful Bryant was to do all his journalistic writing in the office of the paper itself, leaving his own home free from any taint of contemporary pressure. And there is an anecdote of Bryant that illuminates the conditions of journalism. A friend repeatedly urged him to advocate a certain cause, and supplied him with facts and arguments in its behalf. Finally, an article appeared, and Bryant asked his friend if it was not satisfactory—if it was not good? The friend responded at once that the article was too good altogether, too complete, too final, since Bryant had said in it all he had to say on the subject, and, therefore, would not recur to it again, whereas what his friend had wanted was, that the editor should take up the case and keep on writing about it, day in and day out, until he had really aroused public interest in it."

THE MACRUM CASE.

The Macrum case has ended in a fiasco. Mr. Macrum was formerly United States Consul at Pretoria. He left his post because, as he alleged, his mails had been opened by the English authorities. His examination before the Foreign Affairs Committee of the House of Representatives had this result :—

He said that he understood, while he was at Pretoria, that the British were in possession of the United States cable ciphers. He could not affirm that fact from actual knowledge, but on November 6 he cabled to the State Department in cipher asking for leave. His message passed through Durban. He was informed on the following day that a newspaper at Durban had printed the facts that he had requested leave of absence. The message was sent in the State Department cipher of the Slatter code. He did not know whether the report of the publication of his application was accurate; he himself never saw it. The first actual evidence of the opening of his mail was the receipt of two opened letters. He did not inform the State Department that his mail had been opened. A letter from Mr. Hay to the committee was read, in which the Secretary of State said that Mr. Macrum had made no representations regarding the opening of his mail. Nevertheless, Mr. Hay mentioned the matter to Lord Pauncefote, who was afterwards informed from London that the British Government was not aware of any such inci-

Digitized by Google Original from CORNELL UNIVERSITY

dent, and that if it had occurred what had been done was contrary to instructions.

On March 21, Mr. Stowe, United States Consul at Cape Town, informed Mr. Hay that two letters from the Consulate General at Cape Town, one to Pretoria and the other to Lorenzo Marques, had been opened by the censor at Durban. Sir Alfred Milner afterwards offered a very satisfactory apology.

The committee took no action with reference to the making of a report. Members of the committee state that nothing is to be done beyond the taking of testimony. Mr. Macrum's case fell flat and failed to impress the committee favourably.

The New York *Times* comments thus upon the incident :—

"Poor Macrum! Thanks to the mistaken kindness of the House Committee on Foreign Affairs in assuming that the ex-consul's requests for an investigation of his charges were sincere, his microscopic wrongs and his mountainous follies are now public property. The result is that the final condemnation of his course, long held back by the hope that the man had some slight excuse, other than treachery or cowardice, for his flight from his post of duty, will at last be pronounced by his countrymen, and the best he can expect hereafter, even from the most charitable of them, is contemptuous pity. And really it was a pathetic exhibition that he made of himself when the opportunity which he had so often asked and so adroitly evaded was, to his obvious dismay, actually forced upon him, and he had to tell the ridiculous trifles out of which he and a few sensational newspapers had tried to manufacture an international grievance. All he could say was that two entirely unimportant letters had been opened by mistake, and that an unnamed person had seen in an unnamed paper a bit of worthless information that might or might not have been secured through the deciphering of a code despatch! Such, when reduced to the bare facts, was the mystery the elucidation of which was to set two great nations by the ears, sustain Macrum's claim to the honours of martyrdom, and convict the President and his Cabinet of base subservience to perfidious Albion. Fortunately for the ex-consul, it is easier to laugh at the outcome of the inquiry than it is to work up effective anger over his past misbehaviour."

LORD ROBERTS' CRITICISMS.

SEVERE REMARKS ON WARREN AND BULLER.

London, April 17.

The War Office to-night publishes in the *Gazette* a despatch from Lord Roberts, dated February 13th, submitting General Buller's despatches describing the Spion Kop and other operations from January 17th to January 24th.

Lord Roberts deals severely with General Warren and some others. Even General Buller does not escape. Lord Roberts complains that the plan of operations is not clearly described in the despatches. After stating General Buller's intentions as communicated to Sir Charles Warren, who commanded the whole force, Lord Roberts points out that Sir Charles Warren seems to have concluded, after consultation with his officers, that the flanking movement ordered by General Buller was impracticable, and therefore so changed the plan of advance as to necessitate the capture and retention of Spion Kop.

Lord Roberts continues :—"As General Warren considered it impossible to make the wide flanking movement which was recommended, if not actually prescribed in the secret instructions, he should forthwith have acquainted General Buller with the course he proposed to adopt. There is nothing to show whether he did so or not. But it is only fair to General Warren to point out that General Buller appears throughout to have been aware of what was happening."

Regarding the withdrawal from Spion Kop, the retention of which had become essential to the relief of Ladysmith, Lord Roberts says :—"I regret to be unable to concur with General Buller in thinking that Colonel Thorneycroft exercised wise discretion in ordering the troops to retire. I am of the opinion that Colonel Thorneycroft's assumption of responsibility and authority was wholly inexcusable. During the night the enemy's fire could not have been formidable, and it would not have taken more than two or three hours for Colonel Thorneycroft to communicate by messenger with Major-General Coke or General Warren. General Coke appears to have left Spion Kop at 9.30 p.m. for the purpose of consulting with General Warren. Up to that hour the idea of withdrawal had not been entertained. Yet, almost immediately after General Coke's departure, Colonel Thorneycroft issued the order without reference to the superior authority, which upset the whole plan of operations and rendered unavailing the sacrifices already made to carry it into effect. On the other hand, it is only right to state that Colonel Thorneycroft appears to have behaved in a very gallant manner throughout the day."

General Buller's report, commenting on General Warren's reports of the capture and evacuation of Spion Kop, after disputing the correctness of some of General Warren's assertions, and describing some of the dangerous situations occupied by General Warren's force, tells how he saw that the force at Spion Kop had given way on it. General Buller therefore telegraphed to General Warren :—"Unless you put a really good, hard fighting man in command on top you will lose the hill. I suggest Colonel Thoneycroft."

General Roberts continues :—"I have not thought it necessary to order an investigation. If at sundown the defence of summit had been taken in hand, entrenchments laid out, and the dead and wounded removed, the whole place would have been brought under regular military command and the hills would have been held, I am sure. But no arrangements were made. General Coke appears to have been ordered away just as he would have been useful, and no one succeeded him. Those on top were ignorant of the fact that the guns were coming up, and generally there was a want of organisation and system, that acted most unfavourably on the defence. It is admitted that all of Colonel Thorneycroft's command acted with the greatest gallantry throughout the day, and really saved the situation. But preparations for the second day's defence should have been organised during the day and commenced at night-fall. As this was not done, I think Colonel Thorneycroft exercised wise direction.

It is regretted that General Warren did not himself visit Spion Kop in the afternoon or evening, knowing as he did that the loss of the position would involve the failure of the operations. He consequently was obliged to summon General Coke to headquarters and the command at Spion Kop thus devolved on Colonel Thorneycroft, unknown to General Coke, who was under the impression that the command devolved upon Colonel Hill, as senior adviser. Offences or mistakes of this nature may be trivial in themselves, yet they may exercise an important influence upon the course of events, and I believe General Buller was justified in the conviction that there was a want of organisation and system which acted most unfavorably on the defence.

The attempt to relieve Ladysmith was well devised, and I agree with General Buller in thinking it ought to have succeeded. That it failed may in some measure have been due to the difficulties of the ground and the commanding positions held by the enemy, and probably also to errors of judgment and want of administrative capacity on the part of General Warren. But whatever faults General Warren may have committed the failure must also be attributed to the disinclination of the officer in supreme command to assert his authority, and see that what he thought best was done, and also to the unwarrantable and needless assumption of responsibility by a subordinate officer."

The despatch concludes :—"The gratifying feature of these despatches is the admirable behaviour of the troops throughout the operation."

In a long editorial, *The Daily News* speaks of the "somewhat appalling language," of Lord Roberts's despatch, and then goes on to say :—"Upon the whole, these despatches are disquieting and disheartening in no ordinary degree. Following immediately upon the recall of General Gatacre, they will create a wide-spread feeling of uneasiness and anxiety."

The *Standard*, which is supposed to be in the confidence of the Government, says :—"It is scarcely likely that the publication of Lord Roberts' despatches, is without a purpose. It irresistibly suggests whether it is not to be followed by further important changes in South African commanders. Painful as such measures may be, there must be no hesitation in clearing them out."

Colonel Crofton, who was in command at Spion Kop from the time General Woodgate was wounded until Thorneycroft was appointed to the position, and whose heliograph messages to General Warren caused General Buller to appoint Colonel Thorneycroft to the command, was placed on half-pay to-day. Private information received from Shrewsbury to-day is to the effect that General Gatacre is leaving South Africa this week to resume command of a local district.

THE SURRENDER OF CRONJE.

(FROM THE "TIMES CORRESPONDENT.")

Paardeberg, March 3.

From the reports of scouts and deserters and from such observation as is possible from a balloon, supplemented by the stories of prisoners and careful inspection of the laager, this account of the last stand of the great Boer general is compiled. Written within four days of the surrender, and on the spot, it cannot, perhaps, be claimed that accuracy in details has been always secured, but the following is substantially a true history of the internal history of that brief resistance.

On Sunday, February 18, Cronje realized that the trap in which he found himself had no outlet. With the instinctive knowledge of an able general, he recognized that not a kopje ringing the even plain that gently shelved down to the river bed in which he found himself was without its hidden complement of troops, and that the escape of any considerable force even by night was, without outside relief, an impossibility. He was in possession of perhaps a mile of the river bed on either side of the Wolveskraal Drift, with the 19th Brigade of the English troops intrenched and sapping up towards him from the west and General Tucker's division slowly encroaching from the east.

To the south he was exposed to continual bombardment from the field guns massed on Gun Hill at a range of hardly more than a mile; from the north he received the shell of the naval guns and another battery of howitzers. It is said that he deliberately retreated into the river in order to try again the tactics that might, if vigorously persevered in, have beaten off Lord Methuen's column at Modder River; that he expected a general advance from all sides, and relied with some reason upon having ample men, rifles, and ammunition to man the line of trenches which he hastily threw up. But the more probable solution of his having entered this *cul de sac* is simply that he had no option. To retreat further was impossible, and defence for even three days was equally out of the question except in a position where water could be obtained. It is difficult to say what expectation of relief he had. Heliographic communication from one of the hills of the Petrusberg range, 20 miles to the south-west, undoubtedly reached him, as that communication was resumed after our occupation of the laager, but no signalling apparatus was found there after the surrender and the value of a one-sided conversation by heliograph is very small. His stores were terribly deficient in everything but ammunition; wagons containing provisions had been outspanned and abandoned during the retreat to help those containing munitions of war, and the actual supply of food was not more than sufficient to last a week. The presence of a few women and children added to his difficulties, and with the gravest misgivings he ordered Monday, February 19, to be spent in preparing a system of trenches that deserves more than a passing mention.

Reference to the map will show the general disposition of the earthworks, but the skill with which they were constructed as defences against both rifle and shell fire is worthy of the highest praise. All except those of the outer lines of pickets were made so narrow and deep that it seems as though they were in many cases entered from one end rather than the top, as any such ingress must, even in a week's time, have considerably widened the neck of the excavation. At the top they are, perhaps, 18in. wide, at the bottom about 3ft., and by crouching down the most complete protection is afforded from bursting shell.

Every natural protection, such as the ramification of the dongas which eat into the banks on both sides of the river, had been utilized, though the bombardment from both sides compelled them to abandon their first hasty breastworks cut into the actual top of the bank, which is here from about 50 to 100 yards from the river itself, and 30ft. in height.

For the first time here the "T" trenches, of which much has been said during the present campaign, were used. Frankly, they do not seem to present the least advantage over the ordinary shapes except that in an exposed angle they may provide additional protection against an enfilading fire.

The Red House—a kind of dak-bungalow which is found near every drift in South Africa—was used as Cronje's headquarters. Here his wife slept, though during the daytime she joined the women in the carefully-made shelter constructed for them. Albrecht probably remained in the northern intrenchments with the guns, though the ammunition for the Krupp guns ran out on Tuesday. Speaking of his experiences in the trenches, he says that one of our lyddite shells, burst within five yards of him, covering him with dirt and leaving a foul taste in his mouth, but otherwise not affecting him, even to the extent of knocking him down.

It is extraordinary that so few should have attempted to escape. Burnham, the well-known American scout, who for several nights crept up to the very trenches on either side of the river under cover of the scanty scrub, reports the "spoor" of only three or four deserters a night, of whom quite half must have been secured by our outposts and sentries.

Tuesday, the 20th, was marked by the severest bombardment of the entire investment, and a Boer doctor describes the position as awful. Nothing could be done but crouch in the trenches and wait till dusk prevented further attack, while wagon after wagon in the laager caught fire and burnt away into a heap of scrap iron amid a pile of wood ashes. The desolation produced was fearful, and it soon became impossible to make any reply. The losses inflicted upon the horses were the turning-point of the siege. So enormous a proportion (estimated by some at 75 per cent. of the total number present) of the horses, for which no protection could be made,

Digitized by Google Original from CORNELL UNIVERSITY

were lost that any dash for freedom by night was impossible, and the condition of the laager rapidly became so foul that that alone, apart from the want of food, would have compelled an early surrender. There was no opportunity of getting rid of the vast number of dead animals; burial was impossible, and the low state of the river prevented them from sending them down stream for several days; all they could do was to drag them to leeward of their camp. Meanwhile decomposition set in, and the absolute need of clean air caused a serious rebellion in the camp, most of the 4,000 men demanding that surrender should be made at once. When on Sunday, the 25th, the flood brought down past our lines an unending series of dead animals that cannot have been less than 1,500 or 2,000, the desperate straits of the enemy were apparent indeed.

More to get rid of this plague than for the ostensible reason, General Cronje sent in asking for a day's armistice to bury his dead. Lord Roberts, suspecting that the delay was asked for merely to give time for the relieving force of Boers to come up, refused it, offering in turn to send doctors to look after the sick and wounded. This offer, though subsequently accepted in a modified form, was refused, and Cronje, criticizing our Field-Marshal's attitude as "inhuman," closed his letter with the words, "Under the circumstances I have no other choice." By this the Boer commander merely meant that he had no option but to continue the struggle, but the mistake of an interpreter led to its being regarded as an offer of surrender. An answer framed on this misunderstanding led to an indignant refusal by Cronje, who announced his intention of holding out till we should take the position by storm.

As a matter of fact a day's grace was given the besieged force, and the active bombardment only began after the triple assault of small bodies of Boers, amounting in all to perhaps 4,000, on Wednesday and and Thursday from the Kameelfontein, Osfontein, and Poplar Farm directions.

Hopelessness now settled down upon the imprisoned Boers, and among the arguments used to lessen Cronje's authority was that he had wilfully suppressed Lord Robert's offer of safe-conduct to the women and children before the bombardment was begun. Hunger and nausea worked upon the despairing Boers, and all that could be put forward was used to compel Cronje to yield. For one whole day the struggle went on, and then a compromise was arrived at. If no help should have come by Wednesday morning, the 28th, the place should be surrendered, but Cronje, pointing out the abundance of rifles and ammunition, absolutely refused to surrender on the anniversary of Majuba-hill.

From that moment the Boers scarcely obeyed orders. A sharp division between the Transvaalers and the Orange Free State Boers ensued, and the only bond of sympathy that united them, besides their common adversity, was a long-hidden hatred of the Germans in their ranks. Albrecht, who had worked for them faithfully and well, whose orders had been hitherto implicitly obeyed, and to whom indeed the credit of nearly the whole of the successful opposition to the relief column is due, was openly accused of incompetence and even disloyalty. He, in turn, took no pains to conceal his opinion of the fighting powers of the Boers when on equal terms with the enemy, and the breach was complete. Until sunrise on the 27th the state of affairs among the Boers was pitiful. Apart from the ever-increasing hunger, despair of relief, and unhealthiness of the position, mutual recriminations destroyed the last consolation of adversity, good-fellowship, and Cronje sat aloof, silent and unapproachable.

The events of the early morning of the 27th can best be told from outside.

Brigadier-General MacDonald sent from his bed a note to Lord Roberts reminding him that Tuesday was the anniversary of that disaster which, we all remembered, he had by example, order, and threat himself done his best to avert, even while the panic had been at its height; Sir Henry Colvile submitted a suggested attack backed by the same unanswerable plea. For a moment Lord Roberts demurred to the plan; it seemed likely to cost too heavily, but the insistence of Canada broke down his reluctance, and the men of the oldest colony were sent out in the small hours of Tuesday morning to redeem the blot on the name of the mother-country.

From the existing trench, some 700 yards long, on the northern bank held jointly by the Gordons and the Canadians, the latter were ordered to advance in two lines—each, of course, in extended order—30 yards apart, the first with bayonets fixed, the second reinforced by Royal Engineers under Colonel Kincaid and Captain Boileau.

In dead silence and covered by a darkness only faintly illuminated by the merest rim of the dying moon, "with the old moon in her lap," the three companies of Canadians moved on over the bush-strewn ground. For over 400 yards the noiseless advance continued, and when within 80 yards of the Boer trench the trampling of the scrub betrayed the movement. Instantly the outer trench of the Boers burst into fire, which was kept up almost without intermission from five minutes to 3 o'clock to ten minutes past the hour. Under this fire the courage and discipline of the Canadians proved themselves. Flinging themselves on the ground they kept up an incessant fire on the trenches, guided only by the flashes of their enemy's rifles, and the Boers admit that they quickly reduced them to the necessity of lifting their rifles over their heads to the edge of the earthwork and pulling their triggers at random. Behind this line the Engineers did magnificent work; careless of danger the trench was dug from the inner edge of the bank to the crest, and then for 50 or 60 yards out through the scrub. The Canadians retired three yards to this protection and waited for dawn, confident in their new position, which had entered the protected angle of the Boer position, and commanded alike the rifle pits of the banks and the trefoil-shaped embrasures on the north.

Cronje saw that matters were indeed desperate, Many Boers threw up their hands and dashed unarmed across the intervening space; others waved white flags and exposed themselves carelessly on their intrenchment, but not a shot was fired. Colonel Otter and Colonel Kincaid held a hasty consultation, which was disturbed by the sight of Sir Henry Colvile, General of the Ninth Division, quietly riding down within 500 yards of the northern Boer trenches to bring the news that even while the last few shots were being fired a horseman was hurrying in with a white flag and Cronje's unconditional surrender, to take effect at sunrise.

Of the three Canadian companies the foremost, and that which suffered most, was the French company, under Major Pelletier.

Meanwhile, a few formal preliminaries were being arranged at headquarters, and General Pretyman went out with a small escort to meet the Boer commander and his secretary.

Lord Roberts, in the plainest of khaki, without a badge of rank except his Kandahar sword, awaited the arrival of his distinguished prisoner. "Commandant Cronje," was the brief introduction as the Boer swung himself off his white pony, and curtly answering the Field Marshal's salute, shook hands. "I am glad to see you, I am glad to meet so brave a man," was Lord Roberts' brief welcome, and a formal surrender followed, the conversation being interpreted by Cronje's secretary.

The general, a man of few words, sat deeply sunken in his chair with his hands in the pockets of his overcoat, and sullenly regarded the scene. Every consideration was paid him, but until the last was seen of his bulky form driving away to Modder River in the closed carriage which had been provided for him, his set, hardened face only suggested that the bitterest hour of his life was being barely endured by the man whose pluck, whose capacity, and whose straightforwardness we, his enemies, are the first to admit.

TELEGRAMS.

(REUTER'S SPECIAL SERVICES.)

THE BOER WAR.

THE MILITARY SITUATION.

Shanghai, May 4.

Pending the receipt of further dispatches from Lord Roberts, the military situation is obscure. It appears that a general advance was made on the 30th ult., in the direction of Brandfort, and that it included the brigades of Bruce-Hamilton and Broadwood. The Boers appear to have fallen back, and these Brigades were apparently afterwards ordered to join Ian Hamilton, who was confronted by an unexpectedly large and resolute force of Boers, covering the whole of the Boer retreat.

HAMILTON'S ADVANCE.

Later.

In Hamilton's advance on the 30th ult. five officers were wounded, including Lord Cusington (?)

THE ACTION AT HOUTNEK.

Lord Roberts cables that Hamilton met with considerable success on the 1st of May. He drove the enemy from a strong position at Houtnek. The Boers dispersed to the north and east, leaving 26 prisoners. Hamilton is now at Jacobsdrift. The enemy admit that they had 12 killed and 40 wounded. Twenty-one belonging to the Foreign Legion were wounded. Amongst them was Maximoff, the Russian Commander. The German Lieutenant Gunter and two Frenchmen were killed.

THE CROWN PRINCE OF GERMANY.

The Chinese Minister in Berlin has transmitted to the Kaiser the congratulations of the Empress Dowager and the Emperor of China on the occasion of the Crown Prince attaining his majority,

BRANDFORT CAPTURED.

Shanghai, May 5.

The British have captured Brandfort, surprising the Boers, who retired to the north-east. Delarey commanded the Boers.

The Boers have evacuated Thabanchu, trekking north. It is expected that Brabant will join Rundle at Thabanchu immediately,

THE 1,000 GUINEAS.

The result of the Thousand Guineas Stakes is Winifreda first, Inquisitive second, and Vain Duchess third.

HAMILTON.

Shanghai, May 6.

Hamilton advanced to Welkot and engaged the enemy throughout his march. Welkot is not mentioned in the maps.

THE RELIEF OF MAFEKING.

Roberts reports that Hunter has carried the passage of the Vaal at Windsorton unopposed. This is the first indication that Hunter had started to relieve Mafeking.

JAPANESE PRINCES AT WINDSOR.

Princes Kotohito and Iwakura of Japan visited the Queen at Windsor yesterday, and slept at the Castle.

THE "KOWSHING" CASE.

In the House of Commons Mr. Brodrick stated that the *Kowshing* case will be submitted to the arbitration of an eminent foreign jurist.

CHINESE REFORMERS.

There is no reason to suppose that the Chinese Government comtemplates the execution of the reformers mentioned in the *China Herald.*

GENERAL OTIS RELIEVED OF HIS COMMAND.

Otis has been relieved of his command in the Phillipines. MacArthur succeeds him.

PRINCE KANIN.

Later.

Prince Kanin has visited the Prince of Wales.

EXPELLED FROM THE TRANSVAAL.

Five hundred expelled British subjects of all classes, mostly women and children, have arrived at Lourenzo Marques.

THE DREIBUND.

The Austrian Emperor is at Berlin attending the festivities in honour of the majority of the Crown Prince. The Kaiser, in proposing his health, said that his visit showed the world how firm and sure the alliance between Germany, Austria, and Italy still is.

THE PASSAGE OF THE VAAL.

Shanghai, May 7.

Barton's Brigade, with whom is Hunter commanding the Division, has crossed the Vaal at Windsorton. The Boers are trekking north and Barton is pursuing.

THE BRITISH ADVANCE.

Later.

Lord Roberts wires that he arrived on Saturday within 3 miles of the Vet River. The enemy in considerable strength held the

Digitized by Google Original from CORNELL UNIVERSITY

opposite bank. Our guns engaged theirs for three hours without being able to force a passage, but at dusk Hulton with the mounted infantry dashingly turned the enemy's right and crossed under a heavy fire. We are now bivouacking for the night three miles from the River. Hamilton on Friday prevented the junction of two Boer forces, inflicting heavy loss on the enemy, who fled leaving their dead and wounded.

BARTON BEYOND THE VAAL.

Barton was heavily engaged on Saturday to the north of Ruidot (?)

LORD ROBERTS' ADVANCE.

Shanghai, May 8.

Lord Roberts telegraphed from Smaldeel Junction, on Sunday afternoon, that he crossed the Vet river that morning, and is now encamped at the junction. The enemy are in full retreat toward the Zand river and Kroonstadt. Our losses are trifling.

THE ASHANTEE REBELLION.

10,000 rebels attacked Coomassie fort from the 25th to the 29th April. Two officers were wounded and 14 Houssas killed and wounded. The Lagos constabulary arrived at Coomassie on the 29th April after two days' severe fighting with 8,000 rebels. They had 5 officers and 159 of the constabulary wounded.

BOERS EXPELLED FROM FOURTEEN STREAMS.

Later.

The Boers have been expelled from Fourteen Streams. The British encamped on the Northern bank after defeating the enemy on the 4th inst.

HUNTER JOINS WITH PAGET.

Hunter has joined hands with Paget at Warrenton.

THABANCHU.

The enemy have retired from an exceedingly strong position in front of Thabanchu, and Rundle has occupied it.

MAFEKING.

Shanghai, May 9.

A message from Mafeking dated the 22nd ult. says that the place can hold out as required with care.

[Note—Lord Roberts has asked the garrison to hold out till May 24th, if possible.—Ed. *J.M.*]

A message from Plumer's camp, dated the 26th, says that the Boers at Mafeking have been gradually reinforced, and are now estimated at 3,000. Plumer has communicated with Mafeking by pigeon.

NATAL.

The cavalry operating in Natal in the direction of Van Reenan's Pass found the country clear of Boers.

WINBURG OCCUPIED.

Later.

The Highland Brigade occupies Winburg. Brabant has joined Rundle at Thabanchu. Hutton has reached Wellgellagen station and reports that the Boers intend to make a big stand at the Zand river.

[Note—Wellgellagen station is 14 miles north of Smaldell.—Ed. *J.M.*]

MAFEKING HOLDING OUT.

Reuters' agent telegraphing from Mafeking under date of the 28th April, says that in spite of daily decreasing rations and a slight outbreak of typhoid, the garrison is determined to resist for another six weeks.

(Telegrams Received at the Legation of France.)

THE FIRST OF MAY IN FRANCE.

Saigon, May 3.

The 1st of May passed everywhere amid the greatest calm.

PEST.

Cases of Pest are announced at Aden and Port Said.

EXPLOSION IN A MINE.

An explosion has occurred in the Schofield Mines at Utah. There were 220 killed.

THABANCHU.

Saigon, May 4.

Lord Roberts telegraphs that Hamilton's Division defeated and dispersed the Boers in the neighbourhood of Thabanchu on the 1st of May. The Boers had 12 killed, 41 wounded, and 26 prisoners. Some skirmishes have taken place on the south of Brandfort.

COLONIAL AFFAIRS.

Saigon, May 5.

Several decrees have been issued, reorganizing the personnel of the French Colonial Governors and Colonial Administrators.

BRANDFORT.

The English have occupied Brandfort after a feeble resistance by the Boers.

GERMANY AND AUSTRIA.

Saigon, May 6.

A telegram from Berlin says that the Emperor of Austria has arrived there to take part in the celebrations connected with the coming of age of the Crown Prince. The speeches made by the two Emperors asserted the solidarity of the Triple Alliance, which had for its sole object the maintenance of peace.

THE WAR.

Saigon, May 7.

Lord Roberts' despatches show that the English are advancing all along the line. Roberts in the centre has arrived on the banks of the River Vet. Hamilton operates on the right, Hunter on the left. The Boers resist strongly.

FRENCH MUNICIPAL ELECTIONS.

Saigon, May 8.

The municipal elections have taken place in perfect quiet. Some disturbances occurred in the provinces, especially at Romans. Eight new Nationalists were elected in Paris; among them, Messrs. Barillier, Méry, Galli, and Lepelletier.

SOUTH AFRICA.

The English have crossed the River Vet after a sharp engagement. The Boers are concentrating on Kroonstadt.

THE WAR.

Saigon, May 9.

The English have occupied Fourteen Streams on the north of the Vaal river, and also Winberg. The Boers are preparing to make a vigorous resistance at the Zand river.

DISTURBANCES AT WEI-HAI-WEI.

British Officers Wounded.

(From our own Correspondent.)

Shanghai, May 8.

The Boundary Commission, which has been engaged in delimitating the borders of the leased territory at Wei-hei-wei, have been attacked by hostile villagers. Major Penrose and Captain Pereira were wounded. Thirty natives were killed in the sequel of the affair. The Chinese regiment behaved splendidly.

PRINCE BROGLIE.

(From our Correspondent.)

Hakodate, May 6.

Prince Broglie arrived here on board his yacht *Victoria* this morning. He will leave for Vladivostock the day after to-morrow.

BANK OF JAPAN.

Banking Account.

CHESS.

(All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

PROBLEM 472.

Solvers are requested to make a correction in the diagram of this problem, as published last week. The Rook on Black's K 3 should be Black not White. A White Rook in that position converts the problem into an easy two-mover.

SOLUTION OF PROBLEM No. 471.

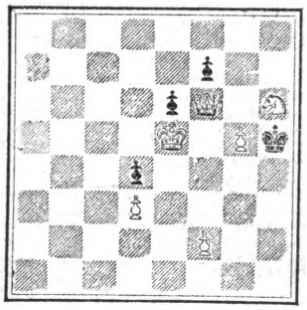
WHITE.	BLACK.
1—P to B 3	1—K to R 5
2—Kt to K 7	2—Any
3—B to K B5, mate	
	1—K to Q B 5
2—Kt to Q B 7	2—Any
3—B to R 6, mate	
	1—K to Q B 3
2—P to B 4	2—Any
3—Kt to K 7, mate	
	1—P to K 5
2—B to Q 7	2—Any
3—Kt to Kt 6, mate	

Correct solution received from "W.H.S."

PROBLEM No. 473.

By C. W., of Sunbury.

Black.



White.

White to play and mate in three moves.

GAME 588.

A Brilliancy Prize Game.

Mr. Trott, who was in Class II,, gives odds of Q's Kt to Mr. Hubble, of Class V. Played September 4, 1899, in the handicap tourney of the Adelaide Chess Club. Mr. Trott, as winner of this game, was awarded the special prize of 10s. 6d., offered by Mr. T. S, O'Halloran, for the game in the tourney with the most brilliant finish.

(Remove White's Q's Knight.)

White—Mr. F. T. Trott. Black—F. J. Hubble.

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—B to B 4	2—Kt to K B 3
3—P to Q 3	3—B to B 4
4—Kt to B3	4—P to Q 3
5—P to K R3	5—P to K R 3
6—P to B 3	6—B to Kt3
7—B to Kt 3	7—B to Q2
8—B to Q 2	8—Kt to B 3
9—Q to K 2	9—Kt to K 2
10—Castles Q's R	10—P to B 4
11—Kt to R 2	11—P to Q R 4
12—P to K B 4	12—Kt to B 3
13—P takes P	13—P takes P
14—B to K 3	14—Q to K2
15—K R to B	15—B to B2
16—B to K B2	16—P to Q Kt4
17—B to K R4	17—B to Q3
18—R to B3	18—P to R5
19—B takes Kt	19—P takes Q B
20—B to Q5	20—Q R to B
21—Q R to B	21—B to K3 (a)
22—R takes P	22—B takes B
23—P takes B	23—Kt to Q so
24—Kt to Kt4 (b)	24—P to R 4
25—Kt to R 6!	25—R to B
26—Q takes R P	26—R to B2
27—Q to Kt5 (c)	27—P to K5
28—Kt to B5 (d)	28—Q to Q2
29—Kt takes B (ch) (e)	29—K to K2
30—R K6 (dbl. ch and mate).	

(a) Black should play P to K B4, and then advance P to K5 if White K P take P.

(b) Mr. Trott plays very carefully all through. His skilful concentration of force on Black's weak point, the K B P, is well worthy of attention.

(c) Necessary before attacking with Kt at B5.

(d) A crusher, leading to an artistic mate.

(e) Kt to Kt 7 (ch), and then R to K6 mate were better, allowing Black no option; whereas in the text Black could prevent the mate by Q takes Kt.

GAME 589.

Centre Counter v. Queen's Gambit.

White—Mr. Riedel. Black—Mr. Griffith.

WHITE.	BLACK.
1—P to Q4	1—P to Q4
2—P to QB4	2—P to K4(!)
2—QP takes P (a)	3—P to Q5!
4—KKt to B3 (b)	4—QKt to B3
5—P to QR3	5—QB to Kt5
6—P to K3	6—QKt takes P
7—KB to K2	7—QB takes Kt
8—KB takes B	8—QP takes P
9—Q to R4(ch)	9—P to QB3
10—QB takes P	10—KKt to B3
11—QKt to Q2	11—KB to B4
12—KB to K2 (c)	12—KB takes B
13—BP takes B	13—Kt to Q6
14—KB takes Kt	14—Q takes KB
15—QKt to Bsq	15—Castles KB
16—Q R Qsq	16—Q K5
17—Q R Q2	17—Q R Qsq
18—Q R K2	18—Q Kt8 (ch)
19—K B2	19—Kt5 (ch)
20—K Kt3	20—Q Kt3
21—Q B2	21—Q R Q6
22—K R4 (d)	

22—K R4 (d) and Black announced mate in three moves, which is well worth the young players looking at. (Black can mate in two moves by 1—Kt K R3, and 2—Q K Kt 5, or 2—Kt K K B4 mate!—Chess Ed. *Adelaide Observer*).

(!) Bravo! Mr. G. This counter gambit is, at the furthest, cousin to Brother Charlick's direct 1—P to K 4. Black's 2 is an interesting suggestion of the "Falkbeer-Lederer"—Miron.

(a) Perhaps 3—P to K 3 would have done better.

(b) If White intends to maintain the P he must play 4—P to K B 4.

(c) Better 12—B takes B.

(d) Has no escape.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 19TH, 1900.

DEATHS.

On the 3rd April at Southampton, THOMAS ROSE, aged 67.

Entered into the eternal rest, on the fifteenth day of May, in the city of Tokyo, the Rev. S. J. MILLIKEN.

SUMMARY OF NEWS.

CHAROUSEK, the well-known chess-player, died at Budapest on April 18th.

IN the two last days of April there were 12 plague cases at Hongkong and 8 deaths.

THE *North-China Daily News* is still in the van of progress. It is now set-up by linotype machines.

THE recall of M. Doumer, the French Governor-General of Indo-China, is stated to be imminent.

H.M.S. *Robin*, the new river gunboat, which has been put together at Kowloon, has had a very satisfactory steam trial.

SIR FRANK SWETTENHAM, K.C.M.G., Acting Governor of the Straits, has been appointed Commissioner to Weihaiwei. He has been granted three months' vacation leave, to be followed by four months' leave on half-pay from April 29.

ROBERTS is advancing steadily, and Buller is co-operating from Natal, having forced the Biggarsberg and occupied Glencoe.

EXTRAORDINARILY heavy shipments of foodstuffs and material are being made from Hongkong to Port Arthur and Vladivostock.

HERR WILHELM SEHRING, the poet and historian, died on April 25th at Carlsruhe in his eighty-fourth year. He was born at Koenigsberg.

THE British gunboats *Woodcock* and *Woodlark* have surmounted all the rapids on the Upper Yangtze between Ichang and Chungking, having experienced some trifling damage on the way.

FIRE broke out about 2.30 a.m. on Wednesday at Hagoromo-cho, Itchome, Yokohama, in a house occupied by an embroiderer named Yamada Inamatsu. Two houses were destroyed. The cause is unknown.

EXECUTIONS of pirates are said to be of daily occurrence in Canton just now, H.E. Li Hung-chang doing all he can to carry out his promise to the Governor of Hongkong, that he would stamp out piracy on the West River.

MR. CHAMBERLAIN has introduced his Imperial Federation scheme in the House of Commons. It provides for representatives of the Colonies to sit in the House of Lords and on the Privy Council as Lords of Appeal, with life peerages.

RELATIONS between the United States and Turkey are said to be critical, owing to the Sultan's failure to indemnify American missionaries. It is probable that Mr. Hay, the Secretary of State, will send the Turkish Minister his passports.

IT is stated by *La Politique Coloniale* that the King of Cambodia, the Emperor of Annam, and two Laos kings, have been prevailed on to accept an invitation to visit the Paris Exhibition, where preparations are being made to receive them suitably.

THE Horticultural Show which the British Women's Patriotic Association were endeavouring to hold in the Public Hall this month has had to be abandoned, owing to the paucity of entries. It seems a pity, for in Shanghai Flower Shows are a great success.

THE death has occurred at his residence, Leytonstone, of Professor Pepper, formerly honorary director for upwards of twenty years of the Polytechnic, Regent-street. He was the inventor of the celebrated "Pepper's Ghost" and other illusions.

THE annual spring regatta was held at Kobe on Saturday. The sea was rather choppy and there was a strong breeze. The crew stroked by A. E. Cooper easily won the Club Fours. The Senior Pairs was won by W. Pietzecker and C. Mancini and the Tub Sculls by Pietzecker.

AT a special general meeting of the Central Cement Manufacturing Company, held in the Tokyo Chamber of Commerce on the 6th inst., a resolution was passed in favour of establishing a branch manufactory in Formosa, with a capital of from 100,000 to 200,000 *yen*. This sum will be raised in the form of debentures.

HERE is a specimen of the Boer bulletins:—Boer official notices have been found placarded at Campbell and elsewhere saying that in the recent battles the Boers captured 13,000 troops, eighteen cannon, and 300 wagons; setting forth that the burghers were full of valour, that the outlook was bright, and saying confirmation had been received of the report that Russia had invaded India with 2,500,000 men.

THE amount of *saké* manufactured in Nada, in Hiogo Prefecture, during the 32nd year of *Meiji* reached 366,716 *koku*, against 349,904 *koku* for the previous year, showing an increase of 16,722. Below are details:—Imatsu, 52,565 *koku*; East district, 41,788: West district, 74,868; Nishimiya, 110,081; Central district, 87,412.

A CHINESE passenger went ashore at Nagasaki from the British mail steamer *Gaelic* on May 9, and on being examined by the Customs authorities at a jetty in Oura, a quantity of opium and smoking apparatus were found concealed on his person. He was handed over to the Megasaki police, and afterwards was sent to the District Court for trial.

ACCORDING to the *Osaka Asahi* the value of opium paste produced in Formosa amounts at present to over 4½ million *yen*. Materials for manufacture are chiefly imported from Persia and India, to the value of 2 million *yen* annually. As the original cost does not exceed 10 *yen* per 100 *momme*, the annual profit realized by the sale is estimated at no less than 1,600,000 *yen*.

VERY soon the present British halfpenny postage and Revenue stamp will be replaced by one of the same design, but green instead of red. About Midsummer the present one-shilling green stamp will be replaced by a bi-coloured one of that value. The latter will be printed in a combination of green and red. The International Postal Union have asked for these changes.

THE work on the Formosa railway has been pushed since last year with the greatest possible speed. The estimated outlay for this year amounts to 4½ millions of *yen*, of which 539,747 *yen* are set apart for office expenses. It is said that the sum allotted for the Taipeh-Tamsui section is 250,000 *yen*; for Kelung-Hsinchu 2,009,661; the two other sections absorbing 259,700 and 1,440,892 respectively.

ON the 7th instant the Tokyo City Reform Committee voted a sum of 15 million *yen* to be disbursed as continuing expenses for five years in order to carry out extensive improvement works. The programme includes large schemes of road making, and the expenditure is to be met by municipal loans, but the decision of the Municipal Assembly and the sanction of the Government are required to give effect to the decision.

THE U.S.S. *Hancock*, with the members of the Phillippine Commission on board, left for Manila on Thursday. The members of the Commission are Judge Taft, President, Judge Ide, Mr. L. E. Wright, Professor Bernard Moses, and Professor Dean Worcester. These will constitute the supreme authority in the Phillippines. The families of several of the commissioners will stay at Yokohama during the summer to avoid the unpleasant hot season of Manila.

OF late "flower cards" have become extremely popular not only among the nobility and gentry, but even among coolies and *jinrikisha* men. Gambling, remarks the *Yomiuri*, has infected all classes of society. Members of the Diet are among the worst offenders, and some of them make a profession of gambling in the interval between the sessions. The law, efficient as it is, is nevertheless impotent to put a complete check upon the evil. A suggestion has lately been made, therefore, as to the advisability of imposing taxes upon flower cards and imported cards. Investigation are now being made by the authorities to ascertain the amount of the annual sales of these cards in the various prefectures.

THE IMPERIAL WEDDING.

Tokyo was *en fête* on the 10th instant; that is to say such *fête* as is possible in a city where the lowly buildings do not lend themselves to anything more imposing than the suspension of a few lanterns along road-ways and the erection of crossed flags over gates. A Japanese city can never get into gala costume, as the term is understood in the West. There can not be any wide expanses of festooned banners or any towering tiers of blazing illumination. Everything looks small and unpretentious. Even the crowds never seem to be visited by any access of really lusty enthusiasm. No one thinks of tossing his hat into the air, or even of waving it over his head, and the *banzais* elicited by any event, however exciting, sound more like a fitful exclamation that a sustained, delirious cheer such as one hears from a British concourse. It did not appear, either, that the streets were densely thronged on Thursday. Even at the Sakurada Gate whence the Imperial procession was to emerge, the sight-seers lining the street were not 20 deep, and the general effect produced was rather sombre than joyous. The Japanese, when they go picnicking in the season of cherries or azaleas, present a gay appearance. But no one puts on holiday attire for the purpose of waiting in the streets to see an Imperial procession pass, and it results that the aspect of a Tokyo crowd assembled for such a purpose is comparatively dingy. On the other side of the account, however, must be set the orderliness and good humour that invariably mark the demeanour of a Japanese throng. Throughout the whole of Thursday, though the festival lasted the entire day, not a single disturbance was reported, and such a thing as a drunken rioter did not obtrude himself upon the scene. Everything moved with clock-like regularity so far as the official arrangements were concerned. The Imperial couple left their respective residences at half-past seven in the morning, aud proceeded by different routes to the Palace. This part of the programme was not distinguished by any special display. The Prince rode in an ordinary carriage, duly escorted by lancers and preceded by outriders. He wore his military uniform of Major, and the waiting crowds saw little to distinguish the occasion from one of the every-day comings and goings of His Imperial Highness. The passage of Princess Sada to the ceremony which was to make her the future Empress of Japan, presented features of greater interest, for she wore the old court costume of Japan, and her pretty face was framed in the wonderful coiffure—expansive, angular and inartistic—which, in defiance of the law of the survival of the fittest, still holds the place of honour among Japanese head-dresses, a relic of the days when the country founded its fashions on Korean suggestions. The bride's progress did not elicit any demonstration from the crowds through which her equipage passed, preceded by carriages of Chamberlains, escorted by lancers, and followed by coaches carrying various dignitaries. She reached the Palace nearly half an hour before the Prince—an arrangement which may be regarded as the only mark of deference paid to the traditional inferiority of the fair sex in Japan on this occasion. The Prince, after arriving at the Palace, donned a Japanese costume appropriate to the occasion, and the Imperial couple then repaired to the Sanctuary, the Prince led by the Grand Master of Ceremonies, Baron Sannomiya, and followed by a chamberlain bearing the Sacred Sword; the Princess conducted by a Master of Ceremonies and supported by two maids of Honour. The rites performed in the Sanctuary were particularly interesting. Not for their own sake, indeed, since they consisted merely of the offering of evergreen branches at the Imperial Shrines; the recital of a marriage ritual by the Prince; the drinking of sacred *saké*, and various obeisances before the Altar of the Sanctuary, while a naval squadron assembled in Shinagawa Bay and troops at Aoyama fired salutes of 101 guns. But the noteworthiness of this ceremonial will be understood when we say that it was altogether novel. An Imperial marriage in Japan had never previously been solemnized in such a manner. The old custom did not demand anything more than a public announcement. A certain lady was gazetted to the post of Imperial consort, just as a man who had deserved well of the State might have been gazetted to some high office. No religious element of any kind used to be imported into the procedure, whereas the rites solemnized on Thursday give to the Imperial marriage a character of the highest sancity. The innovation is due, of course, to Marquis Ito. It represents part of the work upon which that eminent statesman is now engaged; the work of constructing a code to regulate all affairs relating to Imperialism in Japan. It is plain that an object lesson taught by the example of the Palace will have a large effect upon the nation, but we are not prepared to say whether any inference may be drawn with regard to a change in other customs which it would be out of place to discuss here.

After the ceremony in the Sanctuary the Imperial couple changed their costumes, the Prince now wearing the usual Court dress, and the Princess donning foreign robes. They then repaired to the presence of the Emperor and Empress; received the congratulations of their Majesties; drank the traditional "cups of felicitation;" and taking their leave, entered a State coach drawn by four horses, preceded and followed by carriages containing high dignitaries of the Household, and escorted by lancers. This part of the great event had been most eagerly awaited by the public, for it was known that the State coach, especially constructed for the occasion, would be an object of great magnificence, and it was rumoured that the Imperial couple would wear Japanese costumes. In one respect the expectation was satisfied. The coach was distinctly gorgeous—a glittering structure of rich lacquer, glowing gold and bright glass—and the four horses were caparisoned in right royal style. But there was no vestige of Japanese costume. The Prince wore his court robes, stiff with gold lace, and the Princess had on a dress just such as any European lady would have chosen under the circumstances. The crowds were perhaps a little disappointed. But they raised a chorus of *banzai* as the procession passed; a very feeble chorus if judged by Occidental standards; but in considering these things we have to remember that silent awe still seems to the average Japanese a mood better befitting the reception of Imperialism than boisterous acclamations. A few hours of comparative quiet succeeded, and in the afternoon at four o'clock the Imperial bridegroom and bride proceeded once more to the Palace where arrangements had been made for a reception on a large scale. All the high classes of officials, the nobility, the principal officers of the Army and Navy, the members of the Foreign Corps Diplomatique, several officers from the foreign men-of-war now in Yokohama, and all foreigners holding orders of and above the Third Class, had been bidden, the result being that some sixteen or seventeen hundred assembled. At first they were all ushered into the Hall of the Phœnix, where various spaces had been partitioned off by means of silk cords for the accommodation of the several groups. Extensive as is the *Hoo-den*, it barely sufficed, even with the addition of its environing corridors, to afford comfortable space for so large a throng. Nothing need be added about brilliant uniforms, gay costumes, and other glittering features. The Palace is in the Japanese style of architecture, and a very grand example of that style. But there are additions of arras, electroliers and other features which disturb the homogeniety of the design and, in our opinion, detract not a little from its beauty. In other respects, however, an assemblage of dignitaries and honoured guests at the Japanese Court presents no traits to distinguish it from a similar gathering in the West. There is the same lavish display of gold lace, the same profusion of stars and orders, something of the same variety of uniforms, and a semblance of the same glitter of gems. Not one Japanese costume is to be seen. The ladies of Tokyo, if they wish to attend such ceremonies, must struggle into Occidental costumes, which many of them have never worn previously and some never expect to wear again save for the purpose of being photographed. For the general throng of guests a delay of some three-quarters of an hour now ensued, during which the Emperor, the Empress, and the Prince and the Princess Imperial gave audience in a separate chamber to Marquis Ito as representative of the nobility, Marquis Yamagata, as representative of the Administration, and Baron d'Anethan as representative of the Corps Diplomatique, received addresses from them, replied thereto, and also received the Foreign Chefs de Mission and their wives. These various personages now rejoined the assembly in the Phœnix Hall, and presently the Emperor and Empress, the Prince and Princess Imperial, and all the Imperial Princes and Princesses at present in the capital, walked into the Hall, passing along a space left vacant in the front of the concourse. Arrived at the centre, the Imperial party paused, bowed graciously, and, after a very brief interval, left the Hall, repairing to the "Hall of Many Foliages" (*Chigusa-no-ma*), where a banquet was served for their Majesties, the Princes and Princesses, the members of the Corps Diplomatique and the highest dignitaries of State. Meanwhile the remaining guests were conducted to the Hall of Abundance and Effulgence (*Homei-den*), and the Eastern Waiting Room (*Higashi Donari*). There a monster buffet had been arranged along the whole length of three sides of the *Homei-den*, presenting a remarkable appearance of artistic profusion, while other parts of the spacious area were set with small tables and chairs where the guests could seat themselves in parties of four or five. It need scarcely be said that these arrangements were very perfect. At about seven o'clock the great throng began to wend its path to the points of exit. On the way thither each guest handed in his card of invitation and received in return a silver *bonbonière*, certainly the most beautiful souvenir of the kind hitherto given in the Palace.

Thereafter followed illuminations and fireworks of the usual kind. There were some exceptional features in the shape of arches and decorative tableaux modelled in accordance with ancient legends; but as we have

Digitized by Google Original from CORNELL UNIVERSITY

said, a Japanese city offers, in this respect, only a faint reflection of what may be seen in the Occident. In depth of loyalty, however, and in earnestness of hope for the happiness of the newly married couple and the brilliancy of their reign, we dare say that the citizens of Tokyo may claim to be unsurpassed.

THE IMPRESSIONS OF A TIRED PEDESTRIAN.

I am the humble man on foot, unfriended, solitary, and slow. Not for me the pair of smart greys and the resplendent landau, not for me the prancing thoroughbred and the springy dog cart, not even the far from harmless but sometimes necessary *'rikisha*. The former, owing to the malice of mankind, I cannot afford, and the latter no man of acumen and experience engages unless it is absolutely necessary. More especially on an Imperial Wedding day. That comes only once in a life time, and a *jinrikisha* coolie with a stunted conscience and an average of three children to each *tatami* space is not the man to miss the opportunity. It is his harvest. His rapid eye takes in the ignorance or the debility of his fare's mind at a glance, and he doubles, trebles, or quadruples his fare with the quickness of a calculating machine. Distances he multiples in alarming fashion; *cho* become miles, half-*ri* grow to leagues, a ten-*sen* ride is suddenly transformed into an enormous distance for which 50 *sen* is an almost brutally inadequate remuneration. Why not? The *'rikisha* coolie, good honest man, is staunch patriot enough, and rejoices with his betters, but there is absolutely no reason, except his enfeebled conscience, why he should not make private advantage of so rare an event—and he does.

But enough of the coolie. He is not the pleasantest company on a warm Spring day, especially when he approaches one too closely at the end of a smart run to argue his case in a mixture of five words of bad Japanese to two of worse English. Nor will we deal with the other harpies of the tea-houses, the restaurants, and other places where patriotism is made to pay quite as well as in other lands nearer the meridian of Greenwich. We are not concerned with them. These lines are merely intended to record the great event of the 10th May as it appeared to a man in the street, an outsider, unknown to the Board of Ceremonies, unnoticed by all officials, except (unhappy exception) the tax-collectors, unordered and unmedalled, with all his imperfections on his head, and a good deal of the dust of the capital on his clothes.

I have seen a good many state and civic ceremonies in this unofficial way, and with every new experience the suspicion increases that the sacrifices are greater than the gains. I have seen that stately tomfoolery which Londoners and hordes of country cousins crush each other to witness every Ninth of November, and I cannot conceive the Lord Mayor's show which would compensate one for two or three hours squeezing in the smelly company of a Cockney crowd. I have seen two Jubilee processions, and it is my earnest prayer that I may never have to see another. May Her Majesty live to have others, by all means, but may I not be there to see. To wait half a night on a camp-stool, or dozing in a seat for which you have paid two guineas a fortnight before, while the current price of the chairs around you has fallen to five shillings, is to undergo a bitterness of soul that no pageant, however gorgeous, can quite obliterate. Of course it is a great consolation to be able to bore friends for the rest of your natural life with moving accounts of what you saw, but so many millions have the same record, and so many millions more who did not see it will give much better accounts than you ever could, that after all the distinction is not a very valuable one. No, emphatically the best way to view a procession is to attend a cinematograph performance, where every prospect pleases, and your neighbour in the stalls is not (at least externally) vile.

Take the facts in this case. Knowing what a Japanese railway is at a gala time, and having some slight objection to two heavy gentlemen compressing your spine on each side, while a third, standing up, lurches heavily into your waistcoat with each jar of the train, you elect to go up to Tokyo overnight. Your imagination has been fired by what you have read in the papers. You will see a gorgeous State procession. If you get up in time you will catch a glimpse of the Imperial couple dressed in costumes which were considered the mode when Jimmu Tenno was the mould of fashion and the glass of form. You will see the future Emperor of Japan and his fair young bride also in the European costume which becomes them equally as well as the classic habiliments of their native land. You will see great crowds, gorgeous decorations, everywhere evidences of the loyalty and love of a capital which represents, even if rather unworthily, a population of over 40 million brave, ingenious, and intelligent people. Some of this you do see, but what you most want to behold—the cynosure of all eyes—of that, unless you are lucky enough to be a giant in height and strength, you will see very little.

Overnight you stroll about, looking at the illuminations and decorations. You have seen plenty before. You have seen those, elaborately hideous for the most part, which lighted up the dingy City streets in 1897, and the others, somewhat lighter and in better taste, that infused an unwonted warmth into stately facades of the West End. Decorations which, generally speaking, proved that, while England has much to celebrate, she has less taste in celebrations then countries with not a tithe as much history. And you have seen other celebrations in Tokyo and Yokohama, so that the peculiar quaint grace which the Japanese know so well how to throw into all they touch in this line is no longer novel. Besides, it must be said that there is nothing great in these particular decorations. There is a lack of plan. The usual red and white lantern is, of course, everywhere, artificial flowers bloom with almost monotonous frequency, and here and there is a triumphal arch of evergreen, surmounted with some of those terrible Chinese characters which are probably still savage mysteries to you. In out of the way suburbs you find an unexpected piece of prettiness. But there is a certain sameness about everything, now that you are no longer in the globe-trotter stage of receptivity; and especially in the environs of the Palace, near the great blocks of Government buildings, where you naturally expected a grand display, there is but an infrequent flag or two and an arch of evergreen. The Ginza is rather disappointing; its up-to-date shoddiness ordinarily does not please, and even the glare of gas and electric designs, the cloud of lanterns, and the masses of greenery do not suffice to redeem its native ugliness. So it is with rather a sense of disappointment that you seek your bed. Perhaps you expected too much.

You go to bed, but not to sleep. With a praiseworthy desire to carry out your character as one of the crowd, you go to a Japanese hotel. But you are of an unfortunately restless habit, and sleep, always difficult, is next to impossible for you in a Japanese hotel. There is a guest in the next room who *will* talk on the most confidential subjects in a voice which would be very appropriate in trying to obtain the ear of the Diet during a fire of interruptions from Mr. Tanaka Shozo. On the other side is a gentleman with an insatiable appetite for pipes, and his continual tappings on the side of his *hibachi* do not make for slumber. Besides, you get alternately stifled by the weight of the *futon*, and frozen with cold when you fling it off in desperation, and altogether your position is not a comfortable one. You are one of those angular Europeans who never will fit into the usages of Japanese life, much as you try to conquer them. And the sleepless hours lag heavily on.

At last you fall into unconsciousness. But fate dogs you, and at three a.m. a fearsome noise comes to arouse you with a start. It is the outside shutters being opened. No more sleep for you. You lie and feebly curse the Japanese early rising madness. Half-an-hour of scrubbing and bustling about, half-an-hour of high-pitched conversation between the maids and the men servants; then the noise of the guests' ablutions, the bustle of breakfast-getting, and finally an attendant, who has been very uneasy at your laziness, comes in and announces that it is six o'clock, that you have barely time for the morning procession, and that breakfast is over-due. It is no use. You are too feeble in body and mind to stir, and you lie indecisive until all hope of being in time is gone. A pity. Still you have another chance at eleven o'clock. This nerves you to some display of energy, and you go to your bath, which makes a new and altogether improved man of you. With a little yawning you are ready to eat your breakfast and meet your bill, which is rather more than would have sufficed for comfortable quarters and substantial meals at a European hotel. You curse the folly that leads you to do things *à la Nipponne*, though you know perfectly well the frenzy will seize you again when the occasion occurs; and you go out for another stroll to view the capital in its gala dress.

Half-past ten finds you at the entrance of the grounds of the Imperial Palace. There is already a big crowd, and you think it your duty to get in the midst of it. Clearly the best point of vantage is by the big triumphal arch under which the Imperial procession must pass. You station yourself there. You are surrounded on all sides by a seething mass of spectators in *kimono*, in *hakama*, in smart European clothes, in scarecrow ditto, in all that delightful variety of head dress one sees only in Japan, from the modern Lincoln and Bennett to the green and lichen-covered silk-hat of early times, the shapeless billy-cock, the battered straw, the cap of extraordinary hues. There is a general atmosphere of good humour, *sake*, Kirin beer, hair pomatum, oranges, and peppermint. Every moment a pair of *geta* crunch your favourite corns, causing you an agony you try to disguise under a cheerful smile. Two students try to oust you from your position by an agreeable system of tactics. One attacks you in the rear, trying to lever you out by a side pressure. The other stamps on your foot in order to make you stand less steady. But you hold on like grim death, and they retire, like the Boers, "in good order," to repeat their guerilla tactics at some weaker point. But another danger threatens you. An active Japanese is climbing up into the arch just above you, and his footing

Digitized by Google Original from CORNELL UNIVERSITY

is unsteady enough to disquiet you in the extreme. You are looking up, trying to remember some algebraic formula about multiplying the mass by the square of the velocity, and thus calculating the probable impact, when the expected happens. He comes down and crushes your toes. But he is not disconcerted at all. He says *gomen nasai* quite cheerily, assures you he is not hurt, and begins to climb again. This is too much. It is poor consolation to know that he is not hurt—you would, in fact, witness the breaking of his neck with considerable resignation—but a repetition of that punishment to you is too awful to contemplate. You move away, immediately a rush is made for the vacancy, and you have the grim satisfaction of seeing the human projectile come down again with a crash on another unfortunate. Finding it is safer in the middle of the crowd, you remain there, and are thenceforth engaged in a perpetual football scrimmage, in which elbows and shoulders, and sometimes umbrella knobs, are used with great effect against your ribs. But you have your compensations. You can now see from time to time a carriage containing some richly uniformed officer, sometimes alone, sometimes accompanied by his wife, proceeding from the Palace. What more can you wish for? Every time such a carriage passes, the police and soldiers keeping order make a rush at the crowd, and they dart back in panic, identifying your feet with the public highway in a manner that your shoemaker (or your creator, for that matter) never contemplated.

After three-quarters of an hour spent in this manner you have your reward. First comes the Chamberlain and an outrider, of whom your see one-sixteenth, occasionally eclipsed by the umbrella of a fair onlooker. Then comes a fraction of a lancer with the Imperial Banner, then a company of Imperial Guards, from the ears upwards, then a row of gorgeously gilded and capitally horsed carriages, and in the midst the Imperial Couple. You just see the Prince in uniform, and catch a glimpse of the Princess, charming though vague, at his side, and you notice that His Imperial Highness acknowledges most graciously the salutations of his august father's subjects. Another moment, and he is gone from view. Then follow more carriages, and more guards, but they have little interest for you. You have something more important than them to think about, for the homeward rush has begun, and you are swept forward by the living avalanche till you find yourself eventually on the foot-path, dusty, battered, afflicted with a consuming thirst, and a desire to seek some greener and cooler spot than the arid precincts of the Sakurada gate. A brush up at the "tousovial parlars" (in conventional spelling "tonsorial parlours") kept by a grandiloquent Japanese close by is necessary to make you again decent. And you feel rather as Tony Weller did about marriage, "that it wasn't worth while to go through so much to learn so little, as the boy said about the alphabet," until you remember that you have seen something, if only a little, of a spectacle you can hardly expect to witness again. It was worth it after all, and, though you don't feel inclined to join the crowds which you still see waiting later in the afternoon for the return to the Palace, you go away contented and wishing all earthly blessings on the young couple so happily united amid the prayers and blessings of an entire nation.

The Honours List.

Fifty-eight patents of baronetcy have been conferred in connexion with the Imperial Wedding. As the great majority of the names are unknown to our readers, the list need not be published in full. But some of the new peers have been before the foreign as well as the Japanese public. Dr. Kato Hiroyuki, the well known philosopher, is among them, and so are Mr. Otori Keisuke, one of the staunchest of the old Tokugawa adherents, whose last active post was that of Japanese Representative in Söul at the time of the war with China; Mr. Kaneko Kentaro, the eminent constitutional jurist and administrator; Mr. Oki Morikata, the sometime Governor of Kanagawa, universally popular with foreigners; Mr. Shibusawa Eiichi, the great financier and leader of the Japanese business world; and Mr. Nori Jusuke, a prominent civil engineer who, however, owes his promotion to his lineage rather than to his professional fame.

The Emperor has also presented a sum of fifty thousand *yen* to Mr. Fukuzawa, in recognition of the distinguished services rendered by him since the Restoration in introducing Occidental learning, promoting education, training able men and publishing valuable works. It is understood that Mr. Fukuzawa would have received a patent of nobility had not his desire to remain a commoner been known to the Sovereign.

A number of Decorations have also been bestowed. Prince Kujo, father of the Princess Imperial, receives the Grand Cordon of the Chrysanthemum; Viscount Tanaka, Minister of the Imperial Household, the Grand Cordon of the Rising Sun; and Surgeon General Baron Hashimoto and Dr. Baelz the First Class of the Sacred Treasure. It will give universal pleasure to the foreign community to hear that this honour has been conferred on Dr. Baelz. No distinction was ever more fully merited.

The Emperor has further taken advantage of the occasion to make a donation of 80,000 *yen* for educational purposes in Tokyo and 20,000 in Kyoto.

The First Class of the Sacred Treasure has been conferred on the Princess Imperial, and the Emperor has also presented to her, in accordance with old Japanese custom, a dirk of great value.

The Vernacular Press.

Tokyo newspapers have treated the Imperial Wedding as an occasion resembling the New Year. They publish greatly expanded numbers. The *Jiji Shimpo* heads the list with 40 pages; the *Nichi Nichi* is second with 20; the *Kokumin* follows with 16; the *Asahi* is fourth with 12, and the remainder content themselves with 8. As to reading matter, the *Jiji* and the *Kokumin* appear the most interesting. They give valuable accounts of the manners and customs of the country, in relation to wedding ceremonies and the various articles used on such occasions. Poems by the Prince Imperial and the Princess Imperial are also published on separate illuminated sheets, the Prince's poems being transcribed by Marquis Ito and those of the Princess by her own fair hand.

It is stated that the present made by the Foreign Consuls to the Prince Imperial is a gold scarf-ring, with a brilliant one-half of an inch in diameter.

Congratulatory messages have been transmitted to the Emperor and to the Prince Imperial from all the Governments of the Treaty Powers; and the Sovereigns of Austria-Hungary, Russian, Italy, Holland, and Korea have presented to the Prince the highest Orders in their respective gifts.

The Emperor and the Prince Imperial have specially recognised the services of Marquis Ito, Marquis Oyama, and Count Hijikata in connexion with His Imperial Highness' education. The Emperor sent to Marquis Ito a magnificently embroidered six-leaf-screen, and the Prince Imperial sent him a set of three gold cups.

The Prince and Princess Imperial proceeded to Hayama on the 14th instant, where they will spend their honeymoon.

Tokyo journals state that the number of congratulatory telegrams, addresses, and letters received at the Palace in connexion with the wedding of the Prince Imperial was 152,261.

The number of persons subscribing to the Imperial Wedding Memorial Museum has reached 18,537, and their subscriptions thus far aggregate 394,464 *yen*. It does not look as if the required amount of 600,000 *yen* would be obtained.

It appears that the Prince's gifts to Marquis Oyama and Count Hijikata were the same as those made by him to Marquis Ito, namely, a set of gold *sake* cups. A similar present was made to Dr. Baelz.

In Yokohama.

The day was observed in Yokohama as a general holiday, every foreign bank, store, office, etc., being closed in the Settlement; while China town and the Japanese quarters gave themselves up entirely to pleasure. The streets looked very pretty in their gay attire of bunting, evergreens, strings of *go-hei* and particoloured *chochin*; while every house, both on the Bluff and in the town, hung out flags galore. The shipping in harbour were all decked in holiday finery, and at noon the men-of-war in the offing fired a salute, the ships taking part being the *Yashima*, *Akashi*, and *Miyako*, the *Admiral Korniloff* (Russian), *Calabria* (Italian), *Concord* (U.S.), *Endymion* (British), *Jaquar* (German), *Newark* (U.S.), and *Yosemite* (U.S.). The schools all held holiday and the children were entertained at a sports meeting behind Noge-yama.

In the evening the town was illuminated in the pretty Japanese fashion, and joyous crowds thronged the streets until a very late hour.

Cricket.

Occasion was also taken to play the opening match of the cricket season on Thursday between two teams captained respectively by Mr. C. M. Duff and Mr. K. F. Crawford. The ground was in excellent condition and the weather delightful. Play commenced a little after 10 a.m., Captain Duff winning the toss and going first to the wicket. The seventeen members of the team managed to put together 86 runs, of which Duff contributed 23 and S. Wheeler 18. Mr. Crawford's fourteen were all disposed of for 63, the Captain himself scoring 24 and Fradgley 19, out of the total. Bugbirds' and Braess' bowling proved very telling. Duff's team then started a second innings and had knocked up 201 runs for fifteen wickets when stumps were drawn at 6 o'clock, J. E. Moss having made the fine score of 51, G. Braess 40, and S. Wheeler 23. The scores were as follows —

THE ADDRESS FROM KOBE.

The following is the text of the Address which has been presented to the Prince on behalf of the foreign community of Kobe:—

May it please Your Imperial Highness:

The auspicious occasion of your Imperial Highness' approaching marriage inspires in the minds of the Japanese people feelings of respectful interest and joyful anticipation in which resident foreigners are privileged to participate. They appreciate with sympathetic insight the public importance of this event, and they desire to associate themselves with those manifestations of national rejoicing which, amongst a people so devotedly loyal to the Imperial Dynasty, are naturally evoked by the nuptial celebrations of the Heir Apparent to the Throne.

Influenced therefore by these sentiments, we, foreigners of all nationalities residing in Kobe and Osaka, join in respectfully tendering to your Imperial Highness and your affianced Bride the expression of our sincere congratulation for your united happiness and welfare, and we beg that you will deign to accept this address and casquet as a token of our respect, and of the earnestness of our desire to identify ourselves with the great public and social interests of the land wherein we sojourn.

RIOT AT ODAWARA.

The *Jiji Shimpo* and the *Chuo Shimbun* write in very strong terms against the Odawara rioters who smashed some cars on the electric railway. Both journals concur in declaring that such an act on such a day was an insult to the Prince and Princess Imperial on whose account the town was *en fête*.

The inhabitants of Odawara seem to have become incensed against the proprietors of the new electric railway. We can not discover any reason for the sentiment, except that the Railway Company's contribution to the festivities on the 10th and 11th instant was only 5 *yen*, and the people appear to have justly regarded such a sum as altogether mean. Accordingly, when the festival cars were brought out, their bearers deposited them on the tram-way, or employed them as battering rams against the electric cars, and the pastime grew so unruly that the police were finally compelled to effect a number of arrests.

SOUTH AFRICA.

Saturday, May 12.

It is very curious to read the comments of some American journals on the recent operations of the Boers at Thabanchu, Reddersburg and Wepener. Roberts is spoken of as being "nearly surrounded, with his forty or fifty thousand men, by a thin line of Boers, having possession of the water-works of the town, and operating both east and west of his railway communications;" the Boers are said to have "enveloped Robert's huge army at Bloemfontein with a cloud of swiftly moving detachments, behind which considerable masses of their combatants are supposed to be concentrated," and it is concluded that "the Boers have Roberts and his army cooped up in Bloemfontein." It must be confessed that no such alarmist views were entertained in our own remote quarter of the world, and that they look very quaint when examined by the light of what actually took place. There can be no doubt that the march of the Boers *viâ* Ladybrand, Wepener and Smithfield into the south-west of the Free State had for its object the cutting of Lord Roberts line of communications with the Orange River. That was the device by means of which President Kruger hoped to verify his prophecy that he would retake Bloemfontein in a week. But the whole affair proved a complete fiasco. The Boers succeeded in entrapping part of a British convoy in an ambush, and in capturing a few companies of British infantry whom they caught moving across country at a distance from supplies of food and water and with only a few rounds of ammunition. But they never got near the lines of communication, and after these first surprises, they effected nothing. A little group of 500 Englishmen held them powerless for ten days, and they finally had to beat a hasty retreat northwards, the purpose of their expedition wholly unaccomplished. They made an effort to strike at the communications in the direction of Kimberley also, but it ended even more futilely. Nobody was less perturbed than Lord Roberts.

Monday, May 14.

Lord Roberts has made a record march. His rate of advance averaged 8½ miles daily from the 1st to the 10th of May, for Ventersberg station, which his cavalry and mounted infantry occupied on the 10th instant, is 85 miles from Bloemfontein. To move an army at that pace even in the absence of opposition would be a fine feat, considering that no assistance can be derived from the railway; but it becomes a very remarkable achievement when we remember that the Boers have stubbornly resisted the advance of the British force, and that three battles have had to be fought *en route*, one at Brandfort, one at the Vet, and one at the Zand. Roberts' object in pushing forward so rapidly is to prevent the Boers from making an organized stand and entrenching themselves strongly. Had Methuen been able to adopt similar tactics on his march towards Kimberley there would have been no Maggersfontein. The wisdom of the delay made by Roberts at Bloemfontein is now apparent. He was determined not to move until his preparations having been completed, he could count on advancing steadily, instead of having to check his forward movement at some point where every day's delay would have enabled the enemy to concentrate an opposing force.

From Ventersburg to Kroonstad in 29 miles. The telegrams say that a decisive battle was expected in the neighbourhood of the latter place on the 13th instant. But the estimate seems defective. So soon as Roberts arrives in the vicinity of Kroonstad his reasons for great haste cease to be imperative. Already the Boers have made all their preparations for the defence of that place. We may assume, therefore, that the British attack will not be delivered precipitately. The tactics of the English General are to avoid needless sacrifices of life: he prefers manœuvring to frontal attacks. An interesting illustration of that method was furnished recently at Thabanchu. On the 5th of May, the Boers retired from Thabanchu in the face of Rundle's advance and Brabant's imminent arrival. But being anxious to delay the British progress and perhaps, to cling to a position whence they could continue to threaten Roberts' communications, they left a force in possession of an almost inacessible kopje near the town. Rundle, acting of course under instructions, made no violent attempt to dislodge them. He left some troops to watch them, while Ian Hamilton pushed on northward and Brabant swept round to the east. On the 8th, the Boers, seeing that their presence accomplished nothing and that they were in danger of being cut off, abandoned the position and effected their escape. The Zand River fight also illustrates Roberts' strategy. He assured himself of the dimensions of the enemy's front by simultaneous reconnaissances in force on both wings, and then he outflanked them. The Boers must have been in great strength; at least twenty-five thousand men, for to occupy a front of 20 miles with a smaller force would have been to court serious disaster. Roberts fortunately had a still more numerous army. If it had been necessary for him to draw troops from his centre in order to deliver outflanking blows, the mobility of the Boers would always have enabled them to concentrate an effective force at the threatened point. A telegram published by the *Japan Times* puts Roberts' army at 35,000. That, of course, means the force under the Field Marshal's immediate command. But even then we believe it to be an underestimate. Broadly speaking, Roberts' plan of campaign is to drive the Boers back over the whole extent of the Free State. He is determined not to leave them any opportunity of threatening his communications. The main advance is the centre, where he himself leads an army of probably fifty thousand men. On his right, moving in the district between Winburg and Vicksburg, is Rundle with, perhaps, twenty thousand men, having advanced from the Bloemfontein-Thabanchu-Ladybrand line. On his left are Methuen and Hunter; the former, with fifteen thousand men, occupying the district between Kimberley, Boshof and Winburg; the latter, with fifteen thousand men, pushing northward from Warrenton. Thus the British front may be said to extend over 170 miles, unequally divided by the Bloemfontein-Kroonstad Railway, Methuen having to guard more than 100 miles, and Rundle only 60. But the country on the west of the railway in the direction of Boshof and Kimberley is unsuited for the Boers' operations, and an advance by them on that side is scarcely to be apprehended. Hence Methuen's task is comparatively easy. On the other hand, the frontier of the Free State takes a large eastward sweep beyond Vicksburg, and if Rundle continued to advance in a direction parallel to Roberts' line of progress, he would expose his line of communications to enterprises on the part of the Boers from Van Reenan's Pass and Harrismith. It is here, we believe, that Buller's cooperation will come in. Roberts at Ventersburg has reached a point nearly due east of Reenan's Pass and Harrismith, and therefore threatens to cut the latter's communications with Kroonstad. Meanwhile Rundle will soon be advancing from Vicksburg in the direction of Bethlehem, the terminus of the Ladysmith-Harrismith Railway *viâ* Reenan's Pass. Now, therefore, is the moment for Buller to strike. If he can force the Pass, he marches direct upon Harrismith and Bethlehem, joins hands with Rundle, and sweeps the whole of the north-eastern section of the Free State. As to the forcing of the passes, it is undoubtedly a tremendous undertaking, but the time for the attempt is certainly now.

Digitized by Google Original from CORNELL UNIVERSITY

On this hypotheses, the distribution of the British forces would seem to be approximately as follows :—

The Centre under Roberts	50,000
The Right Wing under Rundle	20,000
In Natal under Buller	40,000
The Left Wing under Methuen	15,000
The Warrenton column under Hunter	15,000
On the lines of Communication	35,000
In Cape Colony	10,000
Under Carrington, Plumer and in Mafeking	15,000
Casualties	20,000
Total	220,000

It will be remembered that on the 4th inst. Ian Hamilton prevented the junction of two Boer forces, and inflicted heavy loss on the enemy. The telegraph now says that the Boers are hemmed in at Klokolan and that Rundle is fighting there. There are two Klokolans: one a mountain 30 miles east of Winberg; the other a town on the road between Ladybrand and Vicksburg. There can be little doubt, we think, that the former place is indicated. The Boers in their retreat from Ladybrand to Kroonstad, might either keep to the road on the extreme east, which would take them first to Vicksburg and then to Bethlehem; or they might strike due north, cross the Winburg-Vicksburg road at Trommel, and thence proceed *viâ* Senekal and Ventersburg to Kroonstad. The former route would remove them from the fighting area for a considerable time, and the probability is that in taking the latter they were intercepted by Hamilton and driven into laager at Klokolan, just south of Trommel. It is also possible that the force intercepted was that retiring from Vicksburg in the direction of Winburg. At any rate we may conclude that for once the Boers have relied too much on their mobility.

The news that a special relief column for Mafeking has passed through Vryburg will take the public by surprise—not the British public alone, but the Boer public also, we imagine. Vryburg is 127 miles beyond Kimberley and 96 miles south of Mafeking. Thus in 10 or 12 days this column should be within striking distance of Mafeking. The wonder is how it made its way to Vryburg undiscovered and unopposed—if it has really made its way thither, for we find the news difficult to believe. The only conceivable hypothesis is that, while Methuen threatened the Boers at Barkly, the relief column crossed the Vaal at some point westward of the Harts, and marched northward, keeping that river constantly on its right flank. Still we can not understand how it achieved the feat of getting past the Boers, and how Roberts allowed it to run the risk of being completely severed from its base, as it might have been at any moment by a movement of the Boers from Warrenton. If the thing has been done, it must stand as a most daring feat unjustifiable by anything save success. Of course the column may have made a very wide circuit through Bechuanaland, but in that case it would scarcely have emerged at Vryburg. This is one of the most interesting incidents of the whole war.

Since this article was in type news comes that Roberts has occupied Kroonstadt unopposed, although for weeks past we have heard of extensive preparations made there for resistance by the Boers. It may be presumed that the war is now over for the Free State, and that the Transvaalers are reduced to their own resources. Roberts' march is very remarkable. He has averaged 10 miles a day for 12 consecutive days.

Tuesday, May 15.

The Leeuw River, at which Rundle and Brabant were halted on Sunday, is immediately on the north of Winburg. We confess to being sceptical about the resistance which the telegram published elsewhere foresees for these Generals. If the Free State burghers could not be induced to resist at Kroonstad, where they had plenty of time to mass their forces, entrench themselves and make vigorous preparations for defence, it is not easy to perceive why they should make fruitless and disjointed resistance here and there throughout the State, especially with Roberts and French holding the principal roads of retreat to the Transvaal. It appears to us that the fate of the Free State is practically sealed, and that the burghers will not do much more fighting. Their desertion by the Transvaalers is singular. The latter are reported to have said that they would not fight any more for the Free-staters. But it is the Free-staters that have been fighting for the Transvaalers throughout. England had no quarrel of any kind with the Free State. President Steyn induced his misguided nationals to throw in their lot with their neighbours, not for the redress of any grievance or the repelling of any aggression, but simply in accordance with a scheme of ambition.

THE FINANCIAL SITUATION.

Saturday, May 12.

Mr. Yamamoto, President of the Bank of Japan, addressing a meeting of bankers in Osaka on the 8th instant, explained that though the Bank is precluded from hoping to attract foreign capital by raising its rate of interest, the circumstances of the time seem to call imperatively for a contraction of the amount of money in circulation, and no course suggests itself for that purpose except to raise the rate of interest. Some inconvenience is thereby inflicted on the commercial public, but the President considers that unavoidable.

Mr. Yamamoto then went on to draw an interesting contrast. In 1890, he said, there were 372 banks in England but the number has now fallen to 250, with a total capital of twelve hundred million *yen*, or an average of 4.800,000 *yen* per bank. In Japan, on the contrary, there are 1677 banks with a total paid-up capital of 210 million *yen*, being an average of a hundred and twenty thousand *yen*. There are in fact nearly seven times as many banks in this country as in England and each Japanese bank works with a fortieth of the capital of an English bank.

The President might have capped this comment by comparing the amount of currency in circulation in some foreign countries with that circulating in Japan. Let us take the United States, with its huge population of 77,395,000. The total money in circulation on April 1st, 1900 was $2,021,274,506, being at the rate of $26.12 per capita, or 52 *yen* per head of the population. In Japan the total amount in circulation at the date of the latest returns was 314,105,408 *yen*, being at the rate of a little less than 7 *yen* per head of the population. Nothing conveys a more vivid impression of the smallness of Japanese financial affairs than such a contrast as this.

Monday, May 14.

At a general meeting of commercial and industrial representatives held in Osaka on the 8th instant, some important resolutions were adopted. Premising that the positive policy of expansion adopted by the Government after the war with China must not be limited to armaments, but must extend also to industrial and commercial development, the meeting proceeded to declare that the import and export trade must be protected; that all industries using domestic raw materials must be encouraged; that, whether by direct or indirect means, exports must be increased; that no recourse should be had to temporizing and superficial methods of restricting imports—as by raising the Bank of Japan's rate of interest—; that the country must adopt the open-door policy in fact as well as in theory by permitting foreigners to hold shares in all enterprises, to own land and to work mines; that the financial system must be amended—this is not explicable—and that suitable means must be adopted for collecting the scattered money of the people and utilizing it as industrial and commercial capital.

This subject was farther ventilated at a meeting between six representatives of the Tokyo Chamber of Commerce and three of the Cabinet Ministers—namely, Marquis Yamagata, Count Matsukata, and Baron Sone—which took place on the 10th instant in the Premier's residence. Baron Shibusawa, Mr. Amenomiya and the other representatives urged that steps must be taken to bring about the introduction of foreign capital, but the Minister of Finance is reported to have remarked that to bring in foreign capital with the right hand and pay it out with the left was a futile proceeding, and that Japan's great need was the development of an effective spirit of saving. If every unit of the population saved 5 *yen* annually, there would result a sum of 200 million *yen* for the promotion of industry and commerce, but if the people spent as fast as they earned, wealth could never be accumulated. We do not imagine, however, that Count Matsukata confined himself to the enunciation of a platitude of that kind.

Tuesday, May 15.

Addressing a meeting of business men at Hakata in Chikuzen, Marquis Ito spoke in a strain that might almost be called alarmist with reference to the exodus of specie and the excess of imports over exports. He noted that Japan had received 360 million *yen* in gold from China, and that she had sold war bonds amounting to 40 million *yen* the year before last. It was commonly supposed that the greater part of this money had been paid away for the country's increased armaments; but, in point of fact, only 160 millions or 170 millions had gone for that purpose. What had become of the remaining 230 or 240 millions? There could be no doubt, the Marquis thought, that it had left the country in payment of the excess of imports which had taken place every year since the war. There was, however, no new source from which gold could be drawn, and, if the present drain continued, the specie reserve must gradually dwindle away, and the nation would find itself with an unredeemable currency, just as had been the case before 1885, with this difference, that the misfortune would be felt much more widely and keenly than it had been felt then inasmuch as enterprise had become so much more active. It was idle to talk of the introduction of foreign capital as a remedy. Foreign capital would not come for the mere asking. The people must be prepared to help themselves, and, without attempting to indicate any definite remedy, the Marquis earnestly directed the attention of his hearers to this all-important subject.

A NEWSPAPER ABOLISHED.

Tuesday, May 15.

We are sorry to see that a journal published in Christian interests has offended against the Press Law by inserting matter disrespectful to the Imperial Family. The newspaper is called *Seinen no Fukuin* (Young Men's Gospel), and is said to be edited by a former student of the Doshisha. We have not read the offensive article, and naturally our Tokyo contemporaries, in referring to it, confine themselves to giving the heading. From that heading, however, we gather that the writer allowed himself to discuss the recent Imperial marriage in terms at once cruel and insulting. Freedom of speech is admirable in its way, and modern experience indicates that the atmosphere of liberty is the best antidote for all extreme views. But there are limits to the application of every principle and if the contents of the *Seinen no Fukuin's* article be such as the title suggests, the publication is calculated merely to do mischief. The *Official Gazette* announces the suppression of the paper and the confiscation of the plant, and two arrests are said to have been made. We give the writer full credit for sincerity of faith, and we are not without admiration for his courage, but it would have been better had he remembered the injunction of the Master whom he desires to serve before he penned such a diatribe. The *Nippon*, alluding to the incident, observes that the offending paper is rumoured to be under the supervision of a foreigner, and supplements its statement of the rumour by the curt comment *sa mo aran* (very likely). Unfortunately it can not be denied that the *Nippon* has cause for such a remark, but it might have qualified it by reference to the tone of the local foreign press in connexion with the Imperial Wedding, and by reference to the warmly worded addresses from the foreign communities.

Thursday, May 17.

The crime of *lèse majesté* is so exceedingly rare in Japan that considerable excitement has been caused by the case of the *Seinen no Fuku-in*. The particulars, as published by Tokyo newspapers, go to indicate that the affair belongs to the category of offences committed by men whom indigence has rendered desperate. The writer of the article was Yamakawa Hitoshi, a youth of 21, and the fair copy was made by Morita Bunji, a lad of 19. Yamakawa seems to be one of nature's failures; or at any rate, he has hitherto been attempting to make his livelihood in lines for which he is entirely unadapted. He received some education at the Doshisha, probably because it cost little, and he then became a sort of hanger-on in the establishment of Mr. Akiyama Teisuke, of the *Niroku Shimbun*. By that gentleman he was sent to the Seiji Gakko, established in recent years by Mr. Matsumoto Gumpei, for teaching the sciences of politics and economy. But in connexion with some question of starting a magazine in the school, Yamakawa showed such a want of discipline that he was expelled. He again sought assistance from Mr. Akiyama, but was ultimately given up by that gentleman also as a hopeless youth. Ultimately he started the *Seinen no Fuku-in*, but to such straits was he driven for the purpose of keeping body and soul together that he had to devote his nights to the occupation of distributing newspapers. The *Seinen no Fuku-in* (Young Men's Gospel) did not attract purchasers, and in a fit of desperation Yamakawa conceived the idea of publishing something which would make a sensation. He had probably derived the idea from observing the success which has rewarded similar efforts on the part of the yellow journals of Tokyo. He is to be pitied.

The *Mainichi Shimbun* declares that Yamakawa is a product of the times. Our contemporary elaborates its thesis very cleverly, the gist being that the hysterical patriotism so blatantly proclaimed by some folks, and their tyrannical manner of thrusting it down the throats of the people, can not fail to excite feelings of resentment, and even to drive giddy persons to demonstrate their protests by extreme measures. Nishino Buntaro, Viscount Mori's murderer, was an example of the madness wrought by this diseased patriotism, and Yamakawa Hitoshi is an instance in the opposite direction; an instance of the reactionary delirium that such extravagant doctrines beget. Doubtless the incident will be used by the conservative section of educationists to support their argument against the dangers of Christianity. They will say that Yamakawa imbibed his disloyal notions at the Doshisha. But they are themselves responsible for him.

It will be easy to find an answer for the *Mainichi* in the fact that Yamakawa's folly was inspired simply by the desperation of penury. But no thoughtful person, we think, can deny our contemporary's contention that patriotism is over-done in Japan, and that by screaming themselves hoarse in the market place, its exponents will ultimately become a public nuisance, and will bring into disrepute not themselves but the cause they represent.

EMIGRATION TO AMERICA.

Remonstrances continue to be received from Seattle with reference to the inflow of Japanese immigrants. The acting Japanese Consul writes that on the 15th of April the *Riojun Maru* brought 1,500 immigrants, of whom 590 were for Seattle. On the 17th of the same month, the *Goodwin* brought 1,000 to Tacoma. Two or three days previously to the despatch of the Consul's letter, 700 arrived at Portland, and there was then a rumour that the *Tosa Maru*, which left Yokohama on the 24th April, would bring 1,000. The Labourer's Union in Seattle was becoming much excited over this question, and the press was taking it up vigorously. The acting Consul recommends, therefore, that the people in Japan be earnestly warned of the hopelessness of engaging in such enterprises. Many, if not a majority, of the emigrants can not anticipate anything better than to become objects of charity.

The difficulty presenting itself to the Japanese Government in this matter is obviously want of power. Officials have no authority to interdict immigration without some enabling legislation by the Diet. An urgency ordinance would scarcely be warranted by the facts. Probably the origin of the trouble is to be found in the indiscriminate encouragement offered to emigrants by companies which find their account in inducing men to make the essay, and which take no thought whatever for the issue. It appears that the most effectual remedy is applicable through the medium of local governors, who should endeavour to convey to the people in their jurisdiction a true conception of the perils involved in such wild enterprises. We do not doubt that full instructions in that sense have already been given to the various prefectures.

CONTRASTS.

Some of the advertisements appearing in the newspapers at present offer striking contrasts. In one and the same column we find it announced that several Japanese banks of good repute pay interest at the rate of 5.84 per cent. annually on daily balances of current account for all amounts of not less than 100 *yen*, and that the four foreign banks of Yokohama pay interest at the rate of 2 per cent. annually on daily balances of current accounts for amounts not less than 500 *yen*. That is a very remarkable difference: nearly three times as much interest in one case as in the other, and payable, moreover, by the Japanese banks on everything over 100 *yen*, but by the foreign banks on nothing less than 500 *yen*. It would be hard to find anything more forcibly illustrating the gulf that separates the financial world of Japan from the financial world of the Occident. If these banks were situated in different countries, it would be easy to understand the discrepancy in their rates, but they are all in Japan, and their places of business are within a few miles of each other. Moreover, while the Japanese banks are in urgent need of capital and can not attract deposits even by paying 5.84 per cent. on ordinary current accounts and 6.57 on special current accounts, the foreign banks get large deposits though they pay only 2 per cent. Does not this show the fruitlessness of talking about the import of foreign capital into Japan? Does it not show that some great gulf has still to be bridged before money begins to travel hither from abroad? In spite of the high rate of interest that they pay to depositors and clients the Japanese banks reap handsomer profits than the foreign banks doing business in a neighbouring field with capital obtained at much cheaper rates. Cooperation is certainly the need of the time, but how it is to be brought about we do not perceive.

KEROSENE IN YEZO.

Numerous reports are reaching Tokyo of kerosene wealth in Hokkaido. It is alleged that the island offers prospects not inferior to those of Echigo. The places where oil is said to exist are numerous. At Nukimi-mura on Soya-strait considerable quantities can be obtained without recourse to machine-boring. In fact the oil has long overflowed into the sea, and local knowledge of the phenomenon is attested by the fact that, in stormy weather, boats have been in the habit of passing near Nukimi-mura as the sea there is always comparatively calm. Also at Nigori-kawa near Hakodate; at Kayanuma-gori near Shiribeshi; at Itaibetsu on a branch stream of the Uriu River; at Kotanimura and Tsukisamu-mura near Sapporo, and, finally, in the neighbourhood of Abashiri, rumour alleges that rich wells exist, at some of which a hundred bushels a day may be obtained by ordinary digging without any machinery. The names of Messrs. Okura Kihachiro and Amenomiya are mentioned in connexion with the enterprise. They are said to have acquired, or applied for, leases of some of the wells. It will strike our readers that Japan is beginning to reveal a wealth of mineral deposits not hitherto suspected. Hokkaido with its coal, its gold, and its kerosene may prove a veritable treasure island. Iron is now the great desideratum. If some one could discover really rich deposits of that ore, the country would be happy.

DOMESTIC POLITICS.

It is doubtless remembered by our readers that when some agitation was recently made by the Liberals for the purpose of obtaining practical recognition of the services rendered by them to the Government, they were said to have been induced to leave the question in abeyance until after the wedding of the Prince Imperial. Now, therefore, the journals of Tokyo are busily bringing the topic again upon the *tapis*. They assert that the Liberals have applied to have their claims fully considered, and that no further procrastination will be possible. These cries of wolf have been so frequent that it is hard to place any confidence in their recurrence. At any rate everything is still hopelessly vague. No one ventures to predict whether the Ministry will admit some of the Liberals to its ranks; or whether there will be a complete reconstruction of the Cabinet; or whether the Prime Minister will defy the Liberals and dissolve the Diet next session should it prove intractable.

Mr. Hoshi Toru has allowed himself to be interviewed on this subject. He thought it worth while to contradict an industriously circulated rumour to the effect that the Cabinet is employing the Tokyo-street-railway concession as a bait for the Liberals. The concession, he declares, is a problem entirely apart from politics, nor has political influence been obtruded into the field at all. In point of fact the Government has given the charter to the *Sampa-godo* (three-companies union), and the only matter now under consideration is the question of method. Turning then to the relations between the Ministry and the Liberals, he spoke at some length, the gist of his remarks being that the Liberals are content to advance towards their goal of party cabinets step by step; that their coalition with the Yamagata Ministry has been dictated throughout by considerations of public utility rather than by ambitious projects; that Marquis Yamagata is not likely to resign in consequence of any demands preferred by the Party, but, that means of satisfying such demands will probably be furnished by the voluntary retirement of some Ministers who are are not unwilling to sacrifice themselves for the good of the country; that Marquis Ito would scarcely consent to form a cabinet now, inasmuch as his ideals with regard to political parties are not yet satisfied nor his arrangements with the House of Peers complete; that although Marquis Yamagata is not the man to cling to office for the sake of office, neither is he the man to abandon the helm when serious problems of finance and foreign politics call for solution; and that whatever arrangement is made will probably secure the assent of the influential leaders of the Liberals, though among the rank and file there may be some disaffection.

THE KOBE WATER WORKS CASE.

In the *Kokumin Shimbun* we find an excellent article on the subject of the above case. The writing is characterized by all the fairness and moderation that usually distinguish the *Kokumin's* columns. From the point of view of the strict letter of the law, our contemporary thinks that Mr. Morse's case may not be valid, but it appears to entertain no doubt that, morally speaking, he has justice on his side. The writer asks very pertinently how any thinking person can suppose that the statement of a sterling rate on the back of the bonds had no significance whatsoever. Why was an English "translation" put upon the bonds if it was not to have a value and not to be regarded as a translation? The Kobe folks deny that they gave any promise to redeem the bonds with sterling at a fixed rate. They allege that they merely undertook to cause a fixed sterling rate to be recorded on the bonds. In fact, their contention is that the sterling figures were intended to give information as to the sterling equivalent of the bonds at the date of issue, and not to convey any pledge as to a sterling rate of redemption. But they do not deny that a discussion took place originally between themselves and Mr. Morse as to what rate should be shown on the bonds, or that ultimately they conceded a higher rate in deference to his desires. How is that to be interpreted? Can there have been any reasonable doubt in the minds of the Kobe negotiators that Mr. Morse was bargaining for a rate of redemption? The *Kokumin* thinks not. It believes that although the Japanese text on the face of the bonds did not contain any provision with regard to a sterling rate, both of the contracting parties understood that a sterling rate of redemption had been agreed to between them. If then Mr. Morse is cast in this case merely because of a technical flaw, a grave charge of *mala fides* will lie at the door of the Japanese, and the country's credit must suffer much injury. The *Kokumin* hopes that the question will not be allowed to go to an appeal court, but that an agreement will be come to by the parties as quickly as possible.

THE EARTHQUAKE ON THE TWELFTH.

A very severe shock of earthquake was felt in Tokyo at 2.24 a.m., and in Yokohama at 2.24.10 a.m., on the 12th inst. No damage was caused in either city, but a very slight increase of the shock must have had more or less disastrous effects. The motion seems to have been chiefly horizontal, attaining a maximum of 2.4 m.m. in that direction, whereas the vertical component was comparatively insignificant, and as the vertical motion is chiefly responsible for damage, the immunity is explained so far as Tokyo and Yokohama are concerned. The area of disturbance was very wide, extending from Hakodate to Kyoto, and the centre seems to have been near the Rikuchiu coast, a constant origin of seismic activity. Sendai appears to have been greatly shaken up, and all the northern districts were severely visited, but no serious injury is yet reported.

Intelligence from the north indicates that the earthquake caused much more damage than the first reports led us to suppose. In Tokyo and Yokohama only one shock was felt, but in Sendai, Fukushima and Miyagi there was a succession of tremors, and the people seem to have been thrown into considerable alarm. The first hypothesis, namely, that the centre of disturbance was in the sea off Rikuzen and that the shock had its origin in a subsidence at the Tuscarora Deep, is now abandoned in favour of a supposition that the seismic energy was volcanic, but as usual the conviction is confirmed that these phenomena defy the explanations of scientists. Accurate details of the damage done have not been collected, but it is stated that in Sendai 40 houses were more or less injured and 5 people wounded; in Fukushima, 12 houses suffered; in Toda-gori (Miyagi Prefecture), 30 houses were overthrown and many persons and animals were injured, and from Iwamura comes a similar report. The railway also has suffered between Semine and Konohida and in the neighbourhood of Hanaizumi.

KOREAN AFFAIRS.

From Korea comes a statement that in addition to the large area recently acquired by Russia at Masampho, she has also obtained possession of some 200,000 *tsubo* of land at Chinnampho, and that the latter area is outside the foreign settlement, though within the treaty limits. This second acquisition was not made recently. The bargain is said to have been struck nearly two years ago. Being private property, the land could be purchased without specially attracting attention, but, as its immediate occupation was not contemplated, the persons residing on it were not required to move immediately. The idea is that Russia made this purchase with the object of having a station between Port Arthur and Masampho.

The Emperor of Korea has shown considerably courtesy towards the Japanese who were connected, indirectly, with the building of the Sōul-Chemulpho Railway. His Majesty recently entertained them at a banquet, and spoke in warm terms of the relations between Korea and and Japan. He also insisted that Mr. Omiwa Chobei should accept the post of superintendent of railways, and although Mr. Omiwa did not by any means covet the honour, he had to consent finally, and to proceed to the Palace to receive his commission. It is stated that he was obliged to wear Korean costume for the purpose of presentation to the Emperor, and that as he is now in his sixty-sixth year, this masquerading in foreign garb did not commend itself to him.

The Sōul correspondent of the *Yomiuri Shimbun* says that the Korean Government has issued an ordinance declaring that severe penalties shall be inflicted on any Korean subject who enters into such relations with a foreign Power as are calculated to injure Korea. An elaborate definition is given of which constitutes injurious relations; for instance, the employment of foreign troops; the borrowing of foreign money or ships; the soliciting of foreign influence as a means of obtaining office in Korea; the use of foreign Powers as a weapon of intimidation; the sale of land to foreigners in places not sanctioned by treaty; the lending of one's name to a foreigner desirous of buying land; or the concealing of the fact that another person has thus lent his name, and so on. Between every line of this strange document one can read the embarrassments that beset the unfortunate Sovereign of Korea, but it is impossible to avoid the reflection that his Majesty has himself been eminently guilty of some of the unpatriotic sins against which he now warns his subjects.

Telegrams in the *Jiji Shimpo* from Sōul say that the Department of Education has decided to engage an English teacher, the British Representative giving his good offices for the purpose, and that, in consideration of the advice of the French Representative, the services of several Freachmen will be secured, one to act as adviser to the Department of Agriculture and Commerce; one to be teacher in the industrial school; one to be general manager—of what we do not gather—and five to act in the capacity of engineers.

The latest rumour about land acquisitions in Korea is that a Japanese subject is found to have purchased the island of Wŏl-mi-to, which is near Chemulpho and in the vicinity of the place where the *Kowshing* was sunk in 1884. The purchase is said to have been made last year for a sum of 150,000 *yen*, and it is

Digitized by Google Original from CORNELL UNIVERSITY

added that the Korean official responsible for the transaction has been dismissed from office. Perhaps this incident is the proximate cause of the Ordinance referred to above. It appears pretty plain that there has been no lack of Japanese enterprise in Korea. A considerable quantity of land here and there is in Japanese posession. Russia found, for example, when she came to peg out her claim near the foreign settlement at Masampho, that about 4 acres in the most eligible part of the lot were already owned by a Japanese subject. How that complication has been dealt with we do not yet know.

The Emperor of Korea is said to have purchased the German consulate and the site on which it stands for the purpose of making an addition to the palace. The consulate was the private property of Mr. Walter, and the price obtained for it from the Court is put at 30,000 *yen*.

Another telegram alleges that the Sōul Government is being pressed by the American Representative to grant a concession of a gold mine at Kaichhōn in Phyŏngan-do.

The second public sale of settlement land at Masampho took place on the 30th ultimo. Comparatively low prices were realized. Eleven lots were purchased by a Russian, formerly an engineer of the Port Arthur Railway, but now said not to have any official connexion; one by a Russian connected with a German firm in Nagasaki; sixteen by an Austrian, who is described as the overseer of the Fusan agency of the Russo-Chinese Railway; six by the Japanese Department of Communications, for the purpose of building post and telegraph offices; two by the Japanese Consul; sixteen by three Japanese subjects, and two by the Western Hongwan-ji of Kyoto. Thirteen lots did not find purchasers.

Mr. Kwŏn, whose arrest on landing at Chemulpho has just been announced, was Chief of Police in Sōul at the time of the *coup d'état*—November 2nd, 1896—when the Prime Minister Kim was murdered, and the King took refuge in the Russian Legation. Kwŏn escaped to Japan, and has remained in hiding ever since. It is not clear what sin he is supposed to have committed. Public opinion inclines rather to the belief that he was sinned against. At all events he appears to have grown weary of exile, and in spite of the urgent remonstrances and warnings of his friends, he repaired to Korea and gave himself up. Such, at any rate, is the latest version. It may be presumed that Mr. Kwŏn had received some guarantee of safety.

The Korean Government seems to have been driven to desperation by the repeated applications for mining concessions that have recently reached it. It is said to have refused three preferred by American citizens, and also to have postponed further consideration of the Japanese application for Chiksan. Meanwhile, France has entered the field as an applicant.

The *Jiji Shimpo's* telegram announce that Mr. Gubbins, H.B.M. Chargé d'Affaires in Korea, has reached Sōul, as also has a French Jurist, appointed to serve as instructor in law to the Korean Government. Mr. Gubbins was to have proceeded to Korea *viâ* Japan, but at the last moment it seems have been considered desirable that he should take up his duties with the least possible delay. He is not accompanied by his family. Considering the important duties that Mr. Gubbins was performing in Japan, and considering his exceptional qualifications as a Japanese scholar for their discharge, we are not sure that the public service is to be congratulated on his transfer to Soul; and so far as he is personally concerned, residence in the Korean capital will not be as agreeable as residence in Tokyo. But the appointment undoubtedly means promotion, and also opens up a new field for the exercise of the great abilities of which Mr. Gubbins has often shown himself the possessor. It indicates, further, a new departure, from a diplomatic point of view, since it may be regarded, we think, as an evidence of the Foreign Office's final abandonment of its old-fashioned theory that Korea was little better than an appanage of China. That theory led to unfortunate results in the war of 1894-5, and it was doubtless responsible for the unvarying selection of a member of the Chinese staff of the Legation to represent Her Majesty in Sōul, as well as for the previous union of the two posts of Minister in Peking and Minister in Sōul in one and the same official. Mr. Gubbins belongs to the Japanese branch of the Service. He has an intimate knowledge of Japanese politics, and, indeed, of everything relating to Japan, and these facts give to his appointment a significance which Lord Salisbury must have fully foreseen when he made the nomination.

The *New York Tribune* has an amusing picture entitled, "Don't interfere with the animal at meal-time." An immense white bear, open-mouthed and of the fiercest mien, rises over a bone labelled Korea and advances snarling against a lilliputian mannikin standing on *geta* and armed with a Japanese umbrella, which he flirts in the face of the monster. The mannikin wears a costume evidently supposed by the artist to be Japanese, but bearing no sort of resemblance to any dress seen in this country. However, there is no mistaking the intention of the picture. Japan is supposed to have nothing better than an umbrella to stay the onset of the great white bear.

Apparently Korea's reluctance to grant any further mining concessions to foreigners has been overcome in favour of an American citizen. The Emperor is said to have promised a concession at Kyŏng-chu in Kyŏngsan-do, and although the Minister concerned has not yet given the necessary documents, it is supposed that there will not be any ultimate difficulty.

THE PEST.

Monday, May 14.

Five new cases of pest occurred in Osaka on the 10th instant. The disease is no longer confined to the Western quarter of the city: it has now invaded the eastern quarter and the southern quarter also. Of the 5 cases reported on the 10th, 2 were in the southern quarter. Numbers of rats are said to be dying in various parts of the city, and in every instance the plague bacillus is found in their bodies. In view of these alarming symptoms, and of the fact that the man who was recently taken ill in Shizuoka Prefecture has since died of the malady, which he had evidently contracted during his sojourn in Osaka *en route* for Shizuoka, it has been decided to revive the system of medical inspection of passengers arriving in Tokyo by the Tokaido Railway.

It is evident that there was some truth in the charges recently preferred against the Osaka Authorities that they had concealed the fact of the pest's recrudescence. The Governor of Osaka, Mr. Kikuchi, is publicly reprimanded in the *Official Gazette* for having failed to forward reports to the Home Department.

A case is reported from the northern district also of Osaka. It occurred on the 9th instant and terminated fatally on the 12th.

Tuesday, May 15.

Another case of pest is reported from Shizuoka. It occurred at Omiya-machi, and seems to have ended fatally in a few hours. There is no news, however, of any fresh case in Osaka, and it must be confessed that although the presence of the disease in Japan is a too patent fact, the Authorities seem to struggle very successfully against its rapid spread.

Wednesday, May 16.

Two more cases of pest have occurred in Omiya-machi, Shizuoka Prefecture, making three cases in all for that district. Another case is also reported from the Western Ward of Osaka.

The Russian Authorities in the north have notified that all vessels coming from Japan, with the exception of those arriving in Saghalien from Hakodate, shall be regarded as from infected ports, and shall be subjected to medical inspection and other precautionary measures at Vladivostock.

The Governor of Kanagawa Prefecture on Monday issued a notification containing instructions for the purpose of preventing the spread of plague. These regulations deal with railway passengers from Osaka, inspection being again enforced; and the reporting to the police by hotel-proprietors of all guests who may arrive from the infected districts. Anyone failing to observe these regulations is liable to a fine of from 50 *sen* to 1.50 *yen*.

THE NOBILITY.

The addition of 60 new peers to the nobles' list has naturally suggested to Japanese publicists some considerations about the growth of the titled class. When the peerage was created in 1886, the total number of peers was 533, and with their families they aggregated 3,430. In 1898 the number of peers had grown to 716, making 4,523 with their families. Adding the 60 new creations, there are now 776 peers, or 243 more than there were originally. The entailed property (*sesshu zaisan*) of the peers prior to the latest additions, stood as follows:—

	In number.	Yen.
Princes	11	1,156,200
Marquises	33	5,929,913
Counts	89	4,484,595
Viscounts	363	4,946,987
Barons	220	140,016
	716	16,657,721

It is well understood that this last figure does not by any means represent the property really owned by the peers: it merely represents the sum registered by them under the provisions of the law which compels them to set aside a certain amount as entailed property, for the purpose of supporting their titles. If it represented their whole property, they would certainly be the poorest nobility in the world. Japanese journalists are beginning to consider seriously whether the rapid increase of the number of peers and of their families will not lead soon to the serious impoverishment of the order, and whether it might not be wise to limit the transmission of certain titles to two or, at most, three generations.

CRITICISM.

We have become accustomed to listen patiently to the criticisms of the German and French press, and even of German and French military men, with reference to the operations of the British troops in South Africa. It does not immediately occur to us that either the Germans or the French have any heaven-derived right to pose in the role they have assumed, but we recognise that the failures made by our generals in the beginning of the war deprive us of the pleasure of protest, however numerous be the fingers of scorn raised against us, and whatever be the quality of the persons raising them. After all, England's back is broad enough to bear a great deal of abuse, and as long as she profits fully by the experiences she has purchased so dearly, we can afford to let our friends rail. They are in the comfortable position of not having to give practical proofs of their own competence, and we have nothing worse to wish them than that they should remain wise in their own conceit. It is to be observed that the Germans have now persuaded themselves of their qualifications to criticise the British navy also. The guns, the quality of the crews, the discipline and the training are all denounced as defective. The *Vossische Zeitung*, for example, writes as follows :—

"It is not at all impossible that Great Britain would experience as much disappointment in a naval war as now in her struggle on land. A portion of the English press have acknowledged that all is not as it should be: but the general public hardly know the extent of the corruption rampant in the navy. Many of the guns are made of bad material, are faultily constructed, and have wrong calibre. Guns must be manufactured with the utmost precision, else they are likely to burst and can not be depended upon for accurate shooting. Krupp, for instance, owes his reputation to the fact that nothing is allowed to leave his works ere it is thoroughly tested and able to pass the most rigorous inspection. Now in England it is very common for cabinet ministers to be interested in large industrial establishments, and to draw large sums as shareholders or directors. It is, therefore, easy to understand that government contracts are not always given to the most reliable firms. Thus the guns obtained from the Italian branch of the Armstrong Company are said to be very faulty. (Naturally a part of the Italian artillery also leaves much to be desired.) Faulty calibre is a serious matter. For if the ammunition of a gun should run short, it may be found that ammunition supplied for another gun nominally of the same calibre is useless, and a gun is put out of action. To this must be added that many ships are armed with old, inferior guns, and therefore hardly able to cope with an enemy carrying the best modern artillery.

"The quality of the crews leaves much to be desired. Their discipline is not good, and that counts almost for more nowadays than personal courage. Their training also is faulty. There can be no doubt that the British navy have ships which might well be the envy of any nation; but, on the average, that navy is certainly not what it is 'cracked up to be,' and it may with certainty be assumed that the German—excepting, of course, in point of numbers—is much more serviceable."

What are we to say to all that? The infallible Germans may be right about our guns, our crews, our discipline and our training, but what about the "Cabinet Ministers interested in large industrial establishments," and the "contracts not given to the most reliable firms?" We must be very grateful to the Germans for pointing out these things. They would not be playing a friendly part if they did not give us the benefit of their invaluable criticism, and we have also to be thankful that their own Navy furnishes a model which we can imitate.

"JAPAN'S FAILURE IN FORMOSA."

Under the above heading we find an article in *Harper's Weekly*, written not so much for the purpose of demonstrating Japan's want of success in Formosa, as with the object of showing that the province of Fuhkien ought to become American territory. The connexion of ideas may not be immediately apparent, yet it is simple enough. If Japan has failed in Formosa she would have less chance of succeeding in Fuhkien with its twenty millions of inhabitants. Therefore, in the event of China's breaking up, Fuhkien ought not to go to Japan. But why should it go to America? There we find a missing link in the chain of reasoning. Mr. William N. Brewster, the writer of the article, puts the matter thus :—

It would seem to be the height of folly for Japan to attempt to handle a whole province with ten times the Formosa population on the mainland. Disastrous failure would be certain. All this points to the possible possession of this great province by America in the not distant future. In case China breaks up, as now seems most probable, America cannot escape a share of the responsibility for the government of her next-door neighbour. Japan's failure in Formosa will naturally throw this province, which Japan seems to want but can never govern, to America as the nearest great power that has not already marked out its "sphere of influence." It is not safe to prophesy with too much confidence in such a matter, but the past two years have realized far stranger and more improbable events in American history.

Mr. Brewster, in a word, regards America as residuary legatee of Japan's failures. He does not pretend that America has any moral right whatever to Fuhkien, but he wants a slice of China for his country, and, as the greater part of eligible Chinese territory has been ear-marked by European Powers, he suggests Fuhkien, since Japan only has advanced any pretensions to it. His method of proving that Japan has such pretensions is this :—

That the Japanese have designs upon Fuhkien is is no longer even an open secret. It is no secret at all. Japanese exploring parties are often met; the Japanese flag is flying on Chinese junks by the score; there is a large Japanese concession of land and a settlement at Foochow, and one at Amoy; a Japanese railroad is to be built; Japanese Buddhist churches, avowedly for political purposes, are being organized all along the coast. The meaning of all this, and much more in the same line, is so plain that he who runs may read. American interests here are very great and may be developed indefinitely. This province is close to the Philippines. Let the reader take a map and study the relation of Fuhkien Province to the Philippines and Formosa, and then it will be no longer necessary to emphasize the importance of this question from the American stand-point.

The Japanese Buddhists will be surprised to learn that they have "organized churches all along the coast avowedly for political purposes," and if Mr. W. N. Brewster believes anything of the kind, he must be a remarkably credulous person. Concerning his indictment of Japan's methods in Formosa, it is based on the assertions of Dr. Wykeham Myers, recently made to an interviewer of the *North-China Herald* and published by that journal:

The interviewer says: "I was anxious to get some clear idea of how, under present conditions, the island is divided up, and Dr. Myers was good enough to draw me a diagram which showed roughly but clearly the state of affairs. The chain fringing the eastern side of the island is, so to speak, the background to the present political trouble. Running westward from these to the coast-line is the plain land, in which, as one nears the coast, are to be found the big towns. At present the land immediately at the base of these hills is divided up into territories which have been granted to various banditti chiefs on terms of absolute independence." After telling of the revolts of the populace and the changes of administration and policy, each change seeming to make matters worse, Dr. Myers is quoted as saying:—"They [the Japanese rulers] conferred with the robber chiefs under the most humiliating conditions, and finally ceded large tracts of Formosan territory to these men. Notable among the chiefs is Lim-Siau-Nian, who holds the southernmost tract of land, running from the hills clear to the coast-line. Koa Thih-haw, another robber chief, holds a large tract of land farther north, while between these and to the north of them are a number of smaller grants."

Upon being asked, "How much of Formosan territory is left under Japanese jurisdiction?" Dr. Myers replied, "Supposing that the treaties and arrangements made by Dr. Goto, the present civil administrative chief, are allowed by the Japanese to remain in force as at present, there is only a narrow strip on the western side of the island, bounded by a line running close to the east of the chief cities on that coast, which the Japanese attempt any jurisdiction over."

In answer to the question whether Japan had granted extra-territorial rights to these men, Dr. Myers, while expressing the opinion that the Government had not been consulted by its representatives in Formosa in the concessions, said, "I cannot deny that these banditti chiefs hold sovereign rights." So much for at least two-thirds of the territory. Not only have the Japanese not succeeded in establishing their authority over it, but they have been forced to make formal treaties with not only one rebel, but several, and have recognized a number of small states under the government of these feudal lords.

But how about the strip of land along the western coast over which the Japanese exercise a degree of authority? Are the people well treated, and contented with their new masters? Let the English adviser of the new régime speak. Evidently Dr. Myers's advice is little followed by his employers, or he would have a different story to tell. "Notwithstanding this confusion, Dr. Goto has to show that Formosa can do something for itself, or at least be less of a burden on the mother-country, whose apparently unbounded generosity he has almost exhausted. To do that the people in the narrow strip of Japanese territory are taxed with a new and extremely heavy tariff. Besides that, they are made to pay export taxes. The method of collection is by no means a satisfactory one, moreover."

"What is the result of this on the people?"

"Those that the Japanese can get at are oppressed almost to ruin," Dr. Myers said. "Another result is that the tariff offers such an enormous premium to smuggling that syndicates have been formed in China and elsewhere which are actively and most remuneratively engaged all along the coast-line in evading the regulations governing the export and import of goods. As to the bandit Lim Siau-Nian, whose territory is to the south, and runs from the hills clear to the coast-line, he can bring whatever he likes into the country, arms included. It goes without saying that he takes the opportunity."

We imagine that Dr. Myers' statements must be considerably discounted in view of the fact that he no longer holds a post under the Japanese Government, and that his loss of office was due to differences of opinion with Dr. Goto, whose proceedings he so severely criticises. At all events we should like to hear Dr. Goto's views before arriving at any conclusion. Meanwhile, it is very interesting to note how appetite has come with eating in the case of some Americans. Three or four years ago such views as those expressed by Mr. Brewster would have sounded very strange in the mouth of an United States citizen.

THE PRESENTATION TO MR. & MRS. A. C. READ.

We have received the following letter, which speaks for itself, from Mr. J. F. Lowder :—

Ye Olde Manor House,
South Norwood Hill, Surrey.
April 8th, 1900.

MY DEAR LOWDER:

I write these lines to ask you to be good enough to convey in such manner as may seem to you most desirable, our renewed and most grateful thanks to all those kind friends who presented us on our departure from Japan with the very beautiful and costly souvenir which has just arrived home in safety, and now adorns the side-board of our quaint old dining-room. It is impossible for me to adequately express how sincerely my wife and I appreciate the kindly thought and feeling of so many Japan residents towards us, which is very deeply reciprocated on our part, and I can assure you and all of them that the silver punch bowl and goblets and the accompanying address, signed as it is by all whom we were privileged to call friends in Japan at that time, will ever be amongst our most jealously guarded treasures and be handed down to those who come after us as cherished heir-looms.

With our united kindest regards to all,

Believe me to remain, yours very sincerely.

A. C. READ.

J. F. LOWDER, ESQ., Yokohama.

Original from CORNELL UNIVERSITY

NOTES ON CURRENT EVENTS.

The Italian Government has declared Port Said an infected port in consequence of the appearance of pest there.

A strike of labourers is reported from the Arakawa copper mine in Akita Prefecture. The details are obscure.

An explosion of gas has occurred at the Yuge-mura coal mine in Fukuoka Prefecture. Two miners were killed and eight injured.

The third-class cruiser *Chihaya*, now under construction at Yokosuka, will be launched on the 26th instant, according to the present programme.

The Viceroy Chang Chih-tung has sent his son to Japan to conduct some investigations. The young man arrived at Kobe on the 14th instant.

The *Official Gazette* publishes the Bill passed by the Diet last session, providing for co-operation between the courts of law in Formosa and Japan.

The Japanese Consul telegraphs from Vancouver that numbers of Japanese immigrants are in a destitute condition in that district, and that he is devising measures to succour them.

It is reported that H.I.H. Prince Nashimoto has been betrothed to the eldest daughter of Marquis Nabeshima, and that the wedding ceremony will be conducted according to the rules observed at the recent marriage of the Crown Prince.

The line-of-battle ship *Mikasa* (15,362 tons), the building of which is in the hands of Messrs. Vickers, Maxim and Company, will be finished by next May, it is expected. Captain Serata has been appointed to take command of the crew which will navigate her to Japan.

We are to have a Japanese reprint of that perennially entertaining book, the "Travels of Marco Polo." The work is said to cost 70 *yen* in England at present, and the Kyoyeki Shosha of Takekawa-cho in Tokyo think that it will pay to bring out a new edition, which they propose to sell for 8 *yen* to subscribers, and for 9 *yen* to subsequent purchasers. Then will be two volumes.

According to the *Shogyo Shimpo*, a meeting of the Four Elder Statesmen, Marquis Ito, Count Inouye, Marquis Yamagata, and Count Matsugata, is to take place in a few days, for the purpose of discussing the general question of Japanese finance. It is thought that this conference will have considerable influence on the compilation of next year's budget.

It is stated that seven dogs were seized with rabies in Tokyo during the first week of the present month and that they bit thirty people. The police authorities have consequently issued instructions urging the muzzling of dogs, immediate recourse to medical assistance in case of bites, and the forwarding of information to the nearest police station when any symptoms of rabies or of illness are perceived in a dog.

A company has been formed to build an electric railway from Fujisawa to Enoshima *viâ* Katase, and thence to Kamakura. The railway will reach Enoshima at the celebrated Shichiri-ga-hama, or "Seven-league beach." The company's capital is put at 200,000 *yen*, and 24,000 has been paid up as security. The sanction of the Home Department having already been obtained, work will probably be commenced at an early date, and it is expected that the line will be open for traffic next year.

News from China is to effect that the Chinese Delimitation Commissioners at Weihai-wei were attacked and besieged by the rioters, and that Governor Yuan being unable to effect their rescue, applied for assistance to the British, who dispersed to mob and saved the Commissioners.

We observe that the science (?) of phrenology is being taken up in Japan. Such at least we presume to be the translation of the term *kosso-gaku*, which Mr. Takahara, Principal of the Commercial College, promises to explain by lecture and experiment at the Imperial Hotel this evening (16th), under the auspices of Messrs. Sonoda Kokichi, Yokoyama and Hara Ryozaburo. These names indicate a serious undertaking.

The affairs of the Ota (Mito) Railway do not appear to be mending. We explained in a previous issue that the railway is indebted to the Fifteenth Bank in the sum of 280,000 *yen*. Attempts have been made to induce the Bank not to press its claim at present, but no success has been achieved, and the shareholders, who have paid up 400,000 *yen*, are threatened with the loss of all their money unless they can find a purchaser for the line. A general meeting is to be held to decide the fate of the undertaking.

The *Official Gazette* publishes the convention concluded by Japan with China in connexion with the administration of the special Japanese settlement at Amoy. Speaking briefly, all the functions of municipal government are delegated to the Japanese community—the making and repairing of roads and bridges, the construction of drains, the policing of the settlement, and so on. The Japanese have been taught by experience how to draft a convention of this kind.

On the 7th inst. a train which left a station on the Hoshiu (Buzen-Bungo) Railway at 11 a.m., was derailed near Natsuyoshi. The engine fell down an embankment dragging with it five wagons. There was only one passenger carriage, the train being made up chiefly of good's vans, and as that carriage did not leave the rails, no passenger was injured. In the account of the accident given by vernacular journals, we do not find any allusion to the driver or stoker of the engine, but it is unlikely that they escaped serious injury.

According to the *Kokumin Shimbun*, a member of the firm of Messrs. Oppenheimer Frères of Yokohama has instituted a suit for libel against the *Niroku Shimbun*, that journal having published a statement to the effect that the gentleman in question attacked his wife in a hotel in Yokohama and beat her severely. We are glad to see that some one takes the trouble of invoking the law's protection against journalistic slanders in Japan. As a rule they are left severely alone, and one result is that the newspapers lose all sense of responsibility.

The meeting of steamship and railway companies held a few days ago in San Francisco to consider the formation of a conference for the purposes of Trans-Pacific freight, came to an agreement, and the result will be a general raising of rates. This issue is somewhat unexpected, for the President of the Nippon Yusen Kaisha, who attended the meeting on behalf of that Company, was understood to be determined to claim certain concessions. It appears, however, that the principal of these concessions has been secured, namely, a rebate on the freight of silk piece-goods, and that the organization of the conference has thus become possible.

Two fresh cases of pest are reported from Osaka, both in the Western Ward, where the disease has been from the first markedly prevalent. The victims were a woman and a little girl, and both cases ended fatally in a very brief time.

A general meeting of the principals of normal schools is now being held in the Mombusho. A number of more or less important questions have been submitted by the Minister of Education for discussion by the meeting.

A serious collision is reported to have taken place on the 14th instant between the miners of the Atsuji and Höö coal-mines in Fukuoka Prefecture. The police had much difficulty in restoring order. As yet the cause of the trouble is not published.

A Belgian gentleman now staying at the Imperial Hotel in Tokyo is said to be endeavouring to promote a grand scheme for a big syndicate composed of Japanese, Germans, Frenchmen, Belgians, and Chinese, the object being to exploit mining and railway enterprises in China first and afterwards in Japan.

The financial difficulty among the Ashikaga weavers has not been settled, as was hoped at one time. It has not been found possible to effect an arrangement with regard to the cheques issued by Mr. Sekida, to the amount of fifty thousand *yen*, and proceedings in bankruptcy have been commenced. Mr. Sekida's victims are said to have invaded his premises and threatened to kill him, but that procedure does not appear to have improved the position. The sufferers are all in the two towns of Sano and Ashikaga.

The *Chiuo Shimbun* justly remarks that Count Inouye's recent utterances on financial topics seem to have been greatly misunderstood. People imagine that he advocates a negative, retrogressive policy. No one acquainted with the Count could suspect him of anything of the kind. He is all for the pushing of great enterprises and the vigorous development of the nation's resources. But he believes that strength is being frittered away by division and subdivision, and that the need of the time is co-operation, so as to secure economy in organization and to make capital efficient.

It is stated by the *Chiuo* that Baron Kodama, Governor-General of Formosa, and Mr. Goto, Chief of the Civil Government Department, have interested themselves greatly in the problem of spreading Japanese influence in Fuhkien. By giving substantial aid to schools, fostering the establishment of a newspaper, promoting the organization of a sericultural station, and encouraging navigation, they have succeeded in winning much public approval, so that the people of Fuhkien have come to regard Japan as a most desirable neighbour, and are showing a disposition to take her for a model in everything. There are traces of the enthusiastic penman in this paragraph, but we may assume that it contains some grains of truth.

The various cement companies seem to have almost succeeded in forming a trust. They held a meeting on the 11th instant in the Yanagi-ya restaurant, Tokyo, and decided that each of the confederating com-

Digitized by Google Original from CORNELL UNIVERSITY

panies should put up a sum of ten thousand *yen* to form a joint capital; that in future when tendering for Government contracts the price of cement should be raised by from 40 to 50 *sen* per barrel; and that if a tender was received by an outsider, none of the confederated companies should supply cement to him, the penalty for violating this agreement being a fine of one *yen* for every barrel supplied. Detailed regulations are in process of compilation.

Contradictory reports are circulated with reference to the effect that will be produced on Trans-Pacific freights by the agreement reached in the recent conference at San Francisco. Mr. Mutsu, Japanese Consul at the latter place, telegraphs that the rate for tea will be $1.50 per 100 lbs., and that for fancy matting $1.25 per 100 lbs., but that there will be no additional charge for Eastward cargo. Other authorities state, however, that the freight on Eastward cargo will be increased 25 per cent. As to the fact that the Nippon Yusen Kaisha has obtained a special rate for silk piece-goods, it is beyond question.

The returns of the income tax collected last year show a result much more favourable than the estimates of the Finance Department contemplated. The figure set down in the estimates was 3,830,000 *yen*, whereas the amount actually collected was 4,894,624 *yen*, showing an excess of 1,059,624 *yen*. The collection was made up as follows:—

	Yen.
Juridical Persons	1,602,454
Bonds and two Shares	255,977
Individuals' Incomes	3,036,193
Total	4,894,624

It is, at any rate, an exceedingly paltry figure; so paltry that one is impelled to suspect extraordinary falsification of returns on the part of tax-payers.

It is stated that the negotiations which have been going on since 1898 with the proprietors of the Hanyang mine have now at length been brought to a satisfactory conclusion, and experts will soon be sent to China to complete the arrangements for a constant supply of iron to the Foundry at Yawata. The Foundry is to commence work next July. It is said to be a very complete and well equipped affair, as indeed it should be, seeing that it has cost the country fifteen million *yen*. We read in the *Nichi Nichi Shimbun* that the annual output is expected to be 71,000 tons of rails; 10,000 tons of Bessemer steel; 25,000 tons of iron plates; 15,000 tons of manufactured iron; and 5,000 tons of Martin's steel. If these expectations are fulfilled, the Foundry will not only supply all Japan's domestic wants, but will also leave a margin for export.

The Minister of Justice, addressing the meeting of the Judges and Public Procurators now assembled at the Department of Justice, laid great stress on the importance of not sticking with slavish closeness to the text of laws; of not attaching too much importance to trifles, and of supplementing the deficiencies of the Codes by a judicious application of legal principles. His Excellency called attention to the facts that during last year 1,368 cases had been carried to appeal courts on the motion of public procurators and that 503, or 36.5 per cent., had been given against the appellants, whereas out of 5,443 appeals by suitors or defendants, only 1,695, or 31 per cent., had failed. From these figures it appeared that the public procurators preferred appeals on less solid grounds than did suitors themselves, whereas the opposite ought to be the case. We may add that the Minister alluded to criminal cases only.

The torpedo-destroyer *Usugumo* reached Kagoshima on the 14th instant, having left Hongkong on the 5th.

His Excellency the United States Representative on Wednesday conducted the Philippine Commissioners to the Palace and introduced them to the Emperor. Afterwards the ladies of the party were introduced to the Empress by Mrs. Buck.

A telegram says that the battle-ship *Asahi*, having been docked at Portsmouth after her recent accident, was found entirely free from injury as to her hull. It was expected that she would be able to get out in about two weeks on a flood tide.

With regard to the Hawaiian problem, telegrams have been received in Tokyo stating that the United States' Navigation Law and Customs Tariff will not go into force until the forty-fifth day after April 30th, when the Bill was duly sanctioned. All labour contracts concluded subsequently to the 12th of August, 1898, when annexation was declared, will be void, but labourers who arrived in Hawaii under such contracts will be allowed to remain. The latter concession was not included in the original Bill. On the contrary, the Bill provided that all these labourers must be returned to Japan within a period of 12 months. The Senate Committee, however, struck out that harsh provision.

Mr. Dole, hitherto President of the Republic, is to be Governor of the islands in their new character of a "territory," and Mr. Cooper will be Secretary.

A fundamental question seems to have caused the dissolution of the tribunal recently organized in Hawaii for the purpose of investigating the losses suffered by Japanese subjects in connection with the measures taken by the Sanitary Authorities. The President of the United States had suggested the organization of the Court as a means of ascertaining how much compensation should be paid, but the Hawaiian President assigned to it the duty of determining whether any compensation should be paid at all. This discrepancy was naturally crucial. Japanese newspapers now predict that the claims must lie in abeyance until the islands pass definitely under American jurisdiction on the 15th of June. It is alleged that the Hawaiian Government had every intention originally of giving compensation for losses resulting from the sanitary precautions, and that a sum of five hundred thousand dollars was then available for the purpose. But the money had to be devoted to other objects, and out of that fact grew the idea of rejecting the claims.

The United States Military Attaché with the Boer Army is Captain Carl Reichman. A rumour has been spread that he "led the Boer attack on Colonel Broadwood's column at Koorn Spruit, when 450 British were captured," and some credulous newspapers have published pictures of him on the strength of that report. It is an amusing idea. Is there anything too absurd to be credited by a section of the public? What is stranger still is that the *Philadelphia Press* and the *Literary Digest*, which insert the picture with the wonderful legend printed under it, do not appear to have the least appreciation of the dishonour and disgrace that would be inflicted on the American Army if Captain Reichman had done what he is supposed to have done, and do not apparently suspect that, supposing him to have been guilty of such an act, to stand up before a platoon af musketry would be his lawful fate if captured by the British. There are no American officers who would be guilty of such things. The *Philadelphia Press* aud the *Literary Digest* evidently are entirely ignorant of an officer's respect for his cloth.

H.I.H. Prince Kanin seems to have been received with remarkable cordiality in Paris. A member of the *Chuo Shimbun's* staff, being in his Imperial Highness' suite, has communicated the particulars to that journal. It seems that not only were the usual ceremonial visits interchanged, but also the President gave a banquet at the Elysée in honour of the Prince. Sixty guests were invited. The Prince took in Madame Loubet, and on her left sat the President of the Chamber of Deputies, while the President had on his right Madame Jules Ferry and on his left Madame Kurino, the wife of the Japanese Representative. Prince Iwakura and Mr. Hayashi, chief commissioner of the Japanese section in the Exhibition, were also among the guests. We learn from the same authority that the proprietors of the *Figaro* also gave a banquet in honour of the Prince.

An Imperial Ordinance has been issued directing that the Fifth National Exhibition shall be held in Osaka from March 1st to July 1st, 1903. The site chosen is in the south district of the city at Imomiya within the Tenno-ji area. As nearly three full years of interval remain, it is to be hoped that ample preparations will be made and that sufficient steps will be taken to give publicity to the project in foreign countries. The Japanese have hitherto shown themselves invariably deficient in that respect. It never seems to strike them as worth while to scatter prospectuses broadcast and advertise freely in foreign countries as all European or American projecters of similar enterprises do. The Fifth Exhibition, it will be observed, is to run for four months only. People in Occidental countries can not possibly discover its existence in time to pay it a visit if they hear nothing of it until after it has been opened.

We learn from the *Jimmin* that there is a great tendency at present to suicides by lovers. The *Jimmin* thinks that this custom had its origin at the end of the seventeenth century, when two or three cases occurred in Osaka. They were made the subjects of poems that contributed materially to create a false conscience about such acts. Above all, our contemporary condemns in strong terms the so-called suicides in which a man, being unable to win a woman's love, kills her and then kills himself. Instead of being regarded as a common assassin, his true character, such a man is counted a sort of hero by the public. The *Jimmin* observes that the suicide of two lovers because they can not live together in this world is not due to real love, but to a spurious passion with no depth of perseverance or endurance. That is very true, but do not these unhappy lovers imagine that they will be united beyond the grave? It is to that belief, as we have always understood, that they owe the incentive to their rash act at least as much as to a feeling of despair or impatience. The *Jimmin's* teaching is wholesome, but something seems wanting to supplement it.

LEGAL DECISIONS RELATING TO LAND IN KOBE.

IT is worth while to draw attention to a decision rendered on the 3rd instant by the Kobe Local Court with reference to an attempt on the part of a Japanese land-owner to recover possession of a lot of land from a foreigner who held it. A British subject, CREAGH, purchased from a Japanese subject in 1888 the right of tenure of some land for building purposes, the agreement being that the tenure should continue for 50 years in consideration of a lump sum paid by CREAGH in satisfaction of rent for that term. In short, CREAGH purchased the superficies of the land in a manner that guaranteed him against all interference for 50 years. In a few years CREAGH died, and the superficies was sold by his executors to an American citizen, SMITHERS, who also having died, the superficies became his wife's property. She duly registered her accession at the United States Consulate in 1897, but she failed to register it at the prefectural office until March, 1900. Meanwhile the original owner of the land had also died, and it had been sold and re-sold, finally coming into the hands of one FUKAZAWA. Land in Kobe having appreciated enormously since 1888, the new owner, FUKAZAWA, became anxious to recover possession of the property. We do not say that he did not believe in the validity of his right to recover it. We merely explain the apparent facts. He therefore brought suit to oust Mrs. SMITHERS, his grounds being, first, that the tenure had been transferred without the consent of the owner; secondly, that Mrs. SMITHERS had omitted to register her acquisition of the title at the prefectural office, according to law; thirdly, that she had failed to pay rent; and fourthly, that her right of tenure was a simple lease and not a superficies. It will be seen that this suit incidentally involved the question of the relations between an owner and a superficiary, since it raised the point whether the latter can transfer a superficies to a third party without consulting the former. The Court decided in favour of Mrs. SMITHERS. It ruled, in the first place, that CREAGH had obviously obtained a superficies, not an ordinary lease, since his avowed object had been to own buildings on the land. It further ruled that the lump sum paid by CREAGH at the outset had been intended to be in commutation of all rent, and that, consequently, no rent was thereafter payable on the land for fifty years. It further ruled that a superficiary who has acquired his title in such a manner is at liberty to transfer the title to some one else without seeking the owner's consent; in other words, that a superficiary is absolutely independent of the owner from the beginning to the end of the term of the superficies if the rent has all been paid in advance. And it finally ruled that although Mrs. SMITHERS' had certainly failed to register her title at the prefectural office in 1897, the failure did not invalidate her title but merely exposed her to a fine. All this is in plain accord with the text of the law, but it furnishes an object lesson as to the law's practical meaning, and will probably remove the last doubts lingering in the minds of some persons with regard to the quality and value of a superficies.

"THE ANTI-FOREIGN SPIRIT IN JAPAN."

A MR. R. VAN BERGEN publishes in the April number of the *Review of Reviews* a singular article entitled "The Anti-foreign Spirit in Japan." We quote two paragraphs:—

> The Japanese possessed no written codes, and in criminal cases torture was resorted to for many years to extract a confession. Besides this, the *joi*, or anti-foreign spirit, was daily growing more and more rampant among all classes, and there was ample evidence from cases brought against Japanese and adjudicated in their courts that foreigners could not obtain justice against a native. These facts prevented the heads of legations at Tokyo from recommending a favorable consideration of Japan's reiterated requests, until on July 17, 1894, it was suddenly announced that Lord Salisbury had signed the revised treaty, granting all of Japan's demands on condition that it should go into effect after five years, and provided that at that time the written codes should have been in operation for one year. After this decisive act of Great Britain the other treaty powers could no longer resist, and Japan's most ardent desire was fulfilled.
>
> While the masses of the Japanese were jubilant as the time drew nigh when no consular court should continue to afford much-needed protection, it was not the foreigners only who looked with apprehension upon the approaching date. The government of Japan dreaded the excesses of its uncontrollable subjects. Had not the native courts arduously and indiscriminately defended every native guilty of an unprovoked assault upon a foreigner? Had not acquittal uniformly followed the most flagrant case of cheating or embezzlement committed upon an alien? These facts could not be denied. But while this line of conduct had not displeased the government at a time when it could not be held responsible, it was now deemed necessary to invoke the highest power, the emperor's writ, in restraining the ardent patriots from such embarrassing behaviour. An imperial rescript was issued a few days prior to July 17, 1899, strongly advocating a more civil and just line of conduct. This rescript was unheeded. The majority of those natives whom business or social relations bring into contact with foreigners looked upon it as a mere formality to allay fears. With the strongly biased actions of the judges before them, the people could come to no other conclusion.

Mr. VAN BERGEN then proceeds to refer to the Kent case. His account of it is remarkable. He sets out by declaring, as an established fact, that the Japanese quartermaster entered KENT's room and struck him before KENT raised his hand in self-defence. No one believes anything of the kind. Assuredly it was not proven. Mr. VAN BERGEN further gives the judgment of the lower court condemning Kent to six months' imprisonment, but says nothing of the higher court which reversed that judgment and sentenced Kent to 10 days' detention, and similarly ignores the facts that the quartermaster himself was sentenced to 10 days' detention and was dismissed from the service of the Nippon Yusen Kaisha. The Kent case could not fail to injure Japanese reputation considerably, and we are not inclined to say anything in mitigation of the punishment it is bringing on them, for the lesson will probably be wholesome. But we find it amusing that Mr. VAN BERGEN should be so ready to denounce Japanese injustice when his own idea of justice is not only to give a garbled and misleading account of the case, but also to publish the sentence of the lower court and suppress the fact of its reversal by the upper. Mr. VAN BERGEN's other statements in the paragraphs quoted above show the same recklessness. He alleges that at the time of treaty revision in 1894, the Japanese had no written codes. That is false. The Criminal Code and the Code of Criminal Procedure had been in operation for 13 years, and the Code of Civil Procedure for three. He alleges that "in criminal cases torture was resorted to for many years to extract a confession." That is equally false. Torture had been finally abolished twenty years previously. It is true that Mr. VAN BEEGEN does not actually say that the system of torture was in force when treaty revision took place, but his words convey that impression, and were evidently intended to convey it. He alleges that "there was ample evidence from cases brought against Japanese and adjudicated in their courts that foreigners could not obtain justice against a native." That is equally false. An exhaustive record published in these columns three years ago showed that of all the cases brought by foreigners against Japanese up to that time, the great majority had been given in favour of the foreigners. He alleges that "the *joi* spirit was daily growing more and more rampant among all classes." That is equally false. The *joi* spirit can not be said to have any practical existence at all in Japan. He alleges that "the majority of those natives whom business or social relations bring into contact with foreigners looked upon the Emperor's Rescript of last July as a mere formality to allay fears," and he adds that "with the strongly biased actions of the judges before them, the people could come to no other conclusion." That is not the least of his falsehoods. There had been no evidence whatever of such bias up to the time of the publication of the Rescript. On the contrary, any Japanese looking through the records of the courts might have been disposed to accuse them rather of pro-foreign bias. He alleges that "the Japanese mob was jubilant" over the Kent case. That also is flagrantly false. The Japanese mob, whatever that may mean, never evinced any sentiment whatever, and Mr. VAN BERGEN, if he paused to think, would know perfectly well that it did not. Finally, he alleges that "there is no safety for a foreigner in Japan," while we are all going about our business comfortably, mixing with the people on friendly terms, and living in absolute security. We wonder what instinct of blind animosity to the Japanese impels an educated man like Mr. VAN BERGEN to publish such a tissue of malicious falsehoods as the above. For every grain of anti-foreign feeling in Japan, he and his fellow-thinkers can show a pound of anti-Japanese feeling. The amusing thing is that if any advocate of the Japanese were to indite a series of such gross misstatements as those put forward Mr. VAN BERGEN in the *Review of Reviews*, he would find himself hounded out of society, whereas we venture to predict that Mr. VAN BERGEN will find many endorsers and sympathisers. He predicts that "the

Digitized by Google Original from CORNELL UNIVERSITY

condition of affairs must necessarily come to light and finally will result in serious trouble with Japan." Yes, if there were many Mr. VAN BERGENS, trouble would surely be inevitable.

FOREIGNERS AND BUSINESS TAX.

The *Asahi* has a note about the refusal of foreigners to pay the business tax. The 15th instant was the date appointed for payment, but only one-third of those liable have met the call. The French and German residents, our contemporary says, are conspicuous in their opposition. One well-known German resident called at the local office, said that he was not under any obligation to pay the tax, and wished to return the notice served on him. The local office was of course unable to give him any satisfaction. It had merely obeyed instructions. It is certainly most unfortunate that some definite understanding can not be arrived at in this matter. The attitude of the section of the foreign residents who are unwilling to pay will surely be misconstrued by the Japanese public at large, with the result that fresh ground will be afforded for the too-prevalent idea that in his relations with the Japanese the average foreigner is an arbitrary, masterful, and defiant sort of person. There is not the least unwillingness on the part of foreigners, whatever their nationality, to pay whatever taxes they are justly liable for. But many of them believe that the treaties confer exemption from any tax upon their house property or on the rent of their land. They have stated their reasons for that view, and, pending a settlement of the question, they are unwilling to pay. Their proper course, in our opinion, would be to pay, trusting their diplomatic Representatives to recover the money for them should it be proved to have been wrongfully collected. But, whatever view may be entertained about that matter, it can not be too clearly understood that there is no desire to defy the Authorities or to evade liabilities. There is a discussion, that is all; and until some final decision is reached, the foreign resident hesitates to pay, especially as, in one instance at all events, he has been desired by his Consul not to do so.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—At the late meeting of the diocesan council of the Nippon Sei Kookwai, in the district of Kyoto, a committee was appointed to endeavor to do something to further the movement for the relief of the sufferers by the famine in India. This committee was appointed first to gather contributions from Church people in our own district, and next to do what might be possible to awaken general interest in the subject among the Japanese people. It is to this last point that I wish to call your attention and that of your readers. The dimensions of this great calamity are so enormous that it is out of the question to look for relief to the people of the British Empire only. Starvation affecting a population as large as that of the whole Empire of Japan, or greater, can be relieved only by the efforts of the charitable throughout the whole world. As the constituency which we represent, composed as it is entirely of Japanese, with a little handful of Americans co-operating with them, has no connection with India or the British Empire beyond that of a common humanity, we are able to appeal to the Japanese people solely on this latter ground, and confidently count on your support for our appeal. We desire also through your columns to appeal especially to missionaries and other Christian workers to do what lies in their power, through the various Japanese Churches with which they are connected, to make this movement general among the Japanese people, and so not only save many lives for which there is else little hope, but also bring the blessings of unselfish charity upon the givers, and help in some degree to bring about the longed-for reign of universal brotherhood and peace among the nations.

I may add that while we have no wish to become almoners for the general community, contributions of those who may desire so to send them will be received by Mr. Tamamura Hatsutaro, Heian Jogakuin, Kyoto, or myself, and forwarded with the contributions of our Church to the Archbishop of Calcutta.

THEODOSIUS S. TYNG,
Chairman of Committee.

Nara, May 12th, 1900.

P.S.—Our Committee has prepared for distribution a circular containing a phototype of some children rescued from the famine, which we shall be glad to send on request so far as our means permit.

In connection with the Indian famine, the following paragraphs from the *Times of India* are of interest: —"There are now (April 14) nearly five millions on relief, an increase of 94,000 being reported during the last week. Increases of 38,000 occurred in the Central Provinces and Hyderabad, 32,000 in the Bombay Native States, and 23,000 in Bombay. There was, on the other hand, a decrease of 54,000 in the Central Indian States. Subscriptions towards the relief of the famine-striken continue to pour in from all quarters. Within the last week a sum of Rs. 15,000 has come from Shanghai followed by Rs. 20,000 (third instalment) from Singapore." "The list of subscriptions to the Famine Charitable Relief Fund which is now (April 18) issued shows a total of over thirty-nine lakhs, apart from 8½ lakhs held by the Comptroller-General as the unexpended balance of the Fund of 1897. The total sum received so far from the Mansion House Fund is Rs. 2,500,000. Edinburgh has sent about Rs. 75,000, Shanghai a second instalment of Rs. 30,000, and Amoy Rs. 1,182." The Navy Department at Washington have secured a 5,000 ton steamship to carry foodstuffs collected by private citizens for the famine-stricken in India.

TAXATION IN YOKOHAMA.

A friend in Yokohama incidentally furnishes some information which our readers will doubtless find interesting:—

Two days ago I received by a messenger two white and two green tax papers, calling upon me to pay a total of $69.81 as ½ year's Imperial and Ken tax. As nothing was stated concerning the details, I at once sent to the Tax Office to ask how the amount was made up. The explanation was not clear although every civility was shown. My messenger was referred to the tax book of which I had a copy, but I failed even then to comprehend the matter. While pondering on the problem, I saw passing an Officer formerly in the police and now in the Revenue Tax Office. Soliciting his aid, I explained my difficulty. He most kindly sat down and went into the matter, making out the following, which comes within a few cents of the amount claimed, and he rendered the facts so clear that I think it may be of interest. Account as sent in:—

Imperial Tax—

For ½ year.

Business tax	35.90 6/10
Com. tax	4.30
Ken tax	1.50
Ken Business tax	14.36 2/10
say	$56.56

Imperial tax to be paid by May 15th, Ken tax by May 31st.

As explained, the $35.90 was

Tax of $5 per $10,000 on wholesale trade of $2,621.22	1.31
Tax of $15 per $10,000 on retail trade of $11,000	16.50
Tax of $40 per $1,000 on rental of $1,200	48.00
4 Employes $1 each	4.00
for 12 months	$69.81
now collected ½	$34.90
difference, perhaps they taxed some other employé 1 *yen*	
Com. tax 1 *o/o* on 975.34 for 12 months, say	$9.00
for 6 months	$4.50

Ken tax is 40 *o/o* on total of Imperial Tax and so runs out.

I asked if this was all. He said no, there will be Town Tax and Income Tax. I seem to be in a tight place. My income is my business, so if I have to pay on that I pay twice on the same thing. The property comes in first: I pay ground rent, then house tax, then the rental tax, 40 per cent., then ken and town tax, and finally income tax on receipts from it. Surely "the burden laid upon us is heavier than we can bear." In spite of your asserting that taxes are lighter here than at home, the rental tax surely of 40 per cent., is abnormal. Why not, at least for the first time, put a detailed translation in English on the back of account, as they do in the land-rent receipts? The average man is willing to pay all just dues; but he wants clearly to know what those dues are; the more so since he has no voice in the matter of fixing the same.

As to Bike tax, do you not see the *jinriki* owners' hand in it? Why ¥6.50 here and ¥1 in Tokyo. Even there they are all against any improved transit, hence the muddle.

Certainly we think that some steps might be taken to render the facts clearer. Our correspondent is not quite right about the tax on bicycles in Tokyo. The amount is not one *yen* but 3 *yen*. At least, that was the rate at the close of last year, but we believe that it has since been raised. We do not think that the *jinrikisha* owners have anything to do with the matter.

SAILING RACES.

Only three of the 17-raters entered for Saturday's yacht race, and of these *Bonito* did not start, but *Devonia* and *Wettinge* sailed over the No. 3 course, 4½ miles, the latter taking the prize. The times were as follows:—

	Rating.	Start.	Harbour Entrance.
Devonia	16½	2.25.15	2.31.35
Wettinge	17	2.24.33	2.32.15
	Finish.	Club time allowance.	
Devonia	gave up	1.03	
Wettinge	3.32.5	—	

Mr. H. W. Irwine officiated as officer of the day.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense, responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE INCOME TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Whatever may be the tax, and under whatever condition it may be imposed by the Government, citizens should pay it.

I understand you to hold that a tax on the rent of a lot in the former Concession is in no sense an additional tax on the land. Can such a view be reasonable? The tax already imposed on the land is a tax on the value of the land,—rationally supposed to be its value at the time of purchase? The value of the land at present is ascertained by its rental income. This is probably in every instance much more than it was at the time of purchase. It is doubtful whether any of this land at its purchase was worth what its land tax would require it to be worth to make ends meet. Ten years ago a lot (say 500 *tsubo*) in the Tsukiji Settlement, Tokyo, could be bought for 1,500 *yen*. The rental value would not be more than 90 *yen* a year, whereas it was taxed 142 *yen*. To cover only the land tax imposed it should have been worth not less than 2,367 *yen*. This same land has increased in value many fold, because the income (rent) from it has increased. And this income is just the same whether the owner lives on it, or rents it to another. A tax is now to be imposed on the rent derived from the land, only when the owner lends it to another. You tell us that this tax is not of the same nature as the tax already paid. Both are taxes appertaining to the land. One is levied per *tsubo* at an estimated value; the other is levied per *tsubo* also at an estimated value fixed by the rent value.

It seem to me that by deducting the land rent already paid from the income derived from rent, and calculating this income tax on the remainder is, in a measure, conceding that the two taxes are similar and levied on the same property. "This land," it is equivalent to saying, "should yield so much tax. The land tax is deficient; but from the total amount which the land should yield the tax already paid will be deducted, and the deficiency only must be paid."

But just here is where the French citizens no doubt objected—viz., that the land tax already paid was pretty high,—high enough to place the owners of Concession lots at a considerable disadvantage. And this brings up the question of the concluding remark of my former letter. I believe it can be shown that the land tax now paid by Concession land owners will more than cover both the land tax and the income tax payable on the rent of land anywhere outside the former Settlements. I do not profess to know by just what method of valuation land is classified in Japan; but, adopting methods familiar to me in America, I see no reason why land on opposite sides of a canal or street (all other things being equal) should differ so widely in the land tax as 8 *sen* and 28 *sen* a *tsubo*. And this disparity is what led me to make the remark I did.

There is one point which I think needs a little more light. You say the French protest, if universally applied, would exempt nearly all incomes derived from business, for example, a lumber merchant's income would escape since the trees in the forest have already been taxed. Are the cases truly parallel? I think a second thought will convince one that they are not. If the trees in the forest should again be taxed while standing there according to what they would bring if placed on the market, then the cases would seem similar. No transformation or new combinations of these lots takes place. They are not ploughed and sowed: the business carried on on them is taxed and a revenue derived from it. None object to this.

There are other questions growing out of the unique position now occupied by land owners in the former Concessions. For instance the income from renting houses might be mentioned. I think most of the foreign citizens have reported the house rents. But it must be borne in mind that the house and lot is rented together for so much, say 600 *yen* a year. Is any discrimination to be made and part of the tax to be laid on the lot and part on the house? I confess that more people than the lot owner will be puzzled over exact calculations. Probably in the point of time-saving it would be better to over-pay than to insist on scrupulously exact figures.

Very truly,

E. SNODGRASS.

Tokyo, May 12th, 1900.

CHINA NOTES.

A Canton correspondent of the *North China Daily News* learns from a very trustworthy source that the Government officials anticipate a great rebellion in Kuangtung province some time during the summer, and are making every effort to arm the troops with rapid-firing guns. Over 5,000 Mausers arrived at Canton recently, being portion of a contract for 15,000 ordered in December last by Li Hung-chang. The heads of the discontented people are also buying and smuggling into the province Mausers, machine guns, and ammunition in great quantities, sufficient at the present moment to put a force of over 25,000 men in the field. The delay in the breaking-out of the anticipated rebellion is due, it is stated, to the fact that the rebel chiefs desire to have 50,000 men, at least, who must be armed like modern troops to form the nucleus of the insurgent army. Viceroy Li seems to be alive to the danger in his province, and is said to be quietly making his preparations to meet the crisis. Telegrams between Canton and Peking are constantly going backwards and forwards, reporting progress of the armament of the troops in the South. It is therefore expected that Viceroy Li will give even larger contracts for modern arms and ammunition, which his opponents welcome, as they anticipate capturing these arms, etc., for their own use at some time.

The funeral of the late Sir Nicholas Hannen took place in Shanghai on Sunday, April 29. The procession to the Cemetery was led by the Volunteers, English, German, and French, and after them came the gun carriage, with its sad burden, on either side of which walked a party of marines from H.M.S. *Hermione*. The chief mourners, in carriages, came next, and then a large body of sailors from the *Hermione* and the warships of the other Powers in port, followed by naval and military officers; the representatives of the Bar and representatives of the French Municipal Council, the Cosmopolitan Council, and the Imperial Maritime Customs, and the Chinese authorities. The various Foreign Consulates united in doing honour to the late Chief Justice, and amongst the occupants of carriages in the cortège were the representatives of Russia, Portugal, Italy, Japan, Sweden, Norway, Denmark, and all the other nationalities. The Consular officers were in full uniform and many of them personally conveyed handsome wreaths. H.M.S. *Hermione* landed 125 bluejackets and 18 marines, the whole being under the command of Lieut. Good-enough. The eight marines who carried the coffin were the same men who bore the late Governor of the Straits Settlements, Sir Charles Mitchell, to his last home. The officers of the various foreign warships in port attended in full uniform. The Rev. W. Gilbert Walshe officiated, and there were also present the Rev. C. J. F. Symons, the Rev. F. L. Hawks Pott, and the Rev. Henry Dalzell, chaplain of H.M.S. *Hermoine*.

Commenting on the Spring Meeting of the Shanghai Race Club, which has just concluded, the *N.-C. Daily News* says:—

There is a general complaint that while the racing is good, and the public come up in full numbers, the meetings themselves nowadays, are very tame. Old residents especially may be heard deploring the absence of the fun that used to characterise the racing formerly. But the conditions have entirely changed. In the old days almost everybody lived in town, the jaunt to the races was a jaunt into the country, and the meeting was a kind of grand picnic where everybody knew everybody else, and all about their ponies and their hopes and fears. Everyone had some personal interest in the sport, and each race was not merely a spectacle which you went to the rails to look at if you felt so disposed, and then turned away contented. The interest in the races has been weakened by dilution, there being ten events a day now, where six or seven would be quite enough, and by being spread over a much greater number of people. There is a great deal of reason, too, in those who blame the prominent position occupied by the pari-mutuels for the absence of gaiety at the races. Three-fourths or more of the men and half the ladies go about all the afternoon with Bank-notes in their hands, and are thinking all the time of their losings and winnings, and asking for and exchanging tips. It is good business, no doubt, but it is fatal to gaiety. It is impossible for a place that has become as large as Shanghai now is, to remain the one happy-go-lucky, friendly, jovial family that it was at the race-meetings of yore. The amount that passed through the pari-mutuels made a total for the three days of something over $103,000.

In view of the recent disturbance at Wei-hai-wei, the following paragraph from the *N. C. Daily News* is of interest:—We learn from Wei-hai-wei, under date the 2nd instant, that Colonel Bower and Major Penrose, escorted by Capt. Pereira and a company of the 1st Chinese Regiment, left to delimit the boundary of the territory leased to Great Britain on the 25th ultimo with the Chinese Commissioners, Taotais Li and Yen, and Capt. Liu of the Chinese navy. Three days later Colonel Bower sent for reinforcements, anticipating trouble, it is supposed. On the 30th further help from the Chinese Regiment was sent, 170 men making a night march, under Major Bruce. Most of these men returned to Wei-hai-wei on the 2nd instant. It is understood that everything is quite quiet, but that the people have detained the unfortunate Chinese Commissioners on the ground that they have sold the territory to the British without the knowledge or sanction of the Emperor.

Ma Kie-chang, who is a large holder of shares in the old Bank of China and Japan, and who has been the ringleader of the Chinese who refused to pay their calls, has been arrested in Hongkong at the instance of the Bank of China and Japan. If the Bank should be able to compel him to pay his calls, remarks a Shanghai contemporary, there is little doubt that the other recalcitrant Chinese shareholders will follow suit.

The native correspondent of the *North-China Daily News* in a recent letter, has the following obituary notice of a Palace official:—

Much joy has been of late manifested in the Capital at the news of the sudden death of Li Lien-yin, *alias* "the Man with the False Smile," the favourite (sham) eunuch of the Empress Dowager, which occurred on the 26th ultimo, after only a couple of hours of illness passed in extreme agony. This has led to the supposition of poison at the hands of the man's enemies, of which he had very many, and this is somewhat confirmed by the fact of his burial within seventy-two hours of his death. This is a most unusual circumstance, for even amongst the ordinarily well-to-do, the respect due to the dead requires that one hundred days, at least, should elapse before burial, in order that the due number of Buddhist and Taoist prayers should be said before the body is placed beneath the sod. Doubtless there were good reasons for the dead eunuch's family adopting this course which will gradually leak out in good time. The eunuch left an estate valued at 38 million taels, one-third of which is in hard cash, obtained through bribes and "presents" from Princes of the Imperial House desirous of place and power, down to the official of the 7th rank or district magistrate who wants his "name recorded in the Grand Council books for immediate substantive preferment." Nothing was too small or insignificant for Li Lien-yin. All was fish for his net. As a matter of fact the man's annual income from these sources is said to have been something incredible in figures, for once any person was "honoured" by being allowed to send him a gift, it became the duty of that one to send the eunuch something at the end of each year in order not to be "forgotten." These 12 million or so taels are deposited in gold shops, banks, pawnbroking insitutions, wholesale drugshops, etc., and can be withdrawn at any time. His landed estates are spread over the three provinces of Chihli, Shansi and Honan, namely, nearly 200,000 mow in Chihli, 150,000 mow in Honan and 500,000 mow in Shansi—all cultivated lands. Whole streets of houses in Peking and Taiyuenfu (capital of Shansi) stand in the Li family's name, whilst the value of precious stones and jadestone and bronze antiquities received as "presents," or bought by the eunuch in a career of ten years' favouritism, is almost incalculable. Being a connoisseur in antiquities, Li not only eagerly accepted such "presents" but paid enormous sums for such things as the bronze sacrificial utensils of the Shang (B.C. 1066-1154) and Chou dynasties (B.C. 1122-1255). For instance, hearing a Chêkiang family possessed a beautiful bronze sacrificial utensil of the first-named dynasty, a beautifully-cast urn, nearly five feet high, Li Lien-yin sent, in 1893, two special agents to buy the thing. The owners being in no wise poor refused to part with a treasured heirloom that had belonged to the family for over 700 years; but pressure was put upon them by aid of the then Governor of the province, and it was finally sold to

Digitized by Google Original from CORNELL UNIVERSITY

the eunuch's agents for Tls. 120,000—how much they charged their principal for it is not known—it being also promised to give a substantive Taotaiship to a member of the family in Shantung and good appointments at Peking to two others then acting as 3rd class Secretaries in the Boards of Punishments and Revenue. All these promises were made good within a month of Li Lien-yin's receipt of the bronze urn. Amongst his collection of antiquities is a large bronze vessel, standing on a tripod, though nearly seven feet high, covered with hieroglyphic characters and figures of birds and animals, alleged to have been cast by the Emperor Yü, the Great (Ta Yü, B.C. 2205-2197), for which Li paid an enormous sum which, although the Empress Dowager also wished to possess, he flatly refused to part with. As to the money "presents" this remarkable eunuch was in the habit of receiving, the following may be taken as an instance. It will be remembered that the Empress Dowager's ex-secret emissary to Japan, the notorious Liu Hsiô-hsun was under a ban in 1898 being sentenced by the then Viceroy Tan of Canton to summary decapitation for irregularities in the Weising lottery, of which Liu then had the monopoly in Kuangtung province. Liu managed to get introduced to the eunuch shortly after the "coup d'etat" of September 1898, by the payment of a present of Tls. 400,000 cash, and obtained further commendation by offering to search the world over, at his own expense, and arrest Kang Yu-wei, the Reformer. Liu's visit to Japan was in this connection and also to try to persuade the Japanese to refuse protection and hospitality to the Reformer and his friends.

Liu had a companion named Ch'ing K'uan, an exscribe of the Board of Revenue, for whose arrest a reward had been offered by that Board. when he went up to Peking to purchase the favour of the eunuch. Liu got his patron to cancel the sentence of arrest against Ch'ing K'uan, for which the latter paid the eunuch Tls. 150,000, and was then appointed to assist Liu in catching Kang Yu-wei. Ch'ing K'uan's deficiencies in the accounts of the Board of Revenue, being at that time a Treasury scribe, amounted to nearly Tls. 600,000, the discovery of which caused him in 1897 to flee to Shanghai where he met Liu Hsiô-hsun and became his close companion. These two bribes aggregating Tls. 650,000 were considered by the eunuch to be only "ordinary" cases, which were of "nearly every day occurrence!"

SPRING MEETING OF THE N.R.C.

PATRONS.—H.I.H. Komatsu-no-Miya, H.I.H. Fushimi-no-Miya, and H.I.H. Arisugawa-no-Miya.

PERMANENT COMMITTEE.—Sir Ernest Satow, K.C.M.G., President; Dr. Wheeler, Vice-President; Y. Asada, Esq., A. J. Easton, Esq., Jas. Dodds, Esq., F. Strahler, Esq., Baron d'Anethan, Count Orfini, T. Thomas, Esq., R. D. Robison, Esq., W. W. Till, Esq., E. Knaff, Esq., G. Philip, Esq., S. Isaacs, Esq., W. F. Mitchell, Esq., T. Rinoiye, Esq.

EXECUTIVE COMMITTEE.—W. W. Till, Esq., Chairman; T. Thomas, Esq., Geo. Philip, Esq., J. C. Nicholson, Esq., A. J. Easton, Esq., K. Mori, Esq., V. Blad, Esq.

CLERK OF THE COURSE.—A. J. Easton, Esq.

SECRETARY.—Mr. J. E. Beale.

FIRST DAY.—MONDAY, 14TH MAY.

The Spring Race Meeting opened under the most favourable circumstances with regard to weather. After the heavy rain of Sunday there was a delightful coolness in the air, while the blue skies and bright sun allowed the course and the fine scenery beyond to be seen at its best. There was a large company, but the ladies were not in great force, though perhaps there were more than usual for the opening day. The racing was capital. Favourites generally justified the expectations formed by their backers, but there was one great surprise—the Mandarin Plate—where Boxie, a a warm favourite, was unexpectedly beaten by Excelsior, whose lucky supporters won a fine dividend of 106 *yen*. Surprise, a new importation, proved a very easy winner of the Shanghai Plate, showing a clean pair of heels to Mr. Darcy and Miyajima. The Russian pony Mira, who ran so finely last autumn, also showed that she had not deteriorated by winning the Cosmopolitan Stakes in capital style. Faule Grete also ran well, winning two races. The Pari Mutuel was conducted by Messrs. Eyton and Pratt, while an excellent luncheon was supplied by Clausen's Hotel. Following are details of the events:—

1.—The NEWCOMERS' PLATE, for Country breds, Maidens at date of entry and Australian Subscription horses of 1900; weight as per Scale, Country-breds allowed 7lb.; Winner ¥200, Second, ¥50; Entrance, ¥5. Three-quarters of a Mile.

Mr. Scherz's Faule Grete, *137lb., carried 3lb. over.....(Mr. Mottu) 1
Messrs. King & Satsuma's Molly, *137lb. (Mr. Kingdon) 2
Mr. Lowder's Wallaby, *137lb. .....(Mr. Riddle) 3
Mr. L. Mottet's Cousine, *137lb. .....(Kubota) 0
Mr. Russia's Dobriak, *137lb., carried 3lb. over.....(Horikoshi) 0
Mr. P. P. C.'s Pirouette, *140lb. .....(Miyagawa) 0
Mr. Hugo's Moonshine, *130lb., carried 3lb. over.....(Goto) 0
Mr. Tor's Torquay, *140lb.....(Katsu) 0
Mr. States' Michigan, *137lb. .....(Sugiura) 0
Mr. News' Estafette, *140lb. .....(Mayeda) 0
Mr. Tatsuta's Ayame, *133lb.....(Hayashi) 0
Mr. Avis' Kittiwake, *140lb.....(Hakodate) 0

* Maidens—Allowance Deducted.

Time, 1.25¼.

Dobriak was leading by a head for the first furlong, but was then challenged and overtaken by Faule Grete, Molly and Wallaby also passing him soon after. Faule Grete entered the straight with a slight lead, and, despite a strong bid by Molly, came in an easy winner by three lengths. About the same distance between second and third.

PARI MUTUEL, 5 yen—Cousine 3, Dobriak 5, Molly 42, Pirouette 2, Moonshine 14, Faule Grete 57, Torquay 2, Michigan 1, Estafette 2, Ayame 53, Wallaby 13, Kittiwake 3; total, 985 yen—Faule Grete, 15.50 yen.

2.—The MONGOLIAN PLATE, for Subscription China Ponies of Autumn, 1899, and Spring, 1900, Non-winners in Japan at date of entry; weight as per Scale; Winner ¥200, Second, ¥50; Entrance, ¥5. Three-quarters of a Mile.

Mr. Nemo's Boxie (late Dot Rose) 141lb. .....(Ichi) 1
Mr. Scherz's Huckebein (late Hellas), 150lb. (Mr. Mottu) 2
Mr. Tandem's Firefly, 153lb .....(Mr. Elliott) 3
Mr. Worthington's Rebuff, 147lb. .....(Hayashi) 0
Mr. Tatsuta's Morokoshi, 150lb. .....(Rikizo) 0
Mr. Avis' Siskin (late China Rose), 147lb.(Hakodate) 0
Mr. Starlight's Saturn (late Rover), 150lb. (Nakagumi) 0
Mr. Russia's Prostyak (late Enigma), 150lb. (Horikoshi) 0
Mr. News' Excelsior (late Black Prince), 147lb. (Mr. Kingdon) 0
Mr. Iris' Toyokawa, 150lb. .....(Goto) 0
Mr. Tor's Torcross, 153lb. .....(Sugiura) 0
Mr. Tytherleigh's Strathcona, 150lb...(Mr. Easton) 0

Time, 1.37.

Boxie went away with a long lead, with Huckebein next and the rest close together. Boxie was never troubled, and entered the straight several lengths ahead. A hollow race ensued down the home stretch, Boxie cantering in three lengths ahead; a length between second and third.

PARI MUTUEL, 5 yen—Boxie 105, Rebuff 2, Morokoshi 17, Siskin 5, Saturn 1, Prostyak 4, Huckebein 36, Excelsior 56, Toyokawa 4, Torcross 26, Firefly 10, Stratchcona 10; total, 1,380 yen—Boxie, 12 yen.

3—The ALL-AGED STAKES, for Country-breds; Maidens at date of entry 10lb. allowance; weight as per Scale; Winner ¥200; Entrance, ¥10. Three-quarter of a Mile.

Mr. Yodo's Saikio, *140lb. .....(Sugiura) 1
Mr. Avis' Peacock, 142lb.....(Hakodate) 2
Mr. R. Field's Tomboy, 145lb. .....(Mr. Mottu) 3
Mr. Tatsuta's Tatsuta, 145lb. .....Rikizo) 0
Mr. R. Field's Mazette, 135lb. .....(Miyagawa) 0

* Mare—Allowance Deducted.

Time, 1.22¾.

Saikio went away with the lead, with Peacock second, Tatsuta next, and Tomboy just heading Mazette. Saikio led all the way round, Tomboy displacing Tatsuta just after the trees. A fair race ensued down the straight, Hakodate riding Peacock for all he was worth, but he failed to catch Saikio, who won by a short length. Bad third.

PARI MUTUEL, 5 yen—Tatsuta 49, Peacock 23, Tomboy 87, Mazette 11, Saikio 194; total, 1,320 yen—Saikio, 8.50 yen.

4.—The CRITERION STAKES, for China Ponies; weight as per Scale; Winner ¥250; Entrance, ¥10. Three-quarters of a Mile.

Mr. Worthington's Standard Rose, 150lb.(Hayashi) 1
Mr. Hugo's Sunshine (late Blaubart), 147lb. (Goto) 2
Mr. Avis Nightingale, 147lb. .....(Hakodate) 3
Mr. Tatsuta Suzume, 144lb. .....(Rikizo) 0
Mr. Nishimura's McMorse, 150lb. .....(Takahashi) 0
Mr. Starlight's Pollux, 150lb. .....(Katsu) 0
Mr. States Oregon, 150lb., carried 2lb. over...(Mr. Pakenham) 0
Mr. Campredon's Coquelicot (late Kotaka), 147lb....(Horikoshi) 0

Time, 1.36⅘.

Standard Rose took the lead, with Sunshine in attendance, the rest stringing out. Standard Rose entered the home stretch with a lead of about a length, and a fine race ensued down the straight. A blanket would have covered Standard Rose, Sunshine, and Nightingale for half the way down, but Standard Rose kept ahead and won by three-quarters of a length; a good third.

PARI MUTUEL, 5 yen—Sunshine 28, Standard Rose 175, Suzume 87, McMorse 34, Nightingale 9, Pollux 4, Oregon 10, Coquelicot 16; total, 1,815 yen—Standard Rose, 9.50 yen.

5.—The SYDNEY STAKES, for Australian Subscription Horses of Autumn, 1899, Non-winners, and Australian Subscription Horses of Spring 1900; weight 147lb.; Winner, ¥300, Second, ¥50; Entrance, ¥10. Five Furlongs.

Mr. Scherz's Faule Grete, 147lb.....(Mr. Mottu) 1
Mr. Tatsuta's Oimatsu, 147lb. .....(Rikizo) 2
Mr. May's Non Such, 147lb., carried 7lb. over (Mr. Pearson) 3
Mr. Hugo's Moonshine, 147lb. .....(Goto) 0
Mr. Nemo's Sardegna, 147lb.....(Ichi) 0
Mr. Worthington's Nun Nicer, 147lb.....(Hayashi) 0
Mr. Nishimura's Kobu, 147lb.....(Takahashi) 0
Mr. Avis' Kittiwake, 147lb. .....(Hakodate) 0
Mr. Russia's Dobriak, 147lb.....(Horikoshi) 0
Mr. Scherz's Tante Lotte (late Etoile), 147lb. (Korosaka) 0
Mr. News' Estafette, 147lb. .....(Mayeda) 0
Mr. P. P. Co.'s Pirouette, 147lb. .....(Miyagawa) 0
Mr. Tor's Torquay, 147lb. .....(Sugiura) 0
Messrs. King and Satsuma's Molly, 147lb. (Mr. Kingdon) 0

Time, 1.10.

Mr. Scherz declared the best of his two to win. Oimatsu made the running to the straight, when Faule Grete, who had been racing third till past the trees, came away, and, going with a great stride, won by a length. A good third.

PARI MUTUEL, 5 yen—Moonlight 8, Sardegna 32. Nun Nicer, 4, Oimatsu 175, Kobu 7, Kittiwake 2, Dobriak 5, Tante Lotte 13, Faule Grete 149, Estafette 3, Pirouette 6, Torquay 2, Non Such 10, Molly 15, The Field 2; total, 2,165 yen—Faule Grete, 13 yen.

6.—The MANDARIN Plate, for Subscription China Ponies Autumn, 1899, and Spring, 1900; weight as per Scale; winners in Japan at date of entry 5lb. extra; winners of more than One Race at date of entry excluded; Winner ¥200, Second, ¥50. Entrance ¥5. Mile and a Furlong.

Mr. News' Excelsior, 147lb. .....(Mayeda) 1
Mr. Nemo's Boxie, 141lb. .....(Ichi) 2
Mr. Tor's Torcross, 153lb. .....(Sugiura) 3
Mr. Tatsuta's Morokoshi, 150lb. .....(Rikizo) 0

Digitized by Google Original from CORNELL UNIVERSITY

Mr. Nishimura's Sobu, 155lb.....(Takahashi) 0
Mr. Starlight's Saturn, 150lb. .....(Nakazumi) 0
Mr. Russia's Prostyak, 150lb. .....(Horikoshi) 0
Mr. Schetz's Huckebein, 150lb. .....(Mr. Mottu) 0
Mr. Tytherleigh's Strathcona, 150lb...(Mr. Easton) 0
Mr. King's Mikozuki (late Donatello), 152lb.
(Mr. Kingdon) 0

Time, 2.33⅘.

Boxie, who was a hot favourite, made the running all the way round, entering the straight ahead of Excelsior and Torcross. A splendid race ensued up to a few yards of the post, the first two racing neck and neck. Just before the finish, however, Excelsior shot a few inches ahead, winning by a touch. Torcross a poor third.

PARI MUTUEL, 5 yen—Boxie 188, Morokoshi 10, Sobu 15, Saturn 3, Prostyak 1, Huckebein 19, Excelsior 16, Torcross 4, Strathcona 15, Mikazuki 107; total, 1,890 yen—Excelsior 106 yen.

7.—The COSMOPOLITAN STAKES, for Country-breds and Australian Subscription Horses; weight as per Scale; Winner ¥250, Second ¥50; Entrance, ¥10. Three-quarters of a Mile.

Mr. Russia's Mira, *140lb. .....(Horikoshi) 1
Mr. R. Field's Tomboy, 145lb. .....(Goto) 2
Mr. Nishimura's Piber, *140lb. .....(Takahashi) 3
Mr. Nemo's Savoia, *140lb.....(Kobayashi) 0

Time, 1.23.

Tomboy made the running, with Mira in close attendance. At the trees Mira challenged Tomboy, and came away, entering the straught a length a head. This advantage she more than maintained, winning easily by two lengths. Bad third.

PARI MUTUEL.—Savoia 130, Piber 75, Mira 228, Tomboy 54, Total 2,435 yen—Mira 9.50 yen.

8.—The SHANGHAI PLATE, for China Ponies; weight as per Scale; winner ¥250; Second ¥50; Third ¥25; Entrance, ¥5. Mile and a Half.

Mr. Hugo's Sunrise, 150lb. .....(Goto) 1
Mr. Worthington's Miyajima (late Okayama), 153lb.
(Hayashi) 2
Mr. Nemo's Mr. Darcy, 150lb. .....(Kobayashi) 3

Time, 3.29⅗.

Miyajima made the running from Sunrise till first past the post, when they were racing neck and neck, Mr. Darcy being lengths behind. The two leaders kept company, Sunrise having a slight advantage, to the trees, when Sunrise came right away, and, entering the straight with a long lead, won in a canter by many lengths. Mr. Darcy came up in the straight, and was only beaten by half a length for second.

PARI MUTUEL, 5 yen—Sunrise 272, Mr. Darcy 125, Miyajima 95; total, 2,460 yen—Sunrise, 8 yen.

9.—The MELBOURNE STAKES, for Australian Subscription Horses of Autumn 1899, Non-winners, and Australian Subscription Horses of Spring, 1900; weight 147lb; Winner ¥300, Second ¥50; Entrance, ¥5. One Mile.

Mr. Hugo's Moonlight, 147lb. ..... (Goto) 1
Mr. David Jackson's Fin McCoul, 147lb.
(Mr. Hudson) 2
Mr. Russia's Zorka, 147lb. .....(Horikoshi) 3
Mr. Hugo's Moonbeam 147lb.....(Hakodate) 0
Mr. Nishimura's Tobu, 147lb..... (Takahashi) 0
Mr. Starlight's Aldebaran 147lb. .....(Katsu) 0
Mr. P. P. C.'s Claquette, 157lb. .....(Miyagawa) 0
Mr. State's Michigan, 147lb.....(Sugiura) 0
Mr. Tandem's Silver Tail, 147lb. .....(Kobayashi) 0
Mr. H. Klingen's Quibus, 147lb.....(Nakagumi) 0
Mr. Rodenstein's Tasmania, 147lb.....(Mr. Mottu) 0
Mr. May's Non Such, 147lb.....(Mr. Pearson) 0

Time, 1.56⅘.

Mr. Hugo declared best to win with Moonlight if able. Moonlight made the running, and won very easily. The rest straggled in, Tobu, who was much fancied, being only fifth.

PARI MUTUEL, 5 yen—Moonlight 244, Moonbeam 5, Tobu 197, Aldebaran 5, Zorka 16, Claquette 3, Michigan 1, Silver Tail 15, Quibus 6, Tasmania 43, Nonsuch 7, Fin McCoul 12; total, 2,750 yen—Moonlight, 10 yen.

SECOND DAY.—TUESDAY, 15TH MAY.

The Ladies' Day passed off with great *éclat*. The weather was magnificent, even better than on the opening day, and the sport, which furnished several surprises, was good. The Nankin Stakes ended, as was expected, in an easy win for Boxie. Saikio was strongly favoured for the Spring Stakes, but allowed Peacock to beat her. The Queensland Plate was a complete surprise. Oimatsu was the favourite, Molly having the next largest backing, but Silver Tail, who ran very well, managed to carry off the event. The Ladies' Purse was won by Aberdeen, the favourite; Sunrise, who was greatly fancied, being only third. Excelsior was the only one in the Peking Cup, and Mira had quite a hollow thing in the Yokohama Derby, winning by many lengths. She broke Tatsuta's record of 2.55⅘ for the mile and a half made last year. The Manchurian Stakes proved disastrous for the knowing ones, McMorse, who was not heavily backed, beating Sunrise, who was a warm favourite. The Taiwan Stakes was simply a walk-over for Huckebein, but the last race of the day, the New South Wales Cup, was much more sensational. Faule Grete was enormously fancied for this event, but bitterly disappointed her backers, being unable to come up with Fin McCoul, who made the running all the way round. In the Queensland Plate Mr. Nishimura's Kobu fell and broke his back, the poor animal having to be killed. The jockey was also rather seriously hurt.

It should be mentioned that his Majesty the Emperor presented a prize consisting of a splendid silver bowl for the Yokohama Derby, which was won by Mira, while Viscount Aoki gave a smaller silver bowl for the Taiwan Stakes. There was a very large attendance, but perhaps, socially speaking, the day was not quite so successful as the Ladies' Day is at most spring races. The fact that neither the Emperor nor any of the Imperial Princes was present had, of course, something to do with the matter. His Majesty, we are given to understand, wished to attend the races, in which he takes great interest, but engagements arising out of the Imperial Wedding prevented him doing so.

The Ladies' Purse was presented to Mr. Kingdon, the successful jockey, by Mrs. M. Kirkwood, who made a neat little speech, and was presented with a bouquet; Baron Sannomiya presented the Emperor's prize, Mr. Neville receiving it on behalf of the owners; and Miss Aoki gave the Viscount's prize to the successful owner.

1.—The NANKIN STAKES, for Subscription China ponies of Autumn, 1899, and Spring, 1900; weight as per Scale; winners in Japan at date of entry 4lb. extra; of more than One Race excluded: Winner ¥250; Entrance, ¥5. Three-quarters of a Mile.

Mr. Nemo's Boxie, 141lb. .....(Ichi) 1
Mr. Scherz's Huckebein, 150lb. .....(Mr. Mottu) 2
Mr. King's Mikazuki, 152lb. .....Mr. Kingdon) 3
Mr. Iris' Toyokawa, 155lb. .....(Fujisaki) 0
Mr. Worthington's Rebuff, 147lb. .....(Tomioka) 0
Mr. Tatsuta's Morokoshi, 150lb. .....(Rikizo) 0
Mr. Nishimura's Sobu, 155lb. .....(Takahashi) 0
Mr. Avis' Siskin, 147lb.....(Hakodate) 0
Mr. Russia's Prostyak, 150lb. .....(Horikoshi) 0
Mr. Tor's Torcross, 153lb, ...(Sugiura) 0

Time, 1.36⅜.

From a good start Boxie went away, closely attended by Sobu, with the rest of the field stringing out. At the trees Huckebein, who had been in the ruck, came up and displaced Sobu. On entering the straight the favourite was leading by a length, Huckebein running gamely second, while Mikazuki had displaced Sobu. The favourite was never troubled and won by a couple of lengths.

PARI MUTUEL, 5 yen—Boxie 200, Rebuff 3, Morokoshi 6, Sobu 16, Siskin 3, Prostyak 3, Huckebein 54, Toyokawa 3, Torcross 15, Mikazuki 20; total 1,615 yen—Boxie 7.50 yen.

2.—The SPRING STAKES, for Country-breds; weight as per Scale; Maidens at date of entry allowed 10lb.; Winner of Race No. 2, First Day, 7lb. extra; Winner ¥200; Entrance, ¥10. Mile and a Furlong.

Mr. Avis' Peacock, 142lb.....(Hakodate) 1
Mr. Yodo's Saikio, *140lb. .....(Sugiura) 2
Mr. R. Field's Tomboy 145lb. .....(Goto) 3
Mr. Tatsuta's Ayame *130lb. .....(Miyagawa) 0
* Mares—Allowance Deducted.

Time, 2.0⅗.

Saikio was leading past the post, but going up the dip Peacock again got on terms and soon after passed the favourite. She then came away with a long lead, and though Saikio made up some of the distance in the straight she was unable to reach Peacock, who won easily by three lengths. Tomboy was a fair third.

PARI MUTUEL, 5 yen—Ayame 11, Peacock 116, Tomboy 53, Saikio 208; total 1,940 *yen*—Peacock 15 *yen*.

3.—QUEENSLAND PLATE, for Australian Subscription Horses of Autumn, 1899, Non-winners, and Australian Subscription Horses of Spring 1900; weight, 147lb,; winner of Race No. 4, First Day, 7lb. extra; Winner ¥250, Second ¥50; Entrance, ¥5. Three-quarters of a Mile.

Mr. L. Mottet's Cousine, 147ib.....(Kurosaka) 0
Mr. Lowder's Wallaby, 147lb. .....(Mr. Riddle) 0

Much difficulty was experienced in getting this big field off. After several false starts they got away fairly well together, Silver Tail making the running from Oimatsu and Molly, the rest tailing off. At the bend Silver Tail was still ahead, but in the straight the favourite made up some of the distance, and a fine neck-and-neck race ensued down to the post. Oimatsu, however, was unable to reach Silver Tail, who won by a short head. Good third.

PARI MUTUEL, 5 yen—Moonshine 22, Sardegna 10, Nun Nicer 12, Oimatsu 198, Tobu 55, Kobu 3, Kittiwake 3, Dobriak 7, Tante Lotte 3, Estafette 8, Pirouette 2, Michigan 3, Torquay 3, Silver Tail 21, Tasmania 16, Non Such 18, Molly 81, Cousine 2, Wallaby 12, The field 1; total, 2,400 yen—Silver Tail, 103 yen.

4.—The LADIES' PURSE (Presented), for China Ponies; to be ridden by Members of the Club or Visitors, whose names must be sent to the Committee before the meeting and approved by them; weight as per Scale, with 5lb. added; Entrance, ¥10. One Mile

Mr. Worthington's Aberdeen, 155lb.(Mr. Kingdon) 1
Mr. Nishimura's McMorse, 155lb. (Mr. Nishimura) 2
Mr. Hugo's Sunrise, 155lb. .....(Mr. Mottu) 0
Mr. Nemo's Mr. Darcy, 155lb.....(Mr. Andreis) 0
Mr. Tatsuta's Suzume, 149lb.....(Mr. Riddle) 0
Mr. States' Oregon, 155lb. .....(Mr. Pakenham) 0

Time, 2.11⅕.

Aberdeen got the best of the start, but Sunrise went ahead going up the dip, and then made the running to the trees, the two being close together nearly all this distance. Aberdeen then challenged and passed Sunrise, who was also overtaken down the straight by MacMorse. An excellent race between Aberdeen and MacMorse ensued down the home stretch, but Aberdeen won by half a length.

PARI MUTUEL, 5 yen.—Sunrise 259, Mr. Darcy 34, Aberdeen 335, Suzume 20, McMorse 23, Oregon 28; total, 3,495 yen—Aberdeen 9.50 yen.

The Ladies' Cup was presented to the winning rider, Mr. Kingdon, by Mrs. Montague Kirkwood, and on the call of Mr. Kingdon a cheer was given for the lady donors.

Mrs. Kirkwood, in handing the prize, said:—It gives me very great pleasure to present you this Purse, subscribed to by the ladies of Tokyo and Yokohama, and with this cigarette box, a present from myself. You have ridden the race in your usual brilliant style and you have had the good fortune to ride the best pony, belonging to two of the oldest and best supporters of the Yokohama turf. You have added another to your many victories, and have shown us how a race should be well ridden and successfully won.

5.—The PEKING CUP, for Subscription China Ponies of Autumn, 1899, and Spring, 1900, Non-winners in Japan at date of entry; weight as per Scale; Winner ¥200, Second ¥50, Third ¥25; Entrance, ¥5, Mile and a Half.

Mr. News' Excelsior, 147lb.....(Mayeda) 1
Mr. Tytherleigh's Strathcona, 150lb.....(Ichi) 2
Mr. Tandem's Firefly, 153lb. .....(Kobayashi) 3
Mr. Tatsuta's Morokoshi, 150lb. .....(Rikizo) 0
Mr. Russia's Prostyak, 150lb. .....(Higaki) 0
Mr. Iris' Toyokawa, 150lb. .....(Goto) 0

Time, 3.27.

Strathcona made the running from Excelsior and Prostyak, Firefly racing fourth. On passing the post first time the favourite and Strathcona were neck and neck, but at ¾-of-a-mile from home Excelsior came away, and at the half mile was leading by many lengths. Strathcona made up some of the distance in the straight, but Excelsior was never troubled, and won by three or four lengths. Firefly, who had passed into third place near the Trees, was fairly close up.

PARI MUTUEL, 5 yen—Morokoshi 34, Prostyak 30, Excelsior 293, Toyokawa 24, Firefly 94, Strathcona 191. Total 3,375 yen—Excelsior 10.50 yen.

6.—The YOKOHAMA DERBY, for Country-breds and Australian Subscription Horses; weight as per Scale; Winner ¥250, Second ¥50, Third ¥25; Entrance, ¥10. Mile and a half.

Mr. Russia's Mira, 140lb.....(Horikoshi) 1

Mr. Nishimura's Piber, 140lb.....(Takahashi) 3
Mr. Nemo's Savoia, 140lb. .....(Kobayashi) 0
Mr. Starlight's Aldebaran, 130lb. .....(Katsu) 0

Savoia made the running, but they passed the post close together, Savoia leading, Tatsuta second, and the favourite third. Going up the hill Mira came away and at the half mile was several lengths ahead. She was never troubled after this, and finished many lengths ahead, though Tatsuta was doing all he could. Piber was nowhere.

The prize was presented by Baron Sannomiya on behalf of the Emperor, and cheers were given for his Majesty and the Baron.

PARI MUTUEL, 5 yen—Savoia 54, Tatsuta 141, Piber 54, Aldebaran 23, Mira 372; total 3,220 yen. Mira 8 yen.

7.—The MANCHURIAN STAKES, for China Ponies; weight as per Scale; winners of One Race at the meeting 5lb. extra; of two Races, excluded; Winner, ¥250; Entrance, ¥10. Mile and a Furlong.

Mr. Nishimura's MacMorse, 150lb. ...(Takahashi) 1
Mr. Hugo's Sunshine, 147lb. .....(Mr. Mottu) 2
Mr. Hugo's Sunrise, 150lb. .....(Goto) 3

Mr. Starlight's Pollux, 150lb. .....(Katsu) 0
Mr. States' Oregon, 150lb. .....(Sugiura) 0
Mr. Campredon's Coquelicot, 147lb. ...(Horikoshi) 0

Time, 2.23 1/5.

Mr. Hugo declared Sunrise to win if able. Mr. Worthington declared best to win. Sunrise made the running for some distance, but fell behind half a mile from home, MacMorse and Sunshine both passing her, while Standard Rose pressed her hard, Sunshine being close on to MacMorse, but the latter won a capital race by a length. Fair third. Standard Rose was fourth.

PARI MUTUEL, 5 yen—Sunshine 16, Sunrise 234, Mr. Darcy 11, Standard Rose 95, Miyajima 139, MacMorse 44, Nightingale 44, Pollux 9, Oregon 5, Coquelicot 7; total, 3,020 yen—MacMorse, 62 yen.

8.—The TAIWAN STAKES, for Subscription China Ponies of Autumn, 1899, and Spring, 1900, Non-winners in Japan at date of entry; to be ridden by members of the Club or Visitors, whose names must be sent to the Committee before the meeting and approved by them; weight as per Scale with 5lb. added; winners of One Race at the Meeting, 5lb. extra; of Two Races, excluded; Winner ¥200; Entrance, ¥5. Half a Mile.

Mr. Scherz's Huckebein, 155lb. .....(Mr. Grose) 1
Mr. Tor's Torcross, 158lb. .....(Mr. Pakenham) 2
Mr. Worthington's Rebuff, 152lb., carried 2 lbs. over (Mr. Pearson) 3

Time, 1.3.

Huckebein got the better of the start, and went away closely attended by Torcross, who kept a length or so behind until just before the straight, when Huckebein drew away and won easily by three lengths. Rebuff was nowhere.

The prize, a handsome silver bowl presented by Viscount Aoki, was handed to the winner by Miss Aoki.

PARI MUTUEL, 5 yen—Rebuff 97, Huckebein 332, Torcross 155; total, 2,920 yen—Huckebein, 8 yen.

9.—The NEW SOUTH WALES CUP, for Australian Subscription Horses of Autumn, 1899, Non-Winners and Australian Subscription Horses of Spring 1900; weight 147lb; winner of Race No. 9. First Day, 5lb; Winner ¥250, Second ¥50; Entrance, extra ¥5. Mile and a Furlong.

Mr. David Jackson's Fin McCoul, 147lb. (Mr. Hudson) 1
Mr. Scherz's Faule Grete, 147lb.....(Mr. Mottu) 2
Mr. Nishimura's Tobu, 147lb.....(Takahashi) 3

Mr. Russia's Zorka, 147lb .....(Horikoshi) 0
Mr. Lowder's Wallaby, 147lb. .....(Rikizo) 0

Time, 2.14.

Fin McCoul led passing the stand, shortly after which Tobu challenged, but soon fell behind, Faule Grete running into second place. The favourite tried hard to reach Fin McCoul, but was beaten by a length.

PARI MUTUEL 5 yen—Moonbeam 15, Tobu 66, Zorka 15, Faule Grete 349, Non Such 18, Fin McCoul 128, Cousine 14, Wallaby 45; total, 3,250 yen—Fin McCoul 23 yen.

THIRD DAY.—WEDNESDAY, 16TH MAY.

The concluding day, like its predecessors, was favoured with beautiful weather, and the attendance was almost as large as on the Ladies' Day. The sport was capital, and productive of a good many surprises. The opening race, the Brisbane Cup, should have been an easy thing for Moonlight, and she was at first warmly backed, but on her appearance in the field it was at once apparent that she was lame, and Fin McCoul then attracted the majority of backers. Soon after the race commenced Moonlight fell out, disabled, and Tobu had a fairly easy win, earning his supporters a pretty little dividend. Sunshine was the favourite in the Cezarewitch, but had to play second fiddle to Nightingale. This was also a surprise and brought a fine haul to the lucky speculators. The Prix des Haras ended equally unexpectedly, Piber securing a win which brought in 50 *yen*, Peacock and Saikio being the favourites.

The China Champion was a very good race. Mr. Kingdon rode Aberdeen in very fine fashion, and scored one of the best wins of the day. The Mixed Champion resolved itself into a match between Peacock and Mira. There was no question as to the superiority of the Russian mare, and she started so warm a favourite that her success only earned her backers a dividend of 6.50 *yen*. The China Subscription Consolation was a win for Firefly, who justified the expectations formed on his previous efforts, which have several times secured him a place. The Mixed Consolation should have been Tomboy's race, but the very bad start destroyed his chances and he could not regain the lost advantage in the distance, though probably if the race had a little longer he would have beaten Savoia. The Solace ended in a magnificent win for Mikazuki, due principally to the splendid riding of Mr. Kingdon, who has added to his laurels this meeting, and has proved himself the best gentleman rider in the club. Suzume and Miyajima made a dead heat for second. The Australian Consolation was marked for Oimatsu, and he proved his form by scoring an easy win.

In the Prix des Haras Piber broke the records of Idaho (1.50¾) and Mira (1.55¾), and in the Mixed Consolation Savoia lowered her own time of 1.23⅝ to 1.23¼, carrying seven lbs. less. Details:—

1.—The BRISBANE CUP, for Australian Subscription Horses of Autumn, 1899, Non-winners, and Australian Subscription Horses of Spring, 1900; weight 147lb.; winners of One Race at the meeting 7lb. extra, of Two Races, excluded; Winner ¥250, Second ¥50; Entrance, ¥5. One Mile.

Mr. Nishimura's Tobu, 147lb.....(Takahashi) 1
Mr. David Jackson's Fin McCoul, 149lb. (Mr. Hudson) 2
Mr. Tandem's Silver Tail, 154lb. .....(Kobayashi) 3
Mr. Hugo's Moonlight, 154lb. .....(Goto) 0
Mr. Russia's Zorka, 147lb. .....(Horikoshi) 0
Mr. Rodenstein's Tasmania, 147lb.....(Sugiura) 0

Time, 1.56.

Fin McCoul was much favoured, it being rumoured that Moonlight had gone a little lame. This was apparent when they faced the starter and after finishing a quarter of mile Moonlight retired from the race. Tasmania made the running for a good distance, but finally Tobu came away, and entered the straight with a lead of a couple of lengths. A good race ensued down the front, Silver Tail trying hard to reach Tobu, but this was not possible, Tobu winning by a length. Meanwhile Fin McCoul rushed up on the last few yards into second place, beating Silver Tail by a neck.

PARI MUTUEL, 5 yen—Moonlight 153, Tobu 15, Zorka 7, Silver Tail 27, Tasmania 9, Fin McCoul 114; total 1,625 yen—Tobu 97.50 yen.

2.—The CEZAREWITCH STAKES (Handicap), a forced entry at ¥10 of all China Ponies entered at the meeting; Non-starters Half Forfeit; Winner ¥300, Second ¥100, Third ¥25. One Mile.

Mr. Avis' Nightingale, 142lb. .....(Hakodate) 1
Mr. Hugo's Sunshine, 147lb.....(Goto) 2

Mr. Starlight's Pollux, 140lb., carried 2lb. over...(Katsu) 0
Mr. Scherz's Huckebein, 150lb. .....(Mr. Mottu) 0
Mr. States' Oregon, 140lb. .....(Sugiura) 0

Time, 2.11⅜.

Mr. Worthington declared best to win. Sunshine made the running to the dip, when Oregon took up the lead. He was soon displaced, however, by Nightingale, and Sunrise, who had been going fourth or fifth, ran into second just past the trees. Nightingale entered the straight two lengths ahead of Sunrise and though the favourite ran well down the home stretch Nightingale was not troubled and won by a length and a half. Huckebein was two lengths behind Sunrise.

Huckebein was disqualified, Mr. Mottu dismounting before weighing.

PARI MUTUEL, 5 yen—Sunshine 111, Mr. Darcy 10, Standard Rose 19, Miyajima 17, Suzume 25, Sobu 16, Nightingale 29, Pollux 3, Huckebein 15, Oregon 2, Mikazuki 25; total 1,360 yen—Nightingale 42 yen.

3.—The PRIX DES HARAS (Handicap).—For Country-breds and Australian Subscription Horses; a forced entry of ¥10 for all entered at the Meeting; Non-starters Half Forfeit: Winner ¥300, Second ¥100, Third ¥25. One Mile.

Mr. Nishimura's Piber, 140lb.....(Takahashi) 1
Mr. Yodo's Saikio, 247lb. .....(Sugiura) 2
Mr. Tatsuta's Tatsuta, 145lb.....(Rikizo) 3
Mr. Hugo's Moonshine, 127lb., carried 1lb. over...(Kobayashi) 0
Mr. Worthington's Nun Nicer, 132lb. ...(Hayashi) 0
Mr. Avis' Peacock, 145lb.....(Hakodate) 0
Mr. Russia's Zorka, 137lb., carried 4lb. over (Horikoshi) 0
Mr. Scherz's Faule Grete, 148lb.....(Mr. Mottu) 0
Mr. P. P. C.'s Pirouette, 129lb. .....(Miyagawa) 0
Mr. H. Klingen's Quibus, 144lb., carried 14lb. over...(Nakagumi) 0
Mr. David Jackson's Fin McCoul, 146lb. (Mr. Hudson) 0

Great difficulty was experienced in effecting a start. At last they got away well together. Saikio made the running, closely attended by Peacock, the rest tailing off. Piber displaced Peacock half the way round, and Tatsuta soon after came up into third. At the trees Piber challenged Saikio, and passed him on entering the straight. A capital race ensued down the straight, but Saikio was unable to regain the advantage, Piber finishing with a length to spare. Faule Grete was last. The time was a record.

PARI MUTUEL, 5 yen—Moonshine 18, Nun Nicer 19, Tatsuta 97, Piber 55, Peacock 209, Zorka 14, Faule Grete 39, Pirouette 7, Saikio 103, Quibus 8, Fin McCoul 40; total, 3,045 yen—Piber 50.

4.—The CHINA CHAMPION.—For China Ponies; a forced entry for winners at the Meeting, of One Race ¥10, of Two Races ¥20, and of more than Two Races ¥40; optional to beaten Ponies at an Entrance Fee of ¥25; weight as per Scale; Winner, ¥500. Mile and a Quarter.

Mr. Worthington's Aberdeen, 150lb..(Mr. Kingdon) 1
Mr. Nishimura's MacMorse, 150lb. ...(Takahashi) 2
Mr. Hugo's Sunrise, 150lb. .....(Goto) 3
Mr. Nemo's Boxie, 141lb. .....(Ichi) 0
Mr. News' Excelsior, 147lb.....(Mayeda) 0
Mr. Avis' Nightingale, 147lb. .....(Hakodate) 0

Time, 2.47.

Excelsior made the running, and passed the post first attended by Sunrise, Aberdeen lying third. Thus they went up the rise, Aberdeen going very leisurely, two or three lengths separating him from the first two. At the Shakespeare, Excelsior dropped behind and Sunrise led. Aberdeen then began to go ahead, and by the trees they were racing level, MacMorse, who had come up from the ruck, being also close up. Aberdeen entered the straight on level terms and immediately after headed Sunrise. Half way down MacMorse rushed into second, and made a splendid struggle for first, but was unable to catch Aberdeen, who won by half a length. A length between second and third. Mr. Kingdon's win was a most popular one.

PARI MUTUEL, 5 yen—Boxie 49, Excelsior 115, Sunrise 70, Aberdeen 343, MacMorse 155, Nightingale 22; total 3770 yen—Aberdeen 10 yen.

5.—The MIXED CHAMPION.—A Champion Race for all Country-bred and Australian Subscription Horses; a forced entry for winners at the Meeting, of One Race ¥10, of Two Races ¥20, and of more than Two Races ¥40; optional to beaten Horses at an Entrance Fee of ¥25; Winner, ¥500; weight for age. Mile and a Quarter.

Mr. Russia's Mira, 140lb. .....(Horikoshi) 1
Mr. Avis' Peacock, 140lb.....(Hakodate) 0

Time, 2.24¾.

Peacock made the running, Mira lying easily behind. They proceeded thus to the Shakespeare, when Mira came on terms, and, going at an easy gallop, entered the straight with a slight lead. The two came down the straight well together, Mira evidently not being at all troubled, the jockey applying neither whip nor spur. Peacock was close to her heels, however, and the win was only by rather more than a length. Mira, however, could have won by more if she had been pressed.

PARI MUTUEL, 5 yen—Mira 350, Peacock 156; total 253 yen—Mira, 6.50 yen.

6.—The CHINA SUBSCRIPTION CONSOLATION, for

Digitized by Google Original from CORNELL UNIVERSITY

Subscription China Ponies of Autumn, 1899, and Spring, 1900, Non-winners in Japan at date of entry, that have started and not won a Race at the meeting; weight as per Scale; winner ¥175, Second ¥25; Entrance, ¥5. One Mile.

Mr. Tandem's Firefly, 153lb. .....(Kobayashi) 1
Mr. Tytherleigh's Strathcona, 150lb....(Mr. Easton) 2
Mr. Russia's Prostyal, 150lb. .....(Horikoshi) 3

Mr. Iris' Toyokawa, 150lb. .....(Goto) 0
Mr. Tor's Torcross, 153lb. .....(Sugiura) 0
Time, 2.14⅘.

Torcross made the running till the rise was nearly mounted, with Strathcona second, but then Firefly, who had been going third, came on terms, and at the half mile was leading by a length. After this he was never troubled, entering the straight with a long lead, and winning by three lengths. Prostyak rushed into third place three-quarters of the way down the straight.

PARI MUTUEL, 5 yen—Rebuff 5, Morokoshi 37, Siskin 21, Prostyak 18, Toyokawa 11, Torcross 98, Firefly 252, Strathcona 107; total, 2,745 yen—Firefly, 10 yen.

7.—The MIXED CONSOLATION, for Country-breds and Australian Subscription Horses that have started and not won a Race at the Meeting; Country-bred Maidens at date of entry 10lb. allowance; weight for age; winner ¥175, second ¥25; Entrance ¥5. Three-quarters of a Mile.

Mr. Nemo's Savoia, *140lb. .....(Ichi) 1
Mr. R. Field's Tomboy, 145lb .....(Goto) 2
Mr. Scherz's Tante Lotte, *140lb.....(Kurozaka) 3
Mr. Tatsuta's Ayame, *130lb.....(Miyagawa) 0
Time, 1.23¼.

Savoia had much the best of the start, and went away with a long lead, Tante Lotte being second, and Tomboy third. Tomboy soon got on terms with Tante Lotte, and they ran thus to the trees, when Tomboy came into second place, and pressed Savoia. The latter reached the straight with a lead of two lengths, and, though Tomboy made a fine race down the straight, he was unable to reach the other, who won by best part of a length. Tante Lotte a bad third. Ayame was nowhere. Tomboy's failure appeared to be owing to his bad start, which cost him several lengths.

PARI MUTUEL, 5 yen—Savoia 187, Ayame 57, Tante Lotte 53, Tomboy 365; total, 3,310 yen—Savoia 16 yen.

8.—The SOLACE, a Consolation Race for all China Ponies that have started and not won a race at the meeting; weight as per scale; winner ¥175, second ¥25; Entrance, ¥5. Three-quarters of a Mile.

Mr. King's Mikazuki, 147lb. .....(Mr. Kingdon) 1
Mr. Worthington's Miyajima, 153lb. .....(Hayashi) †
Mr. Tatsuta's Suzume, 144lb.....(Rikizo) †
Mr. Hugo's Sunshine, 147lb.....(Goto) 0
Mr, Nemo's Mr. Darcy, 150lb. .....(Kobayashi) 0
Mr. Nishimura's Sobu, 150lb. .....(Takahashi) 0
Mr. Starlight's Pollux, 150lb. .....(Nakazushi) 0
Mr. States' Oregon, 150lh. .....(Sugiura) 0
Time, 1.38¼.

The favourite made the running for some distance, but was overhauled at the trees by Miyajima, and fell back into the ruck. Miyajima and Suzume came up the straight neck and neck, but a hundred yards from home Mikazuki made a fine dash, and, quickly coming up with the other two, a neck and neck race ensued to the finish, Mr. Kingdon, by fine riding, landing his animal's nose just in front of the other two, who made a dead heat for second.

PARI MUTUEL, 5 yen—Sunshine 268, Mr. Darcy 14, Miyajima 53, Suzume 75, Sobu 58, Pollux 5, Oregon 15, Coquelicot 54, Mikazuki 75; total, 3,085 yen—Mikazuki, 37 yen.

9.—The AUSTRALIAN CONSOLATION, a Consolation Race for all Australian Subscription Horses of Autumn, 1899, and Australian Subscription Horses of Spring, 1900, Non-winners, that have started and not won a Race at the meeting; weight 147lb. winner ¥200, second ¥50; Entrance, ¥5. Three-quarters of a Mile.

Mr. Tatsuta's Oimatsu, 147lb. .....(Higaki) 1
Mr. May's Non Such, 147lb. .....(Kobayashi) 2
Mr. Tor's Torquay, 147lb. .....(Nakazumi) 3
Mr. Rodenstein's Tasmania, 147lb....(Mr. Hudson) 0
Mr. Hugo's Moonshine, 147lb. .....(Goto) 0
Mr. Nemo's Sardegna, 147lb.....(Ichi) 0
Mr. Worthington's Nun Nicer, 147lb. ...(Tomioka) 0
Mr. Avis' Kittiwake, 147lb. .....(Hakodate) 0
Mr. Starlight's Aldebaran, 147lb. .....(Katsu) 0
Mr. Russia's Dobriak, 147lb.....(Horikoshi) 0
Mr. Scherz's Tante Lotte, 147lb. .....(Mr. Gross) 0
Mr. P. P. C.'s Pirouette, 147lb. .....(Miyagawa) 0
Mr. States' Michigan, 147lb. .....(Sugiura) 0
Mr. H. Klingen's Quibus, 147lb.....(Mr. Mottu) 0
Mr. King & Satsuma's Molly, 147lb....(Takahashi) 0
Mr. L. Mottet's Cousine, 147lb. .....(Kuroyaka) 0
Time, 1.26⅘.

After several false starts Oimatsu got away with a good start, and made the running all round, winning by a couple of lengths. Torquay was a good third.

PARI MUTUEL, 5 yen—Moonshine 18, Sardegna 32, Nun Nicer 9, Oimatsu 271, Kittiwake 12, Aldebaran 10, Dobriak 10, Tante Lotte 50, Pirouette 4, Michigan 5, Torquay 8, Quibus 7, Tasmania 38, Non Such 35, Molly 112, Cousine 8; total 3,645 yen—Oimatsu 12 yen.

The prizes at the Spring Meeting of the Nippon Race Club were won by 13 owners with 21 different horses.

CRICKET.

MR. K. F. CRAWFORD'S TEAM V. MR. C. M. DUFF'S.

A match was played on Saturday afternoon between teams captained by Crawford and Duff. The former's eleven went first to the wickets, and compiled 113, the Captain doing most of the hitting, and putting together 55 by pretty cricket. Duff's team replied with only 69, P. B. Clarke's 14 being the top score. Stuart bowled well, capturing 7 wickets for 26 runs. Score:—

NEWS OF THE WEEK.

The *Hongkong Telegraph* publishes the following telegram from Labuan, dated the 30th April:—"The Sultan of Sulu has arrived here on his way to Singapore. The object of his visit is said to be to solicit England's aid for the purpose of remedying the abuses of the Americans in the Sulu Archipelago in imposing customs duties in defiance of the Protocol of 1877."

According to the *Fiji* the silk trade of Yokohama from the 1st June last till the 30th April this year, as compared with the corresponding period of the previous year, was as follows:—

	1899. Bales.	1898. Bales.
Stock at end of May.....	1,440	8,547
Arrivals 116,436		97,425
Sales 110,675		104,270
Stock at end of April in following year	7.201	1,702

Mr. Peter Terry, whose death is announced at the age of 95, undoubtedly deserved the description of "father of the news trade." He founded the wholesale newspaper branch of the business with which his name was associated as far back as 1818, at a time when, as he often related, newsvendors had to wait for their copies of the *Times*, as they were slowly printed by a machine at the rate of 1,100 copies an hour. Mr. Terry had the distinction of being the chief founder of the Newsvendors' Benevolent and Provident Institution, a benefit society in which he continued to take a prominent interest until the close of life.

The trade between Japan and America has made marked progress during the past few years, remarks the *Jimmin*. Exports to America for the year ending June last amounted to $26,706,493, while imports for the same period aggregated $17,264,688, leaving a balance of $5,441,806 in favour of the former. Compared with the volume of trade transacted between America and China during the period under review, the figures show an augmentation by $656,674. Five years before, namely, during the year ended June, 1894, exports to and imports from America did not exceed $19,426,522 and $7,289,971 respectively, and therefore the increase for 1899 reached $13,277,873 for the former and $7,289,971 for the latter. Since 1894 the excess of exports has gradually decreased. At the end of that year the amount stood at $15,431,707; in 1895 at $19,061,240, but by 1898 the figure had fallen to $9,451,805, which, compared with the gross total for 1894 and 1895, shows a decrease of $5,987,902 and $9,609,435 respectively. The cause of diminution is ascribed to an enormous augmentation in imports of raw cotton, steel and iron, kerosene, flour, alcohol, tobacco, leather, &c.

The British Revenue returns for the year ending March present a total far surpassing any figure of which the country has had previous experience. The revenue paid into the Exchequer was no less than £119,839,000, or eleven and a half millions more than the revenue of the previous year. It is true that some part of this enormous total represents an anticipation of next year's revenue due to the rush to clear goods through the Custom House before the new taxes were imposed. But even allowing for this factor the rise in the year's revenue still remains unprecedented. It must be realised, too, that the rise is to no appreciable extent due to increased taxation. A few small taxes were imposed last year, but they in no way made up for previous reductions. In rough figures it may be stated that the revenue of the United Kingdom has in five years increased from £100,000,000 a year to £120,000,000 a year, solely by the growth in the national prosperity. That is a fact which may with advantage be noted by the pessimists who, less than five years ago, were prophesying the commercial downfall of England.

Original from CORNELL UNIVERSITY

A. B. M. UNION.

The Annual Conference of the missionaries of the American Baptist Missionary Union in Japan was held at Yokohama, May 2nd to 5th, inclusive. The conference met in the chapel of the Theological Seminary at 75 Bluff, and opened with a thoughtful and timely sermon by the Rev. C. K. Harrington, on the "The three great sayings of Isaiah in which he crystalizes his doctrine of faith."

The officers for the year are as follows:—President, Rev. W. B. Parshley, Yokohama. Vice-President, Rev. E. H. Jones, Sendai. Secretary, Rev. R. Austin Thomson, Kobe. Statistician, Rev. J. H. Scott, Osaka. Executive-Committee, Rev. C. D. H. Fisher, Tokyo; Rev. A. A. Bennett, Yokohama; Rev. R. Austin Thomson, Kobe. Preacher, next year, Rev. H. Topping, Tokyo. The reports on the work of the year from the various standing committees as well as from the five Girls' Schools and the Kindergartens were all of a very encouraging character, The recent agitation against Mission schools has not been as injurious as at first feared but rather has been stimulating both to teachers and students increasing their efficiency and earnestness. Our Boys' school, now the Duncan Academy, has moved into its new quarters in Ushigome, Tokyo, and is evidently on the road to prosperity, judging from the number of pupils and the work accomplished. During the Conference four very important subjects to missionaries were discussed; "Bible and Tract selling and distribution," "How can the Theological Seminary be made of a spiritual help to our native and foreign workers?" "The Infilling of the Holy Spirit for work." The discussion on these subjects was helpful and interesting to all present.

The increasing difficulty of getting workers and means for work from home was acknowledged; several stations at present time being in need of new men to carry on work already opened. Five new missionaries are needed at once to fill urgent vacancies without attempting to open new work.

A Conference of all the Japanese Baptist workers was held in Tokyo at the same time and was fairly well attended from the different sections of the country. A fine spirit of harmony and good-fellowship prevailed between the two conferences and it was felt that such meetings will do a great deal towards bringing about unity in the work as well as a much better understanding between the workers and of the needs and responsibilities of those engaged in preaching the gospel and building up the Kingdom of the Lord Jesus Christ in this empire.

A glance at the statistics for the year will give a slight idea of the extent of the work. Male missionaries on the field 13 (absent 4). Lady missionaries, 18; Total 54. Ordained native preachers, 7; unordained preachers, 38. Male teachers 26, female teachers 42, Bible-women 22, total 162. Organized churches 25. Preaching places 74. Baptisms for the year 176. Total membership 1885. S. Schools 80, S. S. scholars 3874. Theol. Sem. 1, students 16. Girls' schools 5, pupils 276. Academies 1, students 55. Kindergartens and other schools 8, pupils 369. Amount received from tuition, *yen*3, 936.93. Amount contributed by members for church expenses, repairs, etc., *yen* 2,818.48. While the figures are not quite as good as last year, yet they are not discouraging and it is felt that the work, as a whole, is satisfactory.

AMERICAN NOTES.

The Hon. J. A. Bingham, ex-United States Minister to Japan, a noble gentleman and most lovable friend, died at Cadiz, Ohio, on March 19.

Philadelphia is no longer entitled to be called "the Quaker City." A late religious census shows that in a population of 1,500,000 only 1,925 persons are members of the Society of Friends.

Thirty miles of overhead telephone and telegraph wires are to be put underground in Chicago within the next six months, and an agitation has been started to bring down the overhead trolley within the business part of the city because of the frequency of accidents for which it is held responsible.

Six small vessels are being fitted out by the U. S. Navy Department for service in surveying the waters of the Philippines. These vessels will be armed and are intended as well for blockade work. Spanish charts of the Philippines are woefully faulty and the Navy Department will endeavor to make a complete set of charts.

On April 24th, the Hon. Matthew S. Quay was refused a seat in the United States Senate, on the appointment of the Governor of Pennsylvania, by a vote of 33 to 32. The entire time of the Senate that day was devoted to debating the question, many ofthe greatest lawyers and orators in the body delivering speeches. As the day's session wore on and the hour for the final vote approached the galleries filled until they were thronged with multitudes, while other multitudes were unable to gain admission. Senator Vest's vote of "no," brought about Mr. Quay's defeat.

A gift of $200,000 has been made to the board of directors of Mount Sinai Hospital, New York, by Mr. Meyer Guggenheim and his seven sons, Isaac, Daniel, Murray, Solomon R., Benjamin, Simon and William. The money is given in memory of Barbara, the deceased wife of Mr. Guggenheim, and will build a new hospital for private patients on Fifth Avenue, between One Hundredth and One Hundred and Fifth streets. The site which is to be occupied by the new hospital buildings, nine buildings altogether, and which includes the whole block, was bought some time ago, and the plans are all drawn.

A telegram dated New York, April 23, which appears in the Manila papers, says:—Great destruction has been caused by dynamiters in New York. The Welland Canal, connecting Lakes Ontario and Erie, has been dynamited and several locks destroyed. The Welland Canal enters Lake Ontario a short distance from Buffalo, N.Y. It is 26¾ miles in length, 14 feet in depth, and has 55 locks. Cutting off Niagara Falls, it gives free passage from the Atlantic to the great chain of lakes, and its value to commerce cannot be estimated.

President Hill, of the Great Northern Railroad, announces that his plans for a new line of American transpacific steamships have been changed. Some time ago he prepared plans for several 10,000-ton vessels, but further investigation has convinced him that the future carrying trade across the Pacific must be done at a small margin of profit, and that immense cargo carriers will be necessary. He has, accordingly, ordered two ships each of 20,000-tons capacity and intends to order more. The steamships will be placed in commission in the fall of 1901.

Apparently the municipal officers of New Orleans are not contented with an expenditure of over $2,000,000 on the drainage system of the city, for a proposal to issue about $15,000,000 in bonds to further improve the sewerage system of the city was to be submitted to its citizens on April 17 for approval by them. The Baltimore *Manufacturers' Record*, in describing the conditions under which the bonds will be issued, remarks that this will be one of the largest, if not the largest, issue of municipal securities ever proposed in the south. The interest on the bonds will be paid from a special tax levy and from other sources, which it is calculated will raise $500,000 annually.

The formation of trusts, remarks the *San Francisco Chronicle*, is going on in free-trade Great Britain about as rapidly as in this country. The organization would doubtless be quite as rapid if the press advertised the plan as much as it is advertised here. Nobody, however, except those entering the combinations appears to care anything about the matter, and a paragraph of a dozen lines is all that the editors of the leading papers will spare to a consolidation to which papers in the United States would devote five or six scare heads and a column or two. The *London Daily Mail* lately gave only twenty-eight lines to the organization of a worsted spinners' trust which consolidated 106 firms and whose capital is $88,000,000.

The New York *Evening Post* says:—Inquiry was made on April 19 concerning a report that the publishing houses of Harper & Brothers and D. Appleton & Co., both of which lately failed, might be combined under one management. It was said that G. B. M. Harvey, now the financial head of the Harpers, would become the head of the reorganized Appletons. It was further said that this move would be the first step toward the formation of a big book publishing trust, that within a few months all the large concerns would be united, to decrease the cost of production and do away altogether with competition in the reproduction of European successes. Such a trust could dictate terms to news companies and the reputable retail firms.

President Garrett Droppers, of the University of South Dakota, has an interesting article in the current *International Monthly* on Japan. In forecasting the future he says:—"Japan has, during the year, reached the goal of her ambition. She now stands on a footing of complete equality with western nations, having all the rights and privileges of a great and civilized Power, having also the responsibilities and cares that go with authority. She will be judged, and justly judged, by exacting standards of criticism. As she is apparently a notable exception to the rule of nations, her actions will be more minutely scanned than are the actions of those nations which have an acknowledged reputation and position in the political system of the world. The crux of Japan's success will lie in the administration of justice. In ordinary cases, the judicial decisions of her courts will doubtless be intelligent and impartial, but whether the judges can maintain a judicial attitude in the stress of party passion, especially if some semblance of a patriotic move be involved in the case, remains to be seen. Every nation prefers to administer its affairs in its own way without too much advice from foreign nations."

A recent visitor at the White House, referring to the lack of chaplains with the volunteer regiments in the Philippines and elsewhere, says that Miss Helen Gould of New York is maintaining nine or ten chaplains in the army at her own expense. These men are not officially recognized as chaplains, but as ministers and Y. M. C. A. workers. They voluntarily and unofficially do practically the same work. Miss Gould, it is stated, pays each one of these men $30 a month and his expenses. The latter amount to more than salaries in the Philippines. It is thought that Miss Gould's monthly payment is something like $2,000. She has been maintaining these Christian workers since last fall, when the regiments first began going to the Philippines and attention was brought to the failure of Congress to provide for the chaplains. Her great work is not generally known, as all her deeds of this kind are done in the most quiet way.

The Democrats are confident that the Republican blunder on the Puerto Rican tariff will give them the control of the next House of Representatives, which can be accomplished by carrying eight congressional districts now represented by republicans. This looks comparatively easy on the face of the returns of the last congressional election, when ten Republicans were elected by less than 500 majority from California, Illinois, Indiana, Kentucky, Maryland, Minesota, Ohio, and New York. Fifteen or twenty had less than 1,000 majority, and the close districts—that is, those which have been represented alternately by both Republicans and Democrats during the last few years with the shifting of public sentiment—number between forty and fifty. The fact that the Democrats can always depend upon a solid south gives them a great advantage to start with, no matter what the issue may be. There is no doubt that the political fate of several northern representatives is imperilled by their vote upon the Puerto Rican bill, and a number of Republican members who sustained it purely as a matter of party loyalty expect to lose their seats. Privately the Republican leaders express great anxiety, but they are opposed to taking a back track, because that would be a confession of error, and, in their opinion, would weaken rathen than strengthen their cause.

An attempt is being made by the "regular" Democrats to fasten the responsibility for Admiral Dewey's appearance in the presidential field upon ex-Senator Gorman, John R. McLean, Bradley B. Smalley, David B. Hill, W. C. Whitney, Henry Watterson, Daniel Lamont, ex-Secretary Onley, Perry Belmont, and other anti-Bryan democrats, who, it is claimed, have encouraged the hero of Manila to believe that he can secure the presidency, and are using him as a stool pigeon to divert the public and break up the plans of the leaders of their party. This is stoutly denied both by Admiral Dewey and all the rest concerned. The Admiral declares that there is no intrigue, that his announcement was made without consulting political leaders on either side, and is due entirely to the encouragement he has received, not from the politicians, but from the people. Mr. McLean declares in most positive longuage, too positive to print, that he had nothing whatever to do with the announcement of his brother-in-law, was never consulted, and is not in his confidence. Senator Gorman says he has no acquaintance with Admiral Dewey, although he recollects having visited his office two or three times on business when he was chief of a bureau of the navy department. Mr. Gorman disavows all responsibility for and previous knowledge of the Admiral's announcement, and says that he has not seen him or communicated with him directly or indirectly since he returned to the United States.

The annual overflow of the Mississippi into the Mississippi valley has occurred, the swollen river having burst over its extensive levees, flooding the surrounding country. All of the cities in the country around New Orleans are surrounded by a vast sheet of water, and the damage done to property is enormous. Many lives have been lost in this sudden overflow, and thousands of families are homeless. The damage done to the young crops of rice and sugar reaches the millions. New Orleans is situated right at the delta of the Mississippi river, into which empty the Ohio, Alleghany, Missouri, and a number of other rivers. This overflow is the result of the spring thaws in the north, and the event is one of almost annual occurrence. Millions have been expended by the Government in constructing and keeping up vast levees to guard against these inundations, but the object has never yet been fully accomplished. When the Mississippi rises in the spring vast quantities of sand are carried down to the delta, where they dam the river to a considerable extent

Digitized by Google Original from CORNELL UNIVERSITY

and cause these floods. A great deal of labour and money has been expended in dredging the mouth of the river, but to no effect, as the inundations are annually repeated. The Government is doing all in its power to give assistance and relief to the unfortunate population, but the task is a difficult one.—*Manila Times.*

WITH NUMBER THREE.

By Rudyard Kipling.

Chapter I.

All the world over, nursing their scars,
Sit the poor fighting men broke in our wars,
Sit the poor fighting men, surly and grim,
Mocking the lilt of the conqueror's hymn.

Dust of the battle o'erwhelmed them and hid—
Fame never found them for aught that they did.
Wounded and spent, to the lazar they drew,
Lining the road where the legions went through.

Sons of the Laurel, that press to your meed—
Worthy God's pity most ye that succeed—
Ye that tread triumphing crowned toward the stars,
Pity poor fighting men broke in our wars!

The sun had faded the red cross on her panels almost to brick colour, had warped her woodwork and blistered her paint. For three months she had jackaled behind the army, now at Belmont, now at Magersfontein, now at Rensburg, and in that time had carried over 1300 sick and wounded.

In her appointments, her doctors, her two nursing sisters, and her nineteen orderlies there was neither veneer nor pretence, coquetry of uniform nor the suspicion of official side.

She was starkly set for the work in hand, her gear worn smooth by use and habit, detailed for certain business only, and to that business most strictly attending.

As she started from no known platform I came aboard early, and while we lay silent as a ship in port, the big stock-pot purring in the kitchen, the bottles clicking in the pharmacy as the doctor counted them over, I felt that peace had never been in our generation—that No. 3, hospital train, iodoform scented, washed, scrubbed and scoured, had plied since the beginning of time.

Know now that hospital trains have the right of way over all traffic, and since their crews feed aboard them need only stop to water and change engines.

We slipped out of Cape Town into the twilight at a steady twenty-five mile an hour on our 600-mile journey north.

Some day you in England will realize what it means to handle armies and their supplies over this distance on a single three-foot-six line.

The war has been a war of shunting and sidetracking, telegraphs and timetables; so we may hope that the railway men, who have worked like devils, will not be overlooked when the decorations come ripe.

Because the line runs through Cape Colony, and because Cape Colony is—we have the highest authority for it—loyally trying to be "neutral," every bridge, every culvert, every point at which the line may be cut or blown up was guarded by a little detachment of armed men.

These are drawn chiefly from local corps, such as the Duke of Edinburgh's Own Volunteer Rifles. They do not like the work; they love still less the "loyalty" which has made the fatigue necessary.

Said a dust-spotted, begrimed sergeant of the "Duke's" as Number Three, double-headed, panted up the Hex River Pass into the karroo: "We've been here since November. I don't mind telling you we're pretty sick of it. We sit here and patrol the line. Lovely work!"

The setting of the picture hardly varied a hair's breadth.

The single track, lifting and dancing in the heat; the brown, hairless hills dusted with split stones; the sleek mirage, the knot of khaki figures, the dingy tents, repeated themselves as though we were running in circles.

Here was a water tank. Number Three drank of it, sucking thirstily; here was a speckle of ten houses and a refreshment room, which we had no need to enter; here was a new laid siding, and Number Three flung them all behind her; but from the men with rifles, the red eyed, bristle bearded, disgusted track watchers, there was no escape.

Suddenly we overhauled a trainload of horses, Bhownagar's and Jamnagar's gifts to the war; stolid saices and a sowar or two in charge.

"Whence dost thou come?"

"From Bombay, with a Sahib." He looked like a Hyderabadi, but he had taken off most of his clothes.

"Dost thou know the name of this land?"

"No."

"Dost thou know whither thou goest?"

"I do not know."

"What, then, dost thou do?"

"I go with my Sahib."

Great is the East, serene and immutable. We left them feeding and watering as the order was.

A few miles farther on—forty or fifty are of no account in this huge place—were guns, infantry and buck wagons, rumbling toward De Aar, and, I think, New South Wales Lancers. Then a Victorian contingent camped by the way-side, happier than the "Duke's," because they were nearer the front, but wrathful in that certain Canadians still farther up the line had the audacity to make a camp called Maple Leaf.

They wanted news of the Burmah Military Police—long men on little clock-work ponies, recently landed and vanished. Corps have a knack of disappearing bodily in this country.

Of the Burmans I knew nothing, but could furnish information more or less accurate of some Malay Light Horse lately seen in Cape Town, and of some Yeomanry details.

"Ah!" said Australia, with a rifle, by a water tank, "wait till you see our Queensland bushmen. My word! They're something."

Then he expressed a private and unprintable opinion about those arrogant Canucks up the line, which opinion twisted the other way I got back again from a Canadian, an Eastern Province man, a few hours later.

Strictly in confidence, I may tell you the colonial corps are riding just the least little bit in the world jealous. They have each the honour of a new country to uphold, and it is neck and neck between them.

So I sat joyously on the rear platform while Number Three ran the links of empire through my hands.

English of the Midlands, Cockney, Scotch, Irish, Welsh, Africa-born, Queenslander (he had been in the Sunnyside "daur" and "blew" furiously), Victorian and Canadian—one after another, we picked them up and dropped them with a flying word.

There was nothing wrong with that chain, and by the same token it seemed to have got hold of something at last, for a truckload of Boer prisoners slid by in charge of a few disreputable bearded cornets.

"Ho?" said an orderly, critically. "And where did you pick them up?"

"Round Paardeberg. There's more to follow. Most of these is Transvaalers."

"That's all right," said the orderly.

The army, you see, is collecting Transvaalers and has come a long way for samples.

"An' which might be prisoner and which is guard?"

Said the head cornet, with a battered helmet, "I'm a sergeant of the Northamptons in charge."

"Oh, you are, are you? Then what are you doin' with Labby's friends? Take 'em along. Mr. Labouchere won't be pleased at you."

But the sergeant was mightily pleased, save that his prisoners had not washed for some time. He said it.

Then we drew to the home of lies, which is De Aar—a junction, the pivot of many of our manœuvres and a telegraph centre.

It smelled like Umbala platform in the hot weather, and they kept a hell there of fifty naked telegraph operators, sweating under the blazing kerosene lamps, each man with two pairs of hands and some extra ears.

Outside was thick darkness, and the shunting of trucks—thousands of trucks—but the steady boom of the racing instruments beat through all other noises like the noise of hiving bees.

There was some need to work, and at least one very good reason in the shape of a big saloon that glided past us in the night, a lit window revealing just a chair and a neat empty table.

The Sirdar was on the move; going down to Naauwpoort to arrange surprises, and it is not at all healthy to be idle when Kitchener passes by.

Therefore, and before this war is over, you will hear all sorts of baseless tales from a certain type of officer who has been made to work; and you must not believe them.

After De Aar time-tables ceased.

We were cut adrift on the Sargasso sea of accumulated rolling stock between that place and Orange River.

Here the rumours begin.

There has been a killing—the first satisfactory killing—at Paardeberg, up the Modder. Roberts held Cronje in a ring of fire, burning day and night. That was none of our concern.

We had some news that many wounded waited for us at Modder—thirty officers, at least, and twice as many men—all more or less bad cases.

Here and there one could catch the name of a dead man, and the sister's lips tightened.

Was So-and-so alive? Well, he was a week ago—some one had seen him.

And Such-another? Oh, Such-another had been buried a week back.

Could Number Three go ahead? Oh, yes; but there was a block at the Modder, and Kimberley was sending down a trainful.

Number Three whistled madly. Her business was to get up, load and get away again. Belmont, with the bullet holes through the station name board, interested her not, nor Graspan either. She had been that road too often—hot on the heels of the very fight itself. She checked despairingly, fifth in a line of long trains on the red smear of Modder Plain. The old bridge, wrecked by the Boers, was now all but repaired.

At present Number Three would go over the trestle, but as to when Number Three would get across authority could not say, and whistling was just waste of steam.

Merciful rain had laid the dust, which normally lies ten inches thick, and one could look all across the brick red land.

By this time you probably know more about Modder than I; will have seen a hundred photographs of the naked, coverless plain that tilts to the thin line of trees and the dirty little river; lifting again northward, as a slow wave of the Atlantic lifts, toward Shooters Hill, where the naval gun played.

North of this again, a bluish lump in the morning light, rises Magersfontein.

At that precise moment—but the camp fills and empties as swiftly as the river—most of our men were out with Roberts nearly thirty miles to the westward. Vast empty acreages showed where their accommodations had stood. Men, horses and wheels had wiped out every trace of herbage, and the diminishing perspective of their patient single files attested how far afield the camp oxen must go to graze. Horsemen by twos and threes wandered forth attacking interminable distance in which they were swallowed up. Sidings solid with trucks spurred left and right across the plain, and the trucks on the main line backed up to the very shoulders of the resetters repairing the bridge.

Chapter II.

Number Three fought her way inch by inch, and was met by a little knot of army sisters. In civilization their uniform is hideous, but out here one sees the use of the square cut vermilion cape. Everything else is dust coloured, so a man does not ask where a sister may be. She leaps to the eye across all the camp.

"And where are our wounded?" asked Number Three.

"Still coming in from Paardeberg. They're being dressed. You'll get them later. Where are your spare doctors?"

We had come up with six surgeons taken from the big Wynberg and Rondesbosch hospitals, where for months they had lived on a promise of work at the front.

They were not R. A. M. C. men, but house surgeons, fresh from the home hospitals, young, enthusiastic and happy, though their baggage had been cut down to the thirty-five pound scale, and they had not the ghost of a notion where they were going.

They were uncarted like stags on Modder platfrom, gazed awhile, met a man in authority, and were swiftly commandeered. Two or three doctors lay dead or wounded across the plains, and it was a hot press for the medical service.

Half a mile across the plain, behind the graves of the Highland Brigade, lay the hospital tents, and thither loaded mule and ox wagons were heading. Like Number Three, they had been at work a weary while. There came no surprise or bewilderment, hardly even any pity, to the onlooker as the big Red Crosses lurched and pitched. This, said the wagons, is the custom with the wounded. Stricken men are gathered as soon as possible by the bearer companies, whose casualty list is a heavy one.

They are dressed for the first time swiftly and efficiently; they are then put into the tilted wagons till they reach the hospital that sends them to the rail. The rail takes the badly wounded to Cape Town and the sea that leads to Netley.

This is the system, said the wagons, and here was the system all naked to the glaring day.

Three nights had the wagons been on the road—rained upon, thundered over and lightened about, jolted and jerked and jarred—but the long and short of it was that of 800 wounded the wagons had lost not one.

Would the hospital take delivery, please, said the wagons, and they drew aside to rest, for their cattle were very, very tired.

As for Number Three. No, it would not be wise to visit Magersfontein. The train might be filled and sent away at any moment.

There was an old official ring about this, and I was not the least surprised that we waited eleven hours—time to have gone to Magersfontein and back on all fours. But I am glad I stayed by Number Three. It is early days to make that field of blood a show place, and—one can collect shells on other beaches when peace comes again.

The station was the centre of local society.

The staff, including a German Prince, lived across

Digitized by Google Original from CORNELL UNIVERSITY

the road in a battered caravanserai with scores of ponies tied to the veranda.

The platform was banked with Red Cross cases, badly needed at Kimberley, and with mail badly needed by the men who came up, fingered them curiously and slunk away. Business first, mails later.

The telegraph office was a small edition of De Aar—hideously overworked.

A knot of sappers came up from the river, where they had been stamping ballast under a new siding, Other sappers with "R. P. R." on their hats followed.

These last were the details of the Railway Pioneers. skilled mechanicians, and the like, of Johannesburg, and under the grime and the khaki one met a host of a certain weird dinner given in the Gold Reef city two years ago.

One gets used to privates with visiting cards, and it is perfectly natural to discuss bacteriology, West African exploration, and the ethics of publishing, the intricacies of the bankruptcy act and the prospects of the Labour party in South Australia with spurred troopers.

So it was not disconcerting to meet men of the Chitral siege, once prisoners in the hands of Omra Khan, old schoolmates, Indian staff corps men doing duty as "tail-twisters" in the transport, lost acquaintances of ten years ago, side by side with the fellow-passenger of three weeks ago, unrecognizable to-day under the sunburn, hair and dust.

It was only an undress rehearsal for the day of judgment.

A detail of army service men on route for Kimberley spread themselves at ease on their baggage and chaffed a quartermaster sergeant who had lost his sword, but by the regulations was miserably tied to the empty scabbard till he could return the thing to store.

A knot of excited Life Guards demanded news of French's division.

"Out since Sunday week and no news. We belong to 'em. We were sick. We want to rejoin. Do you know where he is?"

A colonial suggested that cavalry divisions always suspend operations for a corporal of horse and two dozen troopers.

A gunner driver in a cart pored over a three days' old Cape paper, for there is no news at the Modder.

A man with a drawn face came out of nowhere and told a story. His wife had died at home of influenza, was dead and buried. His people could look after the children, thank God! but it hurt—it hurt cruelly. He spoke and vanished.

Half a mile up the line a private of Highlanders was cooking potatoes and semolina together. He was in luck. He had helped "swipe" a Boer wagon overturned by our shell fire, and picked up the semolina from the dust.

A knot of officers had made themselves a rude mess house in a roofless hut, with a blanket for shade. One of them wished to see a sister of Number Three—to tell her that So-and-So was dead.

A little gathering moved across the dust to look for the graves of the Highland Brigade. Even now the nameboards are split and blistered, and the date carries us back a thousand years.

And so it went on, hour after hour, this procession of faces, this tangle of half caught tales.

Toward evening the remnants, as it were, of a battalion moved from the hospital tent in broken squads, one man supporting another.

They were our "light" cases—men denied the merciful cushioning shock of a severe wound—in acute and annoying pain. They would go down to Naauwpoort by the Kimberley train, but first they must be called over.

They reached the platform haltingly; their uniforms were darkened in places by patches as of carelessly spilled varnish, and sometimes their trouser hems were gummy with the same stuff.

They sat down by companies in the dust, half a score of regiments mixed.

Their officers got them fruit and cigarettes; the mere sound filled their companies' water bottles.

They chaffed greatly in undertones, but they did not say one single word which by any construction could be considered even coarse. They did not complain, they did not growl, they did not curse. They were going to Naauwpoort to get well. In a few days they would return. They had outmarched and outmanœuvered their enemy—on a couple of biscuits a day, but they had also outmarched their provisions. Their companions were now attending to that enemy, and they were content.

On their departure Number Three waked to life.

The wagons were coming in from the hospitals. The doors of the cars flew back; orderlies went to their stretchers; the side boards were ripped out of the bunks; the cook put the last flavouring to the big stock-pot; the sisters stood to attention, each in her ward—a doctor and a sister are responsible for half a train apiece—and the blessed morphine needles were made ready. They want rest from pain our wounded. Food and clean sheets will often bring it, but on occasion we must help nature.

The worn, chipped and scratched rifles clattered into the arm racks, the thin dusty kits followed, and after them the loaded stretchers.

"Fractured thigh," said an orderly.

"Which? Left or right?" said the Sister.

"Right," said the man, and he was slipped on to his back accordingly, injured leg outside, where it could be got at easiest.

"Special," said the orderly. Here was a clean stomach wound. He could eat milk and slops in a bunk marked to that effect, and the gentlemanly Mauser would suffer him to live. Down the car he went, thinking nobly of his soul, and in no way approving of milk diet.

Entered one amputation below the right elbow—very cheery. Full diet for this amputation, but no full diet for yonder lung shot, who cannot lie down without pain.

Were there any sick?

There were no sick, and the doctors thanked heaven. They would sooner bring down three trains of wounded than one of sick.

Dysentery, that milks the heart out of a man and shames him before his kind; rheumatism which is the seven devils of toothache, in the marrow of your bones; typhoid of the loaded breath and the silly eye, incontinent and consuming; pneumonia that stabs in the back and drives the poor soul, suffocating and bewildered, through all the hells of delirium—we are clear of these for this journey.

The clean aseptic bullet kiss and the shell splinter are all our care.

Quietly and quickly, but above all quietly, come the stretchers.

Fractured shoulder; elbow joint; lung, again from right to left, but nothing vital reached; shattered forearm (owner says explosive bullet); two head cases, both will live. Eye, head and neck, upper arm; thigh again; two or three clean shots through the thigh (owners very hungry); shoulder smashed and top of finger shot off (owner much annoyed at this little extra); forearm again, and "please, sir, the bandages are pinchin' me horrid."

It isn't the bandage, but the doctor does not say so. He exhibits the merciful squirt and the bandages miraculously loosen themselves.

One colonel, bearded like the heavy swell of the sixties; another colonel (the Highlanders must have been catching it cruelly); a major; a bearded captain (on investigation this turns out to be a lieutenant, aged 23, when he is shaved); and a sprinkling of subalterns and doctors.

In each man's bed is a bag holding shirt, pajamas, towel, brush, sponge, soap and toothbrush. They call it the Good Hope bag, but it was evidently invented by a thoughtful she-angel.

Man after man shakes off or is helped out of the creased, dirty, greasy, gloomy, blood-stained khaki, nestles in the luxury of clean body clothes between clean sheets. They have rest; now they must have food—thick soup for choice, if they will only stay awake to drink it, and milk and brandy for the stomach and lung people.

Chapter III.

Theoretically, 600 miles of rail should be bad for wounded men. Practically it does them all the good in the world.

In the first place, they are cleanly and honourably out of it. Not for weeks the sun and the dust, the foul water and the weary marching; the booted sleep and the plug-plug of the rifle butt against their shoulder.

Many of them will be permanently lost. The ship will take them to England, they will find their billets waiting, and they will return to live before the faces of their fathers.

Moreover, these are they who have come out of a winning fight. Cronje's end is certain. They left the guns pounding the soul out of his laager by the Modder.

It is not as was that terrible journey after Magersfontein, when doctors and sister had to sit up with weeping men—men who had been killed in heaps of a sudden one day and damned in heaps by their general the next—men who tried to explain but broke down and turned their faces to the wall and cried miserably and hopelessly.

Number Three's staff will remember that Magersfontein trip as long as they live.

This is distinctly a better business. They are going off to sleep, like tired children already—thirty-one officers and sixty-six men. They will be different people to-morrow.

The doctors look at the sisters and nod joyously.

A good train load; no one will be lost, and that little end car for once need not do duty as a mortuary.

Number twenty-seven wants something solid to eat. Number twenty-seven won't get it. He is shot through his stomach, and it is a miracle that he is not under the Modder dirt. He can have some more milk and brandy.

"Please, sister, there's a colonel hoppin' about the alleyway."

A sister advances to cut him off. Mere doctors are helpless here. They dare not herd colonels like ostriches. Besides, he has one sound leg. He says so.

"But you are to get on your back and lie down," is the order.

"But, please, sister, I feel quite fit."

"But I say so."

A wave of the hand eliminates the colonel. He will hop no more to-night.

A fractured Victorian (shoulder and collarbone by the look of it) and a child with a slung arm have dodged the eye of authority for a few minutes, and, sua dente diabolo (but I know Australians liked tea), are drinking tea in the staff carriage.

The child is 19. He has one month's service. He does not appreciate a sister's drawing comparisons between him and a 17-year-old middy carted off the field at Graspan. It was his first engagement; he was scooping potted meat out of a can when the advance began. Then he was firing. A bullet hit his rifle on the trigger guard, broke up and continued through his hand, which is now extensively bandaged. It hurts a little.

"Of course it does if you let it hang down like that," says the sister, and she deftly loops up the sling, while the child blushes adorably.

He argues impersonally on the advantages of retaining the forefinger of the right hand. Not his forefinger by name but abstract forefinger. One wants it for shooting and writing, don't you know. Oh, there are a heap of things one can do with it.

Then the colour goes out of his face and the sister whirls him into bed.

The Victorian turns pale dun and thinks he will lie down.

One finds out later with other men that the first was a most plucky child and would not take chloroform when they dressed him. His hand is horribly cut up, and his rifle in the rack is smashed across the stock. The nickel nosed bullet has sunk a quarter of an inch into the steel trigger guard. It would be unfair to steal that rifle.

The child is asleep. He looks about 13.

Now the covers are drawn on the lamps, the night watches are set and we take our last turn down the corridor.

A thunder storm chases Number Three southward, the lightning spills all over the veldt and the sun-warped roofs leak.

Thirty or forty or fifty thousand men are lying tentless in this downpour, but it must be flooding out Cronje in the bed of the Modder.

Our children are here asleep—deeply and beautifully asleep, all except one man whose eyes shine like the eyes of a prepared moth.

"What is the matter?"

"I haven't slept in these"—he picks up the sheet—"since the third of November. It's too comfortable to sleep. Oh, Lord, it is comfortable." He squirms luxuriously in his bunk.

Through the long night when we stop all voices are lowered. Footsteps halt before us and voices whisper.

"Have you any New South Wales Lancers, sir, please?"

"No, we have not. Have we any Oxfords? Yes, a sergeant, but nobody is coming to wake up this train. Yes, we are full; but they are all doing well. No—They are in bed and asleep, and you must go away." All this in tense whispers.

Doctors and sisters call it an easy night. They are not actually on their feet or fanning a pneumonia case from 11 to 6.

Well, they had their reward in the clean rain-washed morning, when every runnel of the Karoo was bankful and the waste water (some day we shall get big dams with a system to them) spilled away profligately.

Our children were hungry—mutinously hungry. Officers fancied this and fancied that; milkmen wanted to know why they were not full dieters and sent verbal messages by orderlies asking for more—much more.

"You won't get any breakfast till they're all fed," said to me an orderly with a pyramid of porridge basins. "You'd better fill up on Osborne biscuits, You see 'arf of 'em 'aven't the use of their 'ands."

So they stoked them—"the 'arf that 'adn't the use of their 'ands"—and they redressed their bandages, and they washed their little faces and combed their little hair, and then the cry went up for tobacco.

Some of the men had changed past recognition during the night. The lines of pain, the terse, drawn expressions, were gone. They had rested, their bellies were full, they were smoking.

You must remember that a wounded man is not a sick man. He is generally in superb physical condition; he has been off all liquors for some months, and so responds readily to stimulants, his blood is clean, and he breathes the best of air. Give him half a chance and he will clamber up again hand over fist.

Then, all animal needs satisfied, some of them wanted to send word home, and that was a full morning's job.

Digitized by Google Original from CORNELL UNIVERSITY

The usual form ran: "Dear Mother—Just a few lines to tell you I was hit at Parbederg on February 18, when we fought Cronje. I was hit in such-and-such a place, but please do not worry about me, as I am coming on all right. It was a bit hard in the carts, but I am lying in bed in the train here and we are all going down to the hospital, and I am quite comfortable, and I shall be all right in a few weeks, so please do not worry about me, because I am all right and doing well."

Their first throught in every instance was that she should not worry. One man—a Celt, be sure—launched into some description of the fight (I saw him later at Wynberg covering sheets and sheets) and a few others had business matters to adjust; but for the bulk, the word, the assurance, and the message of love sufficed.

Remember, it was not the army that you and I know, but the army of the People, heavily laced with Reservists, family folk who have kiddies and businesses over the sea. Blacksmiths, gardeners, club porters, and small shopkeepers were among those represented, and their physique was almost as admirable as their spirit.

One man only of all that train broke down—and small blame to him. He was a badly shotten "lunger," and there seemed no way to make him easy, sitting or lying! He got out his home photos—the little tintype one carries in the inside pocket—and the cruel home sickness atop of the pain took him and broke him for a minute or two. I think he had come out of some well ordered country house, for he returned to the manner of lodge porter in his talk.

There were quiet men, deeply concerned for the probable loss of a working arm; there were mildly—oh, so mildly!—riotous men, who staggered about visiting from bunk to bunk; there were funny men, worth their weight in silver to the ward; there were angry men brooding over that last shot which stretched them and meditating revenge; there were just men, admitting that their enemy up in a tree had sighted more quickly than they, "but my section got him with four bullets, and he came down like a pheasant, sir;" there were silent men, breathing quickly, counting each turn of the wheels, and there were doubting Thomases who needed particular information about Wynberg Hospital.

I heard a good deal of all sorts, but I did not hear one word of complaint.

So it is in the base hospital. From at least a thousand wounded men at Rondebosch and Wynberg under fairly intimate circumstances, orderlies out of earshot and the talk running free, I did not gather one whimper.

A badly hit man—fracture or stomach—is, of course, glad he is going home—till the steamer comes around. Then he is not so pleased.

A slightly wounded man takes all the ward to witness that so soon as he is mended wild horses won't keep him away from his family. Ten days later he is lying—lying like a skirmish line under pompom fire—to his doctor with intent to rejoin. The hospitals have their own esprit de corps, and tents are proud to be able to say they are all going back.

But our boys wanted rest before all things; and Number Three hurried them to it. Our little world on wheels had hardly come to know itself when we were half way home.

A little letter writing; a small "smoker" between two cool windows where wounded colonels and subalterns met in pyjamas and talked over good men killed, while the idle rifles clicked in the rack behind; another ravenous meal or two ("Which will you 'ave, sir? Steak or rissole?" "Oh, both, I've been dreaming of steaks since Jacobsdal!"); another and an easier night, and then the thrice blessed firs of Wynberg, the waiting hooded ambulances, a good road and Number One and Two Hospitals just around the corner.

Once more the business of the stretchers, the tally of fractures and perforations, the whispered cautions, and the louder words of good cheer.

It is not in the official bond, but Number Three's staff, a little worn with night watching, dusty and heavy eyed, will see the boys up to their beds. They know every one of the cases now, and a word or two in season will be profitable.

In an hour Number Three stands empty and stripped. Blankets, sheets and bedding must be renewed; a hundred things go to the wash, and they swish and swill the floors.

To-morrow night its work begins again.

The latest official investigations show that the amount of leaf tobacco produced during last year and retained in the Monopoly Bureau and in various branch offices throughout the empire does not fall short of 2,254,727 *kwan* (1 *kwan*=8⅓ lbs.). It is said that over 100,000 *kwan* are secured in each of the three districts, Otawara, Moki, and Tsuruki, while 50,000 or 60,000 *kwan* are held in Matsumoto, Iino, Wakamatsu, Nagoya, Mito, Maiko, and Bato.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE BOER RETREAT.

Shanghai, May 10.

The Boers have abandoned Ladybrand and Ficksburg.

LORD SALISBURY ON THE SITUATION.

In a speech delivered by Lord Salisbury at the Royal Academy banquet, the Prime Minister eulogised the careful neutrality that had been maintained by all the Powers. Nevertheless, as regard the future, Great Britain must rely solely on her own strength. The military efficacy of the great nations were increasing daily and he questioned the wisdom of trusting to the Navy alone. As conscription was unacceptable, he urged the creation of rifle clubs everywhere. The responsibility rested with the people to ensure the security of the country by placing it in the position of an armed nation.

THE CHESTER CUP.

The result of the Chester Cup was as ollows :—

Roughside	1
Empress	2
Baldur	3

THE BOERS AT ZAND RIVER.

Later.

General Hutton's mounted infantry reconnoitred the Zand river and found the enemy in considerable force. General Broadwood's cavalry, with Gen. Ian. Hamilton's force, performed the same operation with similar results.

FOURTEEN STREAMS.

General Hunter reports that he occupied Fourteen Streams unopposed. The enemy retired precipitately, abandoning their ammunition and personal effects.

THE ZAND CROSSED.

Shanghai, May 11.

A despatch from Field-Marshal Roberts, dated the 10th inst., says that we are now across the Zand River. The enemy are still holding a strong position, but we are gradually pushing them back.

EXODUS FROM THE TRANSVAAL.

A large number of foreigners are now quitting the Transvaal, including officers and ambulance men.

THE ZAND RIVER.

Later,

Roberts telegraphs from the Zand River at 1 o'clock on the afternoon of the 10th that the enemy are now in full retreat. They occupied a position 20 miles long. Our line was necessarily longer, with widely scattered forces. The cavalry and horse artillery are now pursuing by three different routes.

BULLER.

Shanghai, May 12.

Great activity is reported on Buller's part, but the correspondents are forbidden to divulge his movements.

A SUCCESSFUL DAY.

Roberts telegraphs from Rietspruit on the evening of the 10th that he had a successful day and has driven the enemy from point to point. We are now eight miles beyond the Zand River. The Cavalry and Mounted Infantry are at Ventersburg.

HONGKONG.

Mr. George Wyndham, Under Secretary of State for War, has approved of the plans for a new Hospital at Hongkong, and the necessary documents are leaving for the Far East this month. Every effort is to be made to erect the building at the earliest possible date.

THE WEI-HAI-WEI DISTURBANCES.

The Hon. St. John Brodrick, Parliamentary Secretary to the Foreign Office, has instructed Colonel Durward to continue the demarkation at Wei-hai-wei even without Chinese co-operation.

TO THE RELIEF OF MAFEKING.

Shanghai, May 13.

The *Daily Mail's* correspondent, telegraphing from Cape Town, says that the special Mafeking relief force has passed through Vryburg.

THE TRANSVAAL INVADED.

Reuter's agent, telegraphing from Kimberley, says that the British patrols from Fourteen Streams have entered the Transvaal.

NEARING KROONSTAD.

Reuter's agent, telegraphing from Geneva Siding, on the morning of the 11th instant, says that the British forces have arrived there, 14 miles from Kroonstad.

MR. CHAMBERLAIN ON THE FUTURE OF SOUTH AFRICA.

Mr. Chamberlain, speaking at Birmingham with regard to the general conditions of the settlement in South Africa, said that Her Majesty's Government was not prepared to again recognise the independence of the Republics. Their territories must be incorporated in Her Majesty's dominions under the British flag, but individual liberties should be preserved.

KROONSTADT OCCUPIED.

THE FREE STATERS GIVING UP.

Later.

Roberts has occupied Kroonstadt unopposed. President Steyn fled after vainly endeavouring to persuade the burghers to continue their opposition. The Transvaalers said they would fight no more for the Free State, and made for the Vaal River.

RACING.

The Jubilee Handicap has been won by Sirenia, with Merry Methodist second and Royal Flush third.

THE SURRENDER OF KROONSTAD.

Shanghai, May 14.

Reuter's agent telegraphs from Kroonstad, under date of the 12th inst., that a Field Cornet surrendered the town. Field Marshal Roberts and General French camped on the north-eastward, and Roberts sent General Hunter and Colonel Weston to cut the railway. They succeeded last night, but unfortunately after the last train had left the Free State. The opposition is practically over. The Boers are now entrenching at the Vaal river.

RUNDLE AND BRABANT.

Later.

A telegram from Maseru, dated Sunday, says that Rundle and Brabant are advancing in line across the country, and that they are now camping on the Leeuw River. They may meet heavy resistance, since though the Free State concentration is broken up, individual commandos are ready to attack any weak point.

FRENCH MUNICIPAL ELECTIONS.

Shanghai, May 15,

The Nationalists have finally gained 49 seats out of 80 in the French Municipal Elections. The Paris newspapers regard this as somewhat ominous.

THE BOERS DEMORALIZED.

The recent movements of Field Marshal Roberts have absolutely paralyzed all dis-

Digitized by Google Original from CORNELL UNIVERSITY

cipline and concerted opposition on the part of the Boers. They flocked from the entrenchments, which had been half-heartedly constructed. President Steyn personally whipped them out of the train.

STEYN RETIRES TO HEILBRON.

President Steyn has gone to Heilbron, which he has proclaimed as his new capital.

BIGGARSBERG MOUNTAINS FORCED.

Reuter's Agent, telegraphing from Pietersmaritzburg under date of the 14th inst., says that a telegram from Buller announced the successful forcing of the Biggarsberg Mountains, and that the occupation of Dundee is expected to-day.

IMPERIAL FEDERATION.

Mr. Joseph Chamberlain, Secretary of State for the Colonies, has introduced in the House of Commons the Commonwealth Bill, but said that he must ask the House to amend the Bill in order to retain the power of the Court of Appeal. But he proposed to introduce in the House of Lords immediately a scheme to appoint for seven years one representative from Canada, South Africa, Australia, and India, respectively, as members of the Privy Council, they to act as Lords of Appeal and to receive life peerages, also to continue to sit in the Lords after the expiration of the septennial term; the Imperial Government to pay the salaries.

THE BOER WAR.

Shanghai, May 16.

Reuter's agent, telegraphing from Kroonstad under date of 14th, says that it is reported that the whole of the Boer forces are concentrating on the Vaal river, leaving the Biggarsberg and the southern and western borders. It is concluded that the Free Staters fighting on the Vaal do not now exceed 2,000.

The health of the British troops and horses is excellent and food and water are plentiful.

BULLER'S SUCCESSES.

General Buller occupied Dundee on the 15th, after operations lasting for 4 days; 2,500 of the enemy have left for Glencoe.

THE STATE OF DUNDEE.

The collieries at Dundee have been wrecked.

MAFEKING.

The Boers on the 12th furiously bombarded Mafeking, destroying and afterwards occupying the native quarter. The British attacked and surrounded them on Saturday night. The Boers lost 7 killed and 17 wounded.

THE BOER DELEGATION.

The Boer delegates are in New York

GLENCOE OCCUPIED.

Shanghai, May 17.

Buller occupied Glencoe on the 15th inst., unopposed. The Boers fled precipitately during the night. They numbered 4,000, and got off with their ambulance and 11 guns.

The Transvaalers have evacuated the Biggarsberg Mountains. The number of the Free Staters on the Drakensburg is much reduced.

THE NEWMARKET STAKES.

The result of the Newmarket Stakes is Diamond Jubilee, first; Chevening, second; and Guidwife, third.

THE AMERICAN PRESS.

The leading papers of New York deprecate the idea of deluding the Boers with false hopes, when they are merely to be used as puppets in the Presidential Election.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

SOUTH AFRICA.

Saigon, May 11.

The English have occupied the Zand River after a sharp engagement. The Boers are concentrating in the neighbourhood of Kroonstadt.

THE EXHIBITION.

Saigon, May 12.

The installations at the Exhibition are being rapidly finished. The Colonial Exhibition in the Palais du Trocadéro attracts numerous visitors.

THE WAR.

Saigon, May 13.

The English continue to advance northward in three columns, fighting constant battles the while. Lord Roberts arrived in the morning at a point 8 miles to the South of Kroonstadt.

SPAIN.

Demonstrations have taken place in the principal towns of Spain against the levy of taxes. Grave disorder has broken out in Barcelona, Valencia, and Seville.

OBITUARY.

Saigon, May 14.

Vice-Admiral Zédé has died at Brest.

THE WAR.

Roberts entered Kroonstad unopposed on May 12th. The Transvaalers set out for the Vaal River. Steyn has established his seat of government at Lindley.

FRENCH MUNICIPAL ELECTIONS.

Saigon, May 15.

Nineteen Nationalists and eleven Republicans have been elected as Municipal Councillors in Paris. The candidates on the list of the Republican Defence have triumphed in most of the principal towns. Everything passed off quietly.

THE BANK OF INDO-CHINA.

Saigon, May 16.

The privilege of the Bank of Indo-China is extended by decree in consequence of the engagement undertaken by the Bank to double its capital, to found new branches and to include in its operations loans on crops.

THE WAR.

Buller has commenced to advance. He has gained possession of the Biggarsberg Passes and has occupied Dundee.

BULLER.

Saigon. May 17.

General Buller has occupied Glencoe. The Boers to the number of 4,000 retired north.

MAFEKING..

A rumour is current that Mafeking capitulated on Sunday.

(FROM OUR OWN CORRESPONDENT.)

THE EARTHQUAKE.

Hakodate, May 12.

This morning, at half-past two o'clock, a heavy. and long continued earthquake was felt here.

(FROM THE "MANILA TIMES.")

ARMY OFFICER IMPRISONED.

New York, April 30.

The Supreme Court of the U. S. has reviewed the case of Ex-Captain Oberlin M. Carter, of the United States Army, who had been sentenced to a term of imprisonment for five years at the Military Prison of Fort Leavenworth, Kansas, in addition to paying a fine of $5,000, for embezzling and defrauding the United States Government of over a million dollars in gold, in connection with harbour works and dredging contracts in the South, a year and a half ago. This sentence was passed on Carter by a military court-martial and the sentence was approved and officially decreed by President McKinley and Mr. Secretary of War Root. Later, however, on March 1st, Carter's counsel brought the case before the Courts of New York and obtained a Writ of Error. This procedure delayed the execution of the sentence, and Carter obtained his freedom under heavy bail, pending a review of the case by the Supreme Court of the United States. It was thought probable that it would be one or two years before the Supreme Court would take the case into consideration, and that when it did it would sustain the Writ of Error. The High Court upholds the decision of the Court Martial in sentencing Carter to five years' imprisonment. Carter has, therefore, been returned to prison at Fort Leavenworth to complete the term of his confinement.

STRIKES IN AMERICA.

New York, May 2.

A big strike has occurred among the building trades of Philadelphia. The workers have been agitating through their trades' unions for some time for the adoption by the employers of the eight hours' working day, but the master builders have refused to accede to the demands of the workers. The trades' unions of Philadelphia have therefore called a strike among the building trades, and 3,000 men stopped work.

(FROM THE "HONGKONG TELEGRAPH.")

TROUBLE IN NORTH BORNEO.

Labuan, May 3.

On the night of Friday last the town of Kudat and its environs were attacked by a native force under the command of Mat Sater, the half brother of the late Mat Salleh, the notorious rebel chief. The town itself suffered severely, the Government magazine and a maxim gun being captured by the rebels. These were, however, subsequently retaken. Two of the British North Borneo Constabulary were killed and seven wounded, including Mr. G. N. Malcolm, Wing Officer of the force. Twenty-five Chinese were killed and the environs of the town were entirely destroyed. Many refugees have arrived here. The cause of the outbreak and the attack upon Kudat is the general dissatisfaction amongst the natives with the rule of the Chartered Company.

Labuan, May 4.

The S.S. *Taganac* is overdue and has probably been requisitioned for the relief of Kudat, either at Sandakan or the former port. The *Marudu* sailed at midnight yesterday for Gaya with extra police. There is no further news from Kudat.

The departure of Rajah Brooke's expedition, presumably for the Trusan River, is assuming a more important phase, as it is now rumoured that he intends to compel the people of Brunei to pay poll-tax.

Notes (abridged).

(a) Castles, followed by P to Q 4, is better play here.

(b) Kt to Kt 5 is preferable.

(c) Sound and brilliant.

(d) Q to Kt 3, followed by Q to B 3, is better for White.

(e) If Kt to B 3, Kt takes B P.

(f) Splendidly played.

(g) A magnificent sacrifice such as has very seldom occurred in actual play.

(h) Really magnificent.

GAME 591.

It is very strange that Pillsbury should be unable to snatch a game from Blackburne in any of the Cable Matches, even under most favourable circumstances. In the game below, which was played in the last cable chess match between England and America, Blackburne handicapped himself at starting with the Philidor's Defence, selecting besides the most unfavourable variation (3...B to Kt5), so much so that he had to give up a Pawn in the first half-dozen moves, and so practically conceding to his formidable opponent Pawn and move at the start. Asking him why he chooses this defence, he said, "Well, I want to get out of the Ruy Lopez." Pillsbury should have won the game, but he gave Blackburne a chance to assume the attack, and he handled it with such consummate skill that the game might be taken as a classical specimen all through, when nothing else but a dull game was expected.

The board was keenly watched by an appreciative crowd. Blackburne played with unerring accuracy, and never gave his opponent the least chance from the moment he took the attack into his hands.

Pillsbury's message proposing a draw was couched in flattering terms to the English Master. There is an interesting phase in the game which may be specially pointed out—viz., if Pillsbury had been tempted to attack the Rook again with 48. Kt to Q3. then Blackburne had a little trap prepared with 48, P to B6; 49, Kt takes R, P takes P and White could not save the game. However, Pillsbury was to careful to fall into his trap, although the combination is subtle enough to come off under ordinary circumstances.

The following is the game:

PHILIDOR'S DEFENCE.

White—H. N. Pillsbury. Black—J. H. Blackburne.

INTER-VARSITY CHESS.

Oxford and Cambridge combined defeated on April 21 the American universities, Harvard, Columbia, and Yale, in a cable chess match, after a two days' struggle, by the score of 4½ to 1½. While the British victory was anticipated, the overwhelming defeat of the Americans was a matter of surprise. The Oxford contingent of the British team was in good form and proved much stronger than was expected. The trophy, represented by Professor Isaac L. Rice, will therefore remain in England for another year, as last year's match was won by Oxford and Cambridge by scores of 3½ games to 2½. The following is a summary of the pairings and the score:

American.		British.	
Rice (H.).....	½	Tattersall (C.).....	½
Hunt (P.)	0	Softlaw (C.)	1
Sewell (C.)	0	Ellis (O).....	1
Cook (Y.)	0	George (O.).....	1
Hopkins (H.).....	1	Soddy (O.)	0
Austell (Y.).....	0	Wiles (C.)	1

The Americans had the first move on boards 1, 3 and 5.

The Oxford and Cambridge representatives occupied private rooms at the British Chess Club, a few members of which, including Sir George Newnes, were present during the exchange of messages. The American players conducted their games in the Knickerbocker Athletic Club's theatre in New York, which was filled with early visitors, mostly college men and *alumni*, who eagerly watched the progress of the games as illustrated on six boards. Mr. Stanley H. Chadwick, secretary of the Brooklyn Chess Club, acted as umpire for the British team, and Sir Henry Henniker, M.P., accepted a like office for the American players.

NOTES.

We regret to inform the world that our old friend H. E. Bird is in a bad way, and, it is said, has left for ever the familiar corner in the Divan. In his illness, which arises from the gout, which has troubled him for so many years, the veteran has not been left high and dry. Chess players all over the world will rejoice to learn that Mr. Bird is in a sort of cottage hospital at Tooting, and that the few pounds per week required for expenses and little luxuries are forthcoming.—*Birmingham Weekly Mercury.*

Deutsches Wochenschach (Berlin) gives the following figures, showing the percentage of wins in master tournaments and the number of such contests used for a basis of calculation: Lasker (4) 76.6, Pillsbury (5) 70.3, Dr. Tarrasch (10) 69.99, Burn (12) 68.82, Anderssen (5) 66.57, Zukertort (9) 66.35, Steinitz (9) 64.85, Blackburne (22) 64.83, Schlechter (8) 57.72, Mason (19) 55½. Albin is the last in the table of sixty players, with 33.78 per cent.

The seventh national Italian chess tournament is now being played. The first prize, a costly Sevres vase, is the gift of the King of Italy. The Prince of Naples, who is honorary president of the Italian Chess Union, gives the second prize, and Baron Sonnino the third. In addition, there are other prizes, consisting of medals and money.

The Paris chess tournament was expected to open on May 15th. It is probable that the following experts are taking part in the contests; Pillsbury, Showalter, and Marshall from the U.S.: Tschigorin, Lewin, and Lebedew from Russia; Alapin, Albin, Marco, and Schlechter from Austria; Brody and Maroczy from Hungary; Walbrodt, Lipke, and Mieses from Germany; Janowski from France; Blackburne, Burn, Mason, and Lee from Great Britain.

Bruley, Mr. Steiner, Mr. and Mrs. Ch. Fruitt Mr. Ng. Yat Seeng. Mr. F. Hart, Mr. H. Fitzgerald, Mr. R. Randolph, and Mr. J. A. Quinn, in cabin.

LATEST COMMERCIAL.

IMPORTS.

American cotton has been reshipped to Liverpool, in view of the state of the market and the fact that prices are much lower here than at home. There is no business in cotton yarns, and nothing in shirtings beyond a few retail sales. A small business in some lines of fancy cottons and woollens. Metals dull.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirting—8¼lb, 38½ yds. 39 inches	$2.85 to 3.85
Grey Shirting—9lb, 31½ yds, 45 inches..	4.75 to 6.50
Indigo Shirtings—24 yards, 14 inches ...	2.30 to 3.35
Prints—Assorted, 24 yards, 30 inches ...	2.80 to 5.00
Cotton—Italians and Satteens, Black, 32 inches...	PER YARD. 0.21 to 0.32½

WOOLLENS.

	PER YARD.
Flannels	$0.45 to 0'65
Italian Cloth, 30 yards	0.35 to 0.50
Mousseline de Laine,—Crape, 24 yards, 30 inches	0.24 to 0.33
Cloths—Pilots, 54 @ 36 inches	0.65 to 0.95
Cloths—Presidents, 51 @ 65 inches	0.90 to 1.10
Cloths—Union, 54 @ 56 inches	0.60 to 1.10
Blankets—Scarlet and Green, 3 to 5lb per lb...	0.68 to 0.78
	PER PIECE.
Velvets—Black, 35 yards, 22 inches	9.20 to 11.25
Victoria Lawns, 12 yards, 42-3 inches	0.96 to 1.20
Turkey Reds—2.8 to 3.0 lb 24/25 yards, 30 inches	2.15 to 2.47½
Turkey Reds—3.8 to 4lb, 24/25 yards, 32 inches	2.75 to 3.50

ONE NIGHT TREATMENT FOR SORE HANDS

Bathe and soak the hands, on retiring, in a strong, hot, creamy lather of CUTICURA SOAP. Dry, and anoint freely with CUTICURA Ointment, the great skin cure and purest of emollients. Wear, during the night, old, loose, kid gloves, with the finger ends cut off and holes cut in the palms. For red, rough, chapped, and discoloured hands, dry, fissured, itching, feverish palms, shapeless nails with painful finger ends, this one night treatment is simply wonderful.

FOR BABY'S SKIN Scalp, and hair, no other soap is so cleansing, purifying, and beautifying as CUTICURA SOAP, the most effective of skin and complexion soaps, as well as purest and sweetest for toilet, bath, and nursery. For infantile rashes, chafings, inflammations, and eruptions, for crusted, itching irritations of the scalp, with dry, thin, and falling hair, for red, rough hands with shapeless nails, and simple blemishes of infancy, when assisted by gentle anointings with CUTICURA Ointment, it is absolutely without a rival.

Sold throughout the world. British depot: F. NEWBERY & SONS, London. French depot: L. MIDY, Paris. Australian depot: R. TOWNS & Co., Sydney. POTTER D. AND C. CORP., Sole Props., Boston, U. S. A.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 26TH, 1900.

MARRIAGE.

On Saturday, April 28th, at the Church of the Redeemer, Bryn Mawr, Penn., U.S.A., by the Rev. Dr. Haughton, assisted by the Ven. Prescott Evarts, JEROME DAVIS GREENE to MAY, only daughter of the late Marshall Tevis, Esq., of Philadelphia, U.S.A.

SUMMARY OF NEWS.

MAFEKING has been relieved. The Boers are in full retreat on Pretoria.

PRESIDENT MCKINLEY refuses to abandon the attitude of strict neutrality in the war.

SIR JOHN BRIDGE, the well-known police magistrate of London, is dead. He was born in 1824.

THE revenue of the colony of Hongkong in 1899 was $3,610,143, and the expenditure $3,162,792.

THE dispute between Turkey and America is in a fair way of settlement, the Porte having promised to pay America's claim.

APPRAISERS place the loss by fire in Ottawa at $3,912,000, gold, and up to May 7th, the relief funds exceeded $600,000.

HIS HONOUR JUDGE WILKINSON returned to Yokohama on Tuesday by the C.P.R. steamer. He will make but a short stay here.

MR. PATRICK CAMPBELL, husband of the famous actress, joined the Imperial Yeomanry as a trooper for service in South Africa, and has fallen at the front.

THE Imperial German mail steamer *Hamburg* made a very smart run to Kobe, having averaged 16.5 knots an hour. Her passage occupied 21¾ hours.

A SUM of 100 *yen*, the offertory taken at the Union Church, Yokohama, has been forwarded to Mr. Eddy, of the Y.M.C.A., Madras, for the Indian Famine Fund.

THE Variety Entertainment to be given in the Public Hall on June 5th, in aid of the funds of that institution, promises to be a most enjoyable affair. Rehearsals are actively proceeding.

CAPT. BRINKLEY'S house in Tokyo was destroyed by fire on Wednesday. Everything was lost, including his library, MS.S. of over 20 years' collection, etc.—a very heavy loss indeed.

PROPERTY worth millions of dollars has been swept away by the floods in the Southern States. Vast damage was done to bridges, railroads, and dykes. It is estimated that the total property loss will reach $60,000,000.

AMONG the spectators at the Indian Famine Concert on Monday evening was Sir Edmund Fremantle. The veteran Admiral seemed to enjoy the programme, and especially the whimsicalities of Mr. Brady, to the full.

As there are still many districts in Tokyo to be supplied with water, an enlargement of the works has become necessary. The authorities are preparing to commence the work, which is anticipated to cost *yen* 650,000. The pipes will arrive from abroad about August or September.

A TELEGRAM from Sapporo announces that a conflagration occurred at Toyohira-mura on the 20th instant, and that, in consequence of a strong south-east wind, the flames spread rapidly, destroying 250 houses. Sparks carried to Sapporo caused a fire there, and 20 houses were reduced to ashes.

THE Maoris of New Zealand have been refused permission to take an active part in the South African campaign, but they have not been behind the rest of the Empire in doing their share towards the relief funds. They have already contributed over £1,000, principally raised by means of native entertainments.

A BETTO named Suzuki Fukumatsu on the afternoon of the 19th inst. stole a bicycle belonging to an employe of Messrs. Vantine & Co. While engaged in arranging for its sale to a Chinese dealer in Honmura road, he was arrested. It then transpired that he had been engaged in the big robbery at the Uyeno Fine Arts Exhibition.

TELEGRAPHING from Formosa on the 18th inst., the Governor-General says three cases of pest occurred at Taipeh on the 17th, and two deaths; at Taichu on the 18th there were 10 new cases and five deaths; at Tainan nine cases and five deaths. From the beginning of the year to the present there have been 654 cases and 459 deaths.

A WOMAN named Hatakeyama Yone (27), residing at Yeirakucho Ichome, Yokohama, committed *shinju* with an artist at Takigashira, Negishi, Yokohama, on the morning of the 21st inst. Both parties partook of a narcotic and then waded out to sea, but it being low tide some fishermen found them, though not before life had left the body of the man.

THE *Netherlands States Gazette* contains the statutes of the Netherlands-Japanese Trading Company, established in Amsterdam and purposing to trade principally with Japan, both on own account and on consignment, and all business connected with it. The company may establish agencies and branches in other places. The capital is fl.100,000 in 100 shares of fl.1,000, of which twenty are taken and paid up, and the remainder within ten years.

AN extraordinary general meeting of the shareholders in the Grand Hotel, Ltd., was held at the Grand Hotel on Monday for the purpose of considering a proposition by the Board of Directors to erect a new three-storied wing on the site of the present "Annex" building. The proposition was unanimously approved. The new building will have fifteen suites of apartments, provided with private baths, etc., besides other special features for the comfort of guests.

THE Salvation Army make an appeal through the local head of their organization, Colonel Henry Bullard, for funds for the Indian Famine. This gentleman points out that the S. A. "have extensive operations in the most affected areas, including, Rajputana, Gujerat, Panch Mahals, the Punjaub, and N. W. Provinces, and through the medium of our Officers have exceptional facilities for distributing help to the most needy." Donations should be sent to Colonel Bullard, Salvation Army Headquarters, Ninami-Sakumacho Itchome, Shiba, Tokyo.

SOME of the hospitals in South Africa are to be provided with a luxury that will be much appreciated. Through the generosity of the Edison-Bell Phonograph Company, the sick and wounded at Wynberg, Woodstock, Bondebosch, Naauwpoort, and Bloemfontein are to be supplied with phonographs by means of which they can communicate viva voce (but through the medium of the post) with friends in England. They will also be able to fit on to their machines cylinders sent to them from England. A greater luxury for men in hospital could scarcely be imagined.

MANILA papers report a furious engagement at Cagapan, Mindanao, between United States troops and some insurgents toward the end of April. The insurgents remained strongly intrenched and were not dislodged when the latest news came to hand. Another telegram reports the siege of 30 men of the 43rd infantry in a church at Cantubig, Samar. Though the roof was burnt over their heads the Americans held out for five days until relief arrived. Yet another telegram tells of the capture by General Funston of several tons of Aguinaldo's confidential correspondence, including documents implicating several business firms in Manila. Among Aguinaldo's other letters *The Manila Times* says that there were communications to and from Admiral Dewey and Consul General Wildman.

WITH the object of encouraging emigration to the fertile regions recently opened up by the Trans-Siberian Railway, the Russian Government has given orders for the issue of tickets at a very cheap rate. These special tickets are issued for Tobolsk, Irkutsk, and, beyond there, for Vladivostock and Port Arthur. One ticket, apparently, will cover a whole family, and will be available at something like 114 stations on the line of route. The zone tariff has been adopted. From any point in Russian Europe to Tobolsk the price per head has been fixed at two roubles. Beyond Tobolsk to any spot in the vast Siberian region the charge for these emigrant tickets will be 4½ roubles a head—that is to say, that for about 14s. 6d. one will be able to travel a distance of over 6,000 kilometres, or something like 4,000 miles.

SOUTH AFRICA.

Saturday, May 19.

Mequatling's Nek, which General Rundle has just occupied, is the point where the road from Vicksburg to Winburg crosses the Klokani mountains. It is only 45 miles from Thabanchu. Thus Rundle is evidently advancing much more slowly than Roberts did on the march from Bloemfontein to Kroonstad. But Rundle has a difficult task. Not only is he moving in mountainous country where the utmost caution is necessary, but it is also his business to clear out all the Boer commandos on the east of the Bloemfontein-Kroonstad line, so to secure Roberts' right flank against any enterprises such as the Boers recently undertook. The Yeomanry under Welsh are plainly moving up the Basuto-Land frontier of the Free State. It will be seen by looking at the map that Roberts' extreme right, namely, the Yeomanry, is greatly recessed. In fact, the three positions, Kimberley, Ladybrand, and Kroonstad, lie at the angles of a right angled triangle, Ladybrand being at the right angle and Kimberley and Kroonstad at the extremities of the hypotenuse, while Rundle, at Mequatling's Nek, finds himself on the Kroonstad-Ladybrand side, about twice as far from the former place as from the latter. It looks as if Lord Roberts had ordered Rundle to sweep right across to the east of the Free-State, and get possession of Bethlehem, while the Yeomanry move against Harrismith and the rear of Van Reenan's Pass. Roberts himself will of course make Heilbron his next objective point. It is 55 miles from Kroonstad.

Meanwhile attention is concentrated on Mafeking, where the Boers are evidently making a final effort. Fifty killed and wounded was a heavy loss for the little garrison last Saturday, but they fought gallantly and inflicted a severe reverse on their assailants. The question is, did the Boers renew the attack on Sunday and Monday after their failure on Saturday? If so, they have departed from their Ladysmith traditions. But they know that little time remains available, for the relieving force must be close at hand, supposing that it really passed through Vryburg at the time recently mentioned. The loss of Mafeking would not signify much, though all England would grieve to hear that the brave garrison had been obliged to capitulate after more than six months' resistance against heavy odds.

Monday, May 21.

The position is becoming very desperate for the Boers. From every side the British are closing in on them. If they had to contend against Roberts alone they might still make a strong stand on the line of the Vaal so as to cover Potchefstroom, Johannesburg and Heidelberg. But Hunter has already crossed the Vaal and reached Christiana, and there is no doubt that Methuen can cross in the neighbourhood of Hoopstad. It is true that the columns of both Hunter and Methuen are far from the direct line of advance against Pretoria. Supposing that Methuen crosses into the Transvaal below Hoopstad, he would still have 70 miles to march before reaching Klerksdorp, and Hunter at Christiana is still 120 miles from the latter place. At first sight it appears that neither Methuen or Hunter was intended to take any direct part in the attack on Pretoria. The role assigned to Methuen was to guard Roberts' left flank against enterprises by the Hoopstad-Boshof Boers; and Hunter's immediate purpose was to guarantee the Mafeking relief column against having its communications severed in the neighbourhood of Warrenton. But it is doubtless part of Lord Roberts' programme that these columns should contribute directly to the final result, for which purpose they will probably advance down the Vaal in the direction of Klerksdorp, which place is in railway communication with Potchefstroom, Krugersdorp and Johannesburg. Then there is the Mafeking column. We know nothing of its composition, but it can scarcely be less than ten thousand strong. The operations of this column strike us as perhaps the most remarkable incident of the war. Roberts' change of direction after Cronje's flight from Maggersfontein; the subsequent advance against Bloemfontein; the really fine rush of the cavalry from the Modder to Kimberley; the marching of the column that entered Bloemfontein from the south, and Roberts' last advance against Kroonstad—all these were very admirable in their way. But the absolute secrecy observed in organizing and despatching the Mafeking relief column; its disappearance into space; the public's ignorance of its very existence until news suddenly came of its passage through Vryburg, 127 miles from its point of departure and only 96 from its destination—this is the performance that will attract most attention and merit most praise. Until it reached Vryburg the column probably moved in British territory. But there were many secret enemies *en route*, and we can not doubt that, had not extraordinary precautions been taken, the Boers at Bloemhof and Warrenton would have been kept accurately informed of the column's movements, and would have seized the unique opportunity thus offered for the kind of enterprise they particularly effect. We did not, for our own part, suppose that the relief would have been attempted from the Kimberley direction, in view of the perils and difficulties attending such an essay; but Roberts has known when to take a risk, knowledge that is characteristic of his ability as a general. On the whole Mafeking is the most picturesque chapter of the story. Its resistance has been quite an illustrious feat of arms, enhanced by the final attempt of the Boers and the fiasco that attended it, and the manner of effecting the relief has been a species of *coup de théâtre*. What, now, will be the role of the Mafeking relief column? It deserves some rest, but it stands at the entrance of the easiest route to Pretoria, and its advance along the 150 miles of road that separate it from the Transvaal capital would certainly facilitate Lord Roberts' task materially. Then finally there is Buller, who seems bent upon forcing the passes of the Drakensberg and effecting an entry into the Transvaal by the historical route of Majuba and Laings Nek. Thus the Boers are veritably threatened from every side, and the possibility of a northward trek is obviated by Carrington's presence beyond the Limpopo. It is not difficult for President Kruger to choose an appropriate text for the occasion. The bulls of Bashan are encompassing him most manifestly on every side. No wonder that a peace party is forming in Pretoria.

Wednesday, May 23.

Things appear to be moving with extraordinary rapidity at the seat of war. Our news on the 21st was that Methuen had entered Hoopstad, and now the telegraph says that the British have occupied Klerksdorp, which is nearly 90 miles distant from the former place. Evidently Methuen can not have reached Klerksdorp, unless our previous account of his doings was incorrect, which is not a satisfactory explanation. If Klerksdorp has really been occupied, the occupiers are probably the troops of Roberts' left wing. North-west of Kroonstad, at a distance of 55 miles, lies Vier-fontein, which is in railway communication with Kroonstad. A few miles beyond Vier-fontein the Yster Spruit enters the Vaal, and immediately above and below the point of affluence there are two drifts, Doods Drift and Klerks Drift. It is possible that Roberts decided to throw his left wing forward in order to effect the crossing of the Vaal at the drifts, in which case his troops, after crossing, would have found themselves within 15 miles of Klerksdorp, which they at once proceeded to occupy. The meaning of that would be that a large flanking movement has been effected by sending a column over the Vaal 75 miles westward of Viljone's Drift, where the direct railway to Johannesburg and Pretoria is carried over the river. These troops will now move upon Potchefstroom—35 miles east of Klerksdorp—, and thence will turn the position of the Boers defending the Vaal at Viljone's Drift on Roberts's direct line of advance. If that be the state of affairs at present, the position of the Boers has become more hopeless than ever. They have probably entrenched Pretoria very strongly, and, if twenty thousand of them decide to garrison the place, the siege may be a protracted affair, for Roberts will certainly not proceed by the method of escalade. But there is little chance of their making any effective resistance southward of their capital. It is true that Johannesburg is capable of defence, being surrounded by heaps of tailings which can easily be turned into forts. But any Boers that allow themselves to be shut up in Johannesburg must abandon all hope of taking part in the defence of Pretoria, for Roberts is strong enough to invest both places simultaneously. There will thus be a necessity to choose, and the choice must fall on Pretoria. At the same time, we have strong doubts about the Transvaalers' protracting the struggle. Everything that they looked to achieve has failed; the whole prospect that induced them to plunge into war has faded. Instead of driving the British out of South Africa, they are now themselves driven to the very walls of their capital, and since they can no longer entertain any expectation of foreign intervention, nor look to beat back their assailants, it is hard to see what they could gain by standing a siege. If it be true that the whole of the force assailing Mafeking has been captured—a story which probably must be received with reserve—then the road to Pretoria lies open to the relief column, and the distance is much the same as that from Kroonstad to Pretoria. Moreover, Buller's mounted division is said to have reached Laings Nek, from which we infer that the Transvaal will be pierced from that point without serious difficulty. The Boers must see that the game is up.

THE "LESE-MAJESTE" AFFAIR.

Tuesday, May 22.

It does not appear rational that any great fuss should be made over the sensational article recently published by the *Seinen-no-Fukuin*. A giddy youth of twenty-one, unable to climb to fame or to keep the wolf from the door, penned some silly remarks about the Imperial wedding, in the hope that he would at least become notorious and an object of public interest. To raise a commotion about the event is to play the game of the offender. At first, indeed, the public

Digitized by Google Original from CORNELL UNIVERSITY

seemed to appreciate these considerations. The incident was scarcely noticed by the press. But presently the *Mainichi Shimbun* published an article alleging that such acts are the products of the nation's hysterical tyranny of patriotism, since one excess begets another. That theory involved a species of excuse for the writer of the disloyal article; a very shadowy extenuation, but still an extenuation. Then the *Yorozu Choho* came out unequivocally. It declared that no praise could be too strong for the courage and philanthropy of the writer of the diatribe. "Heaven does not speak," said the *Yorozu*, quoting an old Chinese proverb; "it makes its voice heard through the mouths of men." Now the *Mainichi's* editor is a prominent Christian, and the *Yorozu Choho* is associated with Mr. Uchimura Kanzo and other eminent followers of the Nazarene. Hence those disposed to draw strained inferences found here an opportunity to accuse the Christians in general of fomenting disloyal sentiments among the people. That is a charge often made in the past, but the Christians have hitherto been able to defy their accusers to advance any evidence in support of the accusation, and have justly claimed that, next to fearing God, their creed inculcates the duty of honouring the king. Unfortunately a weapon has now been forged to attack them. We need scarcely say that the *Nippon* leads the assault: Chauvinism against indiscretion. Christianity had nothing whatsoever to do with the analytical philosophy of the *Mainichi Shimbun* or with the erratic enthusiasm of the *Yorozu*, but the two journals have Christian connexions, and that is enough for the extremists.

Wednesday, May 23.

Messrs. Honda, Kozaki and Uyemura, all well-known leaders of the pro-Christian movement, have considered it advisable to protest, through the columns of the *Kokumin Shimbun*, against the insinuation that Christianity had any connexion with the publication of the matter which has led to the suppression of the *Seinen-no-Fukuin* and the apprehension of its editor and two others, all of whom, we may mention, have been committed for trial. Yamakawa, who penned the obnoxious article, is not a Christian. He has never been baptized and has no relations with any sect. Morita Bunji, the lad of 19, who made a clean copy of the article, is a Christian, being a member of the *Kanda Fukuin Kyokai*, but it would be extravagant to suppose that because a youth of 19 acted the mechanical part of amanuensis, the matter he copied represented the sentiments of Christians in general.

DOMESTIC POLITICS.

Saturday, May 19.

Predictions of a political crisis continue to be freely uttered. One newspaper undertakes to declare that an arrangement will be made by the 25th, but does not venture to foretell whether there will be a reconstruction or an overthrow of the Cabinet. Another is confident that there will not be any "earthquake," but that the settlement will take the form of giving portfolios to two or three of the Liberal leaders, and also nominating others to the new post of *Chef de Cabinet* in the various Departments. It is noticeable that the latter posts have not yet been filled, their duties being discharged at present by the Vice-Ministers of Departments. Some observers think that an arrangement on that basis would be willingly accepted by the Liberals, first, because their fever of office hunting has been considerably abated by the receipt of increased parliamentary stipends; and secondly because there is no question of policy on the *tapis* at present warranting a split with the Cabinet, and the Liberals having been instrumental in restoring a measure of stability to the Cabinet and peace of mind to the nation, appreciate the unwisdom of renewing the reign of unrest merely for the sake of shouldering themselves into power. We certainly think that the Liberals have deserved well of the nation and of the Government. They stepped into the breach when things were threatening to fall into a chaotic condition, and when a policy of destruction seemed to have become the fashion among party politicians in Japan. It thus became possible for competent men to take charge of the country's interests with some feeling of confidence, and the result is that from a welter of change and instability the nation has now enjoyed tranquil and good government for nearly two years. That the present Cabinet has showed remarkable competence, no one will be disposed to deny. It has gone on its way resolutely and calmly, doing the right thing and trusting to time for its vindication. At one moment the Foreign Office under Viscount Aoki became a cynosure of attack, but if public opinion were polled today, there would be an almost unanimous verdict that Viscount Aoki has been one of the most successful Foreign Secretaries ever possessed by Japan, and that he has displayed the specially admirable faculty of wearing his laurels in private. It will be a source of genuine regret for Japan's sake if another era of unrest is to be inaugurated merely because of some personal ambitions. The Liberals doubtless appreciate these points, but they justly urge that, after all, whether in cooperation with the Cabinet or in opposition to it, they have had constantly before their eyes an unchanging goal, the establishment of party government, and that unless they make some progress towards it, they will stand convicted of abandoning their principles. There are many considerations making for compromise.

Monday, May 21.

The *Jimmin* being the organ of some of the Liberal leaders, if not of the whole Party, its comments on the present political situation have special interest. The gist of its writing is that a coalition Cabinet is the best plan under the circumstances. Of course the ideal would be a party cabinet, but since such a change would be too sudden, the halfway house of a coalition is the only satisfactory resource. To continue the plan hitherto pursued would be the worst method of all.

These are very plain utterances and one wants to learn something of the reasons on which they are based. Why should a continuance of the existing arrangement be called an intolerable plan? To the eyes of impartial observers the present arrangement seems eminently satisfactory. The country's affairs both at home and abroad, have been smoothly and successfully administered. There are no grounds for complaint on the part of the people nor has the Cabinet's name been associated with any failure. The *Jimmin* is evidently conscious that no fault can be found nor any defect indicated. Yet a reason has to be assigned, and our contemporary discovers one in the mood of the nation. People have grown tired, it says, of things as they are: they want a change. It is certain that people grew very tired of the state of affairs existing when the political parties pursued destructive tactics only, checking all progress and interrupting the course of Government. But we can not detect any signs of weariness now. No section of the press assails the Cabinet. Indeed, we can not remember that any period since 1878, when the first political party was organized, has been so free from censures of officialdom. It is difficult to reconcile such an absence of open symptoms of discontent with the theory that the nation longs for a change. However, the *Jimmin* may be right. After all, the life of British Cabinets is frequently terminated by popular caprice. Something new is craved for and the nation votes a re-organization of the Ministry. Justin McCarthy has admirably described how mutability of national fancy destroys cabinets in England. Japan's Occidentalization has seemingly reached to that feature also.

The latest statements about political changes may be summed up very briefly. We have, first, the *Kokumin Shimbun*, which alleges that things will not be settled as speedily as some people appear to anticipate, but that some changes are certainly pending. Then we have the *Asahi Shimbun* which professes to know that a meeting recently took place between the three great Choshiu statesmen, Marquis Ito, Marquis Yamagata and Count Inouye, on which occasion Marquis Yamagata expressed his desire to be relieved of the weight of responsibility now borne by him, saying that it had become too heavy, owing to the attitude of the Liberals and the financial proposals made by Count Matsukata. He begged that either Marquis Ito or Count Inouye would take his place, and he declared himself willing to serve under either, as would also be Marquis Saigo and Count Matsukata. To this Count Inouye replied that he had definitely resolved not to enter the Government again, and Marquis Ito answered that he was not prepared to do so. Therefore they both urged Marquis Yamagata to remain in office. Concerning this story, we may say that we do not credit it. Then comes the *Nichi Nichi Shimbun* with a pertinent reminder that Cabinets, according to the Japanese Constitution, are nominated by the Emperor and hold office at his pleasure. Such a thing as a party Cabinet is not contemplated, nor could it come into existence in any openly recognised form. It might happen that the Sovereign, finding men of exceptional ability and trustworthiness in a particular party, should delegate to them the duty of organizing a Ministry, and thus a party Cabinet would exist in effect, though not in officially recognised shape. Anything else would be unconstitutional, and party politicians would do well to keep the fact before their eyes. As to the theory of this contention, we agree with the *Nichi Nichi*, but it seems to us that time has left the constitution somewhat in the rear, and that its provisions can no longer be successfully invoked to stem the tendency of political development.

Tuesday, May 22.

There continues to be much talk about Cabinet changes, but it is obviously irresponsible and uninteresting. The only fact which seems to emerge clearly is that the Ministry has made some kind of promise to give favourable consideration to the wishes of the Liberals. Tokyo journals undertake to describe what Marquis Yamagata is prepared to do and what he is not prepared to do, but it is plain that not one of them has any definite information on the subject. Mr. Hoshi Toru has again been interviewed, and is represented as saying that Marquis Yamagata finds himself much embarrassed, which is not

Digitized by Google Original from CORNELL UNIVERSITY

at all improbable. One journal is persuaded that even though the Liberals refrained from preferring any demands, the Cabinet would break-up, owing to financial difficulties, but as the finances are understood to be in a satisfactory condition, no credence can be attached to that statement. Altogether it is evident that every one is groping in the dark, and that those who are in a position to speak with confidence, carefully keep silence.

THE UNITED CHAMBERS OF COMMERCE.

Wednesday, May 23.

The committee of the United Chambers of Commerce of this country has elaborated a bill for relieving the financial condition now existing in this country, and it is expected that the measure will obtain the approval of the Chambers by a large majority. In the first place, the Committee applied itself to determine the causes of the difficulties besetting Japanese merchants and manufacturers, and came to the conclusion that they are, insufficiency of capital; unsuitability of the methods of industrial undertakings; incomplete provision of the machinery of commerce; defective means of communication. As to the remedies, the Committee proposes the following:—The establishment of an industrial bank. The introduction of such fiscal changes as shall quickly restore to circulation all monies collected by the Treasury, and shall facilitate payments on account of taxation, notably by accepting cheques instead of money, and in connexion with this latter point the Committee suggests that efforts should be made to extend the system of bills and cheques and promote credit transactions. It need scarcely be said that the establishment of a special savings bank is urged, the idea being that if the method of prize-bearing shares were fully adopted, the scattered money of the people might be collected, and rendered available as capital for business purposes. The Committee also recommends that the privilege of owning real estate and of holding shares of every description shall be extended to foreigners, and that they shall be in every way encouraged to start enterprises on their own account and in conjunction with Japanese in this country. Then come suggestions as to founding a school for training practical men of affairs; as to sending youths abroad for the purpose of studying commerce and industry; as to increasing the number of industrial experimental stations; as to establishing commercial and industrial museums, and as to the development of export facilities in general. The Committee thinks that endeavours should be made to promote the manufacture of all articles suitable for taking the place of imports, and that the Government should employ domestic commodities as far as possible in preference to foreign. Other suggestions are the founding of an East-Asian Bank in Kobe to work in conjunction with the Specie Bank of Yokohama in promoting trade; the assistance and encouragement of unions among manufacturers and producers of goods for export, and the removal of abuses now impeding such enterprises; speedy completion of railway communications, and the granting of special traffic rates to domestic manufacturers both over railways and in steamers of companies receiving navigation aids from the Treasury.

The Committee was absolutely unanimous with respect to allowing foreigners to hold shares of every description. But when the question of land-ownership came up for discussion, it encountered some opposition. The Osaka and Okayama delegates spoke strongly in its favour, but the representative of Nagoya, Mr. Okuda, and the representative of Yokohama, Mr. Otani Kahei, raised objections. Neither of these gentlemen opposed the principle, but Mr. Okuda thought that the step would be premature, and Mr. Otani believed that this privilege ought to be reserved as a weapon for negotiating the complete recovery of Japan's tariff autonomy when the time comes for that measure. Experience had shown, he thought, that Japan could not hope to obtain anything without giving some equivalent in exchange. The Committee, however, set aside these objections and passed the draft by a large majority.

A protest has been lodged from another quarter, however, namely, the *Nippon Kogyo Kyokai* (Japan Industrial Association). The members of that body hold that the privilege of land-ownership should not be granted unconditionally. Foreigners complain that so long as the privilege is withheld, they can not feel any security in organizing industrial enterprises. The Association denies all lack of security, but, at the same time, recommends that this sentiment on the part of foreigners be placated by giving to them the right of owning land on condition that they use it for industrial purposes within a certain time.

It is stated that Baron Shibusawa asked Marquis Yamagata, Marquis Saigo, Count Matsukata and Baron Sone to attend the meeting of the Chambers when this bill comes up for discussion, but that the four Ministers thought is advisable to refrain from doing so.

Thursday, May 24.

On the 23rd instant, the United Chambers of Commerce held a meeting in Tokyo to consider the proposals embodied in the report of the Committee which had been appointed for the purpose of drawing up a programme in connection with the present financial crisis. We have already stated in detail the recommendations of the Committee, and it now remains to note that they were all passed by the Chambers. No discussion was provoked except with reference to the provision that the privilege of owning real estate, holding shares of all kinds and engaging in mining enterprises, should be extended to foreigners without restrictions. Baron Shibusawa Eiichi, President of the Tokyo Chamber, left the chair for the purpose of speaking on this motion. His speech, as reported by the vernacular press, was short but strong. The line of argument was that the time had come for Japan to divest herself completely of old fashioned prejudices and to sweep away every obstacle that tended to impede her industrial and commercial development. Baron Shibusawa acknowledged that at the time of the Restoration he had been one of those who were ready to cut down foreigners wherever they found them, yet he now stood before the meeting as an open advocate of granting to foreigners every privilege enjoyed by Japanese subjects. It appeared to be apprehended by some timid folks that if foreigners were allowed to come in, own land, hold railway shares and work mines, they would acquire some sort of mastery in Japan, but he ventured to say that the Japanese people could hold their own in any struggle with foreigners, and he was persuaded that the country could not afford to check its progress and be distanced in the race of development for the sake of preserving some antiquated theories of isolation.

This speech, coming from a man of such eminence and well-known caution, must have produced considerable effect. But some members of the Chambers were disposed to think that the question was too important to be disposed of precipitately, and others showed a disposition to limit the concessions. When a vote was taken, however, a large majority pronounced in favour of the proposal without any modification whatever.

The only Tokyo newspaper that discusses this decision editorially is the *Nippon*, and such of our readers as are acquainted with the political complexion of that journal will be prepared to learn that it condemns the vote of the Chambers. We are bound to confess, too, that the *Nippon's* method of argument will probably convince a great many people. As to the merits of the question itself, our contemporary stands on contemptibly weak ground. It speaks of the troubles that beset Korea in connexion with concessions as to mining and land-ownership, says that it sympathises profoundly with the neighbouring empire, and hints that similar troubles may be anticipated by Japan if she follows the lead of the United Chambers, since foreigners do not radically differentiate her from either Korea or China. Apparently the *Nippon* fails to perceive that such defective discrimination on the part of foreigners is justified and confirmed by writings like that of the *Nippon* itself, for if a Japanese journal classes its own nationals in the same category with Koreans in respect of their ability to compete with Occidentals, how can the average Occidental be expected to see more clearly? This pusillanimous and antiquated line of thought will not appeal to Japanese intelligence, we trust; but we have not the same confidence about our contemporary's more subtle thesis that the Japanese will be thought ridiculously changeable if they now propose to voluntarily surrender safeguards and reservations which, a year ago, they deemed essential. There is no doubt, the *Nippon* says, that the Japanese Government's refusal to embody these concessions of land-ownership, mining, and so forth in the revised treaties, was dictated by deference to public opinion in Japan, and there is further no doubt that had they been able to grant them, revision could have been effected on lines still more favourable to Japan. What has happened, then, to warrant a complete surrender of the position within a few months of the operation of the revised treaties? Has public opinion changed? No, only the opinion of business men has changed who think solely of their own interest; andnot even of genuine business men, but of mere speculators who hope to find in these concessions a means of giving a fillip to the stock market. Yet these, the *Nippon* adds, are the very men who, two years ago, urged the State purchase of private railways on the ground that in time of emergency, danger might arise from leaving the lines of communication in non-official hands. Here, however, the *Nippon* makes an interesting confession. It avers that in thus advocating State ownership, the business men only pretended to be interpreting national thought; in reality they were pleading for their own pockets.

This charge of inconsistency and precipitancy, shallow as it is, will probably influence some people, comical as it must seem to every one that a man like Baron Shibusawa should be classed with unpatriotic speculators. Unless we are much mistaken, a different note will be struck by journals which have more right to be regarded as exponents of intelligent public opinion. At any rate the significance of the step taken by the United Chambers can scarcely be questioned.

Digitized by Google Original from CORNELL UNIVERSITY

BUSHIDO.

Very few of our readers have ever heard of *Bushido*, we presume. The literal meaning of the term is "the way of the soldier," just as *Shin-to* signifies "the way of the Gods." But while we have a single word, "religion," for the latter, we have no satisfactory equivalent for the former. The practice of rectitude presents itself to the mind of a Japanese under the guise of "treading a path" undeviatingly. When he says *michi wo fumu*, he means the following of the road indicated by ethical sign-posts. *To* is the Chinese pronunciation of *michi*, and thus the *samurai no michi* of pure Japanese become *Bushido* in classical terminology—"the religion of the soldier" in short. Mr. Nitobe Inago has taken *Bushi-do* as the subject of a brochure which an American publisher—the Seeds and Biddle Company of Philadelphia—presents to the world in very attractive guise. As a rule, peaceful folks do not want to hear about soldierly ethics. They associate the idea with bloodshed, battle and violence in general. But *Bushido* is concerned with such matters in only a very secondary degree. In the phraseology of trial by court-martial, all offences justiciable by such a tribunal are classed under the universal heading of "conduct unbecoming an officer and a gentleman." A Japanese would render that notion in the form "conduct contrary to *Bushido*." *Bushido*, in short, is the system of ethics that every Japanese officer and gentleman ought to obey. To know exactly what that system inculcates, is to know what kind of moral standard the educated Japanese of feudal times endeavoured to attain. Mr. Nitobe explains the matter in detail, and as a matter of course, his explanation displays great research. If he shows any fault it is enthusiasm. The way of the *samurai* leads us, under his guidance, to realms of moral nobility which, we venture to think, were never fully illustrated in the *samurai's* practice. On the other hand, we are persuaded that this creed belonged to a very high grade of ethics, and that it inculcated the pursuit of ideals which few, very few, students of Japanese life and manners have ever thought of attributing to the *samurai*. Naturally Mr. Nitobe sets out with an explanation of *giri*. He tells us that *giri* corresponds with the English term "duty," but he is inclined to think that the word ultimately degenerated into mere "propriety," under guise of which many deeds were done that shock our moral sense, as when a mother sacrificed her younger children to save the life of her first-born, or a daughter consented to sell her chastity in order to pay debts contracted by a dissipated father. We should not have thought that a mother or a daughter adopting such a course could be said to obey the dictates of "propriety." To English minds each would appear to be doing what she considered "right"; bowing to her sense of duty at any cost of suffering. However, that is a mere question of terminology. Our own experience in Japan has shown us that the sphere of *giri's* operation is wider than that where our English "duty" holds sway. An Englishman never considers it his duty to do a thing that is in itself wrong; but the Japanese *giri* has an altruistic sense in which duty to another takes precedence of the principles of abstract right. The *giri* of *Bushido*, however, was simply the duty of observing all the dictates of the code, bravery, honour, loyalty, truth, justice, magnanimity, courtesy, and chivalry. But this duty did not extend to dealings with women. There the *Samurai* failed completely, judged by an Occidental standard. Neither did his sense of chivalry forbid him to have recourse to devices of the most dishonourable kind in warfare. His conduct certainly illustrated the maxim that all is fair in love and war. With these limitations, however, *Bushido* was a noble code of ethics; not perhaps quite so fine as Mr. Nitobe believes, but incomparably finer than any Occidental imagines who has not made a careful study of the *Samurai's* career. Mr. Nitobe is the first to treat this interesting subject.

KOREAN AFFAIRS.

Mr. Kwŏng, the former chief of Police in Sŏul, who recently returned to Korea from his hiding place in Japan and was arrested immediately on landing, is said to have taken that apparently rash step in consequence of services rendered by him to Lady Om, the Monarch's favourite. The telegraph now tells us that he has petitioned to be confronted with some one—we can not tell who—in open court before he is executed. He is not likely to be executed in any case, we imagine. Will Koreanever have a respite from these intrigues, emeutes, and judicial assassinations? What is her malady? There are sufficient symptoms of serious sickness, but no one seems competent to diagnose them.

The latest sensation in Sŏul seems to have been connected with the Government's desire to borrow half a million of *yen* for coinage purposes. Korea, as our readers know, has adopted the gold standard, but for her the measure has remained a magnificent abstraction, for she has no gold. Her attempt to carry the system into practice did not extend beyond establishing a mint at Chemulpho, where some nickel coins were struck. Recently she moved the machinery to Yŏng-san, but then the difficulty occurred that she had no metal to coin nor working capital for the mint. It was under these circumstances that she signified her desire to borrow half a million, and a favourable response was at once received from various quarters, each of the would-be creditors have an axe, or several axes, of his own to grind, in the form of concessions. While all were haggling, the sharp American, Mr. Hunt, stepped in and became the successful party. So it is said at any rate, but rumour does not undertake to explain what conditions are attached. The *Jiji Shimpo's* special correspondent, from whom we obtain these details, adds that a Japanese also would fain have lent the money, but he condemns the Japanese method of procedure as wanting in wiliness. The way "to get" the Korean is not to frighten him at first by a big proposal, but to put forward some insignificant trifle as a bait, and then gradually to draw him on and entangle him until he has no choice but to be pliant. The Japanese attach more importance to the signature of Mr. Brown than to that of the Emperor himself. That is where they make a mistake. Mr. Brown's signature may be more trustworthy, but there is much more capital to be made out of an unimplemented promise which has received the Sovereign's sign manual. A very pretty political creed, is it not?

There has been a demonstration in Sŏul against the electric railway. It took the forms of a scheme to wreck the station in the vicinity of the Bell Tower. Apparently the Authorities were able to deal with the trouble.

A telegram published by the *Tokyo Asahi* says that Mr. Hunt has obtained the perpetual right of carrying on mining operations at Unsan, in consideration of a payment of 300,000 *yen*.

The explanation of the telegrams we have received from London about the comments of the *Times* and Mr. Brodrick's statements in Parliament on the subject of Russia in Korea is that the news of the Koje-Island Convention has only now been published in Europe. Our readers are already acquainted with the facts. We need only say that Russia has obtained from Korea a pledge that the Island of Koje shall never be alienated to any Foreign State, including Russia herself. That is a very harmless kind of pledge as it stands, though of course we all know that it means more than it says. There is, moreover, a special qualification. Both Great Britain and Japan have required that their rights shall not be affected by the guarantee, and Korea has made that reservation. Hence what Russia has obtained is a pledge that Koje shall never be leased or ceded to any foreign Power, including herself but excluding England and Japan. We understand that Great Britain, in this instance, has insisted on the maintenance of the engagement given by Korea at the time of the restoration of Port Hamilton, and that Japan took her stand on the special situation created by her interests and her neighbourhood. It would be idle to imagine that the pledge has no significance from a Russian point of view, but its import has certainly been much limited by the reservations that Japan and England have secured.

PRESS LAW.

The *Nichi Nichi Shimbun*, although it was always very outspoken in its condemnation of the old press law, nevertheless opposed the abolition of the right of suspending a journal, its contention being that the time had not arrived for such a step. It now insists that the existing law should be enforced with greater rigour. The best plan would be to re-invest the Authorities with the power of suspension, but pending that reform, it is the duty of the Government to make every possible use of the law as it stands, for much of the matter now published by newspapers and periodicals is distinctly demoralizing. Our contemporary alludes, of course, to yellow journalists, headed by the *Yorozu Choho*, who have no respect for the privacy of domestic life, and who, in not a few cases, if they do not actually resort to black-mailing, at all events make money by circulating villainous falsehoods detrimental to the reputation of individuals. Apparently public opinion is still insufficiently developed in Japan. It does not interfere to prevent these scandalous abuses, and the law is either inadequate in its provisions, or incompetently applied, for in no one instance has a suit for libel resulted in the effectual punishment of the accused. We entirely agree with the *Nichi Nichi* that something is needed. To us the trouble has always seemed the indifference of society. People shrug their shoulders and say "it is only a newspaper." Thus the status of the press is constantly lowered, and its sense of responsibility blunted. No quarter should be given to these wretched parasites who batten on slander and falsehood. They should be hounded out of society, and haled before the criminal courts whenever they offend.

ADMINISTRATIVE APPOINTMENTS AND CHANGES.

A number of administrative appointments are gazetted, principally with regard to the newly created office of *Chef de Cabinet*, and the newly denominated office of *Somucho*, which, we are disposed to think, may be best rendered by Permanent Under-Secretary, though the literal translation of the term does not convey that meaning. In the Departments of Foreign Affairs, Home Affairs, War, Navy, Justice and Communications, the present Vice-Ministers of State are gazetted Permanent Under-Secretaries, holding in conjunction the office of *Chef de Cabinet*. In the Department of Finance, Baron Tajiri, the Vice-Minister, is appointed Permanent Under-Secretary, but the post of *Chef de Cabinet* goes to Mr. Hirayama Seishin, hitherto a Judge of the Administrative Court. Also in the Departments of Education, and of Agriculture and Commerce, while the Vice-Ministers are similarly appointed to the position of *Somucho*, Mr. Koba Sadanaga and Mr. Okano Keijiro become *Chefs de Cabinet*. It will be observed that in no case has an outsider been brought in. Of course party politicians will by-and-by be appointed *Chefs de Cabinet*, that being the obvious purpose of the post. But for the present the matter is left in abeyance in the case of all the Departments except three.

Very considerable changes of organization are announced in the cases of the Army and Navy Departments. Possibly the experiences recently gained at the Naval manœuvres may have had something to do with this. In the Naval Department the following new bureaux and sections are created:—The *Kiyoiku Hombu* (educational bureau); the *Kansei Hombu* (ships stores bureau); the *Komu-bu* (harbour-affairs section), one at each naval station; the *Yobikwan-bu* (reserve-ships section), one at each naval station; and the *Heiki-sho* (armaments bureau), one at each naval station except Kure. In the Army Department, a *Jinji-bu* (section of personal affairs) is added to the former *Hokan-bu* (section of law), and the combined sections become the *Homu-kyoku*. There are also added to the organization of the Naval Department a *Gunjuhin-ko* (naval requisites section), one at each naval station; a *Sokuriyo-ko* (surveying section); and *Kaigun Boro* (outlook stations). These details are not complete, but our object is merely to give our readers a general idea of the changes effected.

THE COMMEMORATION MUSEUM.

Only four hundred and thirty thousand *yen* have been subscribed for building the Commemoration Museum, and at least six hundred thousand is wanted. The subscription list closes at the end of this month, and there are consequently great doubts whether the required amount will be obtained. The *Jiumin* vehemently attacks the nobles in connexion with this matter. It notes that there are 482 nobles living in Tokyo, and that if the subscriptions of Counts Ii and Date, Prince Tokugawa and Marquises Hachisuka and Tokugawa be excepted, the subscriptions of the thirty-six who alone have have put up anything, aggregate 6,745 *yen*. Our contemporary thinks that a very paltry sum. But is the stricture just? The average is 187 *yen* per head, which may be regarded as fully the equivalent of £100 in England. The nobles of Japan are by no means wealthy.

TOKYO AFFAIRS.

The Tokyo City Council has rejected the alternative plans of harbour construction submitted by Mr. Furuichi, as explained in a recent issue of this journal, and has approved of the original plan, which locates the docks near Shinagawa. This decision will dissatisfy the citizens of the Kyo-bashi and Nihon-bashi districts, but it appears that the alternative plans—there were two—would have involved increased expenditures of over 5 million *yen* in one case, and over 15 millions in the other; and, in the opinion of the Council, would have not have been as advantageous as the Shinagawa scheme.

It would almost seem as though there were some real prospect of the harbour's being constructed. Mr. Hoshi Toru, speaking on the 22nd at a meeting of the *Gunshi Konshin-kai*, held at the Yaomatsu restaurant, said that the work would require an expenditure of 40 million *yen*, and that the city had a right to expect the Government to contribute one-third, in accordance with the precedent of Osaka. As to the means of obtaining such a sum—13 million *yen*—there might be doubts, in view of the present state of the finances, but a simple plan suggested itself, namely, that the State should hand over the lands held by it within the limits of Tokyo Prefecture. These lands cover a wide area and are now unproductive—for example, the old store-house site at Asakusa and the tracts set aside as military and naval property. Mr. Hoshi considers that they could be sold for the amount needed. He said nothing about the proposed method of raising the remaining 27 millions, but a municipal loan is doubtless the idea.

Mr. Hoshi at the same time spoke of the City Improvement Scheme, explaining that the Municipality intends to spend 15 millions in the course of the next 5 years, the money being obtained by the sale of bonds.

THE SO-CALLED "BAKAN-BOYCOTT."

Nearly two weeks have now passed since one at least of the Yokohama local journals re-produced from the columns of the *Kobe Chronicle* a statement that an organized movement, based upon antipathy to foreigners, had been commenced in Bakan, its object being to prevent them from doing business in that place. The Kobe journal alleged that of the four branches of foreign firms doing business at Bakan, three had received notice to quit, and it suggested the advisability of a representation to the Minister of State for Home Affairs. Subsequent inquiry showed that the *Kobe Chronicle* had been entirely misinformed. There had not been any movement of the kind. One foreigner on the expiration of his lease had declined to pay the increased rent justly demanded by his landlord for a renewed lease, although the demand was quite in accord with existing conditions. The other foreigners remained undisturbed, and are said to have been much chagrined that such a false complexion should have been imparted to their really friendly relations with the Japanese. The *Kobe Chronicle*, on learning how greatly it had been misled, took immediate steps to correct the error and to give a true version of the facts. So, at least, we are informed. But we have not observed any contradiction in the columns of the Yokohama journal by which the original misstatement was reproduced.

THE PEST.

Saturday, May 19.

A case of pest has occurred in the suburbs of Osaka, at Hidamachi in Toyo-no-gori. As usual the invasion of this quarter by the dread disease was heralded by the discovery of a number of dead rats. Since the recrudescence of the malady in Osaka, the cases have totalled twenty-four, a record which looks very paltry compared with the returns from some parts of India. Undoubtedly the Japanese sanitary authorities are making a good fight. It is to be devoutly hoped that they may be able to hold their own.

From Nagasaki also comes news that a case of pest occurred on the *Taichiu Maru*, a steamer belonging to the Osaka Shosen Kaisha, which entered that port on the 16th instant from Formosa.

Wednesday, May 23.

There has been another case of pest in Osaka. The sufferer was a child, and death ensued very quickly.

From Hashimoto-machi, in Wakayama Prefecture, news comes that a boy of 14 has been attacked by a malady closely resembling pest. He had been ill for nearly a fortnight before the ominous swelling under the arm made its appearance. The medical experts have not yet agreed, however, that the case is undoubtedly one of pest.

There is, further, a possibility that Yokohama has been invaded. A coolie who arrived from Osaka by the *Nobuyoshi Maru* and took a lodging at the Satsuma-ya in Miyoshi-cho, developed symptoms of the malady and has been isolated for treatment. All requisite precautions have been adopted with reference to the lodging-house.

The statement that a case resembling pest had occurred at a cheap lodging-house in Yokohama created considerable alarm, but happily the malady was found to be of an entirely different character. From Osaka, however, news come of another fatal case, a little girl of eight. Up to the present, there have been thirty cases since the recrudescence of the malady, namely, 25 in Osaka, 4 in Shizuoka, and 1 in Nagasaki. Every one of these seizures has ended in death. In Formosa, the record for this year is 654 cases and 450 deaths.

MARKET PRICES.

Thursday, May 24.

Another illustration of the gulf that divides the European money market from the Japanese is furnished by the quotations on the London and Tokyo Exchanges. Japanese 5 per cent. War Bonds are announced as standing at £105 13s. 1½d. in London, whereas the quotation in Tokyo on the 16th instant was 933 *yen*, or less than £95. If there were any effective communication between the markets, such a wide discrepancy would be impossible. Of course the explanation is that the bonds quoted in the Japanese market are redeemable in *yen*, whereas the bonds sold in London are redeemable with specie. The British public do not understand the *yen*, or, if they do, are still sceptical about Japan's ability to maintain the convertibility of her notes. It is curious, however, that if the 5 per-cents sell for over 105, the 4 per-cents fetch only 82. The proper proportion would be 105 and 84. Incidentally we may call the attention of the Kobe Municipality to these figures, for the sake of the evidence they afford that Mr. Morse must have intended from the first to insist on a fixed specie rate

Digitized by Google Original from CORNELL UNIVERSITY

when buying water-works bonds. He knew perfectly well, as everybody knows, that bonds redeemable with *yen* would find no purchasers abroad.

The tone of the London market is altogether firmer. The rate of discount is telegraphed at 3⅛; consols stand at £101⅝, and the stock of the Japanese 4 per cent. new loan is at £82¼.

CONCERT AT THE TOKYO ACADEMY OF MUSIC.

A concert in celebration of the Prince Imperial's Wedding was given by the Tokyo Academy of Music on the afternoon of Sunday, the 20th. We are unfortunately unable to give any account of the performance, for, although our representative attended by invitation, he could not obtain admission, the hall being so full that even standing room was not available. It might be well, perhaps, if the directors of these ceremonies refrained from issuing tickets for a greater number than the hall can accommodate. Possibly, however, Sunday's concert was exceptionally well attended on account of the nature of the occasion. We append the programme:—

1. Orchestra—Symphony, B minor (unfinished). First Movement.....Schubert.
2. Chorus—Requiem, C Minor.....Cherubini.
3. Orchestra—
   a. Andante religioso.....Junker.
   b. Morris Dance .....
   c. Shepherd's Dance, from Henry VIII. ..... } German.
4. Chorus—
   a. Veni Sancte Spiritus .....Koeber.
   b. Veni Creator .....Casciolini.
5. Orchestra—Wedding March .....Mendelssohn.
6. Chorus, Orchestra and Organ—"And then shall your light," (from the Elijah)...Mendelssohn.

CHINESE AFFAIRS.

The "Boxers" appear to have made their way to Peking. Having harried all the Roman Catholic converts in the districts of the original unrest, these insurgents have attacked a village of Catholics some 23 miles from Peking, murdered a number of converts, variously stated at from 13 to 72, and then effected an entry into the capital where their presence seems to be causing no little uneasiness. Telegrams says that the Foreign Ministers are taking measures to guard the Legations, and that an American war-ship has been summoned to Tientsin. There has been much talk of the Peking Government's temporizing with these people, if not actually encouraging them, but probably the rumour is based solely on some appearance of lack of vigour in dealing with the rioters, who may have grievances which, in the opinion of the Peking Authorities, call for consideration. Now that the insurgents have reached Peking, however, the Government will have to show its hand plainly. It is in incidents of this kind that the chief danger to China's integrity lies.

The *Hakuai Maru* has brought another batch of Chinese students to Japan. They arrived on the 18th instant. There are eight military men, and ten cadets who are to attend a military college. Japan is becoming quite an educational academy for the rising generation of the Chinese nation. It cannot be doubted that the effects of this movement will be felt by-and-by, but the question is, will the Chinese empire last long enough to give these students an opportunity.

NOTES ON CURRENT EVENTS.

Captains Uryu and Serata, of the Imperial Navy, are promoted to be Rear-Admirals.

Telegrams received in Tokyo indicate that there will not be any summoning of foreign marines to Peking for the present.

It is stated that a plot to poison the newly adopted Prince Imperial in Peking has been discovered, and that a chamberlain concerned in it has been arrested.

The business troubles in Ashikaga are said to be spreading. The banks have refused to honour several other cheques, in addition to those of Mr. Sekida.

Negotiations are proceeding with regard to the lands owned by Japanese subjects within the plot selected by Russia at Masampho. It is expected that the Japanese will sell.

A villa belonging to Dr. Baelz at Hayama was partially destroyed by fire on the morning of the 20th instant. The conflagration originated in connection with a stove. There was no insurance, we believe.

The despatch-boat *Chihaya*, now under construction at Yokosuka, is to be launched to-day. It is expected that the Emperor will attend the ceremony. The *Chihaya* is a vessel of 1,250 tons displacement and 6,000 horse-power, and her speed is to be 21 knots.

Mr. Wanami, a member of the House of Representatives, and three others have been sentenced by the Yokkaichi Court to 45 days' imprisonment and a fine of 7 *yen* for gambling. They have appealed against the judgment, which certainly seems very heavy.

The *Official Gazette* announces that ships about to leave Yokohama, Kobe, Nagasaki, Moji, or Shimonoseki for foreign ports will henceforth be able to receive certificates of health (*Kenzen-shosho*) from the Medical Inspection Station (*Kenyeki-jo*) on payment of a fee of 5 *yen*.

The Emperor is to attend the ceremony of distributing certificates at the Naval College on the 25th instant. With regard to the Imperial Visit to Yokosuka on the 26th instant, it is stated that His Majesty will leave Shimbashi by the 10 a.m. train and return to Shimbashi at 7 p.m. The launch will take place at 2 p.m.

Tokyo journals state that from the beginning of this month it became possible to obtain post-office orders direct on Seattle, instead of sending them round by San Francisco as has hitherto been the case. We have not seen any official notification in that sense, but we presume that the statement is correct.

A number of copies of the *Yorodzu Choho* and the *Niroku Shimbun* have been confiscated on the ground of containing matter prejudicial to public morality. We are not surprised at this incident. The two journals in question have been in the habit of inserting matter which, whatever may be the ultimate purpose of its publication, is certainly scandalous and demoralizing.

There has been a disturbance in the principal school in Nagasaki. The affair had its origin in arbitrary conduct on the part of a number of the senior students. They called the juniors together, and then, singling out a dozen of them, administered personal chastisement. The director happened to be absent in Tokyo, and pending his return, the 49 lads who had thus taken the law into their own hands, were suspended, which sentence added fuel to their discontent. We do not know how the matter has ended.

The earthquake on the 12th instant, which is supposed by some to have been caused by a subsidence at the Tuscarora Deeps, and by others to have been of volcanic origin, seems to have been severely felt in Hokkaido. There is news that it caused an extensive land-slip in Kamiiso-gori of Oshima, and that a lake about 20 miles in circumference was formed. No loss of life is reported.

The three champion events at the Uyeno bicycle races on Sunday last, the mile, the five miles and the twenty miles, were all won in fine style by Mr. Benjamin Mason. For the twenty miles, ten started, but only five finished. These five kept in a bunch up to the last few hundred yards, when Mr. Mason, who had been riding beautifully and with excellent judgment, came away easily and won by about 50 yards.

No such heat has been felt in Japan for many years at this season as that experienced on the 22nd instant. The thermometer stood at 28° C. in Tokyo at 2 p.m., and the Central Observatory reports that the average temperature throughout the empire was 7° or 8° above the normal register. It is supposed that we shall emerge from these unusual conditions by a violent atmospheric disturbance.

The Prince and Princess Imperial left Tokyo on the 23rd and proceeded to Ise, Nara, and Kyoto. They stopped the first night at Numazu, and the next day went to Yamada in Ise. On the 25th, the Prince worshipped at the Great Shrine and made the report required by the new law. On the 26th, the Imperial couple continued the journey to Kyoto. On the 27th, the shrine of *Jimmu Tenno* at Unebi in Yamato will be visited, and there also the necessary announcement will be made, after which the Prince and Princess will return to Kyoto and spend some days there, coming back to Tokyo early in June.

It has finally been decided that the much-talked-of Imperial library shall be erected in the Uyeno Park, on or near the site of the present Musical Academy. The choice of position led to a great deal of discussion, but the Authorities arrived at the conclusion that Uyeno's only drawback, remoteness, would soon be remedied by electric railways and other aids to communication. The library will be a very extensive building, covering 1,200 *tsubo* (one acre), and costing a million and a half of *yen*. It is to be gradually constructed, the work extending over four years, and being finished, according to the present plan, in 1904.

The Judges of Japan have signed a petition to the Government asking for more consideration in the matter of emoluments. They do not use the vulgar word "salary" or even the more euphonious "emoluments." They speak of *yutai*, which is a prettily vague expression, literally signifying "better treatment" but intended, we do not doubt, to embody the idea of larger salary, in the first place, and greater consideration in the second. A tangible plea advanced by the judicial petitioners is that the pay of Local Governors having been improved, the "balance" has been disturbed, and should be restored. We think that every one must sympathise with the judges in this matter. They are underpaid, and their position does not carry with

Digitized by Google Original from CORNELL UNIVERSITY

it the dignity that ought to attach to the discharge of such duties as those devolving on them.

While congratulating Great Britain in the successes her arms are now achieving on South Africa, and on the ability displayed by her diplomatists in "holding off" the world, the *Yomiuri Shimbun* thinks that the latter result has been materially assisted, so far as the Orient is concerned, by Japan's attitude. It does not attempt to place England under an obligation to this Empire, but it ventures to express a hope that the facts will be appreciated, and that they will have the effect of drawing England and Japan closer together. The *Yomiuri's* belief is that every relaxation of vigilance on the part of Great Britain in the Far East creates an opportunity for Russia.

Mr. Poncey, a gentleman connected with Aguinaldo's Government, though in what capacity we do not know, is again in Japan. On the 20th instant he visited Mito, and delivered a lecture which is said to have been very well attended. A certain romantic interest attaches to the struggle for independence made by the Filipinos, but one can not disguise from oneself the fact that independence in such cases means the satisfaction of the leaders' ambition rather than of the people's aspirations. Under American rule the individual Filipino will enjoy a much fuller measure of liberty and will be much better governed than he would be under an administration of his own contriving. We do not know what Mr. Poncey hopes to effect in Japan, for the sympathy he obtains here can not be of a very practical nature.

Unfavourable news continues to arrive from Ashikaga. The disposition now is to lay the blame on the Mitsui Bank, which is said to have refused to honour the cheques of Mr. Sekida, though it had originally been disposed to do so. A committee of the silk-weavers waited on the manager of the Bank, and urged him to take up 35,000 *yen* worth out of the 50,000, but he declined to do so. Meanwhile the endorser of the cheques, Mr. Wada Akizo, has absconded, and nothing remains except an attachment of his property as well as of that of Mr. Sekida. Steps to that end have been taken. It is thought that there will be much embarrassment in consequence of this affair, but one can scarcely believe that such a small amount will be severely felt.

A new plan for the construction of a harbour has been prepared and presented to the Tokyo City Council. Our readers have learned that the former plan contemplated making Shinagawa the nucleus of the port, such being the idea best adapted to natural conditions. But as that arrangement would of course involve a shifting of the centre of the capital southwards, it provoked considerable opposition on the part of the population of the Nihon-bashi and Yeitai-districts, the result being that Professor Furuichi, in conjunction with Professor Naoki, has prepared a new scheme, locating the docks at Reigan-jima and thus bringing the harbour into the neighbourhood of Tsukiji. This second programme is now under consideration. We trust that the realm of harbour construction is not to be invaded by the jealousies and disputes that obstructed for such a long time the progress of street-railway enterprise.

The arrangements have finally been completed for despatching a deputation to receive the Buddhist relics which the Siamese Government is giving to Japan. The deputation consists of 15 persons, its head being Mr. Otani Koyen, and its second in command, Mr. Nanjo Bunyu. Rumour says that Mr. Nanjo was very reluctant to be included in the party, but that he found it impossible to refuse. The deputation leaves Kyoto on the 22nd by the *Hakata Maru*. It is to have a great send-off, several hundreds of priests assembling at the Kyoto station to say farewell, and an equally large party accompanying it to the ship in Kobe. Strange to say, a Buddhist organ, the *Bukkyo Zasshi*, throws ridicule on the whole affair by means of a cartoon representing parts of the skeleton of a horse. Siam retains the head, and gives a hoof to Japan. It is almost impossible for a Japanese to resist the opportunity of making a jest if it presents itself, but this performance by the *Bukkyo Zasshi* seem to us to be clumsy and far-fetched.

Signal success has not attended the attempts to raise money for establishing a fine arts museum in commemoration of the Imperial Wedding. According to the estimates of Mr. Katayama, a building of 350 *tsubo* at 1,500 *yen* per *tsubo* would be required. Thus the cost of the structure alone would be 525,000 *yen*, whereas the sum thus far obtained is only 402,371 *yen*, and the subscription list closes at the end of this month. The question then is whether to reduce the dimensions of the project, or to delay its execution for three or four years, putting the money out to interest in the meanwhile. It will be observed that this forecast does not take any account of the furnishing or maintenance of the museum, though those points are at least as important as the building. Apparently the time has been ill-suited for the starting of such an enterprise. As for ourselves, we were doubtful of its success from the outset. Our present expectation is that the Committee will fall back upon the Imperial Household Department, which generally saves all situations of the kind.

A scheme is on foot to start a sugar-refining company in Formosa. Some excellent names are connected with the project; those of Count Inouye, Mr. Masuda, Prince Mori and the Mitsui. The expert is Mr. Suzuki Tozaburo. He holds that the production of sugar in Formosa can be quintupled without much difficulty, in which case not only would Japan's domestic needs be supplied, but there would also be a surplus for export. At present she buys 30 million *yen* worth of sugar from foreign countries every year. Her own sugar-refineries have been almost completely driven out of the field, and she has become dependent upon over-sea sources. Formosa is believed to furnish the means of remedying that state of affairs. There have been many projects of sugar-refineries in Japan, as our readers are aware, and we all foresaw that an enterprise of that nature would surely be started so soon as some measure of security for life and property existed in Formosa. The new company ought to prove a success. It seems to be commencing on a comparatively small scale: only half a million of *yen* for capital. But the idea is to put up five millions eventually.

An armed raid on a Japanese doctor's house was made at Kobe on Monday night. Two men, one of them armed with a sword and the other with a pistol, entered the house of Dr. Yamaguchi Jirohei, 16 Moto-machi, Rokuchome, and succeeded in getting away with a gold watch, two gold rings, and various articles of clothing. The value of the stolen articles is 700 or 800 *yen*.

"SUMMARY OF JAPANESE LAWS AND REGULATIONS RELATING TO TAXATION."

This handy little volume, by Mr. Oyama Yokichi of Nagasaki, should be of the greatest use to foreigners. It sets out in a clear, succint form all the information needed by tax-payers in Japan. There is a Japanese section also, so that the book will serve for natives as well as foreigners. Mr. Oyama does not, however, tell us anything about local taxes, which are the great source of perplexity to foreigners, and he has omitted to add an index to his work, so that the accessibility of his information is impaired. Nevertheless, the book should prove a great help.

CONFLAGRATIONS.

A fire occurred at Naraomura in Nagasaki Prefecture on the 22nd instant. The number of houses destroyed is not stated, but the conflagration must have been very serious, for seven lives were lost and thirty-seven persons injured.

On the 21st, a fire broke out at Tsunodate-mura in Akita Prefecture. The houses reduced to ashes were 267, and three persons were slightly injured.

ANNUAL CONFERENCE OF THE JAPAN METHODIST CHURCH.

The twelfth annual conference of the Japan Methodist Church was held in the Central Tabernacle, Hongo, Tokyo, from the 9th to the 16th inst.

Rev. J. Scott, D.D., President, called the conference to order at 9 a.m. on Wednesday, May 9th. After the opening devotional exercises the following were elected to the various offices by ballot. President, Rev. J. Scott, D.D.; Secretaries, M. Takagi, B.D., and D. R. McKenzie, B.A.; fraternal delegates to Methodist Episcopal Church, G. M. Meacham, D.D., and M. Takagi, B.D.

There were present during the conference 26 ministers and 14 laymen from the various parts of the work. On the 10th no session of the conference was held owing to the Imperial Wedding, but a prayer-meeting was held to ask for Divine blessing upon the Royal bride and groom and the Imperial family.

The report of the statistical committee showed an increase of 42 in membership during the past year, and 164 baptisms, total membership now being 2,381. The givings of the Japanese Church were *yen* 4,692.10, being a little over two *yen* per member, and an increase of *yen* 300.93 as compared with the contributions of last year. Reports from the West Coast and from the North were very encouraging and hopeful.

The Conference decided to raise the standard of salary to be paid by self-supporting churches from *yen* 25.00 per month to *yen* 35.00 per month, and all churches not able to reach that standard within two years are to cease to be independent churches and be put upon the Foreign Missionary Society for such support as may be necessary.

A sum of fifty *yen* was deemed necessary for the preparation of Sunday School literature and the S. S. Committee recommended that this amount be asked from the Foreign Missionary Society. An amendment requiring the raising of the money by the Sunday Schools in Japan instead of asking the Foreign Missionary Society for it was carried by a large majority, manifesting a healthy spirit of self-reliance.

A resolution asking the Conference to provide a constitution for the organization of societies in the local churches along the lines of the Christian Endeavour constitution and encourage the organization of such societies was defeated. There were many who thought that such organizations were unsuited to the work and conditions in Japan, and so, because of their lack of familiarity with it, voted against the resolution, but the vote in favour on this, the first occasion that it has come before the Conference, speaks well for the intelligent interest taken in the progress of aggressive Christianity in the world at large and augurs well for its adoption in the near future.

The Conference closed on Wednesday, May 16th, at 10 p.m., after a very satisfactory and inspiring meeting.—*Communicated.*

Digitized by Google Original from CORNELL UNIVERSITY

OSAKA AS THE CAPITAL OF JAPAN.

MR. NAKAHASHI TOKUGORO has written a clever brochure for two purposes, first, to induce the Government to establish a free port at Osaka, and secondly, to prove that the capital of Japan should be transferred without delay to that city. The author is a great believer in free ports as a means of promoting national prosperity. He finds that among all the countries of the world Germany is making the greatest strides of prosperity at present, and he attributes the fact partly to her wisdom in establishing free ports at Hamburg, Bremen, and Stettin. We share Mr. NAKAHASHI'S faith in the usefulness of free ports, but we find that he is guilty of a slight inaccuracy when he says that "neither in England nor America has a single specimen been ever established in its complete form," and that Japan must go to Germany, Belgium, or Denmark for a perfect model. Apparently he has forgotten Hongkong, which has been a free port for more than half a century. The omission is unfortunate because the extraordinary prosperity enjoyed by Hongkong, and the enormous tonnage of vessels entering that harbour every year, would have furnished a striking and easily accessible object lesson in support of Mr. NAKAHASHI'S thesis. It will be understood, of course, that the proposal does not extend to exempting from import dues goods landed at the projected free port. Custom houses would have to be established at the outer limits of the free-trade district, so that dues could be collected from merchandise passing into the interior. But no charge or restriction of any kind would be imposed with respect to the use of the harbour. Mr. NAKAHASHI thinks that Osaka might thus be converted into the half-way house of all the trade between the two continents of America and the 400 millions of persons inhabiting China, Japan, Indo-China, the Philippines and the Dutch Indies. As to the details of his scheme, they are that the Government should take over the present works of harbour construction at Osaka; that it should buy up at 10 *yen* per *tsubo* an area of 5 millions of *tsubo* lying between the city and the sea, on the east and west, and the Yamato-gawa and the Yodo-gawa on the south and north; that, having set aside one million *tsubo* for roads and public purposes, it should sell the remainder at 20 *yen* per *tsubo*, thus realizing 30 million *yen*, which should be appropriated to the free-port establishment fund; that the privilege of land ownership within this district should be granted to all nationals without distinction; and that the present scope of harbour construction should be extended so as to include the widening and deepening of the Aji-kawa, thus making room for docks and new wharves, and enabling small steamers to go up the river and assist in distributing commodities.

This is a fine plan, worthy to have emanated from a city so remarkable for enterprise as Osaka. Being, for our own part, thorough believers in free ports and free trade, we can not but endorse Mr. NAKAHASHI'S suggestion, so far as the harbour is concerned. Osaka is already constructing for itself a harbour which will greatly affect its prosperity. The Kobe people appear to watch with indifference the progress of the works, but it can scarcely be doubted that Kobe will suffer materially, for there will cease to be any reason why goods destined for Osaka should call at Kobe *en route*, as they do at present. The free-port project, however, is a still more drastic measure. We are persuaded that it would tend to enrich Japan, and that Osaka, if thus treated, might become the great entrepot for the Trans-Pacific and Trans-Asian trades. Concerning the transfer of the capital from Tokyo to Osaka, however, Mr. NAKAHASHI'S arguments are not convincing. No inference as to Tokyo's permanent disabilities can be drawn from its present condition, for, although it is a miserably backward city, all its defects are capable of remedy. The only serious question is whether the citizens of Tokyo are really qualified to occupy the metropolis of the empire. Judged by their acts, they certainly are not. By steadily refraining from constructing a harbour they not only impose upon themselves a heavy tax, since everything they buy has to be saddled with an additional charge on account of defective facilities of transport, but they also turn away the tide of prosperity from their doors. They can not even get soberly to work for the purpose of furnishing themselves with street railways, though other cities of far less pretensions have long been equipped in that respect. They are struggling to make roads, but the work is done in a hopelessly unscientific manner. Altogether, their method of procedure does not suggest that they have a valid title to the position they occupy. But they may awake at any moment from their torpor. Whether the day of their awakening will be a fortunate one for Yokohama we are not prepared to say. It is scarcely possible, however, to seriously contemplate the transfer of the capital to Osaka. The vested interests opposed to such a measure are enormous, and Mr. NAKAHASHI fails, in our opinion, to establish any valid case against Tokyo. In fact it seems almost a pity that he should have included in the same brochure his programme of a free port and his dream of a new capital.

THE INDIAN FAMINE FUND.

The Hongkong and Shanghai Banking Corporation at Yokohama send us the following:—

"JOKOHAMA, SWEDEN."

A correspondent writes:—The London Board School boy knows a great deal about the Principles of Agriculture, Physiology, Biology, Electricity and Magnetism, Acoustics, Light and Heat, Comparative Anatomy, Differential Calculus, Spectroscope Analysis, Astronomy, Psychology, Music and Drawing, and Transcendental Philosophy; but he is rather weak in a common-place subject like geography, which is too abject to be dignified with a capital letter. A person in Yokohama on Tuesday received by the Canadian mail a parcel from one of the principal London newspapers. Some responsible person had evidently scribbled "Smith, Yokohama," on a piece of scrap paper, and had handed it to an office boy whose duty it was to pack and address parcels. The confidence displayed in the said office boy's geographical knowledge was scarcely justified, for this is the address as it finally appeared "——— Smith, Esq., Jokohama, Sweden." Fortunately St. Martin's-le-Grand was in command of sufficient learning to rectify the error, and the parcel arrived without the delay consequent on a journey to King Oscar's dominions.

HIGHER COMMERCIAL SCHOOL.

The sixth annual exhibition of the H. C. S. English Speaking Society—which, under the energetic supervision of Baron Noiba Kanda, is doing such excellent work in Tokyo—was held in the Lecture Hall of the Higher Commercial School on Saturday evening. As usual a most interesting programme was set for discussion, and the lads acquitted themselves well:—

MISCELLANEOUS NOTES.

The promoters of the railway between Otaru and Hakodate recently received official sanction for the scheme. The charter, however, is said to be only for 8 years.

Some members of the Kanagawa Prefectural Assembly belonging to the Progressist Party are about to apply to the Minister of the Home Department for the transference of Governor Asada.

A man named Kimura Manjiro, residing at Kobe, has presented to the Sanitary Bureau designs of an invention for ridding houses of rats and thus minimising the chance of plague. The idea is to secure a constant current of air through the hollow parts of a house, thus making life unbearable for the rats.

The Meiji Fire Insurance Company recently held its general meeting in Tokyo. During the last fiscal year premiums were secured to the amount of 390,000 *yen*, which, together with a sum of 120,000 *yen*, brought over from the previous year for current risks, and other receipts amounting to 80,000 *yen*, make up a gross total of 590,000 *yen*. Of this amount 200,000 *yen* were set apart to cover risks insured; 130,000 *yen* as reserves on risks, and a certain portion deducted as working expenses, the remainder—130,000 *yen*—being declared net profit. The figures may be tabulated as follows:—

	Yen.
Net profit for the current business year.....	136,676
Carried over from the previous year's account	154,554
Total	291,230
Distributed :—	
To Reserve	80,000
To Dividends (at the rate of 16 per cent. per annum)	35,000
Carried over	176,230

The total reserve of the Company has increased to 500,000 *yen*.

The *Shogyo* publishes statistics showing the amount of goods exported from Tokyo during the week ending the 7th instant.

	Amount.
Iron	1,001,860 catties.
Oil cake	66,109 *kwan*.
Salt	235,606 *kwan*.
Kerosene	6,135 cases.
Imported woven goods ...	35,333 catties.
Bean refuse	30,635 sheets.
Rice bran...	423 tons.
Sugar	113,129 *kwan*.
Cotton yarns	150,910 catties.
Cotton fabrics	627,593 catties.

As to imports the figures are as follows :—

	Amount.
Rice	1,081,815 catties.
Coal	5,286 tons.
Timber	5,910,262 catties.
Cotton fabrics	1,552,384 catties.
Wood	208,695 *kwan*.
Charcoal	247,163 *kwan*.
Cotton yarns	131,580 catties.
Fish	779,427 catties.

Fishing, it is said, has been extremely successful this year, and the amount received in Tokyo is expected to exceed by 30 or 40 per cent. the maximum figure recorded for the previous years.

The *Jiji* publishes the following statistics of the Finance Department showing the volume of trade transacted throughout the empire during the latter half of last month :—

	Latter half April. Yen.	Total from Jan. Yen.
Exports	6,771,367	58,341,168
Imports	14,306,502	110,382,677
Excess of imports ...	7,535,135	51,041,509
Exports of gold	6,050,000	21,165,802
Import.....	192,481	1,001,280
Excess of exports ...	5,857,519	20,164,522
Export of silver	52,918	642,027
Import.....	1,546	19,238
Excess of exports ...	51,372	622,789

Compared with the first half of the month the figures show an increase in the export and decrease in the import of merchandise. The excess of imports, and demand for capital in connection with tea and silk, &c., considerably increased the amount of loans from the Nippon Ginko, so that at the end of April the issue of notes to the extent of 6 million *yen* above the legal limit was absolutely indispensable. The beginning of May, however, witnessed repayments steadily coming in, so the over issue has now decreased to 2¼ millions approximately.

The *Keizai Zasshi* publishes investigations of the Bank of Japan showing the amount of money to be received by the Treasury and the various companies during the month of May :—

National taxes—	Yen.
Farm and country house lots (for the 6th period)...	8,304,295
Hokkaido land (for the 4th period) ...	8,905
Taxes in arrear payable in installments	7,348
Business tax for the half year	2,927,737
Total	11,248,285
Calls on companies' and debentures.	
Tokyo Gas Works Company (10 *yen* per share)	70,000
Odawara Electric Railway Company (7.50 *yen* per share)	100,000
Kochiya Kerosene Oil Company (5 *yen*)..	50,000
Japan Industrial Bank's debentures ...	1,350,000
Total	1,570,000
Grand total	12,823,285

As to the amount of money to be distributed by the Treasury and the various companies during the period under notice, the figures stand as follows:—

Interest on public loan bonds.	Amount in Yen.
5 per cent. Pension Bonds	635,716
Naval Bonds	219,915
Total	855,631
Dividends of the Nippon Yusen Kaisha...	990,000
Total	1,845,631

Thus the amount of absorption exceeds that of distribution by 10,977,654 *yen*, and the effect upon the market may not be inconsiderable. In the previous month the distribution exceeded the amount absorbed by 1,128,000 *yen*; yet there was a serious tightening in the market resulting in the raising of interest and the issue of notes above the legal limit. There can be therefore no second opinion as to further depression during this month.

The *Nichi Nichi* says the world's iron output last year amounted to 40,500,000 tons, showing an increase of 4 million tons in comparison with the figures for 1898. America stands highest on the list with 13,838,634 tons; next come England and Germany, with 9,399,169 and 8,029,306 tons respectively. The gross total for these three countries comprises more than two-thirds of the entire output. As regards Japan the amount is quite insignificant, though increasing yearly. Below are the comparative figures for the past 10 years :—

Year.	Amount in Catties.	Year.	Amount in Catties.
1888	30,324,069	1889	33,424,569
1890	35,021,756	1891	28,854,906
1892	31,446,663	1893	28,345,663
1894	32,390,394	1895	42,995,663
1896	45,622,369	1897	46,652,275

It is worthy of notice that the amount of import is steadily increasing—a fact which clearly illustrates the dependence of commercial and industrial prosperity upon the use of iron. Strange to say, however, the figure considerably decreased last year. In the 31st year of *Meiji* (1898) the import of iron and steel, with the exception of machinery and locomotives, amounted to 446,860,700 catties, valued at 13,002,591 *yen*, but in the 32nd year the amount suddenly fell to 234,685,001 catties, valued at 11,329,011 *yen*. This diminution might at first sight seem a cause for congratulation but it is to be regretted that it was simply the result of a decline in commerce and industry caused by the unusual stringency of the money market.

According to the *Jiji*, the Bank of Japan has been indirectly making purchases of gold dust through native merchants since April last year. The average amount thus secured by the Bank is estimated to have reached 70,000 *yen* per month, the quantities offered for sale varying from 100,000 to 130,000 *kwan*. The Bank seems to have expected to procure a much larger amount, but, declining to pay the price demanded, was entirely beaten out of the field by the Chinese, who offered more favourable terms. It is said that the latter are now engaged in the export of dust to Shanghai.

A special general meeting of the Osaka Railway Company was held on the 15th instant, when resolutions were passed arranging for amalgamation with the Kwansei Company.

On the 11th instant the following sanitary regulations were issued by the Central Board of Police :—

1. Restrictions shall be imposed upon owners of land or buildings with regard to the construction of drains and water courses. These shall be made of brick, stone, or glazed porcelain, in such a way as to effectually prevent the leakage of dirty water, width, depth, and gradient being determined in proportion to the quantity of water to be discharged.

2. A receptacle for dirty water can only be constructed with the sanction of the police authorities.

3. Persons coming within the purview of these regulations are required to take steps, when occasion requires, for disposing of poisonous or dangerous substances, or substances emitting an offensive smell or containing much sediment, or liquids discharged in connection with surgical operations or the cleaning of a corpse, or other things which are deemed injurious.

4. Places where dirt, rubbish, or any other impurities are dealt with must be situated at a distance of at least 10 *ken* from a dwelling house or houses, and over 5 *ken* from a well containing drinking water.

5. Places where dirt and rubbish are burnt must be beyond the limits of a city or town, and at a distance of at least 30 *ken* from dwelling houses or public highways, and 5 *ken* from a well yielding drinking water. They must be surrounded by fences over 9 feet high, and the destructor in which the rubbish is burnt must be provided with a chimney over 50 feet high.

6. Restrictions are also imposed with regard to the position and construction of water closets, the transportation of excremental matter, and the construction of vessels for holding them.

The *Jiji* publishes some remarks from Mr. Ichihara, naval Aide-de-Camp of the Formosa Government Office, with regard to the condition of the island. Work on the railway between Taku and Tainan is pushed on with great speed, and it is expected that traffic will be commenced by June this year. As to the Kelung harbour-works similar expedition is noticeable, two dredgers having recently been purchased, and materials for the construction of projecting embankments tested. The convertible notes of the Nippon Ginko are accepted by the people at a premium of 10 *sen* per *yen*, and those of the Formosa Bank have fallen to 94 *sen*. Graduates from the Japanese language school now number over 200, of whom some are employed in the General Government Office, but most as teachers in elementary schools in Taipeh, Taichiu, and Tainan. The streets within the walls of Taipeh are lined with fine shops and stores like those of the Ginza in Tokyo. The roads have been laid out after the fashion of the Kobe settlement, at a cost of seven *yen* per *tsubo*, and with two rollers for occasional repairs. In this respect Tokyo is inferior to Taipeh. The trade of the natives consists in the sale of merchandise imported from Hongkong, at comparatively low prices. Goods handled by the Japanese are sold at almost double the rates set by the natives, and there is thus a tendency for the latter to monopolise commerce. The strength of the bandits has considerably declined; there is now no chief with over 70 followers, and half of these are not properly equipped. Still arms are secretly imported from China in junks. The number of Japanese residents in Formosa has now increased to over 40,000, and that of registered natives to 2½ millions. The population of the Pescadores is supposed to be some 100,000. The principal production of Taichiu is the matting known as *Taikomushiro*. Hats of this stuff are supposed to last for ten years. Encouragement of the cultivation of the raw material will be a source of considerable revenue.

INDIAN FAMINE CONCERT.

Yokohama is ever ready to contribute its mite in the cause of charity. Few places respond more readily to the call, whether it comes from those immediately surrounding or from lands far distant. We were therefore a little surprised that the Indian Famine Concert did not draw a fuller house at the Public Hall on Monday night. All the performers, save one, were old friends, and their contributions, whether vocal or instrumental, were capitally given and in most cases heartily received and encored. Mr. N. G. Maitland, the new arrival, made a brilliant first appearance, with Handel's charming old-world air "Where'er you walk,"—and as an encore "In Happy Arcadie"—demonstrating by his treatment of the themes the capabilities of his well-trained and sympathetic baritone voice. He has captured a very sure place in the affections of Yokohama concert-goers. Mr. Vincent's pianoforte playing was very charming and received a full meed of recognition; and Mr. Brady, whether reciting or singing, proved as versatile as ever. The full programme was as follows:—

PART I.

Overture.

2.—Vocal Duet.." Fading Flowers "..... *Franz Abt.*
The Misses PAGE.

3.—Character Sketch..." The fallen Star." An Old Actor's Story.
Mr. G. G. BRADY.

4.—Song....." Where'er You Walk "..... *Handel.*
Mr. N. G. MAITLAND.

5.—Piano Solo...(*a*) "Spring-tanz," op. 27, No. 2 *Kjerulf.*
(*b*) "Caprice," op. 59...*Gottschalk.*
Mr. W. KARL VINCENT.

PART II.

6.—Song....." Chant Hindou " (with Violin obligato)...*H. Bemberg.*
Mr. E. W. MAITLAND.

7.—Cello Solo....." Romance "..... *Vicodé.*
Mr. R. SCHMIDT.

8.—Song....." Thy Blue Eyes "..... *C. Bohm.*
Mrs. IRWINE.

9.—Violin Solo.....(*a*) "Aria" ..... *Bach.*
(*b*) "Gavotte"..... —
Miss HELENA PAGE.

10.—Humorous Song..."When I was a boy at school."
Mr. G. G. BRADY.

THE CLUB HOTEL, LIMITED.

The annual general meeting of shareholders of this Company was held at the Hotel on Monday afternoon, Mr. H. C. Litchfield presiding over a very small attendance.

The CHAIRMAN presented the report, which was as follows:—

THE REPORT.

The Profit and Loss Account and Statement of Assets and Liabilities for the year ended 31st March, 1900, are now submitted to you.

The Gross Receipts for the past year were ¥64,419.70, including Rents and Transfer Fees: and the Expenditure was ¥56,051.39, leaving a balance of ¥8,168.31, which, with the amount of ¥1,891.23 carried over from last year, makes a total of ¥10,159.54 at Credit of Profit and Loss.

The Directors propose to declare a dividend of ¥5 per Share for the past year, which will absorb ¥9,250 out of the above profits, leaving ¥909.51 to be carried forward to new account. At an Extraordinary General Meeting held on the 10th day of January last a full explanation of the troubles they had had with the former Manager was given by the directors. It is now therefore only necessary to explain that the sum of ¥6,802 recovered from the said Manager has been applied in reducing the Sundry Debtors Account which stood in the books on 30th September last at ¥8,266.17.

The thanks of the Company are due to Mr. Cecil Guinness, your auditor, for the very exhaustive examination he has made into the accounts of the Company, and your directors have much pleasure in recommending his re-appointment as auditor for the coming year.

The retiring Directors are Mr. H. C. Litchfield and Mr. T. L. Brower, who by the articles of association are eligible for re-election, but Mr. T. L. Brower does not wish to serve.

HENRY C. LITCHFIELD, Chairman.

Yokohama, 28th April, 1900.

I have compared the above Accounts with the Books and Vouchers of the Company and find the same to be in accordance therewith.

CECIL GUINNESS, Auditor.

Yokohama, April 28th, 1900.

Commenting on the report the Chairman said:—It will be observed from the comparison of the report with that of the previous year that the gross profits are less than in the former year by 7,532 *yen*; yet we are able to declare a dividend of 5 *yen* per share and to carry forward the sum of *yen* 909.51. The directors have considered it advisable to write down many of the items of account and for this purpose have absorbed the reserve fund for fluctuation of property, 30,000 *yen*, a reserve which existed, according to the statement made by former directors, to provide for this, and which only existed on paper. The present directors considered that this item created a false impression, and that a sounder policy would be writing down of the properties at once. This has accordingly been done. The ground and building were valued at 191,871 *yen*; that has been written down to 166,500 *yen*; the furniture was 39,940 *yen*, which has been written down to 35,311 *yen*; and stock 16,674 *yen*, which has been written down to 11,543 *yen*. No reduction has been made in steam launch account, as the directors consider, since the settlement of the disputed accounts with the builders, the value placed upon the launch is a correct one. As to sundry debtors' account of 1783 *yen*, the item represents good debts, which have been collected since date of account. The directors consider that the position of the company as now shown is a sound one and that under new management and careful control the prospects are good. The past year has been been a trying one, but the directors hope the chief difficulties have been surmounted. The directors are anxious the Board should be a full one; there is plenty of work still to be done, and new men bring new ideas and fresh energy. It is for the shareholders to elect two new members. Mr. Cecil Guinness audited last year's accounts and in addition prepared a special report founded on a re-audit of five previous years, and the directors have much pleasure in recommending him for re-election.

Mr. W. R. BENNETT, director, added some remarks, and said the steam launch had not been touched in writing down; in fact it could not be replaced at anything like the money. The company was now in a sound position. He proposed that the accounts and dividend be passed.

Mr. E. B. JONES seconded both propositions, and they were carried.

DIRECTORS.

The next business was the election of directors.

Mr. J. W. HALL proposed and Mr. BOOTH seconded the re-election of Mr. Litchfield, and it was unanimously carried.

Mr. DARE proposed and Mr. JONES seconded that the new directors be Captain Weston and Mr. Blake.

This also was carried.

AUDITOR.

On the motion of the CHAIRMAN, Mr. Cecil Guinness was re-elected auditor. The Chairman added that that was all the business, and expressed his satisfaction at the nature of the meeting. Very few had turned up and none had turned up to growl—(laughter and applause).

DIRECTORS' FEES.

Mr. HALL said there was an item which had not appeared in the report—that of the directors' fees. It was an honour of course to be a director, but business men should not be called upon to give their time without some remuneration. He thought they ought to pay the directors' fees, since during the last year an enormous amount of work had fallen on the directors. He proposed that the fees for the past year should be——what were they in the previous year?

Mr. BENNETT—There was none paid (laughter). It was very kind of them, added Mr. Bennett, but he thought it would be best to postpone the matter to the next half-yearly meeting. There was no money left to pay the directors' fees at present.

The CHAIRMAN—The directors of this Company have been working gratuitously so long that they are quite used to it (laughter). I am very much obliged to Mr. Hall, but am inclined to agree with Mr. Bennett. The cash is not in a sufficiently liquid state to afford a fee at present.

Mr. HALL thought if they could afford a dividend they could afford fees. He proposed that the fees be 1,000 yen for the year.

Mr. BOOTH proposed a hearty vote of thanks to the directors.

Mr. BLAKE agreed with Mr. Hall. He thought that the motion should be passed as showing the appreciation of the shareholders for the hard and good work done by the directors, even if the latter should decide to reject the offer.

The motion was then put and passed, and the meeting terminated with a vote of thanks to the directors and the Chairman.

THE YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

An Extraordinary Meeting of the Yokohama Engine and Iron Works was held yesterday afternoon at Keil's Buildings, to consider the following Resolution put forward by a number of Shareholders, or any amendment thereto viz.:—

"That the capital of the Company be increased to "$130,000 by transferring the sum of $65,030, appear-"ing by the last balance sheet to 'Capital Reduction "Account,' to 'Capital Account,' and by issuing to "existing shareholders, to represent such increased "capital, 1,300 fully paid up shares of $50 each in the "proportion of one new share for every old share "held by them."

The original notice stated that the meeting will take place at No. 61, Yamashitacho, Yokohama, at 3 o'clock in the afternoon of Thursday, the 10th day of May, 1900.

Original from CORNELL UNIVERSITY

As the question to be submitted to the meeting is one of great importance, the Directors think it very desirable that every shareholder should give it his serious consideration, and be prepared to record his vote thereon. They therefore earnestly request your attendance, either in person or by proxy, both at the meeting, and at any subsequent meeting that it may be necessary to hold. A form of proxy is enclosed, which, if made use of, should be sent to the Acting Secretary, No. 161, not less than seventy-two hours before the time appointed for holding the meeting.

The Directors and Shareholders present were Mr. J. F. Lowder, Chairman, and Messrs. G. J. Melhuish, Alf. Woolley, M. Kirkwood, E. Berger, J. J. Johnstone, F. Gillett, B. Gillett, J. Dodds, G. Philip, R. A. Wylie, E. J. Coll, Collins, F. L. Elliott, G. Braccialini, B. C. Howard, J. W. Weaver, W. K. Tresize, A. J. Knapp, etc.

The CHAIRMAN read the minutes of the last meeting, held on the 10th of May, when Mr. J. J. Johnstone was voted to the chair, but, there being no quorum, the day being the wedding day of the Prince Imperial, the meeting was adjourned till the 21st instant.

Some discussion ensued with regard to the date of registration of certain shares held by Mr. Knapp and others, the principal question being whether the term "meeting" applied equally to the first meeting, held on the 10th May, and the present meeting.

The CHAIRMAN said it was a difficult question to settle and he would put it to the meeting.

The question was argued by Mr. KIRKWWOOD and Mr. F. GILLETT, who contended that the meeting of yesterday was the real meeting, as there was no quorum on the 10th.

Mr. MELHUISH proposed that any shareholder whose name was on the register one calendar month before the date of this meeting should be entitled to vote.

Mr. DODDS seconded and the motion was carried almost unanimously.

Mr. KIRKWOOD then introduced and explained his amendment, or amplification, of the original resolution, which was as follows:—

AMENDMENT.

1. That the sum of $65,000 now appearing to Capital Reduction Account being undisposed of accumulated profits of the company, but actually employed in the business, be distributed amongst the shareholders and the capital of the company be increased by a similar amount.

2. That such distribution be made at the rate of $50 per share to holders of shares on the registered list of shareholders on the 31st May.

3. That the capital of the company be increased to $130,000 by the creation of 1,300 new shares of $50 each.

4. That such shares be offered at the issue price of $50 per share to holders on the registered list of shareholders on the 31st May, 1900, in the proportion of one new share for each old share held by them respectively and be allowed to such as shall have within such time as the Directors may name applied for the same and requested the Directors to retain the sum of *yen* 50 per share to which they are entitled under the distribution in payment therefor.

5. That all new shares not so applied for shall be issued by the Directors at such premium and to such persons and in such time and manner as the Directors may think fit.

6. That the holders of the new shares shall be entitled to dividend for the year beginning 1st June, 1900.

7. That for the purposes of these Resolutions the Japanese *yen* shall be treated as equivalent to the Mexican Dollar.

Mr. WYLIE seconded the amendment.

The CHAIRMAN said he could not put the amendment to the meeting until the original resolution had been put in.

Mr. F. GILLET said that to save time he would propose the adoption of the resolution.

Mr. DODDS seconded.

The CHAIRMAN, after reading the amendment of Mr. Kirkwood, stated that in his opinion it went so much further than the resolution itself that he could not put it to the meeting.

Mr. KIRKWOOD challenged the Chairman to show where it differed from the original resolution in a single point, and asked him to give his reasons for outruling it.

The CHAIRMAN declined to give his reasons.

Mr. KNAPP asked if there was no appeal against the decisions of the Chairman.

The CHAIRMAN—Yes, in the Courts of Law.

The original resolution was then put to the meeting and carried by 11 to 4.

The CHAIRMAN then proposed that a poll be taken. For this it was necessary that five members should vote for the poll.

Mr. Johnstone, Mr. Tresize, and Mr. Weaver voted for the poll and Mr. Lowder supplemented the number by giving his own vote and that of Lowder and Litchfield in company that were entered conjointly as shareholders, for the other two.

Mr. KIRKWOOD objected to Mr. Lowder appearing as two persons present at the meeting in voting, and quoted the rules that only the first name appearing in a joint shareholdership could vote. Five shareholders present at the meeting were required by the articles.

The Chairman overruled Mr. Kirkwood's objection and ruled that the application for a poll had been sustained.

On the proposal of Mr. KIRKWOOD, seconded by Mr. MELHUISH, it was decided to take the poll by open vote from the shares represented by those present and proxies.

Some time was occupied in examining proxies and powers of attorney, with the result that the Chairman ruled out some eight or ten as invalid. After this had been concluded and the votes were taken the result showed 256 votes for the resolution and 142 against.

The CHAIRMAN, in announcing the result, stated that as the articles required a two-thirds majority the resolution had failed to pass.

This concluded the business of the meeting.

THE "ADELAIDE."

The German ship *Adelaide*, 1,281 tons (Captain Muller), from Barry for Yokohama, went ashore at Jogashima, Sagami on Monday. The *Adelaide* left Barry on December 23rd and passed the Sunda Straits on March 27th. She carried a cargo of coals, consigned to Langfeldt and Co. The vessel is said to be fast breaking up. It appears that there was thick weather at the time she struck, about 8.30 a.m., preventing a clear sight of the rocks on which she met her fate. She lies only 150 to 200 yards from the shore, and her position is broadside on, with a list seaward. On Tuesday morning her decks were being swept by seas, and appeared to be opening. She was full of water, and will probably be a total wreck. The crew are safe. The mate and three men remain on the spot, and Mr. Weinberger, the German Consul, and others have visited the scene of the disaster.

THE FORMOSA TEA TAX.

The following letters to Sir Ernest Satow, H.B.M.'s Minister at Tokyo, are published by the Hongkong Chamber of Commerce:—

Amoy General Chamber of Commerce,
Amoy, 5th April, 1900.

Your Excellency.

This Chamber begs to acknowledge receipt of your despatch dated 18th December last, the contents of which have received careful consideration, and it has been resolved to again address you on the subject of export Duties on Teas shipped from Formosa.

The complaint which this Chamber makes is that the Japanese Government since the 3rd August last, despite the protest of shippers in Formosa, has levied and continues to levy a discriminating duty on Teas shipped from Formosa in the following way.

1.—If shipped *via* Japan for the United States and Europe a levy called a "Harbour Tax" of *yen* 1.00 per picul is made. This tea can then be exported from Japan without further payment of Duty.

2.—If shipped to the United States and Europe *via* any port in China or via Hongkong or elsewhere, other than Japan, an Export Duty of *yen* 1.60 is levied.

2.—If shipped *via* Hongkong and Japan for the United States and Europe the duty of *yen* 1.00 per picul is still charged, thus making the Duty clearly one on a particular route.

It is true, as you point out, that the difference is but 60 *sen* per picul, but the Chamber submits the actual amount is not so much the point as the principle involved, which if allowed to pass uncombated leaves no safeguard that the difference may not be accentuated until British shipping and the choice of the Suez route are handicapped out of evidence.

British Merchants in Amoy are vitally interested in the Formosa Tea Trade, it having been developed by them from absolutely nothing under the Chinese sovereignty of the island. Hitherto Amoy has been the emporium of Formosa Teas, whence they are shipped to the United States and Europe, and to Java and the Straits, none being consumed in Japan and practically none in China either.

Amoy is the nearest port to Formosa available for ocean steamers and the natives engaged in the trade are all from Amoy. With these advantages Amoy merchants might naturally look to maintaining their position, provided equal export duties are levied on shipments from Formosa, no matter what the destination may be.

In the statement above presented to you there is a clear case of injustice to British merchants whose trade, after some 30 years of building up, is threatened by means of discriminating duties in favour of a particular route.

With the near approach of the Tea Season your kind assistance is urgently asked to the end that the Japanese Government may be induced to remove the discriminating element in these Duties.

I have the honour to be,
Your Excellency's obedient Servant,
FRANCIS CASS, Chairman.

His Ex. Sir ERNEST SATOW, K.C.M.G., etc.

Hongkong General Chamber of Commerce
Hongkong, April 28th, 1900

SIR,—Referring to previous correspondence on the question of the imposition by the Formosan Government of a discriminating duty on teas shipped from Formosa to the United States or Europe *via* Chinese ports or Hongkong, this Chamber is in receipt of a further communication from the Amoy Chamber of Commerce stating that this duty is still being levied, in spite of protests on the subject.

I am therefore instructed to submit to your Excellency that the principle of imposing variable duty on different routes is a distinct infringement of par. 2 of Art. VIII. of the Treaty of 1894, which provides for the perfect equality of treatment of articles of export whatever the route or place of destination, and to express the hope that you will be able to induce the Japanese Government to relinquish the attempt to divert the export of Formosan teas from the channel it has for so many years taken, and which has proved most convenient to those engaged in trade.

I have the honour to be, Sir, Your most obedient servant, R. M. GRAY, Chairman.

His Ex. Sir E. Satow, K.C.M.G., Tokyo.

NAVIES OF THE FUTURE.

Lecturing at Portsmouth, Mr. A. Yates, Chief Constructor at that dockyard, gave an interesting forecast of what the British Navy might become 20 years hence. He said that probably most of the battleships of which we were now so proud would be obsolete, and in their place we would have a magnificent fleet of ships of quite another type. In his opinion, instead of trying to put every variety of weapon of offence and means of defence in one vessel, we shall have fleets composed of groups of vessels of different types. Each of these groups would have one particular mode of offence, and the skilful admiral would arrange for each to deal its blow at the proper time. For example, one group might have nothing else to think of but firing guns, and it would be well provided with those weapons. A second group might have nothing else to do but fire torpedoes, and would have to be protected so as to run the gauntlet of the enemy's guns, thinking only of its own deadly weapons. A third group might be arranged for ramming only, and would come into play against partially disabled vessels of the enemy. This plan of battle would be something analogous to our present army, composed of infantry, artillery, and cavalry. The principal reason for this sub-division of offence was the impossibility of one man (the captain) being able to control such a complex weapon as a modern battleship, and if the captain was placed *hors de combat*, the difficulty would be accentuated. If, however, a ship had only one thing to do, every man on board would know what that one thing was, and would be ready to dare and do all that was required.

DR. INOUYE TETSUJIRO'S SENDAI SPEECH.

About two years ago an Education Society called "The Oshû and Hokkaidô United Education Society" was formed. This Society held its second anniversary meetings in Sendai on the 13th and 14th instants. They were attended by about one thousand delegates.* These gatherings were evidently deemed to be of considerable importance by the Education Department, as, in addition to the Minister himself, Dr. Inouye Tetsujirô, Professor Tejima, Dr. Ishikawa, and Professor Watari went up to Sendai for the purpose of taking part in the proceedings. The meetings commenced on Sunday morning (the 13th) at 8 a.m., and with a short recess for lunch continued till 4 p.m. on that day. On the second day the same number of hours were passed in listening to lectures or in discussing various subjects connected with education, the proceedings being closed by a huge social gathering held on the evening of the 14th. Count Kabayama delivered his address on Sunday, the 13th inst., having to return to the capital the following morning. Among the speakers at Monday's meetings was Dr. de Forest, one of Sendai's oldest foreign residents. Dr. Inouye's speech was delivered on the afternoon of the 14th and occupied nearly two hours. It is very seldom that Sendai residents are privileged to listen to such oratory as that to which Dr. Inouye treated them on this occasion. The late Dr. Toyama undoubtedly made a great name for himself as a popular speaker, but his speeches were often marred by a certain roughness of expression that offended the tastes of refined hearers. Not only has Dr. Inouye great command of language, but his language is always choice and forcible. His voice is clear, we might almost say silvery, his manner earnest without approaching the boisterous, his enunciation perfect. On the occasion of which we write he made use of a great many Chinese philosophical terms, but, in our opinion, the technicality of the subject under discussion rendered this necessary. Of his speech as a whole we should say that its tone was conservative and slightly anti-foreign. One of his objections to Mr. Fukuzawa, whose teaching on morality was vigorously attacked, was the persistency with which the Mita Sage had taken foreign notions as he found them and transmitted them to his fellow-countrymen. One impression which the speaker left on the mind of his hearers was that in choosing morality as the subject of his discourse he was playing no perfunctory part—that the subject which he discussed was in the speaker's estimation the most vital of all subjects, and that it was one which had engaged his most serious attention. There is all the difference in the world between the ring of the word of a man who speaks from deep conviction and the mere utterer of platform commonplaces and plausibilities. Dr. Inouye undoubtedly wields great influence in educational circles. This is not on account of his polished scholarship alone, nor owing to his prominent position at the Imperial University, but is rather to be attributed to an existing impression that in all he advocates and all he denounces Dr. Inouye is perfectly sincere. Even those who differ most from him cannot but feel that he is not only every inch a philosopher, but that he breathes the air of the loftiest regions of moral thought. He is no time-server, as some have insinuated, no worshipper of the powers that be, as others have hinted, but a man who has the courage of his opinions and who is determined to act on them, be the consequences what they may. We dwell on this because we have often been asked to account for the popularity that Dr. Inouye enjoys among school teachers throughout Japan. We now proceed to give a very brief epitome of Dr. Inouye's Sendai speech.

The title of the lecture was *Kyôikuka no torubeki kongo no dôtoku shugi* (The Moral Principles to be henceforth adopted by Educationists). The whole tenor of the speech showed that Dr. Inouye only intended to dwell on the great importance of morality and to let alone the vexed and extremely complicated question of the moral standard to be followed. In his opening remarks Dr. Inouye observed that there is little to be gained by following the fashion of so many writers and speakers in dwelling on existing moral corruption. There was a great deal of fussiness on the subject of morality that did more harm than good. To be talking about morality from morning to night to the exclusion of all other topics was not the way to bring about moral reform. But on an occasion like the present, when a large number of teachers were assembled for the purpose of consultation, it was important for him to draw attention to the claims which this subject had on their thoughts. Of all the branches of knowledge studied by mankind none had such an important bearing on human life and progress as morality. That topic might well occupy our deepest thoughts. That each one should have a moral standard of high character and regulate his life according to it was of primary importance. Some school teachers seemed to be of opinion that this standard was supplied by the Imperial Rescript on Education issued some years ago. But that was not the case. All that the Rescript did was to enunciate certain leading moral principles in a general way. The harmonising of these principles with each other and their application to the affairs of everyday life were left to each individual. In adopting principles which shall act as guides to us in the rugged path of life we must exercise the greatest care. We must accept nothing without careful examination. Of late a man of great influence in the country had given to the world what purported to be a system of morality. In Mr. Fukuzawa's *Shûshin Yôryô* we were told that the leading principles to be adopted in morality were independence and self-esteem. Now a standard of morality ought to be universally applicable, and nothing could be plainer than the fact that Mr. Fukuzawa's standard was not universally applicable. This stalwart assertion of the principle of independence and individualism was a reaction from the doctrine of subjection which was taught in this country for so many centuries. Mr. Fukuzawa, seeing the evils of bowing to the authority of others in a slavish manner, endeavoured to get rid of this tendency altogether by asserting that independence and self-esteem were the only safe guides in the moral world. But could morality exist at all if the doctrine of subjection to lawful authority and dependence on others were abolished? Where in actual life was absolute independence possible? Could any teacher or student in a school act independently of the rules of the establishment? Had not all existing organizations their rules, and was not the observation of those rules essential to their efficiency and even to their very existence? Did not the principle of subjection to others assert its importance in every institution that is characterised by stability in the wide world? In body and mind we must labour to be independent, says Mr. Fukuzawa. But were not both kinds of independence unattainable? And was it not extremely dangerous to hold up the principle of ndependence as worthy of occupying the highest rank among virtues? This was no other than Rousseau's doctrine of the equality of all men—the very doctrine that led to all the horrors of the French Revolution. It was a curious fact that in this 33rd Year of Meiji the Japanese should be asked to trust themselves to the guidance of a principle that in France upset the whole structure of society and introduced a reign of terror and disorder. If his audience wished for a repetition of the French Revolution then the surest way to bring it about was to adopt Mr. Fukuzawa's anti-subordination principle. This doctrine of the equality of all men, on which Montesquieu, Voltaire, and Rousseau dwelt so much, what was it but an absolute contradiction of all the most familiar facts of life? If there was one thing more than another that impressed itself upon us in our intercourse with our fellowmen, it was the inequality that existed everywhere, not in one particular only, but in every respect. Mr. Fukuzawa's teaching on morality was nothing but sophistry and could only be mistaken for true wisdom by the ignorant or the unwary. That this Mita standard was no real standard was demonstrated by the fact that its adoption is to be traced to a wholly accidental cause. Subjection and subordination having been carried to excess in this country in the past, in Mr. Fukuzawa's opinion, it was purposed to banish it altogether by the assertion of the opposite principle of individual independence. The elevation of this principle to the rank of a moral standard then depended entirely on a fortuitous circumstance, and the question which it was pertinent to ask was, may not a fortuitous circumstance compass its downfall as it has secured its rise? How long, they may well ask Mr. Fukuzawa, was this principle to be used? When it has served its purpose and rooted out of the mind the spirit of subordination it was designed to crush, was it to be placed on the shelf? If so, what was to succeed it? A standard of this kind was evidently no standard at all. Its use was confined to a single country and to a special age. Though it was true that the forms of morality change and that moral feelings adopt various ways of asserting themselves in the world, yet the fundamental notions and principles of morality never change. This doctrine of self-assertion to which Mr. Fukuzawa has given such prominence was by no means new. Shaka Muni taught self-assertion also. When he asserted that he stood by himself in the Universe, it was to an etherialised, superior "self," a "self" that had been divested of all the imperfections of ordinary humanity—a purely ideas "self"—that he referred. There was a greater and a lesser "self" (小我 大我). It was the latter that Mr. Fukuzawa exalted to the throne in the new kingdom that he was endeavouring to create.

The lecturer went on to say that it was not his intention to utter one word that might reflect on the aged author of the *Shûshin Yôryô*. For Mr. Fukuzawa he had the highest respect. He was in every way a remarkable personality. But they must not confound the man with his teaching. Mr. Fukuzawa's teaching was too deeply tinged with Occidentalism to please the speaker. Not only this, but Mr. Fukuzawa's doctrines seemed to him open to abuse in a very special manner. This exaltation of the type of human self met with in everyday life meant nothing else but the reign of selfishness, covetousness, and self-aggrandizement of every kind. Mr. Fukuzawa was largely responsible for prevailing money-worship, and there could be nothing more degrading in the moral world than the wide prevalence of this spirit. Had not all the great moral reformers of the world turned their backs on worldly gain? Were not Christ and Shaka both poor? Were not China's and Japan's greatest moralists comparatively poor? But Dr. Inouye did not mean to say that Mr. Fukuzawa's new work had better not have been written. As a practical guide to busy men it possessed much value. It was not philosophical nor was it in any way thorough, but it treated certain moral topics in a popular manner and was characterised by that common sense for the possession of which Mr. Fukuzawa was so highly esteemed.

In the lecturer's conception morality was a thing of the heart. There in the recesses of man's inmost thoughts was its chief seat. All ethical discussion and all moral acts were to be traced to moral feelings and ideas. What it was in the mind that constituted the primary source, or first principles (淵源 *Yengen*) of morality he did not purpose to discuss on that occasion. It would take him too far into the regions of philosophy. He might say, however, that he hoped to publish a book on the subject before very long and he begged his hearers to wait for that. Most of the morality taught had to do with outward acts, but the rectitude of that source all of the springs of moral actions, the mind, was of the highest importance. Of men's outward acts it was true to say that to a very large extent they were make-believes. What men realised they ought to feel, that they endeavoured to simulate in words and acts. There was a discrepancy between exterior and interior morality—between the real conscience and that expression of it intended for the public eye or the public ear. The garnishing of the outside man

*Hokkaidô sent 28 delegates, and the 6 prefectures were represented by the following numbers:—Fukushima, 18; Yamagata, 39; Aomori, 35; Akita, 20; Iwate, 135, Miyagi 723.

Digitized by Google Original from CORNELL UNIVERSITY

often corresponded in degree to the rottenness within. What he wished to impress on his hearers was the immense importance of having a clear conscience. The man who had the approval of his own conscience need fear nothing and should stand in awe of nobody. Harmony should exist between all our outward acts and our innermost feelings. There was no happiness like this. It was an undoubted fact that morality was a difficult study; that progress in knowledge of the subject was by no means commensurate with the advance made in other studies. In science the modern world had so outdistanced the ancient as to make us smile at the fictions that our forefathers took for truths. But on moral subjects we in this 19th century still sit at the feet of the great sages of antiquity. In studying morality we were studying the infinite, we passed out of the world of sense, where phenomena are the chief instructors, and entered the region of the supersensible, where we have to rely on different guides. It was quite true to say that many of those who were very deficient in knowledge of the exterior world were deeply versed in the secrets of the heart. That the men who had moulded the ethical opinion of the world by their teaching, men like Christ, Shaka, and Confucius had each been in possession of that original source of morality called religion there could no question, and it was this that had preserved their memory fresh in our minds to-day. Though man was a part of nature and in many ways incapable of being separated from her, yet he possessed a kind of immortality that was denied to inferior animals. His thoughts lived on; and among those thoughts moral ideas lived the longest. Christ, Shaka, Confucius, being dead, yet spoke and would go on speaking to the end of time. These men were remembered when the names of their contemporaries, who had boasted of rank and revelled in wealth, had rotted in the dust. He wondered whether any of his hearers remembered the names of India's noted men, Shaka Muni excepted. Why did they remember him? Because he was a moral hero. So that it came to this, that morality outlived all things and erected a throne for itself on the ruins of most other human fabrics. He hoped that they would see to it that they were guided by a well balanced moral system. Too much independence and too much subjection were both bad. Excessive egoism and excessive altruism were to be avoided. Let nothing induce them to neglect moral culture. The man who possessed no moral ideal had better be dead than alive. Over the death of Christ we mourned because he was a moral hero, but who cared a straw that the thief who suffered death by his side was thus separated for ever from the company of honest people? The sooner the people hopelessly reprobate left the world the better for the world. There was no such gauge by which to measure men as the moral gauge, and the life of no educated man was complete if he lacked those high-class moral traits which constitute the brightest ornament of human nature.

The lecture was characterised by remarkable clearness of thought throughout, and it would be no exaggeration to say that there was not a single obscure sentence in the discourse, which, considering the nature of the subject, was noteworthy. It was cause for regret with not a few of his hearers that Dr. Inouye did not give his audience some idea of the moral standard that he considers worthy of confidence. It can hardly be said that, excellent as the lecture was as philosophic oratory, it throws much light on the deeper questions of morality. Dr. Inouye spoke as though he believed in the existence of some universally applicable standard, but all that he said about this standard left the impression that it was subjective rather than objective, and if so how can it possibly possess the attributes mentioned above? The guidance which he gave his audience was of a general rather than a particular kind. He said a good deal about the importance of morality and warned his hearers against adopting mistaken theories, but the question, what is to take the place of the authority possessed by rejected theological teaching, he did not answer. But he promises to answer it fully in the book he is about to write.

NIPPON RACE CLUB.

OFF DAY.

An off day's racing was held by the Race Club on Saturday last and afforded some fairly good sport, though most of the six events were considered foregone conclusions by those "in the know," and consequently there were no big coups made in the Pari Mutuel. The attendance at the Grand Stand was scarcely as large as might have been expected on a Saturday afternoon, with fine weather to help out the sport, but still a good business was done by the Pari Mutuel and sweeps, showing that the interest in the races had not diminished. The events were as follows:—

1.—A race for Australian and Country-bred Horses. Non-winners at the meeting. Weight as per scale. Three-quarter Mile. Entrance ¥5. Winner ¥100.

Messrs. King & Satsuma's Molly, 137lb...(Sugiura) 1
Mr. Worthington's Nun Nicer, 137lb. ...(Hayashi) 2
Mr. May's Non Such, 140lb. .....(Kobayashi) 3
Mr. Starlight's Aldebaran, 130lb. .....(Katsu) 0
Mr. P. P. C.'s Pirouette, 143lb. .....(Mr. Mottu) 0
Mr. Hugo's Moonshine, 135lb. .....(Goto) 0
Mr. Russia's Dobriak, 140lb.....(Horikoshi) 0
Time, 1.24.

Non Such and Molly were the favourites and fully deserved the confidence of the public. The former ran to the front at the start, but was displaced by Molly at the half mile. Nun Nicer made a game try at the Trees, but failed to get to the front, and Molly won a good race by a length.

Pari Mutuel, yen 5—Aldebaran 9, Dobriak 6, Pirouette 3, Moonshine 12, Nun Nicer 8, Dolly 78, Non Such 82; total, yen 990—Molly, yen 11.50.

2.—A race for China Subscription Ponies. Non-winners at the meeting. Weight as per Scale. Three-quarter Mile. Entrance ¥5. Winner ¥100.

Mr. Tatsuta's Suzume, 146lb.....(Rikizo) 1
Mr. Tytherleigh's Strathcona, 150lb....(Mr. Easton) 2
Mr. Russia's Prostyak, 150lb. .....(Horikoshi) 3
Mr. Tor's Torcross, 153lb. .....(Mr. Kingdon) 0
Mr. Worshington's Rebuff.....(Tomioka) 0
Time, 1.35⅝

Suzume started a hot favourite, but after a good deal of trouble is getting the small field off Torcross got away with a good start. He only held the lead, however, for the first quarter mile, and was then displaced by the favourite and Prostyak. In the Straight Strathcona ran into second place, Suzume winning easily by three lengths.

Pari Mutuel, yen 5—Suzume 166, Torcross 74, Rebuff 2, Strathcona 39, Prostyak 18; total, yen 1,495—Suzume, yen 8.00.

3.—Handicap for Australian and Country-bred Horses. Non-winners at the meeting. Once round. Entrance ¥5. Winner ¥100. Winner of race 1 excluded.

Mr. Scherz's Tante Lotte, 135lb. .....(Hayashi) 1
Mr. Rodenstein's Tasmania, 139lb., carried over 8lb....(Horikoshi) 2
Mr. Tor's Torquay, 140lb.....(Sugiura) 3
Time, 1.57½.

Tante Lotte was left behind at first, but came up at the distance, displacing first Torquay, and winning by three lengths.

Pari Mutuel, 5 Yen—Tante Lotte 70, Torquay 46, Tasmania 48; total 820 yen—Tante Lotte, 10.50 yen.

4.—A Handicap for all China Ponies. Non-winners at the meeting. Once round. Entrance ¥5. Winner ¥100.

Mr. Campredon's Coquelicot, 142lb.....(Mr. Mottu) 1
Mr. Tatsuta's Morokoshi, 135lb.....(Miyagawa) 2
Mr. Starlight's Pollux, 137lb .....(Katsu) 3
Mr. Tor's Torcross, 145lb.....(Sugiura) 0

Torcross went to the front after the start, with Morokoshi in second place. At the Shakespeare Coquelicot came up and displaced Morokoshi and in the straight passed Torcross, and a neck and neck race ensued between the two, Coquelicot, hard ridden by Mr. Mottu, winning cleverly by a head.

Pari Mutuel, 5 yen—Morokoshi 80, Coquelicot 126, Pollux 48, Torcross 38; total, 1,435 yen—Coquelicot, 10 yen.

5.—A race for Australian Horses. Non-winners at the meeting. Weight as per Scale, 1 mile and a Furlong. Entrance ¥5. Winner ¥100. Winner of races 1 and 3 excluded.

Mr. Russia's Zorka, 137lb. .....(Horikoshi) 1
Mr. Rodenstein's Tasmania, 142lb. ...(Mr. Mottu) 2
Mr. May's Non Such, 140lb. .....(Kobayashi) 3
Mr. Tor's Torquay, 142lb. .....(Sugiura) 0
Time, 2.14.

Torquay made the running first, but was afterwards displaced by Non Such and Zorka. Zorka assumed the lead in the straight, and Tasmania beat Non Such just before the post. Two lengths between first and second; good third.

Pari Mutuel, 5 yen—Tasmania 41, Zorka 187, Non Such 104, Torquay 18; total, 1,750 yen—Zorka 8.50 yen.

6.—A race for all China Ponies. Non-winners at the meeting. Weight as per scale. 1 Mile and a furlong. Entrance ¥5. Winner ¥100. Winner of races 2 and 4 excluded.

Mr. Hugo's Sunshine, 147lb.....(Goto) 1
Mr. Worthington's Miyajima, 153lb.(Mr. Kingdon) 2
Mr. Russia's Prostyak, 150lb. .....(Horikoshi) 3
Time, 2.35.

Sunshine passed the post first, Miyajima lying just behind, and this order was maintained throughout, Miyajima made a capital bid, but was unable to catch Sunshine, who won by a head.

Pari Mutuel, 5 yen—Sunshine 127, Miyajima 250' Prostyak 32; total, 2,045 yen—Sunshine, 14.50 yen.

CRICKET.

Owing to the base-ball match falling through on Saturday, a game of cricket was hastily arranged under the captaincy of Messrs. Bugbird and Crawford. The former, going in first, made **116 for 9 wickets, a total that was soon passed by** Crawford's team. The game was not fought to a conclusion owing to lack of time. Scores:—

Mr. Bugbird's Eleven.

Mr. J. H. Cocksedge, c. and b. P. B. Clarke.....	17
Mr. F. O. Stuart run out	17
Mr. S. Wheeler, b. P. B. Clarke.....	5
Mr. E. Clarke, b. Joy	5
Mr. A. Read, st. Crawford, b. P. B. Clarke	9
Mr. F. Pollard, b. Joy	13

YACHT RACES.

Three yacht races were sailed on Saturday afternoon, for 39-raters, cruising class, and 12-raters. That for 39-raters resulted in a win for *Maid Marion*, with *Kingfisher* second. The course was No. 2, 9 miles. Times:—

	Start.	Finish.
Haidee	2.16.05	5.08.05
Maid Marion	2.15.45	4.37.15
Kingfisher	2.15.25	4.48.10
	Allowance Arbitrary	Corrected Arbitrary.
Haidee	5.00	5.03.05
Maid Marion	—	4.37.15
Kingfisher	8.00	4.40.10

In the cruising class *Daimyo* secured first prize, and *Surprise* second. The course was No. 1, 6 miles. Times:—

	Start.	Finish.
Daimyo	2.30.30	4.35.00
Swanhild	2.31.40	4.50.21
Surprise	2.32.40	4.42.50

The 12-raters race resulted as follows:—*Titania* 1st; *Thistle* 2nd.

Mr. E. M. Barnby acted as officer of the day.

WILL IT PAY?

To the Editor of the "Japan Mail."

Sir,—The central government of this country enoys the advice of men of the most astute intellect, so jthat it would be a work of supererogation to attempt to inform them upon any subject, but there are those of the younger generation who seem to thirst for foreign capital in order that they may borrow themselves rich.

To this audience, with your permission, I would most humbly address myself and ask. Will it pay to tax the incomes of the foreign missionaries? Do any of these people receive their support from their Japanese converts? Is it not rather the case that not only a certain number of their converts, but also the enemies of their religion, are on their monthly pay roll? Are they not bringing money into the country rather than taking it out? Is it not true that their salaries are paid by the capitalists from whom we hope to borrow?

If we tax their incomes, is it not probable that they will beg the people who pay them to refund the amounts, so that in the end the cash will come out of the pockets of the very men from whom we expect favours in the future? Is it not true that the Japanese reputation for business capacity is rather below par? Does not this act of taxing the incomes of people who are constantly begging money from their own people to help us, rather reflect upon our sense of gratitude? However, in the long run the action will do good, for in preventing the influx of foreign capital our people may finally learn to plough.

Wouldn't it be a good plan to tax the funds now going out of the country for the famine in India?

Yours truly,
智智和

May 19th, 1900.

THE CHINESE REFORMERS.

To the Editor of the "Japan Mail."

Sir,—Will you kindly allow me space in your paper to speak something of the Chinese reformers and their enemies? At present these reformers are receiving very kind treatment from the hands of the British Government and I daresay that without their great help, the reformers would have long ago been finished with. Therefore the Chinese reformers will never forget the British nation for their kindness. You are also aware, I suppose, Mr. Editor, the reformers have enemies in Shanghai, Hongkong, as well as in the Straits Settlements. In Hongkong these rumours were current:—

1st. The family of Chiu Shuyuan, Editor of *Thiennan Shinpao*, was arrested by the Chinese authorities.

2nd. The reformers have ordered 7,000 pieces of soldier's uniforms with the intention to rise against China.

3rd. Mr. Kang Yu-wei has used ill-words against the British.

4th. Lo Feng Loh, the Chinese Ambassador in London, has seized the *Thiennan Shimpao* press in Singapore, also they have gone so far as to say two men-of-war were ordered to Singapore to arrest Kang Yu-wei and Chiu Shuyuan.

I have to inform you all the above are false rumours; they are quite absurd and untrue. In the Straits a good deal was told against Mr. Kang Yu-wei, and all these you will find in the Straits Newspapers. I understand the Editor of one of the leading papers in the Straits Settlements is a very good friend of Mr. Loh Chong Yauw, the Chinese Consul-General in Singapore. The Editor always called on the Consul-General, and I do not know what conversations had taken place between them; all I know is what has been published in the Newspapers which to my knowledge is injurious to the Chinese reformers.

I am Sir, yours faithfully,

A Chinaman who loves his Country to Prosper.

Singapore, May 1st, 1900.

TREATMENT OF CRIMINAL DEFENDANTS.

To the Editor of The "Far East."

Sir,—In view of the revival of interest in this important subject, it will not I trust be deemed out of place for me to offer certain suggestions arising from my reading and study.

Sometime ago I listened to the discourse of a gentleman of note who had served for some years as a judge in one of the higher courts of Japan. He seemed to labour under the impression that those who advocate reform are seeking to anglicize the criminal procedure. This impression is widely prevalent, it would appear, among those who hope to maintain the code in substantially its present form. There could, however, be no greater mistake than to assume a necessary connection between the desire to secure greater privileges for the defendant and the disposition to substitute a system based on English law and usage. The fundamental question with the reformers is this, Shall the enormous discretion which the present Code confers upon the examining magistrate (*juge d'instruction*) be exercised in secret?

How great these powers are very few understand. It is stated by the Comte de Calonne that "*A juge d'instruction* belonging to the Tribunal of the Seine, a good, learned, and circumspect man, was once questioned by the Emperor Napoleon the Third about his duties. With a good humonr not wholly free from irony the judge replied: 'Sire, I am more powerful than your Majesty.' 'How so?' 'You cannot directly and of your own will throw a man into prison; I can do that!' The magistrate then explained how, on the slightest pretext, or acting upon the most trivial denunciation, an inquiring judge, once put in charge of a case by the Public Prosecutor, could have an innocent man—an entire stranger to the affair—arrested and kept in solitary confinement, if he thought the person had been concerned in it. A personal enemy could be locked up, which would of course be a disgraceful proceeding, or simply a suspected man, which would be the result of excessive zeal. The Emperor's face assumed an anxious expression, and certainly if war had not broken out soon afterwards, he would have asked his Minister of Justice, M. Emile Ollivier, to place a limit to these extravagant powers."

Professeur Jules Leveillé writing in 1882 said:—"*Ce juge a des pouvoirs à peu près illimités. Il n'existe pas en ce monde de fonctionnaire qui ait des droits aussi exorbitants que les siens.*"

These are not the words of Englishmen or Americans critical of foreign institutions, but of exceptionally well informed Frenchmen, firm believers in the general merits of the French system, yet keenly alive to the dangers associated with it prior to 1897. No one will venture to assert that the Japanese Code embodies any substantial curtailment of these inordinate powers. I am aware that the *mise au secret* was abolished by a law passed in 1899, but in place of it there was substituted what I suppose to be the *défense de communiquer* of the French Code. Ortolan, the distinguished jurist, refers to this as a kindlier name, but adds, "*le nom ne fait rien à l'affaire.*" That such confinement has been, and still is, used in Japan as a means of inducing confession is at least very generally believed. However, my object is not here to ask the abolishment of this extraordinary power, though I believe with all my heart that it ought to be abolished, for it has wrought untold suffering to innocent persons in all countries where it is conferred, I simply wish to indicate how great, and how liable to abuse this power has proved to be.

The effort is sometimes made to break the force of such criticisms by statistics which it is thought show that the difficulties which theoretically appear serious are in practice reduced to a minimum too small to warrant radical changes in the law. For example, in the *Japan Weekly Mail* of February 4, 1899, in a paragraph reproduced from the Japanese press, it was stated that during the year 1898, 4,675 criminal charges were submitted to the public prosecutors of the Tokyo Local Court. Of these, 994, or 26 per cent., were dismissed as groundless; of the 3,681 persons actually summoned, 182 were dismissed as the result of the preliminary examination, and 92 were acquitted at the public trial; that is, a little less than 7¼ per cent were found innocent, which is certainly creditable to the procurators and the examining magistrates.

In the *Weekly Mail* of May 5th, there is a series of tables copied from the *Tokyo Asahi*, embodying a comparison between the Japanese and French procedure, as regards the time involved in the different stages. The result here, too, is gratifying; but it must not be forgotten that if the comparison had been with English procedure, the Japanese would not have appeared to advantage. For all England, aside from London and certain adjacent districts under the jurisdiction of the so-called Central Criminal Court, where cases of hardship are rare owing to the Court's being almost continuously in session, the number of persons detained more than sixteen weeks to await trial (1897) was only 120, as against 1221 in Japan (1898) who were detained more than three months after the conclusion of the examination. In the case of Japan, there must be added a considerable period of detention during the preliminary stage of the procedure, which occupies far more time than in England, averaging, it would appear from the *Asahi's* figures, something over a month. This estimate is based upon the first table which refers to both crimes and misdemeanours.*

However, it is not worth while to lay stress on comparisons. The hardship at best is very great. By a collation of two of the tables, it appears that there were not less than 126,545 alleged criminals and misdemeanants before the Japanese Courts in 1898, excluding those dismissed at the preliminary examinations. The number dismissed is not given. If the ratio were the same as in the case of those reported by the Tokyo Local Court (7.44 per cent.) there must have been over 9,500 person detained for a longer or shorter time while awaiting the decisions of the examining magistrates and judges, who were subsequently pronounced innocent. This may be a necessary sacrifice upon the altar of justice. It may be no larger sacrifice than is paid in some other countries, but it is certainly large enough to warrant the very careful inquiry whether something cannot be done to make it less—to shorten the time of confinement and to alleviate the distress while that confinement lasts.

It is proper to add that there is ground for the belief that the prevailing system leads to a considerable number of mistaken convictions. They are found everywhere and Ortolan gives an impressive list of conspicuous cases selected from the records of various countries. Some of the most striking have been the direct result of the system of preliminary examinations pursued in France. Careful inquiries in Japan indicate that there are more than there ought to be. A prison director not long since on being questioned on this subject replied with emphasis that there were many ("*Zuibun aru desuyo*"). Last winter I asked a similar question of an ex-judge in one of the north-western provinces and received the same answer. The latter said at once that the reason was to be found in the undue reliance upon the report of the preliminary examination at the public trial. Other information points the same way.

All this combines to force the impression upon the intelligent observer that whether these evils are less than in some other countries or not, they are serious enough to demand the careful consideration of every patriotic Japanese. One hesitates to place the responsibility upon the already overworked judges; still if each one of them could ever keep in mind what Ortolan calls "*the dreadful but salutary thought that what for him are hours of leisure, are for the defendant hours of captivity*," it is possible that the wheels of justice would move more rapidly. However this may be, I believe that the system itself must be changed, and that the first step to be taken is to strengthen the defence.

Those who hesitate to change the present system rely in the main upon two considerations: (1) that the examination is not conducted by the Public Prosecutor, who, as his name implies, stands as the adversary of the defendant, but by the judge, who occupies a neutral position and is maintained in that position by a judicial training; and (2) that the preliminary examination is simply provisional and open to unlimited criticism at the public trial.

As regards the first point, Professor Laveillé says:—"*Cette observation n'est qu'une chinoiserie. * * * * Dans la pratique des affaires criminelles, les deux magistrats* (the judge and the procurator), *le passionné et le nonpassionné constituent pour l'inculpé deux adversaires, deux adversaires, loyaux sans doute, mais enfin deux adversaires.*"

As regard the second point, the same jurist says: "*Mais est-il vrai, comme on le prétend, que le jugement soit presque tout et l'instruction presque rien? Non. L'expérience quotidienne démontre au contraire que l'instruction dont on s'efforce vainement de diminuer l'importance, influe profondement sur le jugement définitif.*" In a note, he compares the work of the examining magistrate to the investiture of a city, and remarks that Sedan was lost before a single cannon shot had been fired—from the time, indeed, when Count Von Moltke had covered with his batteries the heights dominating the city. He also quotes Mittermaier as saying in a critique of the French system that the trial with its publicity, following the examination with its secrecy, suggest a person wearing a beautiful

* One of the *Asahi's* tables places the number of "misdemeanors" at 123,920, while another gives the number of "serious crimes" as 2,625. Whether these figures include all crimes and misdemeanours is not stated. They are rather larger than I should have expected and do not readily harmonize with the report of the Tokyo Local Court for the same year, as stated above. If they are correct, the variation may be due in part to the fact that the provincial procurators do not sift their cases with the same care as their Tokyo colleagues. However this may be, the force of the argument is not materially lessened, even if the number of innocent sufferers be considerably reduced. They have a right to demand that everything possible be done for their relief, whether they number 5,000 or 10,000.

outer garment while his under-clothing is torn to shreds.

Prof. Laveillé is no enemy of the French system. He pleads for no radical reform and desires no curtailment of the judicial powers; for, as he says, "Whatever obstacles may arise they [the magistrates] must be able to overcome them. Crime must be vanquished." "But in return for this liberty of action," he continues, "which I concede to the judicial authorities fully and entirely, there is a guarantee which the defendants have the right to demand: a guarantee which does not exist in the procedure of the preliminary examination as now [1882] conducted, a guarantee which is, however, the logical compensation *sine qua non* of the unlimited power of the judges; that necessary guarantee, which ought to be incorporated in the new law, is the effective and immediate control of the acts, of all the acts, of the officers of justice." "Thus the system which I support is solidly based, it rests upon these two principles which are fundamental and indivisible and which materially complement and justify each other, namely:

"(1) The examining magistrate must be clothed with full powers, because it is essential that he reach and unmask the guilty;

"(2) The examining magistrate must be controlled in all he does, because it is essential that he should never compromise the innocent."

Professor Laveillé then points out the agent by whom this control should be exercised. "The one to whom everything points to fill the office of controller is the counsel. The counsel combines in himself the manifold qualities which a task so delicate demands; he has experience in the business of the court, for he lives there; he has an independent position, for he is included in the hierarchy of public functionaries; he has firmness of character, for he is accustomed to strife; he has finally what is in no respect a hindrance, but is on the contrary the greatest advantage, a respectful deference for the magistracy."

"As I wish the control to be effective," he goes on to say, "I demand very formally that it be immediate. * * * * Consequently the counsel should be present at the hearing of witnesses and at the examination of the accused." He does not urge, however, that the counsel be allowed to take part in the examination, or even be allowed to speak, except by express permission of the judge. He simply insists that he be allowed to hear the words of the accused and of the witnesses as they fall from their lips, whether forceful or hesitating; that he be permitted to see and to hear all that goes on at the examination of either, and is quite content that he be a mute witness of the scenes enacted before him, though taking notes of course at his own discretion.

It is difficult to see any reasonable objection to the admission of counsel to the examination of both the accused and the witnesses for and against him. Without such admission, the accused is and must be greatly embarrassed in preparing his defence. It is not enough that he and his counsel examine the record, it is important that the counsel should know the atmosphere of the examination chamber and the many matters of detail which elude the reporter. The influence of his presence would be in every way beneficial to the judge himself. There is no man who would not be benefited by the knowledge that at least in this limited sense he is acting under the eye of the public.

The Hon. Simeon E. Bailwin, Judge of the Supreme Court of Errors of the State of Connecticut, and Professor of Constitutional Law at Yale University, has long been an advocate of introducing into the criminal proceedings of the United States something equivalent to the preliminary examination of the French system. In a recent letter which now lies before me he says:—"It would be hazardous to allow committing magistrates to cross-question the accused in private at any length. Either the examination should be conducted by the prosecuting attorney, the judge simply presiding over the proceeding, or the accused should be supported by the presence of his counsel, or of some other friend whom he may name, to watch what is done, and be ready to bear witness to any undue pressure that may be exerted. In modern society public opinion is the great restraint upon governmental abuses, and a judge would seldom put a prisoner in a state of mental torture, or harass him by unnecessary adjournments and remands, when he saw before him one who would have it in his power to make any such preversion of authority generally known to the community.

"That bail, *in all ordinary cases*, should be a matter of right is also, in my opinion, a *sina qua non* in any system which admits of preliminary examinations."

The arguments in favour of the admission of counsel have convinced both the German and French authorities. In France the amendment to the Code was adopted December 8, 1897. A clause of the Act of Amendment reads as follows:—"Sont et demeurent abrogées toutes les dispositions antérieures contraires à la présente loi." When a way so simple is open for bringing the code into harmony with an amendment, it seems a pity to have this great boon withheld for the sake of a recodification of the law. The public sentiment of these modern times, which has conquered so largely the conservatism of Continental Europe, will not reconcile itself to the hardship which the present Japanese Code entails.

The assurance that the examining magistrate will hereafter exercise his vast powers under the trained eye of the defendant's counsel, whether the procedure be hastened to the hoped-for extent or not, would unquestionably add to the respect of the people for the administration of law and would bring great relief to thousands who are now weighed down with a sense of utter helplessness.

May we not confidently expect that the Commission now engaged in the revision of the Code will prepare for presentation to the Diet at its next session a draft which shall embody the humane provisions of the French amendments of 1897?

I am, Sir, yours, etc.,

DANIEL CROSBY GREENE.

BUSINESS AND FINANCE.

The excess of imports during the past few months is now beginning to decrease. The foreign trade for the first half of this month shows a diminution in imports of over 4 million *yen*, as may be perceived from the following table:—

	Exports for 1st half of May. Yen.	Imports for same period. Yen.	Excess in imports. Yen.
Yokohama	4,222,609	5,501,041	1,368,432
Kobe	4,982,566	7,372,625	2,390,059
Osaka	323,603	225,093	—
Nagasaki	256,108	626,303	370,195
Hakodate	48,682	7,933	—
Niigata	12,712	—	—
Moji	206,413	470,530	264,117
Shimonoseki	254,228	328,213	73,985
Kuchinotsu	254,770	6,921	—
Total	10,561,691	14,626,659	4,064,968

The total from January for the various ports above mentioned is as follows, the gross excess of imports having reached 56 millions of *yen*:—

Yokohama	32,652,276	43,842,669	11,190,393
Kobe	25,915,029	70,029,735	44,114,706
Osaka	1,975,871	2,830,169	854,298
Nagasaki	2,307,248	5,303,595	2,996,347
Hakodate	460,009	197,608	—
Niigata	40,904	93	—
Moji	1,710,999	1,636,054	—
Shimonoseki	2,851,001	1,790,854	—
Kuchinotsu	1,712,513	232,953	—
Total	69,625,840	125,863,800	56,237,860

With regard to specie the export of gold during the period under review amounted to 4,340,000 *yen*, against 6,050,000 *yen* for the latter of April, and 6,530,000 for March. As the Government recently brought home gold ingots to the amount of 2,200,000 *yen*, the balance is not more than 1,800,000 *yen* in favour of exports. Below are details:—

	Export in Yen.	Import in Yen.	Excess in import or export Yen.
Yokohama	2,850,000	—	*2,850,000
Kobe	1,490,000	2,300,557	810,557
Osaka	—	243,131	143,131
Nagasaki	5,686	—	*5,686
Total	4,345,686	2,543,688	*1,801,998

* Represents excess in exports.

The gross total of exports of gold from January, according to the *Jiji*, reached 25,511,489 *yen*, against 3,545,968 *yen* in imports, leaving a balance of 21,965,511 *yen* in favour of the former.

Below are comparative figures showing the deposits in the various Postal Savings Banks for the past two years:—

	1899.	Decrease in comparison with 1898.
New depositors	289,337	25,772
Persons who have withdrawn their whole deposits	302,011	22,734
Actual number of depositors at end of year	1,240,892	12,746
Amount of deposits	¥9,990,973	¥3,683,565
Deposit of interest on public bonds	60,856	307
Interest on deposits	1,063,847	17,092
Repayments	14,879,623	2,461,082
Balance at end of the year	22,005,105	3,749,152

As there are no accurate statistics with regard to the occupations of depositors, it is extremely difficult to ascertain what class of the people show the most thrift in this manner. The following figures, however, are given in the *Osaka Asahi*:—

Classification.	Number.	Amount.	Average per head.
Farmers	484,734	¥6,846,214	¥14.10
Merchants	192,543	4,846,836	25.20
Manufacturers	80,929	1,939,809	24
Miscellaneous	74,164	1,552,061	20.90
Artisans	58,386	982,165	16.80
Fishermen and sailors	14,206	257,092	18.10
Government officials and soldiers	71,325	1,372,919	19.20
Students	78,962	372,056	4.70
Persons without fixed occupation	17,376	354,352	20.40
Persons whose occupation is uncertain	147,303	2,811,623	19.10
Total	1,219,928	21,335,127	17.50
Temples, shrines, and other corporate bodies	20,964	669,978	32
Grand Total	1,240,892	22,005,105	17.70

According to the *Osaka Asahi* the amount of coal exported from the various ports in the empire during April was 259,320 tons, valued at 1,543,697 *yen*. Compared with the corresponding period of last year the figure shows an increase of 73,268 tons, valued at 319,141 *yen*. Last year quotations stood at 6.57 *yen*, but this year they have fallen to 5.95 *yen*. The total export from January to April is reported to have reached 1,107,406 tons, worth 6,471,295 *yen*, showing an increase of 334,271 tons, worth 1,325,656 *yen*, over the figure for the corresponding period of last year.

The interest on Imperial Bonds is to be paid from the 1st of June next, and this, remarks the *Nichi Nichi*, will have the effect of improving the money market. According to official investigations the amount to be disbursed on this account is no less than 9,083,901 *yen*, of which 3,302,600 *yen* will be paid in London on the 30th proximo, and the remaining 5,681,001 distributed in Japan. The latter amount is to be divided between Tokyo and the provinces, the former securing 2,840,500 *yen*.

The *Keizai Zasshi* publishes the following statistics as to the number of foreigners living in China:—

Nationality.	1899.	1898.	Increase.
English	5,562	5,148	414
Japanese	2,440	1,688	742
American	2,335	2,056	279
Russian	1,621	165	1,456
Portuguese	1,423	1,082	341
French	1,183	920	263
German	1,134	1,043	91
Total	17,193	13,421	3,772

From the above it may be perceived that although the English are still predominant in China, the number of Russians shows a far larger relative increase. This is a phenomenon too serious to pass unnoticed. As to the number of commercial companies and firms the figures stand as follows:—

Companies.	1899.	1898.	Increase.
English	401	398	3
Japanese	195	114	81
German	115	107	8
French	76	37	39
American	70	43	27
Russian	19	16	3
Portuguese	20	10	10
Total	933	773	160

According to the latest investigations of the Finance Department the average value of various public loan bonds during April, as compared with the previous month stood, as follows:—

Bonds.	April. yen.	March. yen.	Rise or fall. yen.
Imperial	88.25	90.50	2.25
Naval	92.90	91.80	1.10
Redemption	93.60	94.40	0.80
War	93.65	94.40	0.75
5 per cent	88.00	90.90	2.90
Tokyo Municipal	96.30	—	—
Industrial (50 yen face value)	48.00	48.30	0.30
Same (20 yen)	19.85	19.80	0.05
Same (20 yen)	20.85	21.00	0.15

ORDINANCE OF THE COMMUNICATIONS DEPARTMENT.

The following Ordinance of the Communications Department is published in the *Official Gazette* :—

Art. I.—Any person desiring to tender for the supply of stores for Government railways under the direct supervision of the Communications Department, the said goods being manufactured in Europe or in the United States, and inspection as to quality or classification being made prior to shipment, must have the following qualifications specified in the 1st clause of Article XIX of the Law of Accounts :—

1. He must be in possession of a head office, branch, or agency in Japan.

2. He must be in possessson of a head office, branch, or agency in a city of Europe or the United States.

3. He must be possessed of a certificate showing that he has properly fulfilled contracts with Government offices or railway companies for the supply of foreign railway stores to the amount of at least 100,000 *yen* in one year within three years from the date at which the tender is presented.

Art. II.—These regulations shall come into operation from the 1st of June (1900). Ordinance No. 28 of the Communications Department issued in the 29th year of *Meiji* shall be rescinded from the date of the operation of the Regulations.

Another ordinance of the same Department refers to competitive tenders for the construction or repair of railways, ships, or official buildings. The provisions are as follows :—

Art. I.—Tenderers for works indicated above must be persons who have paid direct national taxes for the past two years, in accordance with the following scale :—

Estimated cost for work in *yen*.		Annual amount of tax in *yen*.
Not exceeding	5,000	Not less than 5
,,	10,000	,, 10
,,	50,000	,, 20
,,	100,000	,, 30
,,	200,000	,, 50
Above	200,000	,, 80

Art. II.—In the case of an ordinary partnership one of its members, and in the case of a limited partnership one of the members of unlimited liability, must fulfil the above requirements.

Art. III.—In the case of a joint stock company the amount of shares paid up must be more than double the cost of the work rendered.

Art. IV.—As to joint stock partnerships one of the conditions required of a limited partnership in Article II. or of those specified in Article III. must be complied with.

Art. V.—With respect to a foreign company the same must have been registered according to the regulations, and must possess qualifications the same as, or analogous to, those of companies specified in Article II. or Article IV.

Art. VI.—Tenderers for the construction of ships having a gross tonnage of more than 1,000 tons must possess the following qualifications besides those specified in each of the foregoing articles :—

1. They must be possessed of a suitable workshop for the construction of ships of the dimensions indicated, and must have practical experience in connection with the building of the same.

2. They must be possessed of an annealing plant.

Art. VII.—With regard to competitive tenders in Hokkaido, and in Okinawa and Ogasawara islands, as well as in foreign countries, these regulations shall not apply for the time being.

THE TOKYO TRAMWAY QUESTION.

As the sum of 1½ millions of *yen* set apart by the Tokyo Tramway Company in connection with the alteration in motive power has been expended in other directions, it will be necessary for the company, remarks the *Yorozu*, to make a fresh appropriation to the amount of at least 3 million *yen* when permission is obtained from the Government. But the period of the charter expires in ten years, and there is little prospect of profit in such an investment. The company has therefore applied to the Government for an extension of the period to the limit fixed for the Tokyo Municipal railway, and for permission to alter the Shinagawa lines into a double elevated track. Simultaneously with this application it is suggested that since Article III. of the charter, prohibiting foreigners from becoming shareholders of the company, has become invalid in consequence of the laws subsequently issued and the treaties concluded with foreign Powers, the sale or transfer of the company's stock may be undertaken without discrimination between foreigners and Japanese.

CHRISTIAN EDUCATIONAL WORK IN JAPAN.

The *Yorozu* has an article pointing out the energy displayed by Christians in the cause of Japanese education, and condemning the authorities for the unnecessary interference which has almost crippled that work. According to statistics compiled at the end of last year, the number of Christian schools and students totalled 204 and 15,846 respectively. Below are details :—

		Schools.	Students.
Above middle course of education	Men	20	2,916
	Women	48	3,538
Primary course of education for men and women		136	9,394
Total		204	15,846

In the face of these figures the general progress of education undertaken by Japanese is extremely slow. The latest statistics compiled by the Education Department show that out of 7,125,966 children of school age only 4,910,380 are receiving instruction in elementary schools, the remaining 2,215,586 remaining at home. Japan cannot escape the charge of procrastination in this matter, as may be perceived from the following comparative figures for the past four years :—

Percentage of school age children under instruction.....	1895.	1896.	1897.	1898.
	61.24	64.22	66.65	68.91

The Government ought to adopt more efficient means for the diffusion of knowledge, but instead it has, directly and indirectly, attempted to hamper the educational work of Christians. Now that the Bureau of Religions has been established it is advisable that Christianity should be investigated in its true light.

FIRE IN TOKYO.

The residence of Captain Brinkley, at No. 3 Aoicho, Tokyo, was destroyed by fire on the night of the 23rd instant. The flames made their appearance at half-past nine, and in less than three hours the whole building was reduced to ashes. Fortunately there was little wind at the time, or the United States Legation on the other side of the street could scarcely have escaped. For a moment, indeed, it seemed to be in considerable danger. Captain Brinkley was absent, and it resulted that the whole of his manuscripts were consumed with the library. A large collection of works of art stored in the upper floor of the building was also destroyed. The conflagration seems to have had its origin in a defective flue, one of those too common sources of danger in wooden buildings.

H.B.M.'S COURT FOR JAPAN.

Before His Honour Judge WILKINSON.
WEDNESDAY, May 23rd.

A NAGASAKI WILL CASE.

Re the Will of the late Charles Sutton. C. D. Moss petitioner.

This was the petition of Mr. C. D. Moss for the appointment of a Judicial Trustee under the will of the late Charles Sutton, of Nagasaki. Mr. Sutton died a bachelor on the 28th April, 1892. By his will he bequeathed to Kate and Mary Smith, daughters of the late O. Smith, 1,000 dollars each. In consequence of the withdrawal or death of the executors appointed, the petitioner became official administrator on the 12th January, 1894, of that part of the personal estate of the deceased left unadministered by the former executors, and paid into Court on March 1st, 1894, two sums of 1,000 dollars each to meet these special legacies. These sums were placed at fixed deposit with the Hongkong and Shanghai Banking Corporation; bearing interest which had been added to the principal. The sums now amounted to *yen* 1,314.68 each. As the jurisdiction of the Court was about to cease the petitioner considered it necessary to provide for the vesting of the said funds, and proposed to appoint H.B.M. Consul and Vice-Consul at Yokohama or such one of them as the Court might select and their successors as Judicial Trustees or Trustee. Oliver Smith, the father of the legatees, was a Norwegian subject, and in the event of the death of his children under the age of 21 their share would devolve upon their next-of-kin according to Norwegian law. The next-of-kin of Charles Sutton was his sister Mary Ann Brent, wife of Frederick John Brent, of East Finchley, London. The mother or a Judicial Trustee of the said children, Mrs. Carl M. Nickel, wife of Capt. Nickel, a German subject, lived at Kobe, and the children were now residing at Hamburg. The petitioner therefore prayed the Court to order that Judicial Trustees, or a Judicial Trustee, be appointed and such directions given for the vesting of the trust as might be deemed just and proper. It should be explained that Mrs. Nickel and the children have since become German subjects, and Mr. John Westphalen, of Kobe, has been appointed by the German Consulate at Kobe as guardian of the infants. The service of the petition on Mr. Westphalen instead of on the infants had been applied for by Mr. Moss and granted, but Mr. Westphalen failed to appear.

A certificate of service was produced at the hearing, but His Honour ruled that an affidavit as to service must be produced. The hearing was therefore adjourned to Monday, May 28th.

Mr. Litchfield appeared for Mary Ann Brent, next-of-kin of Charles Sutton, and Mr. H. A. C. Bonar and Mr. R. G. E. Forster were also present.

LEAVES FROM AN OFFICER'S DIARY DURING THE SIEGE OF LADYSMITH.

A cavalry officer who passed through the siege of Ladysmith, jotted down the following notes, which have been kindly placed at our disposal.

Although the railway and telegraph were not cut until 2nd November, the siege practically commenced on October 30th. For some unknown reason we were ordered to retire after the battle of that date and were promptly invested by the Boers. No one knows the strength of the Boers round Ladysmith at the commencement of the siege—but it must have been at least 20,000. Their strong point was their artillery, their big guns being more numerous and better than ours, and they mounted them in excellent positions and shelled us daily. At first they did little damage, but as their gunners improved with practice the damage done by their shells grew, and many poor fellows were killed in the streets, in houses, and in the various camps. To cope with these guns we only had the big guns of the Naval Brigade from Durban, some 5 in number, which by the greatest of luck arrived about the day before the railway was destroyed by the Boers. Our other artillery, being only field guns, of course could not reach the Boers. The garrison of Ladysmith consisted of the Naval Brigade, 4 regiments of British Cavalry (ourselves, 5th D.G., 19 Hrs. and the remainder of 18 Hrs.—nearly a squadron of the latter regiment having been captured with Colonel Moller at Dundee and sent to Pretoria). (By the way. We hear Mrs. Moller applied to Kruger to be allowed to go to Pretoria to her husband, but was refused and that she then went on her own hook through Delagoa Bay—very plucky of her, if true, but I doubt it). To continue—6 batteries of Field Artillery and 2 howitzers—8 Brigades of Infantry regiments and 3 corps of Natal Mounted Volunteers and the Imperial Light Horse, some 11,000 men all told.

The great mistake in my opinion was the keeping of the Cavalry Regiments here—we have been doing infantry work nearly all the time and at the present moment (9th Feb.) there are four fine cavalry regiments hopelessly, I fear, destroyed. We have no horses—they having been turned away to graze, as there is no food for them, and hundreds have died of exhaustion and been eaten. When Sir George White decided to hold Ladysmith, he ought to have sent the 4 cavalry regiments down to Buller, to whom we should have been useful, for the Colonial Volunteers could have done the little cavalry work there was to do here during the siege.

It is pitiful to think how a fine mounted force has been wrecked. However, we have done very well as infantry (or horse marines!!) and the C.-in-C. said a short time ago the Cavalry had more life left in them than any one else. The 5th Lancers especially have earned great praise from everyone in every undertaking. We are now armed with *rifles and bayonets* —our lances, swords, saddles, and carbines having been returned to store. This, I fancy, is a unique experience of a British Cavalry Regiment being actually suddenly transformed into an infantry regiment!!!! We now hold our portion of the defences. Myself with 30 men hold the advanced Ration Post—a small wall fort right away in front of the defences to the West. It is so far to the front that the Boer lines are on 3 sides of us. Our orders are to hold it to the bitter end and not to retire on any account whatever, and it is *mined* and the means of firing the mines are inside the wall at my hand—that I fancy will explain to you the important place it is. King, our present commandant, said when he detailed me for the post: "There is V. C. to be got there." Very probably, but it seems to me that something else is much more likely to be got there!

Feb. 10th.—I ran out of English tobacco early in November, Boer tobacco in Dec., and yesterday finished my last pipe of Kaffir tobacco—so now I suck my pipe all day and imagine it full! The siege is getting most monotonous and I am fearfully thin —horse flesh diet does not seem to agree with me.

Now to give you a short résumé of my diary—from Nov. 3rd to Nov. 28th. The regiment was on outpost duty every other day from about 3 a.m. to 7.30 p.m. On the 9th Nov. the Boers made a determined attack against our "A" Squadron outpost line and I had to take my troop from "C" Squadron to support "A." After climbing the hill the "A" people were on, (our horses we left at the foot of the hill), I led my troop over two open spaces, each 70 yards wide and swept by the enemy's fire—a perfect hail of bullets greeted us as we rushed across, but no one was hit and we joined the "A" Squadron firing line and held the Boers in check till dark. We sat on that hill each man behind his stone from 5 a.m. till 7 p.m. in a broiling sun with no water to drink and nothing to eat. And the Boers kept up an incessant fire the whole time on us and 3 guns were playing shrapnel on us also all day. We soon drove the Boers back to their hill and then simply lay low and watched. They did not come forward again, as they were out of range of our carbines, while we were within easy range of the Mausers. After dark the Boers retired and we handed our hill over to the Rifle Brigade. I had a corporal shot in my troop which, considering the awful fire we were under, was wonderful, but we lay as low as possible. A company of the Rifle Brigade sent up in the middle of the day to support us lost 1 officer and 10 men.

The regiments new to South Africa have had to learn at a great cost the value of *"keeping cover"* in this fighting on kopjes. Our men are very good at it and consequently we have lost very few, whereas the regiments from India and home do not seem to know *how* to take cover behind stones and consequently get shot like rabbits by the wily Boer, who himself *always* fights from behind a stone. Well, the 9th Nov. was a very warm day and I was glad when it was over.

Nov. 10 to 28.—We and the 5th D. G. took it day about on outpost duty and miserably monotonous work it was in hot sun and bitter cold rain, &c., &c. Nothing particular happened. The Boers used to "snipe" us all day and every day, but we could rarely return the compliment, as they took care to keep out of range of our carbines. One day as a joke we stuck up a dummy man made out of old clothes on a wall and the Boers shot at it all day and ended evidently in a rage by planting a shell on the poor dummy. Ladysmith of course was shelled daily and sometimes at night by the Boers.

From Nov. 29th to about Dec. 17th.—The 5th Lancers formed part of a flying column ready to co-operate with Redvers Buller, who was coming up from Maritzburg with an army corps to our relief. Everyone naturally is looking forward to being relieved and we expect it about 15th Dec.

Buller occasionally signals by flashlight in the clouds at night to us and during the day we heliograph to him to a hill N.W. of Weenen, some 35 miles from here. Our daily routine is very monotonous now. The regiment parades an hour before dawn and by sunrise is in the bivouac down by the river, as we have to get the horses into hiding before the Boer guns discover our whereabouts, and there we remain until after dark, when we return to our camp. The heat at this time was awful and the flies a pest and the Long Tom Shells from the big Boer guns used to fly about us pretty consistently. Two or three night alarms disturbed us.

8th Dec.—(The night of the 7th was a busy night). Sir A. Hunter led a party of Natal Volunteers and Imperial Light Horse up Gun Hill at Lombard's Kop during the night and blew up the two big Boer guns (one being a "Long Tom") and took away a machine gun. A very gallant performance. They caught the Boers napping and our casualties were very slight.

Also the Leicestershire Regiment made a raid on Hyde's Farm but found it unoccupied—during the night.

Also a squadron of 19th Hussars went out and burnt some kraals, lit grass fires, and generally made a row to keep the Boers' attention off Hunter's expedition. We got the "benefit" of this latter manœuvre later on.

At 3.30 a.m. on 8th the Cavalry Brigade were ordered out under following dispositions:—

5th Lancers to reconnoitre country to N., between Limit Hill and Long Hill, ascertain Boer position and enemy's strength in that direction.

18th Hussars to keep the enemy in the Pepworth (west) direction from cutting off the retreat of 5th Lancers.

5th Dragoon Guards to be in reserve *at Orange F. S. Ry.* junction. We, 5th Lancers, galloped across the plain to Limit Hill, which my squadron ("C") made good, and were shelled the whole way across by the Boer artillery on Surprise Hill. From Limit Hill we galloped up the Newcastle Road right up to the Boer positions on Long Hill, who opened a perfectly awful rifle fire on us—"whiz! whiz! whiz!" all round you and "phwt"! "phwt" when a bullet hit anything. It was at this point that I was hit by a Mauser bullet in the left arm and a man was killed. My troops was 50 yards in rear of remainder of "C" squadron (Boers being on my left), and, seeing the head of the Regiment wheel off the road to the thorn jungle on the right, I followed suit. "C" squadron went on some distance towards Lombard's Kop, again meeting the enemy, and "A" and "D" went round to behind Limit Hill and "C" eventually joined them. My horse Challenger was excited, and his capers hurting my wounded arm, I gave him to a man to lead and proceeded to walk back alone across the plain to the O. F. S. junction, where an ambulance was waiting. Just before I left the Regt., M. Bulwana gun opened fire on us and soon after a message arrived from Sir George White to return. In returning the Regt. went back in magnificent order at a trot absolutely steadily in spite of shells falling right amongst the squadrons. As they passed ¼m. away I stood still to watch, thinking it the finest sight I had ever seen, when "Whizz, Bang" and I was covered with mud and and dirt, a N, Bulwana Long Tom shell falling 6 feet behind me. Just before reaching the ambulance the 11th Hussars came galloping back from the Pepworth direction and, getting a tremendous slating from the Boers on the ridge, they suffered severely.

As they passed me a man pulled up and offered me his horse, which I refused, but, catching hold of his stirrup leather, got dragged along and shortly after, Thackwell of the 18th coming slowly along wounded, I sent the private off and made use of Thackwell's stirrup leather until, an 18th man coming along with a led horse, I mounted it and rode the rest of the way in. A very warm ride. Genl. Brocklehurst estimated we had located 3,000 Boers. Rather a waste of horses and men sending out 2 regiments when a troop could have done what we did. 5th Lancer casualties were 1 man killed and 1 officer (self) and 3 men wounded, 3 horses killed and 9 wounded.

At the hospital it was found the bullet had gone through the muscle of my left arm, missing the bone and an artery by $_{10}$ $^{1}_{0}$ part of an inch—a lucky escape!

The following appeared in Natal Field Force orders with reference to this reconnaissance:—

"On the Report of the reconnaissance of the 8th inst. rendered by the G. O. C. Cavalry Brigade, the C.-in-C. made the following note—" "I regret the number of casualties, but I was an eyewitness and it was inspiriting to see the keenness and dash with which a dangerous duty was carried out by officers and men."

10th Dec.—The Rifle Brigade made a gallant attack during the night on Surprise Hill and blew up the big gun but suffered severely in their return. Our fellows were playing polo yesterday and were shelled by the Boers!

11th, 12th, 13th, 14th, 15th, 16th Dec.—Still standing to help Buller. Were turned out twice at night.

17th Dec.—Alas! George White has published an order that "Redvers Buller will not be able to relieve Ladysmith as soon as expected, but expects that in spite of the disappointment all ranks will cheerfully carry on the defence as before." It appears that Buller got a severe knock at the battle at Colenso on 15th.

Dec. 18th to 21st.—"Standing to" is off, as Buller is n't coming and the ordinary defence goes on wearily. A M. Bulwana shell got a good bag on 18th, killing 5 men and wounding 9 and killing and wounding 11 horses of the Natal Carbineers—biggest bag one shell has got yet.

Whiskey is now £5 a bottle and eggs 13 shillings a dozen. *Our big gun ammunition is getting short.*

Boers nightly turn search lights on us evidently fearing attack.

Dec. 22nd.—A shell from Telegraph Hill fell and burst in *my* troop whilst the Regiment was at "Stables," killing 4 of my best horses and wounding Fawcett, King, Mather, Oakes, Hulse, and Sergt. Major Harris (latter had his eye knocked out). Luckily I was on the sick list in camp or I should have got it again, as they were looking at a sick horse in my troop at the time. To-day also a M. Bulwana shell killed 6 men and wounded 10 of the Gloucester Regt. Another knocked down part of Sir George White's house.

Dec. 23rd.—*All the officers* of my squadron being now sick and wounded and my arm getting on well, I return to duty and command the squadron. For this reason Clayton takes over adjutant's duties from Hulse, as in his squadron are plenty of officers, whereas I am quite alone in mine. Rather unfortunate for me!! Matches cost now 5 shillings a dozen.

Dec. 24th to 31st.—A Christmas message received from the Queen by helio from Buller, "I wish you and all my brave soldiers and sailors a Happy (!) Christmas. God protect and bless you all. V.R.I." Blowbank gun has got the range of 5th Lancers' officers' tents and plugs us unmercifully daily.

On 27th a M. Bulwana shell fell in Devons' officers' tents, killing 1 (decapitated) and wounding 7. On 28th the Boers tried an attack, but were easily repulsed with no loss to us.

Fearful rain storms. Klip River suddenly rose, drowning 7 horses of Leicester Mounted Infantry.

The neutral sick camp at Intombie contains 1,200 men and 10 are being buried on an average daily, the result of enteric. Fawcett is at Intombie, his wounded leg being bad, also Hulse, Hooper, and Gwyn—the last 3 with enteric.

Jan. 1st to 5th, 1900.—Eggs are now 23 shillings a dozen and all grub getting very scarce.

Jan. 6th.—A very hot attack by the Boers. They got up to Cæsar's camp and Waggon Hill in the dark and by a ruse rushed the sentries, who were Imperial Light Horse and Volunteers. (N.B.—Regular soldiers should only be allowed to do outpost duty—it is too harassing and important work for Volunteers).

At 1 p.m. the Boers were actually in possession of our sangars on Cæsar's camp and Waggon Hill. The Cavalry Brigade were sent up at a gallop. The fighting was the hottest I have seen, the Boers fighting with the utmost courage. About 4 p.m., 5th Lancers'

Digitized by Google Original from CORNELL UNIVERSITY

having climbed Cæsar's camp (leaving our horses at the foot of the hill) rushed across the top in a storm and, getting into the sangars on the far side, got in a tremendous fire on the Boers. My squadron was on the right—Mather and Hill were with us. Poor Hill was shot dead through the head and Mather wounded in the leg. The command of the squadron then devolved on me.

The Devons made a magnificent charge on my right and drive the Boers down. I saw many of them fall like shot rabbits as they came rushing past us cheering—a magnificent sight.

We held the Boers until dark, when they were driven back all along the line and retired, losing many men in the retreat. The hottest fire I have been in yet and we had to lie flat down the whole time—the noise was simply fearful and a terrific thunder storm broke over us in the afternoon, drenching everyone. I had orders to remain all night where I was with my squadron and throw out cossack posts. A very gruesome night with dead men lying amidst us and many wounded too, poor fellows. In the morning, I was ordered to take my squadron to Waggon Hill and collect the dead of the Gordon Highlanders (the remainder of that regiment being away on the other side) and a horrible business we found—some of the poor fellows being awful sights. On Sunday afternoon, we officers of the 5th Lancers rode out to attend the funeral of Hill and the other killed. A gruesome business, the men being laid side by side in long trenches—some 80 officers and men were buried there—the others elsewhere. It was a narrow shave of losing Ladysmith, for if the Boers had got possession of Cæsar's Camp and Waggon Hill (and they tried their utmost) it would have been an end to Ladysmith.

The official estimate of Boers losses was 1000 and the British 150 killed and 200 wounded. The Queen wired congratulations, as did people all over the world.

The Civilians, Soldiers, and Sailors of Hongkong wired congratulations to Ladysmith garrison.

7 to 14 Jan.—Nothing much of interest, everything monotonous. Grub bad. Beastly hot. Boers shelling. Two corporals of the 5th Lancers distinguished themselves on patrol one night and were personally thanked by Sir A. Hunter. On 12th, 5th Lancers went out at midnight to capture a Boer picquet, but found they were gone. I am still in command of C Sqdn. Potatoes cost a shilling each. McTaggart at Intombie with enteric.

Jan. 15 to 22.—Same old game going on. Cavalry brigade is again standing to co-operate with Buller at Potgieter's drift on the Tugela. On 16th a shell from Surprise Hill fell, and burst in our mess tent. Luckily Scriven was the only occupant and although the tent was wrecked he got off with a few slight wounds.

We can hear Buller's big gun Spion Kop way.

Matches (wooden) 1s. a box. *Twelve bottles of whiskey offered for sale with an upsset price of £100.* (I suppose the only 12 left in Ladysmith. Eggs are now 2s. each and we have nothing to drink but water.

Jan. 23 to 31.—George White says Cavalry Brigade have more go left in them than any one else. On 27th, a terrific tornado blew away all our tents during the night and wet us and our kit through and through! Pleasures of war!

On 29th, we hear we are again doomed to disappointment in our relief. After Buller's force had taken Spion Kop a Brigadier, for no reason at all, ordered a retirement and the Boers again took possession.

The relief seems as far off as, or further than, ever

No more food left for horses of Cavalry Brigade, so with the exception of 75 per regiment all the horses were on 30th turned out to graze, and cavalry brigade turned into infantry regiments and *armed with rifles and bayonets*!!!

Also our rations are cut down and we daily eat the horses that are grazing. *An unparalleled case in history of a cavalry regiment being dismounted and turned into infantry and having to eat their mounts.* After this war there ought to be in the new cavalry drill-book a drill, "To eat your horses; prepare to dismount!"

The Regiment is now on Picquet duty holding Leicester Post and Cove Redoubt—*a la* infantry.

Feb. 1st to 7th.—I was on Flag of Truce duty. Got half-loaf of bread to-day—great luxury! Carrying on same old game and every one thin and cross! Eggs are now 3s. each. Mealies meal given out. The horse bovril is called "cheveril." Horseflesh is an acquired taste. For lunch one day we had cheveril and the *haunch* of a *mule*.

On 3rd, intimation was received that the Boers intended delivering a last and final attack on Ladysmith, so every night the entire garrison stands to arms. My post is an advanced ration post with 30 men. It is the most advanced post to the N.W. and is surrounded on three sides by the Boers, so we shall have a hot time—especially as we are to hold the post *to the last* and not retire. Following is strength of Fifth Lancers officers now:—

At duty.		Sick.	
King	...	Hulse	(Enteric)
Parker	...	Gwyn	,,
Mather	...	Hooper	,,
Oakes	...	Arkwright	,,
Scriven	...	McTaggart	,,
Jardine	...	Fawcett	(Wound)
Clayton	...		
Willcox	...		
Fraser	...		
Wood	...		
Adams	...		
Waterman (Qr. M.)	...		

Feb. 8th, 9th, 10th.—Last night at Adv. Rat. Post we fired some rounds at a Boer patrol who made off. Rations again reduced. I have run out of last bit of Kaffir tobacco.

February 11th, 12th and 13th.—On night of 13th exchanged shots with Boers at Adv. Rat. Post.

Two Basutos were caught loitering near my post and we sent them under escort to Intelligence Department. Eggs 3/6 each.

February 14th.—Following message has been received by White from Lord Roberts, "With a large "force of mounted troops, very strong in mounted "infantry, artillery and cavalry, I have invaded the "Orange Free State. Tell your troops that I hope the "events of the next few days will enable me to help "Ladysmith."

Eggs are are now £2.8.0 a dozen, four shillings each. We have one a day, the only luxury we get—remainder of our food consisting of horseflesh and occasional trek ox and 3 biscuits, and every other day instead of latter ½ small loaf bread.

February 15th.—Heavy guns heard near Colenso at 2 a.m. and nearly all day.

Boers round us appear much excited—galloping about all over the country and we saw some 100 waggons on the trek.

February 16th, and 17th.—We hear of relief of Kimberley. A great trek of Free State Boers going N.

February 18th, 19th, 20th to 26th.—Buller trying hard to get in and evidently fighting hard. On 19th he heliod: "Have taken Cingola and Monte Christa hills."

Eggs are £2.10. a dozen. I tried to make a pudding out of violet powder and water but the scent spoilt it. Everybody's hopes again dashed to the ground as our rations have been cut down another ¼, which is absolute starvation (1¼ biscuit and a bit of horse a day), tea and coffee given out. The cutting down of rations has circulated all sorts of rumours that Buller has failed again.

February 27th.—Majuba Day, Boers bombarded pretty hotly. Buller seems to be fighting a big battle. Great excitement here as no one knows what is happening.

February 28th.—Buller heliod to-day. "Severely defeated enemy yesterday, they appear to be in retreat, am sending on my cavalry." Also a helio. arrived from Roberts. "Cronje and all his force has surrendered to me, I trust the Government will be pleased to hear of this success on Majuba day." So after 19 years, on the anniversary of that day, the disgrace of Majuba is avenged! And two huge victories credited to the British arms. We saw thousands of Boers and waggons trekking north all day, but from want of horses we were unable to pursue. Such a glorious chance for cavalry has never occurred and we could not take advantage of it because our horses were "inside of us"! Absolutely sickening luck. At 6.15 p.m. Major King and I on Cove Hill saw 3 squadrons of Natal Mounted Volunteers ride into Ladysmith amidst great cheering.

March 1st.—*Relief of Ladysmith.* Relieved at last, after 119 days. Redvers Buller arrived at noon with his staff. A squadron of 13th Hussars rode in early and brought tobacco for our men—a great luxury, for they have had no smoking for some three months. A flying column consisting of Ladysmith Infantry and guns and Buller's cavalry followed the Boers and worried their rear, but for some reason best known to himself Buller ordered no regular pursuit which might have turned the retreat into a rout.

March 2.—*Rest.* No Boer shells buzzing about our ears. Numbers of people from Buller's Camp at Nelthorpe rode in with food for us. Graham, Hamilton, &c., &c., &c., came.

They were surprised to hear we had been living on horses and were rather afraid of their fat horses falling victims, noticing our hungry looks!

In my troop I have only 6 horses, or skeletons, left.

I have my 1st charger alive, the other two are dead. *Men* of my troops have been exceptionally lucky.

March 3rd.—The Ladysmith garrison turned out to welcome Buller's relieving divisions and the enthusiasm was indeed great—Buller's divisions took all day coming in. His men looked the picture of health—hard, fit, sunburnt, and bearded men—such a fine sight I don't suppose has ever been seen—the Jubilee day show not to be compared with it. I did not see a single "boy stripling" in the ranks of his army—all bearded sturdy men.

To me it is incomprehensible that Buller with such a magnificent force could not get in before—something wrong somewhere—the men were all right.

Our poor white skeletons of men were a great contrast to Buller's army, but our fellows have tons of fight left in them yet. The 5th Lancers were cheered by every regiment of the relieving force and many were the jokes about where the horses had gone to, that were showered on us—for we were standing with our rifles and bayonets—an amusing sight I suppose seen for the first time.

March 4.—I borrowed a horse at 4 a.m. and with half a dozen men and 3 waggons went off on a looting expedition to the Surprise Hill Laager, some 5 miles off. The Boers had evidently left in a hurry as everything was in a state of chaos—food even still cooking on fires, &c. I looted some 15 good tents—3 marquees for our mess, a kitchener stove, arm chairs, a spring mattress, &c., &c., &c., and picked up some 100 private Dutch letters which were sent to our Intelligence Department. Some Boer officer had made a fine collection of burst shells fired from Ladysmith and in his hurry to get away left them in his tent, this collection I took possession of! I also seized two rather fine pointers; these dogs I sold for £1.1s. apiece, or rather the men did, for I gave them to the corporal.

Women and even children had lived in the Boer camps, for I saw female "affairs" lying about. Also hundreds of bibles and hymn books.

March 5 and 6.—Rest, and getting provisions and tobacco, mostly presents from people all over the world. The mail, consisting of 4 months letters and papers, has arrived and keeps us busy. How pleasant it is to get news of the world at last. According to the papers, Trooper Shurlock seems to be a great hero and has had some 50 presents sent him; it is most amusing, for since he used his revolver so recklessly at the Elandslaagte charge he has not been allowed to carry one for fear of shooting one of us in front of him by mistake—and the British public call him "a little hero," &c., &c., &c., and presents have been showered in, even one from Lady White's youngest daughter. He is in my troop, and all this will probably turn his head and mean a dose of cells, for he is a cheeky youngster!

March 7th.

Now to close this. The English mail (how funny it sounds talking of the English or any other mail) leaves in half an hour. I cannot attempt to answer yours or mother's letters, for all those written by you since August arrived in a bundle yesterday and it is all I can do to read them—4 months mails. I thank my stars the siege is over. We are going to get an easy for a month to recoup, I believe, and get more horses (having about 10 that are any good left) before being employed again.

Evidently the Ladysmith garrison has earned its laurels, and I think we have deserved them. The 4 cavalry regiments here certainly deserve them for we have had the worst of bad luck in losing our horses. Fawcett, Hooper, Hulse, Gwyn, McTaggart, and Parker, I believe, are being sent home, all except the first having bad enteric, and poor Arkwright is still very bad. Excepting for my wound I have not been on the sick list during the seige, but am woefully thin—a mere skeleton—but plenty of fight left still! Buller is shoving on at once, I believe, to Newcastle to keep the Boers out of Natal, and Bobs has the whole of the other Boer army in front of him, and so I suppose the war will soon be over, in which case I fear the 5th Lancers will have no more fighting. If I see an opportunity I shall go on with some other corps if we do not.

I hear seven new Cavalry Regiments are to be raised. I shall think seriously of asking for a troop and the adjutancy of one.

I'm afraid we shall get no promotion here for some time. Expenses during the seige have not been light, for while there were things to buy to eat I bought them, as I judged it foolish to risk sickness for a little money—my mess bills have run to an average of £19 monthly, which, considering there was nothing but water to drink and latterly only horse and no vegetables or bread, is an enormous sum—an occasional piece of trek ox cost a mint of mony.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

MAFEKING STILL HOLDING OUT.

Shanghai, May 18.

The Boers confirm their reverse at Mafeking on the 12th, and admit that a number of Boers were taken prisoners. Fifty British were killed and wounded.

RUNDLE'S BRIGADE.

Rundle has occupied Mequatling's Nek. Welch and the Yeomanry occupied Ladybrand on the 18th.

ANXIETY FOR MAFEKING.

The anxiety regarding Mafeking is intensifying in consequence of alarming rumours, emanating probably from Boer sources, that the garrison are desperately defending themselves against vehement assault.

METHUEN.

Lord Methuen has reached 12 miles along the Hoopstad Road without seeing the enemy.

HUNTER.

Hunter has occupied Christiana unopposed. The enemy have retired to Klerksdorp.

BOERS ANXIOUS TO SURRENDER.

A number of Boers in Vicksburg and Bethlehem districts are desirous of surrendering.

PRISONERS AT MAFEKING.

The *Cape Argus* says the Commandant Eloff and 90 Boers were taken prisoners at Mafeking.

MAFEKING RELIEVED.

Shanghai, May 19.

Mafeking is relieved.

BRIDGE BLOWN UP.

The Boers have blown up the railway bridge over the Rhenoster River.

(The Rhenoster River is between Kroonstad and Heilbron.—ED. *J.M.*)

PEACE PARTY FORMING.

A peace party is forming among the townspeople in Pretoria.

THE FREE STATE.

The burghers in the Kroonstad District believe that the Boers will offer little or no resistance, and that the commandos are kept together only by Steyn's insistent threats.

MAFEKING.

Reuter's agent telegraphs from Mafeking that the siege has been abandoned and that the British relief force has entered the town.

METHUEN.

A later telegram says that Methuen has entered Hoopstad, and that Generals Duprez and Daniels with forty men have surrendered.

THE NORTH-EAST OF THE FREE STATE.

Broadwood has occupied Lindley. Hutton's mounted infantry surprised and captured commandant Botha and 23 others at a place 30 miles to the north-east of Kroonstad.

REJOICINGS IN ENGLAND.

Shanghai, May 20.

The widest enthusiasm was caused in London and the provinces by the receipt of the relief of Mafeking. The houses were decorated with flags, and cheering crowds assembled everywhere. Traffic was disorganized. Telegrams from all parts of the empire report magnificent demonstrations of joy and loyalty.

GENERAL RUNDLE'S OPERATIONS.

Reuter's agent from Maseru telegraphs, under date of the 18th instant, that General Rundle is encamped at Klokolan. Large bodies of Boers are reported to have returned from Bethlehem to oppose Rundle's advance. They occupy a strong position at Vicsburg with very rough country in the rear.

THE PRISONER BOTHA.

The prisoner Botha is apparently not the Commandant General.

MORE ABOUT MAFEKING.

Reuter's agent, telegraphing from Lourenzo Marques, confirms the news of the relief of Mafeking, which was effected on the 16th instant. Details are eagerly awaited. Everything connected with the relief column has hitherto been kept absolutely secret. Even the name of the Commander is unknown. The War Office has no news of the relief yet. The *Te Deum* was sung at St. Paul's yesterday afternoon. The Lord Mayor and Sheriffs were unable to attend, as it was impossible to leave the Mansion House owing to the crowds.

BLOWING UP A TUNNEL.

Shanghai, May 21.

Reuter's Agent telegraphs from Cape Town that the Boers have exploded the tunnel at Laing's Nek.

THE MAFEKING RELIEF.

News from Pretoria, dated the 19th, says that it is officially announced that General Delarey engaged the British relief column at Mafeking successfully during the whole of Wednesday but during the night one of his officers withdrew without the General's knowledge, leaving the way clear for the relief column.

JOHANNESBURG TO BE DEFENDED.

President Kruger has notified the foreign consuls that Johannesburg will be defended and that he disclaims responsibility for persons and property.

EXCHANGE OF PRISONERS PROPOSED.

President Kruger has proposed to Field Marshal Roberts an exchange of prisoners.

PRESIDENT KRUGER'S ALLEGED PROPOSALS.

The *New York Herald's* correspondent in Lourenzo Marquez says that Kruger has decided to send a message to Roberts requesting the cessation of hostilities and demanding a guarantee for the lives of the colonials serving with the Boers. He will state that, unless his terms are granted, the mines will be exploded and Johannesburg destroyed.

THE MAFEKING COUP.

Shanghai, May 22.

The *Daily News* correspondent, telegraphing from Lorenzo Marquez, under date of the 20th inst., says that the British on the 17th captured the entire Boer force around Mafeking, including the guns.

KLERKSDORP.

The British have occupied Klerksdorp unopposed.

THE RELIEF OF MAFEKING.

Sir Alfred Milner telegraphs to Mr. Chamberlain that Mafeking was relieved on the 17th. The relief column was a composite force of about 2300 under Colonel Mahon.

A WELL-DESERVED PROMOTION.

The Queen has promoted Baden-Powell to be a Major-General.

SUPPLIES FOR THE MAFEKING GARRISON.

Hunter is pushing up the railway with supplies for the Mafeking garrison. The sick and wounded are to be removed to Kimberley.

RUSSIA AND KOREA.

Mr. St. John Brodrick says that the rights of British subjects at Masampo are not limited by the Russo-Korean agreement.

GREAT BRITAIN AND AUSTRALIA.

Mr. Chamberlain announces that a general agreement has been reached with the Australian delegates according to which the Imperial appeal is fully maintained in every case other than those in which Australian interests are concerned.

THE COMMONWEALTH BILL.

Shanghai, May 23.

The House of Commons has passed the second reading of the Commonwealth Bill.

THE U.S. AND NEUTRALITY.

Mr. Secretary Hay has informed the Boer delegates that President McKinley adheres to the policy of neutrality.

AN AMBUSH.

Buller telegraphs from Newcastle under date of the 22nd that Bethune reports that a Squadron of his Mounted Infantry was ambushed yesterday marching to Newcastle. Very few escaped. The casualties were about 66. Lieuts. Lansom and Capel are missing. Earl Delawarr is wounded. Buller had detached Bethune with 500 men to advance to Ngulu, which had been reported to be evacuated.

THE CHINESE TARIFF.

Mr. St. John Brodrick says that negotiations concerning the revision of the Chinese Tariff will be conducted in Peking.

BIRTHDAY HONOURS.

The Birthday Honours are: Sir Claude Macdonald, Grand Cross of St. Michael and St. George. Mr. Cameron, of the Hongkong Bank; Commander Frilford; the British Consul at Newchwang; and Mr. Kinder, of the China Railway, to be Companions of the same Order.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

MAFEKING.

Saigon, May 18.

The capitulation of Mafeking is not confirmed.

THE ITALIAN CHAMBER.

The Italian Chamber will be dissolved in consequence of the obstruction of the minority.

MAFEKING.

Saigon, May 20.

Mafeking was relieved on Thursday. The English, coming from the south, occupied the town after bombarding the Boers' positions. There is great enthusiasm in England.

KRUGER'S PROPOSALS.

Saigon, May 21.

The Pretoria correspondent of the *New York Herald* announces that the Transvaal has asked Lord Roberts for a suspension of hostilities.

THE ITALIAN CHAMBER.

The Italian Chamber has been dissolved. The elections will take place on the 6th of June.

RIOTS IN BERLIN.

Saigon, May 22.

It is announced from Berlin that the populace gave itself up to grave disorders on the occasion of a strike of tramway employés. Two persons were killed, fifty wounded, and a hundred arrested.

THE PARIS EXHIBITION.

Saigon, May 23.

Parliament has been reopened. The Presidents of the Senate and of the Chamber of Deputies, MM. Fallières and Deschanel, have borne witness to the success of the Exhibition and of the Fête de la Paix et du Travail, and welcomed foreign nations.

FIRE AT HAKODATE.

(FROM OUR CORRESPONDENT.)

Hakodate, May 18.

At 12.40 o'clock this morning fire broke out in the Hakodate Public Hospital and totally destroyed all the buildings. The patients were rescued uninjured.

White mates in three moves.

GAME 592.

QUEEN'S GAMBIT DECLINED.

Harry Pillsbury, the American Champion, has been very busy with exhibition playing out in the Western States ever since the middle of December, and reports say that he continues to meet with unvarying success as well as a warm reception wherever he goes. Recently at Lexington, which is close to the home of Jackson W. Showalter, he engaged in a hard series of three exhibition games with the ex-United States Champion. All three games were drawn, a record which speaks well for the present form of the Kentuckian. At Lexington also Pillsbury gave a blindfold seance against twelve boards, of which the following remarkable game is a splendid specimen :—

White—Pillsbury.	Black—Amateur.
WHITE.	BLACK.
1—P to Q4	1—P to Q4
2—P to Q B4	2—P to K3
3—Kt to Q B3	3—P to Q B4
4—P takes Q P	4—K P takes P
5—P takes P	5—B takes P
6—Q takes P	6—Q to Kt3
7—P to K3	7—Kt to KB3
8—B to Kt5 (ch)	8—B to Q2 (a)
9—Q to K5 (ch)	9—B to K2

16—P to Q 5	16—Q R to K (ch)
17—B to K 3	17—B to Kt 4 (b)
18—Kt takes B	18—Q takes Kt
19—R to B (ch)	19—Kt to B4
20—P to Q R 3	20—K to Q2 (c)
21—Q to Kt 4 (ch)	21—K to Q
22—Q to Kt 5 (ch)	22—K to Q2
23—Q to B 5 (ch)	23—K to Q
24—Q to B 6 (ch)	24—K to Q 2
25—Q takes P (ch)	25—R to K2
26—R take Kt !	26—Q takes R
27—Q to K 6 (ch)	27—K takes Q
28—P takes R (ch)	28—K to Q3
29—B takes Q (ch)	29—K takes B
30—Castles	30—K to Q3
31—R to K	31—K to K2

32—P to K B 4, and Black resigns.

(a) If 8, Q takes B; 9, Q to K 5 ch and wins.

(b) If 17, Q takes Kt P; 18. Castles, Q takes Kt; 19 K R to Q B, and White should win.

(c) Better was P to R R4

GAME 593.

FRENCH DEFENCE.

Though Tschigorin will probably continue to hold his own in the small tournament between ten Russian players now proceeding at St. Petersburg, he has been defeated by one of Russia's young players—M. Lebedew. The game is appended. It forms another addition to the very large number of failures that have resulted from Tschigorin's move of 2 Q to K 2 in the French Defence. It is strange that the Russian master should persevere with a move which has proved unreliable, especially considering the fact that he has had very large experience of the misfortune which overtakes an obstinate and perverse player. Over and over again he has beaten Steinitz, both in tournament and matches, in the Steinitz Gambit, Evans Gambit, and in the Ruy Lopez, because the ex-champion persisted in lines of play which had proved failures; and yet Tschigorin himself allows his splendid talent for the game to be handicapped by adherence to the same wrong policy.

Game played in the St. Petersburg tournament between Lebedew and Tschigorin :—

White—Tschigorin.	Black—Lebedew.
WHITE.	BLACK.
1—P to K 4	1—P to K 3
2—Q to K 2	2—Q Kt to B 3
3—Q Kt to B 3	3—P to K 4
4—P to K Kt 3	4—B to B 4
5—B to Kt 2	5—P to Q 3
6—Kt to Q 5	6—Kt to B 3
7—P to Q B 3	7—Kt takes Kt
8—P takes Kt	8—Kt to K 2
6—P to Q 3	9—Castles
10—B to K 3	10—B to Kt 3
11—Castles	11—P to Q B 3
12—P takes P	12—P takes P
13—P to Q4	13—P takes P
14—B takes Q P	14—B takes B
15—R takes B	15—P to Q4
16—Kt to B3	16—Kt to B4
17—Q R to Q	17—Q to R4
18—K to Kt	18—R to Kt
19—Q to B2	19—R to Kt3
20—Kt to Q4	20—Kt takes Kt
21—R takes Kt	21—B to B4!
22—Q takes B	22—Q takes B P
23—Q to B2	23—Q takes R
24—R to Q	24—R takes P (ch)
25—Q takes R	25—Q takes R (ch)
26—Q to B	26—R to Kt (ch)

It will be remembred that Lebedew is one of the players brought into prominence by the Russian National Tournament. He has played this game right well, though of course his task was made easy for him by Tschigorin's persistence in the move of Q to K2, which renders this opening so pointless and inactive for the first player. After ten moves had been played, Black's superior development was manifest. The expedient of castling on the Queen's wing adopted by Tschigorin is always hazardous in close games. By 11, P to Q B 3 Black promptly obtained the open Q Kt file, on which he accumulated an attack with good judgment, culminating in Black's pretty move of 21, B to B4, which gave Lebedew a winning game.

Doshin Kaisha	28
Total	295

Raw silk shipped per steamer *Hamburg* :—

	Option.	Italy.	F'nce.	N'saki.
Nabholz & Co.	10	—	—	—
The Robison Silk Trading Co., Ltd.	—	20	—	—
Longin & Co.	—	—	30	—
Brown & Co.	—	—	—	10
Total	10	20	30	10

LATEST COMMERCIAL.

IMPORTS.

There is still almost complete inactivity in all lines, but there are no great reshipments, and the tone is a shade better. A large quantity of cotton turned up unexpectedly by the steamer *Winchester*, which had been almost given up.

COTTON PIECE GOODS.

	PER PIECE.

Brown Canton	5.50 to 6.90
White Java and Penang	6.90 to 8.50
White Refined	7.90 to 9.70

EXPORTS.

RAW SILK.

Considerable business in old silk for Europe. Fine sizes are scarce and comparatively dear, but full sizes are cheap and move freely. The New York market seems dead, but Lyons is taking full sizes filatures, while the demand for fine sizes is too great for supplies. Re-reels are scarce and there is scarcely any Kakeda.

QUOTATIONS.

Filatures—Extra, Fine	—
Filatures—Extra, Coarse	950 to 960
Filatures—No. 1, Fine	—
Filatures—No. 1, Coarse	900 to 910

Kakedas—No. 1½	
Kakedas—No. 2	
Kakedas—No. 2½	

WASTE SILK.

Prices are down, and some business has consequently been done in Kikai Kibiso. Nothing done so far in Noshi, but there is some medium quality Joshu on the market. Prices, however, are not as yet low enough to tempt buyers. Good quality generally is scarce.

QUOTATIONS.

Noshi—Filatures, Best	150 to 155

ITCHING
Burning Scaly
HUMOURS
Instantly Relieved by
One Application of
CUTICURA

1st Step — Bathe the affected parts thoroughly with HOT WATER and CUTICURA SOAP, to remove the crusts and scales, and soften the inflamed, cracked, bleeding, or thickened cuticle.

2d Step — Next apply CUTICURA Ointment, the great skin cure and purest of emollients, to allay itching, irritation, and inflammation, and soothe and heal.

3d Step — Lastly, take a full dose of CUTICURA RESOLVENT, to cool and cleanse the blood, and expel HUMOUR GERMS.

This SINGLE treatment affords instant relief, permits rest and sleep, and points to a speedy, permanent, and economical cure of the most torturing, disfiguring, itching, burning, and scaly skin and scalp humours, rashes and irritations, with loss of hair, when all other remedies and even the best physicians fail.

SAVE YOUR HAIR, HANDS And Skin by using CUTICURA SOAP, greatest of Skin Purifying and Beautifying Soaps, as well as purest and sweetest for toilet, bath, and nursery.

Sold throughout the world. PRICE, THE SET, 6s.; or, SOAP, 1s.; OINTMENT, 2s. 6d.; RESOLVENT, 2s. 6d. British depot: F. NEWBERY & SONS, London. POTTER D. AND C. CORP., Props., U. S. A. How to Cure Humours, free.

The Japan Weekly Mail.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 2ND, 1900.

BIRTH.

On the 31st May, at No. 90-B, Yamashita-cho, the wife of R. PFISTER, of a daughter.

MARRIAGES.

On May 24th, 1900, at H.B.M's. Consulate, Yokohama, by the Reverend E. Champneys Irwine, M.A., in the presence of H. A. C. Bonar, Esquire, Consul, MAY, second daughter of Charles D. Moss, Chief Clerk and Acting Registrar of H.B.M's. Court for Japan, to HERBERT, second son of Baldwin H. Bent, of Goodworth House, Andover, Hants.

Le 28 Mai, 1900, au Consulat de France, Hankow (Chine), de Mademoiselle GILBERTE JUBIN, de Yokohama à Monsieur JEAN PONTUS, Secretaire de la Municipalité française à Hankow.

DEATHS.

On the 20th May, at Stratford Lodge, St. Margaret's, Middlesex, FRANCES ANNE WALTER, in her 73rd year. Deeply regretted.

On May 31st, at 6.30 a.m., at 276 Settlement, Yokohama, J. M. SCOTT, aged 65.

SUMMARY OF NEWS.

The latest news is that Pretoria has surrendered; Kruger is a fugitive; Lord Roberts is dictating the terms of peace, —and the war is over.

By order of the Imperial Governor of Kiaochow the ports of Hongkong, Canton, Manila, Hoihow, and all Formosan ports have been declared infected with plague.

THE Cabinet is said to have resigned.

THE recent tragedies in Söul have caused a good deal of excitement in Japan.

THE condition of affairs around Peking has caused the Foreign Powers to land marines.

SHANGHAI has sent a third remittance, amounting to Rs. 45,000, to Calcutta for the Indian Famine Fund.

TELEPHONE exchanges will be working at Sendai, Kanagawa, Hiroshima, and Kumamoto from the 1st June.

A CHINAMAN recently in Hongkong, whilst attempting to catch a rat, was bitten on the hand. Eight days later the man succumbed to plague.

THE Department of Agriculture and Commerce is now preparing to despatch about a dozen inspectors to China on a tour of investigation into the actual condition of Chinese trade.

MR. MIWO MOTOHARU, Editor of the *Keihin Shimbun*, published in Yokohama, has been sentenced to one month's rigorous imprisonment and $10 fine on a charge of libel.

H.R.H. PRINCE ABHKARA of Siam, who was for some time in Her Britannic Majesty's Navy, has invented a new submerged torpedo-tube, which the Admiralty is said to have accepted from him.

A REGULATION for the inspection of summer beverages, a matter formerly in the hands of the Metropolitan Police Bureau, will shortly be issued by the Central Sanitary Association of the Home Department.

IT is reported that considerable ill-feeling has been engendered between the French and Russians at Hankow, owing to the interference of the latter with the road of access to the French Consular compound.

WE learn that on Sunday last, as Dr. Koch was driving along the Race Course road, the horse was startled by something and collided with a telephone pole. The animal was killed on the spot but the Doctor escaped injury.

IT appears that Lord Roberts' hobby is collecting horseshoes. He picked up one on the day that he entered the Orange Free State, a second the day before Cronje surrendered, and now a Portrush gentlemen has sent him a third.

SERITA (22), Hirano (28), and Sugiyama (23), three coolies, have been arrested by the Water Police and charged with having stolen from the *Hongkong Maru* on the 18th ult. certain Chinese fabrics, valued at *yen* 500. The men pawned the goods in Matsukagecho Itchome.

THE *Jiji* publishes a telegram from Nagasaki to the effect that the Russian steamer *Baikal* (4,670 tons) went ashore at Hirato at one o'clock a.m. on the 25th ult. Some damage has been done to her bottom, but the cargo and passengers are safe.

THE total quantity of champagne forwarded from the champagne district for the 12 months ending 31st March last amounted to 28,454,436 bottles. Stocks in casks and bottles equal 1,175,488 hectolitres, or about 146,936,000 bottles, considerably over five years' supply at present rate of consumption.

A VEIN of excellent coal has been discovered about 70 *li* from the Chang Yi gate of Peking, at a place called Tai-ping-ti. It lies very close to the surface and is easily obtained, and the villagers there have used it considerably and sold it in small quantities. It is said to be a smoke-less coal.

THE Russian steamer *Ussuri*, which has become a total wreck off Ikutsukishima, near Nagasaki, was formerly the N.D.L. steamer *Hohenzollern*, and was purchased by the railway company for service between Port Arthur and Vladivostock.

A DESTRUCTIVE fire occurred at Wuhu on 8th May when the office of the China Merchants' Steam Navigation Company was burned to the ground. The fire broke out in a godown and a strong wind blowing carried the flames to the offices. In one of the godowns was stored a lot of the valuable furniture of the late Viceroy Li Han-chang.

THE stranded German barque *Adelaide*, which went ashore at Jogashima on Monday last, and her cargo of 1900 tons Cardiff coal, were sold at auction by Messrs. Eyton & Pratt on Thursday morning. The coal was sold first and was knocked down to the Uchiyama Shokai for *yen* 5,400; the ship, an iron one, being sold with all her rigging and apparel, to Mr. Sasao for 10,000 *yen*.

IN the Chiho Saibansho, Yokohama, on Tuesday, the case brought by Otake Mohei against Messrs. Wonch & Co., for delivery of some 7,000 cases of alcohol alleged to have been purchased by plaintiff on March 23rd, 1898, was resumed. Evidence was given that a *banto* of the firm made the contract without the firm's knowledge. Judgment was given for the defendant.

AN United States War Office return issued on the 13th April states that the American military forces in the Philippines number 63,585 officers and men, of whom 30,847 are volunteers. General Miles, Commander-in-Chief, in the course of an interview at Philadelphia, expressed considerable doubt as to whether it would be possible to reduce that large army in the course of the next few months.

ENERGETIC measures are being taken against pirates at Woosung. The *Sin Wan Pao* says that about noon on the 19th ult. the native water-police and marines at Woosung succeeded in capturing three junks in which were some eighty robbers, both male and female, and several children. A large quantity of booty was also found. The prisoners were all sent to the Pooshan Magistracy for trial.

MR. H. PINCKNEY, who will be remembered in Yokohama, has won the Lawn Tennis Championship of Hongkong, defeating Major Griffin. The first set was closely contested, and, though Mr. Pinckney took the first two games, his opponent reached 4-3. Mr. Pinckney then won the set by taking the remaining games. In the second set he did even better, running to 5-1 and winning ultimately by 6-3. Rain then came on but the match was played out, and Mr. Pinckney took the third set and with it the Championship.

THE clamour against the establishment of minor banks is increasing, remarks the *Jimmin*. During January this year 23 new institutions were inaugurated with a capital of 1,452,000 *yen*; in February 29 more were added with a capital of 2,965,000; in March 144 were started with a capital of 635,000, and by April 30 were called into existence with a capital of 4,189,000 *yen*. Thus during four months new banks were established numbering 226 in all, their gross capital amounting to 10,271,000 *yen*—an average of only 45,000 *yen* per bank. Twenty are in Tokyo, 16 in Nagano, several in Chiba and one only in Osaka.

THE WAR.

Thursday, May 31.

The fighting of the Boers at present indicates demoralization. They do not make a stand anywhere. Again and again the same farce have been enacted; an announment of desperate resistance at some particular place and a complete collapse when the crucial moment came. Since Driefontein, the last combat on the way to Bloemfontein, the advance of a British force can not be said to have been resolutely resisted on even one occasion. At first there was to be a stand at Brandfort where the Doorn Spruit offers a strong line of defence. The Boers had plenty of time—a full month—to make their dispositions there. But on the approach of Lord Roberts they retired at once. Then Kroonstad was declared to be the seat of Government, and rumour spoke of strong entrenchments being prepared there. But again the enemy dispersed on the appearance of Lord Roberts' van. Then Heilbron became the citadel, and there a slight show of resistance was made, the capture of the place costing 75 casualties. Next the world was told of a great concentration on the Vaal River, and of a desperate resolve on the part of the Transvaalers to make a Spartan stand on the frontier of their country. But Roberts crossed the Vaal without difficulty. Then a new line of concentration—the Klip River, 24 miles north of the Vaal—was announced. But once more the advance of Roberts' army has not been sensibly checked. At first these retreats might be interpreted to imply some ulterior strategical purpose; but the only explanation they now suggest is that the Boers recognise the fruitlessness of resistance. There is just a possibility that they may put their backs to the wall at Johannesburg, for the capture of that town will mean the loss of their supplies of gold. But Roberts is forcing the pace so rapidly that unless their dispositions are already fully taken, they will probably do as they have done at every point along the road from Bloemfontein to the Klip. Such invertebrate tactics can not have President Kruger's endorsement. They suggest that the control has entirely slipped from his hands, and that the Burghers are thinking of surrender rather than of resistance. It is very doubtful, we think, whether they will even hold Pretoria resolutely, though it offers splendid opportunities for defense. They must know that if they allow themselves to be invested there, they will merely defer the end and bring fresh suffering on themselves. Still we know what these men can do when they plant their feet firmly, and the record they established at the beginning of the war forbids us to assume that no final struggle will be made.

The battleship *Goliath*, Capt. L. E. Wintz, arrived at Sheerness on 17th April from Chatham, on her way to China to relieve the *Victorious*. The *Goliath* was to embark her War Department stores, adjust compasses and carry out her commissioned trial before taking her departure from Sheerness.

UNREST IN CHINA.

Monday, May 28.

It appears that the Foreign Representatives addressed a joint note to the Peking Government with reference to the disturbance caused by the "Boxers," and that the Government, alarmed by the prospect of foreign troops being summoned to the capital, gave solemn assurances that strong and effective measures should be adopted forthwith. In pursuance of that promise they sent a small force to arrest the leader of the rioters at whose hands the Roman Catholics had suffered, but the result of this perfunctory measure was that some seventy of the soldiers, including their captain, were killed, and the Boxers received a fresh access of confidence. The people have now begun to be seriously alarmed, and numbers of them are flocking to Peking for refuge. These incidents seem to have roused the Authorities to decisive action. General Nich has received orders to lead a thousand troops against the Boxers, but as the latter are said to muster 3,000 strong, it is by on means certain that this step will prove effectual.

Tuesday, May 29.

It is not easy to credit the latest alarm circulated in China, namely, that a great movement is on foot having for its object the crushing of all foreigners except the Russians and their expulsion from the territories leased by them. Peking is said to be the headquarters of the movement; at its head are the Empress Dowager, Prince Ching, Prince Tuan, father of the heir-apparent, as well as other notables; it is believed to have an army of seventy-two thousand men, and the Boxers are to move in the van of its columns. The Peking correspondent of the *North-China Daily News* is responsible for the story. He justly apprehends that it will be received by the public with some incredulity, but he expresses a hope that his warning may not be dismissed as altogether idle. Indeed he goes so far as to allege that all Chinese of the upper classes have cognisance of the plot, and he quotes a conversation between the Empress Dowager and a censor named Wang, in which her Majesty is represented as questioning Wang about the genuineness of the Boxers' anti-foreign sentiment, and Wang as re-assuring her Majesty on the subject, and promising that, when the time comes, he will have no objection to leading the Boxers himself against the "foreign devils." To us this story seems to be made out of whole cloth. It is impossible to imagine that the Empress Dowager and her chief advisers entertain any such wild scheme, and when we hear, as we have just heard, that the Boxers are slaughtering imperial troops sent against them, we are driven to conclude that the Peking correspondent of the Shanghai journal has been unwittingly responsible for a sensational romance. If China be really seething with anti-foreign designs as some writers suggest, her condition is distinctly perilous, but history does not show that her rulers have ever been so short-sighted as is now suggested. Undoubtedly they must feel very bitterly the encroachments of which their country has been the victim during recent years, and they must indignantly resent the perpetual attempts made to exploit her natural resources in foreign interests. But experience must have dearly taught them the strength of Foreign States as well as their own military and naval impotence. For many years they have found safety in taking advantage of the mutual jealousies of Foreign States, and it is inconceivable that they should now unite the latter against them by adopting a policy of general hostility. But in truth we are treating the story too seriously.

Thursday, May 31.

There is no denying the gravity of the situation in China. Owing to the incompetence of the Authorities, or their supineness, the riotous Boxers have gradually made their way to the capital, and, by cutting the railway and thus isolating Peking, have created a situation of which ugly advantage may be taken before help can arrive. The distance from Tientsin to Peking is 90 miles, and as the troops that may be landed at the former place are marines, who, if they proceed to Peking, must travel on foot, carrying their own supplies, several days will be required for them to reach their destination. The disquieting question is, what use the Boxers will make of that interval. Rumour says that they are only three thousand strong, but as they have raised an anti-foreign flag, and as they enjoy the prestige of initial successes, we may take it for granted that their numbers would speedily swell to tens of thousands for the purpose of a raid upon the Foreign Legations and the foreign residences in Peking. On the other hand, the Government undoubtedly has ample forces at its disposal to crush these insurgents. It has hitherto treated them with almost contemptuous *insouciance*, but it can not afford to do so any longer, as several foreigners were among those assailed by the Boxers in their latest enterprise against a railway station, and a French citizen is said to have been wounded. We do not think that any credence should be placed in the rumour of official complicity with the Boxers, but, unless the Government in Peking shows efficient resolution at this juncture, it will lay itself open to all kinds of exactions. Already, indeed, a record has been established out of which many complications may grow. Japan is always at hand to furnish troops should the *émeute* assume dimensions seriously threatening foreign life and property. About 30 men have already been landed in Tientsin from the gunboat *Atago*; a man-of-war has been dispatched from Yokosuka, and doubtless the British, French, and German squadrons will furnish men as rapidly as possible. But, owing to the cutting of the railway, there must be an interval of suspense.

In view of the present situation in China the following notes from China papers are of interest:—

The *P. and T. Times* gives news of another fierce attack on Catholic converts in the vicinity of Pao-ting-fu, at a village called Kao-lo, 30 *li* from Tsing Hsien, and also at another place some 10 *li* from Tang-shu. No authentic details are as yet to hand, but there seems no room for doubt that at least sixty Christians have been killed. Some versions state that the Christians were holding service, when the chapel was attacked by Boxers, the doors fastened, and the building fired. This would easily account for the great loss of life. Others say that though a chapel was burnt, there was no one inside it. That a lamentable loss of life has in some way occurred at the hands of the Boxers is, however, quite certain, and the *Times* is glad to hear that the French Admiral is expected immediately. It hopes that the French Government will be roused to take very definite action in this matter now, and not pass it over. News is also to hand that the rioters are keeping things moving in Shantung. A native Christian was first killed at Kao-mi; then the German railway engineers were driven back; and lastly the Magistrate at Kao-mi has been murdered. They are evidently doing their best to test how far they can go unpunished.

A large number of women are, says the same

Digitized by Google Original from CORNELL UNIVERSITY

paper, joining the Boxers, and they profess to have second sight and prophesy. They have traced lost property and such like things, and great faith is consequently felt in them.

The Russian minister at Peking, according to the *N.-C. Daily News*, gave a grand banquet on the evening of the 11th instant at the Russian Legation, to which were invited nearly all the Ministers of the Tsungli Yamên, only those—one or two—who were known to be friendly to Great Britain being absent from the function. It is reported that the banquet was held to "rejoice over the completion of a secret understanding between the two empires in anticipation of certain movements of other Foreign Powers over the Boxer agitations." This explanation comes from reliable Chinese sources at Peking, who also state that the alleged secret understanding between Russia and China has made the former Power paramount at Peking, for the present at any rate.

Friday, June 1.

Japanese newspapers are practically unanimous in the view they take of the situation in China. They urge that Japan should combine with all the other Treaty Powers to insist upon the adoption of some effective measures by the Peking Government for the preservation of law and order. None of the leading Tokyo journals endorse the suspicion ventilated by foreign local papers that the Chinese Government not only is in sympathy with the Boxers but actually aids and abets them. That suspicion is nothing more than another illustration of the invariable tendency existing in some quarters to manufacture sensations out of the flimsiest materials. The Empress Dowager, in one of her proclamations, adopted language which, though its purpose was merely conciliatory, might possibly be construed in the sense of an indirect approval of the Boxers' motives. But any misgivings suggested by that document have now been dispelled by the latest edict, in which the Boxers and their doings are unequivocally denounced. We observe also, with satisfaction, that not one Japanese journal thinks it worth while even to notice the wild rumour circulated by a Shanghai journal that Russia is intriguing with China to promote the present disturbances. Publicists making such reckless statements must be classed with agitators of the worst type. Russia is sending a man-of-war from Tientsin to cooperate with the French, German, and English vessels which are on their way thither, and with the American and Japanese ships which, being there already, have landed marines for defensive purposes. The *Kasagi* (4,978 tons displacement), a second-class cruiser, has also been despatched from Yokosuka, with orders to steam direct to Tientsin, and as her speed is 23 knots, she will probably reach her destination on the 2nd or 3rd instant. Meanwhile the railway has been restored, and the Chinese Government, which appears to be now quite willing to avail itself of foreign assistance in quelling the rioters, is expected to run special trains for the purpose of carrying troops to Peking from Tientsin. We may be quite sure that Russian marines will contribute to the restoration of order as frankly and efficiently as any other troops. Of course it would be unwarrantable to conclude that these troubles will be settled without leaving any permanent mark on the situation. The Treaty Powers can not consent to have their nationals constantly exposed to such alarms and perils, and it may be considered necessary to go beyond the mere guarantee of the Chinese Government and to provide some effective and independent means of preserving good order. It is obviously in such incidents and their sequels that the danger to the integrity of the Chinese empire lies. There is still, we believe, a long interval to be traversed before the Treaty Powers agree to divide China into districts within which each of the Powers shall make itself responsible for the effective discharge of police functions. But that is the finale towards which events are evidently tending.

KOREAN AFFAIRS.

Monday, May 28.

Some very painful incidents have occurred in Sōul, and it appears possible that they may lead to troublesome complications. Our readers are aware that An, formerly a refugee in Japan, lately returned to Sōul and gave himself up, the result being that merely nominal sentence of exile was passed on him. It is considered certain that the Japanese Representative interested himself actively in An's behalf, and that the latter owed his immunity from severe punishment chiefly to that intervention. Encouraged, doubtless, by the result of An's surrender, Kwŏng, who also had been concerned in the affair of 1895, left his place of refuge in Japan and repaired to Sōul. Unfortunately for him no diplomatic influence had been exercised in his behalf, and, further, a new chief of police had just come into office who believed in the antiquated methods of administering the law. Kwŏng was seized and put to the lorture, with the result that he made various confessions about the incidents connected with the murder of the Queen, implicating An, among others. An was forthwith apprehended and also put to the torture—torture so severe that he was at one moment reported to have died under it, the unconsciousness produced by his suffering having borne a close resemblance to death. Many other arrests were made, and vigorous search has been commenced for persons implicated by the confessions of An and Kwŏng. Meanwhile, the Minister of War has memorialized the Throne that the extreme penalty of the law should be exacted in An's case, and the other Ministers of State, impelled by zeal which is, perhaps, easily explicable, are understood to be urging similar inclemency. But rumour alleges that some pledge about the safety of An had been given to the Japanese Representative, and that, on learning of the above incidents, Mr. Hayashi immediately sought an interview with the Emperor. The Korean Minister for Foreign Affairs, however, undertook to make representations to the Throne, and Mr. Hayashi left the matter in his hands, entrusting to him a representation containing six counts. It is not considered probable, however, that the intervention of Japan will effect much in this instance.

The murder of the Queen of Korea was such a hideous crime, so brutal in its nature and so merciless in the manner of its execution, that no one can sympathise with those concerned in it, whatever the sufferings it brings upon them. It is nevertheless shocking to think that in a country which has opened relations with foreign nations, which admits Christian missionaries to its capital, and which enjoys the privilege of associating with civilized peoples, these barbarous methods of administering the law should still prevail. Interference in the domestic affairs of a state is to be avoided as far as possible by foreign Governments, but it can scarcely be denied even by the most rigid stickler for international purism that when the judicial officials of a State are empowered to mangle the bodies of its subjects in order to force from them confessions which, being wholly untrustworthy under the circumstances, may destroy the innocent as well as the guilty, the interests of humanity warrant intervention by civilized Powers. Different customs suit different people, but judicial torture can not be right under any conditions and we can not see why a country which made such great sacrifices as England did for the purpose of abolishing slavery, should suffer incidents like those described above to occur in the Korean capital. If Japan put her foot down firmly to check such inhuman abuses, she would win the applause of the civilized world.

Some little excitement has been caused by a charge of thefts of lumber in Ulneung Island, which has been preferred against Japanese subjects. A commission of inquiry has been appointed, consisting of Japanese and Korean officials, and is now engaged conducting investigations.

A French citizen—whose transliterated name we can not decipher—has been appointed adviser to the War Office in Sōul. It is stated that the Russo-Chinese Bank has opened a branch in Sōul.

Tuesday, May 29.

A building has been rented in the vicinity of the Russian Legation in Sōul for the use of the branch which the Russo-Chinese Bank is about to establish there.

Mr. Pablov is reported to be about to make a visit to Port Arthur. His journey is spoken of as "secret," but why that adjective should be applied to it we fail to understand.

It is reported from Sōul that the Korean Government has not made any response to the remonstrance addressed to it by the Japanese Representative on the subject of An's being put to the torture. A telegram published by the *Jiji Shimpo* says that the Minister of Foreign Affairs, who charged himself with the duty of delivering Mr. Hayashi's protest, is suspected of having suppressed it. Meanwhile the unfortunate prisoner is said to be in a very bad way. He was already suffering from *kakke* at the time of being put to the torture, and, since his relatives are not allowed to convey wholesome food to him, his condition is decidedly precarious.

Wednesday, May 30.

The horrible tragedy just enacted at Sōul must shock the civilized world. There is, of course, a bare possibility that the death of An was due to the rigour of prison confinement and the pain of anxiety aggravated by a disease from which he was already suffering. But it is scarcely credible that these causes could have operated so quickly to produce a fatal result. We are driven to the conclusion that a man has been most barbarously tortured to death in the capital of a country holding relations with civilized nations. What aggravates the tragedy, if anything could aggravate it, is that the Emperor of Korea is understood to have pledged his word to the Japanese Representative in Sōul that An should be neither tortured nor executed. There is a homely old Chinese proverb which compares the word of a Sovereign to perspiration (*ringen ase*): once uttered, it can never be recalled. The Emperor of Korea now stands before the world a perjured monarch, unworthy to be again believed. His Majesty, as well as the Minister of Foreign Affairs who promised that the remonstrance of the Japanese Representative should be presented to the Throne, are said to be disposed

Digitized by Google Original from CORNELL UNIVERSITY

to make a scape-goat of the Chief Judge upon whom the duty of examining Kwŏng and An devolved. A miserable subterfuge of that kind is, perhaps, their only possible excuse. But it is an obvious falsehood. There can not have been any ignorance of what was in progress at the Department of Justice. The Emperor and all his Ministers knew perfectly well that a man's flesh was being torn and his bones crushed for the purpose of compelling him to confess a crime which he might or might not have committed. They refused to permit the examination of the corpse by a foreign physician, and they winked at the fact that the Chief Judge, without waiting for a warrant from the Throne, ordered the immediate decapitation of Kwŏng and An, though torture had failed to wring a confession from the latter, and though the executioner had to perform his office on a corpse in the case of one of the men at least. The whole incident is an abominable outrage. There is no law of morality or principle of expediency that requires the civilized world to stand a silent spectator of such horrors. We earnestly hope that Japan will not relax her efforts to contrive some effectual guarantee against any repetition of crimes so shocking. Her own hands were not clean in this matter thirty years ago. But she appreciated and obeyed the necessity of respecting the moral code of the nations with which she had established relations of friendship, and she has therefore a kind of prescriptive right to force Korea into the same civilized route. If she succeeds, these unhappy men, Kwŏng and An, will not have suffered a shocking death in vain. Their connexion with the murder of the Queen—if, indeed, they were connected with it—will have been amply condoned should their fate prove the means of rescuing their country from judicial barbarism.

It is stated that Mr. Sands, adviser to the Korean Foreign Office, has memorialized the Government, urging the imperative necessity of completely remodelling the laws and judicial procedure of the country, not only in the interests of civilization, but also because the independence of the empire is exposed to constant danger by the provisions and methods now in force.

Thursday, May 31.

It is evident that the Korean Government seeks to evade all responsibility for the murder of An. Various telegrams have reached Tokyo, and the gist of them is that the Minister of Justice will be dismissed from office, that the Chief Judge who tried the case will be sentenced to three years' transportation, and that the other officials connected with it, including the Superintendent of Police, will receive various punishments ranging from 10 years' transportation to fines. Such is said to be the decision arrived at by the Government; but none of these penalties has yet been inflicted, and it is very doubtful whether they will be considered satisfactory by Japan. The sentences may be merely farcical, and they probably would be, for no one questions that the Korean Government was perfectly cognisant throughout of the measures adopted by its judicial officials, and if it makes scapegoats of them now, the world will not be deceived. The Japanese Representative in Sŏul seems to be exerting himself vigorously in the matter. This empire is directly concerned, for it is certain that a pledge of some kind had been given with regard to the treatment of An. Rumour alleges that it was a pledge in the sense that no punishment heavier than transportation should be inflicted on him. We can not answer for the truth of that version, but it is at any rate certain that after his return to Korea An was sentenced to three years' transportation. Up to that point the Korean Government kept its alleged promise, and there is no reason to suppose that it would have been guilty of bad faith had not the return of Kwŏng placed it in possession of fresh evidence. Kwŏng went back to his country, relying solely on the account he had received of An's treatment. No diplomatic intervention had been exercised in his behalf. He seems to have supposed that, having been implicated in the same trouble as An, the same penalty would be inflicted on him. But the event showed that he did not understand his own nationals. He was seized and put to the torture, and the statements wrung from him in his agony led to the recall of An, who also was put to the torture, with the result known to our readers. There is some doubt about the crime charged against An. One story has it that he had been connected with the murder of the Queen in 1895; another, that he took part in the plot of 1897 to dethrone the Sovereign. The truth will probably remain obscure, for no reliance whatever can be placed on the so-called confessions made by either An or Kwŏng under torture. As a matter of course it is denied in some quarters that torture was employed at all. The judicial officials are understood to be adopting that line of defence. But they refuse the Japanese Representative's application to have the body examined by an independent expert. It appears, further, that Mr. Hayashi has not yet succeeded in obtaining audience of the Emperor, before whom he desires to lodge a formal protest. He has a difficult task, for even a day's delay may have been sufficient to enable the Korean Authorities to destroy all conclusive evidence of the crime. The Pedlars' Guild, for example, are reported to have made a raid upon the jail where the bodies were lying, with the avowed object of subjecting them to the process of mutilation known as the "eight-piece division." They did not succeed, but they may still succeed, and, of course, after the corpses had passed through such an ordeal, a medical examination could not furnish any explicit proof of the treatment to which the men had been subjected during life. We have confidence, however, that Mr. Hayashi will not allow himself to be put off with subterfuges. He has a strong case and he represents the interests of civilization. It really matters very little, except as a point of international etiquette, whether the Emperor of Korea adopts the course attributed to him by rumour, namely, the sending of an autograph apology to the Sovereign of Japan, or even whether the officials responsible for the fate of An and Kwŏng are punished in fact or only in name. The main consideration is that Korea must be raised out of the judicial abyss where such horrors are possible. It is to that end that Japan will doubtless direct her efforts.

It seems scarcely worth while, except as a matter of amusement, to notice the criticisms published by the *Yomiuri Shimbun*. That journal loses no opportunity of attacking the Minister of State for Foreign Affairs, and in this instance its indictment is comical. It maintains that Viscount Aoki should have exacted from An a pledge that, in consideration of the asylum granted to him by Japan, he would strictly observe all the behests of the Foreign Office in Tokyo, and never leave the country without permission. That is a very novel view of the duties of a refuge-giving country. Apart from the fact that Viscount Aoki was not in office when An fled to Japan, the *Yomiuri* seems to forget that such pledges are not sought from political refugees in any part of the world, and that their exaction would invest the question of asylum with an entirely new character. Truly it is humiliating to the intelligence of Japanese journalists that such allegations should find their way into editorial columns. We do not recognise in them the sound judgment that often marks the *Yomiuri's* comments on foreign policy.

Friday, June 1.

It seems to be now established beyond the possibility of doubt that the political refugee An was tortured to death by Korean judicial officials. Two Japanese physicians viewed the body, and found evidences of terrible treatment. Details are published by a Tokyo newspaper, but they are of such a nature as to forbid reproduction. We can only say that they indicate the perpetration of shocking barbarities. Mr. Hayashi, Japan's Representative in Sŏul, is pressing the Government with a view to securing the adoption of some measures which shall effectually prevent the recurrence of similar atrocities. The Minister of Justice and the Chief of Police in Sŏul, who were sentenced to terms of transportation for their share in the tragedy, are said to have memoralized the Throne protesting against a discrimination in their disfavour, seeing that the whole Cabinet was cognisant of the steps adopted towards An and Kwŏn. Doubtless this protest will ultimately have weight, but the Emperor appears to have rejected it at present.

One of our Tokyo contemporaries publishes an interview with certain Korean refugees now in Japan. They assert that the Japanese Government was flagrantly deceived by the Korean Authorities, and they endeavour to fix the indirect responsibility for this incident on the shoulders of Russia, whose influence, they declare, is paramount in Korea, and who might have prevented the murder of An and Kwŏn, had she been so minded. Such wild assertions call for no special comment. No Government can guard against deception if its *vis-à-vis* has no respect for a solemn engagement, and whatever the Koreans themselves may imagine, the idea that Russia would have contenanced a judicial murder, however indirectly, is extravagant.

THE WEPENER RAID.

The singular raid made by the Boers into the eastern section of the Free State evoked much curious comment from American journals. At first they wrote as though some stupendous change had occurred in the military conditions. They spoke of Roberts's march having to be suspended; of his communications being severed, and of his reputation being impaired—the reputation made on the plains of Afghanistan only to be destroyed on the veldt of South Africa. Then when the Boers failed to accomplish anything beyond ambushing part of a column and snapping up a nomad detachment, these journals were by no means content to confess that their first deductions had been erroneous so far as concerned the impuissance of the British General. They now concluded that Roberts had set a trap to lure the Boers to destruction, and that their ultimate escape from the trap reflected as much discredit on his strategy as did the initiatory success of their enterprise. "Four thousand Boers," said the Baltimore *American*, "march directly into the enemy's country, and remain there for weeks, doing an immense amount of damage,

Digitized by Google Original from CORNELL UNIVERSITY

and when a most carefully prepared trap has been arranged for their capture, in which one half of Roberts' Army is engaged, they leisurely march off with all their prisoners in their hands." The New York *Tribune* writes in the same strain:—"It is not always easy to catch your prey, however; not even after you have got him into your trap. Between the springing of the trap and its complete closure there is sometimes a chance for the intended victim, if he be sufficiently alert and agile, to make his escape; or there may be cracks and crevices in the walls of the trap through which he can force his way. In the present case something of the sort appears to have happened. The Boers are as expert in getting out of traps as they are in setting traps for self-confident foes. After snapping at the bait and doing incalculable damage, they have slipped out of the trap between the springing and the fall, and are now in full flight towards the northern hills, and the trappers have had to abandon the trap and give chase—a stern chase, which is proverbially a long one." These gentlemen write as though a campaign were something like a game played on a library table, the whole field of operations within range of a man's span. They do not recognise that the Boers had for their operations a road running 80 miles eastward of Bloemfontein, and that had Roberts really employed one half of his army against these raiders, he would have been doing precisely what they wished and wanted. When competent critics come to compile the story of the war, we believe that they will agree in regarding as one of his most sagacious acts Roberts' method of treating the Wepener and Smithfield raid. There is no doubt that President Kruger attached capital importance to this operation, and that he had it in mind when he announced that in a week's time Bloemfontein would be recaptured. Bloemfontein was always declared to be incapable of defence, and in that hypothesis the Boers found justification for abandoning it without a struggle. But the same reasoning applied to its tenure by the British:—they too should have been easily compelled to evacuate it. Instead of resorting to the method of direct attack, however, the Boers, thought that they could effect their aim by manœuvreing against Roberts' line of communications from among the mountains on the east, where they would themselves be virtually safe against being cut off. They made the essay and built high hopes on it. But it proved the greatest fiasco of the war in everything except their method of retreat. Wepener was held by about four hundred English irregulars. Four thousand Boers undertook the task of reducing it. They had a full fortnight for the operation, and they failed signally. As for the other force of unknown strength—probably ten or twelve thousand—that moved *viâ* De Wets Dorp to Smithfield and Rouxville, it never got within striking distance of the British communications. The enterprise, brilliant in conception and bold in execution, was foredoomed to ill success so long as the British General, recognising the discrepancy between the Boers' purpose and the force they employed to effect it, declined to be decoyed into changing the whole programme of his campaign. It was precisely there that Lord Roberts showed his perspicacity, and we entertain no doubt that the object lesson furnished by his imperturbability and their total failure to effect anything sensible against his communications, terribly disheartened the Boers, and may be regarded as the proximate cause of the faint-heartedness subsequently shown by them.

THE CABINET.

Wednesday, May 30.

Various rumours are circulated with regard to the conferences that are taking place between the leaders of the Liberals and the Cabinet, but it is plain that the information possessed by the journals of Tokyo is of the vaguest description. Nothing can be definitely asserted except that there is a movement in favour of giving a certain amount of Ministerial representation to the Liberals, and that the matter is receiving the earnest attention of the elder statesmen. Under the circumstances all the goings and comings of men in office and of influential politicians become invested with unusual interest and are recorded minutely in newspaper columns, the impression produced being that a state of great unrest and commotion exists. So far as we can perceive, however, the perturbation and excitement seem to be chiefly on the part of the newsmongers. Two conferences are said to have taken place between the Liberal leaders and the Cabinet, and the third is believed to be fixed for the afternoon of the 31st instant, by which time a decision of some kind will probably be arrived at. Anything like a break-up of the present Cabinet would be, in our opinion, an unfortunate event for Japan, and it is extremely difficult to understand the reasons advanced in favour of such an event. That a political party should seek to expel from office a Ministry whose programme and procedure it could not endorse, would be natural; but the action of the present Cabinet does not show any points of conflict with the views of the Liberals, whose support it has hitherto enjoyed, and the demand for a change appears to be based solely on the ambition of the leading Liberals to wear the honours of office. It is not a commendable result of party enterprise, but we presume that the personal equation has to be admitted into political calculations here as elsewhere.

One of the stories most persistently circulated is that a serious difference of opinion has arisen between Count Matsukata and Admiral Yamamoto, the latter advocating a substantial increase of the Navy, and the former declaring himself unable to provide the required funds. But even if that rumour be correct, it belongs, obviously, to a category of events different from those now tending to a change of Ministry.

Friday, June 1.

It is alleged on seemingly good authority that Marquis Yamagata has resigned, and that the Emperor asked first Marquis Ito and afterwards Count Matsukata to form a Cabinet, but both statesmen declined. There remains, therefore, no course except a consultation of the elder statesmen in the presence of the Sovereign.

AN UNLUCKY VOYAGE.

The torpedo-destroyer *Niji* arrived safely at Yokosuka on the 26th instant. She seems to have had a most eventful voyage. She left Southampton at the same time as the *Usugumo*, namely, the 11th of February, but was many weeks longer *en route*. Her first mishap was of a trifling nature, but it necessitated putting into Portsmouth for repairs. Then she burst an air pump before reaching Gibraltar. Fortunately the agents of her builders, the Yarrow Company, were able to supply a new pump at Malta, and she resumed her voyage. Then something went wrong with a condenser, and she had to stop for a time at Port Said. Further repairs were effected at Perim, but things continued to go wrong, and in the Indian Ocean she was twice unable to work her engines for periods of 7 hours each. Next, another trouble arose in connexion with a condenser. It appears that the explosion of the air-pump was responsible for all the mischief, some pieces of metal having been driven among the machinery. Finally at Singapore the engines were completely overhauled, and thereafter the little craft was able to prosecute her voyage without further mishap. Captain Takurabe and the crew that navigated the *Niji* are certainly to be congratulated on their success in bringing the vessel safely to her destination in the face of such difficulties.

THE QUEEN'S BIRTHDAY.

Her Britannic Majesty's Chargé d'Affaires and the Honourable Mrs. Whitehead gave a reception yesterday in honour of the Queen's Birthday, the festivities having been postponed from the 24th on account of rain. An entirely novel feature was introduced in the shape of a May-pole dance, which looked very picturesque and was much admired. Refreshments were served in the Legation, and the band of H.M.S. *Aurora* contributed to the pleasure of a very delightful party.

The *Kokumin Shimbun* has a most appreciative article with reference to the Queen's Birthday. It says that Her Majesty is admired and loved not by British subjects only but by the whole civilized world, and that the virtues of her life and the wisdom of her administration have been such as to entitle her to be called an incarnation of a deess.

The *Jiumin*, though not writing directly with reference to the Birthday, evidently makes it the occasion of an article congratulating England on the successes she is now winning in South Africa, and expressing the highest admiration of the qualities her people have displayed in prosecuting the war. Our contemporary believes that so far as the East is concerned, Japan's attitude of friendship has been of some assistance to Great Britain, and expresses the hope that these incidents may be the means of drawing the two countries still closer together.

Owing to the miserable weather, there was but a small attendance at Her Majesty's Consulate, Yokohama, on Thursday, in response to Mr. H. A. C. Bonar's invitation. About midday, just as the warships in harbour were firing a royal salute, the band of H M S. *Aurora* played the National Anthem, a squad of blue-jackets from the same vessel presented arms to the unfurled colours; then three rousing cheers, led off by Capt. Bayly, R.N., were given for the Queen, after which a verse of "God save the Queen" was sung and refreshments followed. Short speeches were made by the Consul and Capt. Bayly, and healths were drank. Mr. Bonar took occasion to bid his fellow nationals farewell, in the course of his speech. Mr. Bonar, who goes on leave of absence, proceeds via Siberia. Mr. R. G. E. Forster will act as Consul temporarily, we understand.

Two sailing races came off in the afternoon, the weather having cleared up. The first was for the 39-raters, for a prize presented by the British Minister, and was won by the *Haidee* with 2m. and 40s. to spare on her handicap. The 12-raters' race for the Albion Cup was won by *Titania*; *Dora* being second.

LIBERALS AND THE FINANCIAL PROBLEM.

The Liberal leaders, having given careful consideration to the financial conditions of the time, have arrived at conclusions which appear to us to do credit to their sagacity. They allege, in the first place, that the growth of the country's trade is a healthy sign; that the preponderance of imports does not constitute a cause of uneasiness, and that no connexion exists between the volume of the currency now in circulation and the appreciation of commodities. All these conclusions have been frequently advanced in our own columns, and we are unable to see that any sound reasons exist for different views. The Liberal leaders then proceed to recommend remedies for the stringency that exists in the money market. Their advice is that extension should be given to the operations of the industrial bank system; that the redemptions of national debts indicated in the Budgets should be effected by means of cheap money obtained abroad; that foreign capital should be introduced; that the Bank of Japan should refrain from seeking to control the situation by raising or lowering its rate of interest, and that the Government should proceed resolutely with its programme of *post-bellum* measures.

It will be observed that these recommendations do not contain any reference to foreign ownership of real estate: apparently the Liberal leaders are unable to arrive at a definite conclusion on that point; or—and this seems to us the more tenable supposition—they are disposed to reserve the concession, as advised by the *Jiji Shimpo*—in order that it may be used to obtain from foreign governments some change in the tariff conditions which now prevent Japan from raising a large revenue from sugar or *sake*. It falls squarely within the range of inviting and legitimate enterprises that she should endeavour to obtain a sufficient supply of sugar from her new dominion of Formosa, and she is evidently anxious to foster that industry by means of a tariff which would exercise a protective as well as a revenue-producing effect. The fallacy of protection disappears, of course, when the interests of the consumers cease to be considered. Hence the Formosan sugar programme assumes a more or less reasonable aspect even from the point of view of pure economics. But it can not be carried out while the Conventional Tariff remains operative in its entirety. Very likely the Liberals approve of the scheme that an exchange should be effected between the privilege of real-estate ownership, on the one hand, and tariff modifications as regards both sugar and fermented beverages on the other.

The main feature of the recommendations is that relating to the redemption of the national debt by means of foreign money; in other words, the conversion of the present domestic loan into a foreign one. That is a very important and far-reaching suggestion. It is put forward unobtrusively and without elaboration, but it involves a great and sweeping change. The Government stands indebted to the people in the sum of 400 million *yen*, in round numbers, a large part of which has been spent upon railways and other useful public enterprises. Foreign observers have watched with outspoken uneasiness this gradual fixing of the people's floating capital. Attention was called to it persistently in these columns between 1884 and 1893, though we fully recognised at the time that serious obstacles stood in the way of any recourse to the European money market. These obstacles have now disappeared, whereas Japan stands in the position of having used all the money in her purse, and being sadly in want of more for the purpose of prosecuting many profitable enterprises. The Liberals recommend a foreign loan to redeem the domestic debt, the service of which would thus become less onerous, while, at the same time, large sums of capital would be freed for industrial and commercial ends. There is no doubt that Japan can obtain money abroad on easy terms if she pockets her pride and agrees to give security. The State railways suggest themselves as an immediately hypothecatable asset. At one time the Liberals were all in favour of the Government's purchasing the private railways, but their method of carrying out that proposal would not have added anything to the assets really available for the country's material development. It is significant that the railways do not figure at all in their latest list of suggestions.

CONVICTIONS.

There has already been a *Te Deum* in St. Paul's Cathedral for the relief of Mafeking, and there will doubtless be thanksgiving services throughout the British dominions when peace is restored. On the other hand, we see President Kruger and his people humbling themselves before the Deity, confessing their sins and praying to be delivered from the oppressor. At first one is disposed to ridicule this last recourse of the Boers. They invaded British territory and formally annexed all parts in which they gained a footing. Now their own territory is invaded and annexed by these same British, and they cry to the Almighty against the oppressor. If Heaven concerned itself more intimately in the affairs of men, it would vouchsafe to them a larger measure of enlightenment, so that they might discern and choose the right in good season, instead of importuning God for aid which cannot be vouchsafed to both sides without injustice to one. But these obvious reflections can not hide from us the sadness of the situation in Pretoria. There is no room to doubt that the Boers have firmly believed throughout in the tutelage of Heaven. President Kruger's faith has been magnificent. He received, as he honestly supposed, a revelation that the Almighty was with his people, and he never wavered in his conviction that success would crown his cause. But now the enemy are at the gates, and he has to abandon his faith and confess himself a false prophet. It is a cruel necessity for the old statesman. He may be rugged and uncouth; he may even be deficient in some of the moral principles that grow out of a more complex civilization; but every one of us must admit that were he an Englishman we should be proud of him, and, though his sturdy obstinacy has cost the lives of many of our countrymen, we can not hide from ourselves that he is a grand figure, or refuse to sympathise with the sorrow and humiliation that have overwhelmed him in his last years. It is indeed probable that the issue of this war will find Her Majesty's subjects singularly free from anger against the men with whom they have waged such a strong struggle. If any of us searches his heart, he will surely discover there a well-defined wish that some way could be found of making things easy for the Boers. There is, we fear, no such way. That they will be ultimately happy under British rule, and will enjoy the fullest personal independence, is certain. But we should all be infinitely gratified if something more could be effected for the sake of these sturdy burghers, who have shown themselves at once brave and kind-hearted.

THE IRON FOUNDRY.

A ceremony by way of inaugurating the new Iron Foundry took place in the Imperial Hotel on the afternoon of the 28th instant. Professor Wada, under whose direction the buildings have been erected and the plant set up, made an interesting speech, in the course of which he said that the Foundry would be able to manufacture forty-five thousand tons of Bessemer steel and the same quantity of Martin's annually, and that active measures were now being taken to construct a good harbour at Wakamatsu. The ore available for smelting was believed to contain 50 per cent. of iron; but assuming that the percentage would average only 40; that 1½ tons of coke would be burned for every ton of ore, instead of the usual allowance of 1 ton of the former; that the output of the furnaces would be 170 tons, whereas their estimated capacity was 250 tons, and that the cost of labour would be at least as great as that incurred in any foreign country, the calculation was that each ton of Bessemer steel would be produced at a total outlay of 56.90 *yen*, each ton of rails at the same price, and each ton of steel plates at 71 *yen*. Rails gave the smallest profit, yet, even assuming that only rails were manufactured, the net earnings of the factory should be 800,000 *yen* annually.

The German expert who has been engaged to superintend the works also made a speech, in which he expressed himself satisfied with the quality of some of the Japanese iron, and approved of the site chosen for the foundry, since the most important point was that the works should be in the immediate vicinity of coal mines.

THE LAND QUESTION.

It was easy to anticipate the attitude that the *Jiji Shimpo* would take with reference to the question of foreign ownership of land. It urges that the concession should be made with all possible speed, and it reminds its nationals that there is a great difference between the ordinary right of ownership and the right of eminent domain. The latter always remains with the Sovereign. As to the advantages likely to result from making this concession, the *Jiji's* view is that, in the first place, it would bring into the country a considerable sum of money in the form of the price paid for land by foreigners. In the second, it would enable foreigners to start enterprises which would not only help to develop the national resources, but would also bring much capital and give employment to many persons. In the third, it would finally dispose of the land question which is now agitating the foreign community in the former Settlements, and is tending to create needless friction. In the fourth, the concession might be employed as a lever for obtaining tariff changes which, while not inflicting any real hardship on foreigners, would greatly assist Japan's fiscal arrangements.

Were this privilege of land ownership conceded, a very interesting question would arise as to the tenure of the former settlement lands. Would the foreign residents desire to acquire titles of ownership, or would they prefer to continue the system of perpetual leases?

Digitized by Google Original from CORNELL UNIVERSITY

"SYSTÈME REPRÉSENTATIF AU JAPON."

Mr. Furuya Hiramatsu, *Docteur en Sciences Politiques*, presented as a thesis to the jury of the Brussels University, in order to obtain his grade of *Docteur*, a work on parliamentary government in Japan, and subsequently published it. It is a book of some size—260 pages— and not only does it cover a wide range of subjects, but also it is written in admirably clear French, which does great credit to the literary ability of the author. Mr. Furuya sets out with the question, is the representative system a result, pure and simple, of the introduction of Occidental civilization, or did it exist in a rudimentary form in old Japan? To answer that question it is necessary for him to review the political history of the empire, which task he performs in a brief but comprehensive manner, arriving at the conclusion that no rudiments of representative government are to be found there. So far as form is concerned, there cannot be any doubt as to the correctness of that view. But we think that absolutism can not be shown to have existed practically either in the imperial administration or in the feudal, and that the invariable tendency of the educated classes was to exercise the power whose ultimate depository was the Sovereign or the *Shogun*. However, our business here is with Mr. Furuya's opinions, not with our own. After his view of pre-Restoration history, he goes on to trace with great accuracy the course of events that led up to the promulgation of the constitution and the establishment of the Diet, and he then analyses the functions and procedure of the Diet, the law of election, and in short, everything relating to the parliamentary system, with the exception of the crucial problem of the Cabinet's responsibility, which, perhaps wisely, he leaves undiscussed. He then gives the story of the Diet's doings session by session, and finally formulates an interesting conclusion, namely that "representative government in Japan promises to have a sufficiently brilliant future." "Thanks to it," he proceeds, "a nation which lived twenty-five centuries under a regimen of absolutism, now participates in its own legislation and oversees its administration. Thanks to it, liberty of the press has been considerably extended, the arbitrary law of peace-preservation abrogated, the financial administration improved, and more than 400 laws have been voted or modified according to the will of the nation." But Mr. Furuya says nothing of the abuses that have come in the train of this system. We admire his optimism. It is at the close of his summary of parliamentary virtues that he alludes to the question of party cabinets in a somewhat diplomatic fashion:—"From the parliamentary point of view the Ministers are to-day absolutely convinced that, despite the constitutional arrangement of exclusive responsibility towards the Emperor, they can not fully discharge their duties without basing themselves on a parliamentary majority."

We should like to speak fully of this excellent work, but our space forbids us to do more than give to our readers a brief idea of its contents. It is unique as being the first full and scientific account of the development and results of constitutional Government in Japan and for that reason we recommend it to all interested in this subject.

THE PEST.

Thursday, May 24.

A doubtful case of pest is reported to have been discovered in the train which arrived at Shimbashi at 2.25 p.m. on the 23rd instant, having left Kobe at 6 p.m. on the preceding day. When the passengers had quitted the station, it was found that one man remained in a third-class carriage, being too ill to leave it. His symptoms suggested pest, and he was removed to hospital. It appears that he is a native of Tamba, and that he was travelling in connexion with a visit to the temple Zenko-ji.

From Kyoto also comes news of a suspicious case. The sufferer is a student of the common school, a lad fifteen years of age. Our readers will, of course, have observed that there is somewhat of a scare at present about the pest, and that suspicions are excited where no real grounds for alarm exist. It is permissible to hope that the above two instances may be of that character.

Friday, May 25.

The case of supposed pest in Kyoto proves to be a false alarm, and as nothing more has been heard of the Shimbashi case, we may presume that it also belongs to the category of mistakes.

Monday, May 28.

Two fresh cases of pest are reported from Osaka; one a girl of 15 and the other a lad of 19. The latter's younger brother had already died of the plague.

From Hamamatsu also a report has been received of a case which appears to be pest.

The record for the 26th instant shows another case in Osaka. A child of seven was taken ill on the 24th instant and expired on the 26th.

Tuesday, May 29.

Another case of pest is reported from Osaka. The victim, a child of seven, was attacked on the 24th instant and died on the 26th. The rapidity with which death follows seizure is terrible. There has not been a single instance of recovery since the recrudescence of the malady.

It is alleged that some trouble has been caused by the injudicious use of serum. Instead of proceeding by slow stages, a physician injected a double quantity in the case of the manager of an Osaka factory, and a somewhat severe attack of fever resulted. There had been a death from pest among the employés of the factory, and special precautions were for that reason adopted.

Wednesday, May 30.

Two new cases of pest are reported from Osaka, one a man, the other a woman. The former ended fatally almost at once; the latter is under treatment.

Niigata Prefecture also reports that the plague bacillus has been found in the carcases of rats at Shibata-mura, and that stringent sanitary precautions have been adopted. Shibata is a little place among the hills. Its invasion by the malady is very singular.

A case of pest is reported from Hamanogori in Shizuoka Prefecture.

Friday, June 1.

A child of 8 has died of pest at Osaka. Since April 12th, when the disease made its re-appearance, there have been 31 cases in all, and only one is expected to recover.

A suspicious case is reported from Nara also. A traveller who arrived there from Osaka was attacked by high fever, and has developed symptoms of a disquieting nature.

THE ORCHESTRA OF THE IMPERIAL HOUSEHOLD.

Among the orchestras in Tokyo composed entirely of Japanese musicians, that of the Imperial Household, although the oldest organization of its kind, is probably the least known to the general public. It appears to have been formed by the voluntary action of several members of the military band instituted a score of years ago for the service of the Court; but though it has always included many of the best performers on their respective instruments that Japan has produced, circumstances have hitherto been unfavourable to its thorough development. It has stood in the somewhat anomalous position of possessing a number of the most skilful players in Japan, while lacking the disciplined practice required to demonstrate its latent capacity. It is a significant fact that, for all orchestral experiments attempted in the capital, recourse to the musicians of the Household has been necessary. Thus the concerts given this year by the Academy of Music—which has no orchestra exclusively its own,—could not have been undertaken without important aid from the body of performers attached to the Court. The Meiji Ongaku-kwai, whose entertainments have attracted attention during the past twelve months, likewise contains a good proportion of delegates from the same quarter. It has been the lot of the Household band to contribute bountifully,—not to say indispensably—to the success of more than one public enterprise, without ever receiving due and sufficient recognition on its own behalf.

The superior proficiency of most of its members has at least one natural explanation. The force of singers, dancers, and instrumental players in the Imperial service is a very ancient institution, and for centuries, we believe, the incumbents have held their positions by hereditary privilege. Frequent marriages and adoptions between members of the same calling have brought the whole combination almost to the condition of one large family, a curious illustration of which is found in the circumstance that the orchestra we are considering, comprising not less than twenty-five altogether, has only four or five surnames for the entire company. The uninterrupted continuance of an occupation through many generations may be open to certain objections, but it has the immeasurable advantage of steadily increasing the efficiency of those engaged in the craft. It is true that musical culture according to old Japanese customs has a different meaning from the artistic culture of modern Europe; but the faculties growing out of constant familiarity with musical sounds, and of steady practice with instruments of whatever description, are unquestionably quickened and enlarged by the system of hereditary training; and when the time came for the introduction of foreign methods, the students of the Kunaisho were incomparably better prepared than any others to adopt them. Their first essays were in what is commonly called military music, performed by wind instruments of wood and brass, in the use of which they were diligently and faithfully instructed by Mr. Eckert, to whom for many years the tuition of various military bands was entrusted. If it had been possible for him to give undivided attention to a single organization, that of the Household, for example, the results produced would have been even more satisfactory than they actually were; but he was under obligation to divide his labours to an extent which lessened their effectiveness in particular cases.

Digitized by Google Original from CORNELL UNIVERSITY

After attaining considerable dexterity in brass and wood, the musicians were eager to enter the higher orchestral field; and several of them commenced to study the instruments of the violin family before any provision was made for the establishment of a regular orchestra. If we are rightly informed, this new departure was largely an independent proceeding. There was no teacher at hand, so in the beginning the pioneers taught themselves and one another. No foreign violin instructor, in fact, has ever been employed in the Kunaisho school, which in this respect has been less fortunate than the Academy of Music. But the students struggled forward undeterred, until a certain number succeeded in placing themselves, by their unaided exertions, quite above the rivalry of other institutions. An orchestra of rather imperfect material was formed some eighteen years ago; from time to time additions have followed, and several attempts have been made to place it upon a tolerably firm foundation. These efforts have not been as successful as might have been hoped from the ability of the individual performers. The absolute necessity of careful and rigorous training has not been taken into account, nor has it, apparently, been perceived that a dangerous error is made in ever putting the leadership into Japanese hands. No native of this country has yet sufficient knowledge or experience to qualify him for the direction of orchestral music,—or, indeed, of foreign instrumental music of any description. All such experiments are injurious, and, for the present, must inevitably check true progress. The time will come when Japanese experts can safely and profitably undertake this work; but it has not yet arrived, by any means.

Early this year it was decided that serious attention should be given to the needs of the Household orchestra, and that an instructor should be expressly engaged for its benefit. This step is understood to have been taken chiefly, if not solely, by the advice of Baron Sannomiya, Grand Master of Ceremonies, whose liberal spirit and broad appreciation of the expediency of assimilating such foreign methods as are essential to progress, has always been conspicuous in matters subject to his control. The task of bringing the instrumental body into the best practical working shape was entrusted to Mr. E. H. House. In the past two months a great deal has been done toward making the members acquainted with their own powers of expression, and, although many things remain to be accomplished, a substantial beginning can be recorded. It is probable that a longer period of preparation would have been desirable, before offering any demonstration of what the new system of tuition has produced, but the fact that the players were studying and practising with unusual diligence did not escape notice in official circles, and a few days ago, Her Imperial Majesty the Empress (who had been informed by Viscount Kagawa of the new course of study now being pursued by the musicians), graciously signified that it would be her pleasure to listen to a performance of foreign music by her orchestra, at the palace in Shiba. In obedience to her command the following programme was arranged, and the event took place on the afternoon of Friday, the 25th instant.

Overture. "Waltz-Songs"	Seimano.
Minuet, from the "Jupiter" Symphony	Mozart.
Turkish March, from The "Ruins of Athens"	Beethoven.
Princess Polka	Moisan.
Andante from the Italian Symphony	Mendelssohn.
Imperial March	Söveh.

At the close of the concert, Her Majesty sent for Mr. House, and graciously expressed her pleasure at the entertainment which the musicians (aided by his skill and instruction) had provided.

Before discussing the merits of the musicians, we may remark that the orchestra, as now constituted, numbers twenty-five players, with others in reserve that can be drawn upon if needed. The usual distribution is as follows. Three first and three second violins, two violas, two violoncellos, two double-basses, one flute, one oboe, two clarinets, one bass clarinet, two cornets, three trombones, and instruments of percussion (drums, cymbals, etc.). An additional flute is available, whenever required, and also heavy brass to any extent, but this latter can rarely be utilized without risk of destroying the balance of construction. It will be seen that the proportion of strings is small, a deficiency which time will doubtless remedy. It is also obvious that certain instruments, notably horns and bassoons, ordinarily considered essential to a full orchestra, are wholly wanting. This is owing to the circumstance that in the original formation it was thought the wind and brass pieces already provided for the military band would be sufficient for all needs, and the plan then adopted has been adhered to ever since. Nothing, of course, can compensate for the absence of horns, and bassoons are almost equally indispensable; but it is worth noting that the two high trombones here fulfil their functions with an effect that few connoisseurs of the orchestra would suppose possible. They are alto trombone with pistons, of a class which educated musicians are not accustomed to rate highly. They are, indeed, commonly condemned by the best authorities,-who are, however, not very familiar with the brass instruments of military bands, but by the Kunaisho players they are made to produce tones so delicate and mellow as to contradict the accepted theory, and cause the loss of horns to be less severely felt than would be imagined. Either the critical estimate of these piston trombones is too harsh, or the Japanese who play them have a peculiar gift. They are now often compelled to do double duty,-in their proper capacity and as substitutes for horns; and this is a very heavy tax upon the players. But horns will be forthcoming in time, and the pressure will be relieved. Yet even when the last-named adjuncts are supplied, Mr. House informs us that some of the novel effects of the trombones are too valuable to be entirely relinquished. *

As a matter of course, the musicians do not all display equal merit, especially as their terms of study have greatly varied. Those that claim approving attention at the first hearing are *imprimis* the leading violin, who shows not only technical skill, but exceptional force, and much more feeling than his countrymen are apt to exhibit in rendering foreign music. The two clarinets are excellent, and the first double-bass has a remarkable command of his difficult instrument. The same may be said of the first cornet. Of the trombones we have spoken. It is not our intention to distinguish the performers referred to above their fellows; they are mentioned because in this particular concert their prowess was conspicuously apparent. The others seemed as trustworthy and faithful to their duties as could be desired; and in all cases it may fairly be hoped that they will do their share towards gradually winning the appreciative sympathy and respect of the Japanese people for one of the highest forms of a pure and noble art.

* The name "Alto trombone" is somewhat misleading. The instrument has a wide range, extending from E below the bass clef, to the middle B of the treble. The lowest notes are not easily produced, nor are they required when a bass or tenor trombone is provided.

"JAPAN COMMERCIAL AND INDUSTRIAL DIRECTORY."

This book has now reached its second issue. It is of considerable size, for numerous advertisements swell its bulk, and it contains alphabetical directories for Japanese merchants, Japanese banks, and foreign firms, and a professional directory for Japanase joint stock companies. But there is no directory for officialdom, the Diet, the nobility, diplomacy—omissions which seem to us to greatly mar the value of the work. Why should not the publishers—whose address alone is given, namely, No. 6 Yamashita-cho, Kyobashi-ku, Tokyo—why should they not have added these important details so as to make the work complete? We think, also, that they should have included a nominal list of all the members of the foreign communities, women as well as men, instead of giving firms only, and we are not sure that their method of arrangement will not prove troublesome, since search for any merchant's house must be preceded by reference to the table of contents in order to find to what section he belongs. Any one seeking for special information might not complain of the necessity of such reference, but the general purpose of a directory should be attainable without any preliminaries of the kind. Neverthless we regard the book as a great boon. It is of the utmost assistance to be able to find out all about Japanese firms and men of business, especially in these times when foreign relations with them are rapidly extending.

NOTES ON CURRENT NOTES.

The *Yomiuri* says that the Foreign Office will soon commence the publication of Blue Books.

The Prince and Princess Imperial reached Yamada in Ise on the 25th ultimo, and his Imperial Highness proceeded to perform the prescribed rites at the great shrine.

The trouble among the silk-weavers of Kiriu is increasing. Several other firms are spoken of as being in difficulties.

The Emperor visited the Naval Department on the 24th ultimo and was present at the ceremony of conferring certificates of graduation.

An order issued by the Department of Home Affairs declares that in future the minimum age of prostitutes shall be 18 instead of 16.

There appears to be no doubt that the Mitsui Company has decided to build an electric railway in Tientsin. Permission is said to have been obtained from the Chinese Government.

The Tokyo Gas Company has decided to double its capital, making it 4,2000,000 *yen*. The works are to be greatly extended in view of a rapidly developing demand. It is stated that a British capitalist will furnish 1,400,000 *yen* at 4½ per cent. interest.

The first torpedo vessel ever completely constructed in Japan is now being built at Yokosuka. Her displacement is to be 53 tons, her horse power 1800, and speed 24

Digitized by Google Original from CORNELL UNIVERSITY

knots. Not only the hull but also the engines are of Japanese manufacture.

The *Jimmin*, in a double-leaded article, announces that the time for a reconstruction of the Cabinet has almost arrived. Our contemporary is somewhat mysterious, but its opinion seems to be that changes will take place among the holders of portfolios.

It is stated that the Naval authorities have definitely decided to build six torpedo-catchers instead of the torpedo depot-ship which originally figured on the *post-bellum* programme. The orders are to be given this year, and the boats will be built in England, France, and Germany.

The 28th May, having been the birthday of Her Majesty the Empress, all the Ministers of State, high officials, and persons of note in the capital proceeded to the Palace to pay their respects. A banquet was subsequently given in the *Homei-den*.

The Authorities propose, it is said, to apply the law with new vigour for the restraint of papers like the *Shin-Nippon* and the *Yorozu Choho*, which constantly publish matter injurious to public morality. We do not know exactly what new rendering is to be given to the law.

A fresh discovery of gold is announced from Hokkaido. The place is Nagayama-mura in Ishikari Prefecture. It is in the neighbourhood of the position chosen for the barracks of the Seventh Division, and being only 5 miles from a railway station, it enjoys far greater facilities than Esashi does. There is great rejoicing over the discovery.

Representatives of the United Chambers of Commerce have waited upon Marquis Yamagata, Count Matsukata, Viscount Yoshikawa, and Baron Sone, in order to recommend the measures recently embodied in the resolutions passed by the Chambers. It is stated that the Ministers showed, on the whole, a favourable disposition.

It appears to be thought worthy of special record that an Englishman and a Frenchman are taking part in the gold-mining enterprise in Hokkaido. We should be much surprised if foreigners refrained from doing so. Besides, work is already being carried on by an English company registered as a Japanese juridical person.

The delegation to welcome and escort the Buddhist relics from Siam left Kobe on the 23rd ultimo by the *Hakata Maru*. It consisted of 15 members, but a thousand priests assembled to bid the deputation farewell. There were fire-works and music, and altogether the function seems to have been quite imposing. It is expected that the delegates will return with their precious charge in August.

The Tokyo municipality have decided, it is stated, to raise a loan of seven million for purposes of city improvement. The bonds will be sold at the rate of two millions annually during the first three years and one million during the fourth year. They will carry 6 per cent. interest, will remain undeemed for 4 years, and thereafter will be redeemed in 39 years. The money is to be spent upon road-making, bridge-building, and canal digging.

Of late it has become a habit with Japanese companies to give prizes in connexion with the sale of commodities. The custom was introduced, we believe, by the agents of the Virgin cigarette. A certain per-centage of the boxes contained a valuable of some kind, which became the property of the fortunate purchaser. All such transactions have now been forbidden by an ordinance of the Home Department. The maximum penalty attached is 25 days' imprisonment and a fine of 25 *yen*.

The Government is believed to have resolved upon increasing the salaries of officials. When the Ito Cabinet was last in power, Count Inouye made a proposal in that sense, but it did not obtain the approval of the Diet. At present the salaries of all officials from the rank of secretary downwards average 33 *yen* monthly, and the idea is to increase that figure to 43 *yen*. The average of officials above the rank of secretary is 1,600 *yen* annually, which will be raised to 1,800 *yen*. These changes will involve a total addition of 5 million *yen* to the Budget.

Marquis Ito delivered a speech in Shizuoka on the 24th ultimo, but the reports of it published by vernacular newspapers are so sketchy that we cannot gather any adequate idea. It is at all events plain that the Marquis condemned political parties and the Diet alike as not having yet attained a satisfactory standard; that he dwelt on the importance of developing commerce and industry rather than agriculture, and that he insisted on the advisability of Japan's assisting China to enter the path of progress, and thus secure herself against the dangers to which she is exposed owing to the revelation of her weakness, resulting from the war of 1894-5.

The *Jiji Shimpo* contains a paragraph which ought to receive attention. It refers to impure milk. The fact that various matters are mixed with fresh milk by dishonest dairymen is notorious, but our contemporary's reference is chiefly to condensed milk. No less than 20 kinds are sold in Tokyo, and the *Jiji* asserts that expert examination indicates that the great majority of them are impure. The best has been found, on analysis, to be the American Eagle Brand, and the second best, the Nestle. But even of the Eagle Brand there are four varieties on sale, and all are not equally commendable.

The Japanese Representative in Sôul continues his efforts to remove the objections raised by the Korean Government to granting a lease of the Chiksan mine to Mr. Asano. The main difficulty seems to be that if the privilege be granted to Mr. Asano, various refusals already made to subjects or citizens of other Powers will have to be reconsidered. The fact is that the Korean Government's attitude towards these questions is of the most fitful nature. At one time they accede, at another withhold, and in the face of their record it seems a little groundless that they should entertain any apprehension of having precedents quoted against them. They have furnished such a variety of precedents that any one can adduce anything he pleases.

A singular accident occurred on the Hokuyetsu Railway on the 19th ultimo. When the first train from Naoyetsu in the morning reached Hashizaki station, the locomotive was found to be in flames, and the train ran through the station at a high speed. Intelligence was immediately telegraphed to Kashiwa-zaki, and preparations were made there to arrest the progress of the train by heaping sand-bags on the rails. Fortunately, however, the oil which had been the cause of the conflagration burned out before the locomotive reached Kashiwa-zaki, so that the train came to a stand-still at the entrance of a tunnel.

Last year, the strong room of the 110th Bank in Mitajiri was broken open, and a sum of twenty-five thousand *yen* stolen. For a long time no trace of the thieves could be discovered, but they have at last been apprehended. The principal was Takamura, who had charge of the strong room. His accomplice, the suggestor of the crime, was Futamiya, an expert in applied chemistry, formerly a pupil of one of the high schools. If seems that this man Futamiya had made a speciality of opening safes. Detecting in Takamura a person of the right disposition, he urged the attempt which succeeded so well. Futamiya, however, was recently arrested in connexion with another robbery of 3,000 *yen*, and in the course of his examination his connexion with the Mitajiri theft and Takamura was discovered.

The resolutions adopted by the United Chambers of Commerce are criticised by several of the leading Tokyo journals. No objection is raised by any—except the *Nippon*, of which we have already spoken—to granting to foreigners the privileges of land-ownership and shareholding, but there is a general disposition to condemn the desire shown by the chambers for official assistance in tradal matters. Special criticism is provoked by the suggestion that the Government should purchase for State use articles of home production instead of imported goods. That is a kind of protection not approved by Japanese journalists. The *Kokumin* makes a very pertinent suggestion. The leading members of the Chambers, it says, show much anxiety to procure the introduction of foreign capital, but they neglect the means to that end that are within their own compass. It is an open secret that the purchase of Kobe water-works bonds by Mr. J. R. Morse was in the nature of an experiment, made at the suggestion of the American capitalist, Mr. Morgan, to test the credibility of Japanese borrowers. The result will therefore be fatal to the object contemplated by the Chambers. Why, then, do they not endeavour to effect some settlement of that important matter, instead of formulating a number of schemes that are not within range of speedy consummation?

The defence set up by counsel on behalf of Yamakawa, whose writing in the *Seinen-no-Fukuin* has involved his imprisonment and trial, is that his reason has given way under a love disappointment. The young lady to whom he was engaged died suddenly, and ever since that event he has been a changed man. One of his earliest productions in the *Seinen-no-Fukuin* was called *Kohan-no-Fumbo* (the grave by the water), and had evident reference to the loss of his love. He is said to have been subject to constant hallucinations about her, and as her name happened to be the same as that of the Princess Imperial, Sada, the marriage of the latter threw him completely off his centre.

It is the recommendation of the *Jiji Shimpo* that the Government should endeavour to obtain a modification of the treaties in exchange for granting to foreigners the privilege of holding real estate. What troubles our contemporary is the fact that the Conventional Tariff works very disadvantageously for Japan. Her consumption of foreign sugar has increased enormously of late years. It is now something like 20 million *yen* per annum. The staple would easily bear a tax of 40 or 50 per cent., giving an addition of 8 or 10 million *yen* to the

Digitized by Google Original from CORNELL UNIVERSITY

Treasury, but no step of that kind can be taken in consequence of the tariff. *Sake*, again, if the tax on it were raised to 20 *yen* per *koku*—which impost it could easily bear—would yield a revenue of 80 millions. But here, again, the Conventional Tariff interferes, for it allows rum or beer or claret to be imported at nominal rates of duty, and the nation will obviously tend to drink the latter in preference to *sake* if the tax on *sake* be much increased.

It has been decided to impose a tax upon the rum manufactured by the Sugar-refining Company of Hokkaido. Owing to the heavy tax levied upon *sake*, rum has begun to be largely used as a substitute, and the Authorities find that the proceeds of the *sake* monopoly are likely to be impaired in consequence. The idea is to include rum in the category of mixed *sake*. The Sugar Company is understood to have protested strongly, but its protests do not command attention.

It is alleged that the Cabinet, at its last meeting, decided upon the conditions under which a charter is to be granted for building street railways in Tokyo. The two main points to be considered were the tax levied upon the earnings of the enterprise and the arrangements as to its reversion to the city. Concerning the former point, the decision is said to have been that one-third of the net profits, after deducting 7 per cent., shall go to the municipal funds, and that the lines and plant shall revert to the city at the end of 35 years.

The Ota Railway has finally passed into the possession of the Fifteenth Bank in satisfaction of a debt of two hundred and fifty thousand *yen*. This railway runs from Mito to Ota, a distance of a little over twelve miles. The paid-up capital is four hundred thousand *yen*. A sum of two hundred thousand was originally borrowed from the Fifteenth Bank, and a further loan of fifty thousand was subsequently made to build a bridge over the Kuji river. But the line has never paid, and the directors found themselves unable to discharge their obligations even in respect of interest, so that nothing remained for the Bank except to foreclose. It is expected, however, that the property will realize far more than the amount of the debt, so that the shareholders will recover some of their money.

Seldom does it occur to masters and mistresses to think about the deadly monotony of the domestic servant's work. Day after day the same weary routine with never a respite nor ever a break except the "Sunday out" at intervals of a year. The system is nowhere harder than in Japan. We can not conceive any drudgery more unceasing than that of the tea-house girl, who goes to bed at 1 a.m. and gets up at 6, from year's end to year's end, and enjoys scarcely a moment of undisturbed rest from toil. There is a movement now on foot in the United States to limit the hours of the domestic servant to 8 daily. Mrs. Blaine of Chicago has set the example. She keeps two sets of servants who go on duty turn about. The experiment has attracted much attention, and the general idea seems to be that something of the kind is becoming inevitable.

According to the opinions of a prominent official whose views the *Jimmin* has consulted, the Government, while not offering any objection to the proposal of the United Chambers of Commerce that the privileges of owning real estate, holding shares in all enterprises, and engaging in mining operations should be extended to foreigners, is not disposed to take the lead in introducing such a measure before the Diet. Members of the Chambers will be left to adopt that course themselves. The chief difficulty is anticipated in the House of Peers, where the conservative element is strong. We (*Japan Mail*) are disposed to think that the most prudent plan would be to except agriculture from the uses to which land held by foreigners may be put. It is among the agricultural classes that timidity seems to be chiefly felt about the consequences of granting the privilege of ownership to aliens, whereas, on the other hand, the latter do not want to engage in farming in Japan. They would be quite content were they permitted to own land for manufacturing, commercial, or residential purposes. Nothing would be less tactful than to imperil the chances of the whole measure for the sake of a condition which has no intrinsic value.

There seems to be a really earnest effort in some quarters to drop all letters that are not sounded in English words, and to reduce spelling to a purely phonetic basis. The first practical step in that direction was taken by the National Educational Association of America, which suggested that simplified spelling should be adopted in the case of twelve words by way of a beginning, namely, *program*, *tho*, *altho*, *thorofare*, *thru*, *thruout*, *catalog*, *prolog*, *decalog*, *demagog* and *pedagog*. Quite a number of newspapers and educational institutions either adopted these changes, or recommended their adoption. A larger suggestion is now made, namely, the dropping of the final *e* in all words where it does not serve to lengthen the preceding vowel; and the substitution of *f* for *ph* and *gh* where the sound represented is really that of *f*. Examples of the first reform would be *spel*, *hav*, *giv*, *ar*, *definit*, *derivativ*, *amiabl*, &c.; and examples of the second, *geografy*, *fantasm*, *enuf*, &c. Another proposal is to drop *gh* in such words as *thot*, *bou* (for bough), *ni* (for nigh) and so on. Of course the obvious objection is that we should thus destroy a method of differentiation which the tongue can not produce or the ear recognise, but which is nevertheless quite discernible by the eye. It is surely of importance to be able, without reference to the context, to distinguish between "bad" and "bade," between "hole" and "whole," between "meat" and "meet," between "sight" and "site," between "sell" and "cell," and so forth.

ORDINANCE OF THE COMMUNICATIONS DEPARTMENT.

The following Ordinance of the Communications Department is published in the *Official Gazette*:—

Art. I.—Any person desiring to tender for the supply of stores for Government railways under the direct supervision of the Communications Department, the said goods being manufactured in Europe or in the United States, and inspection as to quality or classification being made prior to shipment, must have the following qualifications specified in the 1st clause of Article XIX of the Law of Accounts:—

1. He must be in possession of a head office, branch, or agency in Japan.

2. He must be in possessson of a head office, branch, or agency in a city of Europe or the United States.

3. He must be possessed of a certificate showing that he has properly fulfilled contracts with Government offices or railway companies for the supply of foreign railway stores to the amount of at least 100,000 *yen* in one year within three years from the date at which the tender is presented.

Art. II.—These regulations shall come into operation from the 1st of June (1900). Ordinance No. 28 of the Communications Department issued in the 29th year of *Meiji* shall be rescinded from the date of the operation of the Regulations.

Another ordinance of the same Department refers to competitive tenders for the construction or repair of railways, ships, or official buildings. The provisions are as follows:—

Art. I.—Tenderers for works indicated above must be persons who have paid direct national taxes for the past two years, in accordance with the following scale:—

Estimated cost for work in *yen*.			Annual amount of tax in *yen*.
Not exceeding	5,000	Not less than	5
"	10,000	"	10
"	50,000	"	20
"	100,000	"	30
"	200,000	"	50
Above	200,000	"	80

Art. II.—In the case of an ordinary partnership one of its members, and in the case of a limited partnership one of the members of unlimited liability, must fulfil the above requirements.

Art. III.—In the case of a joint stock company the amount of shares paid up must be more than double the cost of the work rendered.

Art. IV.—As to joint stock partnerships one of the conditions required of a limited partnership in Article II. or of those specified in Article III. must be complied with.

Art. V.—With respect to a foreign company the same must have been registered according to the regulations, and must possess qualifications the same as, or analogous to, those of companies specified in Article II. or Article IV.

Art. VI.—Tenderers for the construction of ships having a gross tonnage of more than 1,000 tons must possess the following qualifications besides those specified in each of the foregoing articles:—

1. They must be possessed of a suitable workshop for the construction of ships of the dimensions indicated, and must have practical experience in connection with the building of the same.

2. They must be possessed of an annealing plant.

Art. VII.—With regard to competitive tenders in Hokkaido, and in Okinawa and Ogasawara islands, as well as in foreign countries, these regulations shall not apply for the time being.

CHRISTIAN EDUCATIONAL WORK IN JAPAN.

The *Yorozu* has an article pointing out the energy displayed by Christians in the cause of Japanese education, and condemning the authorities for the unnecessary interference which has almost crippled that work. According to statistics compiled at the end of last year, the number of Christian schools and students totalled 204 and 15,846 respectively. Below are details:—

	Schools.	Students.
Above middle course of education ..... Men	20	2,916
Above middle course of education ..... Women	48	3,538
Primary course of education for men and women	136	9,394
Total	204	15,846

In the face of these figures the general progress of education undertaken by Japanese is extremely slow. The latest statistics compiled by the Education Department show that out of 7,125,966 children of school age only 4,910,380 are receiving instruction in elementary schools, the remaining 2,215,586 remaining at home. Japan cannot escape the charge of procrastination in this matter, as may be perceived from the following comparative figures for the past four years:—

Percentage of school age children under instruction.....	1895.	1896.	1897.	1898.
	61.24	64.22	66.65	68.91

The Government ought to adopt more efficient means for the diffusion of knowledge, but instead it has, directly and indirectly, attempted to hamper the educational work of Christians. Now that the Bureau of Religions has been established it is advisable that Christianity should be investigated in its true light.

Digitized by Google Original from CORNELL UNIVERSITY

JAPAN AND RUSSIA.

IT is quite curious to observe the persistency with which some publicists are propagating the idea that the relations between Japan and Russia have been strained to breaking point. Some months ago a rumour was circulated in London that the two countries were on the eve of war, and certain of the leading English journals gave credence to it. Now again there seems to be a new access of excitement. Leading articles couched in very grave tones are published, and telegrams of anxious inquiry are received in the East. It is true that on this occasion things have not been carried quite to the point of despatching war correspondents to the expected theatre of hostilities, but we are inclined to think that even that step might have been taken had not recent experiences, costly and comical, been fresh in the minds of those that had to pay for them. Meanwhile we who live within sight of the occurrences from which these startling deductions are drawn, are not sensible that even a ripple of danger has disturbed the level surface of events, or that there exists the remotest prospect of a breach of the peace in the immediate future. Throughout the course of recent complications, Russia has persistently shown herself unwilling to push matters to an extremity, or to endorse the somewhat fussy and arbitrary procedure of her Representative in Korea. She has quietly waived her claims so soon as she saw that they could not be peacefully pushed, and, if she has insisted upon maintaining one condition in order to save her face, it is a condition that certainly does not present alarming dimensions. It is true that, by recourse to the elasticity of interpretation which strength always creates, she may one day claim to have established some kind of sphere of influence within a portion of Korean territory. But there is a wide difference between that shadowy claim and her original attempt to secure a definite foothold on an important part of the Korean coast. Besides, the grounds for a potential claim hereafter are still very indeterminate. Both England and Japan have been explicitly excluded from the scope of the guarantee sought by Russia with regard to Koje Island, and, as England and Japan are the only foreign Powers really interested, it is difficult to see that this last enterprise on Russia's part has any appreciable value. At any rate nothing could be more extravagant than to interpret it as a menace of war. The plain facts are that Japanese diplomacy has been emphatically successful in this instance, and that Russia has shown herself neither intemperate nor over-bearing. The newspapers have become a little delirious; they will soon discover the groundlessness of their alarm. We imagine, too, that the St. Petersburg Government will not give unalloyed applause to the ambitious restlessness of its agent in Söul. The actual gain standing on the credit side of Russia's account is very small. Indeed it would be premature to assert that there has been any definite gain, for, in the first place, the discussion has not yet terminated, and, in the second, the impression produced in the Far East by M. PABLOV'S enterprises and by his methods of prosecuting them must greatly discount their results. On the other hand, one plain issue of these incidents is that Japan and England have been drawn closer together. They find themselves rowing in the same boat, and that, we think, is not an outcome that Russian statesmen are desirous of promoting. A leading journal of St. Petersburg remarks that Russia will never interfere with the peaceful development of Japan's industrial and commercial interests in the Korean peninsula, but that if this country follows England's example in seeking for military glory, the Northern Power's friendship can not be counted on. Truly it is well to obtain sometimes an idea of the aspect we present to the eyes of onlookers. Military glory is not the bourne towards which English aspirations tend according to the idea of Englishmen themselves, and our friends on the European Continent have hitherto been pleased to call us a nation of shopkeepers without any stomach for fighting. However, any stick does to beat a dog. The same Russian journal goes on to say that Japan should be warned by Great Britain's experiences in South Africa, where it has been demonstrated that a Naval Power is weak on shore. If it is intended to suggest that Japan is puissant at sea and impuissant on shore, her critics must change their estimate, and the politicians who accuse her of excessive military expansion must confess themselves wholly mistaken. But the fact is that these remarks of the St. Petersburg journal illustrate the difficulty confronting any writer who attempts to prove that the interests of England and Japan are not identical in the Far East. They are identical. Both Powers aim alike at preserving the integrity of the Chinese and Korean empires, developing their resources, keeping their markets open to the commerce of the world, and preserving the tranquillity of the Orient. There is no reason to suppose that Russia, on her side, desires a breach of the peace, or that the St. Petersburg statesmen would readily support any policy tending to such an unhappy end. But Russia is driven by the force of circumstances to pursue a policy of expansion; not a general policy, but a policy having a limited though definite aim. She has found the line of least resistance for her purpose in the direction of Liaotung, and it becomes a collateral necessity from a strategical point of view that she should have a foot-hold in Korea. We do not blame her, nor do we pretend to deny that she is fulfilling what must seem to her to be her plain destiny. But it is obvious that she invites great risks of collisions by choosing such routes, and that her course inevitably conflicts with the programme which Anglo-Japanese interests indicate. The hope we may still cherish is that modern statesmanship will find some pacific exit from this clashing of aims, for in one thing the three Powers are certainly agreed, namely, a desire to keep the peace.

NIPPON YUSEN KAISHA.

The report presented by the Directors of the Nippon Yusen Kaisha at the general meeting just held was very favourable. It would have been possible to declare a dividend at the rate of 15 per cent. But the Directors recommended that the dividend should not exceed 10 per cent., and that a sum of six hundred thousand *yen* should be carried to the reserve for equalizing dividends. The reasons for this recommendation are that exceptional circumstances—the South-African war; the war in the Philippines; the French Exhibition, and so on—operated to bring prosperity to the enterprise of marine transport during the past six months, and that a continuance of such conditions could not be counted on. Further, the reports arriving from the company's offices and agencies do not indicate as satisfactory a state of affairs as is usual at this season in the domestic carrying trade; and, finally, the company's agreement with the Government will terminate in a few months, after which the subsidy will be reduced and the conditions will become more onerous. The shareholders accepted these explanations and passed the report and accounts. The following are the main figures:—

	Yen.	
Net profit for the half year		1,795,686
Brought over from Previous Account		319,160
Total		2,114,846
	Yen.	Yen.
To Reserve	89,784	
To Reserve for equalizing Dividends	600,000	
Rewards to officials	57,182	
Dividend (10 per cent.)	1,100,000	
Carried over	267,800	2,114,846

The Nippon Yusen Kaisha submitted a report of its transactions and settled accounts, prepared in accordance with the provisions of the Commercial Code, to the shareholders on the 22nd instant. Details are given in the *Jiji* as follows:—

The last half-yearly term, from October to March, witnessed symptoms of apparently restored prosperity, but in view of the war between England and the Transvaal the rates of interest abroad have considerably risen, and the foreign trade of Japan has suffered from grave inequality, the exodus of specie being abnormal. Under these circumstances interest was raised, but this brought about a commercial depression early in the beginning of the period under notice. Amid these disadvantages the first half of the business year was passed. On the other hand, the Boer war has necessitated the use of a large number of ships on the part of the English Government, and a brisk demand for steamers arose, which had the effect of considerably decreasing the number of foreign ships plying in the Orient. Consequently Japanese vessels have obtained a larger share of freight than usual. Other causes have combined to create a brisk demand for means of transport in home waters, in strong contrast to the dullness which usually characterizes the period under review. The necessity arose therefore of chartering three ships of a gross tonnage of 5,417 tons for coastwise service. Other details relating to the Company's service may be given under the following heads:—

Service to various parts of the Orient.—With regard to the North China line, a direct service was opened between Kobe, Taku, and Newchwang at the end of the previous half-year, and at the beginning of the present term one more steamer was added to make a fortnightly passage, and at the same time a new weekly service was opened with two steamers between Shanghai, Chefoo, and Tientsin. With the advent of frost, voyages were suspended until March this year, when the service was resumed. These two lines are still more or less of a tentative character, and, unless difficulties are vigorously encountered, it will be impossible to establish these enterprises on a firm footing. The service be-

Digitized by Google Original from CORNELL UNIVERSITY

tween Hongkong and Vladivostock has been maintained for many years past, but as foreign ships entering these ports have considerably increased in number, the company's vessels, which have to call at various ports in Japan, China, and Korea, and thus spend much time before reaching the terminal ports, are not in a position to compete with foreign vessels having but a few ports of call. In view of these difficulties it was decided to abolish the service altogether in March last, but the directors, recognising the necessity of maintaining a connection between Vladivostock and the various important ports in South China, North China, and Korea, established the Nagasaki-Hongkong line with one steamer sailing once in four weeks. On its outward voyage it was made to call at Shanghai and Amoy, and on its return at Shanghai and Inchhon, connecting with the Kobe-Vladivostock line at Nagasaki, and affording a substitute for the former Vladivostock line. As for the Korean line, the Kobe-Vladivostock, and the Yokohama-Shanghai lines, they remain exactly as before.

European line.—With respect to outward voyages the amount of cargo remains nearly the same as before, not exceeding one-fifth of the carrying capacity. The price of rice in the interior having risen during the term under review, the quantities exported were extremely insignificant, the total carried not exceeding 1,700 tons. Formerly the greater part of the ships were filled with cargo in the Straits Settlements, but the amount suddenly fell towards the close of last year, and no signs of improvement were observable at the end of the present half-year. The vessels, under these circumstances, have secured as much cargo as possible in Colombo by quoting the lowest possible rates of freight. This drawback seems to be the result of the wide-spreading influences of the African war. The homeward voyages were fairly successful. The general decrease of available foreign ships consequent upon the war and the unusual augmentation of imports have had the effect of bringing the Company's ships so much cargo as to warrant an increase of freight charges and to counterbalance the losses on the outward voyages. Moreover, both on the outward and homeward voyages first and second class passengers have considerably increased, and the company was able to have the special ordinance of the Government enforced from January this year.

American line.—There is always abundant cargo from America to the Orient, and no severe competition is therefore necessary *vis-à-vis* other steamship companies. On the outward voyages, however, there is a scarcity of cargo, and low freights are inevitable. During the term under review, however, affairs in the Phillippines have to a certain extent affected maritime enterprises in general, and the scarcity of steamers has brought for the outward voyage of the Company's vessels a fair amount of cargo from Japan and China. Vessels on the line under notice were formerly required to make direct voyages from Hongkong to Japan, but in December last arrangements were so altered as to cause them to call at Shanghai, in order that the alteration might have the effect of increasing the cargo from that port to America.

Australian line.—Cargo on this line still remains insignificant, but there is a tendency to increase in all the intermediate ports. Compared with the previous term cargo has increased by about 20 per cent. for the outward, and by 45 per cent for the return voyage. As to passengers a 50 per cent. increase is noticeable. These improvements are attributable to the maintenance of a regular service by excellent ships under special Government subsidy, and to the confidence of the public and the frequency of advertisements. While things, however, have so improved, the vessels are still not full, and the maintenance of new ships built at an enormous cost is a heavy burden. The Manila line, which was re-established during the previous term, did not yield much cargo, but it is expected that, the blockade of the islands being now removed, business will increase in future.

Bombay line.—The insufficient fall of rain during last year in Bombay reduced the cotton crop to nearly half the amount of previous years. Still the monthly voyages were insufficient to meet the demand for transport, and it became necessary for the Company to charter foreign ships on five occasions. The cost incurred in the case of two of the ships chartered had to be borne conjointly by the transporters and the Union Spinning Companies, as well as the consignors, whereas in the case of the three other ships the burden fell upon the transporters alone. In spite of the embarrassment of these losses the Company decided on its course of action in order to supply Japanese spinners with sufficient materials for their enterprises, which depend largely upon facilities for the supply of raw cotton. Such losses, however, cannot be borne year after year.

To sum up, although freight and passengers have increased during the term under review to an extent almost unprecedented, it must be recognised that the result is simply due to the African war, the Phillippine affair, the approach of the Paris Exposition, the departure of Japanese Commissioners to receive men-of-war built to the order of the Government, and other temporary circumstances. The increase cannot be regarded as the natural course of development of Japanese maritime enterprises. When the war in the Transvaal comes to an end, the scarcity of vessels will immediately give place to an over-supply, and a general decline of prosperity will follow. It is also worthy of note that as the foreign trade of Japan has displayed much inequality since the spring, seriously affecting the money markets, there will be a glut in the home markets and a decrease of exports, in consequence of which steamship services, both coastwise and foreign, will suffer.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the *Gwaikô Jihô*, Dr. Ariga, under the title of *Tokubetsu Yûkoku* (A Specially Friendly Power), urges the advisability of Japan's establishing very cordial relations with one of the European Powers; which Power should be asked to represent her when international affairs are being discussed. Dr. Ariga says that the Japanese have hitherto regarded America as their greatest friend, but that America's influence in Europe is confined to England. Hence Japan has reaped little benefit from her reliance on the United States to plead her cause at international council boards. There are many, says Dr. Ariga, who advocate our making a special friend of England. But apart from the fact that the present English Cabinet has not made overtures of special friendship, England's relations with France and Russia are such that mediatorship on our behalf in the case of these two Powers could not be successful. Germany, even if willing to come to a special understanding with us, is too much absorbed in the expansion of her empire to give much attention to our affairs. France and Russia are out of the question. To Italy there are many objections, one of the chief being the frequent changes of Cabinet that occur in that country and the lack of harmony between the King and the executive. The Power to whom this country should look for help, according to Dr. Ariga, is Austria-Hungary. Although a member of the Triple Alliance, her relations with Russia and France are very slightly affected thereby. No country is better informed as to the tendency of events in Europe. It is wel known that most of the diplomatic secrets of the West reach the public ear through Vienna, which city may be regarded as the diplomatic centre of Europe. Austria-Hungary has no special interests in the Far East, and hence may be relied on to act impartially when questions of Far Eastern, policy come up for discussion. As to Austria's willingness to draw closer the ties of friendship that bind her to Japan, Dr. Ariga is not able to tell us anything. Hence the question is far removed from the sphere of practical politics.

* * *

Dr. Inoue Enryô has published a book, covering 70 pages, in defence of the continued use of the ideographs, which is an amplification of the views expressed in a lecture delivered some months ago, summarised by us at the time. Mr. Yamada Bimyô, the famous novelist, has contributed to the *Kokumin Shimbun* an article on the Chinese characters in which he takes Dr. Inoue's side in the controversy now going on in the most decided manner. In his book Dr. Inoue gives 10 particulars in which the ideographs possess distinct advantages over other modes of writing. Mr. Yamada bestows unstinted praise on Dr. Inoue's performance and ridicules the fruitless attempts of the Romaji Kai and the Kana-no-Kai to effect a radical change in orthography. The mistake the advocates of the substitution of vocal signs for the present characters make, according to Mr. Yamada, is that they attach more importance to sound than to meaning. They seem to think that sound can take the place of meaning. Mr. Yamada contends that written symbols should always convey meaning in a direct manner without any reference to sound, just as is done by the signs £, lb, and %. He regards the ideographs in the light of the concisest outward representations of ideas that have ever been invented. He thinks that the desire for brevity which leads us to write Ltd. for Limited, and Mnftd. for manufactured, has led the Chinese to represent a complex idea by a few strokes of the pen, and the multiplication of ideographs he regards as necessary to avoid confusion of ideas. He considers the Chinese system of symbols to be the best that exists. If any reform is needed in Japanese orthography it should, Mr. Yamada thinks, take the form of a modification of these symbols and not of the adoption of any substitutes from whatever source derived.

The recent discussion of the above subject in the editorial columns of the *Nichi Nichi* has already been briefly noticed by the *Japan Mail*. The article in question was evidently written by Mr. Asaina, the editor, who is known to be an ardent advocate of reform. The fact that the editor of the *Nichi Nichi Shimbun* does not practise what he preaches does not prevent us from appreciating the arguments which he elaborates in favour of reform. Briefly stated, they are as follows:—(1) The question of orthographic reform is a practical question, and one of considerable urgency, and sentimental considerations should not be allowed to interfere with its settlement. (2) One great objection to the ideographs is their very antiquity. They were invented at a time when knowledge was very imperfect and hence it is only by adaptation and amplification that they can be made to serve the purpose of modern thinkers. (3) The transformation to which the ideographs are subjected in this country is such that in many cases their original meaning is entirely lost. Many characters have no real relation to the ideas which they express in Japan to-day, and to a Chinaman ignorant of Japanese would be quite meaningless. Such are 挨拶, *aisatsu*, 厳しい, *hiiki*, 野次馬, *yajimma*, and crowds of others. There are numbers of ideographs that appear in the columns of newspapers whose use is quite arbitrary, whose original meaning gives no idea of their sense in the context. When we come to examine recently coined technical terms we find that many of them would he quite unintelligible to the Chinese, and that in many cases they convey no clear meaning to the students for whose benefit they have been invented. Their connection with the original is so distant that it is an effort of memory with the student to recall the idea for which they stand. (4) The argument that one special reason for retaining the use of the characters is to enable the Japanese to instruct the Chinese in Western learning is not worth consideration, as, according to those who have spent years in instructing the Chinese, it is the ideographs and the modes of thinking which their use has produced that form the chief obstacle to the rapid acquirement of Occidental learning by the Celestials. The *Nichi Nichi* concludes its article by expressing the strongest objections to the adoption of any make-shift policy in the matter of reform. What changes are made must be fundamental and adequate to meet the exigencies of the time. As for the notion that characters derive their power and sacredness from being used in Imperial Rescripts and that the nation is bound to retain them in order to show its loyalty to the throne, to defend it, says the *Nichi Nichi*, would be an insult to intelligent people.

Digitized by Google Original from CORNELL UNIVERSITY

The *Teikoku Bungaku* also has an article on the urgent need of orthographic reform. The writer proposes that Kana be used first and Romaji afterwards, and that the ideographs be discontinued. There is nothing whatever new in his observations on the subject, which are of the general kind that characterises so many discourses on a topic which has become quite hackneyed.

* * *

The series of works known as the *Teikoku Hyakkwa Zensho* published by the Hakubunkan is growing apace, Vol. XLVIII. having already appeared. The most recently published volumes are the *Seiji-shi* (A History of Government) by Mr. Moriyama Shinji, Barrister-at-Law; the *Seiji Han* 汎 *Ron* (A general view of Politics), by Mr. Nagai Korenawo, Barrister-at-Law; and the *Nihon Fûzoku-shi*, by Mr. Sakamoto Kenitsu, B.A. The last work, which sells at 35 *sen* a copy, is highly spoken of by reviewers. The following books are announced to appear in fortnightly succession, commencing with the middle of May. *Unsôhô* (Transport), by Mr. Sugawara Daitarô, Barrister-at-law; *Shakai-gaku* (Sociology), a translation by Mr. Totoki, B.A.; *Nihon-hôsei-shi* (A History of Legislation in Japan), by Miura Kikutarô, B.A.; *Shina Bummei-shi* (A History of Chinese Civilisation), by Mr. Shirakawa Jirô, B.A.; *Chiku-san Hanron* (A General Account of the Rearing of Domestic Animals), by Mr. Takami Nagatsune, Graduate of the College of Agriculture; and *Chikusan-kaku* 各 *ron* (The rearing of various animals, considered separately), by Mr. Taguchi, Graduate of the College of Agriculture.

* * *

A new magazine has made its appearance called the 中庸, *Chûyô*. It is a monthly and sells at 15 *sen* per copy. It is designed to be chiefly literary. The first number, which lies before us as we write, is very conservative in tone. It contains numerous congratulatory letters, various statistics bearing on the population of Japan, a few short articles on general subjects connected with literature, covering in all some 40 odd pages. The note struck by several writers is somewhat pessimistic, but the magazine evidently aims at attaining a high standard as a literary organ. The well-known Mr. Sugiura is one of the contributors. The editor is a Mr. Matsuzawa, and the office of the magazine is at 17 Rokubanchô, Kôjimachi, Tôkyô. Dr. Katô Hiroyuki has given to the world a new treatise on the Evolution of Morality and Law entitled *Dôtoku, Hôritsu Shinkwa no Ri*. It is an extremely elaborate and well-balanced work, containing the ripest thoughts of a man who in many respects occupies a unique position as a philosopher. The book deserves and will receive later a fuller notice than we can find space for in this Summary.

* * *

Writing on Chinese verses composed in Japan, the *Teikoku Bungaku* says that this class of literature promises to become extinct. The only composer of high reputation left is Kwainan, the lamp of whose life has burnt very low and may go out at any moment. Five or six years ago a desperate effort was made to revive the languishing interest felt in these poems. But it was evidently only the last sparks of a dying flame. Both Segai and Kinzan have gone the way of all the earth. Kwaiwan some little time ago held classes in order to encourage the study of this class of poetry, and a magazine was started called *Shinshisô* (A collection of New Verses). But the classes have been interrupted by the ill-health of their conductor and the magazine has become defunct. The *Teikoku Bungaku* thinks that in Japan the day has gone by for Chinese verse, and in the absence of worthy specimens of this species of literature deprecates the publication of the productions of multitudinous scribbling poetasters.

* * *

The *Tenchijin* complains of the wearisomeness of Japanese newspaper reading, a complaint that, if we mistake not, will find an echo in not a few foreign breasts. With the exception of one or two of the great Dailies, Japanese newspapers, says the *Tenchijin*, do nothing but reiterate *ad nauseam* political commonplaces or give minute particulars about some petty party differences and irrelevant personalities. The majority of newspaper writers seem unconscious of the existence of any but political interests, and even in politics their view is confined to the very narrow area of Japanese party politics; in foreign affairs they take little interest. To education, religion, commerce and the numerous social topics that need ventilating they are quite indifferent.

The same magazine has an article by Mr. Katayama Hisomu entitled "What we expect from Social Reformers." The following is the gist of what this writer has to say on the social problems likely to arise in Japan. There is less competition and hence less distress in Japan than in the thickly populated countries of Europe. Many of the troubles encountered by Western nations in their onward progress will be avoided by us because we have the advantage of being able to profit by the experience of others. What we are suffering from now is an unsettled state of opinion on a variety of subjects. There is in all quarters a certain amount of swinging between two extremes; action is followed by reaction. But on the whole nothing can be plainer than the fact that in all things the nation is bent on progress and improvement. The agitation of a small section of the public, such as the authors and promoters of what is known as the Nippon Shugi or Kokusui Shugi party, is not to be interpreted as an indication of the feelings of the mass of the people. . . .There is much less class distinction in Japan than in Europe. In many western countries the higher classes speak a different language from the lower and their customs are quite different. Hence it happens that a slight cause of disagreement between the classes grows into a serious rupture. Many of the malcontents of Europe owe their existence to despotic forms of government. Such are the socialists of Germany, the nihilists of Russia, and the anarchists of Italy. We have reason to hope that a considerate government may succeed in removing all causes of discontent among the lower classes. With us the capitalist and the labourer are not likely to quarrel as they do in Europe, as the one has no strong antipathy to the other. We cannot help thinking that those who agitate most for social reform have exaggerated existing evils. Where reform is undoubtedly needed is in the management of money and general property. We on the whole cannot be called a thrifty people. Would-be reformers would do well to make a thorough investigation of the actual state of affairs. Economy is a subject that is quite unknown to the mass of our people. Instead of making a little money go a long way too many of them make a large sum of money go a little way. The writer has a good deal to say on the benefit to be derived from Trusts, for which we have no space here.

* * *

In an article on "The Foreign Ownership of Land," we find the *Taiyô* siding with the opponents of the unconditional surrender of the rights Japan reserved to herself when she signed the Revised Treaties. From a financial point of view the granting of the right of ownership to foreigners would undoubtedly be most beneficial to the country, says the *Taiyô*. It would make mixed residence a reality, whereas now it is only a name, as the foreign possessors of immovable property in the interior would certainly settle down among us contentedly and not a few of them would probably become naturalised. But from a political point of view this measure cannot be recommended. Foreigners have always greatly desired the privilege of owning land, but seeing that we did not grant it to them at the time of Treaty Revision there is no reason why we should grant it now without a *quid pro quo*. If it is to be conceded, let us get in return some of the many privileges we have in vain asked foreigners to grant. Let us ask America to abolish her tax on our tea, and allow us to trade freely with places situated on the Pacific Coast; let us ask France to reduce the tax on our silk; let us ask England and Germany to grant us the privilege of translating their books at will, and let us ask Russia to allow us to fish off the coast of Saghalien.

A somewhat interesting series of articles have been published in the *Jimmin Shimbun* entitled *Kwagaku-teki Nippon* (Scientific Japan), which we epitomise below. The writer uses the word "Scientific" in a very limited sense, in the sense of advanced or modern. So that the title, as is not infrequently the case, gives little idea of the subject treated; which is the importance of combination and organization in all the undertakings of man and the lack of it in Japan. In America, commences the writer, boys seem born with faculties for organizing. Even at elementary schools they will organize Athletic Associations, with a president, secretary, treasurer, and what not. This comes quite naturally to them. They have the feeling that nothing will succeed if set about in any other way. This spirit is wanting in Japan. Not only so, there seems to be a great deal in Japanese human nature that is subversive of organization. There is hardly a Company or Society in existence but has felt the influence of the disruptive tendency in the minds of members. In Japanese society, there are individuals and there are families, but there are no corporations that grow naturally as they do in the West. One of the principal reasons of this is the suspicion with which Japanese regard each other. In the West those who join a society or company do so with the feeling that their fellow-members are honest folk, but in Japan each member acts as though he knew he had rogues to deal with. The saying *hito wo mitara dorobô to omoye* (When you see a man take him for a thief) has passed into a proverb in this country. The feeling that we are surrounded by dishonest people goes with us wherever we go, so that it is no surprise to us to be confronted with the notice, "Beware of pickpockets;" we live in a state of wariness and the notice is hardly necessary. But this constant state of suspicion lessens the pleasure of existence considerably. People say that Western Civilisation is confined to material things and that in the region of mind we Japanese are ahead of foreigners. To me the reverse seems to be the case. In material things we have adopted foreign methods, but as regards mental qualities they are far and of us. Though there is a great deal of friendly feeling existing between relatives, in this country fellow-townsmen and people from the same district or the same village as a rule do not fraternise. In this respect we have not imbibed the spirit of western civilisation.

* * *

As has already been mentioned in these columns, the sixtieth anniversary of Baron Shibusawa's birthday has been celebrated by the publication of what practically amounts to a history of commerce in Japan in recent years. The *Seiyen Sensei Rokujunenshi* (the History of 60 years of Baron Shibusawa's Life), the title of the work we are noticing, consists of 2 vols. and covers no less than 2,200 pages. The principal compiler was Dr. Sakatani, of the Finance Department. The work is most exhaustive, containing some notice of every important branch of business carried on in Japan. From the *Taiyô's* review we extract the following details. The use of the word "history" in reference to the record of the life of an individual is hardly allowable, but Baron Shibusawa's personality is so identified with the development of business in this country that in this case compiling a biography is the same as writing a history. There is certainly no man in the business world who has a greater name than Baron Shibusawa. As money accumulators the Mitsui brothers and the Iwasakis' have no equals in this country, but no member of either of these families will bear comparison with Baron Shibusawa in the matter of influence and actual achievement. What Mr. Fukuzawa has been in the region of thought that Baron Shibusawa has been in the world of practice. The former taught the Japanese public that a thorough reform in their business methods was necessary; the latter led the way in putting into practice approved theories. At the beginning of the *Meiji* era Mr. Shibusawa was associated with Count Inoue in dealing with national finances and even at that time had already made a name for himself as an economist. Had he listed to follow politics instead of devoting himself to business he might have become a Minister of State any num-

Digitized by Google Original from CORNELL UNIVERSITY

ber of times during his career. His reasons for choosing a business profession were two. (1) He hoped by so doing to bridge over the gulf that divided, and still to a certain divides, officials from plebeians and to overcome that silly prejudice against business which was one of the heirlooms received from the Tokugawa age. In this he resembled Mr. Fukuzawa who has always stood forth as the champion of plebeianism. (2) But there was another reason for his choosing an occupation that would necessitate the constant dealing with figures. He was born with a mathematical head and elaborate calculations were his delight from boyhood. Though the son of a peasant, he received a good education. He began his business career at the age of 14 before his education was finished and even at that time showed proficiency beyond his years.

* * *

The *Rikugô Zasshi* publishes a letter from New York written by Mr. Kaneko Kiichi, entitled "Two Questions that lie athwart the Frontiers of the Twentieth Century." The writer is impressed with the fact that the whole western world is absorbed in money making. According to him it is the one engrossing topic of conversation everywhere. All things in life seem to be subordinated to the pursuit of wealth. The hatred of capitalists is growing apace, being fed by ever increasing distress. The rich are literally devouring the poor. (*Jakuniku Kyôshoku*). Communism is abroad and finds more favour everyday. One of the great questions of the day then is what can be done to alleviate the sufferings of the thousands who are feeling the effects of events over which they have no control? Of more importance than the subjugation of the Boers is this question of labour and capital. It will occupy the foremost place in literature as a problem for which some satisfactory solution must be found. (2) Next to this, religion, says Mr. Kaneko, will receive more attention in the near future than it has received for many years past. Respect for the old creeds has dwindled away. Religious ceremonies are regarded as harmless old customs that no longer mean anything to those who attend them. There is a strong desire in the hearts of earnest men for a rational form of faith. Dissatisfaction with existing creeds is universal.

* * *

A writer in the *Bungei Shimbun* maintains that the whole range of Japanese poetry tends to show that Japanese æsthetic taste is confined to a very narrow sphere. A certain kind of delicate beauty such as is displayed in the wings of the butterfly or on the petals of the violet is ardently admired, but in the more magnificent forms of beauty, such as is seen in the grandeur of the mountain storm or the rolling of huge ocean billows there is little that is captivating to the Japanese mind. Going through the *Manyôshû*, the *Kokinshû* and other collections of verses one is struck, says the writer we quote, by the absence of grand poetic ideas. There are pretty fancies, but hardly anything that reaches to the level of the sublime. In the *Bummei* era (A. D. 1786-1788) an eminent composer of those comic verses known an *haikai*, Buson, endeavoured to remedy this defect, but with very meagre results. The *Noritô*, the *Kojiki*, and a few other ancient works do certainly contain some sublime thoughts, but with these exceptions in our prose as in our poetry the form of beauty that finds most acceptance is what we may term gracefulness.

* * *

The Tôkyô Semmon Gakkô has published Mr. Sakai Yôzaburô's *Kinsei Oshû-gwaikôshi* (A History of Modern Diplomacy) which is a translation of the French work by M. Debidour, entitled *Histoire diplomatique de l'Europe depuis l'ouverture du congrès de Vienne jusqu' à la clôture du congrès de Berlin* (1814-78). The translation was made for the Foreign Office, where the book is much used for reference. It occupied Mr. Sakai for three years and is said to have been very carefully done. Vol. I. sells at 1 *yen* 50 *sen* and vol. II. at 2 *yen*.

* * *

The *Nippon Shimbun* gives a list of newly issued magazines with short notices of each as follows:—

(1) The *Kokuryoku*, published at Higashi Katamachi, Hongô, Tôkyô, mentioned in our last summary, is a fortnightly organ of the Shimpôha. The writing is incisive, but rather scanty in quantity.

(2) The 士氣, *Shiki*, is also a political organ, which attacks its foes with great spirit, as its title implies. It evidently owes its birth to some party split, but so far it has not shown its colours in a sufficiently open manner to allow of its *locus standi* being determined. The office of the magazine is the Kwairansha, Nakanomachi, Tôkyô.

(3) The 少文豪, *Shôbungô* (The Young Literary Hero) published at Imagawa Kôji, Kanda, prints the effusions of provincial youthful aspirants for literary fame. The *Nihon Shimbun* is uncertain whether to praise or to condemn it.

(4) The 文界, *Bunkai*, is a general, monthly, literary magaine. It discusses education, home life, customs, and other subjects connected with social reform.

(5) The *Hôritsu Shishin* (指針) is a monthly that devotes itself principally to collecting legal judgments. Its office is in Kakigarachô, Nihonbashi, Tôkyô.

* * *

A highly useful work on Japanese Keramics has lately been published by the Suzandô, Nihonbashi-ku, Tôkyô, which sells at 50 *sen* per copy. Its title is the *Kantei-hiketsu* (鑒定秘訣) *Tôki-ruishû*. The *Shigaku Zasshi* speaks highly of the book. The author is a Mr. Takagi Josui. It is stated that he describes minutely no less than 230 different kinds of ware, and in every case indicates what are the points in which the various classes excel, gives the names of the principal manufacturers, together with a history of the business they carry on. It is said that the author is an antiquarian and had no other object in collecting the information he has published but the gratification of his own taste, but the work cannot but be regarded as a most valuable addition to the history of one of Japan's most important industries, says the *Shigaku Zasshi*.

LAUNCH AT YOKOSUKA DOCKYARD.

Visit of the Emperor.

Yokosuka was in holiday dress on Saturday, in honour of the visit of His Majesty the Emperor to witness the launching of the despatch vessel *Chihaya* built at the Dockyard. The rather squalid streets of the Japanese Portsmouth were made brighter than usual with lanterns and bunting, and the numerous war vessels in the fine harbour dressed ship. The streets, as always, swarmed with soldiers and bluejackets, and a large number of officers and official notabilities' from Tokyo added a touch of brilliancy to the concourse. His Majesty left his Palace at 9.30 a.m., and proceeded by special train from Shinbashi at 10 o'clock, arriving at Yokosuka at 11.37. He was met by the principal officials, and drove to the *Chiuju-fu*, where he partook of luncheon before performing the ceremony.

In the meantime a large and distinguished gathering of naval and military men and civilians, as well as a great crowd of spectators, had assembled around the stays on which the hull of the *Chihaya* was poised. The great number of handsome uniforms, agreeably relieved by the vividly-tinted dresses of a number of Japanese ladies, made the scene very brilliant. In line with the bows of the new ship, and commanding a perfect view of all that should take place, was a pavilion erected for the accommodation of His Majesty, consisting of two or three tiers of seats and one of higher level where his Majesty's chair and table were placed. The decorations consisted of broad bands of red and white bunting, with the Imperial Chrysanthemum and two crossed flags in front. The *Chihaya* was festooned with greenery, and her deck structures were picked out with garlands of the same material. At the bows was suspended a large ball of parti-coloured paper, in which the customary doves were imprisoned. The *Chihaya* is by no means one of the largest vessels so far constructed at Yokosuka; in fact it belongs to a quite secondary rank as regards size. It is intended for a despatch-vessel, and is of 1,230 tons displacement. Built of steel throughout, it is 83.8 metres long, 9.6 metres in extreme breadth, and has a draught forward of 2.64 metres and aft of 3.34 metres. It has twin screws, triple expansion engines of 6,000 indicated horse-power, and four boilers of the Normand type, the speed afforded being 21 knots. The armament consists of two 4.7 in quick-firing guns, four quick-firing 12 pounders, and five torpedo tubes, one right forward and the other four on the upper deck. The armament is all from Armstrong's but will be fitted in Japan. The ship has been designed and built wholly in Japan under the supervision of Constructor Yamaguchi, who directs the 3,000 or 4,000 men employed in the construction department at Yokosuka. The *Chihaya* was laid down about three years ago, and will probably be ready for commission in six months or a little more.

At about a quarter-past the hour, the Naval Band struck up the *Kimigayo*, and immediately after the Imperial party made its appearance. His Majesty, who wore a state uniform, was accompanied by Admiral Inouye and Admiral Matsunaga, of the Dockyard, Admiral Ito, Admiral Yamamoto, Minister for the Navy; Chief Constructor Admiral Saso, Admiral Yamaguchi, Admiral Miyabara, and the staff of the Dockyard and Admiralty Office. After the Emperor had taken up his stand, a speech was read by Admiral Yamamoto, and the operation of launching was then commenced. At the word of command wedges were hammered in to throw the weight of the ship on the "cradle"; then the side shores were removed; next the sand bag holding the stern supports was removed from the chocks, and finally the safety key was taken from the "dog shore," and allowed to fall. At this point the ship should have moved of its own weight, but, probably owing to the fact that it was rather light, it was necessary to start it on its way. Two hydraulic pumps of 100 tons each were accordingly set at work, and at the end of half a minute's pumping the hull had moved an inch. This was sufficient impetus, and it commenced slowly and gracefully to glide along the tallow-anointed slips, gathering momentum with every second, and taking the water amid a splash and a pandemonium of shrieks from the steam whistles of all the craft outside and of *banzai* from the spectators. The motion of the vessel drew taut the cord securing the ball of paper over the bows, and liberated the imprisoned doves, besides letting free a great quantity of varicoloured ribbons. The ceremony was in every way a complete success.

After seeing the *Chihaya* fairly in the water, His Majesty lost no time in withdrawing and was driven to the Admiralty Department, where he remained until nearly four o'clock, when his equipage, preceded by the standard bearer and outriders, passed through an immense crowd to the Railway Station, which the Imperial train left a few minutes past four.

Meanwhile the invited guests repaired to a larger room on the upper floor of one of the workshops, where a cold luncheon was provided of which many hundred officers and visitors partook. Admiral Matsunaga proposed the health of the Emperor amid loud applause, in the absence of His Majesty; and Mr. Kataoka, President of the House of Representatives, submitted the toast of "The Navy." The foreign guests included the German Military Attaché, Captain Bayly, R.N., Professor Hillhouse, Capt. Bishop, M. Francois, and Mr. J. M. James.

In and near the luncheon room were many clever specimens of the ingenuity of the Japanese bluejacket and mechanic. One was a tiger in a bamboo thicket. The tiger was composed of oakum, with a diver's helmet for his head, and iron staples for his claws, while his native jungle was composed of bamboos made out of cans, with slips of white wood for the leaves. Perhaps even more ingenious was a monster dragon-fly, constructed out of the most unpromising materials. Its eyes consisted of two large round bottles, like hand grenades, its antenæ were of insulated wire, its legs were pincers,

Digitized by Google Original from CORNELL UNIVERSITY

the thorax was represented by a round piece of metal, its wings were two pairs of saws, its abdomen a length of hose pipe. A fearsome centipede had a couple of door knobs for eyes, and its *annulæ* were a series of brass fittings of various kinds. A chrysanthemum made entirely of glue, a dwarf tree of isinglass, and a wistaria plant of insulated wire and steel pens were among other clever imitations. The written description of these works of art conveys no idea of the dexterity with which nature was imitated by these most unlikely materials.

THE POLITICAL SITUATION IN THE FAR EAST.

The special correspondent of the *China Mail*, wiring from Yokohama under date of May 19, thus sums up the political situation in the Far East :—

I have returned from an extensive tour of investigation in North China and Korea.

At Tientsin I learned that the Imperial Government are in sympathy with the Boxer Society, and that General Yuan Skik-hai, Governor of Shantung, had not received orders to use vigorous measures to suppress the Society.

Port Arthur is swarming with soldiers, and the naval and military authorities are very active. Two American firms are selling the Russian Government large quantities of stores for the provisioning of the stronghold.

At the Korean towns, Chemulpo, Söul, Mokpho and Fusan, the Japanese control the foreign trade. The Japanese have large and exclusive settlements at each of these ports. Japanese officers are frequently seen in Korea. Undoubtedly Japan would fight to defend her trade in Korea, but the best-informed people are of opinion that, although Japan and Russia may squabble over points of strategical advantage, these differences will not for a long time lead to war, and Korea will continue to be the buffer State between the two Powers for years.

It may be, however, that Japan will be forced into the war by a possible approaching financial crisis. It is reported that there will be an enormous deficit in the budget this year. The amount of the deficit is rumoured at forty million *yen*. Where the money is to come from to meet the current expenses of Japan's large army and navy is the question of the day seriously agitating the minds of statesmen. The people are already highly taxed, and the taxes collected from foreign merchants have fallen far below the sum in the estimates.

The Minister of Finance says the present hard time in Japan is due to a reaction from over-speculation after the war with China. It is asserted by the foreign banks that Japan is being drained of gold, but Japanese officials state that only eight millions have gone out since the China War.

On the whole, I believe that the able men at the head of the Japanese Government can restrain the country from entering into a damaging war without more serious provocation than Russia is likely to give within the next two years.

A DIVORCE SUIT.

The application of Madame Francois to the Chiho Saibansho praying that her husband should be prohibited from entering the premises of the Central Hotel pending the decision in the divorce suit which the lady has instituted, came on for hearing before Judge Fujise on Saturday morning.

Mr. Inouye, who appeared for the plaintiff, said his client had been married to the defendant for ten years, and had been faithful to him, but defendant had brought damaging accusations against her, while his visits to the hotel injured her in her business.

Dr. Mecre gave evidence of treating the plaintiff for slight injuries to her eye, neck, and elbow, and a guest at the Hotel, named Gastard, deposed to having seen plaintiff struck by defendant. A Japanese employe also gave evidence.

The Court dismissed the application with costs.

CHINA NOTES.

The Shanghai Taotai has just done a graceful act, which will be generally appreciated by foreigners, in making a personal contribution of Tls. 1,000 to the Indian Famine Fund.

The Empress-Dowager, Emperor, and Heir-Apparent Pu Chun, who have been spending the winter at Eho Park Palace, will return to Peking for the summer during the first week of June.

It is reported from Peking that wild reports and rumours are being circulated in the city, and placards have been posted not far from the Legations, while well-poisoning stories are also current.

Ill-feeling against the Hankow railway is reported to be growing, partly owing to several accidents which have occurred in connection with the construction and partly through the alleged bad conduct of the railway men.

A French missionary who has lately visited Kwangchuwan declares in *L'Echo du Tonkin* that, though certain parts of the new French acquisition may be tranquil, this is not the case on the Chinese frontier, where pirates are very busy both on land and by sea.

It is said that the Siamese Government is considering a measure for the taxing of Chinese in that Kingdom at the rate of $8.00 per head per annum. This, it is estimated, will bring an additional revenue to the Siamese Government of something like $240,000 a year.

The *North China Daily News* says :—"The police generally, and Inspector Armstrong in paticular, are to be heartily congratulated on their clever capture of Chang Chang-wo, the leader of the Pootung dacoits." He was captured on the 4th inst. in company with another of the band, The Mixed Court ordered that the prisoners should be sent to the City, where the principal, it is said, will undoubtedly be decapitated.

The death is announced at Peking of pleurisy of Père Louis Gaillard, S.J., the distinguished author of "Cross and Swastika in China" and the "Plan of Nanking," in the "Variétés Sinologiques." He was born at Paris in 1850. He was a man of great talents, charming manners, and refined and cultivated taste, and was entirely devoted to his work. In his premature death, remarks the *N.-C. Daily News*, the Kiangnan Mission to which he belonged suffers a very marked loss.

The Nanking correspondent of *The North China Daily News* reports the return to the duties there of old Viceroy Liu Kun-yi, who had surrendered his official seals but has now taken them back. He also notes that some Japanese have established themselves near the Drum Tower, Nanking, and have opened a school for the study of languages. When the school is in full running order some two hundred Japanese are expected to be in attendance. They are to receive instruction in other branches.

A notice to mariners just issued by the Imperial Maritime Customs states that a beacon named the Rocky Point Beacon, Min River, Foochow district, has been erected on the ledge of rocks existing about half-way between Tunui and Tintao, and bearing from Half-tide Beacon W. by S. ½ S., distant 8 cables. The beacon is about 80 feet from the outer extremity of the ledge of rocks and consists of a spar surmounted by a cage, about 13 ft. above high water. The beacon is painted red and the cage bears the words "Rocky Point." Vessels are advised not to approach within one cable of the beacon.

The following Chinese dispatch, under date the 18th May, has been received from Wuchang, and translated by the leading Shanghai morning journal :—The Viceroy Chang Chih-tung received yesterday a dispatch from the perfect of Shih-nan-fu reporting a rising of malcontents in Lichuan district, who attacked a number of Christian villagers there and who succeeded in killing a number of the latter, besides destroying two villages. A strong body of Yamen runners sent by the magistrate of Lichuan served further to increase the wrath of the malcontents, who killed five of the runners and chased the remainder into Lichuan, the gates of which were shut when it appeared that the malcontents were going to assault the place. Upon receiving news of the rising General Fu, commanding at Shihnanfu, at once set out with a force of troops to suppress the Lichuan rising, but was met half-way by the malcontents, who stopped his further progress and killed some 20 of his men in the fighting that ensued. Viceroy Chang has now telegraphed to Ichang to send troops to help General Fu.

The Lu Huan line having been completed as far as Chung-ting, the Russians have asked the Government to send the proper officials with them to define the railway grant already held by them for the line from that point to Tai Yuen, the provincial capital of Shansi, and to assist them in purchasing the land for the line.—*Peking and Tientsin Times.*

A correspondent, writing to the *Rangoon Times* from the Burmah Boundary Commissioners' Camp at Pang Hsang on the 21st April, says :—We have heard from Mong Tum that the Was have been fighting again with the Chinese left there and that the latter have had to leave, their ammunition being exhausted and the local Shan Militia employed having insisted on returning to their homes : as the pay of a militiaman is something less than two rupees a month with nothing found, it is not surprising that he should hanker after home sweet home. The Was destroyed such parts of both Mong Hkaw, where we were camped so long, and Mong Tum as were outside the stockades surrounding those towns. On the departure of the Chinese the Shan residents bought peace with the Was, at probably a pretty high figure. Very likely also the Chinese troops had to pay their way out. So the Was, in spite of the drubbing we gave them, have come out top after all. The idea of the Chinese troops remaining at Mong Tum was that they should protect the Shans while sowing their crops. The manner in which this purpose has been carried out is very celestial.

A dispatch received recently in Shanghai from members of the Reform Party at Taiyuen-fu, capital of Shansi, and printed in the *North China Daily News*, reports that since the assumption, a short time ago, by Yü Hsien, ex-Governor, of the office of Governor of the former province, that notorious hater of all things foreign has already begun to put a stop to all the reform measures of the former enlightened Governor, Hu Ping-chih, such as the College of Western Sciences, the Foreign Military Academy, cotton yarn and woollen mills, etc. Besides this he has also begun his system of opposition to foreigners in the province, a proceeding which, it will be remembered, was stopped, although too late in the day, by his being recalled by the Empress Dowager, owing to complaints made by some of the Foreign Ministers at Peking. It will also be borne in mind that when the news of Yü Hsien's appointment to Shansi was published, about two months ago, a note of warning was sounded of what might be expected from such an official in a province where the Peking Syndicate was just commencing its exploitations of railways and mines. As matters at present stand it also appears from the dispatch now quoted that where foreigners always found the people friendly and glad to give help to strangers, they are now gradually becoming more hostile, the hint having evidently gone forth from the provincial capital that the high authorities are hostile to foreigners and it would therefore be well that the people should also follow suit. Another note of warning may therefore now be sounded, and that is that the Boxers may now be expected to soon appear in Shansi also, for it is well-known that this notorious Manchu Governor is the actual author of this anti-foreign association.

YOKOHAMA AMATEUR ROWING CLUB.

SPRING REGATTA.

The opening day of the Spring Regatta was favoured with splendid weather, the conditions both on land and sea being everything that could be desired. The attendance was good, especially during the latter part of the afternoon, and a good number of ladies graced the proceedings with their presence. The fact that the interport events were to be decided at Yokohama this year lent additional interest to the gathering, and the sport was on the whole excellent. The Interport Fours proved a fairly easy win for Kobe, as had been generally anticipated by the knowing ones. The Alphabetical Fours resulted in an unexpectedly easy capture for Squire's crew, who simply walked away from the more veteran crew stroked by Hayward. The Interport Sculls proved a very hollow thing, Sorhagen, who was hopelessly outclassed, giving up the race. The Senior Pairs proved a capital race, and the applause which greeted Levedag's fine win was well deserved. In the Weight Fours Levedag's crew won with ease, and the last race of the day, the Senior Double Sculls, was a win for Hayward and Squire, Carst and Irwine making a good fight of it.

The prizes were of an exceptionally handsome description, the most conspicuous being those for the Senior Pairs, consisting of a silver cup, given by the Japanese Bankers' Association, and a bronze statuette,—representating a warrior in armour—presented by Mr. Masujima. The prizes for all the Interport events were gold medals made from sovereigns.

The Town Band was present and performed a number of selections, also playing for dancing during the latter part of the afternoon. Refreshments were provided at the Boat House.

The officials were Mr. F. J. Hall, starter; Mr. H. C. Litchfield, judge; and Mr. H. S. Goddard, timekeeper. The Roman numerals denote starting position. Details :—

INTERPORT FOURS.—1 Mile.

II.—K. R. & A. C.

"HART."

Bow.	W. Pietzcker, 155lb.	1
2.	E. Oldenberg, 151lb.	
3.	C. Mancini, 156lb.	
Str.	P. Sorhagen 155lb.	
Cox.	H. E. Green, 133lb.	

I.—Y. A. R. C.

"PEEWIT."

Bow.	W. M. Squire, 150lb.	2
2.	H. A. Poole, 156lb.	
3.	A. T. White, 168lb.	
Str.	G. C. Allcock, 157lb.	
Cox.	W. Goddard, 130lb.	

Time, 7.34.

The Kobe crew, with the outside berth, got the best of the start, Sorhagen setting a stroke of 32 to the minute, while Allcock pulled 30. At the half-mile, Kobe, still leading by about a length, had slowed down to 28, while Allcock still maintained his stroke. By the time they passed the breakwater the Yokohama boat had drawn up somewhat, and was almost level at one time, but Kobe put on a spurt, to which the Yokohama men were unable to respond, and won a good race by half a length. The time was excellent.

ALPHABETICAL FOURS.—One Mile.

II.—N. TO Z.

"SEAMEW" (GREEN.)

Bow.	M. F. Stephens, 149lb.	1
2.	A. T. White, 168lb.	
3.	O. Strome, 190lb.	
Str.	W. M. Squire, 150lb.	
Cox.	J. Abbey, 114lbs.	

I.—A. TO M.

"SWAN" (WHITE.)

Bow.	W. Goddard, 130lbs.	2
2.	H. Y. Irwine, 151lbs.	
3.	F. Kluss, 156lbs.	
Str.	H. E. Hayward, 143lbs.	
Cox.	W. M. Carst, 130lbs.	

Time, 8.25½.

Hayward's crew got rather the best of the start and went away with a stroke of 31 to the minute, Squire setting a rather slower stroke of 30. This crew, however, pulling capitally together, soon drew ahead, and had a lead of a length and a half by the time the Pacific Mail jetty was reached. The distance was too great to be recovered and Hayward seemed not to care to make an effort to get on terms; the journey to the finish was therefore a hollow affair, and Squire's crew won with great ease by a couple of lengths.

INTERPORT SINGLE SCULLS.—One Mile.

I.—Y. A. R. C.

H. Y. Irwine, 151lb. 1

II.—K. R. & A. C.

P. Sorhagen, 155lb. 0

Time 8.43½.

Sorhagen sculling 28 to the minute got the best of the start, but by the time half the distance was completed Irwine, who had reached smoother water; had a slight lead, which was increased owing to Sorhagen's steering a bad course, so that at the P. M. wharf Irwine was lengths to the good. Sorhagen, had been showing signs of distress before this point, and now, seeing the struggle was hopeless, gave up, allowing Irwine to scull in alone. Irwine maintained a stroke of 30 to the minute throughout.

SENIOR PAIRS.—One Mile.

I.—"SCOTER."

Bow.	B. J. Jackson, 173lb.	1
Str.	E. Levedag, 185lb.	
Cox.	J. R. Gibson, 134lb.	

III.—"SCAUP."

Bow.	F. H. Abbey, 143lb.	2
Str.	A. T. White, 168lb.	
Coq.	J. Abbey, 114lb.	

II.—"SHELLDRAKE."

Bow.	F. Kluss, 156lb.	0
Str.	H. A. Poole, 156lb.	
Cox.	W. M. Carst, 130lb.	

Time, 10.5.

Levedag had the inside berth, and White the outside. White's boat took a slight lead, Poole sticking close to him, while Levedag was left over a length behind. By the time half the distance was completed, however, Levedag was holding Poole well, and almost on level terms, White being a length and a half ahead of the other two. Levedag now began to put on steam in earnest, and quickly passed Poole. At the Pacific Mail wharf he was a length and a half ahead of Poole, and was making a fine effort to reach White, who was beginning to show signs of distress. White, however, entered the breakwater with a lead of a length, and it appeared that after all he would win, especially as Levedag did not for some little time afterwards appreciably reduce the distance. When opposite the Grand Hotel, however, he began to spurt, and gradually drew nearer White, who was quite unable to respond. There was no question as to which crew would win if the distance was long enough for Levedag's quickened stroke to tell, but both were now very close to the finish, and the issue was doubtful. By a splendid effort, however, Levedag, managed to force his boat ahead just at the proper moment, and won by a quarter of a length. He had rowed a capital race, with the disadvantage of a bad start. Poole's crew was quite out of it.

WEIGHT FOURS.—One Mile.

I.—12 ST. AND OVER.

"SEAMEW" (Green.)

Bow.	A. T. White, 168lb.	1
2.	B. J. Jackson, 173lb.	
3.	H. K. Onderdonk, 184lb.	
Str.	E. Levedag, 185lb.	
Cox.	J. R. Gibson, 134lb.	

II.—UNDER 11 ST.

"SWAN" (White.)

Bow.	M. F. Stephens, 149lb,	2
2.	H. Y. Irwine, 151lb.	
3.	W. M. Squire, 150lb.	
Str.	H. E. Hayward, 143lb.	
Cox.	W. Goddard, 130lb.	

III.—11 ST. AND OVER.

"FLAMINGO" (Red.)

Bow.	F. Kluss, 156lb.	0
2.	H. A. Poole, 156lb.	
3.	J. J. M. Carst, 164lb.	
Str.	G. C. Allcock, 157lb.	
Cox.	W. M. Carst, 130lb.	

Time 8.41.

Levedag got the inside berth, and Allcock the outside. Allcock had the best of the start and went away with a slight lead, the other two being about level. By the quarter mile, however, Levedag had reduced much of the distance between his boat and Allcock's, and had a lead of Hayward. At the half mile Levedag had forged ahead of Allcock, who had began to show signs of fagging, and Hayward, putting on steam, got on terms and soon after passed Allcock. At the P.M. Wharf Levedag had a clear length of a lead, while Allcock was lengths behind Hayward. A good race ensued from this point between Levedag and Hayward, the latter rowing gamely, but he was unable to reach Levedag's boat, which won by about three lengths.

SENIOR DOUBLE SCULLS.—Three-quarter Mile. (Ladies' Purse).

"TERN."

Bow.	H. E. Hayward, 143lb.	1
Str.	W. M. Squire, 150lb.	

"PEARL."

Bow.	H. Y. Irwine, 151lb.	2
Str.	J. J. M. Carst, 161lb.	

Time, 6.47½.

Hayward went away with a slight lead, which he maintained throughout. There was a fine race for the finish, Carst making a hard fight of it. He was unable, however, to reach Hayward, who won by three-quarters of a length.

Miss A. I. Moss presented the most-coveted prize to the winners in a neatly worded speech of congratulation.

SECOND DAY'S REGATTA.

On Saturday, the second day of the Spring Regatta of the Y.A.R.C., the weather was again delightful. The water for the greater part of the afternoon was rather lumpy, owing to a fresh southerly wind which, though with the rowers, made the work of paddling out to the starting point rather irksome. The Japanese crews, it was noted, got over this by being towed to the half mile line. The attendance at the Boathouse was larger than on Friday and great interest was taken in the various events. The Interport races created quite an excitement and the competing crews were liberally backed by their respective supporters. During the intervals between the races, the ladies, who were present in force, found sufficient amusement in dancing to the strains of the Town Band, which also performed the following programme :—

I.—Overture, "Crown of Victory."	III.—Selection, "Bohemian Girl."
II.—March, "Liberty Bell."	IV.—Fantasie, "Ireland."

Refreshments were liberally dispensed in the Gymnasium, and the visitors generally had an enjoyable time. Most of the races were very even and well contested. In the two interport events honours were divided, the Double Sculls falling to the Yokohama crew, Squire and Hayward, and the Pairs to the Kobe representatives, Mancini and Pietzcker, who rowed in splendid form and had an easy victory. In the races of the local oarsmen the Club beat the Committee after a well contested race, and the Club Fours fell to W. Goddard's crew. The Scratch Fours brought out five boats and resulted after a very close race in another victory for Goddard. The times made generally were very good. The duties of Judge and Starter were efficiently performed by Messrs. H. C. Litchfield and F. J. Hall respectively, while Mr. H. S. Goddard officiated as timekeeper. The details were as follows, the Roman figures before the names of the boats indicating their position from the shore at the start :—

INTERPORT DOUBLE SCULLS.—One Mile.

Y. A. R. C.

"TERN."

Bow.	H. E. Hayward, 143lb.	1
Str.	W. M. Squire, 150lb.	

K. R. & A. C.

"PEARL."

Bow.	W. Pietzcker, 155lb.	2
Str.	P. Sorhagen, 155lb.	

Time, 8.32½

The start, as in the other events in which two boats only competed over the mile course, was from small buoys, and was therefore perfectly level. Both crews began with a stroke of about 28. Sorhagen steered a bad course at first which allowed Squire, on the inside, to obtain a slight lead, but a little later this was lost by the latter steering too far inshore, and at the P. M. Wharf the two boats were abreast. Both crews continued to steer a zig-zag course till passing the Breakwater, where Sorhagen had a slight lead. Squire then spurted, and, after a very fine race to the finish, won by about a foot.

CLUB V. COMMITTEE.—One Mile.

I.—CLUB.

"SEAMEW" (Green..)

Bow.	M. F. Stephens, 149 lbs.	1
2.	H. Y. Irwine, 151 lbs.	
3.	A. T. White, 168 lbs.	
Str.	W. M. Squire, 151 lbs.	
Cox.	J. Abbey, 130 lbs.	

II.—COMMITTEE.

"SEAMEW" (White.)

Bow.	W. Goddard, 130 lbs.	2
2.	H. A. Poole, 156 lbs.	
3.	G. C. Allcock, 156 lbs.	
Str.	H. E. Hayward, 143 lbs.	
Cox.	A. L. Mottu, 140 lbs.	

Time 8.19.

After a level start Hayward obtained a slight lead, but Squire, a little later, drew up to him and before reaching the Wharf quickened his stroke and drew away a length. Hayward then spurted and Squire responded, and holding his lead, won a good race by a bare length.

INTERPORT PAIRS.—One Mile.

K. R. & A. C.

"PRIMROSE."

Bow.	W. Pietzcker, 155 lbs.	1
Str.	C. Mancini, 156 lbs.	
Cox.	H. E. Green, 133 lbs.	

Digitized by Google Original from CORNELL UNIVERSITY

Y. A. R. C.

"SCAUP."

Bow.	B. J. Jackson, 185 lbs.	2
Str.	E. Levedag, 185 lbs.	
Cox.	J. R. Gibson, 134 lbs.	

Time 9.35½.

Starting level from the buoys, Mancini soon drew ahead, rowing a long swinging stroke of about 27 to the minute, while the Yokohama stroke was a little quicker. Mancini gradually increased his lead and was four or five lengths ahead at the wharf, and a dozen at the finish.

JAPANESE SIX-OARS—½ Mile.

Three boats competed in this race, all the crews being assistants in Japanese banks. They were distinguished by the colour of the jackets of the crews, white, green, and red. Green, in inside position, got rather the best of the start, but the three were soon very level. All pulled a fast stroke. At the Wharf White led by half a length from Red, Green having dropped behind. Red spurted inside the Breakwater and won by about half a length, White second. Time 4.27.

CLUB FOURS.—1 Mile.

"DARTER" (BLACK.)

Bow.	H. Y. Irwine, 151 lbs.	1
2.	B. J. Jackson, 185 lbs.	
3.	O. Strome, 190 lbs.	
Str.	W. Goddard, 130 lbs.	
Cox.	H. Gorman, 125 lbs.	

"SEAMEW" (Green.)

Bow.	J. E. Moss, 132 lbs.	2
2.	F. H. Abbey, 143 lbs.	
3.	A. T. White, 168 lbs.	
Str.	W. M. Squire, 150 lbs.	
Cox.	A. L. Mottu, 140 lbs.	

"SWAN" (White.)

Bow.	M. F. Stephens, 149 lbs.	0
2.	H. A. Poole, 156 lbs.	
3.	E. Levedag, 185 lbs.	
Str.	H. E. Hayward, 143 lbs.	
Cox.	J. R. Gibson, 134 lbs.	

"FLAMINGO" (Red.)

Bow.	J. Abbey, 144 lbs.	0
2.	E. Tank, 146 lbs.	
3.	F. Kluss, 156 lbs.	
Str.	G. C. Allcock, 157 lbs.	
Cox.	W. M. Carst, 130 lbs.	

Time, 9.2².

After a little delay the four boats were started very level, Green first showing to the front. At the Wharf Goddard came up with the Green boat and the two rowed nose and nose through the harbour entrance. A little later Goddard spurted and after a close race finished half a length before Squire, the other two boats being two lengths or so behind.

SCRATCH FOURS.—From P. M. Wharf.

GREEN BOAT.

Bow.	Tank	1
2.	Mason	
3.	Strome	
Str.	W. Goddard	

BLUE BOAT.

Bow.	H. A. Poole	2
2.	Barnby	
3.	Hood	
Str.	J. E. Moss	

WHITE BOAT.

Bow.	H. S. Goddard	0
2.	J. Abbey	
3.	Stephens	
Str.	H. Irwine	

BLACK BOAT.

Bow.	Hayes	0
2.	F. H. Abbey	
3.	E. J. Moss	
Str.	C. Mancini	

RED BOAT.

Bow.	Cole	0
2.	H. Goddard	
3.	Levedag	
Str.	Pietzcker	

The five boats were got away on fairly level terms, the Blue and Black boats at first showing a little in advance of the other three. On entering the harbour the Green boat came to the front and after a good race with the Blue, won by about a quarter of a length.

INTERPORT DINNER.

The Interport dinner was held at No. 61, Main Street, on Saturday evening, Mr. F. J. Hall, Captain of the Y.A.R.C., presiding over some 45 members and visitors. At the Chairman's right sat Mr. Sorhagen, winning stroke of the Kobe crew; and among the other visitors was Mr. Mori, Vice-President of the Yushi Rengo Kyosokai. The Vice-chairs were filled by Messrs. Hayward, Poole, Mottu, and W. Goddard. A capital dinner was placed on the boards by Host Clausen, to which full justice was done by a right jovial company.

After the toast of "Our respective Rulers" had been duly honoured, the Chairman proposed the "K.R. and A.C." Having expressed regret at the unavoidable absence of the President, Mr. H. C. Litchfield, the Chairman made brief reference to the Interport races. Kobe had won the Fours and the Pairs; Yokohama the Single and Double Sculls, so that honours were divided. The Fours had been won by good honest work; the Double Sculls were only lost by the smallest margin; while as for the Single Sculls, Kobe's representative was undoubtedly handicapped by the inferiority of his boat. Passing on to the regatta generally, the Chairman said that, so far as the Yokohama Amateur Rowing Club were concerned, the late regatta had been characterised by the slackest training he had ever seen; he said it with grief. He could only call the manner in which some men who had entered for the races loafed down to the Boat-house, careless as to how it affected others, extremely selfish. Another point which the chairman wished to bring home to members was this. In the regatta just held there had been 10 races participated in by 18 men; of these four had rowed in one race, four in two; piling all the rest of the work on the shoulders of the remaining 10. He would leave it to his hearers to work out how much some men had had to do. One, in fact, rowed in seven races. Now, unless members backed up their committee—the men they deliberately elected at annual general meeting—they could not expect the Club to prosper. He regretted this lack of *esprit de corps* and hoped that his remarks that evening would bear fruit, as they should if taken in the spirit in which they were uttered. While making these remarks, he had no wish to detract from the victories of Kobe. The visitors had shown them what pluck, combined with conscientious work—(a voice, "And Kobe Beef")—could do, and the example set by them should be followed by Yokohama. The Yokohama Amateur Rowing Club would have to proceed on those lines if it wished to retrieve its laurels. In rowing, as in everything else in this life, success waited only on conscientious effort and steady application to the matter in hand; and he would impress on his younger hearers that the experience of the world showed that no man was indispensable. No man was so good but that his place could be filled; no man, it did not matter what were his excellencies or achievements, but would find his services dispensed with did he slacken in the race of life. He hoped that in future regattas the members would be found backing up their Committee better; would go in for training earnestly; would consider the convenience of others more; and in every respect pull together. The Chairman concluded by presenting the Y.A.R.C. club flag to the winning stroke.

Mr. SORHAGEN, in reply, expressed thanks for the kindly reception accorded the Kobe crew, and hoped to meet Yokohama oarsmen at the next interport regatta at Kobe, when he trusted Kobe would give them a good race and hold her own. He concluded by proposing the "Y.A.R.C."

Mr. HAYWARD responded and said that he hoped that when the Yokohama oarsmen went down to Kobe they would do unto Kobe as Kobe had done unto them—and more also; a remark which drew forth loud applause. Mr. Hayward then toasted the winning crews, for which Mr. SQUIRE responded.

The CHAIRMAN then proposed the health of Mr. Mr. Mori, Vice-President of the Yushi Rengo Kyosokai, which had donated a prize, and also sent a crew to row in the regatta. He hoped that the time was not far distant when the Japanese oarsmen would be using sliding seats and similar boats to the Y.A.R.C., so as to put up a good race between them; the sooner that time came the better.—(Hear, hear.)

Mr. MORI, speaking in Japanese, said that he echoed the remarks of the Chairman; he hoped that within a few years his association would be using similar boats to the foreigners and that some good races would result.—("Banzai.")

Other toasts were "The Press;" the "Chairman," to whose worth and impartiality Mr. ROSE bore eloquent tribute; and the "Committee." During the evening Mr. Berrick gave a pianoforte selection; Mr. H. A. Poole, a violin solo; and songs were sung by Messrs. E. H. Irwine, H. S. Somerton, G. G. Brady, B. J. Jackson, H. E. Hayward, W. Squire, F. Onderdonk, and others, the company separating about midnight.

The *Argonaut*, cruiser, was commissioned at Chatham on the 19th April by Captain G. H. Cherry, to relieve the *Undaunted*, Captain A. C. Clarke, on the China Station. The t.b.d.'s *Coquette* and *Cygnet* were also commissioned by Com. M. T. Parks and Lieut. Com. F. Wray respectively as tenders to the *Argonaut*. Each of the t.b.d.'s carry a crew of sixty-two.

CRICKET.

MR. CRAWFORD'S TEAM V. MR. DUFF'S.

A match was played between these terms on Saturday afternoon. Mr. Crawford's men batted first and compiled 167, Mr. Duff's side responding with 122 for the loss of seven wickets. Scores:—

CORRESPONDENCE.

DEFORESTATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Though fearing that all appeals made by private individuals are foredoomed to failure, I cannot refrain from asking the attention of your Japanese readers—especially those whose official position may give them influence—to a circumstance which is not only swiftly impairing the beauty of Japanese landscape, but destroying equally swiftly and beyond all possibility of restoration a valuable source of national income. I allude to the reckless destruction of forests throughout the country. Some thirty years ago—at the beginning of the *Meiji* period—Japan was a land of splendid timber. The destruction since then has been so great and constantly increasing, that it is probably no exaggeration to say that another thirty such disastrous years will denude the country entirely:—the unchecked riot and wilful waste of but two generations will have undone nature's work of thousands of years, and Japan will find herself in the same position as the worn-out countries of the South of Europe are in to-day,—without timber, and with her arable valleys ravaged by those violent floods which, in deforested lands, carry away the soil and leave masses of stones and rubble in its stead. Anyone knowing from literature what Sicily and Greece once were, and having seen their bare, stony, unfruitful surfaces to-day, will recognise that this is no fancy picture, but the simple and necessary punishment that follows on neglect of nature's laws. The inevitable result has indeed already ensued in some places in Japan, for instance along the valley of the Totsugawa in Kishu, where, the trees having all been cut down some years ago, the floods descended so furiously as to wash away the villages for many miles and reduce the people to beggary, so that the authorities found it necessary to assist them to emigrate, of course at considerable public expense. Thus the peasantry of that district, far from contributing to Japan's national resources, became a drain thereon. Similarly near some of the lakes north of Fuji, where, excessively steep hillsides having been cleared to plant barley, the soil has slipped away, barley and all, leaving nothing but naked rocks behind. But such cases being still comparatively rare, and occurring mostly in little frequented regions, no one,—at least no one of influence in public affairs—gives them a second thought. It is probable that the evil will not be recognised till the time for remedy has passed by.

In old Tokugawa days the Japanese forestry laws were of extreme severity; but obedience to them secured the splendid legacy of timber which was the admiration of travellers during the seventies and eighties, and of which patches still remain as a source of national wealth, or—more frequently—as a source of wealth to individual speculators. At the time of the Revolution the old laws fell into desuetude, and in-

Digitized by Google Original from CORNELL UNIVERSITY

credible ravages were committed by the peasantry. I am told that the forestry regulations drawn up by the Imperial Government are excellent; but unfortunately it would appear that they are not enforced, or that at any rate they are perpetually evaded. Even Government forests, even forests belonging to the Imperial Household itself, as I am informed in travelling about the country, suffer perpetually from the unchecked depredations of private individuals. The whole district on the northern slop of Fuji is being rapidly denuded in this way, sometimes out of pure mischief, sometimes from laziness—as when a man will cut down a chestnut-tree for the sake of the chestnuts, rather than take the trouble of climbing it,—sometimes in the supposed interests of agriculture, as in the case of the ill-planned and ill-fated barley-fields above mentioned, only in the rarest case for the sake of genuine agriculture that will pay. Or take the Imperial forest on the way up from Nikko to Chuzenji. It is said that under various pretences, private individuals apply for a few trees, for building purposes perhaps, to lay down a small bridge, etc. The applicant is then granted, say, ten trees; he cuts down twenty or thirty (the best of course), mangling many others or felling them in spots so difficult of access that, after cutting, it is found impossible to remove them. Charcoal-burners, too, it is averred, enter even such forests without permission, and cut down the maples and other trees indiscriminately. In fact, in many places (and the Chuzenji gorge is one instance) there is little left for deforestation to effect; the once splendid forest is a complete wreck. The grand cryptomerias of the Reiheishi Kaido avenue are being destroyed, one after another, by the inhabitants of the neighbouring villages lighting fires under them, while the practice in many districts of firing the hills every spring destroys great quantities of younger trees. The Kagozaka between Subashiri and Yoshida has been absolutely cleared, whole country-sides in Kyushu have been denuded, for example, the Kurizaka, so called from the chestnut-trees formerly clothing it, but now all destroyed; similarly in Central Japan,—in Joshu and Shinshu. Passing the other day over the Myojin-toge between Oyama station and Lake Yamanaka, I found the beautiful forest there (a Government forest) in process of being cut down. On the Nakasendo, where most of the forests are private property, the same thing is happening so rapidly that within a few years the large population hitherto supported by the timber trade will be deprived of that means of subsistence.

It is no doubt natural and expedient that timber should be exploited as are other resources,—coal and iron for instance. The difference, however, between mineral wealth and wealth accruing from timber is that the latter, if properly managed, is reproductive, and may therefore remain as a permanent source of national wealth, instead of passing away as a merely accidental and temporary one. This fact is so well-known, and indeed self-evident, that to refer to it were useless, had we not proof that it is constantly forgotten. The question now before this country is:—shall the surviving remnants of its forests be wisely managed to such purpose that permanent supplies for house-building, railway sleepers, match factories, etc., may be handed down to the next generation; or shall two classes be allowed to work their will for a short time,—a thoughtless peasantry and a few speculators? It can be but for a short time only. Of the loss to natural beauty I will not speak, easy as it would be to mention spots once famed for the beauty of their maples, giant pines, camphor, or other trees, but scarcely any longer worth visiting. For it might be too much to expect that such considerations should weigh with practical politicians.

Your obedient servant,

BASIL HALL CHAMBERLAIN.

Hotel Metropole, Tokyo, 25 May, 1900.

WHAT WOULD PLEASE SHAKKA?

To the Editor of the "Japan Mail."

Sir,—From what we know of the true heart of Shakka what is the effect upon him of this present movement to transport one of his bones to this land of the gods?

Is he pleased? Is he amused? Is he pained? Or is he so bathed in infinite bliss that he is indifferent? He lived in India. He renounced his rank, his wealth, his wife and child to be a beggar, all for his boundless compassion for the pains and miseries of the people. The people of India are now dying like sheep for want of food. If the Japanese, who have received the comfort of his teaching, can give *yen* 200,000 to receive with proper honours a fragment of one of the bones of Shakka, in their deep gratitude, how much more can they give to feed the people to whom he gave his very life?

Yours truly,

May 27th, 1900. 智神和

INDIAN FAMINE RELIEF.

CONCERT, MONDAY, 31ST MAY, 1900.

Statement of Receipts and Expenditures.

RECEIPTS.		*Yen.*
Sale of Tickets		351.
Donation from Mrs. Ballagh		50.
Total Receipts		401.
DISBURSEMENT.		
Hire of Hall	*Yen* 30.	
Coolie hire, Plants, etc...	14.20	44.20
Surplus		356.80

A remittance for the equivalent of ¥356.80 has been forwarded through Mr. V. W. Helm, Y. M. C. A., Tokyo, to Mr. G. S. Eddy, Secretary, Y. M. C. A. Madras.

My thanks are due to the Committee of the Public Hall for giving the use of the Hall at a reduced rate; to the *Japan Mail*, *Japan Gazette*, *Japan Herald* and *Japan Advertiser* for advertising free of charge, and to the first for also printing the tickets and programmes at its own expense, and to Messrs. Moutrie & Co. for the use of the piano and their services in selling the tickets.

Kate Page.

THANKS.

To the Editor of the "Japan Mail."

Sir,—Will you kindly acknowledge through the columns of your paper the following amounts which have been received for the Indian Famine Relief Fund, in response to the appeal of G. S. Eddy, Esq. of the Madras Y.M.C.A., as published in the *Japan Mail*. I will gladly forward any further amounts.

With thanks for your kindness,

V. W. HELM,

Y.M.C.A., 3, Mitoshirocho, Kanda, Tokyo.

The Indian Government is undertaking to place a supply of food in every famine-stricken province, and to give work to every man who applies for it, and over 5,000,000 men are now being helped in this way. Beyond these means of relief, say the New York *Evening Post*, "it is difficult to see how the Government, as Government, can go." After a recent discussion in the British House of Commons on the famine situation, Sir M. Bhownaggree, an Indian member of parliament, said that the debate should "convince the people of India that the British nation was neither blind nor indifferent to the hardships from which the Indian people are suffering." From all this *The Evening Post* concludes that there is "little ground for the assertion that the South African war has prevented the English Government from appropriating money for the relief of the famine sufferers in India. Lord Curzon reports that he has in hand all the money he can properly spend." So, too, thinks the Philadelphia *Inquirer*, which says:—

"The administration of that great country [India] is carried on by the Viceroy with the assistance of his own cabinet and of an exclusively local system of governmental organization. India is governed, not from London, but from Calcutta. It has its own budget, its own system of taxation and finance, its own separate and independent institutions of every kind, and so far as the action of the British Government is concerned it has not been affected in the slightest by the South African contest. None of the cost of that contest is derived from its treasury, and the great work that is being done for the relief of the sufferers from the prevailing famine is precisely the work, both as to character and extent, that would have been done under any circumstances. . . . England has her faults, and with regard to the South African war there is room for two opinions, but the government of India under British auspices is a subject not for censure."

An appeal sent out by a committee of missionaries to India in attendance at the Ecumenical Conference in New York said:—

"It is right we should bear our witness that the British Government in India is doing all that any Government on earth could do to save the lives of its distressed subjects, in relieving 5,500,000 of persons by direct government aid. It is achieving a greater work of rescue than any government has ever in the world's history undertaken before. With a skill derived from the carefully garnered experience of previous famine campaigns, with an unstinted expenditure of money and a heroic outlay of British energies and lives, it is doing all that an administration can do."

Prof. Washburn Hopkins, of Yale University, who in 1897 made a study of the famine then prevailing in India, writes an article on the present situation (New York *Evening Post*, April 27). According to him, the need in India is not for additional provisions, but additional money. "There is no lack of grain," he writes, "there is no scarcity of supply." He continues:—

"Why, then, are the peasants starving? For the plainest reason, because they have no money to buy this grain. It is held by merchants, who have enough for the multitude, but will not give it away; nor may the Governmnnt compel them to do so or connive at looting it. If any charitable folk will help the natives of India, and great indeed is their need, let them cable money, not send corn."

Digitized by Google Original from CORNELL UNIVERSITY

But the Professor denies that this lack of money is due to the establishment of a gold standard or to excessive taxation, or to the British misgovernment of any kind. He writes:—

"Drought is the cause. Whenever the monsoon rains fail and the winter showers also fail, there will always be a famine as long as the Hindu *ryot* remains what he is by nature and through inherited inability to escape the money-lender. The peasant works hard, but he is always in debt. Not only can he not save, but he will not. When times are prosperous, he lives as easily he can; when bad times come he is unprepared, now as always."

Professor Hopkins scouts the idea that there were no famines in India before the advent of British rule. Famines lasting for years prevailed under Hindu and Mahommedan rule. Now the measures, both of prevention and relief, are vastly greater than they were then, and the burdens of taxation very much lighter. The professor repeats that the improvidence of the peasant class is the chief cause of the trouble. For a wedding or a funeral, the *ryot* will cheerfully double the mortgage on his estate, paying to the native usurer 180 to 300 per cent. interest, and this, too, "not on the sum loaned, but on this sum with a cipher added, which the usurer knows how to tack on and the peasant is too ignorant to discover."

THE WORLD'S ECUMENICAL COUNCIL OF MISSIONS.

Ithaca, N.Y., May 4th.

This seemed to one at a distance rather a pretentious title, but when once at the gathering the title seemed justified. One must not press the literal meaning of the word too hard, for neither "the inhabited earth" nor all branches of the Christian church were represented. The Greek and the Roman Catholic churches and those branches of it not deemed evangelical had no envoys or delegates, but in one form and another the Reformed or Evangelical bodies of Christians sent representatives or greetings. The great conference has been, by thought, prayer, and money, anticipated during several yars. The project of holding it from April 21st to May 1st has been handsomely carried out, and the success, in gross and detail, has been most gratifying.

One sees at a glance that the burden of Protestant missions rests upon the English-speaking nations. The overwhelming majority of the labourers in the field and of the money spent is contributed by Great Britain, her colonies, and the United States. Yet at this mighty congress there were not only British, Australian, Canadian, and American delegations, but also others from Germany, the Netherlands, Scandinavia and a few other countries.

The honorary president was the Honourable Benjamin Harrison, LL.D., formerly president of the United States, and, in the opinion of many, one of the ablest men who ever lived in the White House, his conspicuous ability being shown in that he was thoroughly able to make the "bosses" know their place and to keep parties and politics in the background. One newspaper, *The Nation*, which foreigners especially recognise as "the ablest American periodical," almost approached the point of "gush" in expatiating upon the splendid possibilities of an ex-president in being able to speak out what he believed, without regard to the brewers or the labourers or the mechanics or the soldiers, or the German, or the Irish "vote." Ex-President Harrison suggested that the nations of the world could and should unite upon some plan for restricting the sale of intoxicating liquors to aboriginal peoples, even as had been done in the case of slavery. The old jest and fact about the Boston ships, which went out with missionaries of the American Board in the cabin and Medford whiskey in the holds, still have their point, and the interior economy of the heathen bodies is still corroded by the Christian's vicious extract of corn.

On the first night the welcome to the delegates was given in Carnegie Hall, which seats easily four thousand people, but into which six thousand can be and have been stuffed. At the women's meetings, especially, the fire-laws, which require the passage ways to be kept clear, were defied in the most lovely and dangerous manner. Yet in several cases Adam followed the precedent set by Eve and also ate the apple of lawlessness, as manifested by crowding into forbidden space. Still, it was a most impressive sight to see the immense stage, the auditorium, ground floor, and the five galleries packed. The audiences twice or thrice daily showed no sign of lessing during the ten days. One direct fruit was a large sum of money raised for starving India and the formation of a permanent Committee of Relief.

President McKinley, in welcoming the delegates, spoke in a very happy way, and did not seem to be much worried because his political critics call him "the Emperor of Porto Rico." Our strenuous governor, Theodore Roosevelt, also spoke characteristically. Then began the real business of the convention.

Your correspondent was present only during two days, but managed during that time to attend several of the hall meetings and the overflow gatherings in the churches near by, and to enjoy one of the stereopticon lectures illustrating India. This lecture was one of the score or more devoted to description of the various countries of the world. He also "took in," on two different days, the really remarkable exhibition of relics and interesting objects showing native life and missionary work in the various lands of Asia, Africa, and other continents. That on

JAPAN WAS PARTICULARLY RICH AND FULL.

Among other objects were no fewer than three of the old notice-boards prohibiting Christianity, one of the oldest having the text of 1683.

No doubt the writer is prejudiced, but that division assigned to Korea seemed to be the most representative and thorough. It is doubtful whether in Europe or America (and we have the collections at Washington, Salem, New York, and Roanoke College in view) there has ever been so large and valuable a gathering of Korean objects in this country. The whole was in charge of Dr. Vinton and his wife. Several of the missionaries from Korea were also present as speakers or delegates. One of the ablest and most luminous papers, on Self-Support by Mission Churches, written by the lexicographer and grammarian, Dr. H. G. Underwood, of Söul, Korea, was read. He showed that out of 188 churches under American Presbyterian oversight, in the once Forbidden Land, over 180 are self-supporting. It was interesting to note how the name of Dr. Nevius, whose birthplace is a few miles from the place in which I write, was so often referred to as that of the father of the self-supporting movement. Let me also state that I was present at the lunch in the Hotel Marlboro, where were gathered many missionaries and missionary officers both of "the old guard," and of the new men and women on their first furlough from places at the ends of the earth.

It would take more space than you would be willing to afford, to tell of the famous men at the convention, such as Cyrus Hamlin, the founder of Roberts College in Constantinople, President Angell of Michigan University, J. Hudson Taylor of the China Inland Mission, John G. Paton, Apostle to the New Hebrides, Canon W. J. Edmond, the venerable Dr. Ashmore of China, Dr. James S. Dennis, the leading missionary statistician of the world, and, last but not least, the five hundred women missionaries from over twenty different countries.

The discussions covered almost every possible theme connected with the missionary work. The complexity and moral grandeur of these themes are vividly brought out at such a gathering. One sees here earnest men and women, many of them with the highest ability, discussing subjects which belong to the lives of nations.

SOME STATISTICS.

As contrasted with the seven societies employing 107 missionaries at the opening of this century, there are now 537 societies (including the women's) employing 15,460 foreign missionaries and 77,338 native helpers, expending 19,126,120 dollars, and having missionary communities under their care numbering 4,414,236 souls. Of universities and colleges in missionary lands, there are 93, of theological and training schools 358, of boarding and high schools 857, of industrial training institutions 134, of medical and nurses' schools 63, of kindergartens 127, of elementary or village day schools 18,742. The Bible is translated into 421 languages or dialects, there are 148 mission publishing houses and printing presses, 366 missionary periodicals, 355 hospitals, treating during the past year 6,647,840 patients. There are 213 orphanages or homes for infants, 90 leper hospitals and asylums, 30 schools for the blind and deaf. There are 67 mission steamers and ships. There are 87 missionary training institutions in Christian lands and 54 native organizations for the extension of knowledge and religious reform.

HOPE FOR THE FUTURE.

Are we not to believe that out of this congress, as out of the congresses in the interest of peace and international reform of war, great good will steadily, though it may be slowly, grow? Among the earnest pleas made for a less divisive, schismatic, and unregulated missionary activity, and for more real unity, were the addresses of Prof. George William Knox, formerly of Japan, who declared that the present methods (not the work itself) were foredoomed to failure, and the Rev. Dr. A. J. F. Behrinds, who declared, with perhaps sensational haste, that the conference was a failure in not definitely deciding on methods of union. However, to the average onlooker and thinker, in spite of human defect and hardness of head or heart, the conference was a noble gathering, out of which must grow much good to the whole world.

W. E. G.

NEWS OF THE WEEK.

On May 4th, President McKinley sent the following nomination to the Senate:—E. C. Bellows of Washington to be Consul-General at Yokohama, Japan. The Senate confirmed it on May 8th.

A betto, named Takejima Matsuzo, in the employ of Mr. C. V. Sale, No. 2,063 Negishi, was arrested on Wednesday on a charge of absconding with a watch, a silver pin, and some clothes belonging to his employer.

In the Yokohama Chiho Saibansho on Friday, Kosuga Hyozaburo, 32, late in the employ of Mr. T. S. Baker, No. 70, Bluff, was sentenced to six months' rigorous imprisonment and six months' police surveillance, being convicted of stealing a piece of white crêpe and some other things belonging to his employer on the evening on the 17th April.

On Tuesday night, a young man and woman committed *shinju* by placing themselves before a train at the crossing near Yokohama Station. The man was employed by a rice merchant in Kitagata, and the girl was an Eurasian. The girl was killed on the spot, being frightfully mutilated, and the man died after his removal to the hospital. The couple had been attached to each other, but the girl's adoptive father refused his consent to their marriage.

On Wednesday, in the Yokohama Chiho Saibansho, three Chinamen, aged 19 and 16 years, respectively, were sentenced by Judge Sato, the first to nine years' and the others each to six years' imprisonment, for having set fire to the residence at No. 127, occupied by Miss Jettie Lee, on the morning of April 3rd. Another Chinese, 12 years, who was arrested with the others, has been acquitted.

A court martial was held on H.M.S. *Terrible*, in Hongkong harbour on May 18th, when Lieutenant-Commander Edward Kelly, of H.M.S. *Whiting*, was charged with refusing duty. Captain Percy Scott, C.B., was the President, and the other officers forming the Court were:—Captain J. H. T. Burke, H.M.S. *Orlando*; Commander C. W. Winnington-Ingram, H.M.S. *Daphne*; Commander Blackburne, of the Naval Yard; and Commander Charton, H.M.S. *Orlando*. The Court found Commander Kelly guilty of refusing duty and ordered him to be dismissed from his

Digitized by Google Original from CORNELL UNIVERSITY

ship and lose five years' seniority. It appears that Commander Kelly had applied for leave to go home and had obtained permission, which was afterwards withdrawn.

The *Jiji Shimpo* publishes a telegram from Marugame, dated 30th May, which says that the steamer *Seiko Maru* went ashore at Takami Island, near Tadotsu, that morning, and damaged her bottom. The crew and passengers are safe.

Shortly before eight o'clock on Tuesday morning an outbreak of fire was reported from No. 265, Yokohama (the Eastern Japan Trading Co., Ld.). A hose reel and firemen were despatched from the Station. The flames, however, which were confined to a partition adjoining the tea-firing furnaces, were extinguished by the employees of the firm without the aid of the firemen. The damage is slight. Supt. Morgin thinks the outbreak was caused by coolies placing live charcoal too near the partition.

The marriage of Miss Mary Maude Gale to Mr. Ernest Thomas Bethell was celebrated at All Saints' Church, Kobe, on Saturday, the Rev. G. H. Davies, Chaplain, officiating. The interior of the edifice was very prettily decorated for the occasion. The bride, who arrived from England by the last P. & O. mail, was given away by Mr. P. H. McKay, and Mr. Herbert Bethell performed the duties of groomsman. There was a full attendance of the choir and the musical portion of the service was well rendered throughout.—*Kobe Herald.*

A quiet wedding took place at the British Consulate, Yokohama, on Thursday, when Miss May Moss, second daughter of Mr. C. D. Moss, for so many years Chief Clerk of H.B.M.'s Court for Japan, was united with Mr. Herbert Bent, of Andover, Hants, in the bonds of holy matrimony. The bride, who was given away by her father, was attired in a white serge travelling dress. The ceremony was performed by the Rev. E. C. Irwine, and in addition to the immediate relatives of the bride and groom there were present, Mr. H. A. C. Bonar and the whole staff of Her Majesty's Consulate. The honeymoon will be spent in Nikko, the happy couple leaving Japan for good on the N.D.L. *Oldenburg*. They will afterwards take up their residence in Canton.

The under-mentioned are the scores made on Sunday for the Champion Flag shot for at Omori between the Tokyo and Yokohama Clubs. Yokohama winning by 20 points.

As the sum of 1½ millions of *yen* set apart by the Tokyo Tramway Company in connection with the alteration in motive power has been expended in other directions, it will be necessary for the company, remarks the *Yorozu*, to make a fresh appropriation to the amount of at least 3 million *yen* when permission is obtained from the Government. But the period of the charter expires in ten years, and there is little prospect of profit in such an investment. The company has therefore applied to the Government for an extension of the period to the limit fixed for the Tokyo Municipal railway, and for permission to alter the Shinagawa lines into a double elevated track. Simultaneously with this application it is suggested that since Article III. of the charter, prohibiting foreigners from becoming shareholders of the company, has become invalid in consequence of the laws subsequently issued and the treaties concluded with foreign Powers, the sale or transfer of the company's stock may be undertaken without discrimination between foreigners and Japanese.

The judgment in the Railway Sleeper case, appealed to the Osaka Koso In, was delivered on Tuesday morning, says the *Kobe Herald*. The first judgment of the Kobe Chiho Saibansho was quashed on the ground that Mr. Yamada, the original plaintiff, had no right to institute an action against Mr. Berigny, ignoring the provision contained in the contract regarding arbitration in case of any dispute, before he submitted to the arbitration of the Kobe Chamber of Commerce. Costs were given against Mr. Yamada.

The *Shogyo* publishes on article on tea prospects for this year. At the beginning of the season, the leaf was much smaller in size than usual, especially as compared with last year, and, moreover, a reduction in output of not less than 10 per cent. is anticipated. With regard to the expenses of manufacture, an increase of 10 per cent., as compared with last year, is likely. Below are details:—

	Shizuoka. yen.	Otsu. yen.	Miye. yen.	Kanagawa. yen.
Price of raw leaf	1.30	0.55	0.76	1
Wages of experts	0.50	0.29	0.233	0.50
Board	0.30	0.26	0.153	0.25
Labour for steaming	0.50	0.20	0.35	0.10
Fuel	0.25	0.26	0.117	0.15
Miscellaneous	0.50	0.60	0.57	0.10
Total expense per *kwan.*	2.45	1.43	1.356	2.10

It is worthy of notice that greater attention has been paid to quality than to the size of the leaf. Yokohama has shown a disposition to purchase fine teas at comparatively high rates, and this attitude is likely to lead manufacturers to adopt superior processes.

We have been asked to publish the following statement of receipts and expenditure connected with the production of the extravaganza "The Princess of Wei-hai-woo" at the Public Hall, Yokohama, 27th April, 1900:—

DR.	¥
From 111 reserved seats	222.00

Total	544.00

¥402.30 sent to Seamen's and Marines' Widows and Orphans' Fund.

GEO. WARRENDER.

A "Strawberry Fete," organised by the ladies of the King's Daughters' Circle, was held on Wednesday afternoon and evening at the Public Hall in aid of the Indian Famine Fund. It had been the intention of the promoters to use the small hall only and to provide amusements, etc., in the adjoining gardens, but in view of the miserable weather it was considered advisable to engage the large hall, which was fortunately available at a trifling expense. It was decorated as well as time would permit, and in the evening presented a very pretty appearance with the various cake, strawberry, sweet, and other stalls; the Aunt Sallies, bran-pies, and other devices handed down from early times; and the tasteful fancy dresses which many of the ladies had assumed. The smaller hall was arranged for dancing, the Town Band supplying the music. It should be mentioned that all the cakes, strawberries, &c., were presented, and that the expenses of the affair were thus reduced to the barest limits. Had the weather been more propitious the result should have been more satisfactory, but even in the depressing conditions that prevailed a fair sum should be realised.

AMERICAN NOTES.

Thirty thousand horse-power of electricity is to be furnished to the city of Montreal by an electric power company whose generating plant is now being erected at Shawinigan Falls, eighty miles distant. The works will be finished this summer.

The following characteristic telegram appears in San Francisco papers:—John K. McLean, brother-in-law of Admiral Dewey, has abandoned the latter in his candidacy for the Democratic nomination for President and has jumped into the front seat in the Bryan hand-wagon.

Sandon, the second mining town of importance in the Slocan district, British Columbia, has been completely destroyed by fire and nearly all its 1200 people are homeless and ruined. It is reported that the total loss is between $500,000 and $1,000,000, while the insurance could only have been about $25,000.

A fire that started at the river end of the Mallory-line steamship pier at the foot of Maiden lane and the East river, New York, early on May 6th, completely destroyed the pier and its valuable contents. The police place the loss at $1,000,000. Several barges which were moored near the pier were also destroyed; one life was lost. The Mallory line pier was 200 feet long and fifty feet wide. The pier was filled with valuable freight, mostly cotton.

The final report of the executors of the estate of the late George M. Pullman is expected to show that the estate, which amounted to something over $8,000,000 when the will was filed, has grown to $15,000,000 under the administration of Messrs. Robert T. Lincoln and Norman B. Regan, the executors. The compensation of the executors for handling the estate will be more than $500,000.

When Hawaii was annexed to the United States it had a bonded debt of about $4,000,000, drawing a heavy rate of interest. This debt still exists, but under the act just signed by the President it is to be assumed by the United States. Secretary Gage does not intend that it shall be added to the bonded debt of the United States if it can be paid immediately. The terms of the debt will be looked into, and if they permit payment at any time the debt will be wiped out as soon as the law goes into effect—in forty-five days.

According to a statistical contemporary the importation of raw silk into the United States was about the same in 1899 as in 1897, say 73,000 bales, or 10,000,000 pounds, but the value was more than $10,000,000 greater in 1899. "In 1897 raw silk averaged $3.12½ a pound; in 1899 it averaged $4.32 a pound; and for 1900 it promises to average over $5.25 a pound. The imports of foreign silk textiles show a decided increase in both volume and value in 1899 over 1898—the increase in quantity being, say, eight per cent., and the increase in foreign invoice value eighteen per cent."

The Populist convention at Sioux Falls has nominated Mr. W. J. Bryan for President. Mr. Charles A. Towne, the Populist candidate for Vice-President, was born in Michigan November 21, 1858. His early education was obtained in the public schools, and in 1881 he graduated from the University of Michigan. In 1886 he was admitted to the bar and the following year he married. He has been an active politician for a number of years and has represented his State in Congress as a Republican. Later he became a Silver Republican, and in the last campaign was an ardent supporter of Bryan. He was chairman of the National Committee of the Silver Republican party. He is an eloquent orator and was on the Pacific Coast in the early part of 1898 in the interests of Bryan and free silver.

Strange stories have been current recently in the United States regarding the negotiations for the acquisition of the Danish West Indies, one of them having for its burden an alleged attempt on the part of a person connected with the Standard Oil Company to force the Danish Government to pay a commission on the sale of the islands to the

Digitized by Google Original from CORNELL UNIVERSITY

United States Government. The publication of this story has led the State Department to depart from its habitual reserve, so far as to authorize the statement that it has never recognized any individual in connection with proposed acquisition of the islands; that it has no knowledge that any private person ever interposed in the negotiations on that subject, and, finally, that the negotiations have never been influenced, directly or indirectly, by unofficial persons.

After perhaps the most exciting debate of the present session, the House of Representatives passed the Nicaraguan Canal bill by an overwhelming majority. This bill, remarks *Bradstreets*, confers upon the President authority to acquire from the States of Costa Rica and Nicaragua the control of such territory as may be desirable and necessary to construct a Canal from a point near Greytown on the Caribbean Sea, by way of Lake Nicaragua, to Breto on the Pacific ocean, and appropriates such money as may be necessary to secure such control. After securing control, the President is to direct the Secretary of War to construct the canal, together with harbours at the termini of the canal, with such provisions for defence as may be necessary for the protection of the canal and harbours. The President is also authorized to guarantee to the States of Costa Rica and Nicaragua the use of the canal and harbours upon such terms as may be agreed upon, and the Secretary of War is authorized to make contracts for the completion of the canal to an amount not to exceed in the aggregate $140,000,000. It is doubtful whether the bill can be got before the Senate, owing to the pendency of the Hay-Pauncefote treaty, and the fear that the introduction of a measure admitting of such contention as it is thought the canal bill would arouse might unduly delay the adjournment of Congress.

On May 6, in Boston, died Mr. William Crowninshield Endicott, aged 73 years, Secretary of War during President Cleveland's first administration. Although Mr. Endicott's system had been somewhat enfeebled by an attack of the grippe from which he suffered last winter, he had been in apparently good bodily health up to the preceding Wednesday, when he took his customary drive. Shortly afterward he was taken ill, and pneumonia developed. Mr. Endicott was the son of William P. and Mary (Crowninshield) Endicott of Salem, Mass., and was born in that city November 13, 1826, and was a descendant of John Endicott, the first Governor of Massachusetts. He received his early education in the Latin school in Salem, and entered Harvard in 1843, graduating with the class of 1847. Soon after graduating he studied law in the office of Nathaniel J. Lord, then the leading member of the Essex bar, and in the Harvard law school. He was called to the bar in 1850, and after filling various offices in Salem became City Solicitor in 1857. In 1873 he was appointed by Governor Washburn to the bench of the Supreme Court of Massachusetts, and in 1882 he resigned. In 1884 he was Democratic candidate for Governor. In 1885 President Cleveland appointed him Secretary of War. One daughter married Mr. Joseph Chamberlain, the English statesman.

In an article on the new currency law, in *Leslie's Weekly*, the author, Mr. Ellis H. Roberts, Treasurer of the United States, points out that by the adjustment of interest and the present worth of the old securities on a basis of earnings of 2¼ per cent. the Treasury has paid out sums reaching $23,378,609.15. These moneys go at once into the loan market wherever national banks exist. There is to be no increase in the volume of United States bonds, while the rate of interest is reduced. The actual net profits on the transactions of the first thirty days under the law are proved by actual calculation up to April 10 upon the bonds given and taken, to the date of their maturity, to be $5,770,425. No exaggeration is involved in assuming that before the close of the present fiscal year $400,000,000 new twos will take the places of the older securities. If the older securities are surrendered in the ratio thus far maintained in the refunding, the payments for interest and present worth in the process will amount to nearly $40,000,000. The net profit to the Government on this basis will reach $10,752,885, upon average settlements for remainder of the sum, as of June 1st. This will be realized at once, and so much of the burden of the national debt and its interest will be lifted from the shoulders of posterity. The achievement of refunding is an incident due to the vital feature of the new law, which is the intrenchment in the statutes of the gold standard. One result is clear: no motive is left for hoarding gold; no excuse can exist for drawing that metal from the Treasury; no pretext can be devised for driving gold from the country. The yellow metal is to be the cornerstone of the currency and its chief increment. On March 1, 1900, the bonds pledged as security for the circulation of national banks were $239,947,270, while on April 13 they had risen to $261,430,850. By the concession of 10 per cent. additional in notes against the bonds an increase follows of nearly $24,000,000. The new circulation which will be issued against the bonds pledged since the new law was passed will equal them in amount, and will add, compared with March 1, $21,483,130, making a total increase to date of $45,477,902. Further inflation is inevitable: the measure of it cannot be predicated, but it will not become dangerous.

MR. WALTON AND CHINA.

IMPORTANT SPEECH IN THE HOUSE OF COMMONS.

In Committee of Supply in the House of Commons on April 6th, Mr. Joseph Walton, M. P. for Barnsley, made his promised speech on Chinese affairs.

Mr. Walton said:—Mr. Speaker, I desire to call the attention of the House to the failure of Her Majesty's Government to uphold British commercial and political interests in China. Though I have recently made extensive journeys in that country, I do not claim to pose as an authority on Chinese affairs, but I rather propose to make a statement as to the present situation, based on information obtained from the best informed men upon spot. I make no apology for recalling the attention of the House to the necessity for the initiation by Her Majesty's Government of a more definite and vigorous policy in the Far East, if our commercial and political interests are to be maintained. I am aware how entirely absorbed the public mind is by what has been transpiring in South Africa for some time past, but I venture to submit that we would be unworthy of the great Imperial responsibilities which rest upon our shoulders were we to allow the affairs, however important, of any one part of our Empire to monopolise our attention to the serious neglect of vital interests in other parts of the world. Nor is it unsuitable, Mr. Speaker, to review the situation in China, because of the agreeable way in which public attention has again been directed to the affairs of the Empire by the signal success of American diplomacy, which has resulted in the assent of England, Germany, France, Russia, Japan, and Italy to the principle of equality of customs' tariff and of harbour dues and equality of railway rates being maintained in China. The advantages conferred by this undertaking are to be common to all States and our kinsmen across the Atlantic are to be warmly congratulated on the success which has attended their efforts. The commercial community in this country are deeply indebted to the United States Government for having thus ensured equality of opportunity for British trade as well as their own. How far Her Majesty's Government ought to be congratulated on the part they have played in this matter has not yet been fully disclosed, but I hope that the right hon. gentleman, the Under Secretary for Foreign Affairs, will be able to tell us to-night that not only was Her Majesty's Government the first to give assent to the proposals, but they, so far as it was judicious, gave their active co-operation in the endeavour to secure the carrying through of the arrangement. I am aware that, in view of the jealousy recently exhibited towards up by foreign Powers, the United States Government were probably able to succeed where we would have failed; and, indeed, any interference on our part might have defeated our object. It is with great satisfaction I notice that not only is there to be equality in the matter of Customs' tariff and harbour dues, but equality also of railway rates. The assurance in regard to the latter is of the utmost value and it was one which the British Government failed to secure in the Anglo-Russian Agreement.

RUSSIAN AGGRESSION AND BRITISH INDIFFERENCE.

I will now turn, Mr. Speaker, to what I found to be the position of affairs in North China. The seizure of Port Arthur by Russia is somewhat ancient history, and I will not refer further to that subject than to say that the people in the East most likely to know unanimously state that no one was so much surprised as were the Russians themselves at their being allowed to take Port Arthur. Russia has already made Port Arthur impregnable by new forts practically encircling it, and in August last she had no fewer than 400,000 troops at Port Arthur and Talienwan. There were also Russian soldiers at the railway stations on her Manchurian lines. She is in military occupation of that huge country of Manchuria, rich agriculturally, in minerals, and fisheries, with emphatically a white man's climate. Even at Newchwang, the only treaty port through which we can now trade, Russian Cossacks had been policing the town, on the invitation, forsooth of the British Consul. On the north bank of the river at Newchwang, there is a Russian concession of several square miles, on which one terminus of her railway is being built, and over which she enjoys sovereign rights. Not content with this acquisition Russia is negotiating for a further concession on the south side of the river, opposite Newchwang and adjacent to the terminus of the Newchwang Extension Line from Shanhaikwan obviously with the intention of bridging the river and linking up her Manchurian Railways, including that from Port Arthur, where her troops are concentrated, with the line leading via Tien-tsin to Peking, which no doubt she will ultimately acquire by advancing to the Chinese Government the money to pay off the British bond-holders, unless much greater determination be shown by the British Government in resisting aggressions certain to strangle British trade in the future. On this Newchwang Extension Line is the treaty port of Chinwangtao, the opening of which was announced by Her Majesty's Government as a diplomatic triumph. This port I visited, and to my surprise I found there was no natural harbour, but only an open bay surrounded by sand hills; no sign of population, except a few fishermen's cottages, and no trade. All the best-informed commercial men agree that it is an act of folly to spend money in Chingwangtao, and that the improvement of the ports of Tien-tsin and Newchwang at each end of the line ought rather to have been sought. Perhaps, Mr. Speaker, the most unaccountable action on the part of the British Government, so far as Russia is concerned, was the conclusion of the Anglo-Russian agreement in the form in which it was finally signed. The negotiations for months proceeded with the expressed intention that what was to be conceded to Russia was the exclusive right of railway construction in Manchuria, we having been conceded a similar right in the Yang-tsze basin. But, as far as Russia was concerned, being at the back of the Peking and Hankow railway, as she undoubtedly is, through the medium of the Russo-Chinese Bank—which Lord Salisbury has told us is a Russian State bank—the agreement with Russia as to our exclusive rights in the Yangtsze basin was broken before the agreement itself was signed; whilst on our part, without a word of explanation, not only did we concede to Russia exclusive rights in Manchuria, but north of the Great Wall of China (which will in the long run be found also to embrace a large slice of the province of Chihli), the whole of the great horse-breeding country of Mongolia and the province of Sin Kiang. I have had a large map prepared showing exactly what it is that Russia obtains under this Anglo-Russian agreement and giving other information which may be interesting to members. If desired, I propose to place this map in the tea room for a short time. The fact is, Mr. Speaker, so far as the blue books disclose it, Russia has the whole of these enormous territories in North China and stretching westward across Asia to territories previously in the possession of Russia and giving to her just what she requires to enable her to take possession, not only of North China, but also of Central China. Without a map, it is perhaps difficult to make clear to the House the exact position of affairs, but hon. members may be able to follow me if I say that, stopping for the time being the construction of the Russian Siberian Railway to Vladivostock, she has already commenced the laying of a line branching off from her Siberian Railway right down through Mongolia direct to Peking. A further concession in connection with the Peking-Hankow Railway has been got for a branch from Kai-feng-fu to Honan-fu, with the option of extending to Singan-fu, a place within only 200 miles north of the Yang-tsze River, and from which the immemorial trade route into Central Asia runs. But this is only part of the Russian programme for

THE CONQUEST OF ASIA BY RAILWAYS.

There is another Russian main line, rapidly advancing through Central Asia, which seems to have escaped public notice. I mean the Russian Trans-Caspian Railway, which, proceeding south-east from Merv, is already constructed to Adijan on the borders of the Chinese province of Sin Kiang, which has recently been accorded by us to Russia and is, as a matter of fact, under Russian domination. From the point to which this Russian Trans-Caspian line has already been constructed there is a perfectly practicable route turning the flank of the mountainous country of Tibet for a railway down through Sin Kiang to Singan-fu. Hon. members will see that, with the completion

Digitized by Google Original from CORNELL UNIVERSITY

of this line, Russia will not only have her Siberian railway tapping North China, but she will have her Trans-Caspian line penetrating into the very heart of Central China and dominating the Yangtsze Valley. The Government do not appear to have even sought from Russia the recognition of similar preferential rights in our favour in Thibet, the only territory now left between India and the Russian sphere. While a comparatively poor country like Russia is not hesitating to spend over £100,000,000 sterling on these projects, which will enable her finally to reap a rich harvest as regards both her commercial and political interests, what, I ask, is England doing? The British Government, so far, appear to have lost those qualities of enterprise, courage, and foresight which characterised our forefathers, and by virtue of which our world-wide British Empire has been built up. Not only have they refused, as a matter of high imperial policy, to give any encouragement or guarantee to a railway from British Burma to the Upper Yangtsze as a counterpoise to the Russian railways, but they have actually stopped the construction of the railway to Kunlon Ferry in British Burma; and this at a time when France is vigorously pushing on with the construction of her railway from Tonkin through Huran to Szechuan, by which she will draw the trade of South-West China through French territories with the aid of protective tariffs, instead of our being able to carry on a free and unrestricted trade through British Burma. British capitalists at Tientsin were perfectly prepared to construct a railway from Tientsin to Kalgan, which is the trade route into Mongolia, but were informed by the Foreign Office that they could not support such an application, as Kalgan was in the sphere conceded to Russia under the Anglo-Russian agreement, though it is far away from Manchuria. This line of railway, being an extension of the Peking-Tientsin line to Kalgan, would have been the most powerful barrier against Russian advance southwards. An important factor in considering the course of events in North China and an important and powerful influence in the direction of keeping it open to trade is the fact that

THE INTERESTS OF JAPAN ARE IDENTICAL

with our own; and that Japan is prepared to resolutely uphold her rights when assailed by Russia. Japan having a population increasing at the rate of half a million a year and her cultivable area being comparatively small, it is essential that she should have room for expansion. The natural expansion of Japan, whether as regards climate, fertility of soil, fisheries, or mineral wealth, is into Korea. From my interviews with Japanese statesmen, I gathered that, even at the risk of war, they would prevent any Russian interference with what they consider their priority of right in Korea. Moreover, the active co-operation of Japan could be counted on in any effort to uphold throughout China the Treaty rights of all nations. With regard to Kiauchou the Germans know their own minds, and I saw not fewer than 10,000 Chinamen at work constructing the harbour works and building the railway into the interior of Shantung, whilst palatial buildings were springing up on all sides. The contrast between the activity of the Russians at Port Arthur and of the Germans at Kiauchou, and our "do-nothing" policy at Wei-hai-wei, after our having somewhat obstentatiously announced to the world that we had taken the place as a counterpoise to Port Arthur, is most humiliating. At Wei-hai-wei not a single fort has been constructed, not one gun mounted; practically no buildings have been erected, and even the pier, with 30 ft. of water at the end, which had been damaged by the blowing-up of a Chinese man-of-war, has not been repaired, though the uprights were ready to receive the superstructure. Beyond a little dredging, the construction of water-condensing apparatus, and the drilling of a few Chinese soldiers, nothing seems to have been done. When I went to the top of the island at Wei-hai-wei, I wished the First Lord of the Treasury had been there with me, for when I condemned the right hon. gentleman's action in having, unasked by Germany, precluded us from connecting Wei-hai-wei with the interior of Shangtung by railway, he interposed with the remark that it was physically impossible. I could look across the country towards Chefoo without being able to see a hill a hundred feet high. And, when again from the top of the pinnacle at Chefoo I looked across towards Wei-hai-wei, Mr. Speaker, I saw that few railways in the world would be so easy of construction as one from Wei-hai-wei to Chefoo, and in at least two other directions leading from territory appertaining to Wei-hai-wei through rich valleys into the interior of Shangtung the same is true. Wei-hai-wei might have been made a great success as a commercial port, had we not thus tied our hands. The road-stead at Chefoo is most exposed, and for days together in the winter ships can neither land nor discharge. With proper facilities a large portion of the trade done through Chefoo would have been transferred to Wei-hai-wei. As, however, the situation is to-day, Russia, having succeeded in converting the question in North China from a sea to a land question, it is very doubtful whether money ought to be spent on Wei-hai-wei. In all probability the best course would be to hand Wei-hai-wei over to Germany, if she, in return, would support our taking another naval base at or near the mouth of the Yang-tsze River.

WE MUST BE FIRM.

The Government announced in this House that concessions had been got for British subjects for 2,800 miles of railways in China. But, Mr. Speaker, terms and conditions enabling the carrying out of the projects have not yet been arranged in connection with a single concession. The Shanghai and Nanking and several other concessions were given as reparation for the breach of faith on the part of the Chinese Government, in giving the Peking-Hankow concession to foreign Powers over our heads. Therefore, in regard to these our Government should stand no nonsense as to the terms and conditions upon which they should be built. Under the Treaty of Tientsin we are entitled to equally favourable terms and conditions to those granted by the Chinese Government to Russia, France, and Germany, but we find that the Chinese Government are insisting upon a mixed Chinese and European control which has proved, in the case of the Newchwang Extension Railway, to be surrounded by difficulties. Our Government should insist on the British concessionaires having complete control of the security, that is, to pay interest and repay principal with a guarantee of non-interference and the maintenance of our rights, giving only the Chinese Government an option of taking over the railways on certain terms and conditions. The Russians, Germans, and French will enjoy this control; why not the British? The confidence of the British investor was disturbed by the way in which the Government allowed Russia to dictate the terms and conditions upon which the Newchwang Extension loan should be concluded, and by the unsatisfactory way in which the mixed control had since operated; for though they offered £12,000,000 sterling against £2,300,000 required when that loan was floated, it is questionable whether the money would now be forthcoming for even the cream of the railway concessions, unless obtained on the terms and conditions I have mentioned. With regard to the terms and conditions upon which the concessions for these—what we may term—reparation railways were made I find that on the 4th of September, 1898, Sir Claud Macdonald stated in a despatch that the terms accorded for the construction of these lines will not be inferior to the terms granted for the construction of any railways in China proper and that they had agreed to send him a confidential note to that effect. This would have secured terms and conditions equal to those granted to Germany for the railways she is constructing in Shangtung; but, within a very few days, under instructions from the First Lord of the Treasury, Sir Claud Macdonald acccepted these concessions on not less favourable conditions than those granted to the concessionaires for the Peking and Hankow Railway. Those terms and conditions are workable when in the hands of concessionaires having at their back the Governments of Russia and France, but are useless to British concessionaires so long as they do not receive the proper support from the British Government.

THE POLICY OF SURRENDER.

An American syndicate entered into a preliminary contract with the Chinese Government for the building of a railway from Hankow to Canton and also made a provisional agreement with an English syndicate, with the object of having this railway constructed jointly by an Anglo-American Company. The Chinese Government, however, had thrown every obstacle in the way of the ratification of this concession on terms and conditions not less favourable to those granted to other Powers, whilst the French Government have actively intervened to prevent the carrying through of the concession and claimed that unless the American syndicate is prepared to construct the line on the terms and conditions of the Peking and Hankow Concession, the right to construct the railway falls into their hands. The question of by whom this important railway is to be-constructed is one vitally affecting the future of the Chinese Empire; for, if the concessionaires of the Peking and Hankow railway are allowed to secure this concession, it will give to Russia and France a railway system through the heart of the Chinese Empire from the extreme north to the extreme south and will place them practically in military occupation of it. I hope, therefore, to hear from the Under Secretary that Her Majesty's Government are vigorously supporting the United States Government in insisting that this railway, penetrating as it does from the South right into the heart of our supposed sphere of interest, the Yangtsze Basin, shall not be given to foreign Powers. Another great achievement of Her Majesty's Government was the Yang-tsze Valley Agreement, which, even now, many people in this country have imagined secures to us the Yangtsze Basin as a special sphere of influence, in which we have priority of rights. This, however, is an absolute myth. Russia, France, Germany, and Japan are all to-day more actively engaged in advancing their commercial and political interests in the rich Yangtsze Basin than we are ours. They have sovereign rights over various areas at Shanghai, Hankow, and elsewhere, whilst we have none. A further surrender on the part of Her Majesty's Government is in regard to the extension of the French Settlement at Shanghai. A firm stand was originally taken against this demand by the Secretary of State for Foreign Affairs, and backed up as it was at the time by the United States of America, it was understood that the demand would not be granted. How needed such a concession was will be made very clear when I state that in the French concession already in existence there are only seventeen Frenchmen resident; and yet, notwithstanding this, our diplomatists have again given way. France has got the extension of her concession and British prestige has once more been lowered in the eyes of the Chinese Government.

GUNBOATS WHICH DO NOT GUARD.

In one debate in this House we heard with great satisfaction that Her Majesty's Government had at length determined to do something to uphold British commercial interests by the placing of gunboats on the inland waterways of China for the protection of British trade. The gunboats were sent out to patrol the Upper Yang-tsze more than 12 months ago, but, though their crews have been paid by the British taxpayer and they have been on the spot all this time, they have yet to make the first ascent of that portion of the river which they were intended to patrol; and the Under Secretary informed us the other day that they were going to attempt it this next month. The fact is that these two boats, the *Woodcock* and the *Woodlark*, are unsuitable for the purpose, both as regards construction and steaming power. As they have to go up rapids sometimes running 13 or 14 knots an hour and steam only 12 knots, it is obvious they can only mount the rapids with assistance from the shore, and they would be useless, therefore, if a hostile attitude were assumed by the inhabitants of the district. The whirlpools and cross currents of the river are in places so strong that the gunboats ought to have paddle wheels instead of screws, and it is ridiculous to send out boats constructed of plates under one-eighth of an inch thick instead of being at least three-sixteenths for a river of the character of the Upper Yang-tsze. Apparently without any inquiry whatever, when gunboats were needed for the Upper Yang-tsze, the Admiralty decided to send out Nile gunboats. This is a serious matter, so far as the commercial interests of this country are concerned, because a British cargo steamer is expected to be plying on the upper Yang-tsze within the next month or two; and as in all probability the half million Chinamen now carrying on the trade on the river will regard this innovation as a menace to their livelihood, trouble will arise. It is imperative that gunboats, capable of going wherever they may be required, without shore assistance and without regard to the state of the river, should be placed on the Upper Yang-tsze immediately. The *Woodcock* and *Woodlark* now there should be transferred to the West River, as on that river the old *Tweed* can steam only two knots against the current and the *Sandpiper* four knots —which, all will agree, renders them quite unable to cope effectually with the pirates who infest that district. The pirates on the West River have more than once seized British-owned steamers, ransacked them, and then used them for capturing ricely-laden native junks. But, up to the present time, no punishment whatever has been inflicted on the perpetrators of those outrages. It is true we are told that the Admiral is now considering the question of how best to repress the piracy. But why now? Why not twelve months ago? Why were the gunboats in the district prevented for so long a time from taking any effective measures for the repression of the piracy which has been so rife?

TRADE UP THE RIVERS.

Then, Mr. Speaker, with regard to the opening up of all the inland waterways of China, the agreement with the Chinese Government was announced in this House as one which would make it possible to take British merchandise in British ships, not merely to the ports recognised by treaty, but to every riverside town and station in the whole interior of China. On the strength of this agreement leading British shipping firms in China expended £60,000 in building steamers to trade from Hongkong and Canton up the West River. So far, however, from these steamers being allowed to take British goods to every riverside town and station, they have not been permitted to load or discharge cargo at intervening places between the treaty ports. They have consequently been working at a considerable loss, and several have been taken off altogether. The right honourable gentleman, the Under Secretary for Foreign Affairs, in answer to a question I put to him the other day on this subject, said this was not within the knowledge of the Foreign Office. In view, however, of the lengthy correspondence between the shipping firms in China and the British Legation in Peking on this question, it seems extraordinary that the Foreign Office should not have received this important in-

Digitized by Google Original from CORNELL UNIVERSITY

formation. In reply to a further question, the right honourable gentleman said the agreement with the Chinese Government permitted foreigners to trade in steamers where native boats had been permitted, but this did not include every riverside town and station. I must, however, refer the right honourable gentleman to the express declaration made in this House by his predecessor, Mr. Curzon, to which I have already alluded. I am informed by those engaged in trading on the Chinese inland waterways that native boats are permitted to trade with every riverside town and station and also escape with lower duties. This being so, it is obviously impossible for British steamers to compete, when they are required to have one steamer to trade between treaty ports and a second with the other riverside town and stations, both boats running probably half empty; whereas, if, according to the agreement, they were allowed to load and discharge cargo at every riverside town and station, whether treaty ports or otherwise, one steamer would do where two are now employed; and a profitable trade would be carried on. I have repeatedly pressed the Government to insist upon the carrying out, in its entirety, of this agreement with the Chinese Government, and I should be glad to learn from the right honourable gentleman to-night that the Government are determined to insist on this.

AS IN SOUTH AFRICA.

With regard to South China and Western China, in the course of my journey I penetrated through the Yang-tsze gorges 1,600 miles up the Yang-tsze River. I travelled some distance into the rich province of Szechuan with its 50,000,000 of industrious and prosperous inhabitants. I found this province covered by French Jesuit priests who, in addition to the work of a religious propaganda, gather and transmit to the French Government information as to the mineral wealth and the commercial possibilities of the country. They have practically completed a geological survey of the great province; and now the French are pressing for exclusive rights to work minerals in six districts which they believe to be rich in mineral wealth. They have also prepared a chart of the Yang-tsze river which was to be of invaluable service. As in South Africa it has been found that we actually had no knowledge of the country around Ladysmith, though it had been our military headquarters for years, so in China our charts are out of date and therefore useless. An Admiralty chart of the Yang-tsze was prepared in 1861, and some slight corrections have been made since, but it is at the present time no guide to the navigation of a river of the changing character of the Yangtze.

FRENCH OPPOSITION.

I have again and again drawn the attention of the Government to the agreement of Jan., 1898, between the British Government and the French Government, under which each nation bound itself to the other to use its best offices with the Chinese Government to secure each for the other similar and increased opportunities and facilities for trading with Yunnan and Szechuan. This agreement has been entirely disregarded by the French Government without calling forth any remonstrance from Her Majesty's Government. Nanning-fu, the treaty port on the West River, which was declared to be opened more than a year ago (as was admitted the other night by the right hon. gentleman) still remains unopened. And remembering the violent opposition on the part of the French to the opening of Nanning-fu, one cannot but feel that in all probability the delay in the opening is due to French influence. I hope to hear from the right hon. gentleman that Her Majesty's Government will not allow further delay, as we have a right to expect that the state of affairs under which British goods have to be transhipped from Hongkong, sent through Tonking up to S.-West China, and are subjected to a differential duty of ten per cent. when passing through French territory, shall be ended without delay. The French are busily engaged in constructing a railway from Tonking towards Yunnan, with the intention of ultimately carrying it forward into Szechuan and of drawing the trade of South-West China down to the sea through French-Indo China; and with the declared expectation that sooner or later France will be able to annex Szechuan, Yunnan, Kwangsi, and Kwang-tung, the four great Chinese Provinces to the North of her Indo-China possessions. When we have regard to the fact that seven-eighths of the imports into French Indo-China in 1885 went from England, Germany, and Switzerland, and that to-day, owing to differential duties in favour of French goods amounting in some cases to 50 per cent., that three-fourths of the imports go from France and only one-fourth from the rest of the world, we have an object lesson of the vital importance of resolutely upholding our just commercial rights in South and South West China, if in the future we are not to see British trade strangled by the differential tariffs in those regions also. Her Majesty's Government took great credit for the Kowloon extension opposite Hongkong. But I find that the value of the extension was very much reduced by the obstinacy with which the home authorities, contrary to the strongly expressed opinion of both civil and military authorities out there, accepted the present boundary, which is considerably south of the head of Mirs Bay included in the concession, and besides contains no healthy camping grounds. They ought to have insisted that the boundary should be a natural line of mountains running slightly north of the head of Mirs Bay, which would have given a healthy camping ground and a strong natural frontier. It will be in the recollection of the House that, owing to the opposition to the British when taking possession we occupied Sam Chun outside the boundary, where we had a most healthy camp. However, while I was at Hongkong, instructions came from home that, under arrangements made with the Chinese Government, Sam Chun was to be evacuated. This, it was believed, had been done because the French had pointed out to the Chinese Government that we had been allowed to occupy a territory beyond the concession agreed upon and that they were in consequence claiming further concessions around their newly-acquired treaty port in the South. If this is so, the result at any rate was not creditable to British diplomacy, for within a week of our evacuation of Sam Shun the French demands were conceded in full by the Chinese Government.

OUR PRESTIGE GONE.

Again and again in this House declarations of policy have been made by Her Majesty's Government which, if carried out, would have given the greatest satisfaction to everybody interested in the upholding and the extending of our commercial interests in the Far East. But, unfortunately, whether in regard to agreements such as the Anglo-Russian agreement in the matter of railway concessions, the opening of the inland waterways, the patrolling by gunboats of the Yang-tsze and the West River, or the terms and conditions upon which the acquisition of Wei-hai-wei and Kowloon have been secured, all alike have proved delusive and unsatisfactory. And I do not hesitate to say that in China our prestige and influence which were predominant five years ago are non-existent to-day.

The blue book issued yesterday is unfortunately largely a further record of failure, on the part of Her Majesty's Government, to deal successfully with the Tsung-li-Yamen. This voluminous paper hardly contains one instance where a distinct diplomatic success has been achieved.

What then, Mr. Speaker, ought Her Majesty's Government to do, in view of accomplished facts in the Far East, in order to retrieve as far as possible the disastrous results of their neglect to pursue a firm and definite policy? The understanding, arrived at between the United States Government and the other nations interested in the trade of China, securing, if faithfully observed, the maintenance of the open door, appears to afford another golden opportunity for seeking the friendly co-operation of the great Powers, in the promotion of administrative reforms so greatly needed for the strengthening of the Imperial Government and the necessity for which the United States Government so fully recognize. All authorities in China agree that a serious mistake was made in allowing the deposition of the Emperor last year and the assumption of the control of China by the reactionary Dowager Empress, who is a usurper and has no title whatever to occupy her present position. In view of the somewhat alarming news as to the disturbed conditions and anti-foreign feeling in various parts of China, joint action ought, in my opinion, to be taken by the Powers to replace the Emperor on the throne; for it is undoubted that his sympathies are genuinely in favour of reform and the opening up of his country to trade.

SOME SUGGESTIONS.

But in addition to this, Mr. Speaker, I would draw the attention of Her Majesty's Government to the fact that the Chinese Government would be powerless to resist the aggression, territorially and otherwise, of other Powers, unless she is enabled to have her naval and military forces re-organised. This she cannot do, unless her revenues are considerably increased. I would, therefore, strongly urge that the time has come for a revision of the Customs tariff in China, and that at present the maritime Customs' import duty of 5 per cent., which is a maximum of 5 per cent., and in many cases really much less, should be substantially increased on the condition that not only every riverside town and station, but also the interior of China, is freely thrown open to foreign trade, and that some satisfactory rearrangement to secure the equitable levying of lekin would be included in the agreement. The proportion should be fixed that is to be paid into the provincial and imperial treasuries respectively. Some system of paying officials, so as to render it possible for them to live without corruptly applying any portion of the revenues which pass through their hands, is essential. It appears desirable that the increased revenue thus obtained by China should be allocated to specific purposes and should be given only on condition that an agreed amount be expended on the re-organisation of the military and naval forces of China, under officers to be jointly provided by those Powers that do not desire the partition of the country; that a further sum be applied to river conservancy with a view of improving the navigation of such great commercial arteries of the Chinese Empire as the Yang-tsze and West Rivers, under the control of international conservancy boards; and that there be a previous ratification, on satisfactory terms and conditions, of railway concessions promised to British concessionaires. If joint action were taken by the United States of America, England, Japan, and Germany in support of the policy I have indicated, it would be difficult for Russia and France to hold aloof. Mr. Speaker, I have always recognised the vast importance to British trade of the development of our Indian Empire. But the great Empire of China, with its 400 millions of industrious trading people, its greater fertility of soil, and its enormous mineral resources, is in my opinion of still greater importance to the British nation, considered from a commercial point of view. I therefore earnestly hope that the Under Secretary for Foreign Affairs may be able to assure the House to-night that this policy of preserving China for the Chinese and developing her resources in the interests alike of the population of that country and of all nations will receive the vigorous and determined support of Her Majesty's Government; for in this way, and in this way alone, can the just influence and commercial rights of the British nation be preserved in the Far East.—(Cheers.)

TELEGRAMS.

(REUTER'S SERVICE)

CARRINGTON'S FORCES.

Shanghai, May 24.

The Canadian Artillery and the Queensland Bushmen belonging to Carrington's force joined Plumer on the 15th instant by forced marches and took part in the relief of Mafeking.

LAING'S NEK.

A fresh commando has occupied Laing's Nek.

BIRTHDAY HONOURS.

Mr. Hugh Clifford, of Labuan, and Mr. E. W. Birch, of the Negri Sembilan, have been created companions of St. Michael and St. George.

THE WAR.

Lord Roberts telegraphs from Haningsspruit, under date of the 22nd, that after the relief of Mafeking the garrison and the relieving force attacked and routed Snyman. The Boers fled.

Hamilton has reached Heilbron after a series of engagements with the Boers under Dewet.

French has crossed the Rhenoster River.

President Kruger denies having sued for peace.

ROBERTS AT RHENOSTER.

Shanghai, May 25.

Roberts has arrived on the south bank of the Rhenoster and found the enemy fled.

Kelly-Kenny reports that the Yeomanry have cleared the country between Bloemfontein and Boshof.

BOERS STILL DETERMINED.

It is reported that the Boers are trekking straight to the Vaal, and that they declare that they will fight to the death.

ON THE WAY TO PRETORIA.

French is now at Prospect, on the railway, 5 miles north of the Rhenoster. Hamilton also is cöoperating. The general opinion is that the British will arrive at Pretoria as fast as they can march.

THE ADVANCE FROM THE WEST AGAINST PRETORIA.

Shanghai, May 26.

General Hunter's Division has occupied Vryburg, whither trains are now running. The place will be made a base of operations for the western column.

LAINGS' NEK.

Buller is posting guns round Laings' Nek. A severe struggle is expected there.

Digitized by Google Original from CORNELL UNIVERSITY

MAFEKING.

Shanghai, May 27.

Reuter's agent telegraphs from Mafeking under date of the 20th that the Boers are entrenching at Polfontein, 10 miles eastward of Mafeking.

MORE TROOPS.

The Marquis of Lansdowne, Secretary of State for War, speaking in the House of Lords, said that 11,000 troops were going to South Africa during June.

THE CROSSING OF THE VAAL.

The *Daily Telegraph* correspondent, telegraphing from Vredefort, under date of the 24th, says that the British outposts are now within 26 miles of the Vaal. Roberts will doubtless cross on Sunday.

THE BRITISH ADVANCE IN THE TRANSVAAL.

Later.

Field-Marshal Roberts telegraphs from Wolveshoek, under date of the 26th inst., that the advanced portion of his force crossed the Vaal River on the Queen's Birthday near Parys.

Gen. Ian Hamilton's column is at Boschdank.

Our scouts are now at Viljoensdrift.

The local mines are uninjured and there is no enemy on this side of the Vaal river.

[Note.—Parys is 25 miles above Viljoensdrift on the Vaal River, and Wolveshoek is a few miles south of Parys. The crossing at Parys is a flanking movement, which, having been successfully accomplished, should render untenable the position of the Boers at Viljoensdrift on the direct route to Pretoria. From the Vaal to Johannesberg is 40 miles and from Johannesberg to Pretoria is 30 miles.]

THE BURGHERS AND THE WAR.

Shanghai, May 28.

A telegram from Lourenzo Marquez says that an influential deputation of burghers have urged President Kruger to surrender, but he replied that the matter is in the hands of the commanders in the field.

PRINCE KANIN.

His Imperial Highness Prince Kotohito has arrived at Constantinople.

THE CROSSING OF THE VAAL.

General French crossed the Vaal at Lindeques Drift on Friday.

NATAL.

Reuter's agent telegraphs from Newcastle that the Boers are very active and have been largely re-inforced; they are fortifying positions extending from Vryheid to Laing's Nek, having retreated from both the Natal and the Free State borders.

THE QUESTION OF SURRENDER.

There are rumours that Kruger is seriously considering the question of surrender.

LORD ROBERTS.

Shanghai, May 29.

Field Marshal Roberts telegraphs from Vareeniging, under date of the 27th, that he crossed the Vaal in the morning and is now encamped on the north bank. The advance of the troops only just prevented the destruction of the coal mines on both banks. Our casualties were four.

The railway between Mafeking and Buluwayo has been restored.

Rundle's Division is moving steadily eastward.

Three columns occupied Senekal on the 27th, Rundle with Campbell advancing from Trommel; Boyes on the left from Bestersflat, and Brabant from Vicksburg.

NATAL.

Reuter telegraphs from Newcastle that detachments of the enemy are frequently appearing near Ingogo. The British have blocked Van Reenen's Pass. The enemy hold Muller's and Botha's Passes.

RUSSIA AND KOREA.

Mr. St. John Brodrick, Parliamentary Under Secretary for Foreign Affairs, speaking in the House of Commons, said that the new agreement between Russia and Korea has no reference to sovereign rights. It grants to Russia at Masampho a concession similar to that already granted to Japan. Her Majesty's Government has no knowledge of any intention on Russia's part to erect fortifications on the conceded site.

ANNEXATION OF THE FREE STATE.

Shanghai, May 30.

A telegram from Capetown says that the Orange Free State was formally annexed to-day.

LORD ROBERTS.

Lord Roberts telegraphs from Klip River station, under date of the 28th, that his troops marched twenty miles to-day, and are now eighteen miles from Johannesburg. The enemy had prepared positions with the intention of opposing our advance, but they abandoned them successively. We pressed them so hard that they had only time to get five guns into the train and leave as the West Australians dashed in.

ADVANCING FROM MAFEKING

The British have occupied Zeerust, and another force is now marching to Lichtenberg.

[Note—This shows that, as we anticipated, a column is marching from Mafeking to assist in the attack on Pretoria.—Ed. *J.M.*]

THE LAST RESOURCE.

Reuter's Agent, telegraphing from Pretoria, under date of the 28th inst, says that President Kruger has ordered three days' of prayer, humiliation, and confession of sins, for relief from oppression.

THE DERBY.

Shanghai, May 30.

The Derby has been won by Diamond Jubilee, Simondale running second, and Disguise third.

THE NATAL ARMY.

Gen. Hildyard has occupied Utrecht. Gen. Clery is bombarding Laing's Nek.

THE NEW TERRITORY.

The annexation proclamation has been read in Bloemfontein. The name of the Orange Free State is henceforth to be Orange River Colony.

GENERAL GALLIFET RESIGNS.

Shanghai, May 31.

General Gallifet has resigned the portfolio of War on the ground of ill-health. General André replaces him.

THE ADVANCE ON JOHANNESBURG.

Lord Roberts telegraphs from Germiston on the evening of the 29th that he arrived there without being seriously opposed. He proposes to enter Johannesburg with all his troops to-morrow (the 30th) at noon. He expects no opposition.

THE NATAL SIDE.

The British now occupy a strong position commanding Majuba Hill and Laing's Nek.

THE CLOSE OF THE WAR.

BRITISH DICTATING THE TERMS OF PEACE.

KRUGER FLEES TO WATERVAL BOVEN.

PRETORIA OCCUPIED.

Shanghai, May 31.

Reuter's agent telegraphs from Pretoria that the British officers in Johannesburg are dictating terms of surrender.

The advance guard is half-way to Pretoria.

Kruger has gone to Watervalboven.

The *Daily Mail's* correspondent telegraphs from Pretoria, on the morning of the 30th, that Pretoria will be occupied in two hours without resistance. The burgomaster and the Boer Commando have arrived from Komati-Poort.

(Telegrams Received at the Legation of France.)

THE CHAMBER OF DEPUTIES.

Saigon, May 24.

The Chamber of Deputies has approved, by 226 votes to 26, the general policy of the Government. It has adopted by 467 votes to 78 a motion, accepted by the Cabinet, inviting the latter to energetically oppose all re-opening of the Dreyfus Affair.

THE VRYHEID AMBUSCADE.

General Buller telegraphs that a squadron of mounted infantry has been captured by the Boers near Vryheid.

THE WAR.

Saigon, May 25.

A telegram from Kroonstad says that General French has crossed the Rhenoster, and that General Hamilton has occupied Heilbron after an engagement in which he lost 75 men.

THE VAAL.

Saigon, May 28.

General French crossed the Vaal at Lindeques Drift on Friday. The Boers, abandoning the Vaal, are concentrating on the Klip River. The leaders of the Boers are discussing the advisability of surrendering.

THE BOXERS.

Saigon, May 29.

A telegram from Tientsin says that the Boxers have burned the station at Builino, 29 miles from Peking, and assassinated several of the Chinese employés.

THE FRENCH CHAMBERS.

Saigon, May 30.

In consequence of an interpellation by the Nationalists, the Prime Minister, M. Waldeck-Rousseau, after a violent tumult and a suspension of the sitting, accepted an order of the day voting confidence by 296 against 246.

GENERAL DE GALLIFFET.

The retirement of General de Gallifet is imminent, because of ill-health.

THE WAR.

The English continue to advance towards Johannesburg. There are some combats.

(From our own Correspondent.)

SERIOUS OUTBREAK IN CHINA.

"BOXERS" ADVANCING ON PEKING.

FOREIGN MARINES LANDED.

Shanghai, May 29.

A serious outbreak of "Boxers" has taken place between Tientsin and Peking.

The rioters have gone to Peking, destroying the railway on their way to prevent pursuit.

The foreign warships are landing men.

Tientsin is quiet.

(From the "Hongkong Telegraph.")

THE SARAWAK TROUBLE.

Labuan, May 17.

On account of fresh developments in the Sarawak affair the British Consul has postponed his intended visit to Sandakan, and left suddenly this morning for Brooketown to meet Rajah Brooke. It is reported that the Trusan Expedition has met with a reverse and is returning to await further reinforcements.

Time was here called, when White claimed a draw, but resigned so as to avoid adjudication.

5—P takes P, Kt takes K P; 6—B to K 3, Q to R 5 ch; 7—P to Kt 3, Kt takes P; 8—Kt to K B 3, Q to R 3; 9—R to Kt sq is more favourable for White than the variation in the text. Morphy played here 8.....B takes Kt (9 P takes B, R to K sq ch; 10—B to K 2, B to Kt 5 with a powerful attack) to prevent White from interposing Q Kt to K 2 in answer to R to K sq ch. Black's attack with 11.....Q to R 5 ch is highly ingenious, followed up as it is with 12..... Kt takes P, but we suggest the preparatory 11.....P to Q B 3 for this reason. If 12—P takes P Black brings a powerful Knight into play; if White plays 12—P to Kt 4 Black gains time with 12.....B to Q 5 attacking the Rook; but the chief reason is that White's saving move in the text—viz., 13—Q to R 4, would not be so powerful, Black Rook not being attacked by it then, whilst as played he had to retire the Queen in the height of the attack. His position, however, was good enough even so, and he won the game quietly without any undue precipitation. The is a good specimen of this variation of the Falkbeer Gambit.

GAME 595.

PEEROFF'S DEFENCE.

From the Vienna Masters' Tournament:—

TEA.

A large business has been done, prices ruling very firm, fully 15 per cent. above last season's values. The demand is chiefly for the better grades. The quality shows an improvement on last year, especially as regards the make of the leaf. Arrivals show a falling off in quantity as compared with last season, and the Japanese dealers state that the crop will not be so large as last year's.

QUOTATIONS.

YOKOHAMA: SATURDAY, JUNE 9TH, 1900.

BIRTH.

On Sunday morning, June 3rd, at 251, Bluff, the wife of S. KOMOR, of a daughter.

SUMMARY OF NEWS.

No. 4 of vol. 8 of the *Betsu Sekai* (magazine), was suspended on the 31st ult.

HAIL fell in the neighbourhood of Zenibakomura, Otaru district, Hokkaido, on the 26th ult.

A CONFERENCE of chiefs of the General Staff of the Army will be held in Tokyo from the 11th instant.

Two hundred *koban* coins have been found in a garden at Shimizu Mume, Takejimacho, Koishikawa, Tokyo.

AN overcoat and a sum of money were recently stolen from the American Legation at Aoicho, Akasaka, Tokyo.

THE Japanese cruiser *Yakumo*, constructed in Germany, has successfully completed her trials. She will leave for Japan in July.

PRETORIA has been occupied during the week by the British. There have been several sharp engagements in the neighbourhood.

THE Boxer riots continue in North China. Two English missionaries have been murdered, and several Belgian railway-men are missing.

FIRE broke out at half-past one o'clock on Friday morning at Ushijima-zaka, Ishikawa, and seven houses were destroyed and two damaged.

A BIG fire occurred at midnight on the 2nd inst. at Nishi Saikumachi, Shimonoseki. About one hundred houses and a theatre were burnt down.

ON the 3rd inst. the aniversary ceremonies for repose of the souls of those who fell in the Satsuma Rebellion were held at Nogeyama by the Yokohama Shoheijikai.

THE inhabitants of New Zealand are sending Sir George White a brick of gold. On one side is written, "This is a brick," on the reverse, "You are another."

A HEAVY thunder-storm, accompanied with hail the size of beans, raged at Sendai on the morning of the 2nd inst. Great damage was done to rice, mulberries, etc.

FIRE broke out on the 4th inst. at Kitaoshimura, Tsuga district, Tochigi prefecture, and twelve houses were destroyed. Two corpses was found among the debris in a well.

A FIRE broke out at Odawara at two o'clock on the morning of the 2nd inst. The Branch office of the Fujisawa Bank and two houses were destroyed, while three were damaged.

LORD METHUEN at his own expense has erected a tomb to the French strategist Villebois Mareuil, who was killed in an engagement near Boshof. The French warmly appreciate Lord Methuen's action.

A COLLISION occurred between a passenger car and a goods train on the Hokuyetsu Railway on the evening of the 31st ult. Four cars were broken to pieces, and two passengers badly injured.

A TELEGRAM has been received by the Government from the Consul at Chemulpo, to the effect that, owing to the recurrence of plague in Osaka and Kobe, ships from those ports will be strictly quarantined.

FIRE broke out on the 4th inst. in a workshop just opposite to Morioka Jail, in Iwate Prefecture. The building was totally destroyed, but the jail was saved. The loss is estimated at about 20,000 *yen*.

THE Tientsin paper says that the Empress Dowager is reported to have been much distressed at the terrible massacre of Christians at Pao-ting-fu, and ordered coffins to be provided out of the Imperial purse.

The Times says Sir Nathaniel Linley has resigned the Mastership of the Rolls, and that Sir Richard Webster succeeds him, whilst Sir Robert Finlay becomes Attorney-General and Mr. Carson Solicitor-General.

LADY SARAH WILSON wired to her sister, Lady Georgiana Curzon, from Mafeking, under date of May 3, saying:—Our breakfast consisted of horse sausages and lunch of minced mule and curried locusts. All well.

SIR HENRY BLAKE, Governor of Hongkong, with Lady and Miss Blake, and the Rt. Hon. Viscount Suirdale, Aide-de-Camp to Governor Blake, arrived in Yokohama on Thursday. They have since gone to Tokyo.

THE British Minister has entered a vigorous protest with the Chinese Government against the conduct of the Chinese Commissioners at Weihai-wei, who to all appearance are responsible for what has occurred there.

ON the 1st inst. Fukuse Tokichi, an employé of Ito Kimbei, silk merchant, Bentendori, Yokohama, was robbed of 700 *yen* which he had drawn on a bill of exchange at the Third Bank. He had placed the money on the bench beside him, and while he was endorsing another document the notes were taken.

A POLITICAL meeting directed against the Governor of Kanagawa Ken was held at the Minatoza theatre, Sumiyoshicho, Yokohama, on the evening of the 1st instant. While a person named Yoshinaga was speaking some *soshi* belonging to the opposition party attacked him. In the scuffle that ensued several men were wounded. A number of arrests were made by the police.

COMMANDER ARTHUR H. LIMPUS, R.N., of H.M.S. *Terrible*, has been promoted to the rank of Captain, for services in South Africa. Commander Limpus was only made a Commander on 1st January, 1898, and as there are still commanders on the list whose seniority dates from 1882, it will be seen that this gallant officer has been given a very big jump up the tree of seniority.

THE steamer *Seko Maru*, owned by Mr. Harada of Osaka, ran ashore near Takamijima, about five miles from Tadotsu, early on Wednesday morning, while en route from Tomonotsu to Tadotsu. The steamer, a vessel of 184 tons, shortly afterwards sank. She was engaged on a run between Osaka and Wakamatsu, Kyushu. Her hull was not insured, but the cargo, consisting of rice, was insured for *yen* 3,000. Fortunately no lives were lost.

THE London correspondent of the *Birmingham Post* learns from a high diplomatic authority, who has just returned to London from Moscow, that it is not at all improbable that the Czar and Czarina may visit the Queen at Osborne during the autumn. It seems to be arranged that their Imperial Majesties will go to the Paris Exhibition, and it is certain that correspondence has taken place between them and the Queen relative to a meeting on either their going or their return.

IT is very well-known that Mr. Herbet Spencer's one recreation is billiards, at which he plays, for an amateur, a very good game. There is a story, that he once addressed another and younger player who had beaten him very decisively in the following terms:—"Sir, a certain dexterity in games of skill is a proof of a well-balanced mind, but such dexterity as you have shown argues a mis-spent youth." One cannot help hoping that the story is true, if only to show that even great philosophers are sometimes quite human.

ACCORDING to investigations completed by the Finance Department and published in the *Nichi Nichi*, the number of foreign tourists who visited Japan last year totalled 32,426. Their nationalities were as follows:—English, 3,915; French, 1,179; German, 1,409; Americans, 3,743; Chinese, 19,046; Russians, 1,051; Austrians, 79; Spanish, 32; Koreans, 146; Indians, 24; Portuguese, 25; Dutch, 19; Italians, 15. Visitors from other countries did not exceed 7 in number. The chief ports for tourists were Yokohama and Kobe.

THE WAR.

Saturday, June 2.

There is quite an interesting complication of dates connected with the occupation of Johannesburg. The *Japan Gazette*, which was the first to publish news of the event in Yokohama, says that its telegram left London at 9.47 p.m. on the 29th of May. Now we know by Reuter's service that Lord Roberts himself was at Germiston on the evening of the 29th, and that he telegraphed thence an announcement of his intention to enter Johannesburg on the 30th at noon, adding that he did not expect resistance. A later telegram dated the 30th shows that he deferred the occupation of the town at the request of the Commandant for 24 hours, and a still later despatch indicates that the British flag was flying there before 2 o'clock on the 31st. We now know further that Pretoria will not make any serious resistance, so that the war is practically over.

It will be observed that Roberts' official telegram announcing his intention of moving against Johannesburg on the 30th, was dated from Germiston, which is a town lying 7 or 8 miles north of Johannesburg, between that place and Pretoria. That fact is very significant. The British General, instead of advancing against Johannesburg from the south, which was the natural route, seems to have carried a force round to the north, and thus practically invested the place before attempting its reduction. His tactics at Bloemfontein were similar. His general line of advance was from the west, but by a forced march of 36 miles in 20 hours, he brought a column of troops into the town from the south, thus completely surprising and discomfiting the Boers. Celerity of movement and rapid strokes following each other in quick succession have been the secrets of his success. Such tactics are particularly demoralizing to a badly disciplined enemy. The Boer method is, not to retreat after an unsuccessful fight, but to disperse. That is an excellent plan for the purpose of achieving the safety of the units of a force. But its disadvantage is that cohesion is temporarily sacrificed, and unless time is available for re-assembling and re-organizing, the situation becomes compromised. Lord Roberts never gave the Boers time to take breath. Once broken, they found it generally impossible to integrate again, and they probably fell at last into a condition of complete demoralization. Strategy of that kind would not have been within the Field Marshal's power had he not possessed great strength in mounted men. It will probably be found that the Australian, Canadian, Imperial-Yeomanry and Cape-Colonial contingents contributed materially to the final success.

The fall of Pretoria means, of course, that the resistance opposite Buller at Laing's Nek will melt away. Buller has been most unfortunate. He made a good fight at Ladysmith. His plans, according to the testimony of Lord Roberts, were excellent, and should have succeeded. But they failed owing to the faults of his subordinates, and when finally he effected the relief of the place, his achievement took the form of an anti-climax. No one had any praise for him. It was concluded that he owed his success to Roberts' movements in the Free State which had relieved the pressure at Ladysmith. Now, again, precisely the same result seems to have been his fate. Just as as he had gained positions commanding Majuba Hill and Laing's Nek, and just as, in all human probability, he was on the eve of forcing that strong position and accomplishing a brilliant feat, Lord Roberts marches into Johannesburg, cuts the railway communication with Laing's Nek, and dissipates the resistance forcing Buller. There are few laurels remaining to be gathered in South Africa. All that were growing there have been woven into garlands for Roberts, French, Baden-Powell, and White. Much honour will also come to Brabant, Rundle, Ian Hamilton, and Hutton, but Roberts, French, Baden-Powell, and White will be the nation's heroes. Roberts will be a Duke, of course. He has been a most fortunate man; deservedly fortunate. The reputation that he made after 35 years' service was already so great that an opportunity to enhance it enormously did not seem within the range of reasonable probabilities. Yet the opportunity presented itself and he has utilized it in such a manner that whereas the world had previously been content to regard him as a good General, it will now count him a great Captain. Of course Englishmen will have too much sense to over-rate these successes gained in South Africa. When Roberts took the field, the disparity of strength on the two sides had become so great that victory for the British could only be a question of time. Granting all that, however, it is not to be denied that Lord Roberts utilized his forces in a masterly manner, and that, in less skilled hands, the success he has gained would have been not only deferred, but also much more costly. His great merit has been appreciation of the necessities of modern warfare, and perfect adaptation of his strategy to the novel conditions confronting him. He won all his fights and made all his captures by constructing situations which paralysed the enemy's resistance, and dispensed with recourse to serious fighting. The Boers gradually realized that it was hopeless to oppose him. Their organization and generalship failed in the face of his tactics. That is the only glory England can claim. It has not been a great war in any sense, though probably no Generals ever had a more difficult task. But its latter operations were well managed, and if now Her Majesty's Government contrives to inflict a minimum of pain on our brave adversaries, we shall all be glad to dismiss from our memories the events of the past six months.

Monday, June 3.

It is plain that the public has been greatly misled by erroneous telegraphic statements. The first and most serious was that published by a local English contemporary that Johannesburg had been occupied on the 29th of May. We have already commented on the mistake of that telegram—a mistake obvious to us from the first—, but we may add here that our comments were entirely unconnected with the medium through which the news was circulated. Our contemporary accuses us of meddling with matters that do not concern us, but, in common with all British subjects, we are very much concerned about the progress of the war, and especially about an event of such capital importance as the occupation of Johannesburg. It is now certain that the telegram was absolutely a fiction. Johannesburg did not pass into British possession until the 31st of May, nor is it possible even to entertain the hypothesis that an advanced guard occupied the place at an earlier date, for Lord Roberts telegraphed on the 29th that he did not expect any resistance on the 30th, a statement quite irreconcilable with the theory that a part of his troops were already in possession of it. If that were the only misleading statement published there would not be so much to complain of. But other telegrams announced, with equal emphasis, that Pretoria also had surrendered. On the 1st inst. a Tokyo contemporary published this news:—"London, May 31st. Pretoria has surrendered;" and followed it on June 3rd with this: "Lord Roberts is now proceeding to Pretoria with the object of receiving the capitulation of that city." Are these statements trustworthy? We do not think so. We do not believe that Pretoria has surrendered. The telegram saying that Roberts was proceeding to Pretoria to receive the capitulation of that city was dated "London, June 1st." Now a Reuter telegram, dispatched from Shanghai at 10.20 a.m. on the 2nd of June, and therefore given in at London on June 1st, informed us that "there was fighting yesterday (May 31st) at Kaalfontein, midway between Johannesburg and Pretoria." That certainly does not suggest that Pretoria surrendered on the 31st. It is to be observed that Reuter has never once misled the public throughout the whole course of the war. He has sent many telegrams which were not confirmed by subsequent events, but in every case he has stated the source of the messages and left the public to accept or reject them. Thus he has told us that the *Daily Mail's* correspondent at Lourenzo Marquez, or *The Times'* correspondent at Maseru, or Reuter's correspondent at Mafeking, and so on, wired such and such news at such and such a date. In the great majority of cases the *Daily News'* correspondent at Lourenzo Marquez has proved to be wrongly informed, and the telegrams of *The Times'* correspondent at Maseru were almost uniformly incorrect. But in no single instance has a piece of intelligence definitely formulated by Reuter been contradicted by later news. Now it will be observed that Reuter has not told us anything whatever, on his own authority, about Pretoria's surrender, and that up to this moment of writing (Sunday morning), no intelligence in that sense has been received from Lord Roberts, though it is quite inconceivable that the Field-Marshal would have delayed for one instant the communication of such important news.

Rundle's operations appear to be very vital. It is probable that quite a large force of Boers are still in the field on the Bethlehem-Harrismith line. We now know that there were some six thousand burghers engaged in the attempt to capture Wepener; that another force of nine or ten thousand threatened the British communications at De Wets Dorp, and that a third column was posted near Thabanchu. It is extremely improbable that the whole of these forces, or even any considerable part of them, concentrated at Kroonstad after being driven back from the Thabanchu-Ladybrand line. What they probably did was to retire northward by the Ficksburg-Bethlehem route, which carried them into the hilly country round Harrismith and at the foot of Van Renan's Pass. Collected there, they still remained a menace to the British communications northward of Bloemfontein, and it is evident that, if Rundle suffered any severe check at Senekal, Roberts' columns might be seriously embarrassed. Of course the point is of such importance that the Field-Marshal has doubtless provided for all contingencies, but we can not escape the conviction that Rundle has a hard task, and that, unless the success of the operations beyond the Vaal paralyses the resistance in the Harrismith region, some heavy sacrifices may yet be demanded.

Thursday, June 7.

The Boers are incomprehensible. People

Digitized by Google Original from CORNELL UNIVERSITY

who were supposed to understand them well predicted, long ago, that they would not attempt to defend Pretoria, since it would be intolerable to them to be shut up in a beleaguered city, leaving their homesteads at the mercy of the enemy. On the other hand, they had certainly made elaborate preparations for the defence of their capital. It was encircled by forts mounting heavy guns, and if ten thousand Englishmen were able to defy the assaults of thirty thousand Boers during five months at Ladysmith, it should have been quite easy for twenty thousand Boers to hold Pretoria during half a year in the face of any army that the British could bring against it. Their strength is in defensive operations, and there could not be the least comparison between Ladysmith and Pretoria; for whereas the former place was a mere camp without any capacities to sustain a siege, all the resources of science had been exhausted to render the latter impregnable. How, then, are we to account for the almost unresisting surrender of the Transvaal capital, especially on the heels of an announcement from President Kruger that the Boers were resolved to fight to the death? With Johannesburg they have lost the source from which they drew gold, and with Pretoria they have lost the only factory where they could make ammunition. If, then, they really intend to betake themselves to guerilla warfare, they commence their new programme under most unfortunate circumstances. We find it difficult to believe in this guerilla warfare. Our impression is that the eyes of the burghers have been opened. For a long time their hopes were sustained by falsehoods about the result of operations in the field and by baseless predictions of foreign interference. But they see now at last that their leaders have been deceiving them throughout; that the men who were supposed to have been slaughtered by thousands on the veldt have arrived scatheless at Pretoria, and that the great crisis has come without any Foreign Power raising even a finger to succour them. In the northern part of the Transvaal there is ample space for them to lead a nomad existence. To follow them from place to place in that wide region, and force them to surrender, would occupy a large force for several months. But in the meanwhile the fugitive burghers would gain nothing. Their lands and stock would be in British possession, and they would be merely adding needless suffering to an inevitable fate. Probably, therefore, we may interpret the surrender of Pretoria to mean that the war is practically over. Laings Nek will very soon be rendered untenable, and whatever commandos remain on the west of the Rand Berg range between Wakkerstroom and Kanati will have to retire northward or lay down their arms. It is evident, we think, that Kruger and Steyn have effected their escape. We trust that they will both be able to cross the sea and spend the rest of their lives in peace. If England captures them, they will merely become pensioners of the Government, and in that character will command a measure of public sympathy, whereas, if they pass over to Europe, they will soon disappear from the field of public observation.

CHINESE AFFAIRS.

Saturday, June 2.

The latest news from China is that the marines landed from the ships of the various Powers have arrived in Peking, having proceeded thither by train. The force sent appears to consist of 70 Americans, 70 British, 63 Russians, 50 Germans, 50 French, 40 Italians, and 24 Japanese; or 367 in all. The Japanese marines will doubtless be reinforced as soon as the *Kasagi* reaches Tientsin, which will be on the 4th inst. There is reason to think that the nature of the objection raised by the Chinese Government to the landing of these troops has been exaggerated. Very naturally the Chinese were at first averse to the coming of foreign marines into the capital, but they quickly yielded to the representations of the Foreign Representatives, merely stipulating that the numerical strength of the force should not exceed that of the last detachment sent. Peking itself appears to be quiet, and we entertain little doubt that the Boxers' movement will soon be quelled.

Monday, June 4.

Telegrams from China agree in asserting that a foreigner, whose name appears to be Villard, and twenty-five Chinese, all employés of the Luhan Railway, who were endeavouring to effect their escape to Peking, have been massacred by the Boxers. The nationality of the foreigners is not stated, but, as there has been talk of a French citizen, we presume that the unfortunate man was French.

It is stated that the argument advanced by the Tsung-li Yamen, to deter the Foreign Powers from sending troops to Peking, was that such a measure would probably have the effect of still further exciting the rioters. An argument of that kind was not likely to have much weight, since it amounted to an admission of the anti-foreign sentiment of the Boxers.

Tuesday, June 5.

The Boxers' trouble seems to be gradually assuming serious dimensions. Our Shanghai correspondent telegraphs news that seven Belgians are believed to have been killed in escaping from Paoting to Tientsin. This is a very grave incident. No one can undertake to gauge the patience of foreign Powers in dealing with China. Again and again in the past it has seemed that a crisis had been reached, and that since China had distinctly proved her incapacity to discharge her treaty obligations in the matter of protecting foreign life and property, some steps subversive of the Sovereign Authority must be taken. Yet on every occasion the Governments of Europe and America have shrunk from adopting an extreme course. They will probably be swayed by the same moderate tendency on the present occasion, but that will depend, to a considerable extent, on the nationality of the murdered men, all of whom are probably not Belgians. The Powers do not treat China similarly. Some are anxious to avoid all complications threatening her integrity; other welcome all pretexts for wresting concessions from her. It is evident that the death of seven men may over-tax the forbearance even of the former States, or furnish an unique opportunity to the latter. Whatever excuses may be framed for the Peking Government, it undoubtedly stands convicted of having grossly neglected its duty with regard to the Boxers. No administration can guard against all troubles. Mob violence may at any moment and in any country over-power the resources reasonably available for preserving law and order, and full allowance is made for that fact when lives are taken in a sudden *émeute*. Such has usually been the nature of outrages against foreigners in China. It has been impossible to convict the Government of deliberately culpable negligence. The present affair, however, does not seem to admit of any exculpation on that ground. There has been manifest carelessness on the part of the Authorities. The Boxers have been *en evidence* for nearly three months, and from the very outset their anti-foreign disposition was proclaimed. On several occasions they have displayed murderous antipathy towards native converts of Roman Catholicism. The Government, if it desired to be credited with any sincere desire to preserve the peace, should long ago have adopted vigorous measures to quell these riotous proceedings, and since it has failed to do so, we fear that it will be very sternly called to account.

Wednesday, June 6.

Things do not appear to be quieting down in China. It appears from latest intelligence that seven are missing—not six, as originally reported—of the party of foreigners who made their escape from Paoting to Tientsin. Among these seven, three are known to be French citizens, and one an Italian subject, but of the remaining three nothing is certain except that there is at least one Belgian among them. It was at first stated that they had remained behind to cover the retreat of the main body, but that version is now contradicted, and grave fears are entertained for their safety. Meanwhile it is stated that an English missionary has been murdered and another seized by the rioters, and there have been further wreckings and burnings of railway stations. On the other hand, the Peking Government is understood to be treating the affair with very culpable indifference. No suggestion is made that the Boxers are actually receiving countenance from the authorities, but some of the latter certainly seem to be so far in sympathy with them that vigorous measures for their suppression have not yet been organised. Not much fear is entertained of the *émeute* extending to the walled city—the official quarter—of Peking, but the inhabitants of the Chinese city are said to be considerably alarmed. The Foreign Representatives have made joint application to the Tsung-li Yamen, demanding that prompt and efficient steps be at once taken to restore order, and have declared that, in the event of further delay, they will proceed to deal with the affair themselves by forming a compound brigade of marines under the command of the senior naval officer at Tientsin. There would be no difficulty in landing a considerable body of men, as the squadrons assembled at Tientsin now muster eleven ships, seven of which are Russian.

With reference to the "Boxer" affair in North China, we find the following in the *Shanghai Mercury* of May 29th—The "Boxer" trouble is getting very serious and the lives of foreigners are being threatened. The rioters have murdered a number of native Christians, and along the railway line from Tientsin to Peking they are doing a deal of damage. They have burnt the railway station and machine shops at Fengtai, and a number of the railway men and others have been killed. The railway bridge at Lukouchiao is also destroyed. The situation is indeed alarming. There are a number of Belgians employed in connection with the railway there, with their families, who have been surrounded at Changhsintien, and it is reported that their retreat has been cut off about seven miles from Fengtai, and they are now defending their lives, entrenched on a hill, and their safety is considered very doubtful. It is also reported that several missionaries have been surrounded at Paotingfu, which is causing a deal of anxiety.

On May 30, the same journal wrote:—

A correspondent writing from Peking on the 25th May states that the official troops that were sent

Digitized by Google Original from CORNELL UNIVERSITY

against the "Boxers" have been defeated. A number of fresh "Boxer" placards have been posted about the city. One of the placards found posted on the 24th May stated that the death of the Emperor was predicted, and the people were advised to take vengeance on four high officials. A number of Christians have fled from their homes and are now taking refuge in Peking. The Magistrate of Ku-an has declined to try the case at Kung-t'sun of two Christians who have been foully murdered. The Magistrate of Cho-chow, thirty-five miles from Peking, obnoxious to the "Boxers" has been obliged to go to Peking in great haste.

The following is a statement given by a man whose friend is a member of the "Boxers." This friend saw the murder of Mr. Elias, an Evangelist of the London Mission, and of Mr. Leu Chang-yun, a member of the Mission at Kung-t'sun.

The man who saw the murders said, "On the 14th of the 4th moon—May 12th—the 'Boxers,' numbering about 57 men, were crossing the river Tsz-tsun (about 1 English mile from Kung-t'sun) and while passing the river met Mr. Lin Chingyun in a boat. They knew he was a Christian and at once attacked and wounded him with their swords. Then they dragged him out of the boat and tied him up securely to a tree on the river bank. Then they went to the Chapel at Kung-t'sun, found Mr. Chao, bound his thumbs and great toes tightly together, and carried him to a tree near to that on which Mr. Lin was hung up. They then cut off Mr. Lin's arms, disembowelled him, and cut off his head and threw the whole into the river. Afterwards they all set to work and hacked Mr. Chao into pieces and threw all into the river. Then they returned to the Chapel, looted the furniture, and smashed the inscription-board and went away."

Thus ends his story. Some of the chapel furniture is said to be in the houses of people in Kung-t'sun who were accomplices in the murder, and may assist in the identification of some of them.

The French Consul from Chefoo had arrived at Chinan to settle a claim arising from a recent "Boxer" out-break. The Roman Catholic losses are said to be enormous. There had been attacks in nineteen towns, and 900 families in 243 villages have been attacked, and the losses incurred are stated to be Tls. 400,000. Protestant losses in the same territory amount to Tls. 15,000, and 125 families have suffered. At present there is no disturbance at Chinan, but the officials, doubtless under orders from Peking, have exercised the utmost leniency to past offenders.

H.M. vessels *Algerine* and *Orlando* have been despatched with a hundred marines and a gun from Weihaiwei to Taku. These will form part of the Foreign guard for Peking.

The U.S. gun-boat *Monocacy* is leaving this evening for Tientsin, to protect American citizens.

A correspondent of the *Peking and Tientsin Times*, writing from Pao-ting-fu under date of May 25th, said:—From being a movement to the south of us three months ago, the Boxers have come almost to taking possession of the capital of Chihli Province. Last Friday they commenced drilling openly in one of the large temples in the city. The officials ordered them to stop,—but they showed such temper that the Provincial Treasurer called in soldiers, guns and cannon from a neighbouring camp to protect his Yamên. The Boxers then moved to another temple, but still kept up the drilling.

So many troops have been drawn off into the country, reinforcements from Peking and K'ai P'ing have arrived, the latter, straw hats and all, seven hundred or thereabouts in number, making a very decent appearance. At the rate affairs are progressing, these troops will be but a drop in the bucket. The details of the Kao-li massacre are still confused. The truth seems to be that the attack was first made on the chapel and when all there were killed attention was turned to the dwellings. Evidently a number of bands were to have united in the plunder on a fixed date already given to the village, but one or two couldn't wait, and in order to get ahead of the others caught the villagers unawares. The man who, escaping, brought the news to Pao-ting-fu was chased by the Boxers to a well into which he threw himself. They then fired down at him, also dropped in bricks, &c., and left the spot thinking him dead. His ghost, however, crawled out and reached here early Sunday morning. No other survivors have come. The Catholic population—over one hundred men, women and children—seems to have been wiped out. The soldiers sent to investigate found smoking ruins and "alas! these people had perished in the fire!" It is said some forty Boxers were driven into the plain and were killed in punishment. This is hearsay. The commander of the forces went up to Ting Hsing yesterday to investigate—but too many Boxers were there; so like the noble Duke of York he came marching down again.

To-day comes the news that somewhere between Ting Hsing and Cho Chou, a Colonel, Tang Fu T'ung, with thirty soldiers on horse were surrounded by Boxers. His horse was killed under him, whereupon his followers fled and left him to be despatched at the enemy's ease. He lived in Pao-ting-fu and at the first uprising against the Roman Catholics, fifteen miles south of us, he was sent with troops to preserve order. Just how the Dowager will look upon the playful act of her fond children who are drilling for "amusement and protection"—is not easy to foresee. Also comes the news of news of two Protestants being killed at a London Mission station S. E. of Cho Chou—the gate-keeper and a teacher named Chao. Thus the Catholics and the London Mission have been visited. A few minutes ago came a letter from Ch'i Chi—150 *li* south of us—saying one of the American Board Church members has been murdered close by that place. This opens new complications south of us. As yet the west has been untouched. Catholics south and east are leaving their homes and fleeing here for refuge. In other places, they have no time to till their fields; the Boxers, however, being so numerous divide their families, some drilling and some working in the fields to support the rest.

Two weeks ago Mr. Simcox of the Presbyterian Mission on arriving with his helper at Wan Hsien, 70 *li* W., of here, was met by a mob who wrecked the furniture of the chapel and siezed on an inquirer just coming in from the country. They twice brutally beat him, finally leaving him for dead. After some hours he recovered sufficiently to be sent home. The main leader was an official in the Yamên, who was the only one the dared to attack Mr. Simcox, hurling a block of wood at him. The Kuan finally appeared and promised repairs on the property,—also furnishing an escort out of town in the early morning. The Prefect has already punished two men for the trouble—but the two ringleaders, the Yamên official and a banished murderer from Peking, will probably escape punishment. Incidentally Mr. Simcox bag was rifled for "well poison," but the Kuan after tasting the cough tables and quinine politely returned them as being harmless—though tasty.

Friday, June 8.

According to the *Jiji Shimpo*, the number of foreign men-of-war now assembled at Tientsin, and their nationalities, are as follows: British, 5 men-of-war and 2 torpedo-destroyers; Russian, 4 men-of-war; French, 3 men-of-war; German, 2; American, 1; Austro-Hungarian, 1; and Japanese, 2, making a total of 20 ships and 2 torpedo-destroyers. The same authority says that the foreign troops already landed and distributed between Peking and Tientsin are: Japanese, 97 of all ranks; American, 125; English, 150; French, 100; Russian, 138; and Italian, 40; making a total of 650. Such a force could very easily make short work of the Boxers.

KOREAN AFFAIRS.

Saturday, June 2.

The Korean Government, after some vacillation, has finally given effect to its original intention of punishing those that were implicated in the torturing and execution of Kwŏn and An. At first the Minister of Justice and the judicial officials concerned in the trial were removed from office and sentenced to various terms of transportatiou. Then the penalties seem to have been revoked, and now again they have been imposed. The Emperor, too, will probably offer some apologetic explanation to Japan, for his Majesty can not escape the imputation either of having violated his solemn pledge or of being without effective authority over his own officials. The immediate effects of the shocking incident will doubtless end there, but we may be permitted to hope that its ultimate outcome will be a thorough reform of Korea's judicial system.

Monday, June 4.

Most conflicting news is published from Sŏul. The corpse of An is said to have been examined by foreign doctors, and not to have been examined; to have been found free from evidences of torture, and to have been found horribly disfigured; the Emperor has punished the judicial officials concerned in the affair, and he has not punished them; the Korean Government has shown itself really contrite, and the Korean Government has suddenly become defiant at the instance of the Russian Representative; and so on. We believe the truth to be that the judicial officials have been punished, though as to the genuineness of the penalties we can say nothing.

A telegram published by the *Yomiuri Shimbun* alleges that the Korean *Official Gazette*, announcing the sentence on An and Kwŏn, declares them to have plotted the death of the Queen, and adds that Mr. Sugimura, the Japanese *Chargé d' Affaires*, promoted the plot. If such an assertion has been officially made on the strength of testimony elicited under torture, there is likely to be trouble.

Another story is that the two men, An and Kwŏn, charged the son of the Tai Wŏnkun, Li Chun-yong, with having instigated the murder of the Queen, and that the Ministers urged the Emperor to recall Li from Japan, where he is now sojourning. The Emperor replied, however, that, in consideration of Li's youth, he was much more likely to have been misled than to be a misleader.

Mr. Hoshi Toru, writing in the *Jimmin* over his own signature, discusses the Korean affair in most uncompromising language. He urges that Japan should insist on thorough reparation, and that she should not abate one iota of any conditions which the situation may seem to require.

There appears to be a general impression that the Japanese Representative in Sŏul is not assuming a particularly resolute attitude with regard to the An incident, and the writings of Japanese journalists evince a tone of chagrin that the episode is not to be followed by any striking consequences. But it is plain that Mr. Hayashi has to choose one of two courses; either to insist that the Emperor has been guilty of a delibrate breach of faith and to hold his Majesty to the consequences; or to accept the explanations offered, namely, that the acts of the judicial officials concerned in the trial were alike unknown and unsanctioned by the Sovereign. There is, however, no room for selection. If the Emperor pleads ignorance and punishes the offending officials—and he is understood to have done both—Japan can not reasonably demand any further reparation. It may be disappointing to some people that there are not to be any fireworks, but the situation does not admit of them. What we hope is that Japan will make such representations as shall lead to the final abolishment of judicial torture in Korea.

Wednesday, June 6.

Very conflicting rumours are telegraphed from Sŏul, but it appears to be quite certain that the judicial officials connected with the trial of An and Kwŏn have been actually condemned to transportation, and that they are now on their way to their place of exile. On the other hand, official agitation to pro-

Digitized by Google Original from CORNELL UNIVERSITY

cure the punishment of Li, the late Tai-won-kun's son, seems to be increasing rather than decreasing. It is urged that application for his deportation should be made to Japan, and the Minister of Education is said to have memorialized the Throne that the young man's educational expenses should no longer be defrayed. It is stated that the anti-Tai-wŏn-kun party have taken fresh heart from recent events and that their agitation has resulted in the recall of two ex-officials, Li and Kin, who had been exiled to Quelpart. These men are understood to have been included in the confessions wrung from An and Kwŏn under torture, and there is an uneasy feeling that they too may fall into the hands of unscrupulous and ruthless judicial officials. At any rate it is quite plain that if the so-called "confessions" extorted from An and Kwŏn are to be employed for the purpose of framing indictments against other persons, while, at the same time, the judicial officials who extorted the confessions by illegal means are criminally punished, the Korean Government will stand convicted of flagrantly inconsistent action.

Some telegrams allege that whereas the Emperor is willing and even anxious to make a proper *amende* to Japan, he is restrained by the advice of his Cabinet Ministers, with Mr. Sands at their head; and others declare that whereas the Russian Representative is admitted frequently to secret audience with the monarch, a reception is persistently denied to the Japanese Representative. We cannot believe that any credence should be attached to these stories. M. Pablov's methods do not command the applause of moderate observers, but that either he or Mr. Sands should associate himself, however remotely, with an affair so disgraceful as the judicial murder of An and Kwŏn, and the flagrant breach of good-faith perpetrated by the Korean Court in connexion with the incident, is wholly incredible.

Friday, June 8.

The proceedings of Mr. Hayashi, Japanese Representative in Sŏul, seem to have given serious umbrage to the Korean Government, and it is said to be for that reason that an audience has been denied to him by the Emperor. Rumour attributes to his Majesty a feeling of extreme apprehension with regard to the doings of the Korean refugees in Japan. He is said to be extremely anxious to lay hands on them. Pak Yong-hyo is a special object of animosity. We imagine that after the awful experiences of An and Wŏng no more refugees are likely to find their way to Sŏul.

JAPANESE POLITICS.

Saturday, June 2.

It appears to be tolerably certain that the Ministry will go out of office. Marquis Yamagata is believed to be unwilling to remain in power at the cost of any of those that have hitherto served with him, and the Liberals, on their side, want some portfolios. The probable issue will be the organization of a new Cabinet under the presidency of Marquis Ito. The Marquis has plainly no desire to resume the control of the Administration, but no other course seems feasible. Doubtless Mr. Hoshi Toru will occupy an important place in the new Ministry; probably the portfolio of Home Affairs will fall to his lot.

Monday, June 4.

It need scarcely be said that vernacular newspapers publish column after column of intelligence and comment on the political situation. The journals of Tokyo resemble those of London in the attention they devote to everything like a change of Ministry or a Cabinet crisis. In one sense, the present complication does not seem to us to warrant such keen interest. No great question is at stake. The Yamagata Cabinet might have gone on discharging its administrative duties to the complete satisfaction of the nation had not the Liberals become impatient to enjoy an actual share in the power which they have materially helped to uphold. Thus the situation, considered under the aspect of a change of Cabinet, does not present any feature of vital interest. There is, however, a collateral issue of great importance in connexion with the development of constitutional government in Japan. It is the question of Marquis Ito's course. There seems to be no doubt that the Liberals have formally asked the Marquis to become the head of their party. A deputation consisting of Messrs. Kataoka, Hoshi, Hayashi, and Matsuda, and Baron Suyematsu, waited on the Marquis in his villa at Oiso on the 1st instant, and informed him that, though some of them had previously urged him to assume the leadership of their party, they had spoken only in their capacity as individuals, whereas they now approached him openly as representatives of the Party, and invited him to become their leader. They claimed that they had hitherto exerted themselves industriously in the interests of the country, but that commensurate success had not crowned their efforts, owing to the fact that no great statesman of established competence was associated with them. That defect would be effectually remedied if Marquis Ito undertook to be their leader. Such was the reason that presented itself to them from their own point of view. They further urged that, as Marquis Ito was understood to insist upon radical reforms in the organization and methods of political parties, he might best effect his purpose by working with material already existing, namely the Liberal elements, instead of undertaking reconstruction *de novo*; and they finally pointed out that, alike in matters of domestic and of foreign policy, there was much at present demanding the earnest attention of Japanese statesmen.

Marquis Ito reserved his answer. He might well do so, for the situation is fraught with weighty considerations. It must be evident to him that he has arrived at the parting of the ways, and that the time has come to consider seriously whether he will undertake to guide and manage the machine indirectly constructed by himself, or whether he will leave it to work out its own destiny at the continued cost of efficient administration. It is not difficult to understand that Marquis Ito finds great difficulty in deciding. As a far-seeing and thoroughly practical man he comprehends that political parties have come to stay in Japan, and that they possess power which, unless directed into constructive and helpful grooves, may serve merely to check the discharge of public business and to expose the country to political vicissitudes of a crippling and demoralizing character. Party government has its blemishes; very serious blemishes, and the tendency of the age is to restrict rather than to extend its sphere. But within certain limits it is an inevitable outcome of constitutional systems, and Marquis Ito must perceive quite plainly that by availing himself of this occasion he can peacefully control and utilize elements which, if unduly opposed, will become mischievous and even dangerous; whereas, by refusing to march at the head of the movement caused by his own legislation, he may forfeit an opportunity not likely to recur. It is true that the conduct of the Liberal Party has not been immaculate; that its reputation is impaired by stains of corruption which can never be effaced, and that even its present procedure is not free from unsightly elements of self-seeking. But, taken as a whole, it may be counted the best political association that the country is capable of producing so long as the "*Meiji* statesmen" and the "men of affairs" persist in remaining beyond the pale of parties. Can Marquis Ito hope to organise a better or more useful party if he antagonises the Liberals? We have long foreseen and predicted the conjuncture now before the nation. Government by party can never be possible in Japan until the *Meiji* statesmen descend from their position of isolation and definitely throw in their lot with party organizations. They may have hoped that the necessity for taking that step would not arise in their lifetime. But we do not imagine that they entertained such an expectation: it would have been inconsistent with all experience of their country's rate of progress. The time seems to have now come, and we cannot deny that the Liberals have shown considerable tact in fashioning the occasion. Had they advanced any grievance against the Yamagata Cabinet; had they exhibited any signs of umbrage in suggesting a change of situation, their proposal to Marquis Ito would have placed him in the dilemmna of having to choose between a political party and his old friends and colleagues. But all complications of that kind have been prudently and adroitly avoided. The Liberals have contrived, on the one hand, to furnish to the nation an object lesson illustrating the smooth and peaceful administrative potentialities created by their support, and, on the other, to preserve such relations with Marquis Yamagata and his Ministers that no violent disruption need result from the transfer of the Party's allegiance to Marquis Ito. It may be affirmed, indeed, that they offer to place themselves under the leadership not of Marquis Ito alone, but of the *Meiji* statesmen in general, thus effecting a coalition between the new factors of constitutional government and the old instruments to which modern Japan owes her very existence. For the country's sake we sincerely hope that the proposed arrangement can be effected. Certainly it would alienate some eminent men; but, on the other hand, unless these resigned themselves to a position of helpless conservatism on the neutral land between the two parties, they would ultimately pass into the camp of the Progressists, and, next to a strong Liberal Party under Marquis Ito's guidance, the thing most desirable in the nation's interests is a strong Opposition under Count Okuma. The disjointed skeleton of parties and coteries now existing is in urgent need of definite articulation.

The Liberals have fully endorsed the course taken by their general committee in inviting Marquis Ito to assume the leadership of the Party. By an unanimous vote they have declared that such an arrangement is earnestly to be desired, and that it can not take place too soon.

Meanwhile Count Inouye, interviewed by a newspaper representative, has frankly stated that he can not see any sufficient reasons for such a course. He does not detect any qualifications on the part of the Liberal leaders except that they are party men, and he does not believe, judging by their record, that they could be trusted to implicitly support the policy of Marquis Ito as their chief,

Digitized by Google Original from CORNELL UNIVERSITY

or that all of them are quite loyal even to their own flag. The Count thinks that the instability of the Cabinet in Japan, resulting from party agitation, is causing infinite injury to the country, and that all expediency recommends the continuance of the present Ministry in office.

The *Nichi Nichi Shimbun*, on the other hand, unequivocally recommends Marquis Ito to accept the proposal of the Liberals. They have proved by their conduct that they are really swayed by patriotic impulses, and they have deserved well of the country by supporting the Government, thus enabling it not only to carry out important *post-bellum* measures, but also to place the fiscal system on a satisfactory basis. The Tokyo journal further thinks that the time has come to achieve the reality of constitutional government.

Wednesday, June 6.

Speaking at a meeting of his own special followers, the Kwanto Club, Mr. Hoshi Toru gave a precise statement of the incidents that have led up to the present political crisis. He denied that the purpose of the Liberals was to obtain portfolios for some of their leaders. The proposals they had submitted to Marquis Yamagata were that, first, the members of the present Cabinet should all enrol themselves in the Liberal Party, in which event it would not be necessary to make any change of Cabinet; or, secondly, that certain members of the Liberal Party should be admitted to the Ministry. It will appear to persons of ordinary intelligence that the difference between these proposals and a demand of Cabinet positions for the Liberal leaders, is a mere matter of phraseology. Mr. Hoshi, however, considers that there is a fundamental distinction. The reply of Marquis Yamagata was an emphatic negative to both suggestions. With regard to the first, he pointed out that a decision on such a matter must depend on the views of individual Ministers and that it would consequently be impossible to announce any collective policy. With regard to the second, he said that as the pledge desired by the Liberals involved an encroachment upon the Imperial prerogative of appointing and dismissing Ministers, the proposal could not be entertained. The receipt of this answer, Mr. Hoshi went on to explain, had virtually terminated the coalition between the Liberals and the Cabinet, though no definite announcement in that sense had been made. Thereafter the General Committee of the Party had proceeded to Oiso and waited upon Marquis Ito, for the purpose of submitting to him a definite proposal that he should assume the leadership of the Liberals. In support of that suggestion, the Committee had urged, first, that whereas Marquis Ito was chiefly responsible for the constitutional organization by which political parties were called into existence, his abstention from joining any party, and the abstention of his brother-statesmen, virtually paralysed the system; for although the Liberals regarded themselves as a party fully equipped to take over the administration of State affairs, they were aware that the public did not so regard them, and that without the cōoperation of some great statesman like Marquis Ito, who commanded the nation's confidence, it would be impossible for them to achieve the purpose of their existence, which was also the natural end of parliamentary government. In the second place, Marquis Ito was understood to contend that political parties had not yet attained a stage of development warranting their assumption of administrative functions, and that they stood in need of large reforms, if not of complete reconstruction. But a political party could not be called into being at a moment's notice, and it consequently seemed much more practical and feasible that Marquis Ito should remodel the materials which the Liberal Party offered, than that he should set to work *de novo*. Finally, the Committee saw that both in domestic and in foreign affairs questions of the greatest importance presented themselves at this juncture, and they were further persuaded that the spirit of the time tended towards an arrangement such as they proposed, since it would result in a stable Government capable of dealing with these various questions strongly and thoroughly. Marquis Ito gave careful attention to these arguments, but declared that, in view of the cardinal nature of the proposal, he must ask for time to consider it maturely. The Committee of course agreed to that, but they begged that as much expedition as possible might be employed.

The Kwanto Club, of whom 54 were present at the meeting, unanimously voted full endorsement of the course adopted by the Committee, and recorded their resolution to act in united support of the projected programme, subordinating all individual views.

Up to the time of going to press Marquis Ito had not made any announcement of his intentions. It is not regarded as certain, by any means, that he will accede to the proposal of the Liberals. Whatever course is adopted must be taken with the concurrence of the *Genro*, or *Meiji*, statesmen, and there are reasons to doubt whether they can be induced to consent to a definite amalgamation with any political party now in existence. If, after due consultation, their decision be adverse, one of two courses will probably be adopted. Either Marquis Yamagata will be persuaded to re-consider his desire to resign and will continue to direct the administration, or the Marquis alone will retire, his place as Pemier being taken by Count Matsukata, without any change of portfolios. In either of these events, a collision between the Diet and the Cabinet next Session would be inevitable, and dissolution of the House of Representatives would ensue, with an appeal to the country under the new law of elections. It is apparently impossible at present to make any confident prediction as to the decision of Marquis Ito and the other *Genro*.

Friday, June 8.

Marquis Ito has withdrawn to Oiso, a step which is interpreted by the public to mean that he intends to defer for at least a week any decision with regard to the ministerial crisis. But it is very possible that the Marquis has simply found it necessary to escape from the importunity of politicians who make their rendezvous at his residence when he happens to be in the capital at a time of public interest, and thus render it impossible for him to hold any undisturbed conferences with his brother statesmen. Count Inouye, also, has set off on a trip to the Hokuriku region. He had long been under promise to make this expedition, and he probably finds in it a welcome refuge from the same kind of "mobbing" as that which embarrasses Marquis Ito. We are inclined to think that the two statesmen have a deep reason, too, for their attitude. They purpose to prove to the Liberals, and to political parties in general, that the administration of national affairs can not be disturbed at any moment in accordance with the caprice of a group of politicians. The Cabinet was not confronted by any troublesome problems of statesmanship or diplomacy when the Liberals inaugurated their recent campaign. Everything was going on smoothly and satisfactorily, and the country was rejoicing in the possession of a Ministry which succeeded in managing public affairs without a hitch of any kind. A bad precedent would be established if it were shown that such security could be effectually troubled at any moment by the arbitrary restlessness of a political party. There is much to be said on behalf of the Liberals, but their action can not be suffered to precipitate a needless crisis. That, we suspect, is the lesson that Marquis Ito and Count Inouye intend to teach them. These statesmen have proved on numerous occasions that they have a profound knowledge of the political conditions existing in Japan, and that they understand perfectly how to deal with them. The whole course of events since the constitution went into operation in 1891 has tended to strengthen the *Meiji* statesmen's title to the confidence of the nation, and there can be no question that they will steer wisely on the present occasion also.

We may refer here to a singular rumour circulated by the *Mainichi Shimbun*. It is to the effect that the true reason of the trouble now agitating political circles is to be sought, not in the action of the Liberals, but in the umbrage of Count Inouye on account of the Treasury's attitude towards the Mitsui Bank. The Mitsui Bank is probably one of the soundest institutions in all Japan, for the Mitsui family own real property to the extent of over twenty million *yen*, and have never engaged in any dangerous speculations of any kind. But the Mitsui Bank can not escape all vicissitudes. It does not enjoy immunity from chance and change any more than other great financial institutions do. Owing to some losses which the Bank was recently reported to have made in Tanko shares, the excitable Japanese public became uneasy, and there followed a run on the Bank, the trustees of the Red Cross Hospital, among others, withdrawing a sum of two million *yen* that they had deposited. The Bank naturally sought assistance from the Bank of Japan, but instead of obtaining a million *yen*, for which it had applied, it could only get three hundred thousand. That failure was attributed to the veto of the Minister of Finance, and as it turned out that the deposits withdrawn from the Mitsui were going mainly to the Fifteenth Bank, which is under the management of Mr. Sonoda, reputed to be one of the soundest and cleverest men of business in Japan, who is of Satsuma origin, a plot on the part of Satsuma to wreck the Mitsui was inferred, and Count Inouye, a staunch patron of the great firm, resenting such procedure, began to agitate against the Cabinet. That is the wonderful mare's nest submitted for public inspection by the *Mainichi*. It can only be regarded as a mischievous and silly canard, bearing its own refutation on its face. Some ignorant folks will be deluded by it, and the *Mainichi Shimbun* will thus—unwittingly we can not doubt—have helped indirectly to strike a blow at the oldest and most respected mercantile house in Japan; an institution which every loyal Japanese should desire to safeguard and assist. All these petty shocks will not disturb the Mitsui, but they reflect very badly on the newspapers responsible for promoting them.

The British foreign-trade returns for April show that imports were valued at £42,621,876, an increase of £3,264,854 over the same month in 1899. The exports were £22,645,147, an increase of £3,187,601 over the corresponding month last year.

COUNT MATSUKATA ON THE FINANCIAL SITUATION.

On the 3rd instant a meeting of bankers was held in Chiba. There are no less than 62 banks, large and small, in that prefecture, and their competition having proved disastrous, a movement was recently set on foot to bring about an union. The meeting on the 3rd was for the purpose of celebrating the consummation of the project. The Minister of Finance attended, as did also the President of the Bank of Japan. Count Matsukata made a speech showing that he is in substantial agreement with the views recently expressed by Marquis Ito and Count Inouye. We are inclined to think that a portion of his remarks is falsely reported, for he is made to say that the inflated and depreciated fiat currency from which the country suffered between 1877 and 1885, tended to promote imports, and was thus responsible for a disturbance of the balance of trade. His Excellency can scarcely have enunciated a proposition so contrary to the views generally advanced by political economists. He may indeed have said that the state of the currency caused a rise in the price of labour and thus indirectly increased the purchasing power of the lower orders, but he certainly can not have said that an inflated fiat currency encourages imports. Passing on to speak of the present time, he compared the condition of affairs in Japan to that which prevailed in England after the wars at the beginning of the century, when the spirit of enterprise being unduly excited, all sorts of unsound schemes were floated, and serious trouble overtook bankers, merchants and manufacturers. The Minister regarded the receipt of the indemnity and its expenditure in Japan as chiefly responsible for the rapid appreciation of commodities and the rise in the price of labour which the past two or three years have seen. He held, therefore, that to bring into the country a large sum of foreign capital would not only have the effect of again setting in operation the factors that had produced the present trouble, but would also be a thoroughly unsound procedure unless some means of defraying the interest and paying off the principal were in plain sight. The foreign loan of 100 million *yen* effected by the Government last year had been for a definite purpose, and the resources to meet the service of the debt had been visible, namely, the increased revenue derived from the Customs under the revised tariff. To raise another loan now merely for the sake of relieving the pressure in the money market would have the effect of accentuating the malady, and would impose a fresh burden on the country without any apparent means of shaking it off hereafter.

In the second part of his speech Count Matsukata dwelt on the necessity of educating among the Japanese a spirit of effective economy. He condemned the luxurious habits into which the people have fallen since the war, as evidenced by the growth of places of amusement, and he combatted the excuse advanced by some apologists that Japan was merely following the example of Paris. The citizens of Paris seemed to spend a great deal upon gaiety and show, but they had an object in so doing; the object of attracting foreigners and inducing them to spend their money in the city. If one travelled in provincial France one found a very different state of affairs: the people were remarkable for thrift and industry, and for their love of saving. Figures showed how very backward the Japanese are. In England, the nation's savings, in cash, aggregate 3,450 million *yen*, being at the rate of 85.60 *yen* per head of population; in the United States, the savings are 4,000 million *yen*, or 64.90 *yen* per head; in France, 1,500 millions, or 41.60 *yen* per head; but in Japan, only 60 millions, or 1.38 *yen* per head. There can be no gainsaying such statistics. They show plainly how terribly backward Japan is, and how essential it is that every effort should be made to educate a spirit of effective economy. If every unit of the nation saved even 5 *yen*, the resulting fund would be 200 millions, and a saving of 20 *yen* per head would suffice almost to wipe off the national debt. Such are Count Matsukata's views.

FOREIGNERS AND SHARES IN JAPANESE RAILWAYS.

Some months ago news was published that a Japanese railway company had applied for permission to sell its shares to foreigners, but that the Government had returned an unfavourable answer. It now appears that the latter part of the story was incorrect. The application was certainly made, but, as it failed to elicit an immediate reply, and as the delay affected other matters included in the same document, the company, of its own accord, cancelled the clause relating to foreign ownership. Meanwhile, the Authorities gave the matter full consideration, and found themselves in a position to make an affirmative reply to an application in a similar sense received subsequently from the Kibe Railway Company. It is further pointed out that the Private Railway Law, which was passed by the Diet last session, and which will soon go into operation, contains a clause providing that fully paid shares may be unregistered; that is to say, they need not bear the name of their holder. Such shares would obviously be purchasable by any one, whatever his nationality. We take these statements from a Tokyo contemporary.

THE PEST.

Three fresh cases of pest are reported from Osaka and one from Hamamatsu in Shizuoka. Nothing more has been heard from Niigata, however, nor from the village in the northern hills where the bacillus was said to have been found in the bodies of dead rats.

A fresh case of pest is reported from Osaka and another from Hamamatsu in Shizuoka Prefecture. The disease nevertheless continues to be held in check by the vigorous sanitary measures that the Authorities are adopting.

Dr. Kitasato having prepared a serum which he hopes will serve as a preventive of pest, has proceeded to Osaka with several assistants to test the efficacy of the invention. It is expected that he will remain in the south for two or three weeks.

From reports issued by the Department of Home Affairs, we learn that since the reappearance of the pest in Osaka on the 12th of April, there have been 39 cases in all in that city, of which 32 have ended fatally and 7 are under treatment. In Shizuoka Prefecture the disease broke out on the 6th of May, and there have been 13 cases, all of which ended fatally. The grand total, therefore, is 52 cases and 45 deaths, being a rate of mortality exceeding 86 per cent,

FOREIGN OWNERSHIP OF RAILWAY SHARES.

The Government has pronounced an important decision. It has granted permission for foreigners to become owners of shares in Japanese railways. The treaties do not explicitly forbid such ownership, but inasmuch as it would amount to an indirect ownership of land, the Authorities have hitherto hesitated to sanction the privilege. Moreover, the by-laws of many railway companies contain a clause restricting the tenure of their shares to Japanese subjects. Within the past six months, however, the desirability of removing this restriction having presented itself more and more forcibly to railway directors, various applications have been made to the Government in that sense, and after considerable delay, a decision was finally formulated by the Home Department on the 5th instant. It is an unqualified assent to the applications in the case of the following railways:—the Nippon, the Sanyo, the Kibi (Miye), the Kyoto, the Hosen (Toyokawa), the Boso (Awa-kugura), the Bisei (Owari) and the Buso (Odawara), eight in all. It now rests with the directors and shareholders of these lines to recast their by-laws so as to enable foreign shareholders to posses a reasonable voice in the management of the railways' affairs.

AMERICAN ENTERPRISE IN ECHIGO.

The *Kokumin Shimbun* publishes a very circumstantial statement to the effect that the Standard Oil Company has purchased a tract of land in the Mishima district of Echigo, and that trial borings for oil will be commenced immediately in the region between Miyata and Iwakata. A large party of foreigners, including the Company's experts, visited the province recently, and, after thorough investigations, selected the place here indicated. It will be a matter of great interest to watch the development of this industry under American control. The Japanese will have a fine object lesson, we suspect. What with gold in Hokkaido and kerosene in Echizen and Echigo the country's mineral resources are beginning to assume a new aspect.

THE EMIGRANTS TO PERU.

The *Chino Shimbun* is not in the smallest degree perturbed by the legal proceedings instituted against it by the Morioka Emigration Company, although the damages are put at 170,000 *yen*. It repeats all its charges in more emphatic form than ever, and announces its intention of publishing letters from the emigrants which will convict the Company of having behaved in a most culpable manner. It is very difficult to credit the accuracy of the accusations formulated by our contemporary, but, if they can be established, the Company will deserve to be held up to public execration. The *Chino* has now defied its opponents, and the question must go before a law court.

RAILWAY NEWS.

An attempt was made to wreck a train in the neighbourhood of Hojo, in Echigo, on the 5th instant, but happily the scheme was discovered before any damage had resulted.

A serious accident occurred on the Nara Railway between Fushimi and Sekida stations on the 6th instant. Two trains came into collision, and 29 persons were injured, 3 of them—all women—receiving serious hurts. No explanation is given as to the cause of the accident.

NOTES ON CURRENT EVENTS.

The iron bridge over the Han River on the railway from Sōul to Chemulpho is progressing rapidly, and will be finished, probably, by the end of this month. The present expectation is that trains will run over the bridge from July.

It is stated that permission has been sought to ship the products of the Yuensan mine direct from Pyŏng-yang, and also for an extension of the lease of the Unsan mine to 50 years, but that no reply has yet been received from the Korean Government.

The decision said to have been arrived at with regard to moisture contained in raw silk coming into the Yokohama market is that everything over 2 per cent. shall be credited to the buyer. The *Kokumin Shimbun* gives a detailed account of the methods to be followed in determining the quantity of moisture.

Speaking at a meeting of the Nippon Boyeki Kyokai, Viscount Aoki condemned the idea of Japanese going to China to start industries when so many enterprises invite their attention at home, not only in Japan proper, but also in Hokkaido and Formosa. We entirely agree with Viscount Aoki in this matter.

The *Hochi Shimbun* continues to write about foreign distrust of Japan's business integrity. It re-asserts the proposition that the loan made by Mr. Morse to the Kobe Water Works was a tentative operation, and that its issue will be fatal to Japanese credit. It further alleges that apprehension of war between Japan and Russia is alone sufficient to deter any foreign capitalist from lending money to this country.

The Tokyo Municipality wants to raise a loan of seven million *yen* for purposes of city improvement, and it proposes to obtain money for interest and a sinking fund by imposing, first, a special tax, and secondly a tax called *bu-ichi-zei*. The former would be levied on exchanges, horse-trams, telegraph poles, gas lamps, boats, and *jinrikisha*; the latter is, in brief, a registration tax of one per cent. on transactions in real estate. The Government is understood not to have any objection to the special tax, but it does not approve of the registration fee, inasmuch as such a fee is already exacted. The *Jiji Shimpo* laughs at such scruples and accuses the Authorities of being slaves to theory and indifferent to considerations of practical utility.

In a recent issue the *Chiuo Shimbun* published a series of sweeping charges against the Morioka Emigration Company with reference to the treatment of Japanese emigrants in Peru. The charges were based on a communication which Mr. Furusawa, Governor of Yamaguchi Prefecture, had received from one of the emigrants, and which was sent by him to the *Chiuo* for publication. The directors of the Morioka Company claim that they have been grossly misrepresented; that the distress said to exist among the emigrants is fictitious, and that their business has been seriously damaged by the publication of such charges. They have therefore instituted legal proceedings against the Governor of Yamaguchi and the editor of the *Chiuo*, putting the damages at 170,000 *yen*.

It is stated that the Government has decided to forbid the export of gold dust found in Hokkaido, the Bank of Japan being ready to purchase any amount obtained by the miners. We do not believe this rumour. The Bank of Japan has to take its chance like all other buyers. It can obviously afford to pay a better price than persons at a distance, and that advantage should secure for it a monopoly of the trade.

In connexion with the above, Tokyo newspapers allege that the number of persons engaged in mining in Hokkaido last year was thirty thousand, and that they took out three million *yen* worth of gold, though the returns credited them with finding only a million and a half. This year it is expected that fully forty thousand will be at work.

The Prince and Princess Imperial returned from their wedding tour on Thursday. Their Imperial Highnesses left Hayama by the 12.45 p.m. train and reached Shimbashi at 2.50 p.m., having been absent from the capital just twelve days.

We read in Tokyo journals that, up to the 31st of May, the number of foreign residents of Yokohama who had paid the house tax was 44 in all; namely, 21 Chinese; 7 Americans; 7 British; 3 Swiss; 3 German; 1 Russian; 1 French, and 1 Italian. On the other hand, there are 241 who have not paid. The latter will, of course, be strengthened in their objection by the fact that the British Government has pronounced itself unable to endorse Japan's claim in respect of the house tax.

At a recent meeting of the shareholders of a local enterprise, Mr. J. F. Lowder, who occupied the chair, ruled that he was entitled to two votes, and proceeded to exercise the privilege. Whether he was right or wrong we do not pretend to say. Certainly, if any one is competent to decide such a question, Mr. Lowder must be considered competent. It is evident, however, that some of those present at the meeting differed from the Chairman's ruling, and one of them stated the grounds of his objection in the correspondence columns of a local newspaper. Thus far the affair invited no comment from outsiders. But it was then taken up and discussed by two journals in a manner against which we offer a most emphatic protest. The rudeness of their writing was almost bewildering, and could not be accounted for on any hypothesis except that they had seized the occasion to gratify some independent sentiment of animosity against Mr. Lowder. Such a tyrannous abuse of the power of the press calls for the strongest condemnation.

The *Mainichi Shimbun* says that the number of one-*yen* notes in circulation has been diminished from sixty or seventy thousands to about thirty-five hundreds. We find the latter figure scarcely credible, for, scarce as one-*yen* notes have certainly become, they are no mean so rare as to suggest that only thirty-five hundreds are in existence. Of course the Government's chief reason for withdrawing the small notes and replacing them by subsidiary coins was to find a means of utilizing the silver *yen* that lay in the Treasury's vaults or came into them after the adoption of the gold standard. The Minister of Finance was also influenced by the consideration that a substantial profit accrues from the minting of subsidiary coins, and he wanted that profit in order to meet the losses resulting from the demonitization of silver. But it can not be denied that the public is greatly inconvenienced by the present system. If one tenders a five-*yen* note in payment of a small sum, one's change takes the irksome form of a heavy handful of silver. The Treasury ought to consult the public's wishes by issuing a new batch of one-*yen* notes.

Concerning the question of Russo-Japanese relations, we have again to express unbounded surprise at the wild rumours circulated by a section of the public's newspurveyors. *The Overland Mail* of April 13th has the following:—

Victoria, B.C., April 5th (*Laffan*).—The Oriental Steamship Company has received advices to the following effect. Political leaders and the press of Japan no longer conceal their opinion that war with Russia seems inevitable, but that the first blow must be struck by Russia; foreign residents are leaving the treaty ports in scores, and in the event of Hongkong financiers demanding exorbitant rates of interest, conditions will be more disturbed than during the period preceding the outbreak of war between China and Japan; the Mikado is stated to be mobilising a torpedo fleet, and hastening the despatch of naval and military supplies to various bases; meanwhile, Russia is making feverish haste to complete the Trans-Siberian Railway, on which work is continued day and night; it is also stated that the Russian Government is negotiating at Peking for the purchase of the interior Chinese Railway.

Shanghai, April 5th (*Dalziel*).—Ominous preparations continue to be made by the Russian and Japanese War Departments.

The officials of the former are making strenuous efforts to fill Port Arthur with grain, even at war panic prices. To do this they are importing wheat from North China.

As regards Japan, the Government has called out the Naval Reserves for service during the approaching manœuvres, in which the entire fleet will be engaged.

There is not one word of truth in all this farrago. How do such canards originate, and by what process are they developed? We all know the game of "circulation," where members of a party whisper the same story in one another's ears consecutively, and the the version that reaches the last man is compared with that given by the first. The resemblance is generally faint, but still some resemblance exists, whereas the tales told by Laffan and Dalziel's agencies do not offer one feature identical with the facts as known to us in Japan.

THE LÈSE-MAJESTÉ AFFAIR.

The Tokyo Local Court has rejected the plea of insanity set up on behalf of Yamakawa, the editor of *Seinen no Fukuin*, who recently published an article grossly disrespectful to the Prince Imperial, and has sentenced him to 3½ years of imprisonment with hard labour and a fine of 120 *yen*, as well as police surveillance for one year. Morita, who copied the article, received the same punishment, and Wakabayashi, who set up the types, was condemned to 8 months' imprisonment, a fine of 50 *yen*, and 6 months' police surveillance. As these men can not be expected to pay their fines, their confinement in jail, without labour, will be protracted as many days as the number of *yen* in the fines.

The culprits in the *lèse-majesté* affair have appealed from the sentence of the Tokyo Local Court. We trust that the appeal may meet with some measure of success, or that, if it fails, the Sovereign will exercise his clemency. Imprisonment with hard labour for 3½ years seems a harsh penalty for such an offence. The people's reverence for the Throne does not require such safeguards, and, indeed, is more likely to be impaired than strengthened by them.

The German Emperor has forbidden all German officers to participate in the Auteuil and all other French races. Lieutenant Suermondt has been ordered to withdraw his steeplechaser Diamant, and a like order has been given to Captain von Eymard. The German sporting press approves this action because French Chauvinists would have made unpleasant demonstrations, possibly leading to international complications.

BISHOP AWDRY'S SERMON.

LAST Sunday Bishop AWDRY, preaching in Yokohama, referred to the subject that was in every one's mind at the time, the war in South Africa. No verbatim report of the sermon has been published, but from the epitome of it that has appeared in the columns of the local foreign press we gather that the Bishop sympathises with the Boers in their present struggle. He thinks that they are fighting for freedom, that they firmly believe in the justice of their cause, and that history will pay an admiring tribute to the fine courage which induced them to enter the lists against a nation of Great Britain's strength and resources. An overwhelming majority of Englishmen unquestionably endorse Bishop AWDRY's views so far as the courage and creed of the Boers is concerned. But the same majority of Englishmen are persuaded that a sharp distinction must be drawn between the faith of the Boer rank-and-file and the ambition of the Boer leaders. The latter do not appear to have precipitated this war for the sake of securing the independence of the two Republics so much as for the sake of driving the British out of South Africa, and absorbing the British colonies into a big South-African hegemony governed by men of Dutch extraction. We all wish to do every justice to the motives of Presidents KRUGER and STEYN, but since we know as an absolute fact that territorial aggression was never for an instant in the mind of the British Government throughout the course of the negotiations, it is difficult for us to imagine that the Boers suspected such an intention. President STEYN, at all events, can not have laboured under any delusion. He knew well that the independence of the Free State was not threatened in any way, and that had the Transvaal agreed to grant to British subjects the same privileges enjoyed by them in the Free State, war would have been out of the question. President STEYN's motives are consequently indefensible, and the taint that attaches to them extends also to his partner and coadjutor, President KRUGER. But the bulk of the burghers knew nothing of the ambitions of their leaders. They left their homesteads and their families to fight, as they honestly supposed, for their independence, and their simple faith in the Bible and their courage must command the admiration of every genuine Englishman. It may be urged, indeed, that they entertained a very erroneous conception of the task before them; that they were ignorant of Great Britain's resources and that they regarded the British soldier with supreme contempt, thinking they could easily sweep him from their path. But their brave persistence has survived the dispelling of that delusion, and we give them full credit. They have been cruelly deceived by their leaders from beginning to end. Grossly false statements of Boer successes, of English reverses, of Great Britain's embarrassments and of foreign intentions have been officially published again and again to delude the unfortunate burghers into continuing the struggle. No apologist for the two Presidents can clear them from the guilt of such treachery towards their own nationals. Yet, when the worst has been said in the strongest terms, there is still a residuum of tenacious gallantry and pure trust in the God of Christianity that should disarm our animosity and make us willing to strike hands of friendship with these people who have waged such a strong fight against us. It was to give prominence to that side of the story that Bishop AWDRY spoke, as we gather from the report of his remarks, and undoubtedly he only did his duty as a minister of the gospel of peace when he sought to arouse in the breasts of his hearers a feeling of forgiveness towards their country's enemies. It seems to be thought he was wanting in tact, and an anonymous correspondent—"Veritas Prevalebit"—has addressed to a local newspaper a letter in which he charges the Bishop with abusing his power because he spoke from the pulpit where contradiction was out of the question. The charge of tactlessness is apparently founded on the fact that a thanksgiving meeting had been organized for the evening of the same day under the auspices of the clergyman whose pulpit the Bishop occupied. We need not pause to make a comment which must have been mentally framed by every Yokohama resident within the past few days, namely, that the thanksgiving ceremony on account of the imminent termination of the war was most unhappily ill-timed, and that the inexpediency of organizing it on the strength of obviously delusive telegrams should have been evident twenty-four hours before the time of meeting. Apart from that point, we fail to see that the hour of victory and rejoicing is unsuited for the utterance of a generous reminder that the vanquished are worthy of sympathy and deserving of friendship. On the contrary, it seems to us that the moment of triumph is especially adapted to the inculcation of these wholesome lessons. As to abuse of power—a charge which "Veritas Prevalebit" prefers in almost offensive terms—it seems to us that if there has been any such thing as "taking unfair advantage of a position," the guilty person is the correspondent who, under the safe disguise of anonymity, shoots poisoned arrows at Bishop AWDRY.

LAND OWNERSHIP BY FOREIGNERS.

THE question of extending to foreigners the privilege of land ownership has not provoked much discussion, which fact is, perhaps, a hopeful evidence that the advocates of the privilege will not encounter serious opposition. The *Hochi Shimbun* writes about the matter in a most liberal tone. It can not discover any ground whatever for supposing that Japanese interests would be impaired by the concession, whereas there can be no doubt that foreigners would welcome it thankfully. Japan is thus in the position of being able to give what others value without any cost to herself, and it is manifestly the part of sound statesmanship to make the gift. No reservations are necessary, nor should any concession be sought in exchange.

Another expression of influential opinion is that the granting of this privilege will not have any effect in bringing foreign capital to Japan, and that, under any circumstances, an inflow of money from the Occident would be a doubtful benefit, since it would produce another outbreak of industrial fever, another rise in the prices of commodities and another inundation of imports. It seems scarcely worth while to discuss this latter view. Japan's development is quite hopeless unless she can procure financial assistance from abroad. She need only look around, and ask herself how things would have fared with Australasia, with the United States of America, with British India, with the Argentine Republic, with South Africa, if foreign capital had not been procurable for developing their resources. There can not be the slightest doubt about the matter. She must either have recourse to the cheap money of the West or be content to sink to a position of insignificance.

As to whether the granting of land-owning privileges would help materially to bring in foreign capital, the convictions of foreigners themselves are surely deserving of greater credit than conjectures of Japanese. The average foreigner has made up his mind that superficies is an entirely unsatisfactory substitute for ownership. Granted that an almost unreasoning want of confidence in Japanese institutions is chiefly responsible for this singular prejudice, the fact still remains, and it is with facts that Japanese statesmen have to deal. Any doubt, however slight, as to the nature of his title to the land on which he erects factories and warehouses is quite sufficient to deter him. Some foreigners who were already pledged to the inauguration of certain enterprises from a date prior to that of the operation of the Treaties, have doubtless availed themselves of the privilege of superficies, and, in the course of years, their experience may prove the groundlessness of the doubts now attaching to that form of tenure. But Japan cannot afford to wait years, and we undertake to assure her that no foreign capitalist, who is without previously established interests in the country, will bring his money here to organise industrial enterprises until the difficulty about land ownership is definitely cleared away. As to lending money on the security of railways, it is needless to point out the impossibility of anything of the kind under existing conditions. We want Japan to prosper, and it is our firm conviction that the wisest step she can take for her own sake is to sweep away every barrier to industrial and commercial enterprise.

At the same time, since it is perhaps too much to expect that the prejudice still entertained by the agricultural class against allowing foreigners to own land can be dispelled at

Digitized by Google Original from CORNELL UNIVERSITY

once, we repeat our belief that it would be wise to make a reservation about agricultural land. Foreigners do not want to become farmers in this country. They would never think of anything of the kind. They will express no dissatisfaction though agricultural land be reserved, whereas the reservation would have the effect of re-assuring those Japanese who are now most strongly opposed to the privilege.

THE OPERATION OF THE NEW TREATIES.

WE observe on the part of some of our Tokyo contemporaries a disposition to express regret that things have not worked more smoothly under the Revised Treaties. They point to some decisions of the law courts, which have caused foreigners to doubt the good faith or the competence of the Japanese Judiciary, especially the case of Mr. J. R. MORSE and the Kobe Water-Works Authorities. So far as we know, not one leading Japanese newspaper has endorsed the verdict in that case. As to the legality of the Yokohama tribunal's decision, the general opinion seems to be that the Court had no choice. It was compelled to abide by the Japanese text of the conditions printed on the bonds. But that an injustice has been done appears to be widely admitted. Hence there are many voices raised in favour of a settlement by private intervention before the matter travels to the court of appeal. We sincerely trust that these wise counsels will prevail, for the case will otherwise work irreparable injury to Japan.

A point discussed by the *Hochi Shimbun* in the same context is the dissatisfaction felt by the foreign community with regard to the manner of registering perpetual leases and with regard to the house tax. Concerning registration, we are firmly convinced that the perpetual-lease title has not been impaired in the slightest degree by the method prescribed, and that the intention of the Japanese Government is absolutely sincere. But we are also convinced that the use of the word "superficies" was an unfortunate mistake. The Japanese Authorities may claim, with much justice, that they had no cause to anticipate objections which are founded mainly on prejudice, and which have no basis of fact. But since their undoubted desire was and is to make everything pleasant for the foreigner, they might well have exercised greater circumspection. The house-tax question is a matter of opinion. We believe is to be a fair impost, in no sense contrary to the Treaties. But we also see that an excellent case may be drawn up for the opposite view. At any rate nothing is more desirable than that those points should be disposed of quickly. Every foreign resident will admit, we think, that the Japanese press has shown remarkable moderation in dealing with the two questions of registration and house-tax. There has not been any disposition to attack the foreigner or to represent him as adopting a defiant and masterful attitude. The foreigners, too, have been patient, remarkably patient. In these two facts we see ground to hope for a satisfactory settlement. It has been unconscionably delayed.

THE LABOUR QUESTION IN JAPAN.

Now that Japan in confronted by the imminent necessity of having to legislate for the control of labour, unless she is willing to see the battle between capital and labour fought within her territories, it is interesting and valuable to note how New Zealand has succeeded in dealing with this troublesome problem. In New Zealand strikes are unknown, and the New Zealanders owe their happy immunity to the Reeves Law, which, briefly stated, provides that every dispute must be either settled by conciliation or arbitrated. The law makes three things compulsory: first, publicity; secondly, reference to a disinterested arbiter; thirdly, obedience to the arbiter's award. Men are not forced by law to work, neither does the legislator interfere to fix wages. But if men choose to work, they must do so without strikes or lock-outs; and if they can not agree about rates of remuneration, the decision has to be left to an impartial person. Unorganized labour, however, does not come within the purview of the law. Only a registered trades union is an eligible subject for legal interference. That restriction is evidently necessary: otherwise the law courts would be flooded with petty adjudications. It is possible, however, for seven men in a shop to constitute themselves into an union, obtain registration and carry into Court any dispute with an employer. The State also encourages labour to organise, and allows unions to own property, to sue and to be sued. There is a "board of conciliation" for every industrial district, and there is a "court of arbitration" for the whole country:

The Boards of Conciliation have from four to six members, and are chosen every three years in each district by elections held separately by the associations of employers and the associations of employees. Each board upon organization elects a chairman, some impartial outsider who is willing to act.

The Court of Arbitration is composed of three judges, appointed by the governor-general. One must be a representative of the trades-unions and nominated by them, one must be a representative of the employers' associations and nominated by them, and the presiding juding must be a member of the Supreme Court. This Court of Arbitration, if necessary, is assisted by chosen experts from the outside, representing both in the dispute.

The moment either side, with a grievance or dispute or with any apprehension of a strike or lockout, summons the other to court, it is a punishable offence for the workmen to stop work or the employer to close down. If an employer locks his men out without warning, he can be arrested, and so can workmen who go out without warning Consequently all strikes and lockouts are prevented. Employers can summon their men to court only as members of a trade-union, but the men can compel any individual employer to appear in court. The court can compel the attendance of witnesses and the production of any papers or books in a dispute; they can also visit any shop or premises where work is being done. Lawyers are not allowed to appear in a case unless both sides are willing.

The decision of a Board of Conciliation are not binding. The decisions of the Court Arbitration are binding or not in the discretion of the court, and any violation of a decision that is made binding may be punished by fine and imprisonment. These are the most essential features of the machinery of this new institution.

"THE JAPAN-AMERICAN COMMERCIAL JOURNAL."

The March number of the above periodical —which, we are inclined to think, has not been published with its usual regularity— contains in its English section a great deal of interesting matter, somewhat marred, however, by the forms of the language in which it is couched. Mr. Matsumoto, the editor, is evidently carrying on the work entirely unassisted. His method has at least the advantage of giving us Japanese thoughts and comments unalloyed, and not disguised by having passed through the hands of a foreign copy-reader. We quote an extract partly for the sake of its strong and just comments, and partly to convey to our readers an idea of the style of Mr. Matsumoto's writing:—

Human nature is fond of notoriety. Anything that does not strike us with wonder is generally discarded as a common-place fact. The love of these striking facts, not to say anything of the love of that stuff which the student of the economic science terms as a medium of exchange, induced many journalists in Japan to adopt many foul and scandalous means. A gentleman of some fame gets up one morning to be startled with the most minute accounts of his personal life, of which, at least in some cases, he himself is quite ignorant. The appearance of these writings in some of our papers generally brings troubles to otherwise a quiet and peaceful home. A number of instances of unhappy partings brought about by these reputed and unfounded charges may be mentioned. In these cases, the existence of such a paper is positively pernicious to the well-being of society. It is not a peace maker, but it is an agitator of the blackest character. The writers of this kind of paper smiles sarcastically at the mischief that their pen worked. To be sure, the wronged has power to sue for his fame, and it may be that he wins his case and the writer of the said paper imprisoned, but this does no at all injure the reputation of the paper. Why? Simply because, it is not the intelligent and gifted writer of the accounts who suffers from the treatment of the imprisonment, but some other less influential and good-for-nothing man who is employed and paid by the newspaper office for the emergency. Under the circumstance, the party who was wronged does not gain anything. The blemish and stain indelibly remain there. As has been mentioned above, these papers are financially better off. For one thing, they are read more by the people fond of sensational accounts, and another thing is that they appeal to a foul measure, mere mention of which is sufficient to make one blush, and be ashamed. To be plain, it is this. One evening, a gentleman receives a visitor who, being introduced into his parlour, takes out a paper with some writings on from his pocket, and begins to talk in a slow and solemn manner. "Sir, I have here," says he, "some unpleasant information concerning your private conduct. Our reporter is anxious to get these printed as soon as possible; but, out of sheer kindness, I have come here to find out what you would say about the matter. It is, indeed, serious for you. I shall be really sorry to see these accounts in our column. Here I am at your service to better the condition." Whether they may be printed or not entirely depends upon the kind of answer the gentleman makes in this interview. What is the underlying motive of this writer need hardly be mentioned here. Five yen in cash would have stopped the whole business.

I am far from asserting that what I have mentioned is always true of all the papers in Japan. Such extreme case as this is necessarily few, but that such a case has been reported as a fact is absolutely true. Let the truth prevail among us the journalists and let us assemble under the banner of truth and justice in order to sweep away all these pestilential elements from the journalistic circle. If a journalist is mean and low enough to break the law of justice let us cry against him and assail him all around.

SENDAI SPEECHES ON EDUCATION.

(COMMUNICATED.)

At the series of meetings held by the Oshû and Hokkaidô Education Society in Sendai on the 13th and 14th May various interesting speeches were delivered. Dr. Inouye's address has been already reported in these columns. Count Kabayama, who spoke on Sunday afternoon, dwelt first on the difficulties encountered by the Central Government in providing the money required to make education thoroughly efficient, owing to the demands made on the exchequer by the Military and Naval authorities. But the Government had fully resolved to do more toward helping local education than it had hitherto done. Yet it would be a mistake for the provincial authorities to rely too much on the Central Government. It could not be said that the Northern provinces had done so much in the educational line as their fellow-countrymen in the South. In the six prefectures represented at the meeting there were last year only 24 Industrial Schools, 4 of which were in Miyagi Ken. The pupils attending these schools numbered 1,680. Now, considering

Digitized by Google Original from CORNELL UNIVERSITY

that the whole future strength of the country depended largely on industry, this was a very poor record to show. The enormous prosperity of Germany in recent years was largely owing to the attention she has paid to industrial education. The resources of the north-eastern part of Japan were as yet wholly undeveloped and in the opinion of many competent judges that part of Japan had a great future before it. But all progress was dependent on education and this must be undertaken and supported locally, as the central Government was unable to do a tenth part of what is required. . . . The Department had already devised a scheme for increasing the number of normal schools in this part of the empire, which would be put into operation in the course of five or six years. Female education had been much neglected hitherto, and Female Normal Schools were far too few to supply the required number of teachers. More attention must be paid to home education. It was in many ways a cause for regret that a law should have to be passed forbidding the use of tobacco by very young lads. It ought to be unnecessary for the Authorities to interfere in such matters, if parents fulfilled all their obligations.

Dr. de Forest's subject was "Mixed Residence and Education." He dwelt first on the importance of Japanese being able to converse with foreigners. He said that out of the 5,000 foreigners residing in Japan 600 were Christian believers, but two-thirds of these did not study Japanese. The difficulties of the Japanese language were enormous, as had been pointed out by interpreters and others. Hence it was necessary that the Japanese should establish language schools and employ foreign teachers. After this Dr. de Forest went on to speak of morality and religion and, according to newspaper reports, during this part of his discourse observed that the basis of Japanese morality, filial piety and loyalty, might do very well for a partially civilised country, but was quite inadequate to meet the requirements of a complex state of society, where so many conflicting interests had to be considered. Another remark attributed to him was that the two virtues in question were the mere A.B.C. of ethics.

This has been taken up by the leading Sendai paper, the *Tōhoku Shimbun*, and represented to be not only offensive to Japanese ideas, but in direct opposition to that part of the Imperial Rescript on Education which declares that these two virtues are at once the brightest ornaments of the Japanese State and the most solid of all the foundations of her educational system (*Kore waga kokutai no seikwa ni shite, kyôiku no engen mata jitsu ni koko ni son su*). The *Tōhoku Shimbun* contends that the mass of the Japanese people are not prepared to give up their basis of morality in favour of anything that America has to offer, and adds that American ethics founded partly on Christianity and partly on the relations of the sexes to each other, may suit a democratic western country, but would never suit Japan.

The article we quote probably represents the feeling of the majority of those who listened to Dr. de Forest's discourse. If Dr. de Forest did actually say that the adherence of the Japanese to loyalty and filial piety was an indication that their standard of civilisation was low compared with that of Europe and America, it was certainly, in our opinion, an unjustifiable remark to make, and one that would naturally offend the Japanese, who are very sensitive on these points. But he may have been inaccurately reported. It is perhaps very difficult for a missionary to make a speech in public without hinting in some way that he thinks himself to be in possession of a superior system of morality to anything that the Japanese possess. Dr. de Forest has repeatedly stated in print that there can be no true civilisation unless Christianity is its basis, an assertion which to educated Japanese is naturally unwelcome. To discuss what is included in the term civilisation and to determine how many of the elements that go to make up the whole had their origin in Christian teaching cannot be attempted here. But it is quite evident to unprejudiced persons that, however much in former ages Christianity may have helped forward civilisation, at the present time the distinctive teaching of the Christian church and civilisation have very little connection with each other and that it is true to say that Western sceptics and agnostics and Japanese rejectors of the doctrines of Christ are as civilised as the missionaries who propagate these doctrines.

BANKING AND FINANCIAL QUESTIONS.

A meeting was held at the Tokyo Bankers' Club on the 25th ultimo and was attended by about 80 persons, among whom the most prominent were Mr. Yamamoto, President of the Bank of Japan; Mr. Matsuo, Superintendent of the Finance Bureau; Mr. Sakatani, Director of the Accountants' Bureau; and Mr. Saito, Director of the Banking Section.

Mr. Matsuo spoke at length to the following effect:—The number of Banks has increased considerably of late. There are at present 2,146 banks in all, with a gross capital of 462,681,169 *yen*, the average capital per bank being 210,000 *yen*. In reality, however, banks with a capital of 40,000 or 50,000 *yen* are most numerous. These were started for very various reasons—some under the pressure of absolute necessity; some formerly carried on exchange business but were formed into banks to conform with the Banking Regulations; some were inaugurated simply as organs for transacting business with the Bank of Japan; some were formed to satisfy personal ambition for the title of Director; others were inspired by fraudulent aims. The first two classes of banks were called into being by the force of circumstances, but the other three classes require vigorous measures to clear them of their abuses. As these minor banks have no connection with each other, they are always liable to embarrassment when the money market tightens. The best plan for the remedy of these abuses is the augmentation of capital and the consolidation of public credit; so that the business circle may be extended and connection secured with other banks. Incidentally, it may be observed that the want of connection between the minor banks is to a certain extent attributable to discrepancies in the rates of interest. The average scale of interest adopted by the Bank of Japan during the past eleven years was 6.9 per cent; in the case of the Tokyo Bankers' Union it was 10.3 per cent., while the figure secured by a similar Union in Osaka was 11 per cent. The difference of interest between the Nippon Ginko and all other banks in Tokyo was therefore no less than 3.4 per cent., while with respect to Osaka the difference was 4.3 per cent.

As to the loans and discounts issued by the various banks, the former amounted to 424 millions of *yen* and the latter to 272 millions approximately. The loans, therefore, have nearly doubled the discounts,—a fact which illustrates the predominance of fixed capital and the consequent tightening of the money market. Apart from these circumstances the diminution of specie reserves has become a subjecs of discussion. People are inclined to suppose that the steady exodus of specie will have the effect of changing the convertible notes now in circulation into an inconvertible currency. The confusion which such a notion has involved is indeed serious. Statistics show that from January to April this year the hard currency of this country was taken abroad to the value of 20,163,520 *yén*. But as the excess of imports of specie from China, Korea, and Australia during the last year reached 11,312,340 *yen*, the actual balance in favour of export did not exceed 8,851,288 *yen*. The specie reserves of the Bank of Japan in January of the 32nd year of *Meiji* (1899) amounted to 89,570,239 *yen*, while by the end of April this year the figure had fallen to 88,617,497 *yen*, a decrease of 952,742 *yen*.

As to the trade for four years from January, 1896, to April, 1900, it may be observed that the imports aggregated 1,000,625,922 *yen* and exports 721,421,652 *yen*, the balance showing an excess of 279,204,270 *yen* in favour of the former. How was this amount of excess paid abroad? The excess of exports in specie from January, 1896, to April, 1900, amounted to 78,300,233 *yen*; whereas the remittances made on account of Indemnity and public loan bonds aggregated 168,994,215 *yen*, making a gross total of 247,294,000, which were appropriated to settle accounts with foreign countries. But the remaining 31,909,822 *yen* are still owed by Japan, and have to be paid in future. Nevertheless, Japan possesses at present yarns to the amount of 12 millions of *yen* and raw cotton aggregating 21 millions in value, these two classes of commodities being stored in Kobe and Yokohama. If they are exported, the sum of 32 millions above referred to may be restored, and there can be no cause for apprehension as to the exodus of gold which is now so much the subject of adverse criticism.

Precautions are only necessary to avert the present difficulty. With regard to the causes of the appreciation of commodities, Mr. Matsuo remarked that, although they are ascribed to the alteration in the coinage system and to the augmentation of currency in circulation, neither of these can be regarded as the correct version. Taking the amount of money in circulation in January of the 26th year of *Meiji* (1893) as 100, it may be alleged that as the value of gold was fixed at 200 *yen* at the time of the revision of the coinage system, against 149 *yen* quoted prior to the revision, the ratio borne to the total currency showed an increase of 34 per cent. If the amount of currency taken as 100 for January, 1893, is compared with the figure for February, 1900, an increase of 41 per cent. is noticeable; whereas the market value of rice in the former period seems to have increased by 76 per cent. in comparison with the latter period. A similar enhancement is observable with regard to other commodities. The domestic staples have risen 60 per cent.; wages, 42 per cent.; food and beverages in Tokyo, 74 per cent.; fuel, 84 per cent.; cotton and silk textiles, 59 per cent.; metals, 80 per cent.; fertilizers, 64 per cent. From these facts it may be inferred that the appreciation of commodities was entirely beyond the influence of the revised coinage system, or was quite disproportionate to the increase of currency in circulation. Although these two conditions, namely, the revision of the monetary standard and the expansion of the currency, cannot altogether be excluded from the category of causes that have tended to enhance the prices of commodities, it is neverthless undeniable that the main and direct cause of appreciation was the general increase in demand and in the purchasing power of the people. The population from January, 1893, to the end of 1898 had increased by 6,586,161, while wages were raised by 42 per cent; the price of rice by 76 per cent., and that of fuel by 84 per cent. The enhancement of these articles of consumption may be taken as a conclusive evidence of general increase in demand. This development of the purchasing power may necessitate the encouragement of savings banks to absorbs the fund now in the hands the people.

Mr. Toyokawa urged the necessity of allowing the use of small cheques in payment of taxes, and obtaining the consent of the Bank of Japan for the speedy enforcement of the scheme.

Mr. Sakatani stated that although the advantages of the use of cheques for taxes had already been recognised by the Finance Department, in practice the matter was still fraught with immense difficulties, in view of breaches of faith which were likely to occur.

Mr. Yamamoto, President of the Bank of Japan, addressed the meeting as follows:—The cry of depression is raised throughout the empire. But, out strange to say, the 45 millions of population appear to have scarcely been affected by it. Luxury prevails in the provinces. The encouragement of thrift is absolutely essential at the present conjuncture, as has already been remarked by the Finance Minister and Count Inouye. In Wakamatsu and Shimonoseki a pair of *geta* valued at 7 *yen* and a piece of soap worth 5 *yen* are on sale and similar things are not iceable in other localities. Kumamoto has always distinguished itself by a rich crop of rice, the annual output being no less than 700,000 *koku*, valued at 7 million *yen*. Yet no enterp rise worthy of public notice has ever been started in the locality; the town itself is notorious for the insignificance of the deposits in its banks. Last year a farmer went to a certain bank with a sum of 10,000 *yen* for deposit, and was told that

Digitized by Google Original from CORNELL UNIVERSITY

the money would be held at 6 per cent. interest per annum. At this he was struck with surprise, and made answer that the money required two watchmen while in his hands, and that since its custody by the bank would relieve him of trouble and anxiety, it was too much for him to be "honoured with interest." The story, simple as it is, clearly illustrates the ignorance of the agricultural classes as to the organization of savings banks. Another fact worthy of notice is that in balancing the amount of gold coins struck at the Osaka Mint during the past few years with the specie reserves actually held by the Bank of Japan, the sum of 18 millions is obtained. This money must be somewhere in the empire, but the place where it lies is not accurately known. As it is not in the hands of bankers, however, it must be in those of private individuals. At any rate there can be no second opinion as to the prevalence of luxurious habits in the country and the fact of funds being hoarded unproductively by individuals. The economic world of Japan underwent serious change after the triumphant war with China. At one time acute depression was experienced, at another undue inflation of the money market, and the effects of the changes were inevitably felt by the middle classes. In order to prevent them from extending to the lower orders, however, schemes were suggested as to the advisability of raising loans abroad or purchasing bonds in the interior, the result being the abnormal appreciation of commodities and the raising of the rates of interest. So soon as tradal depression sets in, wholesale merchants contrive to decrease the amount of their stocks. This may to a certain extent bring about a depreciation of commodities, but the depreciation in question can not be regarded as the result of a decrease in demand on the part of the 45 millions of people. On the other hand the purchasing capacity of the lower orders is exercised without interference in disregard of the steady increase of imports. In this condition of affairs the fair development of the economic community can scarcely be expected. The encouragement of thrift among the labouring classes is the only means for the improvement of the present situation.

Mr. Ogawa remarked that the people of Japan have a greater propensity for the indulgence of their tastes than for amassing wealth, and at the same time they display an insatiable desire for speculation.

Mr. Sakatani alleged that thrift would have a more beneficial effect upon the nation's economical position than the introduction of foreign capital, and that the foreign capital hitherto secured in the form of Indemnity and foreign loans had failed to bring about any good results upon the commercial community at large. The existing regulations for savings banks should be radically changed.

INDIAN FAMINE CONCERT.

The committee of American ladies and others responsible for the entertainment given in the Van Schaick Hall on Friday evening in aid of the sufferers by the gigantic famine in India, are to be congratulated on the success that attended their endeavours, and a goodly sum should result. The room was decorated with tall white lilies, and on the innumerable small tables were bowls of flowers, the whole producing a most charming effect. The programme opened with a violin overture by the Misses Page, the Dances from "Henry the Eighth," most admirably played. Then Mrs. Apcar, from the wealth of her intimate knowledge of Indian life, gave an interesting address on the conditions, customs, beliefs, and yearnings of the vast Asiatic peninsula. She was followed by Mrs. Doering and Mr. Richter, who played Suite VI., Op. 49, No. 1, by Goldner, and they were rewarded by liberal applause. Mr. Somerton was unfortunately incapacited by a severe cold, but in his place appeared Madame Henkler, who sang pleasingly. Mr. Sharp's recitation of Kipling's "The 'eathen" was excellently given, and the programme was brought to a close by Mr. Richter with a piano solo, "Lyrische Stuche" by Grieze. Then refreshments were served and the evening developed into a social entertainment of a most enjoyable kind.

PUBLIC HALL ENTERTAINMENT.

The monster variety bill presented at the Public Hall on Tuesday drew a crowded house, and a considerable addition to the funds of the institution should result. From first to last nearly forty persons were engaged in the performance and much genuine fun was distilled. The programme all the way through reflected great credit on everyone concerned in its production, but specially hearty thanks must be awarded to Mr. F. C. McWilliams, Property Master; Mr. E. Beart, Stage Manager; and Mr. W. Karl Vincent, Musical Director, for on them fell the lion's share of the preliminary hard work.

The Coon-town Black Tulips (Messrs. Ellis, Fuller, Ginn, Gunn, McChesney, Jackson, Morton, J.E. Moss, Pettit, and Pollard) opened the ball with a plantation song, after which Mr. McChesney sang "I'll make that Black Gal Mine," in the chorus of which he was admirably assisted by his ebony-coloured companions. The troupe gave place to Mr. N. G. Maitland, who sang with excellent feeling, "My memories" (*Tosti*), receiving a rapturous recall. In quite a different vein was Mr. Charles Aslet's "Oh! Her face"—and to some the sharp transition in style and taste from the preceding item was rather distressing in its suddenness. Mr. Aslet, a very recent arrival in Japan, has a strong vein of low comedy running through him, and should win much popularity in Yokohama. The Coopers' Chorus from "Boccacio," the solo of which was taken by Mr. N. G. Maitland, was capitally given, the jovial coopers —(Messrs. G. G. Brady, C. H. Fearon, H. E. Hayward, A. R. Owen, H. Riddle, and S. Wheeler)—entering with gusto into their work of hammering and singing. A recall was inevitable, and even then the audience were loth to see the last of the wearers of the brown aprons and octagonal paper caps. A recitation by Mr. H. J. Sharp, "Lucky Jim," evoked much applause for the masterly manner of its delivery and Mr. Sharp responded to an encore with "Faust O'Grady." Next Mr. Brady appeared in Chevalier's diverting sketch "Our Bazaar," the humours of which lost nothing in his experienced hands. A very pretty sight was presented a few minutes later, when a bevy of fair milkmaids, attired in the costumes immortalised by Watteau, tripped upon the stage armed with diminutive buckets and spotlessly clean milking stools. They were the Misses Andrews, Bishop, Carst, A. Page, H. Page, K. Page, Patchett, M. Lloyd-Thomas, M. Sharp, Thorn, Tripler, and Varnum. Having announced their presence with the first verse of a chorus from "Robin Hood," they welcomed to their midst Miss H. Lloyd Thomas, who sang of the delights of a milkmaid's life—as depicted by the poets—whereupon Miss Poole entered from the wings and told in demurely bewitching manner the other side of the story—the grim realities of a milkmaid's slavery, only to be rewarded with the jeers of her companions. The pretty *scena* had to be repeated.

Mrs. McWilliams opened the second half with a monologue, "Behind the Curtain"—a clever piece of declamation as well as of characterization. Mr. S. H. Somerton was the next down on the programme for "A soldier's song" (Mascheroni); and we are glad to say he displayed little trace of his recent severe cold. This singer was was followed by Mr. Aslet with "One hundred and one faces under one hat," a very clever series of impersonations. Then again the ladies mentioned above occupied the stage and sang the Legend of the Chimes from "Robin Hood," Miss Lloyd Thomas taking the solo part. This was one of the prettiest things in the whole programme, and was redemanded. A very successful item was that given in character by Mr. L. S. Hudson, "When I was a girl at school," his make-up in the costume of an ancient lady of the early seventies being particularly effective. He was followed by a most tatterdemalion crew, who came on to sing the "Tinkers' Chorus" from "Robin Hood"—and very well they did it too. These ragamuffins were really Messrs. Brady, Fearon, Hayward, N. G. Maitland, Owen, Riddle, and Wheeler, but their manner of dress was most bizarre. It was some time before the audience would let them depart. The final item, "In the Suburbs" (Herbert Darnley) was given in Mr. Brady's inimitable style—surely none but he could have invented such "patter" as that which interlarded this song.

The humour and gaiety of the whole evening, if described in greater detail, would intrude too greatly on our space. We can but borrow and adapt gossipy old Pepys in concluding —"And the playing, in one word, was the best, for the variety and the most excellent continuance to the very end, that I ever saw, or think ever shall, and all possible, not only to be done in the time but in other respects very admittable; and the house, by its frequent plaudits, did show their sufficient approbation."

MR. SID BLACK.

There was a large attendance at the Cricket Ground on Saturday afternoon to witness the truly remarkable performances of Mr. Sid Black on his Cleveland bicycle. Mr. Black is certainly a marvellous trick rider. He can apparently do anything on a bicycle. He can detach a wheel while going at full speed, and seems to feel no inconvenience on account of such a trifling loss. He can clamber through the framework of his machine without stopping it; he is quite as much at home with his feet in the air and his hands clutching the saddle as an ordinary rider is in the normal position; and, in a word, the bicycle seems less a machine than an intelligent member of the cyclist. His various feats, in which he was assisted by Mr. Vaughan, evoked hearty applause. The exhibition of bicycle polo, in which four riders, including Mr. Sid Black and Mr. Vaughan, took part, was exceedingly clever. The ball was propelled by striking it with the rim of the wheel, and the dexterous manner in which this was accomplished and in which "passing," "centreing," and "shooting" were done, really deserved all the applause elicited. The scoring of a goal was by no means easy, for the posts were but a small distance apart, but there were two or three successful shots.

PEACE THANKSGIVING SERVICE.

A special Thanksgiving Service was conducted by the Rev. E. C. Irwine, recar of Christ Church, Yokohama, in the smaller Public Hall on Sunday evening, in connection with the intelligence of the imminent cessation of hostilities between the British forces and the Boers in South Africa. There was a large attendance, the congregation flowing over from the small hall into seats provided in the vestibule from the larger hall. The service was fully choral, the choir numbering some fifteen boys and a number of ladies and gentlemen. The first hymn sung by the Choir and Congregation was the Processional Hymn 157, in unison. The proper Psalms of the day were chanted by the choir, and the *Magnificat*, and *Nunc Dimittis*, were by Simper, in E. flat. The Anthem selected was "Praise the Lord," by Clarin, and the hymns sung were Nos. 378, 143, (in unison) and 232. At the conclusion an original Vesper, composed by Mr. Karl Vincent, the organist, was rendered by the Choir, and was followed by the National Anthem. Mrs. Irwine took the soprano solos in the anthem and Vesper with her usual success and altogether the musical service was one of the best that the congregation of Christ Church have ever listened to.

Mr. Irwine chose for his text the words of the 76th Psalm "At Thy Rebuke, O God, both the chariot and horse are fallen."

The preacher remarked that at such moments as the present the safest vent for our feelings was found in the words of these ancient inspired poems, springing as they did either from the stress and strain of a national or personal conflict. We had not been ready to couple the name of Heaven with our cause, though we believed it to be the cause of civil and religious freedom, and analogous to that of the American colonies, who rightly demanded a franchise and representation as an equivalent to the fiscal burdens laid upon them. Now that the war seemed to be practically over,

Digitized by Google Original from CORNELL UNIVERSITY

we could not, however, refrain from thanking God for giving us the victory, firmly believing that it was our destiny and that of our western kinsmen to enfranchise every spot of God's earth upon which we set our foot. We admired the many instances of bravery in our foes—we pitied their sorrows and none of us or of our soldiers would hesitate to extend a kindly hand to a wounded Boer, or, as our men did at Belmont Station, extend a "cup of kindness" to a vanquished foe. But we remember that, misled by the rapacity of an ambitious clique, and thinking to surprise us, they first invaded our borders. Like others within our own memory who crossed their neighbours' land mark with victory already self-inscribed upon their banners, they had been repelled, and once again the scene of bloody conflict would become, we firmly trusted, peaceful British soil. Let us then, while rejoicing that God had pleased to cement our kingdom and colonies and extend our Empire, pray that He who sitteth above the heavens would make that Empire great not only in extent but in its aims to christianize, civilize, enlighten, and free the world. Let us rejoice today with the many hearts that were rejoicing at the restoration of peace. Weary prisoners, who, though champing the curb, had cheerfully and bravely shown a bright face. Weary waiting mothers longing for their valiant sons, and among them all the old brave-hearted lady for whom we should now sing and pray "God save the Queen."

PASSPORT REGULATIONS.

Regulations with regard to foreign passports are published in the *Official Gazette* as follows:—

Art. I.—Passports for travellers to foreign countries shall be issued by the Minister of Foreign Affairs; those issued in foreign countries shall be made out by a Japanese Minister or Consul.

Art. II.—Applicants for passports are required to forward a statement containing the following items, to the local authorities of their districts, or to a Legation or Consulate in foreign countries. (Note.—In the case of Japan a copy of the registration of the applicant's family must be annexed.)

1. Full name (with pronunciation indicated in *Kata-kana*).
2. Place of permanent domicile (When the place of actual residence differs from the place of domicile, both must be stated).
3. Personal status (whether head or member of a family; and in the case of the latter the name of the head as well as particulars of connection must be mentioned).
4. Personal order or classification.
5. Age.
6. Profession or occupation.
7. Destination, or names of places to be visited.
8. Object of journey.

Persons retaining a permanent domicile or actual residence in Tsushima Island, Nagasaki Prefecture, may apply for passports to the authorities in the island. In the case of Formosa the passports shall be issued by the Governor-General.

Art. III.—Travellers on official business shall apply for passports to the Foreign Department through the Government Office to which they belong, and in foreign countries to a Japanese Legation or Consulate, stating the items specified in clauses 7 and 8 of the preceding Article. In the case of travellers accompanied by their families or by attendants, clauses 1 and 5 must be complied with with reference to the latter.

If any person staying abroad on official business desires to summon his family or attendants to his place of residence, he must apply for passports for the latter.

Art. IV.—In case a family accompanied by its head, a wife accompanied by her husband, or a child travelling with its parent, desires to obtain a passport, his or her personal order, status, and age may be mentioned on the passport issued to the head, husband, or parent. This provision, however, applies only to persons under age, except in the case of a wife undertaking a journey with her husband.

Art. V.—In case application is made, as specified in Article II., by emigrants under the charge of emigration agents, or for whom securities are required in accordance with the provisions of the Emigrants Protection Law, the counter-signature of such agents or securities is necessary.

Art. VI.—To a passport issued in Japan in accordance with Article II. of these regulations must be affixed a 50 *sen* revenue stamp. In foreign countries the fees shall be fixed by the consul.

Art. VII.—The passport must be signed as soon as it is received. In travelling through countries where a *viśé* is deemed necessary, no attempt must be made to evade such inspection.

Art. VIII.—Persons coming within the purview of the following clauses are not eligible for passports, an exception being made in the case of persons other than those included in the category of clause 2, who intend to undertake a tour to China or Korea:—

1. Persons coming under the Law of Premonition.
2. Persons not allowed to stay in China or Korea.

Art. IX.—Travellers abroad must return their passports on their arrival in Japan, and this provision applies also to holders of passports who have failed to start on a journey within 6 months after the receipt of the passport.

Art. X.—Any person undertaking journeys abroad at frequent intervals for purposes of commerce, fishing, or other business need not return his passport, except when he returns after three years from the date on which the passport was issued.

Art. XI.—Any person not returning to Japan for ten years after leaving the country must submit his passport for inspection by a Japanese Minister or Consul, prior to the expiration of the period referred to. This submission of passport must be repeated every ten years.

Art. XII.—Holders of passports are required to return the same to the authorities when they happen to fail to comply with any of the clauses enumerated in Article VIII., or when alterations are made in regard to items 1, 3, 7, and 8 of Article II.

Art. XIII.—In case of the loss of a passport the fact must be immediately reported. A report is also necessary when the passport is found.

Art. XIV.—The passport shall be returned or a report of its loss or discovery be made to the superior adminstrative authorities in Japan, and to a Japanese Legation or consulate in foreign countries.

Art. XV.—Any person acquiring a passport by fraudulent means shall be liable to a fine not exceeding 25 *yen*, or imprisonment for a term not exceeding 25 days. The same penalty attaches to persons who have assisted in the fraud.

Art. XVI.—The foregoing penalty shall also be incurred by persons using, or causing others to use, a passport issued for a different person. Any person continuing to use a passport without returning it as prescribed by these regulations shall be liable to the same punishment.

Art. XVII.—These regulations shall come into operation from the 1st July.

Notification No. 1 of the Foreign Department issued in the 11th year of *Meiji*, embodying the regulations concerning foreign passports, and notification No. 6 of the same Department, of the 30th year of *Meiji*, are rescinded.

THE TRAGEDIES IN SÖUL.

(FROM OUR OWN CORRESPONDENT.)

Söul, May 28.

General An Kyeng-su and Kwŏn Hyong-chin were strangled last night, or early this morning, in the city jail. General An was, according to his own account, the author of the proposition that His Majesty should retire from active participation in the Government. The plot was discovered and An spent the last eighteen months in Japan. Kwŏn was Commissioner of Police in October, 1895, and was implicated in the murder of Her Majesty the Queen. In February 1896, he fled the country and was a refugee in Japan until about two weeks ago. General An returned under the avowed protection of the Japanese Minister, Mr. Hayashi, who secured a promise that a fair trial would be accorded An and that torture would not be used. An was at once remanded to the Supreme Court, at first under Japanese guards, but later these were withdrawn. The trial was delayed from time to time and An spent his time quietly in a comfortable place in the Supreme Court precincts.

On the return of Kwŏn whose crime was of a different sort, it was found necessary, a few days since, to remove An to the Commissioner of Police in order to have him answer some question. Here he was put to torture in the most approved ancient style.

The Commissioner of Police, Yi Yu In, had both prisoners in his power and, if report may be believed, dispensed with all appearance of trial and almost literally beat and mangled the unfortunate men to death. He announced officially that he was unable to restrain his righteous indignation and therefore, without formal and necessary Imperial sanction, he strangled the men. In reality they died from the fearful and outrageous torture to which they had to submit.

In the meantime the Japanese Minister, on hearing of the treatment to which An was subjected, immediately asked for an audience with the Emperor. This could not be granted on account of His Majesty's illness, and protests had to be filed along the usual channel of the Foreign Department with the information offered that the Commissioner of Police had acted in this matter on his own accord and without the knowledge of His Majesty the Emperor.

At noon to-day an immense crowd assembled at the city jail, and demanded the bodies so that they might treat them in the way the bodies of traitors ought to be treated—exposure to the crowd at the Big Bell and possibly mutilation. Up to this time, as far as I know, the bodies have not been delivered and I hope Korea will be saved this further disgrace.

What the effect of this sudden dispensation of justice in this summary way will be, time alone will tell. No one seems to know why these men voluntarily surrendered themselves. It would also seem that the Japanese Minister had lost his grip on his man and was as helpless in protecting him as were the Russians in protecting their one time famous interpreter.

UNION SPINNING COMPANIES.

The result of the Union Spinning Companies' transactions during March last, as compared with the corresponding period of the previous year, was, according to the *Shogyo*, as follows:—

	—March— 1900.	1899.	Increase or Decrease.
Number of factories	62	69	7*
Number of spindles at work	1,050,360	1,023,091	27,269†
Working days per month	28	28.5	0.5*
Working hours per day	23	21.5	1.5†
Average fineness of yarns produced ..... Ring	20	18.5	1.5†
Average fineness of yarns produced ..... Mule	27	24	3†
Amount of production (in *kwan*)	3,354,829	3,204,538	150,291†
Daily average production per spindle (in *mommé*) ..... Ring..	115	110	5†
Daily average production per spindle (in *mommé*) ..... Mule.	69	81	12*
Supply of cotton for spinning (*kwan*)	3,948,784	3,754,802	193,982†
Waste cotton obtained (in *kwan*)	459,308	433,964	25,344†
Waste yarns (*kwan*)	43,179	44,122	943*
Consumption of coal (lbs.)	70,682,977	65,721,070	4,961,907†
Price of the same per 10,000lbs. (in *yen*)	19.18	19.86	0.68*
Horse power	676	616	60†
Average consumption of coal per hour per horse power (in *sen*)	3.68	3.67	0.01†
Artisans ..... Men	16,029	15,091	938†
Artisans ..... Woman	55,581	52,644	2,937†
Wages (in *sen*) ..... Men	27.95	26.73	1.22†
Wages (in *sen*) ..... Women	17.49	15.87	1.62†

* Decrease. † Increase.

MINES.

The *Jimmin* publishes a statement of Mr. Tanaka, Superintendent of the Mining Bureau. He says the expenses allotted to the Mining Bureau remain the same at present as in the 25th or 26th year of *Meiji*,—an anomaly all the more striking in consideration of the progress made in mining enterprises during the past few years. The Mines Superintendence Office in Fukuoka alone has had over 4,000 applications requiring official notice. The coal mines in Chikuho have made extraordinary progress, but the development of kerosene enterprise in Niigata is still more surprising. During March this year, the number of new applications received in Kashiwazaki for permission to work petroleum wells totalled over 400, and in April the figure increased to 700. Petroleum deposits, however, differ in character from other mines. Although there are so many applicants many are seeking for one and the same vein, struck at different places. The wells taken as a whole therefore are not so extensive as would seem from the number of applications. According to latest statistics the total import of kerosene from abroad is estimated at 20 millions of *yen* a year. It is expected however, that success in the enterprises now undertaken will have the effect of virtually obliterating the importation of oil.

SILK.

Reports on the silk industry in various prefectures are published in the *Mainichi* as follows:—

Yamanashi Ken.—In consequence of the abnormal number of silkworms raised last year, many of the mulberry trees were considerably impaired, and leaves for this year are therefore in a most unsatisfactory condition. Still, in spite of this drawback, the growers have increased their stocks. The value of leaves has quickly risen. While at the beginning of the season they were quoted at 40 *sen* per 1,600 *momme*, they are now sold for 60 *sen*. Under these circumstances quantities of worms are being daily thrown away.

Kanagawa Ken.—Operations in this prefecture commenced some ten days later than usual, while the amount of stock has increased by 50 per cent. The grubs are healthy, and have abundant food. Last year the output amounted to 55,400 *koku*, but this year the figure, it is anticipated, will reach to 58,500 *koku*.

Shinshiu.—In Minato-mura and Uyeda satisfactory results are anticipated.

With regard to the financial condition of the silk producers in Shinshiu, Koshiu, Joshiu, and other north-eastern districts, it is stated that the prosperity they enjoyed last year has enabled them not only to liquidate their former debts, but also to pocket a portion of their gains. They have even been able to establish a small bank, and with the credit thus secured have succeeded in obtaining ample funds from Yokohama merchants.

EPISODES OF THE WAR.

We quote here some extracts from *The Times* setting forth episodes that illustrate Boer methods. The first relates to their treatment of women:—

The following telegram from Lord Roberts has been received at the War Office:—

Bloemfontein, April 25, 2.35 p.m.

The Boers captured several native women trying to escape from Mafeking, but (these) were turned back after having been stripped and sjambokked.

The second illustrates their respect for truth:—

Kimberley, April 20.

Boer official notices which were displayed at Campbell on the 10th inst. stated that during recent battles the Boers had captured 13,000 troops, 18 cannon, and nearly 300 wagons.

The Boers, they said, were full of valour, the outlook being bright, and further reports have been received that the Russians had invaded India with 2,500,000 men.

The third throws a lurid light on the value that the Boers attach to native life:—

Mafeking, April 14.

The past week has been practically without interest so far as Mafeking is concerned, but on Friday occurred one of the dramatic incidents of the war in this region. For some time past it has been impossible to prevent the natives from raiding cattle. The high prices which they are able to obtain in the town and their natural love for expeditions of this sort lead them to break out in small parties, and they return more often than not in triumph with valuable additions to the foodstuffs of the garrison. In the early part of the week two Baralongs arrived in the native stadt and offered to show any party of cattle-raiders where a good haul could be made with comparative safety. On hearing this, 25 Fingos determined to make an effort to capture the prize and started out eager for adventure. They were armed chiefly with old muzzle-loading rifles, only one or two of them having breech-loaders. The treacherous Baralongs led them into a trap, where they were surrounded and attacked by a Boer patrol. So well did the Fingos fight that the Boers, though they out-numbered the natives, were compelled to draw off and await reinforcements. Seeing that escape was impossible, the Fingos fell back to a pan, the only cover obtainable.

The Boers brought up another 100 men with a Mannlicher Maxim and a one-pound Maxim Nordenfelt, and surrounding the pan opened a murderous fire. There was no question of surrender. The leader of the natives, a tall, spare man named Indabaziti rallied his men for their last fight. From the rising to the setting of the sun the 25 Fingos, armed with obsolete rifles, fought a grim, desperate fight. From their two machine-guns and their Mausers the Boers poured a ceaseless fire into their midst, whilst the one-pound Nordenfelt shells cracked all round like fireworks. The Fingos fought till their ammunition was exhausted, and then the Boers killed them all with the exception of one man, who was wounded and escaped by hiding among some reeds.

On the following day Commandant Snyman sent a letter under a flag of truce to Colonel Baden-Powell complaining that the British commandant should employ barbarians to raid cattle.

The natives in the course of the fight killed six Boers and wounded a great number. Had they possessed a larger supply of ammunition they would, no doubt, have inflicted heavier execution, but the expedition, being unauthorized, had been unable to procure more. These poor blacks who died so bravely were loyal to the last to the nation which had protected them against the Boers, and to the "Great White Queen" whose children they claimed to be.

Later.

The following is the correspondence which passed between Commandant Snyman and Colonel Baden-Powell in reference to the alleged employment of "barbarians" by the British in cattle-raiding expeditions:—

"Marico Laager, Molopo, April 7.

"To his Honour Colonel Baden-Powell, Mafeking.

"Enclosed I beg to send to you a copy of a pass signed 'A. T. Mackenzie, Black Watch,' and dated April 4, which is a clear proof that Kaffirs are sent out, with your Honour's knowledge, naturally, as head officer, to plunder, rob, and murder. I am very sorry to see that tyranny carries away the good nature of so polite a nation as the English. They know that the barbarians have nothing else in view. Twenty Kaffirs were sent last week in a northerly direction by an English officer, according to the statement of a wounded native who was taught a lesson by one of my burghers. Thirty-two were sent on the 4th, according to a pass found in the pockets of one of the killed. They were all shot yesterday. I request you to be kind enough to fetch the bodies. Please send an ambulance under a Red Cross flag in the direction of Canton Kopje, and notify me immediately the wagons have left. I will send some of my burghers to point out the battlefield. Your Honour's obedient servant, "J. P. SNYMAN."

"Mafeking, April 7.

"To his Honour General Snyman.

"Sir,—I have the honour to acknowledge your letter of to-day. In regard to the pass signed 'Mackenzie,' this man had no authority to issue a pass of any kind, much less for the purpose stated. I am obliged to you for bringing the case to my notice. As regards your Honour's statement that your burghers killed 32 natives, I beg to inform you that I know nothing whatever about these men. They were certainly not acting under orders received from myself, nor, so far as I am aware, from any of my officers. I would point out that there are a number of natives about the country in a destitute condition owing to their homes having been burnt and their cattle stolen by your burghers, and it is only too probable that they have taken the law into their own hands to endeavour to obtain food. Of this I have warned your Honour before. For their acts I must decline to be held in any way responsible. I have the honour to be your obedient servant,

"R. S. S. BADEN-POWELL, Colonel commanding H.M. troops in Mafeking."

BASEBALL.

TOKYO HIGHER SCHOOL VERSUS Y.C. & A.C.

This match, played in glorious summer weather on Saturday afternoon, resulted in a win for the visitors, the score at the close being Tokyo H.S., 14; Yokohama, 7. Yokohama's prospects were viewed as gloomy before the game began, few of the team having had any opportunity for practice since autumn, while some of the strongest players in last year's team have left Japan or removed to other ports. Consequently it was not to be wondered at that errors were frequent and combined play almost out of the question. Thorn made one good catch in the field, and Merriman put out a man very smartly at second base: these were the only individual bits of smart play worthy of notice on the home side. The visitors were, as usual, in good form: their fielding as smart as ever, while the pitcher's work was very pretty to watch. Looking back over the years, however, there seems to be less dash and daring in the present day Japanese players. Perhaps a better knowledge of the laws of the game has taught them caution; certainly they do not steal half so many leases or hazard half so many runs as they did in times gone by.

The match naturally attracted a huge crowd of students from Tokyo, who rewarded any good play, whether on their own or the foreigners' side, with hearty plaudits. During the afternoon Mrs. E. Flint Kilby, wife of the popular President of the Y.C. and A.C., assisted by the Misses Kilby and others, dispensed tea in the Pavilion to the large company of ladies who had assembled to watch the match. Score:—

Y. C. & A. C.

SAILING RACES.

The Yokohama Yacht Club was favoured with most satisfactory wind and weather on Saturday last for the race by the 17-raters for the "Bonito" Cup (on handicap) and a second prize by the Club on Club time. The course was that known as No. 7, six miles, and the result was a win for *Wettinge*, which took the first prize and two record points, while *Eclair* took second prize and one record point. The times were as follow:—

Rating.	Stort.	Har. Entr.	Finish.	Cor. Time
Wettinge...17	2.80.25	2.38.50	3.54.35	3.54.35
Eclaire ...17	2.31.00	2.39,30	3.54.38	3.54.35
Bonito.....16½	2.30.16	2.40.00	3.58.25	3.57.00
Devonia...16½	2.30.15	2.38.45	4.01.21	3.58.20
Shamrock..16	2.30.16	2.39.30	4.04.17	4.01.21

The 12-raters also had a race over the No. 10 Course, the result being a win for *Titania*, who also took two record points, *Madeleine* being second with one record point. The times at the finish were:—

	Finish.
Lornae Doon	—
Madeleine	3.31.50
Titania	3.30.35
Dora	3.32.45
Albion	—
Thistle	—

SHOOTING.

The following were the scores made on Sunday in the shooting for the Championship Flag at Tsurumi, between teams representing the Tokyo and Yokohama Shooting Clubs:—

Tokyo.	points.	Yokoham.	points.
Mr. Ijuin Jur.	11	Mr. J. F. Drummond..	16
Mr. Miyazawa	17	Mr. K. Uchiyama	9
Mr. Uchida	14	Mr. Nakajima	20
Mr. Suzuki	11	Mr. G. Hood	13
Mr. Negishi	14	Mr. K. Kimura	14
Mr. Eijima	20	Mr. L. W. Eyton	18
Mr. Nakayama	17	Mr. Yano	16
Mr. Mori	15	Mr. A. Kingdon	17
Mr. Matsudaira	14	Mr. J. Higginbotham..	16
Mr. Ishizuka	16	Mr. W. H. McGowan.	17
Mr. Inouye	16	Mr. S. Matsumura	18
Mr. Amano	17	Mr. T. Niwa	13
Mr. Ichinoi	15	Mr. K. Kawazu	15
Mr. Ijuin	18	Mr. H. Hiranuma	16
Mr. Ayai	13	Mr. J. Eyton, Jnr.	15
	228		232

Yokohama thus won by 11 points.

In the other Matches (usual Club Monthly) Mr. L. W. Eyton secured the best average for the day and won the gold medal; Mr. Matsumura was 2nd, and also received a gold medal; Mr. Higano third. In the Blue Rock Match for a silver cup presented by Mr. Furuya, Mr. W. H. McGowan shot a full score (20 points out of a possible 20). The Yokohama Town Band was in attendance and the pavilion was crowded with spectators. Various stalls were erected near by for the supply of beer and edibles free. At the finish of the matches the Yokohama people marched back to the station with the band playing a march and the Champion Flag shouldered by Mr. Nakajima.

STRANGE SHOOTING AFFAIR.

An extraordinary affair occurred at the offices of Oppenheimer Frères, No. 14, Bund, early on Friday morning, June 1st. Madame Gastard, who with her husband, under the names of Madame de Thèbes and Professeur de Delphes, gave a mesmeric performance at the Public Hall recently, proceeded to the office, and asked to see M. Francois. She first saw a Japanese woman, whom she asked to take her to Francois' room. The woman, however, noticed that Madame Gastard had a revolver, and she ran upstairs and acquainted M. Francois with the fact. He got up and locked the door just as the visitor reached it. The lady fired three shots through the door, and the reports alarmed the porter, who went for a constable. On the police coming Francois unlocked the door to see if Madame Gastard had gone, when another shot was fired. The police tried to seize the revolver, and in the struggle another shot was fired, breaking one of the windows. The lady was finally allowed to return to the Central Hotel, where she locked herself up in her room. Eventually Dr. Wheeler, who was sent for by the police, saw her, and advised that her arrest should be postponed, as she was apparently suffering from temporary derangement. Constables were therefore stationed around the hotel, but no active steps were taken to apprehend the lady. Francois has meanwhile sought police protection.

Madame Gastard, who made an attack on M. Francois at No. 14 Bund on Friday, has been examined by Drs. Munro and Watanabe. She is in a delicate state of health, and is in consequence suffering from mental derangement. It appears that some words written by Francois on a bill roused her resentment to an extraordinary degree, and she determined to attempt Francois' life, leaving her bedroom while her husband was asleep. M. Gastard states that under ordinary circumstances his wife would be afraid of firearms, and attributes the strange access of passion to her physical condition.

A collision occurred on May 15th between two boats on Lake Vico, Italy. They were returning from a religious fête loaded with passengers. About forty persons were drowned. Thirteen were rescued.

"THE ROOI-BAATJE."

The following appeared in the *Cape Town Telephone*. It is supposed to be the thought of a dying Boer. "Rooi-Baatje" is Boer for red-coated soldier.

Lay my rifle here beside me, set my Bible on my breast,
For a moment let the warning bugles cease;
As the century is closing I am going to my rest,
Lord, lettest Thou Thy servant go in peace.
But loud through all the bugles rings a cadence in mine ear,
And on the winds my hopes of peace are stowed;
These winds that waft the voices that already I can hear—
Of the rooi-baatje singing on the road.
Yes, the red-coats are coming; I can hear the steady tramp,
After twenty years of waiting, lulled to sleep.
Since rank and file at Potchefstroom we hemmed them in their camp,
And cut them up at Bronkerspruit like sheep.
They shelled us at Ingogo, but we galloped into range,
And we shot the British gunners where they showed;
I guessed they would return to us—I knew the chance must change—
Hark! the rooi-baatje singing on the road!
But now from snow-swept Canada, from India's torrid plains.
From lone Australian outposts, hither led,
Obeying their commando, as they heard the bugle's strains.
The men in brown have joined the men in red.
They come to find the colours at Majuba left and lost,
They come to pay us back the debt they owed;
And I hear new voices lifted, and I see strange colours tossed,
'Mid the rooi-baatje singing on the road.
The old, old faiths must falter, the old, old creeds must fail,
I hear it in that distant murmur low—
The old, old order changes, and 'tis vain for us to rail,
The great world does not want us—we must go.
And veldt, and spruit, and kopje to the stranger must belong;
No more to trek before him we shall load;
Too well, too well, I know it, for I hear it in the song
Of the rooi-baatje singing on the road.

INSURANCE NOTES.

We understand that Mr. W. B. McNaughton, who arrived by the *Empress of Japan*, will undertake the management of the Sun Life Assurance Company of Canada for Japan, for which Messrs. Jardine, Matheson & Co. are agents. This gentleman is already well and favourably known in the East, and has been connected with the Equitable Life Company for the past 18 months. We wish him every success.

We have received the annual report of the Union Assurance Society, one of the oldest of the English Insurance Companies, the report in question being issued for the 186th year of the Society. We notice that the accumulated funds of the Society now amount to the enormous sum of £3,459,044 4s. 1d. or an advance of over £205,000 since the previous year. Such figures speak for themselves as to the prosperity of the Company and the security it offers to its policy holders. The local Agents are Messrs. Flint Kilby & Co. and Mr. James Johnstone.

Fire Insurance agents declare that 1899 will go down in their history as one of the most disastrous years ever known among them. It is therefore very gratifying to see the fine showing of the London and Lancashire Fire Insurance Company for the same period. In the directors' report, setting forth the results of the business for the year ending 31st December, 1899, they say:—The net premiums, after deducting those paid to other companies in reduction of this company's liabilities, amounted to £841,208 5s. 3d. The net fire losses incurred, including full estimates for all those remaining unadjusted at the closing of the books, amounted to £449,751 6s. The surplus on the working of the business, after making full provision for all commissions, expenses, depreciations, bad debts, and other charges, amounts to £90,298. Adding thereto £39,611 4s. 6d. for interest on investments, there results a total credit balance for the year of £129,909 4s. 6d. This amount, in addition to the balance of £394,730 15s. 6d. brought forward from the previous account, but deducing the interim dividend of £17,020 paid in November last, makes an available total of £507,620. The directors propose to transfer to the reserve and reinsurance fund the sum of £150,000, thereby raising that fund from £600,000 to £750,000: to pay on the 4th proximo a dividend of 8s. per share free of income-tax, making, with the interim dividend already paid, a total distribution for the year of £51,060, or 12s. per share; and to carry forward the remaining balance of £323,580 to the next account. The financial position of the company will then stand as follows:—Capital fully subscribed, £2,127,500; of which is paid-up £212,750; reserve and reinsurance fund, £750,000; balance carried forward, £323,580—£1,073,580.

At the 38th annual general meeting held in Liverpool on April 26th, the Chairman pointed out that up to that date 21 English companies had published the results of their operations during the past year. They had taken premiums of £7,876,141, but the net results, after making the necessary provision for unexpired risk, was a profit of £15,748, or rather less than ½ per cent. on the total amount of business. In the United States the showing was worse. Taking the 76 leading companies, the Chairman said he found these companies had received in premiums last year $114,659,181, and the result of the aggregate working, after making in this case also the necessary provision for unexpired risk, was a net loss of $10,294,177. There was no conflagration in the United States to account either wholly or partially for this very disastrous result. It was simply the outcome, on the one hand, of a steady incidence of everyday fires on a very much more frequent scale than usual, and on the other hand of the absurdly inadequate rates which had been prevailing there—rates which were quite inadequate to meet the ordinary average loss of a series of years, and still more inadequate to meet the excessively heavy losses of the past year.

INDIAN FAMINE FUND.

The Hongkong and Shanghai Banking Corporation at Yokohama send us the following continuation of the names of subscribers to the Indian Famine Relief Fund:—

Amount already acknowledged	¥2,959.30
P. Hodnett	20
L. Pollard	50
P. K.	10
King's Daughters	235.57
T. A. Singleton	50

CORRESPONDENCE.

INDIAN FAMINE FUND ENTERTAINMENT.

To the Editor of the "Japan Mail."

Sir,—In behalf of all those interested I desire to express heartiest thanks to Mrs. Winfield and her coadjutors who were instrumental in making the Entertainment in aid of the Indian Famine Fund so conspicuous a success. To Mr. Booth also, and to all who so kindly assisted in making up the programme, our gratitude is due. I have received from Mrs. Winfield, as the proceeds of the affair, the sum of *yen* 415, the equivalent of which has been sent by draft to Mr. Geo. S. Eddy, of the Y.M.C.A., Madras.

Sincerely yours, Diana Aycar.

Following is the report of the Treasurer:—The receipts from the Entertainment amount to *yen* 415 and the expenses were *nothing*. The above amount includes the sum of 57 *yen* directly and generously contributed.

Anne L. Winfield.

Yokohama, June 6, 1900.

NEWS OF THE WEEK.

The remains of the late Mr. J. Scott were laid to rest in the Cemetery on Saturdayin presence of a large number of mourners. The service was conducted by the Rev. E. S. Booth. Capt Iwata, Messrs. Unite, Wright, Tresize, Paxton, and McKirdy were the pall bearers.

We have been asked by the U.S. Legation authorities to publish the following:—"General McArthur, U.S.A., telegraphs the American Legation from Manila that R. B. Cramer, a dismissed officer of the U.S. Army, is reported travelling in the Orient engaged in swindling, using his credit as an officer."

H.M.S. *Rosario*, a twin-screw steel-sheathed sloop of 980 tons displacement, on her way out to replace the gunboat *Rattler*, arrived at Colombo on May 12. The *Rosario* was built at Sheerness in 1898 at a cost of £65,578, and is fitted with Belville tube boilers, the engines indicating 1,400 horse power with a speed of 13.2 knots. She was commissioned for service on the China station on the 20th March last at Sheerness, and after taking in stores put to sea on the 31st of that month and had a fine passage out; and her last port of call, Perim, was left on the 1st May. Commander Hamilton has had much experience on the China station. The *Rosario* carries two guns—6.4-in., and 4.3-pounder quick-firers, and has a complement of 104 officers and men.

The Queen has been graciously pleased to signify her intention to confer the decoration of the Victoria Cross on Major William Babtie, C.M.G., Royal Army Medical Corps. At Colenso, on Dec. 15, 1899, the wounded of the 14th and 66th Batteries, Royal Field Artillery, were lying in an advanced donga close in the rear of the guns without any Medical Officer to attend to them, and when a message was sent back asking for assistance, Major W. Babtie, A.M.C., rode up under a heavy rifle fire, his pony being hit three times. When he arrived at the donga, where the wounded were lying in sheltered corners, he attended to them all, going from place to place exposed to the heavy rifle fire which greeted anyone who showed himself. Later on in the day, Major Babtie went out with Captain Congreve to bring in Lieutenant Roberts, who was lying wounded on the veldt. This was also under a heavy fire.

The *Daily Telegraph*, writing on April 27, said—It is a far cry to the Orient, but it has been frequently shown during the history of the Fund that the many thousands of miles which intervene do not detract from the sympathetic and patriotic interest of our fellow-countrymen, who are there living in pleasant exile. From no distant land have we, perhaps, received more generous help than in the case of Japan. Recently, with a donation from Yokohama, the busy shipping and commercial centre of Dai Nippon, there came an intimation that the Community had decided to celebrate St. George's Day by making an effort to swell the total of *The Daily Telegraph* Fund. That decision has been carried into effect with splendid success, and to-day we have pleasure in acknowledging the handsome subscription sent by that source, through the Hongkong and Shanghai Banking Corporation, of 3,600 shillings—a sum which appropriately stands in the position of honour this morning, for it is eloquent testimony to the loyalty and generosity of our fellows who have gone to the Far East.

The case instituted by Mr. Bardens against Mr. Tanaka Riyemon, rice merchant, applying for a provisional seizure of property, was again before Judges Oshima, Hipama, and Nozoye at the Kobe Chiho Saibansho, on Monday afternoon. The plaintiff was represented by Mr. Sunagawa and the defendant appeared in person. Mr. Bardens contracted with the defendant for the purchase of rice amounting to *yen* 98,280 in value and defendant failed to carry out the contract, which breach of agreement resulted in Mr. Bardens suing him for damages. He learned that the defendant, who was in possession of a large fortune, has been concealing his property to evade the demand for damages, somehow or other, and therefore instituted an action to intercept the action of the defendant. The decision was delivered in favour of Mr. Bardens, and his application was granted upon his making a legal deposit of *yen* 2,000.—*Kobe Herald.*

According to the *Osaka Asahi*, the amount of *sake* brewed in Nada this year reached 366,716 *koku*, an increase of 16,722 *koku* in comparison with the previous year. Sakai is said to have produced 59,924 *koku*, a decrease of 1,437 *koku*. This year sales of liquor commenced about ten days earlier than last, and freight has risen by about 40 *yen* for every 10 pack horses. Sakai liquors are now quoted at from 26 to 33 *yen* per *koku*, the average rate of increase being 4 *yen*. The appreciation is ascribed to the enhanced value of rice and casks during the brewing season. The demand for *sake*, however, is increasing year by year, and the liquor is even exported to Hawaii, Korea, China, and America. Below are comparative figures for the past three years:—

Year.	Nada. *koku.*	Sakai. *koku.*
1897	364,994	70,962
1898	349,994	61,421
1899	366,716	59,924

It is said that the number of brewers in the two places above mentioned had increased in 1899 to 160 and 64 respectively.

The number of emigrants to Hokkaido during the past four months, as compared with the corresponding period of the two previous years, was as follows:—

	1898.	1899.	1900.
January	25	3	3
February	707	37	18
March	9,968	381	1,403
April	14,641	2,386	7,400

The total for this year includes the gold mines in Esashi, so that the number of real immigrants is comparatively insignificant.

An official communication from the branch Consulate in Seattle, under date of the 23rd ultimo, is published in the *Official Gazette* as follows:—"Immigrants from Japan have of late increased to an alarming extent. On the 15th April over 1,500 were brought by the steamer *Riojun Maru;* on the 17th more than 1,000 arrived by the English steamer *Goodwin* at Tacoma; on the 19th another 1,000 were brought by a German steamer to Victoria. A few days ago 700 men were landed at Portland by a foreign ship. Such a enormous tide of immigration has naturally provoked strong opposition from the white labourers, who are preparing for a gigantic demonstration. The press, too, makes vehement attacks upon the Japanese immigrants. It is desirable, under these circumstances, that some restrictions should be imposed."

It is said that Government has now under contemplation the sending of immigrants to Peru and Madagascar. It cannot, remarks the *Keizai Zasshi*, escape the charge of indiscretion in this matter.

The exhibition of water-colour sketches now being held in Mr. Tamamura's studio in Bentendori is very well worth a visit by any one interested in art matters. There are nearly 200 sketches on view and the whole are the work of Mr. F. Baske and his seven pupils, the result of 40 days spent industriously and entirely in the open-air. Naturally among such a big collection the quality of the work is an ever-varying quantity, but the pieces signed by Mr. Baske or by Mr. Kobayashi are deserving of very warm praise. One little gem takes the spectator to the neighbourhood of Tsurumi beach on a misty morning in early spring-time. The tints are all vague, the outlines of the boats and huts shadowy and indistinct, and the water almost eludes the gaze, but the general effect is strikingly effective. A pretty river scene is treated in sepia, and not far away is a delicate creation in greens and yellows and ethereal blues that takes one in fancy to the shores of Dzushi Bay when earth and sea and sky are enfolded in the poetic glamour of a spring morning. There are several very effective moonlight sketches, with the ruddy light gleaming through the *shoji* of way-side houses; many charming riverine studies; and one bold, breezy conception of

A wet sheet and a flowing sea;
And a breeze that follows fast.

A pleasing subject is one entitled "After the Rain," which is treated very skilfully. Mr. Baske is undoubtedly leading his pupils in the right direction, and the future for some of them is distinctly promising.

THE FOREIGN TRADE OF JAPAN.

[By Mr. Arthur Hyde Lay, H.B.M.'s Legation.]

The foreign commerce of Japan entered upon the new stage with Jan. 1, 1899. The year saw the inauguration of radical changes calculated to have an immediate effect upon trade, and bringing with them possibilities for the future. That being the initial year of the new system, it is as yet impossible to predict with any approach to accuracy what the result of the changes will be, but they would certainly appear to indicate great opportunities for the development of foreign trade. At the same time, Japan is not a new country, and although foreign firms are establishing branches in several places throughout the country, such as Nagoya, and the ubiquitous Chinaman is to be found peddling his wares in many of the inland towns, it is probable that trade will remain largely in its old channels for some time to come, and that the chief centres of foreign trade hitherto existing will not lose their importance. Few foreigners have left the old treaty ports for the interior, and it must be many years before there will be sufficient inducement for such a radical change. So far the opening of the country has had little, if any, effect upon the foreign trade of Japan.

New Tariff.—From the beginning of the year the new customs tariff with its higher rates of duty on imports came into force, and in July all duties on exports were done away with. To give examples from among the new duties, which are of chief interest to British manufacturers, we have those on arms and ammunition, such as cannons, muskets, pistols, side-arms, projectiles, cartridges, &c., 25 per cent. *ad valorem*; locomotive engines and parts thereof, 5 per cent.; machinery and machines, engines of all kinds, and parts thereof, not otherwise provided for; and steam engines, boilers, and parts thereof, 10 per cent.; cotton tissues from .006 yen per square yard on shirtings (gray) to .053 yen per square yard on cotton duck; cotton yarns, 4.180 yen per 100 catties; iron and mild steel, pig and ingot, .083 yen per 100 catties; bar and rod exceeding ¼ inch in diameter, .261 yen per 100 catties; plate and sheet, .296 yen per 100 catties; rails, .129 yen per 100 catties; woollen and worsted cloth, .093 yen per square yard; Italian cloth, .029 yen per square yard; caustic soda, .454 yen per 100 catties; vessels (steam and sailing) and boats, 5 per cent.; railway carriages (passenger), 5 per cent.; freight, 10 per cent. The new tariff contains 497 items of dutiable commodities, in addition to which there are twenty-eight articles exempt from duty, and seven prohibited articles, 532 items being enumerated in all. Conventional tariffs exist wth Great Britain, Austria-Hungary, France, and Germany, and the rates of duty specified above are the lowest, and those which apply to countries entitled to most-favoured-nation treatment. Few of the new duties can be called high, but an amendment of the tariff, made on Feb. 13, 1899, raised the duty on all kinds of prepared tobacco to 100 per cent.; on Chinese alcoholic distilled liquors and spirits, or distilled liquors and spirits of all other kinds not enumerated, to 100 per cent.; on Chinese alcoholic fermented liquors and wines, or

Digitized by Google Original from CORNELL UNIVERSITY

fermented liquors of all other kinds not enumerated, and saké resembling the home beverage, to 80 per cent. The duty on alcohol was at the same time fixed at the rate of 250 per cent. *ad valorem*, which was intended to be prohibitive. The tariff schedule would appear, on the whole, to have been loosely drawn up, as disputes between the customs authorities and importing merchants are of frequent occurrence.

The conditions of trade during the first few months of the year were abnormal, owing to the fact that the new customs duties on imports took effect from Jan. 1. During the months of January and February the value of the goods imported was, in consequence of the large quantity of foreign produce and manufactures which passed into the country during the latter part of 1898, with a view to the enjoyment of the benefits of the old tariff, less considerable than during any two months since 1896. Imports for these two months were exceeded by exports to the extent of £920,362 in value, but the magnitude of the excess was partly due to the greater volume of the export trade for the period. In March, however, the tide turned, and from that month, and more noticeably from May on to the end of June, exports fell off and showed increasingly less values than imports.

AGGREGATE TRADE.—The total trade of the first six months of the year, compared with that for the corresponding half of 1898, is as follows :—

Half-year.	Value.		
(January-June).	Imports.	Exports.	Total.
1899	£9,463,360...	£9,079,561...	£18,542,921
1898	15,798,402...	7,115,805...	22,914,207

Exports for the half year thus exceeded those for the six months ended June 30, 1898, by £1,963,756, while imports marked a decline on the values for the latter period of the large amount of £6,335,042. The first half of the year is, as a rule, the period during which imports are in excess of exports, the bulk of the staple exports from Japan falling within the latter six months. The total trade from January to June, 1899, exhibited a falling-off amounting in value to £4,371,286, though in *yen* values it was larger than that for the whole of the year 1893, when it stood at 177,970,036 *yen*. During the latter half of the year, however, the volume of foreign trade expanded, both imports and exports being larger than for the preceding six months. By the end of 1899 the total returns of foreign commerce for the year had reached the highest figures since the first opening of the country to foreign trade, with the one exception of the year 1898. Imports for 1899 were valued at £22,499,363 and exports at £21,940,760, Total trade £44,440,123, showing a decrease in imports as compared with 1898 of £5,828,982, but an increase in exports amounting to £5,020,066; total decrease £808,916. At the end of October and also of November the balance of trade was in favour of Japan, but by the close of December imports had once again exceeded exports as they have done for the past few years.

Attention, however, must be called to the change which was made by the customs authorities from Jan. 1, 1899, in the method of compiling the returns of imports. In former years the practice was to draw up the tables so that the import figures represented only the original cost of the goods at the place of production or shipment, and in previous trade reports an addition of 15 per cent. was made to cover freight, insurance, and other charges, in order to arrive at a correct estimate of the cost to Japan of imported goods. According to the new system these charges are included in the calculations of the value of imports, and the value of imported articles is now taken to be the actual cost of the articles at the place of purchase, production, or fabrication, with the addition of packing charges, cost of transportation, insurance, and all other charges incurred up to the arrival of the articles at the port of importation. Imports have, therefore, declined much more than is at first sight apparent from the comparative figures in the customs returns.

As pointed out in the report on the trade of 1898, the income derived by Japan from her shipping industry, which continues to expand at no slow rate, must be reckoned as representing one of her "invisible exports." This would more than counterbalance the excess in value on the import side of the account, and consequently the year 1899 must be pronounced a very favourable one for Japan from the point of view of her foreign commerce.

IMPORTS.

The causes which led to the decline in the importation of foreign commodities were: the large quantity of goods imported prior to the coming into force of the new tariff and the resulting accumulation of stocks at the end of 1898, the higher prices prevailing in foreign markets for many of the principal manufactures and natural products required by Japan, and higher rates of freight, the development of home industries, and the diminution in the rice import owing to the supply of domestic requirements by the plentiful crop of 1898. Manufactures nearly all display a striking decrease. Cotton and woollen yarns and most cotton and woollen tissues have fallen to figures considerably less than in 1898. Under the heading of iron and mild steel, the items, with a few exceptions, are represented by lower values. Locomotive engines, and railway carriages, machinery, rails, and fittings thereof, and the materials of bridges and buildings have fallen off largely. Nails and telegraph wire have, on the other hand, had a larger import, the value of the former articles being more than twice that of the previous year. Printing paper, sugar, and watches are other important staples of import which were in much less demand according to the trade statistics. The importation of raw materials has very much grown on the whole, more noticeably in the case of raw cotton and wool.

The importation of raw cotton continues to increase rapidly. This material occupies by far the most important position on the list of the imports of Japan. The reason for the growth in the demand for raw cotton is the steady development of the cotton-spinning industry. One point which merits special mention is the increase of the importation of Egyptian cotton, between two and three times as much being imported in 1899 as in 1898. This is an indication that the Lancashire mills are no longer in undisputed possession of the field as regards gassed yarns, and although native competition has not yet assumed very serious proportions, its growth is merely a question of time. From India the importation of cotton shows a large increase, but of late the tendency has been for Japanese cotton-spinners to make use of the American, rather than the Indian product, in view of the advantage thus obtained, when both quality and price are considered, and the preference for cotton from the United States will probably be more marked during 1900. It seems possible that if the rise in price of Indian cotton remains permanent, some of the Japanese mills may give up mixing their cotton, as they do at present, and take to spinning yarn from the American material only; but in the meantime they are afraid to alter the standard of their spinnings lest a fall should occur in prices in India, when the new crop is gathered in, and the present shortage terminates.

The value of cotton prints imported during 1899 was somewhat less than during the year before. There is a talk of a large establishment being set on foot in Tokyo for the manufacture of cotton prints to compete with the manufactures of Europe. Shirtings similarly show a certain decrease. As the native weaving establishments become more expert in manufacture, the manufacturer of Manchester will suffer more and more from their competition, seeing the advantages which the new tariff gives to the domestic goods.

T-cloths will probably be no longer imported, as the duty is practically prohibitive, and the local mills are able to supply the requirements of the market in Japan.

Contracts for cotton yarns in 1899 were on a small scale, and the foreign importer who brought goods out for sale profited by the steady and abnormal rise in Manchester prices.

A striking instance of the tendency of Japan to import raw materials and manufacture them at home is to be witnessed in the growth of the importation of raw wool. The woollen industry has made great strides in Japan during the past few years. The import duty of 5 per cent. on wool, which was formerly levied, was abolished on April 1, 1896, and the exemption of the raw material from customs charges imparted an impetus to the development of woollen manufactures. The demand for woollen goods and woollen clothing among the Japanese has been rapidly growing since 1896. The value of the raw wool imported during 1899 is set down at £441,452. A rise in the price of wool, as compared with 1898, is noticeable.

Manufactures of iron and mild steel, which during 1898 were imported in much larger quantities than in previous years, exhibited for the most part a decline in importation in 1899. The causes of this falling-off were the accumulation of stocks, which commenced in the spring of 1898, and which resulted in few new orders being given after the middle of that year, and the much higher market prices prevailing abroad, taken together with enhanced cost of freight.

Japan is poor in iron, and her meagre resources of the mineral stand in the way of her manufacturing development along this line, and render it incumbent upon her to seek the raw material abroad. Pig-iron from Great Britain still occupies the most important position. During the year a large Japanese firm imported iron from the Hangyang ironworks in China, and though the material was not of the best quality, it was comparatively cheap, and on the whole pronounced satisfactory. Chinese iron seems likely to be a serious rival to English and American pig-iron in the future as it is at present sold in Japan at about £1 per ton cheaper than that which comes from Great Britain.

MACHINERY AND LOCOMOTIVES :—As predicted in the immediately preceding report on the trade of Japan, the importation of machinery of all kinds, of locomotives and railway carriages, and of rails, has decreased in a signal manner, the reason being that the contracts entered upon in 1898 were on a much more economical scale than in 1897. The figures for 1898 showed a falling-off of some magnitude, as compared with those for the preceding year in the case of machinery and rails, as well as of locomotives and railway carriages purchased from foreign countries.

So, far not many locomotives have been constructed in Japan—about fifteen in all. These have been built at the Kobe Railway Station Works and in the workshops of the Sanyo Railway Company. Engines made in Japan are considered to cost a much less sum than those procured out of the country, but it is a moot point whether this is actually so when all expenses, including wear and tear of shops, &c., are taken into consideration. As regards the merits of foreign locomotives, competent observers who have made a careful study of the question say that the Japanese have become firmly convinced that the British engine is the best. Formerly orders for numbers of engines were sent in preference to the United States, but that was because manufacturers there were prepared to sell at two-thirds of the cost of British engines, and to promise delivery in one-third of the time. The active demand, however, for American locomotives has given the establishments in the United States plenty of work, and they have raised their prices and have ceased to offer the same facilities as to promptness of delivery as heretofore. One thing which still militates against the sale of the British locomotive is the long time taken in the execution of orders, manufacturers at home not having sufficient leisure to contract for delivery as speedily as the Japanese wish. To cite a case in point, an agent for an English firm was recently told by the authorities in the direction of the Hokkaido Railway, where the engines all come from the United States, the line having been planned by Americans, that they would be very glad to place some orders in England but that their regulations forbade them to undertake contracts for more than a year ahead. Consequently the impossibility of effecting delivery of British locomotives in less than fifteen months' time prevented their use on the line in question.

Not the least progressive among the modern industries of Japan is that of railway carriage building. A huge factory for the manufacture of railway carriages, with a capital of close on £100,000 and numbering among its promoters many very influential men, was opened at Osaka on July 5, 1899. The object in view is in the first place the supply of the home demand for railway rolling stock. To the new company, it is said, will fall, the order for the railway carriages to be used on the Formosan Railway. In Tokyo there are no fewer than three large private railway carriage works, at one of which rolling stock for use on the line between Söul and Chemulpho is at present being constructed, and there are two similar establishments at Nagoya, and at least one in Osaka. In addition, the Government works at the Shimbashi and Kobe railway station manufacture some of the carriages for the State lines.

IMPORTS GENERALLY.

The year 1899 was the most profitable one to importers for many years, and the extraordinary rise in values, which extended to most branches of the import trade, helped to compensate merchants for the preceding years, when things were not so favourable. 1900 gives promise of being equally satisfactory from the point of view of the importer, as the absence of large stocks allows him to entertain the hope that any fall in price which may take place in home markets will be followed but slowly in Japan. On the other hand, caution is compelled by the fact that in prosperous times the Japanese dealer has a proneness to purchase excessive stock, while he is apt to leave goods ordered by him in the warehouses of importers at their entire charge when the market turns out to be unfavourable to him.

SPECIE AND BULLION.—The total movement of specie and bullion during the year 1899 amounted to £3,199,470, imports being £2,058,377, and exports £1,141,113. From September till the end of December, the exports show a substantial increase, while the imports exhibit an almost corresponding decrease. Although the grand total gives a balance of £917,244 on the side of imports, for the last four months of the year the excess of exports came to no less than £815,632 in value.

Gold has been leaving the country in sufficient quantity to cause comment and some discussion among Japanese financiers. In these discussions the schemes favoured were (1) raising import duties, (2) fostering industries which would lead to increased exports. It is noteworthy that the drain of specie which gave rise to these suggestions came just after (1) a large increase in import duties, (2) a record export year. There was at one time talk of the imposition of a premium on gold, the case of France being cited in support of the plan. But in France vast amounts of gold coin are in the hands of the public and any such action taken by the Bank of France is of little effect, whereas the conditions in Japan are entirely different, and any step of that nature on the part of this country would be disastrous. The statesmen of Japan, how-

Digitized by Google Original from CORNELL UNIVERSITY

ever, seem quite alive to the fact that the main factor in the problem is the volume of the fiduciary part of the currency, though steady pressure is probably brought to bear in favour of expansion on various pleas.

Large expenditure of the national wealth on armaments abroad involves restriction in currency at home, with resulting starvation of production. As long as it is necessary for the country to live up to nor beyond her income, the want of cheap capital must continue to be felt.

JAPANESE INDUSTRIES.—Japanese industries were in a flourishing state during 1899; numerous undertakings yielded larger returns than they had done for some years, and many new enterprises were started. Although the idea prevalent in some quarters a few years ago that the Japanese were to conquer the markets of the world with their manufactures has died a natural death, there can be no two opinions that they are making rapid progress both in commerce and manufactures.

Their great lack is capital and efficient organisation. If Japan could obtain a sufficiency of foreign capital by encouraging its investment in the country; if small Japanese business concerns and industrial bodies (of which there are so many) would unite and so provide more working capital, and if the Japanese were to bring to bear upon their industries the power of organisation which they have shown they possess in a high degree in the development of their naval and military forces, they would no doubt accomplish much more than at present. Recently tendencies towards the creation of larger capital funds for business undertakings have been seen in the amalgamation of spinning companies, banking corporations, &c., and in the formation of trusts.

EXPORTS.

Since 1868 the export trade of Japan has exhibited a gradual and steady expansion, few years showing lower values of articles exported than those preceding them. In 1869 the value of exports was 12,908,978 *yen*; in 1879 27,505,069 *yen*; in 1889, 70,060,705 *yen*, and in 1899, 214,929,894 *yen*. In no previous year were the exports represented by such high figures as last year, and the increase over the year 1898 was no less than £5,020,066. In *yen* values the export trade was three times what it was ten years ago. The principal causes of the satisfactery condition of the volume of exports lie in the revival in the raw silk trade, the greater activity of the cotton spinning and manufacturing industry as evidenced by the large quantity of yarn and cotton tissues sent out of the country, and the exceptional rice harvest of 1898-99, which provided a considerable surplus of export. The other articles which mainly contributed to the increased exportation were silk tissues, camphor, copper, sulphur, and timber. Exports of tea, matches, mats, and coal remain more or less satisfactory.

The rice crop of the past season was expected to be abundant, and it was calculated that it would be more than 10 per cent. above the average, but storms and floods in the summer and autumn had an adverse effect upon the harvest, and the production for the year 1896 finally turned out to be 194,295,550 Imperial bushels, less than that for an average year, the average of course having been raised by the yield of 1898. The yield for the year 1898, 235,186,247 Imperial bushels, however, having been much the largest for many years past, more than twice as much rice was available for export in 1899 as in 1898.

The second largest quantity, over £222,000 worth, went to Great Britain, whither comparatively little of the cereal had found its way the previous year. Hongkong and the United States of America both took more than twice as much as during the preceding period of twelve months.

Raw silk was exported in much greater quantities than during the year 1898, when the market in the United States was influenced by the existence of a state of war between that country and Spain. The export was, indeed, larger than it had ever been in past years, not even excepting the year 1897, which hitherto was the record season. The increase, however, was more marked in value than in quantity. The improvement in the silk trade is attributable to the more favourable conditions for the sale of Japanese raw silk prevailing in America and also to the abolition of the export duty in July.

TEA.—The quantity of tea exported from Japan during 1899 exceeded that shipped abroad during 1898; but all the same the tea business in Japan is becoming more and more unsatisfactory each year, and, for the foreign merchant at any rate, there is litile or nothing to be made out of it. In quality the tea of 1899 compared unfavourably with the crop of 1898. The practice of picking the young leaves in the early spring before they are properly matured, for the sake of obtaining exorbitant prices for small quantities, is undoubtedly having a very injurious effect on the plants, and it is surprising that Japanese tea-growers do not realise this fact.

Of the teas shipped from Yokohama during 1899, 31 per cent. went to New York, 26 per cent. to Chicago, 14 per cent. to San Francisco, 26 per cent, to Canada, and 3 per cent. to Europe.

COTTON YARN.—Each year the cotton spinning industry exhibits great activity, and the stage of its development may be gathered from the fact that cotton yarns now occupy the second place among the exports from Japan. China proper, and North China in particular, is the best customer for Japanese yarns, and the trade is growing rapidly, and the Japanese mills seem likely to drive the Bombay cotton-spinning factories from a field at one time considered, in the case of low counts, theirs exclusively. From the markets of Korea, Japan has ousted all its competitors. Hongkong, however, does not take the same quantity as in recent years. The increase in the volume of export in 1899, as compared with 1898, was very great, being 19,955 tons valued at £857,995. In the spring of 1899 the cotton industry began to recover from the depression from which it had suffered since the middle of 1897, and which was most intense during 1898.

The lower rates of interest at which capital was procurable, combined with cheaper coal, caused a considerable advance in the value of the shares of the cotton spinning mills, and in the dividends declared by them. The price of cotton yarn rose in consequence of the great demand for yarns in the China market. For the first half of 1899 the profits of the spinning companies were on an average higher than they had been for four years, and the second half of the year is expected to show still better results. The advance in the price of cotton, owing to the bad crops in India and the United States, will, however, affect those mills which had not the foresight or the capital to lay in large supplies.

GENERAL.

DISTRIBUTION OF TRADE.—The statistics given below indicate the proportion in which the trade of Japan is distributed among the countries which principally take part in it:—

Country.	Value. Imports.	Exports.	Total.
British Empire—			
Great Britain.....	£4,577,812	£1,150,557	£5,728,369

Imports from all the leading countries interested in the trade show a decrease, with the exception of those from British India, Australia, and Canada, which have slightly increased. Goods coming from Great Britain show a large falling-off, but during 1899 one or two men-of-war and several torpedo boat destroyers, built in England, which of course are not accounted for in the trade returns, were completed and handed over to the Japanese Government. The explanation of the decline in the importation of commodities from Great Britain, and also from Germany, is that these two countries supply the greater portion of the manufactured materials, and that imports of almost all manufactured goods decreased in 1899, as compared with 1898. The United States on the other hand have also a large trade in raw materials, the importation of which has been greater either in quantity or in value than in the previous years, and these increases counterbalance to a great extent the decline in manufactured goods which has been proportionately as great as in the case of the other countries. Exports have, on the contrary, increased in each case, with the exception of British India and Canada.

On the whole, when the decreased importation of commodities in 1899 is taken into consideration, Great Britain's share in the trade cannot be termed unsatisfactory. The smaller quantity of cotton yarn imported is accounted for partly by the growth in the output of the domestic manufactures. The value of the shirtings and cotton prints purchased from Great Britain was greater than that for 1897. The Italian cloth coming to Japan from home shows higher value than in 1898, and the same is true of the iron and steel. Flannels show a great falling-off, but so they do also in the case of the material procured from Germany. English flannel is said to be finding more favour among the better classes of Japanese than that from any other country owing to its better quality and greater durability. Woollen cloths from Great Britain do not show any great falling-off, less in proportion than that from elsewhere, and have actually increased when compared with 1897. Machinery and engines of British manufacture were less in demand proportionately, but in the case of locomotive engines and railway carriages the decrease was less marked than that noticeable in the importation from the United States. The imports of iron, bar and rod, coming from Great Britain diminished by more than half, but while the decrease in the value of the rails also showed a large decline, the value of the rails taken from the United States, which was more than double that supplied by us in 1898, fell to little more than the same figures for 1899.

TRADE WITH CHINA.—China as a field for Japanese trade is more and more attracting the attention of the statesmen and merchants of Japan. Trade between the two countries has increased with rapidity since the war. The Mitsui Bussan Kaisha sent ten students across to the Continent to study questions connected with Chinese trade and the commercial conditions prevailing there, and is sending ten more this year. And there are many other indications of the intention of the Japanese to make commercial profit out of the opening up of the neighbouring Empire. Exports to China during 1899 were much larger than during 1898. Almost twice as much cotton yarn was exported thither, and cotton tissues, matches, European umbrellas, seaweeds, mushrooms, and coal all show an increase of no small extent.

DIRECT TRADE.—The question of direct trade between the home manufacturer and the Japanese consumer is constantly discussed, and demands careful consideration. Numerous inquiries are addressed to Her Britannic Majesty's Legation by merchants and others at home desirous of opening up direct connection with Japanese purchasers in this country. The only reply that can be with safety returned is that no dealings should be had except with firms of whose financial integrity satisfactory assurance can be obtained. In Japan there are to be found a very large number of petty traders, without capital, whose idea of business is mere speculation, and who, in the event of failing to dispose of their purchases at a profit, are unable to meet their monetary obligations. Most of the firms regarding which inquiry is made are of recent origin and little is known about them even in the locality where they are situated. One of the leading Tokyo daily newspapers recently complained that, generally speaking, foreigners were able to obtain better accommodation at a certain Japanese bank than the Japanese merchants themselves, being allowed to do business on credit, whereas the latter were required to deposit full security. The inference is obvious.

The proportion of the trade in the hands of Japanese merchants is steadily rising. In 1898 the value of the goods imported and exported direct was not quite half of that of the imports and exports which passed through foreign hands; while the figures from the period from Jan. 1 to Dec. 31, 1899, are:—Imports and exports by Japanese, £16,802,836. Imports and exports by foreigners, £27,167,609, which is a considerable increase in the case of the former and decrease in the case of the latter. The balance of the trade is represented by the Government imports.

Although there can be no doubt that the Japanese are actually getting more of the foreign trade into their own hands, yet the customs figures are apt to be deceptive, insomuch as large quantities of goods, nominally imported by Japanese firms in Tokyo and other places, are actually the imports of foreign firms brought into the country for convenience sake, in the name of Japanese merchants.

It must not be forgotten that the foreign population of Japan remains practically stationary, the increase since 1891 being under 500 persons. The latest returns of the foreign residents give the number as 4,718 (British, 1,763), exclusive of Chinese who number about 5,300. The Japanese population, according to the last census taken up to the end of 1898, consists of 44,733,379 souls, an increase of 754,884 compared with the previous year. The largest cities are:—Tokyo, 1,425,366; Osaka, 811,855.

SHIPPING.—In number of vessels and tonnage the Japanese mercantile marine is continuously growing. Statistics up to the end of September, 1899, the latest available, tell that there are 723 Japanese registered steamers, with a tonnage of 489,371 tons, and in addition 2,556 sailing ships, large and small, with a tonnage of 256,896 tons. The leading Japanese steamship companies showed great energy and enterprise during the year 1899.

The enterprise manifested by the Japanese in shipping matters brings into greater relief the apathy displayed by the British shipowners in these Far Eastern waters. Opportunities neglected by them have been taken advantage of by others more far-seeing and blessed with broader ideas and greater aims, though not nearly so well equipped for the purpose, either in money, means, or experience.

It has been mentioned several times in these reports that British steamers trading to Japan, *viâ* the Suez Canal, do not give such prompt and reliable service as foreign lines, and on this account the competition of the latter is much more successful than would otherwise be the case. It would seem as if the British shipowner preferred to sacrifice the interests of the cargo in general for the sake of gaining extra freight between ports *en route*, while the foreign shipowner looks at the matter from a wider point of view, and, instead of attempting to serve a variety of ports with satisfaction to none, devotes his attention to a more limited field, and thus gains the confidence and support of shippers. The result is seen in the fact that the Japanese and German lines, although

Digitized by Google Original from CORNELL UNIVERSITY

carried on with vessels of practically the same type and speed as those of their British competitors, make the fastest and most regular voyages, and such is the preference now given to these lines that they could double their fleets and still secure all the cargo required.

It is regrettable that there is no British steamship company running direct mail and passenger steamers from England to Japan. Other things being more or less equal, British subjects would naturally give the preference to their own line, but as things are at present, the bulk of the passenger traffic between Great Britain and Japan, by way of India, goes to foreign lines, more particularly to those of Germany.

From the spring of 1900 the P. and O. Company are to improve their service from Japan to England, so that it will only be necessary for passengers to make one change, and that at Hongkong, instead of to change twice as heretofore.

German Shipping enterprise in the Far East was very marked in 1899. A new fortnightly direct service to Japan was inaugurated by the North German Lloyd Steamship Company on Oct. 4, and the *König Albert*, a vessel of 10,000 tons, the largest steamer that had ever entered a port in Japan, which reached Yokohama, the terminus of the line, in November, was the first ship placed on the run. The service between Hongkong, where passengers from Europe transhipped, and Japan had previously been monthly, and carried on by one small steamer. The *König Albert* represents the class of vessel by which the trade to these waters will eventually be entirely conducted. She is a distinct advance in size and accommodation upon any British vessel ever sent to the East, and with the advantage of a journey without change from Japan to Southampton the line is rapidly coming into favour with British passengers, who cannot secure anything approaching to similar accommodation on British steamers. All concerned in the management of the new line are using their best efforts to cater for British travellers, and unless our shipowners show themselves better able to keep up with the times they will before very long lose entirely their share in the traffic.

It is a noteworthy fact that while a few years ago British steamers carried a large proportion of the cargo from Antwerp and Hamburg to Japan, they have now almost wholly disappeared from that route.

The Hamburg-America Company is now well established, and maintains an excellent cargo service with European ports.

The shipping trade across the Pacific continues to develop. It has been subject to considerable interruptions on account of the regular vessels having been chartered as transports by the United States Government, but these have been replaced by other boats, and it is probable that the tonnage of goods carried over this route was greater in 1899 than ever before, and for some time the cargo offered was in excess of the carrying capacity of the vessels engaged in the trade. This expansion will undoubtedly continue, and, with the establishment of settled rule in the Philippines, there is ample prospect for the employment of much additional tonnage.

Russia was not idle in 1899 in the matter of the extension of her shipping. Russian vessels passing through Nagasaki *en route* to Port Arthur or Vladivostock disclosed a remarkable increase. The acquisition of Talienwan has had a great effect upon the development of Russian shipping.

The total number of vessels entered at Japanese ports coastwise and from foreign countries last year was 5,883, with a total tonnage of 8,295,531 tons, an increase compared with 1898 of 184 vessels, with a tonnage of 262,286 tons. The British share in the shipping trade was 40 per cent. of the total, but shows a large falling-off as compared with 1898. German shipping, while it increased towards the end of the year, displays a decrease on the whole, while that of France remains more or less stationary. Japanese shipping has grown by more than one-third, that of Russia shows a substantial augmentation, and the United States shipping was almost as large for the first half of 1899 as for the whole of the preceding year.

TAXATION.—The taxes which chiefly affect foreigners resident in or doing business with Japan are as follows:—The business tax which takes the form of a national business tax on value of merchandise sold, a national business tax on rental value of buildings for imports, a national business tax of 1 yen (2s.0½d.) per annum on each employé, and in addition a prefectural tax and also a city tax calculated on the basis of the above three taxes; and an income tax on net profits of business to which is added an additional city tax on the national income-tax. The city and prefectural taxes vary in different districts. Persons with a salary of 300 yen (£30 12s. 6d.) or over pay income tax. There is no tax on servants or labourers. Then there is the registration tax, which is as much as 2½ per cent. on registration of transfers of land on buildings, and there are stamp duties, and various local taxes. As a matter of course aliens in Japan are under the new régime subject to the same laws and must pay the same taxes except in so far as they are exempted by treaty, as Japanese subjects.

'KNOWLEDGE OF JAPANESE.—In spite of the widespread use of the English language in Japan, a knowledge of the Japanese language on the part of the foreigner doing business here is more necessary now than ever it was, and the necessity will be more and more apparent as time goes on. Hitherto, the majority of foreigners have conducted their dealings with Japanese in a foreign tongue, but since aliens have now passed under Japanese jurisdiction it is to their interest to be at least acquainted with the colloquial language of the country whose laws they must obey.

INCREASED COST OF LIVING.—Of the factors contributing to the continued increase in the cost of living in Japan, one of the chief is to be found in the ever-growing spending power of the middle and lower classes of the Japanese. A very considerable number of merchants and others have made money since the opening of the country to foreign trade, and more particularly since the war.

Farmers, too, are becoming more prosperous and feel able to indulge more largely in articles that are not necessaries; and the demand for luxuries among all ranks of the people becomes more apparent year by year. Living is more expensive for the people of the country, and the foreigner experiences the result in the enhanced cost of living in Japan for himself.

Taking the average of the market prices of commodities in December, 1899, we find that it is over 7 per cent. higher than it was in December, 1898. The foreign consumer found that during 1899 Japanese produce, such as vegetables, poultry, game, and eggs, was dearer than the year before. Butcher's meat, while it did not show much rise in price, is far above the prices prevailing in Shanghai, whence many of the foreign residents procure their supplies during the winter months in spite of having to pay freight and other charges. Servants' wages had gone up materially in 1899. One fact there is which strikes the foreign observer as curious, namely—that the Japanese to a very appreciable extent adopt a sliding scale of charges. It is noticeable, for example, that the foreigner who is in popular estimation not very well off can obtain goods at prices much lower than he who is supposed to occupy a much better position pecuniarily. In other words, the purchaser has frequently to pay a price calculated by the seller upon the basis of his supposed income.

RAILWAYS.—According to the latest statistics, those up to the end of the financial year ending March 31, 1899, 3,420 miles of railway were open to traffic, of which 768 miles were Government, and 2,652 miles of private lines. This is an increase during the year 107 miles of State and 342 miles of private railways, 449 miles in all. It is now possible to travel over 1,000 miles in Japan without break and one ticket, starting from Aomori in the north of the main island to Mitajiri on the Sanyo Railway, *viâ* Akabane, Shinagawa, and Kobe.

FIRE ON BOARD THE "TAMBA MARU."

[FROM THE "N.-C. DAILY NEWS."]

A fire broke out on board the *Tamba Maru* on the 12th of May, when about 50 miles from Penang. Oriental-like the engineers' storekeeper, a Japanese, was examining the tap of a kerosene oil tank with an oil lamp, when the oil spurted out over the lamp, and immediately the whole of the engine storeroom was in flames. The fire spread rapidly, rendering the stoke-hole and engine-room almost unbearable. The Japanese stokers cleared out at once, and no amount of persuasion could induce them to return to their work. The third engineer, a young Scotchman, Mr. Wallet, and the 5th, Mr. Hunt, of London, worked like Trojans, and it was mainly through their efforts that the fire was got under. They had to stoke the furnaces and attend to their fire hose with the fire raging round them, although in the confusion on deck somebody had covered up the stoke-hole and engine-room ventilators. With such men as these on board foreigners need never fear to take passage in the N.Y.K. boats. The storekeeper was enveloped in flames and would have been burnt to death, had not the 4th engineer, Mr. Wallace, with great presence of mind rolled him over and over, extinguishing the flames. As it was he was very severely burnt about the breast and arms.

At one time things seemed very ugly. Volumes of smoke poured out of the skylights, and some of the boats were swung out, and provisions were got ready in case of need. To make matters worse a heavy squall and mist came down on us, and when the fog whistle blew the vessel seemed to cry out like a thing in pain. The fire raged for about two hours, during which time 120 gallons of oil were consumed.

This is the third accident since the ship left Kobe. At Moji one of the ship's boats capsized with 20 sailors, happily with no loss of life. Near Singapore the starboard engine broke down, and now we have had a fire. One man remarked that as accidents generally go in threes we shall probably travel the remainder of our voyage in peace. But another and more experienced man said, "We are in the Lord's care and He will take care of all His bairns." With our bairns around us, we felt this to be the true position to take.

Altogether we have about 400 persons on board, including 250 Japanese bluejackets *en route* to St. Nazaire, to take charge of a new cruiser for the Japanese navy. They are all good fellows, and have behaved admirably throughout the voyages. During the fire they worked the pumps and swung out the boats, and if their officers had ordered them down to the stoke-hole they would have gone without hesitation. Their presence gave confidence to all on board.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

KRUGER'S ESCAPE.

Shanghai, June 1.

The newspapers regard the war as over.

It is believed that President Kruger has escaped to Delagoa Bay.

JOHANNESBURG.

The *Daily Mail's* correspondent, telegraphing from Lourenzo Marques, says that Johannesburg has surrendered, and that all the Boers have been dismissed from the forts at Pretoria.

CUTTING THE RAILWAY.

The British have reached Hatherley, thus cutting the railway between Pretoria and Delagoa Bay.

BRITISH PRISONERS.

The British prisoners remain at Waterval. There was no time to remove them.

THE OCCUPATION OF JOHANNESBUG.

Roberts telegraphs from Germiston on Wednesday night that at the urgent request of

Digitized by Google Original from CORNELL UNIVERSITY

the Commandant of Johannesburg he deferred occupying the town for 24 hours, desiring to avoid disturbances inside the town, where there are many armed burghers. Moreover the enemy are holding the adjacent hills.

A SEVERE FIGHT.

Ian Hamilton yesterday fought a severe fight until dusk on the westward of Johannesburg. The Boers held a strongly entrenched position with heavy artillery and blocked the road. The Gordons cleared the kopjes with great gallantry.

Hamilton is now at Florida, on the westward of Johannesburg. Our troops occupy the heights on the north and south of the town.

BRITISH FLAG FLIES OVER JOHANNESBURG.

Roberts telegraphs from Johannesburg at 2 o'clock on the afternoon of the 31st that the troops have occupied the town and the British flag flies over the Government buildings.

PRINCES KANIN AND IWAKURA.

Prince Kanin was presented at the Yildiz Kiosk and received the Grand Cordon of the Osmanieh.

Prince Iwakura has received the Order of the Medjidieh. The Princes have proceeded to Vienna.

FIGHT AT KAALFONTEIN.

Shanghai, June 2.

There was fighting yesterday at Kaalfonten, midway between Pretoria and Johannesburg.

THE KAISER'S CONGRATULATIONS.

The Emperor of Germany has telegraphed his warmest congratulations to the Queen on the success of Lord Roberts.

THE SITUATION AT PRETORIA.

It is believed that the Pretoria telegrams representing the readiness of the Boers to surrender were perfectly accurate, but that the people in Pretoria were misinformed as to the course of events in Johannesburg, and thought that the British forces were nearer to Pretoria than they really were.

RUNDLE.

Rundle fought a severe action on the 29th May near Senekal. The results at nightfall were indecisive.

CAPTURE OF A LAAGER.

The Yeomany captured the rebel laager at Kheis in Griqualand West. Major Orr-Ewing and three men were killed, and three officers and seventeen men wounded.

RACING.

The result of the Oaks is La Roche (1), Merry Gal (2), and Lady Schomberg (3).

GRIQUALAND WEST.

Shanghai, June 3.

A thousand rebels surrounded and fiercely attacked 700 British under Warren at Faberspruit near Douglas. They were repulsed after severe fighting. The British loss was 15 killed and 30 wounded.

CAPE COLONY DISAFFECTION.

At the people's congress of 800 influential Dutch colonists in Graafreinet, violent anti-British speeches were made, and resolutions were adopted declaring that any interference of the Imperial Government in African affairs would be intolerable; that if the Republics were annexed, the country would never know peace and harmony again, and that the restoration of unqualified independence must be insisted on.

HIGHLAND BRIGADE AT HEILBRON.

Shanghai, May 3, 4.20 p.m.

The Highland Brigade arrived at Heilbron on the 29th, having been opposed all the way from Ventersburg. Its casualties were 8 men killed and 4 officers and 32 men wounded.

PRETORIA.

Telegrams from the Transvaal are stopped. The latest was that the Boers hold all the positions around Pretoria.

RUNDLE'S FIGHTING.

Reuter's agent, telegraphing from Winburg under date of the 31st May, says that Rundle's object on May 29th was to drive the enemy from Lindley, where 500 of the Yeomanry were isolated. His object was attained. The engagement was not a whole day affair, as previously stated. The Boers were posted on an elevated kopje. The Guards lost heavily in their attack owing to the accidental firing of the veldt by our own men, which made the khaki conspicuous. The Grenadiers had 33 killed and 98 wounded and the Scots 4 killed and 77 wounded.

LORD ROBERTS.

Shanghai, June 4.

Lord Roberts telegraphs from Johannesburg on Friday, 1st June, that Wavell's brigade remains to preserve order in Johannesburg. The rest of the troops are encamped on the Pretoria road. The occupation of Johannesburg passed off satisfactorily, thanks to the excellent arrangements made by Commandant Krause. The officials consented to remain at their posts pending further arrangements.

NATAL.

The enemy are still at Laings Nek. A few Free-Staters guard the passes of the Drakensburg.

JOHANNESBURG.

Everything is quiet in Johannesburg. The people are surrendering their arms and ponies. Only three Boer guns are left in the fort.

NEWS FROM THE FRONT.

Shanghai, June 5.

Mahon's column from Mafeking is advancing to join hands with Hunter, whose exact whereabouts is uncertain. Hilyard, who recently occupied Utrecht, is advancing through difficult country with the view of turning Laing's Nek.

PRETORIA OCCUPIED.

London, 5th June, 12.04 p.m.

(Received, Yokohama, June 6, 8.52 a.m.)

Pretoria has been occupied by the British.

CONFIRMATION.

Shanghai, June 6.

Pretoria is occupied.

THE WAR.

According to the latest advices from Pretoria, *viâ* Lourenzo Marquez, the British invest Pretoria, and the burgomaster will surrender the city unresistingly as soon as a formal demand is made.

Colonel Mahon has effected a junction with General Hunter.

General Rundle has arrived at Hibernia and is now in touch with Brabant.

THE CAPTURE OF PRETORIA.

Lord Roberts' advance against Pretoria began at day-break on the 4th inst. After marching ten miles to Six-mile Spruit, stubborn resistance was encountered, but the Boers were eventually driven back towards Pretoria. Nightfall prevented pursuit and the British bivouacked on the ground gained. A later telegram says that Roberts made a triumphal entry into the town at two in the afternoon. Details have not been received. Enthusiasm has been caused throughout the empire by the capture of Pretoria. The scenes in London and elsewhere are similar to those that took place on the relief of Mafeking.

ASHANTI.

The absence of news from Ashanti causes uneasiness. Carter with 300 troops has left Fumsu to try to meet the Governor.

IMPERIAL YEOMANRY CAPTURED.

Shanghai, June 7.

The 13th battalion Imperial Yeomanry have been overwhelmed by the Boers near Lindley. Lord Methuen made a magnificent march to rescue them but was too late.

THE SURRENDER OF PRETORIA.

Lord Roberts telegraphs from Pretoria under date of the 5th inst. that the surrender was unconditional. The fighting Boers retreated through the town.

MESDAMES KRUGER AND BOTHA.

Mesdames Botha and Kruger are both in Pretoria.

BRITISH PRISONERS.

The majority of the British prisoners are still at Waterval.

PRETORIA.

The chief civil officials met Field Marshal Roberts early in the morning, and stated their wish to surrender the town.

A few prisoners have been removed, but over 100 officers were in Pretoria.

PLUCKY BADEN-POWELL.

Major-General Baden-Powell has joined hands with General Hunter at Lichtenburg.

THE 13TH YEOMANRY AFFAIR.

The 13th Yeomanry consisted of three Irish companies under Col. Spragge. Apparently the majority of them surrendered.

(There is) a belief that Gen. Rundle's operations relieved them.

METHUEN'S ATTEMPTED RESCUE.

Lord Roberts reports that General Methuen attacked and completely routed between 2,000 and 3,000 Boers after a running fight of 5 hours, the troops having previously marched 44 miles in 25 hours.

BRABANT.

Brabant has twice routed the Boers to the north of Vicksburg. The enemy are now in the neighbourhood of Bethlehem and the British are closing around them.

THE BOXERS' OUTBREAK.

(FROM OUR CORRESPONDENT.)

Shanghai, June 3.

A party of refugees from Paotingfu, consisting of British and American Missionaries and some Belgian engineers, have fought their way through the Boxers. They sustained a loss of four killed and four wounded. Armed volunteers are starting from Tientsin to meet them.

A CORRECTION.

Shanghai, June 4.

News has just been received from Tientsin that there were no missionaries among the refugees who fought their way through from Paoting-fu. Instead of four missionaries being killed, it appears that there are seven Belgians missing, and it is thought that they have been killed. Twenty-three arrived at Tientsin wounded, after awful suffering.

DISTURBED CHINA.

ENGLISHMAN MURDERED AND DISEMBOWELLED.

Shanghai, June 6.

The murders of the Revd. C. Robinson and the Revd. N. V. Norman, of the Church of England Mission at Yung-ching, are confirmed. The Rev. Mr. Robinson was disembowelled.

CHINESE MAGISTRATE FLEES.

The local magistrate has fled to Peking.

THE BOXERS GATHERING STRENGTH.

Antung Station has been burned, and the Boxers have surrounded Langfang.

Digitized by Google Original from CORNELL UNIVERSITY

TRAIN SERVICE STOPPED.

There are no trains running on the line to Peking, as the drivers refuse to undertake the work without a foreign guard.

MORE MARINES LANDED.

The Powers are landing more marines.

DISTURBANCE IN THE PALACE.

A disturbance is reported to have taken place at the Palace in Peking.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

JOHANNESBURG.

Saigon, June 1.

At the request of the Commandant of Johannesburg, Field Marshal Roberts has delayed his entry into the town.

GENERAL DE GALLIFET.

Saigon, June 2.

The Chamber of Deputies, by a vote of 313 to 171, has postponed for a month the discussion of an interpellation as to the motives of the resignation of General de Gallifet, Minister of War.

SOUTH AFRICA.

The English have entered Johannesburg.

CHINA.

News from Tientsin says that, the Boxers having burned the railway station at Tengtai, 350 soldiers of various nationalities have been sent to Peking.

Saigon, June 3.

THE FRENCH SENATE.

The Senate is engaged discussing a project of amnesty for acts connected with the Dreyfus affair. The Prime Minister, M. Waldeck-Rousseau, supports the project and raises the question of confidence.

LABOUR TROUBLES IN FRANCE.

Saigon, June 5.

At Chalons-sur-Saône, in connexion with a strike of metal-workers, stones having been thrown at the gendarmes, the latter fired, with the result that one of the demonstrators was killed and three were wounded.

THE LABOUR TROUBLES IN FRANCE.

Saigon, June 6.

Two of the wounded at Chalons-sur-Saône have succumbed. Everything is quiet.

PRETORIA.

The English have taken possession of Pretoria. The official occupation took place on the 5th (?). There were sharp engagements round the town yesterday.

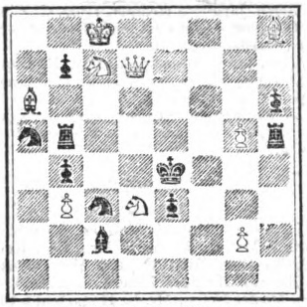
PROBLEM No. 477.

By C. V. BERRY.

First Prize *Reading Observer* Tourney.

Black—Ten Pieces.



White—Nine Pieces.

White mates in two moves.

We have received the following :—

2, Yayoicho, Hongo, Tokyo, June 3rd, 1900.

CHESS EDITOR "JAPAN MAIL."

PROBLEM 474.

Dear Sir,—The solution given to this problem in your issue of June 2nd, omits two important variations :—

White.	Black.
1—R to Kt 7	1—Kt to B 3
2—Q to B 4 ch	2—K must take Q
3—B to Q 2 mate	
	1—R takes B
2—R takes Kt	2—Any move
3—Q to K 5 mate	

Were these considered to be too obvious to require setting forth?

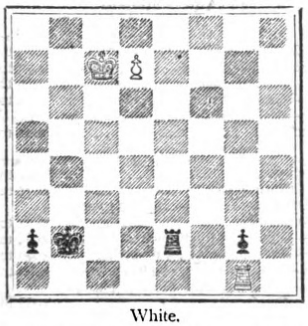
PATT.

CHESS IN TOKYO.

END GAME.

Mr. W. B. Mason sends us the following :—

Black.



White.

The above instructive position occurred recently in a game played in Tokyo, White giving the odds of Q Kt to his opponent. The game was drawn as follows :—

WHITE.	BLACK.
1—R takes P	1—R takes R
2—P to Q 8 (Queens)	2—P to R 8 (Queens)

3—Q to Q 4 ch., and draws by either perpetual check or winning the Rook. Black had winning chances by 2 R to B 7 ch. before Queening, but the temptation to Queen at once was great and the inevitable draw not at all evident.

GAME 596.

THE AUSTRALIAN OPENING.

In a recent match at the Melbourne Chess Club, Mr. C. G. Watson, a rising young player, and until recently the champion of Victoria, employed the Charlick Counter Gambit against Mr. J. E. Crewe, who will be remembered as competing in the major tourney of the Adelaide Jubilee Chess Congress of 1887. The result was an addition to the long list of successes achieved with this latest novelty in the openings. The defence has been tried by the champion, Lasker, Albin, in Vienna, Marshall, in the United States, with success, as well as by numerous players in Australia, Tasmania, and New Zealand. Appended is the game in question, taken with notes from the *Australasian* of March 31 :—

Charlick Counter Gambit.

White—Mr. J. E. Crewe. Black—Mr. C. G. Watson

WHITE.	BLACK.
1—P to Q 4	1—P to K 4
This is the innovation introduced by Mr. Charlick.	
2—P takes P	2—P to Q 8
3—P takes P	3—B takes P
4—P to Q Kt 3 (a)	4—Q to K B 3
5—P to Q B 3	5—B to K B 4
6—B to Q Kt 2	6—Kt to Q B 3
7—Kt to Q 2	7—Castles
8—P to K 4	8—B to K B 5
9—K Kt to K B 3	9—B to K Kt 5 (b)
10—Q to Q B 2	10—Kt to K 4
11—P to Q B 4	11—Kt to K 2
12—B to K 2	12—B takes Kt ch
13—Kt takes B	13—B takes B
14—K takes B	14—K Kt to Kt 3
15—B takes Kt	15—Kt takes B
16—Q R to Q	16—Q to K B 5
17—Kt to K B 3	17—Kt to Q 6
18—R takes Kt (c)	18—Q takes K P ch.
19—K to Q 2	19—R takes R ch.
20—K to B	20—K R to Q
21—R to K	21—Q to K B 5 ch.
22—K to Kt	22—K to K Kt 5
23—R to K 8	23—R takes R
24—Q takes R	24—Q to K 5
25—K to Q B 2	24—Q to K 7 ch.
26—Q to Q 2	26—Q to K B 8
27—Q to Q 3	27—R to K 7 ch
28—K to B 3	28—Q to Q B 8 ch.
29—K to Kt 4	29—R takes Q R P
30—Q to B 5 ch.	30—K to Kt
31—Q to Q 5	31—Q to R 6 ch. (d)
32—K to B 3	32—Q to Kt 7 ch.
33—K to Q 3	33—Q takes Q Kt P ch.
34—K to K 4	34—R to K 7 ch.
35—K to B 4	35—R to K
36—Kt to K 5	36—Q to Q B 6

At which stage time was called, and the game was adjudged to be a win for Black.

(a) Apparently not a good move.

(b) Undoubtedly 9 B takes K P would have been better.

(c) This loses the exchange. The only move to save the Pawn is 18 P to K 5, whereupon Black would have played 18 K R to K, threatening R takes K P ch., with a good attack.

(d) At this point Black should have played 31 P to Q B 4 ch. Then if 32 Q takes P, 32 Q to R 6 ch., winning Queen or forcing mate. If 32 Q takes P 32 R to R 4 ch., winning Queen. Lastly, if 32 K to Kt 5. 32 R to R 4 ch. : 33 K takes R, Q to R 6 ch. ; 34 K to Kt 5. Q to Kt 5 mate.

GAME 597.

(From *Modern Chess-Brilliancies.*)

GIUOCO PIANO.

White—Kölisch. Black—Paulsen.

WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	13 P Q6	PxP
2 Kt KB3	Kt QB3	14 Kt QB3	P QKt3
3 B B4	B B4	15 Kt Q5	Kt Kt2
4 Castles	Kt B3	16 B Kt2	Kt B4
5 P QKt4	BxP (a)	17 Q K3	Kt K3
6 P B3	B K2	18 Kt Q4(b)	B B3
7 P Q4	PxP	19 Kt QB6(c)	PxKt
8 PxP	K KtxP	20 KtxBch	PxKt
9 P Q5	Kt R4	21 Q R6	P Q4(d)
10 B Q3	Kt B4	22 BxP	Q Q3
11 B R3	KtxB	23 P KB4	R Ksq
12 QxKt	Castles	24 R KB3	Resigns.

(a) The game is now transposed into an Evans Gambit.

(b) The initial move of a grand combination.

(c) Extremely brilliant and also sound. Nothing can be finer than the sacrifice of both Knights and the subsequent play. If 19...Q to Ksq ; 20 Kt takes B ch., etc.

(d) If 21.., B to K B4 ; 22 B to B 6, followed by R to Ksq, winning.

TEA.

There is not much demand at present for the highest grades, and consequently the quotations remain more or less nominal. From Common to Medium there is some advance. The results of the present season so far do not compare well with the corresponding period of last year. The total settlements for Yokohama are 82,828 piculs as against 106,455 last year. For the whole of Japan the total is 28,000 piculs less than last year. Prices are on the whole 10 per cent. higher, and with increased freight teas are laid down on the other side at one to two cents. advance.

TORTURING DISFIGURING HUMOURS

ITCHING, BURNING, AND SCALY ERUPTIONS OF THE SKIN AND SCALP, WITH LOSS OF HAIR.

The agonizing itching and burning of the skin, as in Eczema; the frightful scaling, as in psoriasis; the loss of hair and crusting of the scalp, as in scalled head; the facial disfigurement, as in pimples and ringworm; the awful suffering of infants and the anxiety of worn-out parents, as in milk crust, tetter, and salt rheum — all demand a remedy of almost superhuman virtues to successfully cope with them. That Cuticura remedies are such stands proven beyond all doubt. No statement is made regarding them that is not justified by the strongest evidence. The purity and sweetness, the power to afford immediate relief, the certainty of speedy and permanent cure, the absolute safety and great economy, have made them the standard skin cures and humour remedies of the civilized world.

Those who have suffered long and hopelessly and who have lost faith in doctors and medicines may make trial of these great curatives with the most gratifying success. The treatment is simple, direct, agreeable, and economical, and is adapted to the youngest infant as well as adults of every age. *Bathe the affected parts with Hot Water and Cuticura Soap to cleanse the surface of crusts and scales, and soften the thickened cuticle. Dry, without hard rubbing, and apply Cuticura ointment freely, to allay itching, irritation, and inflammation, and soothe and heal, and lastly take the Cuticura Resolvent to cool and cleanse the blood.* This sweet and wholesome treatment affords instant relief, permits rest and sleep in the severest forms of eczema and other itching, burning, and scaly humours of the skin, scalp, and blood, and points to a speedy, permanent, and economical cure when all other remedies and even the best physicians fail. The SET, consisting of Soap, Ointment, and Resolvent, or each separately, may be had of all chemists and stores where medicines are sold throughout the world.

LEA & PERRINS' SAUCE.

Observe the Signature

Lea & Perrins

In Blue Ink across the Outside Wrapper of every Bottle.

ORIGINAL WORCESTERSHIRE

UNTOUCHED BY HAND.

MELLIN'S FOOD

For INFANTS and INVALIDS.

When prepared is similar to Breast Milk.

MELLIN'S FOOD WORKS, PECKHAM, LONDON, ENGLAND.

Ideal Milk

Enriched 20 per cent. with Cream.

STERILIZED— NOT SWEETENED.

A Perfect Substitute for Fresh Milk.

Superior in quality to every other brand of Unsweetened Milk.

DINNEFORD'S

The Universal Remedy for Acidity of the Stomach, Headache, Heartburn, Indigestion, Sour Eructations, Bilious Affections.

The Physician's Cure for Gout, Rheumatic Gout and Gravel; the safest and most gentle Medicine for Infants, Children, Delicate Females, and the Sickness of Pregnancy.

MAGNESIA

Sold Throughout the World.

N.B.—ASK FOR DINNEFORD'S MAGNESIA.

LIEBIG COMPANY'S EXTRACT

Should be in every house for use in time of sickness and emergency. Thousands have been brought through illness by its timely aid. Made from the finest cattle the world produces, it never varies nor deteriorates in quality however long it is kept, but be sure to buy the Company's signed J. v. Liebig in blue. There are imitations which have not the same flavour and are not so carefully manufactured.

HOLLOWAY'S PILLS

Cure Indigestion, Bile, Sick Headache, Giddiness, Palpitation, and all Internal Disorders.

THESE PILLS ARE PURELY VEGETABLE; they contain no deleterious matter, and may be taken by the most delicate.

Manufactured only at 78, New Oxford St. (late 533, Oxford St.) London. Sold by all Chemists and Medicine Vendors

WATERING APPARATUS

Non-freezing & Ordinary Hydrants and Street Washers.

The Japan Weekly Mail.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 16TH, 1900.

BIRTH.

On the 12th June, at No. 3, Aoicho, Akasaka, Tokyo, the wife of H. S. BICKERTON BRINDLEY, of a Daughter.

DEATHS.

On May 7th, 1900, at 38, York Road, Tunbridge Wells, England, ALFRED JOHN WILKIN, late of Messrs. Jardine, Matheson & Co., Yokohama.

At the Methodist Hospital, Brooklyn, New York, on Monday, May 14th, 1900, ALMEDA RUTH, beloved wife of J. O. Spencer.

SUMMARY OF NEWS.

THE Boers have evacuated Laing's Nek. Fighting continues north and east of Pretoria.

A FIRE broke out on the morning of the 9th inst. at Sapporo. A post office and thirteen houses were burnt.

ON the 3rd instant the Prince Imperial presented 3,000 *yen* to the three villages at Numazu as a contribution towards education expenses.

A FATAL case of plague having occurred on board the P. & O. steamer *Rosetta* while in Yokohama, the vessel has been placed in quarantine.

MADAME GASTARD, who fired several revolver shots at M. Francois on Friday week, has been admitted to the Yokohama General Hospital.

AT Pretoria at the end of May, Transvaal paper money was circulating at 80 per cent. discount. Becket's firm offered £1 in gold for £5 in paper.

THE *Daily Express* says it learns that Queen Victoria has definitely decided to spend six weeks of her holidays during the summer of 1901 in Ireland.

THE troubles in China are increasing. A Japanese Secretary of Legation has been murdered. All the Powers have handed marines. Russia has sent a very large force.

SHIRATORI GENJIRO, Proprietor of the *Nisseiro* (restaurant), of Otamachi Gochome, Yokohama, was arrested by the Isezakicho Police on the 7th instant on a charge of forging a seal.

AT the conclusion of General Sir George White's visit to Windsor the other day, Queen Victoria decorated the defender of Ladysmith with the cross and star of the Royal Victorian Order.

LAN CHAONG, compradore to the Pacific Mail Steamship Company and a prominent member of the Hongkong Chinese commercial community, has succumbed to an attack of plague.

REPLYING to a question on the subject, in the House of Commons, the Financial Secretary to the Treasury, Mr. R. W. Hanbury, said the cost of the war up to March 31st was $116,250,000.

ACCORDING to the *New South Wales Government Gazette*, the estimated population of New South Wales on Dec. 31, 1899, was 1,356,650—729,005 males and 627,645 females. This shows an increase of 12,010 persons from July 1 to Dec. 31, 1899.

THE British in the hands of the Boers at Pretoria learned by some extraordinary means of the British victories at Mafeking as soon as the Transvaal authorities, and built bonfires and sang "God Save the Queen."

THE East Siberian Syndicate (Limited) has been registered with a capital of £100,000 in £1 shares. The object is to prospect and explore, develop and work lands, mines, mineral ores, mining rights, and claims in any part of the world.

HATTORI, the employe of the Oriental Hotel, who was charged by the police with having acted as a guide to certain foreigners, though not possessing a guide's license, has been acquitted by the Ku Saibansho, owing to lack of evidence.

FIRE broke out at 2.20 a.m. on Saturday at the store house of Hosaka Torasuke, waste paper seller, 15, Fukutomicho Ichome, Yokohama. Nine houses were destroyed and eleven damaged. It is stated that the place was purposely set on fire.

THE Lourenzo Marques correspondent of the *Times* says that he has it on unquestionable authority that President Kruger has transferred the bulk of his property in the Transvaal to personal friends in order to avoid its confiscation by Great Britain.

THE long-distance telephone service will be extended as follows from the 1st July:—Between Tokyo and Nagoya, fee 2 *yen*; Yokohama and Nagoya, 0.95 *yen*; Nagoya-Otsu, 0.40 *yen*; Nagoya-Kyoto, 0.45 *yen*; Nagoya-Osaka, 0.55 *yen*; Nagoya-Sakai, 0.60 *yen*; Nagoya-Kobe, 0.65 *yen*.

IT is rumoured that the Prince of Wales contemplates a visit in the autumn to the West of Ireland. He will, it is believed, make a coasting tour in his yacht, and having touched at Belfast he will visit Sligo, Westport, and Galway, landing on Tory Island, Clare Island, Achill, and Arran on his way.

AN interesting subscription to the *Daily Telegraph* shilling fund for soldiers' widows and orphans is that sent from Shanghai, from "Three in a houseboat on the Yangtsze-Kiang, as a thank-offering for a delightful trip and for having escaped the perils of the Upper Yangtsze rapids." Two of the party were ladies.

A PROJECT is afloat to establish a tobacco company at Ninsen, Korea. Capitalists of the Kimura Gomei Kaisha intend to ask the Korean Imperial Household to invest 40,000 *yen*, they themselves furnishing a similar amount. Mr. Murakami is said to have been despatched for Korea in connection with the business.

STATISTICS of the Suez canal traffic for 1899, show receipts of $17,510,142, of which British steamers contributed $11,658,325; German and French follow with $1,627,351 and $1,100,610 respectively, American ships furnished $136,230. The total receipts are the greatest in the canal's history. The first year, 1870, they were but $838,791.

THE construction of the mint at Ryusan, Korea, has been completed, and trial workings are now being made. There is active competition for the privilege, the First Bank of Japan, and a capitalist named Umeuchi being among the applicants. The former has on hand 700,000 *yen* in $1 silver which is no longer legal tender in Japan, and naturally the Bank jumps at the opportunity of recoining this.

AT 11 o'clock on Sunday night two Russians entered a Nagasaki confectioner's and made away with the cash box. Early the next morning the same men, armed with knives, made their appearance in Saitamachi, where they met an old Japanese, from whom they obtained by threats the sum of *yen* 11. Later in the day the two men were arrested by the police. They are deserters from the battleship *Rurik*.

IT is said that Captain Lambton, of *Powerful* fame, is to be the successor to Vice-Admiral Sir John Fullerton as Commander of the Royal yacht *Victoria and Albert*. Captain Lambton was a favourite with the Prince and Princess of Wales long before the present war made him a popular favourite, and it was to him that the Princess of Wales addressed the telegram containing the now historic phrase, "Long live the handy man!"

THE Russian whaling steamer *Nicolai* (132 tons), which stranded on Saturday last off the north-eastern part of the Tsushima Island, was on her way to Nagasaki from a Korean port, having in tow a junk laden with whale-flesh. On receipt of the news the Russian steamer *Alexander* left Nagasaki on Sunday morning for the scene of the accident. The *Nicolai* was built at Christiania in 1895, and is owned by Count Henry Keyserling of Russia.

IT is estimated, says *Science Siftings*, that each cavalry man among the forces in South Africa will need four remounts during the year. A veteran officer, in referring to this point, says the hardiest and most effective cavalry forces the world ever saw were some of the Confederate squadrons in the American Civil War. Forrest's troop, harassing Sherman during the operations of the march to the sea, used up horses at the rate of 11 per man in 12 months.

AN amalgamation has taken place between the American Trading Company and Messrs. Flint, Eddy & Co. of New York, two of the most important general export mercantile companies in New York. The former Company has branches in England Germany, China and Japan, and the latter in South and Central American countries, Mexico, Australia, India and the Philippines. The combined value of exports from the United States in 1899 of these two Companies to various countries, was over fifty million *yen*.

THE WAR.

Monday, June 11.

President Kruger is becoming quite farcical. He reminds us of Mr. Snodgrass, who, when the fight with the police had been handsomely finished by Sam Weller and others, took off his coat and announced that he was going to begin. One of the two South-African republics has been over-run by the British troops and annexed by the British Government. The capital of the other, as well as the only town of real importance, the town of the gold mines, have been captured. The Boers have been driven back from every position occupied by them and have been defeated in every one of their enterprises. Yet President Kruger announces that the real struggle is only now beginning. The wreck of all his high hopes and the succession of reverses his burghers have experienced have, perhaps, impaired the old man's reasoning powers. Otherwise he should surely see the foolishness of talking about commencing in earnest when nearly everything worth fighting for has been lost.

Tuesday, June 12.

Mr. Webster Davis, recently Assistant-Secretary of the Interior in the United States Government, paid a visit to South Africa and conceived a very strong respect and admiration for the Boers. His impression as to their right to be left independent was so strong that he resigned his official appointment in order to publicly plead their cause, which he has done, we are bound to say, in a manner rendered all the more effective by his carefully refraining from any of the abuse or sweeping accusation that disfigures the writings of most of the Boer partizans. But he has been exceedingly unfortunate. He contributed an essay to the *Independent* for May under the heading "The Boers must win." The essay saw the light just before the capture of Johannesburg and Pretoria, and these events have imparted a rather farcical character to the following prediction made in the course of Mr. Davis' article:—

> But the slaughter seen so far will be as nothing to that which would ensue before Pretoria could be taken. The Boers' capital is finely situated for defensive purpose, its fortifications are immensely strong, and it is provisioned for years. Moreover, all the Boer women who can possibly be spared from their homes will aid the men in the defence of the capital. They are fine markswomen, some as good as the men, and when I was in Pretoria they were practising every day with the rifle. A few of these women are in the trenches now.

Seldom has a prophecy been more unlucky. Almost before the sheets had left the press, Pretoria had fallen without a struggle. The only thing now to be said about the Boers is that their stout-hearted old President is keeping up appearances with dogged perseverance. When all is practically lost he announces that he is going to begin fighting. There are certainly some thousands of Boers that share their President's unflinching determination, and it is not impossible that these men, when they are brought finally to bay among the Lydenburg hills, may make a stubborn resistance. But we can not ignore the fact that ever since Cronje's surrender the Boers have not stood up once to repel a British attack. Paardeberg seems to have been their *coup de grâce*. Since then they have been merely proclaiming their intention of defending places, and have been abandoning them at the crucial moment. They have shown great skill in effecting rapid retreats without any loss of material, but their adroitness in that respect illustrates the fundamental fault of their fighting systems, namely, its limitation to defensive tactics. Their preparations for retreat are always complete; their preparations for attack are never effective. It does not pay to have troops go into battle with the conviction that everything is ready for getting out of it comfortably and safely. The Boers seem to have carried that conviction into all their fights, and it has made them emphatically weak-kneed. Ladysmith was their *magnum opus*. There they showed admirable tenacity, and their want of dash did not disfigure their operations conspicuously, since to reduce the town by starvation would have been quite as legitimate from a military point of view as to capture it by assault. But it is clear that the credit they achieved by safely moving away all their guns and troops from Ladysmith was not deserved, for had not the garrison been too much weakened to assume the offensive, the Boers would have suffered a crushing disaster in their retreat from the lines of siege. They doubtless felt a sense of intense relief when they found themselves beyond the reach of effective pursuit. But it seems as though the peril they then escaped so narrowly and the capture of Cronje's army greatly unnerved them. They have been thinking ever since of avoiding disaster for themselves rather than of inflicting it on their foes, and their fighting has shown a corresponding want of backbone. On the other hand, if that analysis be correct, their final stand in the Lydenburg region may be of a much higher order than their fighting during the past two months. With nothing to lose but their independence they may possibly fight a grim fight. We do not expect it, however. Pretoria appears to us to have been the crisis. The whole resources of the Transvaalers had been employed for years to render it impregnable, and nature had contributed fortifications which rendered the position almost ideal for defence. A few thousands of resolute men might have there defied the British army for months, unless Lord Roberts decided to make a ruthless sacrifice of life. With the examples of Ladysmith, of Kimberley, and of Mafeking before their eyes, the Boers should not have wanted encouragement to defend Pretoria. That they could not nerve themselves to make the effort does not suggest much obduracy among the Lydenburg hills.

Thursday, June 14.

The telegraph does not bring us any further particulars of the Roodeval catastrophe, and we must conclude that it is one of those incidents which will be only too likely to happen until the Boers are more effectually broken up. They themselves have hitherto managed to evade similar disasters, but their immunity has been purchased at the expense of fighting efficiency, for by invariably retreating before any serious risk was incurred, they have deprived their resistance of all strength. The British can not adopt similar tactics, even if they were disposed to do so. They have to guard nearly a thousand miles of communications, and they are always to be found at spots pretty clearly indicated by the nature of their duty. Therein lies the Boers' opportunity. They have at least one corps of some three thousand mounted men organised with a view to maximum mobility, carrying eight days' rations in their holsters, and capable of launching themselves, within three days, at any point of the British line of communications a hundred miles distant. They have with them two or three machine guns, and when they obtain information as to the whereabouts of a British detachment of infantry rendered immobile by the nature of its task, they can be tolerably sure of achieving a *coup*. The results, however, are paltry, for their mobility has been secured by rendering them temporarily independent of any fixed base, and it follows that even if they manage to throw themselves across the British line of communications, they can not stay there long enough to be a serious menace. Meanwhile, the time for such enterprises is rapidly drawing to a close. The fall of Harrismith and the opening of the Drakensberg passes will reduce the Boers to insignificant detachments, in the Free State at all events.

CHINESE AFFAIRS.

Saturday, June 9.

At length the Chinese Government has put it foot down resolutely, and the result is a crushing lesson for the Boxers. General Nieh—whom we all remember on account of the part he played in the war of 1894-5—is said to have attacked the insurgents in the neighbourhood of Lôba (?), killed 500 of them and burned five of their villages. Unless the figures are greatly exaggerated, such a *coup* ought to end the disturbance. Meanwhile the Foreign Powers have been adopting vigorous measures to protect the life and property of their nationals. Large forces have been landed by the united squadron. There is some difficulty in discovering the exact distribution of these marines—whether there are 525 in Tientsin and 345 in Peking, or whether the latter number is included in the former—, but it is at any rate certain that the British Admiral has put ashore an additional detachment of 180, and the Japanese Admiral, a further contingent of 28. The railway between Peking and Tientsin has also been re-opened to traffic, and, on the whole, it seems fair to say that the crisis is past. The Powers are evidently working in unison, and in the face of their combined action China will be powerless to resist a demand for just reparation, even supposing that she had any disposition to resist it, which we do not believe. The *Jiji Shimpo* urges that Japan ought to take the lead in recommending some combined representation which would have the effect of finally drawing China from her position of conservatism.

A copy of the decree issued on May 30th by the Empress-Dowager for the suppression of the Boxers, is published by the *N.-C. Daily News*, having been telegraphed to that journal from Peking:—

> We issued yesterday a special Decree concerning the Boxer outrages the day before and gave orders for their immediate suppression. Now the first thing of importance is to discover and capture the real leader and culprits and disperse their followers. At the present moment we learn that the people in the vicinity of Peking and Chihli province are getting excited and unsettled, hence if measures be not taken for the speedy suppression of the outbreak it will be difficult by-and-by to distinguish the really guilty from those who have been merely led by the excitement of the moment. It will be hard to root out those who have thus incited the ignorant country people. We hereby command Chu'ng Li (Imperial Clansman), Commandant of the Peking Gendarmerie, the Governor of Peking, the Police Censor of the Five Cities of the Capital, and the Viceroy of Chihli as well as those holding military commands, to combine and arrest the real disturbers of the peace and all who heartily desire to commence a rebellion against the Government, and to punish all such to the severest extent of the law. Let there be no more shirking of responsibilities and delay or attempt at whitewashing the matter at a time like this, and if there be failure in obeying our commands the responsibility will rest on the said Ch'ung Li and the civil and military officials above noted; we are determined that there shall be no leniency this time. As for those persons who have been found merely to have followed in the wake of, and encouraged the rioters without actually joining in the riots, these also must be strictly warned from doing so again and immediately dispersed on pain of condign punishment.

Digitized by Google Original from CORNELL UNIVERSITY

Monday, June 11.

Telegrams from Peking represent the British Minister as taking a very strong line. The Foreign Representatives had agreed to wait until Saturday, the 9th instant, before adopting any decided policy of active interference, but, in the meanwhile, Her Majesty's Minister, in obedience, doubtless, to instructions from London, sought audience of the Empress Dowager, and formally announced that, unless vigorous and effective means were immediately employed by the Chinese Authorities to quell the disturbance, the task would be undertaken by British troops. This intelligence is forwarded by the correspondent of the *Yomiuri Shimbun*, and we do not vouch for its correctness. A telegram to the *Asahi* says that the railway service between Peking and Tientsin is interrupted, and that no prospect exists of its being quickly restored. It that be true it is a serious matter, for the distance between the two places is 90 miles, and it is a matter of no small difficulty to move troops by road or river. The insurgents, meanwhile, seem to be pushing on steadily, so that the crushing defeat said to have been inflicted on them by General Nieh becomes rather apocryphal.

Tuesday, June 12.

It is evident that the Chinese Government has placed itself in a most embarrassing position by its curiously tolerant attitude towards the Boxers. Reports from Peking seem to indicate that a strong blow has at length been struck, that, in an engagement at some point between Peking and Tientsin, six hundred of the Boxers have been killed out of a force of about five thousand who opposed the Government's troops. This statement, however, requires confirmation. The engagement is represented as having taken place on the 7th instant, whereas several items of subsequent intelligence show the Foreign Representatives consulting as to the advisability of taking the law into their own hands, and inform us that the British, the Russian, the American, and the French Representatives have made independent announcements of their resolve to hold the Chinese Government responsible, and to make provision on their own account for the safety of their nationals' lives and property unless the Peking Authorities interfere immediately and effectually. It appears to us that all this activity on the part of the Foreign Representatives can not be reconciled with the allegation that General Nieh had already moved the Imperial forces against the insurgents and had inflicted a crushing blow on them. Moreover, news comes of further outrages; of the cutting of the Peking-Tientsin line; of the slaughter of native Christians—one account says twenty, another forty—, and of the burning of two churches. Whatever the Peking Government may now do, it will stand convicted of criminal negligence in the past. We can not imagine that it will show the extreme unwisdom of giving to foreigners a pretext for taking the law into their own hands. Probably the Tsung-li Yamên has hitherto regarded that contingency as quite remote. It has counted on cooperation as a necessary feature of foreign armed interference, and experience shows that cooperation for purposes of military activity is well nigh impossible to Occidental Powers in these days of inter-State rivalry. But a sudden change has come over the situation. Instead of struggling to disentangle the complications precedent to united action, the Powers have suddenly displayed a disposition to compete for the lead. By which of them the step was taken that induced this metamorphosis of attitude, there are as yet no means of certainly judging. But rumour lays the responsibility on Russia's shoulders. She is reported to have engaged in secret negotiations of some kind with the Chinese Government, while openly professing to be acting in loyal concert with the other Treaty Powers, and these latter consequently found it necessary to assert corresponding independence. Rumour, as moulded in British news factories, always takes a form disagreeable for Russia, always represents her as the villain in the play, waiting to be wicked whenever the opportunity offers. This last tale has to be received, therefore, with the greatest caution. But whatever may have been the train of circumstances leading up to the result, there can be no doubt about the fact that the Powers are now asserting their independent right of action, and China, if she still possesses any of the astuteness displayed by her in the past, must feel like the bird in the fable when it heard the farmer declare his intention of putting in the sickle on his own account. At the eleventh hour she will probably put forth her full strength—such as it is—and crush these insurgents. It will not matter to her that her own insouciance is largely responsible for the heavier penalty they will have to suffer. But it may matter very much to her if the ease with which she finally subdues the riots furnishes an index of the negligence she showed in not dealing with them earlier. She doubtless feels persuaded that, although the Powers may have been temporarily dissociated by rivalry, they will fall into line again when confronted by the question of concessions. In that she is probably right, provided always that she herself does the unaided work of crushing the insurrection. But if she once suffers a Foreign Power to take it in hand, a troublesome settlement will be in store for her.

There is a disposition on the part of some Japanese journalists to advocate stalwart action by this empire. Japan could embark a regiment—twenty-five hundred men—for the scene of the trouble within 24 hours, and she would thus be in an unquestionable position to take the lead in any operations that might seem necessary. We can well appreciate and sympathise with the feeling that dictates this course. To many Japanese the present occasion must seem uniquely adapted for utilizing the military energy which the country has been accumulating since 1895. Perhaps, too, the time has at last come when China must be either prised in her entirety from the groove of stagnation, or taken out of it by the process of disruption. We do not venture to express a definite opinion on that point, without knowledge of many things that are still obscure. But Japanese statesmen possess the required knowledge and will act on it, without displaying precipitancy which might expose the nation to damaging charges of restless ambition.

Wednesday, June 13.

It need scarcely be said that the state of affairs in China causes much uneasiness in Japan. Rumours of all kinds are received, but nothing appears to be quite certain except that the Chinese Government is behaving with extraordinary perfunctoriness; that the patience of the Foreign Representatives is well nigh exhausted, and that the combined squadrons at Taku have landed about a thousand men, of whom a considerable part have proceeded by train towards Peking, carrying tools and material to repair the railway. There is a rumour that the Government's troops have been signally defeated by the insurgents in the neighbourhood of a village called Yang, and there is also a rumour that General Nieh, who was said to have killed 600 of the Boxers, has been reprimanded by the Throne for excessive severity. Telegrams published by Japanese newspapers put the Boxers' total strength at eighty thousand, and say that the spirit of disaffection has spread to Chefoo and Newchwang. It is even asserted that there has been an attack on the foreign settlement at Chefoo, but no particulars are yet to hand. Admiral Seymour appears to have landed in Tientsin and assumed command of the operations on shore, and the *Terrible* is believed to be on her way from Hongkong, carrying a thousand troops supplied by the garrison of that place. There are, of course, many strange reports about Russia's doings. She is in a specially favourable position for despatching a strong force, since she has many thousands of troops in the Liaotung Peninsula who can be carried to Chihli either by rail or by ship in a very brief time. But there is no trustworthy indication that she contemplates any action independently of the other Treaty Powers. The Japanese Authorities are understood to have ordered the *Tokiwa*, the *Takasago*, the *Akitsushima*, and the *Yoshino* to rendezvous at once in Saseho, but we are unable to say whether these four ships are destined to reinforce the fleet at Taku. There is, however, a strong disposition on the part of Tokyo journals to urge the despatch of a considerable body of Japanese troops. Even the level-headed *Jiji Shimpo* thinks that further delay in this matter would be culpable; that China must now be considered to be without an efficient administration, and that, as the Foreign Powers are not at all likely to misconstrue Japan's action, she should take immediate advantage of her exceptional position by sending forward a substantial body of troops. Rumour says that the Tokyo Government has already taken preliminary steps, and that a mixed Brigade—about 4,000 men of all ranks and arms—has been warned to hold itself in readiness for immediate embarkation. Japan is naturally reluctant to take the lead in putting an extreme construction on China's attitude, but, on the other hand, this is an unique opportunity for her to come to the assistance of Occidental Powers in suppressing an insurrection which daily assumes more and more the complexion of an anti-foreign uprising, pure and simple. With scarcely any exception the objects of the insurgents' attacks have been Christian converts, the persons of foreigners, and the material evidences of foreign civilization. In any State claiming to possess ordinarily effective machinery for the preservation of order, strong measures to check these outrages and to punish their perpetrators would have been taken long ago. But the Chinese Government, with strange infatuation, stays its hand. It appears to be repeating the policy of culpable indifference that has been charged against Chinese local officials in almost every case of anti-foreign violence. In the present instance, however, the disgraceful performance is taking place under the very eyes of the Foreign Representives, who certainly can not act the part of passive spectators any longer. How the conduct of the Peking Authorities is to be explained we are unable to conceive. The only credible hypothesis is that they rely on the rivalries and jealousies of foreign Powers to save them from any serious consequences, and that the severest reparation likely to be exacted by Occidental States seems to them less formidable than the estrangement of the anti-progressive section of their own nationals. If that be the explanation, the gravity of the crisis can

Digitized by Google Original from CORNELL UNIVERSITY

scarcely be over-estimated, for it is scarcely possible that Western States will hereafter entrust the duty of protecting the persons and properties of their nationals to a Government which has shown that it believes its tenure of power to depend upon placating its anti-foreign subjects.

The *North China Daily News* publishes the following telegram, received from Peking under date of June 5th:—

At a secret conclave of the Empress Dowager's principal advisers held at the Palace last night it was decided after a long discussion not to crush the Boxers, as they are really loyal to the dynasty and if properly armed can be turned into valuable auxiliaries of the army in opposing foreign aggression. Jung Lu and the Prince of Li were the only ones to oppose the measures, but were overruled by Prince Ching, the Prince of Tuan, (the Heir-Apparent's father,) Kang Yi, Ch'i Hsui, and Chao Shu-chiao. Wang Wen-shao was silent, while the Empress Dowager appeared to keep her own counsel. In the mean time the Boxers seem to be everywhere; hundreds are joining them daily and make no secret of it. The Manchus, without exception, are members of the society and openly flaunt the distinguishing badge of the organisation—a red girdle. The situation is hourly growing more critical, and, unless the Empress Dowager backs up Jung Lu, there can be no peace in the country. If the countryside rise up, the couple of thousand foreigners and their guards here will be but a mouthful to the 200,000 Boxers on the spot, without counting the Grand Army of the North.

Thursday, June 14.

The telegraph between Peking and Tientsin not being available at present, the news received from China is very unsatisfactory. It is impossible to tell whether the telegraph is really broken or whether the Chinese Authorities have decided not to allow it to be used. Naturally the latter view is taken by many people, but to us it appears that since the railway is interrupted, the probability of the telegraph's being left intact is very remote. At all events, since the 10th instant the Chinese capital has not been in telegraphic communication with the outer world, and inasmuch as none of the correspondents in Peking seems to have been able to organise a service by messenger, although the distance between Peking and Tientsin is only from 80 to 90 miles, we are practically without detailed news from the capital since the 10th. So far as Tientsin is concerned, the gist of the intelligence is that the Powers are landing marines and troops with all possible alacrity. Apparently some 600 men are stationed in Tientsin to guard the Settlement, and about as many more have set out for Peking, with the intention of repairing the railway as they proceed. Evidently that may be a very lengthy operation. The latest news goes to show that this force had not got farther than Hang-tung, which is about 15 miles north of Tientsin. It appears to us very unlikely that the Foreign Representatives in Peking are depending on such a slow process. They are doubtless causing troops to come independently by the river route, a comparatively easy matter at this time of year. The Peiho passes 16 miles to the eastward of Peking at Tungchow, and troops moving in touch with the river could readily use it for the conveyance of stores and baggage.

Concerning the progress of the insurrection, want of telegraphic facilities renders it impossible to speak with certainty, but there appears to be no doubt that the Chinese Authorities have not yet adopted any vigorous measures to restore order. The Boxers are said to have arrived at Makia-pu, which is within a few miles of Peking. The Lu-han Railway reaches the city from the West, the Tientsin Railway from the East, and between them is the road along which the Boxers seem to be advancing. If they have really got as far as Makia-pu, the capital is seriously menaced. Rumour puts their force at twenty thousand—another, evidently wild, report says eighty thousand—, and they are supposed to have a thousand adherents within the city. The crushing blow said to have been given to them by General Nieh, of Yashan memory, when he killed 600 of them, does not appear to have been crushing at all. Indeed rumour now alleges that Nieh is in collusion with the insurgents, and that the story of his victory over them was a deliberate invention for the purpose of deceiving foreigners. It is further alleged that the Governor of Shantung, Yuan Shikai, is also opposed to the Peking Authorities, but the probable grain of truth in that rumour is that the Governor condemns the treachery of the Empress Dowager and her advisers.

Treachery may seem a strong term, but we do not see that any other is applicable. The Peking Government is obviously swayed by the anti-foreign conservatives, and, while pretending to respect its treaty engagements, is not taking any effective step to protect the lives and properties of the subjects and citizens of the Treaty Powers. Tsêng, the Chief Commissioner of Railways, is said to have promised a reward of ten thousand taels to any one that would provide for the escape of 23 foreigners employed on the Lu-han Railway. These men seem to have effected their escape by their own resolution and promptness, but Tsêng's action offers, none the less, a remarkable contrast to the inaction of the Peking Authorities. A correspondent of one of our Tokyo contemporaries wires that some foreign ladies who have fled to Peking, and are living in the hotel there, do not know what fate has overtaken their husbands, and consequently pass the days and nights in a state of harrowing anxiety. Yet the Peking Government remains impassive. It appears to be afflicted with an access of the madness that precedes destruction. All the consequences of its inaction should be as palpable to it as they are to every onlooker; but it seems to ignore them.

The Japanese press is an unit in calling for strong measures. Japan has now four ships at Taku, the *Atago*, the *Suma*, the *Takasago*, and the *Kagero*. The last, being a torpedo-destroyer with small draft, can easily cross the bar at Taku and communicate with the railway station at Tong-ku on the eastern bank of the Peiho. Orders have also been given to the torpedo-depot ship, *Toyohashi* (4,120 tons; armament 8 quick-firers), to proceed at once from Saseho to Taku. But these measures by no means satisfy the newspapers. They want to have a strong military contingent despatched at once. They regard the occasion as one peremptorily calling for a resolute step on Japan's part, and they declare that such action could not be misconstrued, inasmuch as there is complete cooperation between all the Powers. We may mention here that no confirmation has been received from any Japanese source of the alleged landing of 4,000 Russian troops at Tientsin, or Peh-tai-ho, or Taku. The statement appears to us quite incredible. Our own telegrams speak of 400, which seems much more credible. Japanese journals are also unanimous in thinking that the Chinese Government has demonstrated its thorough incompetence and untrustworthiness, and that the time has come for foreign Powers to take the law into their own hands. Some of them hold that the only chance for China is to sweep away the rotten administration of the Manchus, and substitute the rule of enlightened Progressists. But our contemporaries do not indicate where such persons are to be found.

In an article entitled "The meaning of the Unrest in China," published by the *Spirit of Missions* for May, we find the following interesting remarks:—

But the Chinaman is naturally a tolerant human being; why, then, should he persecute the converts to Christianity? The idea that he regards them as traitors to religion and country is an explanation that does not explain. The fact seems to be that the Chinese convert acquires by conversion a certain superiority over his fellow-countrymen, which a good many of them are disposed to resent.

To find the reason for this it is necessary to refer to the peculiarities of the judicial system of China. As has frequently been pointed out, one of the first impressions that the foreigner receives, as missionary or merchant, in dealing with the people of the interior, is that of all people the Chinese are the most litigious. It is also, unfortunately, true that justice in China has its price, and that the result of a lawsuit may be determined either by the aid of money or of powerful friends. In rendering judgment in a court of justice, a Chinese official is undoubtedly swayed by the rank of the plaintiff or defendant who comes before him. He will think twice, as has been truly said, before giving judgment against a man who has relatives higher in rank then himself. His place having been purchased for the emoluments it brings him, and his tenure of it being dependent on the good-will of his superiors, he will naturally take heed not to antagonize those who can deprive him of his means of making a living. Among the obscure millions with whom a Chinese district magistrate has to deal there are probably few who have protectors powerful enough to be feared. But of late years there has emerged into the place of superior to the district magistrate—the missionary. His converts regard themselves as his protégés; they are not slow to claim his protection when they come in contact with public officers, judicial or otherwise, and thus a new order has been gradually growing up in China which a large section of the people regard as subversive of their individual rights.

It is said by a dispassionate observer on the spot, from whom we have already quoted, that in some of the Protestant missionary stations almost the first inquiry made of every convert is whether he has a lawsuit at the yamen, and if he has the man is quietly advised to agree with his adversary as the only sure means of being received as a candidate for Church membership. It is also alleged as being part of the popular belief that large numbers of the converts to the Roman Catholic faith have entered the Church in order to obtain aid in lawsuits. It should be noted that missionaries of the Catholic faith have recently acquired this advantage over their Protestant coworkers of being accorded by imperial decree the privileges of officials, so far as their relations with the mandarins are concerned. That is to say, a Roman Catholic priest can demand an audience from a mandarin in virtue of his rank, and not merely on the score of his religious profession. It is said that when calling upon Protestant missionaries the announcement of the arrival of a Roman Catholic by his attendants is in some such phrase as "The great man has come; be quick and announce his arrival."

The murder of the two Jesuit priests in Shantung, which furnished the occasion for the intervention of Germany and the seizure of Kiaochou bay, is now known to have been the result of this supposed preference before the law enjoyed by the Christian converts. It was not these who were the intended victims, but the old priest at whose house they stayed for the night, and who had enraged a rich man by conducting the lawsuit of a Roman Catholic against him. The dissatisfaction due to such causes is undoubtedly the main element of the anti-Christian movement in Shantung and Chihli. That it could be promptly quelled by the authorities does not admit of question, but that it is liable at any moment to reappear when the pressure of authority is removed is equally beyond doubt. It is an extremely difficult problem to settle in any way satisfactory to both sides. As the authority already cited puts one view of the case: "The Chinese have the instincts of a democracy, and though accustomed to endure great injustice from their fellow-countrymen, it has been noted again and again hat, while they are thus patient, at the same time hey are the most impatient of people when new burdens are placed upon them."

But why should the Christian convert be supposed to acquire immunities which are felt as a burden by his fellow-citizens, or why should Chinamen be tempted to embrace Christianity for the purpose of acquiring a standing in the courts of law which they did not possess before? The missionary, who is the pioneer of all progress in China, may surely be trusted to find some way of accommodating himself to the stubborn, because long-settled, prepossessions of the people among whom he lives. If there be missionaries who indulge too great an ambition for political power, they cannot be too soon reminded that the entire structure of foreign influence in China may easily be imperilled by inconsiderate aggressiveness.

Friday, June 15.

News comes from Peking that Mr. Sugiyama Hin, a student interpreter of the Japanese Legation, was assassinated by soldiers under the command of General Tung Fuhtsiang outside the Yung-ting gate of Peking. There are no particulars, but it is known that General Tung is one of those supposed to have been charged with the duty of suppressing the Boxers. Mr. Sugiyama had proceeded to the Yung-ting gate for the purpose of meeting the contingent of marines sent up from *Suma*.

Japan has already four ships at Taku—the *Atago*, the *Suma*, the *Kagero*, and the *Kasagi*. A fifth, the *Toyohashi*, left Saseho for the same place on the 12th inst. The *Toyohashi* seems to have been sent chiefly as a transport. She carried 300 marines belonging to the *Kasagi*, which had left without her full complement. Orders have now been given for the *Chin-pen* and *Chin-chu* to proceed to Taku. These are two gunboats of 450 tons, which are among the ships taken from China in the war. They are specially suited for river service. It is a somewhat dramatic incident that vessels captured from China should be seen in her waters for such a purpose. Another cruiser is said to be under orders for Taku. If that be the case, the Japanese flag will soon be represented by 8 vessels.

It appears pretty certain that Russia has landed 2,000 troops at Tong-ku—that is to say, at the mouth of the Peiho. There is a rumour that a thousand British soldiers from Hongkong have also landed, but although this story has now been twice wired, we are disposed to doubt it. Had such a heavy draft been made on the Hongkong garrison, the fact would certainly have been foreshadowed in some of the journals of that colony, but although we have received their issues up to the 5th instant, there is no word of anything of the kind. Russia's activity is doubtless well intentioned, but we are much mistaken unless its indirect significance elicits general comment. She has offered a practical demonstration of the facilities that the possession of Port Arthur confers on her for organizing an invasion of Chihli, if she be so disposed. Not untruly did she join France and Germany in warning the Japanese off the Liaotung Peninsula, on the plea that their presence there would be a menace to the security of the Chinese Capital. So far as the mere movement of troops is concerned, Peking lies at Russia's mercy, since she holds Liaotung. She has now shown what her position means. There is however, one reservation. Without the command of the sea Russia could not act in a time of war as she is now acting. She would have to move her forces round the northern coast of the Gulf of Petchili. We do not mean to accuse her of any sinister designs. These are obvious reflections.

There has been a collision between the foreign troops and the insurgents, though some doubt exists as to the actual locality. One account says Loh-fah, which is a station on the Tientsin-Peking Railway; another mentions Lang-fang, which is a town to the north-west of Loh-fah. But the two places are so close to each other that we may at least assume their neighbourhood to have been the scene of the contest. Its result was the shooting of some 50 Boxers without any casualties whatever on the foreign side. It would not, perhaps, be right to infer that the Boxers are a mere helpless mob, for those at Lang-fang may be very different from the main body, of whom we last heard at Ma-kia-pu, in the environs of Peking. Yet we do not imagine that the Boxers could make the smallest stand against Occidental or Japanese troops. The sooner a fight occurs, the better. Meanwhile there are rumours that the Ko-lao-hui have thrown in their lot with the insurgents, and that all those hostile to the Manchu Government are likely to adopt the same course. If that prove to be the case, things may become seriously complicated, for the Foreign Powers will then find themselves virtually supporting the Government against rebels with whom they accuse it of sympathising. There is an obvious contradiction, however, in supposing that enemies of the Manchu dynasty are likely to unite with the Boxers.

Mr. Hoshi Toru has an article over his own name in the *Jimmin*. Arguing from the experiences of the European Powers in Crete and elsewhere, he contends that united action is out of the question, and that the best plan is for each Power to proceed independently on purely defensive lines. In other words, he would have each Power guard its own nationals, and await developments, as England and France did in Japan thirty-five years ago.

On the whole the Japanese press favours a strictly cooperative policy, but there is an evident disposition to advocate the despatch of a strong military force.

The *North China Daily News* prints the following Imperial decree, which is dated at Peking, June 6th :—

The Western religion has existed and been disseminated throughout China for many years, while those who disseminated it have done nothing except to exhort people to do good. Moreover, converts to the religion have never, under the protection of religion, raised up disturbances: hence converts and the people at large have always remained at peace with one another, each going his own way without let or hindrance. Of late years, however, with the constant increase of Western churches throughout the country and the consequent overwhelming numbers of converts joining them, men of evil character have stealthily gained a footing into their ranks, making it difficult, under the circumstances, for missionaries to distinguish the good from the bad amongst the converts. Taking advantage of this, these evil characters have accordingly, under the guise of being Christians, harassed the common people and bullied the countryside; but we are of opinion, however, that, perhaps, such a condition of affairs cannot have been viewed with favour by the Missionaries themselves. As to the Iho-Ch'uan (Patriots and Champions of Peace) Society, this organisation was first prohibited during the reign of the Emperor Chia Ch'ing (1795/1820). Owing, however, to the fact that of late the members of this Society simply trained themselves for purposes of self-protection and to defend their homes and villages from attack, and moreover because they had abstained from creating trouble We [did not issue our ban of prohibition according to precedent but] merely sent repeated instructions to the local authorities concerned to keep a proper restraint on the movements of the Society. We pointed out to the said authorities that the present was not a question of whether these people were Society-men or not, but that the point was whether, being banded together, their object was to create trouble in the country or not. If, then, the Society-men should indeed rise up and break the peace it should be the duty of the authorities to make a strict search for the law-breakers and punish them according to law. Whoever these parties may be, whether Christians or Society-men, the Throne makes no difference in its treatment of them, for they are all the subjects (children) of the Empire. Moreover, even in cases of litigation between Christans and the common people our instructions have ever been that the authorities settle them according to the rights of the matter, no favour being allowed to be shown to either party. It transpires, however, that our commands have of late years never been obeyed. The officials of the various prefectures, sub-prefectures, departments, and districts have been proved to have neglected their duties: they have neither acted in friendly conjunction with the missionaries, sympathised with the people under them in their difficulties, nor settled litigation in the spirit of impartiality, and the consequence has been that those concerned began to hate one another, the enmity becoming deeper and deeper as occasions for ill-will multiplied. On account of this, therefore, we now find the members of the Iho-Ch'uan Society banding themselves together as village militia and declaring war against the Christians. In the meantime, we find discontented spirits in conjunction with lawless ruffians joining in the movement for their own ends; riots are the order of the day; railways are destroyed and churches are burnt down. Now the railways were constructed by, and are the property of, the Government, whilst churches were built by the missionaries and their converts for their own occupation. Do these Society-men and others then think that they will be allowed to destroy and burn at their own sweet will? In thus running riot these people are simply opposing themselves to the Government. This is really beyond reason. We, therefore, appointed Chao Shu-ch'iao, Grand Councillor and Governor Adjunct of Peking, to proceed yesterday as our Imperial Commissioner to restore peace and to call upon the people and Society-men to immediately disband and return each man to his own avocations and daily work. Should traitors and revolutionary Society-men try to stir up the people to rise up and pillage and destroy the countryside, we hereby call upon the Iho-Ch'uan people to hand over to the authorities the ringleaders for punishment according to the laws of the land. Should any be so misguided as to persist in disobeying these our commands they shall be treated as rebels, and we hereby warn them that when the Grand Army arrives, their fathers, mothers, wives, and children will be separated from one another and scattered, their homes destroyed and they themselves slain. They will also bring upon themselves the stigma of disloyalty and of being false to their country, for it will then be too late to repent. Our heart is filled with pity when we think of the retribution that will then overwhelm our people. We, therefore, hereby declare that if, after this warning, should there be still any who refuse to obey our commands, we will immediately order the Generalissimo, Jung Lu, to send Generals Tung Fu-hsiang (Kansu Corps,) Sung Ch'ing and Ma Yü-k'un (Szech'uan Corps,) with their commands to punish these rebels and to disperse them. Finally, in sending troops out the primary purpose is to protect the law-abiding people; but we now hear that those sent out by the Chihli provincial authorities have not only failed in affording such protection and restraining evil characters, but, on the contrary, have themselves been guilty of preying upon the countryside. We now hereby command Yü Lu, Viceroy of Chihli, to investigate this matter at once, and also to send trusty deputies to make secret investigations. If it be found that these military officials have indeed been guilty of encouraging their men to loot and pillage, such guilty officers are to be summarily executed. There must be no leniency or mercy shown to such. Let this our decree be copied out on yellow paper and posted through the country as warning to people and army, and that all may know our commands.

Note :—It will be seen from the above decree that, even at this late hour, the advisers of the Empress Dowager are still intent upon screening the so-called "Boxers," making out the recent outrages to have been made by "militia men, traitors, and revolutionary Society-men."—Translator.

AN ICHANG EXILE'S PRAYER.

(*After the Tragedy and Subsequent Farce at Sungpu.*)

Because, oh Lord, there is none other way
Whereby we may escape these evil days,
Because we are as jetsam on the strand,
Forgotten of our country and our kin,
We, who join East to West, the pioneers
Of many better days that are to be :—
Because we, ever toiling overseas,
We who have sold our heritage, our all,
Excepting certain ancient chartered rights
To breathe Thine air and tread the common earth;
Now see these rights invaded day by day
By the encroaching tide of pagan wiles,
Of native insolence and savagery:
Because the distant fate of Margary
Is coming ever nearer to our doors,
And deeds which once had set the world ablaze,
Ay, even to the starting of Crusades,
Are looked upon as commonplace and trite;
Because a murdered Christian does not bring,
As did with Rome's proud citizens of old,
Swift-footed vengeance on the slayers' track,
But is atoned for by official lies
And certain hideous payments of sycee,
Which, on a rapidly descending scale,
Will soon attain that meagre estimate
At which they quoted sparrows long ago:
Because we know not whose it next shall be
To guard his home against the howling mob,
To be the victim of their fierce attack,
And then of mild, politely-penned despatch,
To leave his mangled carcase in the street,
With face uncovered, while the Consul sits
In some Viceregal Yamên, over tea,
Assessing the small value of the dead:

Digitized by Google Original from CORNELL UNIVERSITY

And last, because the sacredness of life
Rests on nice points of quality and clothes:
Therefore it is, oh! Lord, that now we pray,
When next the rabble moves to deeds of blood.
Let not the pillage or the slaughter be
Of Customs hireling or of merchant churl,
Or humble missionary, glad to gain
Exit from trouble to a martyr's crown,
But rather grant, when the incited mob,
Like unleashed blood bound, seeks its nearest prey,
That it may find obtrusive on its path
Some personage important to the state,
Or high official representative,
Some travelling faddist, potent in the press,
Or information-gathering M.P.,
Some Anti-Opium League authority,
Aristocratic trotter of the Globe,
Or human atom authorised to wear
Gold lace upon the edges of his clothes,
Upon whose taking off there shall ensue
The steady tramp of solid infantry
And inexpensive Chinese funerals;
That, with the thunder of artillery,
And sack of goodly cities, there may be
Restored again that wholesome deference,
That usual and necessary respect
Which, from the Asiatic, is our due—
And thus, from evil, shall arise great good.

—TUNG CHIA, in "Lays and Relays."

VERY RABID.

From time to time—though now very rarely, it must be admitted—the local foreign press extends the hospitality of its columns to correspondence betraying the extraordinary anti-Japanese feeling that exists among a section of the residents at the treaty ports. The most flagrant case of the kind that has ever come under our notice is that of a letter appearing in the *China Mail* of June 5th. It is such a remarkably rabid document that we reproduce it as a curiosity, since no *résumé* could do it justice:—

A COAST PORT VIEW.

Those in the Coast Ports who have had dealings with the Japanese are astounded at the tone adopted by the Hongkong press in reference to the present political situation as regards Russia *vis-à-vis* Japan, and the pro-Japanese feeling is unaccountable in the face of facts. The whole tendency of the Japanese has been anti-English so far as British interests in the Far East are concerned, and so long as Russia keeps away from India and its frontiers, their so-called aggression in China and Korea should be regarded with equanimity rather than alarm, and if only there were half-a-dozen English even alive who really understood the situation, the cry would be for an alliance with Russia in her forward work and let Japan relapse into the condition of semi-barbarism, that in reality she has shown herself quite unfit to emerge from. Taking the situation as it stands to-day, in what shape or form has Japan shown England any sign of 'the open door' more than Russia would or will do? On the contrary she has nigh ruined herself in subsidies to corporations created with the intention of ruining British trade—she has borrowed English money to squander in fighting the English Mercantile flag—she has befooled Great Britain into allowing the cession of Ports and Islands opened to British Trade by British blood and developed by British money. Take Formosa, where she rides rough-shod over every article of her Treaty with the Foreign Powers. A corrupt gang of Officials are allowed to place differential duties, taxes, and burthens against British Commerce. Any Chinaman daring to ship, or travel, is subjected to squeeze and extortion if he ship by any other than a Japanese Government subsidized line. Justice for Britishers in Japanese Courts is absolutely unobtainable. No respectable Chinaman dare enter into Foreign employ for fear of being cast into gaol and kept for weeks without trial and with a fair chance of penal servitude for life if convicted of the crime of being a British employee. British graveyards have been desecrated and Foreign life and property are far more insecure than they were under Chinese rule, and this without any protest from our country's representative, and for why? because forsooth, as they state to the home Government, 'Japan will be a useful ally against Russia,' British trade and honour can be ruined and dragged through the mud, and her Treaties disregarded by Japan simply because we fear or don't understand Russia, and Russian motives. Misled by weak and befooled representatives England elects to let Japan be her ally, and what an ally. Her performances show.

The answer to this usually is 'See how Japan beat China; she must be a great country.' Those who really know and were really there reply—Japan beat China by borrowing European money and bribing Chinese Viceroys with it. No battle worth mentioning was really won in open field and they fought only against forces paid to be traitors or who became traitors to their country from lack of pay. Their glorious exploits on land were purely and simply confined to the massacre of villagers defending their homes. Imperial troops were paid to run away by an agreement with Pekin. At sea it was only an order from a highly-bribed Viceroy that prevented poor Admiral Ting from saving his fleet at Yah-Loo, which fight has passed into history and has been adopted in Europe as a glorious Naval victory on the part of the Japanese! and this also partly accounts for the present howl that "Japan is England's invaluable ally.' It will be remembered that poor dear Lord Wolseley formed the same idea of China, and perhaps he was not so far wrong as our present advisers *in re* Japan are. These facts are known to those in contact with Japan as she is—they know further that she is rotten to the core, and on the eve of a vast Rebellion—that she is anti-English and anti-American to the backbone, yet in order to gain her alliance we are prepared to let her possess, and, have let her possess, to the exclusion of British Trade, ports in Formosa and China opened by loss of British life and given up to Japanese occupation, maintained and developed by British capital and enterprise. What the Britisher in China proper desires is that England and Russia should work hand in hand, and after their experience of Japan and its ways that these two great powers should reduce that country to its proper level amongst nations and open her doors to foreign commerce by a distinct mutual understanding just as their desire is that by helping the Patriotic party they can open the doors of China to the world and so create a Far East, unannexed but happy and prosperous in itself. England, Russia, and America working in concord could create a Far East that would cause happiness and prosperity to be the lot of millions. To make individual entangling alliances with barbarians or semi-barbarians is not the way to advance that great cause of progress which the history of the ages shows us is, undoubtedly, the mission of Russia and the western nations.

So far as commerce is concerned Japan has shown her hand and it is more anti-British than ever Russia, if properly approached, could be. So far as British trading interests are concerned take a trip to Formosa and see how they have been shattered under the Japanese regime, or journey to Japan and look under the veneer there.

The *China Mail*, by way of preface to this wonderful diatribe, says:—"There appears to be much feeling in the coast ports at the attitude adopted by Japanese officials and merchants towards the other residents," and adds that "a very painful impression has been produced by the practically wholesale desecration of the graves in the cemetery at Takow." "It is quite evident," says our contemporary, "that this work has been done by Japanese, for it is well-known that the Chinese here would never proceed to such extremities." The *China Mail* fails to perceive the comicality of that assertion; fails to perceive that it is simply a reflection of its own prejudice. As between the Japanese and the Chinese, no sane man could hesitate for a moment to determine on which side anti-foreign sentiment exists, but no sooner is an act of sacrilege committed in a foreign graveyard than the *China Mail* unhesitatingly acquits the Chinese and condemns the Japanese. "The dislike of Japanese, almost amounting to hatred, to foreigners in Formosa has long been noticed," it observes, "and has apparently culminated in an act which will cause universal condemnation." These are the Hongkong journal's excuses for publishing the letter quoted above; a letter teeming with falsehoods from beginning to end and breathing a spirit of rabid antipathy to everything Japanese. We have been readers of the Japanese press for thirty years, and never have we seen any letter or article which could compare even remotely with the *China Mail's* correspondent in point of virulent animosity. We do not propose to dignify it by dealing separately with its wonderful sillinesses, which culminate in the assertion that "Japan beat China by borrowing European money and bribing Chinese Viceroys with it." What we wish to point out is that when correspondents who pen such documents, and newspapers which gravely publish them, venture to charge the Japanese with being anti-British or anti-foreign, they display almost incredible blindness, for their own fierce animosity throws into the shade any prejudice displayed by the Japanese against foreigners during the past thirty years, and is eminently calculated to provoke the very sentiment of which they complain. It is wholly impossible that international friendship, or anything approximating international friendship, can ever exist, so long as vindictive and unscrupulous slanderers like the *China Mail's* correspondent find newspapers to publish and endorse their false libels. The incident is specially regrettable in the face of the remarkable sympathy shown by the Japanese press towards Great Britain throughout the whole course of the South-African war.

KOREA AND JAPAN.

Saturday, June 9.

The refusal of the Korean Emperor to give audience to the Japanese Representative pending the settlement of the An-Kwŏn affair, naturally causes much umbrage in this country. It is a singularly defiant measure for any Power to adopt. Indeed, unless it can be justified by some very convincing explanation, it amounts to an official announcement of severed relations, which is only one step removed from a declaration of war. Korea may claim that her manner of dealing with criminals among her own subjects concerns herself alone, and that no foreign Power has any right to interfere. But that plea does not hold good in the face of the fact that the Emperor had given a distinct pledge with respect to the treatment of An. His Majesty, from the moment that he gave such a pledge, conferred on Japan an unquestionable right to watch An's case and discharge towards him the duties of an *amicus curiæ*. Thus the refusal of the monarch to receive Mr. Hayashi amounts virtually to an insult and demands very resolute treatment at Japan's hands. It may be urged, perhaps, that Japan is not separated by a very long interval from the time when criminals were put to torture in her own courts of law, and that, consequently, it does not become her to interfere in this matter. We can not see that any value attaches to such an argument. Who can undertake to fix the limits of time in such affairs, or to declare how many years a nation must spend in repentance and well-doing before it becomes qualified to be a propagandist of the reforms it has embraced? One might as justly pretend that because a man had once been addicted to alcohol he is permanently unfitted to preach the advantages of temperance. Japan is the Eastern pioneer of Western civilization, and if she does not act that rôle resolutely, she will lay herself open to the suspicion of half-hearted conversion.

No one imagines, of course, that Korea has adopted a stalwart attitude of her own motion. She is obviously obeying the prompting of some other Power, and the plain belief among the Japanese is that Russia is that Power. The *Yomiuri Shimbun* shows its conviction very distinctly. It urges that there can never be real peace between Japan and Russia unless the Korean problem is radically solved; that Korea can never be led into the path of progress so long as she finds a conservative refuge in

Digitized by Google Original from CORNELL UNIVERSITY

the rivalries of neighbouring empires, and that the only practically effective course is to place her definitely under the tutelage of one or other of the rival States. Naturally Japan is the one that commends itself to our contemporary, and a most unequivocal assertion is made that if Russia consented to give Japan a free hand in Korea, Japan should refrain from all interference with Russia's doings in North China, so that the two Powers must thus tranquilly work out their civilizing mission. We make no comment on the general principle here at stake, but we can not refrain from saying that if M. Pablov is supporting Korea in her present attitude, he has chosen his occasion most maladroitly. It may be possible for his apologists to clear him from the general charge of having employed large means to attain very small ends, and of having produced a great deal of unwarrantable commotion in the Far East. But no defence they can make will avail anything should it be now found that he indirectly encourages Korea in courses which shock the civilized world. M. Pablow serves his country ill if he associates her with the Söul Government in its recent doings.

Li Chai-nyön, son of the *Tai-wön-kun* and father of the young man who is now studying in Japan, has been exiled in the sequel of the recent trials in Söul.

A correspondent of the *N.-C. Daily News* sends to that journal a description of a remarkable meeting and conversation which he had with the late Kwön Yung-chin at Fusan on the latter's arrival there to give himself up. The description throws a new and surprising light on the tragedy surrounding Kwön's fate.

In the port of Fusan (writes the correspondent, whose letter is undated) I changed steamers, taking one for Chemulpo. There were in the saloon two first-class Japanese passengers. We left at one o'clock, and at six met round a table, four of us in all, the skipper included, to share our rice with chopsticks. The Captain spoke a little Korean, and with him I conversed, but the other two passengers were silent. One was dressed as a foreigner, the other in silken kimono and Japanese slippers, seemed a refined and modest gentleman, with intelligent expression stamped on a face rather badly scarred by small-pox. Next morning, as I sat in the saloon looking over some views that happened to be there, this gentleman in silk glided in and sat opposite me. "Evidently tongsin (you) have been many years in our country," said he. I looked up with a start, for the accent was too truly Korean to ever come from a Japanese. "I thought you had come from the Rising Sun," I said, "but it is evidently Morning Calm instead, is it not?" "I am a Korean" was the answer, "and we've met before, if I mistake not, in Prince Eiawha's rooms in Tokyo four years ago"; and then I recalled the face and name, Kwön Yung-chin. He had been an exile five years, had been branded as one of the wickedest and most influential of all the rebels, had formerly been Police Commissioner of the Capital, and had gone to Japan in January 1896, just before the fall of the Kim Hongchip ministry.

In surprise I asked "Where are you going?" "Back with a message to my country!" was the answer. "They'll take no message from you but your head." "That's what I mean to offer," was his answer. "I am going back to give myself up. They regard me as guilty of death, and will undoubtedly behead me, but through my death, there is a plan to save my country."

I left the subject and called up other things in order to find if the man was mad, but a more sane, intelligent gentleman in these respects you might travel far to see.

He was posted on the subjects of the day, spoke of the cancer which had eaten the vitals of the Transvaal, and of how one selfish Krüger had ruined a whole country. He touched on points of history here and there, calling attention to Westerners such as Nelson, who had given his life for his country. "All this goes on," said he, "while we, in the East, sit in selfish contentment, and see our countries die. These years that I have been in Japan have been years of plenty. I have many friends, but while I live Chosen dies. It was not so with Shakamuni, he left his palace and became a poor man. Jesus of Galilee elected to die on the cross for the sins of the world. These were acts of the Gods but we men too have little ways in which we can imitate. My people look upon the ruling classes as altogether selfish. 'To die for one's country' they never heard of, and to see such a thing will cause even the dullest to think and it is to wake my countrymen that I die." "Surely you will not die! Let's meet again in peace; God will watch over you." "If I live we meet. When you pray remember me," was the request.

The steamer anchored at Chemulpo. A telegram was sent to Police headquarters:—"I am here, Kwön Yung-chin, you may arrest me, my life is yours." He was at once arrested, and hurried up to the capital where he now lies in his noisome prison awaiting sentence. He said to me, last of all, "Others are going to follow." We certainly have fallen upon odd days in the history of Korea.

Monday, June 11.

There is no longer any doubt that the Korean Government instructed its representative in this country, Mr. Li, to inform the Japanese Foreign Office that the Emperor of Korea would not receive Mr. Hayashi in audience until the An-Kwön affair was finally terminated. Mr. Li hesitated to convey the message, but he did so finally. Considering that Mr. Hayashi's object in asking for an audience was to discuss this very matter of the breach of promise with regard to An and Kwön, the announcement made by the Korean Government is most extraordinary.

A deputation from the Kokumin Dömei Club proceeded to the Foreign Office in Tokyo to inquire about the above incident. In the absence of Viscount Aoki the members were received by Mr. Takahira, the Vice-Minister. He explained, in answer to questions, that the Emperor of Korea had undoubtedly given a pledge about the treatment of An and Kwön, and that the Japanese Government was determined to obtain an explanation of the apparent breach of faith. The Emperor's reason for refusing to receive Mr. Hayashi was obscure, but the Foreign Office had no intention whatever of re-calling Mr. Hayashi, as rumour alleged, or of relaxing its resolve to secure audience for him. In short, Mr. Takahira made it quite clear that the Foreign Office is determined to pursue a strong policy. The deputation then proceeded to the residence of the Prime Minister, where they were received by Count Hirosawa, the Minister's Private Secretary. The interview does not appear to have been important, except that it elicited a declaration from Count Hirosawa that not public considerations alone but personal also prompted the Prime Minister to adopt a resolute line, since the unfortunate Mr. Kwön had been a friend of Marquis Yamagata, and had visited him to say farewell on the eve of his departure for Söul.

News from the Korean capital, dated the 9th instant, is to the effect that the Government of that country is abandoning its obdurate attitude. The Minister of Foreign Affairs has called upon the Japanese Representative for the purpose of offering explanation.

Having tasted blood at the executions of the unhappy An and Kwön, the Korean Government has apparently become insatiable. Three times the Ministers of the Crown have petitioned for the recall and punishment of the principal among their nationals now residing in Japan, and finally the Minister of Justice has issued warrants for the apprehension of Li Cheonyong (Ri Shunyo), Yu Kilsun, Cho Wiyön, Cho Wimeen, and Kwön Pongchin. It is to be sincerely hoped that this order may prove abortive. We do not want to hear of any more judicial savageries. What these young men are accused of we do not know; but, even supposing that they were directly or indirectly cognizant of that most barbarous crime, the assassination of Queen, the Korean judicial authorities have been shown to be wholly unfit to be entrusted with the duties they are appointed to perform. The worst criminal should not be handed over to their savage devices.

Thursday, June 14.

Although the accounts thus far published by the press with regard to the recent judicial outrage in Söul are not specially inaccurate, they err in one or two very important respects. They state, for example, that An Kyeng-su and Kwön Yungchin were extradited by Japan at the request of the Korean Government and in consideration of a pledge given by the latter that the lives of the two refugees should be spared and that no extreme measures should be employed against them. It is further alleged that a Japanese guard was placed at the prison where the ex-Ministers were confined. These are altogether erroneous assertions. The Korean Government did not make any attempt to obtain the extradition of either An or Kwön. An's return to his country was entirely of his own contriving and carrying out. His intimate friends doubtless know what project he entertained in taking such a step, but the explanation which the public has to accept, and which may be regarded as a very close approximation to the truth, is that, by surrendering himself to justice, he counted on being treated with clemency, and probably condemned to nothing worse than transportation. Such a sentence he would ultimately have been able to get commuted for a fine, and thereafter there would have been no insuperable obstacle to his return to public life. An was a man of unquestionable competence. He was regarded as the ablest of the Korean refugees now in Japan; a genuine patriot and sincere believer in progress and reform, whose restoration to office could not have failed to prove advantageous to his country. It is a mistake to suppose that he was suspected of complicity in the murder of the Queen. The charge against him was that he had taken part in the project for the abdication of the Emperor in favour of the Prince Imperial, a measure which would probably have borne very useful national fruit. His Japanese friends tried to dissuade him from returning to Korea, but his desire to see his family, his confidence in the clemency of the Government, and his hope of resuming active life, overcame all scruples, and he proceeded to Chemulpho. Up to that time, his movements had not been in any way influenced by official action. Arriving at Chemulpo, he placed himself in communication with the Japanese Consul, who communicated the fact of his coming to Mr. Hayashi, in Söul, and the latter, happening to have audience shortly afterwards, spoke incidentally to the Emperor of An's coming, and expressed the hope that he would be treated with consideration. His Majesty at once replied in the affirmative, and after that assurance the Consul in Chemulpo seems to have had no hesitation in recommending An to give himself up. An did so, and his trial commenced, ending in a sentence of ten years' transportation. Thus far things had taken the course anticipated by An. But at this stage Kwön returned to Korea and surrendered himself to the Authorities. Some romantic tales have been circulated about Kwön. It has been represented that he went to Söul with a firm conviction that he was going to his death, and that he deliberately sacrificed himself in the belief that his fate would materially affect the course of politics and, in some unexplained and inexplicable way, draw his country into the path of progress. Kwön is dead, and to speak any ill of him is repugnant. But there is little room for doubt that in re-visiting his country he harboured the design not only of claiming clemency on the ground of voluntary surrender, but also of

Digitized by Google Original from CORNELL UNIVERSITY

obtaining consideration by turning informer. Had the information given by him been true, there would be nothing to say. But it was not true. There is little question that it was untrue, and that he deliberately sought to win favour for himself by bearing false witness against An and others. What followed is already known. An was put to the torture. Outside the circle of his examiners no one appears to know what confessions, if any, were wrung from him in his pain. Kwŏn also seems to have been tortured; and, whether on the strength of testimony thus obtained, or on the pretence that testimony had been obtained, the Judicial officials drew up a statement in which the late *Tai-wŏn-kun* was declared to have been the chief plotter of the Queen's assassination, and the conspirators were said to have met at the Japanese Legation for the purpose of concocting their scheme. Mr. Hayashi at once asked the Emperor for an audience, but his Majesty made an excuse, and, when pressed by Mr. Hayashi, wired instructions to Mr. Li, the Korean Representative in Tokyo, to inform the Japanese Minister for Foreign Affairs that the Emperor did not wish to give audience to Mr. Hayashi until the affair of An and Kwŏn was concluded. Probably Mr. Li understood that delay was the chief aim of his Sovereign, for it is understood that he allowed some time to pass before conveying his message to the Japanese Minister of Foreign Affairs. The latter, of course, replied at once that such an announcement was quite inadmissible, since it would be contrary to all diplomatic usage that a Sovereign should decline to give audience to the Representative of a friendly Power accredited to the Court, unless illness or some exceptional obstacle presented itself. Mr. Hayashi was, at the same time, instructed to press for an audience, which he will doubtless obtain very soon, if he has not already obtained it. The Korean Emperor's reason for seeking to evade an audience appears to be very simple: he is unprepared with any valid explanation of his failure to make good his promise, and he consequently shrinks from meeting Mr. Hayashi. The unfortunate Sovereign is in a dilemma, but probably Japan will not exact her pound of flesh.

FAREWELL DINNER TO BARON ROSEN.

On the evening of the 7th instant, the members of the Tokyo Club gave a farewell dinner to His Excellency Baron R. Rosen, Minister of Russia, who is about to leave Japan for an European post. About fifty sat down to dinner, the chair being taken by His Excellency Colonel Buck, United States Representative. After the health of the Emperor had been drunk, Mr. Buck proposed the toast of the evening in these words:—

GENTLEMEN of the Club,—In presiding at this entertainment, as appears to be my duty, I wish I had that facility of speech by which I could do justice to the occasion and express in more fitting terms than I possibly can the sentiments of high regard of all present for the guest of the evening, whom we have met to honour on the eve of his departure from the country.

Our guest and fellow-member, by his rare qualities of good fellowship, has won the hearts of us all. Always genial and cordial, he has made us all happy in his friendship and association.

The loss of no other member of the club, perhaps, would be more keenly felt, or would be more regretted. What he has been to the club and to his fellow-members individually, during the three years he has so ably represented his country at His Majesty's Court, he has been to his colleagues and officials of the Government as well—winning the highest confidence and respect and the lasting friendship of all.

To know our guest is to appreciate his superior qualities of head and heart. His loss to the Diplomatic Corps, the Court, and to this club will indeed be great, and he will not soon be forgotten by any who have had the honour and pleasure of his intimate acquaintance.

As a club, individually and collectively, we wish him and his family a safe and pleasant journey to his new post to which he has been assigned.

Gentlemen, I propose health, prosperity, and long life to his excellency, Baron Rosen.

The toast was drunk with the greatest enthusiasm.

Baron Rosen, who, on rising to reply, received an ovation, made an eloquent and witty speech. He expressed his heartfelt gratitude to all his kind friends for the cordial good-feeling they had shown him in so many ways and for the splendid send off they had united to give him that evening. He also dwelt upon the history of the club, recalling its small beginnings as compared with its present large proportions and prosperous condition, and, while offering the members his sincerest congratulations upon this success, he invited them to drink to the continued well-being of an institution which, during the twenty-five years of its existence, had been a centre not only of genuinely cordial fellowship but also of international good feeling.

THE POLITICAL SITUATION.

The general impression in well-informed circles seems to be that the issue of the political complication will be the retirement of Marquis Yamagata and his replacement by Count Matsukata as Minister President, the other portfolio-holders remaining pretty much as they are. It is said to have been somewhat difficult to effect this arrangement, and no one doubts that it can not prove permanent. The next session of the Diet will show a formidable opposition to any Cabinet not organized on party lines, and there will result an appeal to the country under the new law of elections. We do not venture to affirm that the solution here indicated is definite, but we place before our readers the prospect that seems most credible. For our own part, we should be disposed to welcome any settlement which leaves the present Cabinet virtually unchanged, though, on the other hand, we recognise that all solutions short of parliamentary Ministries must be ephemeral.

It is generally assumed that Marquis Yamagata has postponed his resignation in view of the serious problems presenting themselves in the field of foreign affairs. Under any circumstances it is not probable that the plan proposed by the Liberals could have been put into a working shape.

PEST.

Another case of pest is reported from Osaka; a girl of 13. Death resulted on the third day. It is also reported that a suspicious case has been found on board the *Yeijo Maru* in Nagasaki, but we know nothing as to whence the ship had come.

A case of pest was found on board the P. & O. mail steamer *Rosetta*, in Yokohama harbour, on the 9th instant. The sufferer was a Filipino fireman. He died on the 11th instant, and the ship was sent to the disinfecting station, at Nagaura, where she will stay 10 days. The remains of the fireman have been cremated.

There has been another case of pest in Osaka.

THE FINANCES.

Saturday, June 9.

A correspondent of the *China Mail*, cabling from Yokohama, says that Japan "may be forced into war with Russia by a possible approaching financial crisis," for "the budget this year is reported to show a deficit of forty million *yen*, and it is not known how this is to be made up." It is difficult to understand why men that undertake to discuss great questions in public will not be at the trouble to post themselves in the cardinal details of their subject? A deficit of forty million *yen* in the Budget! What reckless silliness! One would suppose that the Japanese Budget was a secret affair, entirely beyond the reach of ordinary investigations, and that "report" had to be relied on for any information about the document's contents, whereas, in truth, the Budget is open to all, and every figure of it is public property. Had the correspondent of the Hongkong journal taken the trouble to step into the office of the *Japan Mail*, he could have obtained an exhaustive translation of the Budget, and he would then have seen that, so far from there being a deficit, the ordinary revenue exceeds the ordinary expenditure by many millions of *yen*. Apparently one of the developments of *fin-de-siècle* progress is a newspaper correspondent who cares not one straw about the accuracy of his statements provided only that they are sensational, and who is quite above the trouble of collecting easily accessible information about the subjects he descants upon.

Monday, June 11.

Rumours of a most unsatisfactory Budget next year having been circulated by certain newspapers, the *Nichi Nichi Shimbun* has obtained an official statement of figures bearing on the subject. It speaks, first, of the results of last year's financial operations. The returns show that in four cases the revenue did not quite come up to the estimates; namely, in the cases of customs, land tax, the tobacco monopoly, and telegraphs. On the other hand, the receipts exceeded the estimates by 1,700,000 *yen* in the posts, 770,000 *yen* in the income tax, 2,000,000 *yen* in stamp duties, and 1,200,000 *yen* in forests. Hence the total diminution was not more than 1,300,000 or 1,400,000 *yen*; whereas, on the other hand, a sum of from 12 to 13 million *yen* remained over from unused funds. Thus there was no embarrassment whatever. This year, things are moving smoothly and satisfactorily, so that there is no prospect of any discrepancy between results and estimates. As to the Budget for 1901-2, the proposals from the various Departments ought to be in the hands of the Finance Minister by May 31st, but those from the Educational Department and the Agricultural and Commercial Department have not yet been received. Nevertheless it is possible to set down the main figures of the Budget with a close approximation to accuracy. They are these:—

	Million Yen.
Ordinary Revenue	198
Extraordinary Revenue	50
Total	248
Ordinary Expenditure	161
Extraordinary Expenditure	83
Total	244
Surplus Revenue	4

This is a very different showing from that of the pessimists. If Japan's credit is bad, she has to thank, in great part, the reckless statements of some of her own newspapers.

Digitized by Google Original from CORNELL UNIVERSITY

TOKYO IMPROVEMENTS.

The Tokyo City Assembly passed two very important resolutions on the 8th instant. On the motion of Mr. Hoshi Toru it decided that no time must be lost in undertaking the work of harbour construction, and it appointed a committee to consider details, voting, at the same time, a sum of 23,850 *yen* to meet the expenses of the committee. Plans and estimates prepared by Professor Furuichi were submitted to the Assembly, but it wisely decided that their examination by a committee must precede any final vote. There could not be any doubt, however, as to the temper of the members; they were unanimously in favour of having a harbour, and their only apparent objection to Mr. Furuichi's scheme was that twelve years will be needed for its completion.

The second decision taken related to the building of street railways and the conversion of the present horse tramway into an electric line. Both of these projects have received the approval of the Department of Home Affairs, and the City Assembly passed them without debate or dissent. The conditions attached to the street-railway project are very strict. Among them the principal are these:—The gauge is to be 4 feet 7¼ inches; the minimum width of street where a single line is laid must be 36ft., and the minimum for a double line, 48ft.; the posts for carrying the cable must not be more than 120ft. apart; the work must be commenced within 6 months from the date of granting the charter, and thereafter finished in 5 years; the speed must not exceed 8 miles an hour; extensive powers of inspection and control are to be vested in the Chief of Police and the Governor of Tokyo—*e.g.* they may fix the fares, determine the number of passengers and cars, the times of starting trains, the special rates granted to students and labourers, and so on; the Minister of Home Affairs may at any time revise the rules, order a change of motive power or alteration of the lines, and take other steps; one-tenth of the net profits is to be set aside as a reserve, and, after a dividend of seven per cent. on the paid-up capital has been paid from the remainder, one-third of the residue is to be contributed to the Municipality; in June of the 85th year of *Meiji* (1952), the whole of the lines and the rolling stock is to revert without payment to the City, but at any time after 1932 the latter may buy the lines by paying a sum the manner of whose assessment we can not follow. These conditions are said to be considered very harsh by the Three Companies' Union (*Sampa Godo*) which is to receive the charter, but since fresh and perhaps interminable delay would be caused by raising any objection at the present stage, the Union will accept the conditions and subsequently petition for an extension of the date when the lines are to revert to the Municipality.

Concerning the conversion of the horse-trams into electric lines, the conditions prescribed by the Home Department and endorsed by the Assembly are that the work must be undertaken within 3 months and finished within 2 years. Moreover, there is no provision against competing lines being laid over the same routes. These terms are considered prohibitive. The price of land is so high in the districts traversed by the horse-trams that the Municipality itself has hitherto been unable to accomplish any widening of the streets, yet it now requires the Tram Company to effect the necessary widening in two years. Evidently the thing is practically impossible.

The charter for the construction of street railways was duly handed to Mr. Amenomiya and his associated representatives of the Three Companies on the 9th instant. At the same time, the document sanctioning the Horse-Tram Company's application to change its motive power to electricity was also tendered to Mr. Nakano Buyei, as the Company's delegate. He declined to receive it, however, on the ground that the conditions attached were prohibitive. It was pointed out to him by the officials of the Home Department that his objections were not substantial, inasmuch as the tax to be paid by the Company would not exceed that paid by the Street Railways Company, and inasmuch as the period of the charter was 50 years, although 30 would have been the natural term in consideration of the fact that the Company's lines traverse the most populous parts of the city. This reasoning did not convince Mr. Nakano. He persisted in his refusal, and said that he should consult his colleagues.

The scheme of harbour construction planned by Mr. Furuichi, which has been adopted in principle by the Tokyo City Assembly, is said to be based on the designs of a French expert, M. Lemotte (?). The main harbour is to be at Shiba-ura, and the advanced harbour at Haneda, the two being connected by a canal and an embankment. The cost of the work will be 41 million *yen*, and the time of completion, 12 years. A sum of 36,100,000 *yen* will be obtained by floating a municipal loan, and the Treasury is expected to contribute 12 millions. The loan will remain unredeemed for 12 years, and thereafter be paid off in 63 years, for which purpose a sum of 400,000 *yen* annually during 75 years will be appropriated from the City's taxes.

ELECTRICITY AND TUBERCULOSIS.

One of the extraordinary developments of electrical science seems to be a method of curing tuberculosis by the aid of the electric current. The inventor is Dr. Francisque Crôtte, who is now working at St. Luke's Hospital, New York. His method, briefly described, consists in driving medicine through the skin, flesh and bones, instead of administering it by the mouth. It has been known for some time that the microbe of consumption can be destroyed by formaldehyde gas. But this gas can not be administered by inhalation, for it produces coughing so severe as to be dangerous. Thus the question to be solved was, could the gas be introduced into the cavities of the lungs without passing it through the mouth? Dr. Crôtte knew that in France waterproof material is driven into wood by means of electricity, and it struck him that what was possible in the case of vegetable fibre might be possible also in the case of the fibre of the human body. Experiments proved the perfect feasibility of the idea, and the cure is now regularly practised. Sponges saturated with formaldehyde are placed against the back and chest, having been previously attached to one pole of the electric machine, which is a specially contrived affair, capable of producing a voltage of over a million with a very low amperage. The machine being started, the static electricity flows in a steady current through the sponges and carries the formaldehyde with it into the patient's body. It is claimed that this cure is effective in every case of consumption in the first stage; in 75 per cent. of the second stage, and in 30 per cent. of the third, or so-called "hopeless stage."

DEATH OF MR. A. J. WILKIN.

The death is announced from Tunbridge Wells, England, of Mr. A. J. Wilkin, one of the oldest residents of Yokohama. Mr. Wilkin was born on June 7th, 1836, and left London with Mr. R. D. Robison in October, 1862, and arrived in Yokohama about Christmas the same year. He and Mr. Robison founded the firm of Wilkin and Robison, general merchants, and Mr. Wilkin continued to occupy the position of a partner till April, 1885, when he left Japan for Manitoba, where he started farming. His venture, however, was not over fortunate; and he again turned his thoughts to Japan. Arriving in Yokohama in the spring of 1890 he took charge of the business of the Trust and Loan Company of China, Japan, and the Straits, the agents of which were Messrs. Jardine, Matheson, and Co. This position he held after the T. and L. Co., was converted into a Bank, and he continued in the firm's service till quite recently, when, being in a poor state of health, he left for England. Mr. Wilkin was for many years associated with the religious life of the Settlement. He was an attached member of the Union Church, and in his capacity of Superintendent of the Sunday School threw the whole ardour of his nature into the work. He was also for some time President of the Literary Society. He was not a man of robust health, and had of late years suffered greatly as the result of a cowardly assault made on him by some Japanese coolies while riding on a bicycle near Honmoku. These ruffians struck him about the head with their *geta*; inflicting injuries which affected him during the remainder of his life; and probably had something to do with his death. It is characteristic of his kindly and forgiving nature that in spite of the serious injury he suffered, he requested that the cowardly assailants should not be punished. It appears that since his return to England he had grown steadily weaker, and continually complained of pain in the head; indeed, for some time before his death he was completely confined to his bed. He leaves a widow and grown-up family to mourn his loss.

Mr. Wilkin naturally had some very interesting reminiscences of the early days in Japan. Some years ago he delivered a most entertaining paper before the Yokohama Literary Society. It contained so vivid a description of the state of the Settlement nearly 40 years ago that we make no apology for reproducing a few passages:—

To picture Yokohama as it then was, you must first dismiss from your minds altogether the Yokohama of to-day; the Settlement extended only from No. 1 to 89, and thence down Honmura Road to the "creek,"—then a narrow stream. All back of Honmura Road was marsh and swamp. The ground was but sparsely covered with buildings, and there were many vacant lots, especially towards the centre and back. Each firm had generally a large compound with only a bungalow and some out-buildings, and a mud godown or two on it, the lot being surrounded by those black pole fences common in Japan. There were were three or four barn-like two-storied houses, but for the most part the dwellings were of the bungalow type, in fact, Japanese houses improved by glass in the sliding doors and windows, and sometimes with fixed divisions to the rooms. Fireplaces were rare, and stoves not abundant. In the bungalow which we occupied till destroyed in the fire of 1866, there was only one small stove. People used *hibachi* with a shovelful of charcoal to supply the deficiency, and many accidents occurred therefrom.

The price of land and rent were very high already: $300 and $400 a month was asked for such meagre accommodation as the compounds then afforded. I cannot say what the population was, but it was small, and the ladies might be counted on your fingers. Children were scarce and I remember well what a strangely pleasant sound it was when later some

Digitized by Google Original from CORNELL UNIVERSITY

troops came up from Hongkong with a number of married men, to hear the merry shouting of a number of youngsters, as I passed the camp in the evening. You will judge of the population when I say that we used to bathe off the Bund opposite our compound in the morning. The native town was also small, extending no further than Benten-dori or Otamachi. At the far end of the former was the Benten shrine in a grove of trees; over the creek a village extended towards Noge Hill, and a causeway led over to Kanagawa.

The port had then been opened 4½ years, and the worst of the roughing it was over. Residents had supplied themselves from Shanghai with a certain amount of furniture and house fittings, and the time when if you went out to dinner with a friend you took your plate and knife and fork with you, was past. A certain "cliquism" prevailed, but there was a good deal of jolly fraternizing, and the presence of so many naval and military officers added a good deal to the society. Settlement affairs were very much in a state of chaos. The Japanese of course had no idea of sanitation or of the making of roads: consequently our streets were like those of any country road and the traffic reduced them to a frightful condition in wet weather. Not only mud but ponds of water stood in some of the principal thoroughfares, and we had at such times to flounder about in sea boots. There was no drainage of any kind, if we except an abortive and unwholesome attempt which had been made in that direction by digging ditches at the sides. After our worthy and well-known Consul, they were called "Winchester drains." The streets were unlighted, and each one at night took his own coolie and *chochin*. The only thing in the way of police was a small squad of 2-sworded men who occasionally patrolled the place, accompanied by a man stamping on the ground one of those iron staffs with rings at the top to warn thieves to get out of the way.

At this time there were no jinrikishas,—the only way of getting about was on shank's mare or on horseback. In a desperate case at night, one might send down town and get a kago. The Japanese of that day were "pukka" Japanese; the advent of foreigners had but very little affected them in this respect, and they had made but little advance towards Western ideas. The authorities showed the greatest jealousy in their attitude towards foreigners, and did their utmost to prevent their having more dealings with the people, or knowing more about the country than could possibly be helped. Officials exercised complete surveillance over the transactions of their people, and at times most seriously interfered with trade by inhibiting the supplies of silk or other produce to the market. It has happened even that the servants in the place have been withdrawn. As for their own people it was death to attempt to leave the country.

All the two-sworded class lorded it over the civilian and peasant class, and on the slightest provocation would flesh their swords on any unfortunate who crossed their path, and never be called to account. To cross the path of a man of rank was an insult; such a thing as an inferior daring to ride past him was too dreadful an insult to be thought of, and the offender would be immediately cut down. Every morning the Governor of Kanagawa came on horseback to his office. A betto led his pony, a knot of armed men preceded him crying out "Shitaniiro, Shitaniiro," and every person in the road had to squat down. Consequently with all these gentry about we had to be always on our guard. He was accounted a bold man who rode or walked out any distance alone. Passing any of these men, we had to keep an eye over our shoulder. The preparatory motion of drawing a sword was to throw back the sleeve of the coat and press down the handle and we were especially on the look-out for this.

The punishments in vogue in those days were of a very severe character. It was understood that a theft of more than 40 *bus*, or a third conviction for smaller thefts, was punishable with decapitation. A foreigner naturally shrank from giving a delinquent boy over to the hands of the Saibansho to be thus dealt with. For arson, murder of parents, and so forth there were burning alive and crucifixion; in the latter method the culprit was stretched on a cross set upright and speared. For examination of an accused person torture, in the way of flogging, was constantly restored to, and if the sufferer made no confession after being subjected to a sufficiency of this treatment, he was deemed to be innocent.

The *Rangoon Gazette* records the death of a remarkable missionary, the Rev. D. L. Drayton, who died at Rangoon on the 28th ult., after 63 years' active service in behalf of the Two Karens of the Rangoon Province. He was over 91 years of age, yet only last month was delivering a public address in a large hall at Rangoon.

NOTES ON CURRENT EVENTS.

A conflagration of considerable dimensions has occurred at Taka-machi in Niigata Prefecture.

Marquis Mayada is said to be dangerously ill. His brain and kidneys are both attacked, and, though there has been a slight improvement since the 10th instant, fears are still entertained.

Very favourable reports are made of agricultural prospects in Japan this year. Barley is said to be a full crop; rape and tobacco plants promise well; the outlook for silk is excellent, climatic conditions being good and the price of cocoons low—only 40 *yen* per *koku*—, and the yield of tea is expected to be 230 *kwan* per *tan* against 160 *kwan* last year.

It is announced from Hokkaido that an extensive auriferous area has been discovered in Ishikari near the head waters of the Sorachi River. Very glowing accounts are given of the prospects, but, as they seem to be partly written in the interests of speculators who have acquired a large tract of land in the district, they should not be implicitly trusted.

The St. Paul Pioneer Press cleverly caricatures the persistence of war-scare journals which keep the public perpetually fed with rumours of a fight between Russia and some Power or other. Russia is represented as a stolid, peaceful-looking old man smoking a large pipe," and the scare-press takes the form of a donkey in "striped pants" seated at an editorial desk. The old man placidly observes:—"Just thought I'd call around and find out who I'm going to fight tomorrow."

The Chinese Customs Returns for the first quarter of the current year show an increase of revenue to the extent of a million taels, as compared with the figure for last year. The sum actually collected was 5,395,032 Tls. against 4,325,297 Tls. for the corresponding quarter of 1899. We observe that Japanese yarns make a very good showing in the returns:—

	1900.	1899.	1898.
English	6,045	6,153	8,128
Indian	196,524	193,599	206,379
Japanese	122,265	94,690	81,125

It is alleged that the attempts made to effect a compromise of the Kobe Water Works case have been suspended. Mr. Otani Kahei has been engaged in the affair. Finding Mr. Morse naturally unwilling to make any proposal, Mr. Otani approached the Kobe Municipal Authorities. But they, having already gained their case in the lower tribunal, declined to listen to anything, and announced their intention of adhering strictly to what they consider their legal rights.

The *Nichi Nichi Shimbun* says that the *sake* saloon in the Paris Exhibition has proved a failure. When it was first opened it sold all kinds of beverages, as well as ices, and it did a roaring trade. But the Japanese commissioners considered that it was exceeding its license, which referred to *sake* only. They therefore compelled it to close for two or three days, and when it re-opened on strict lines, its daily visitors did not exceed twenty or thirty. The tea saloon (*kitcha-ten*) has also been a failure.

An institution to encourage a spirit of saving has been organized in Tokyo. It is called the *Chokin Shōrei Kabushiki Kaisha* (Savings Encouragement Joint Stock Company), and its chief manager is Mr. Kimura Juyata. The programme is to receive money on deposit without paying any interest for it, and to pay back the double of the sum thus received by a system of lots, so arranged that every depositor must be recouped within 20 years. Thus the most fortunate may find his deposit doubled within a twelvemonth, and the least fortunate will find himself in the position of having lent his money at simple interest of 5 per cent. for twenty years. The newspapers do not give any indication of the minimum sum receivable on deposit.

The following sums (for the first period) have to be disbursed out of the Second Reserve Funds for the current year:—

Expenses.	Yen.
Prevention of epidemics	125,866
Compensation for slaughtered animals	6,698
Attendance at International Convention	50,698
Commissioners for the investigation of American population	4,000
Repairs necessitated by typhoons	2,505
Typhoons and inundations in cities and prefectures	40,172
Water supply for the central observatory	2,159
Control of gold miners in Hokkaido	16,757
Special buildings for the Anti-toxin Serum Institute	7,250
Special buildings for the Yokohama Silk Conditioning Office	15,054

The *Mainichi* attributes the falling-off in the tea output to climatic conditions being behind last year. In spite of a rise of two *yen* in quotations, in consequence of the appreciation of rice and increased expense of manufacture, the manufacturers still fail to secure a fair profit. Under these circumstances prominent tea districts such as Suruga and Totomi are reported to have restricted the amount of manufacture. Compared with last year the stock is considerably less, while sales show a diminution of no less than 1½ million catties. Below are comparative figures for the two years:—

	Up to 28th May, 1899.	Corresponding period of 1900.
Arrivals	77,171 bales	96,991 bales
Sales	6,453,100 bales	8,012,800 bales

The Tokyo Tram Company held its annual meeting on the 11th instant, when the following accounts were presented and passed:—

Gross Earnings from Passengers carried		¥627,695
Miscellaneous Receipts		19,425
Total		647,120
Costs of Working	¥342,057	
Contributed to celebration of Imperial Wedding	5,000	
Total		347,057
Net Profit		300,082
To Reserve (5% of Profits)	¥15,005	
Rewards (10% of Profits)	30,000	
Remainder		255,077
From previous account		29,170
Total		284,248
Dividend at the rate of 35%		253,750
Carried forward		30,489

The meeting then proceeded to discuss the conditions attached to the Government's permission for transforming its service into an electric system. The conclusion unanimously arrived at was that the widening of streets, required by the Government, and the percentage of profits to be paid to the Municipality were altogether too onerous conditions, and that, unless the Authorities consented to modify them, the Company would have no resource except to continue its present method of horse trams.

It is thought that the resolutions adopted by the Tokyo City Assembly with regard to street railways and harbour construction will mark a new era for the city, which will now cease to be merely the political metropolis of the empire and will become the commercial capital. On the other hand, there can be little doubt that the centre of the city will be

Digitized by Google Original from CORNELL UNIVERSITY

shifted in a southerly direction. Such a tendency, indeed, has already been displayed, as may be seen from the following table published by the *Jimmin*, relating to the districts of Tokyo :—

District.	Population in 1898.	Increase or decrease as compared with 1897.
Kojimachi	76,992	6,985 †
Kanda	126,282	12,083 –
Nihonbashi	137,424	3,542 –
Kyobashi	138,793	10,714 †
Shiba	128,663	2,382 †
Azabu	52,726	1,203 †
Akasaka	44,357	3,639 †
Yotsuya	42,173	3,345 †
Koishikawa	55,739	3,791 †
Ushigome	51,469	1,457 †
Hongo	84,220	6,593 †
Shitaya	112,195	17,155 †
Asakusa	139,955	1,086 †
Honjo	132,221	6,631 †
Fukagawa	102,127	5,942 †

In the Tokyo of the future, Kyobashi, part of Shiba, and Kojimachi will probably be the official centre; Shinagawa, the business centre; Azabu, Akasaka, and Yotsuya, the military centre; Koishikawa, Hongo, Kanda, and Asakusa, the educational and recreation centre; and Fukagawa and Honjo, the manufacturing centre.

"JAPANESE NOTIONS OF POLITICAL ECONOMY."

We received, a few days ago, a brochure headed as above. It professed to have been written by "Tentearo Makato, commissioner of Japan to make the investigation," but pasted on the cover was a little slip of paper bearing the legend "Camden, N. J. James Love, 627 Market Street." There never was such a name in Japan as "Tentearo Makato," and there never could have been. Therefore we applied ourselves with some misgivings to peruse the pamphlet. In the very first page we found it stated that books had been written in Japan on "*Akirau* and *Kayuru*, that is to say, on commerce and exchange;" on the second "Mr. Neeshima" was spoken of as Minister of Education, and on the third the "head of the Foreign Office" in 1896 was called "Ishtamusho." Plainly no Japanese ever had any hand in the compilation of the brochure, and after reading it through we were not surprised to discover at the close an "interlude" explaining that the Japanese guise was really a disguise simulated for the purpose of attracting attention which would probably have been lacking had the author written frankly over his own signature. Apparently the ruse succeeded, for the little book has reached its third edition. When we say that it is published by the Scottish Single Tax League, our readers will understand at once the nature of the doctrines it inculcates. We may add, however, that it is a thoroughly clever composition, and although we do not undertake to predict that it will convert every careful reader to Henry George's philosophy, we do venture to affirm that no one can peruse it intelligently without discovering the extraordinary confusion of ideas and contradictions of terms that disfigure the writings of a great majority of the classics of political economy. Any one, therefore, who clings lovingly to his old faith and dreads to have it shaken, had better refrain from perusing "Japanese Notions of Political Economy."

The opinion prevails throughout the southern provinces of Luzon and Samar that arms are being shipped into the country in large quantities. A friend of an officer in the Philippines asserts that he has seen them packing rifles in beer barrels in Hongkong.

DIVIDENDS.

The Tokyo Electric Light Company has just held its semi-annual general meeting. The accounts were passed as follows :—

		yen.
Profit for the half-year		102,219
Brought over		3,075
Total		105,294
To Reserve	5,111 *yen*	
Dividend (8 % annually)	95,000 „	
To next account	5,183 „	105,294

The Muslin Company has also had its general meeting and adopted this statement of results for the half-year :—

Profit		¥128,788
To Reserve	¥10,000	
Dividend (10 % annually)	50,000	
Second dividend (10 % annually)	50,000	
To next account	6,788	128,788

"THE SPHERE."

The Sphere is a new illustrated weekly, published at Great New Street, London. It is printed on beautiful paper, and the illustrations have the merit of being not only interesting in their relation to current events, but also artistic. It is characteristic of the time that such a journal can be produced and sold for the small sum of six-pence; and it is also characteristic of the time that a page is devoted to fashions. What sacrifices are made on that shrine, to be sure! Mr. Clement K. Shorter, the well-known *littérateur*, is the editor.

ORDINATION AT TOKYO.

The ordination of the Rev. V. H. Patrick to the priesthood of the Church of England took place on Sunday at S. Andrew's Church, Shiba, Tokyo, at the eleven o'clock service. Mr. Patrick is a missionary on the staff of the C.M.S. in Tokyo; he was a student of the C.M.S. College at Islington, and was ordained deacon by the Bishop of London on Trinity Sunday of last year. The service on Sunday began with the missionary hymn, "Lord, her watch Thy Church is keeping," whilst the procession of clergy entered the Church, the Rev. L. B. Cholmondeley, Bishop's Chaplain, carrying the pastoral staff before the Right Reverend Bishop Awdry. Then, according to the prescribed order of the Ordination Service, the sermon was preached. The Rev. H. McC. E. Price, M.A., Principal of the C.M.S. Theological College at Osaka, took for his text, "And He gave some, apostles, etc." (Ephesians IV). He spoke of the dignity and importance of the ministry entrusted to the priesthood of the Church, in accordance with our Lord's will,—a ministry "appointed for the salvation of mankind"; and, on the other hand, of the great responsibility of the individual priest, according to his ordination vows, not only to be diligent and faithful in teaching, in ministrations, and in discipline; not only to be an example to his flock, to promote peace and order, and himself to render due obedience to his superiors; but more especially to be a man of prayer and a devout student of the Bible, and thereby to gain spiritual power for his great work.

After the sermon the candidate was presented to the Bishop by Archdeacon Shaw; then the Litany was said by the Rev. W. C. Gemmill, and the Trinity Sunday hymn, "Holy, holy, holy, Lord God Almighty," was sung. The Bishop then began the Holy Communion, the Epistle being read by the Rev. A. E. Webb, and the Gospel by the Rev. W. P. Buncombe. The actual ordination comes in the service between the Gospel and the Nicene Creed. The Bishop, seated in his chair in the sanctuary, facing west, read the exhortation and put the eight solemn questions to the candidate, who stood before him. Then, after an interval of silent prayer, the *Veni Creator* (the ordination hymn) was sung, and a prayer was said. With the Bishop nine priests laid their hands on the head of the candidate, whilst the Bishop pronounced the solemn words of ordination,—viz., the six already mentioned and the Revs. W. T. Austen, of Yokohama, J. T. Imai of Tokyo, and P. W. C. Wise, of Australia. After the ordination the Bishop proceeded in the celebration of Holy Communion, which was as far as possible choral. The Communion hymn, "Draw nigh and take the Body of the Lord," was sung during the Offertory. The organist was Mrs. Awdry.

LAW OF CIVIL ADMINISTRATION.

The Law of Civil Administration, recently passed by the Diet, has been published in the *Official Gazette* as follows :—

Art. I.—The administrative authorities may impose necessary restrictions upon, or seize, dangerous weapons or articles from drunkards, idiots, or persons suspected of intention to commit suicide. Similiar steps may be taken for the prevention of acts of violence detrimental to public welfare. The restraint imposed, however, shall not be prolonged until after sunset on the following day. In the case of the seizure of weapons or articles, the period shall not exceed 30 days.

Art. II.—The administrative authorities are not empowered to enter a private residence without the consent of the occupant, before sunrise or sunset, except when it is deemed that danger to life or property is imminent, or gambling or secret prostitution is proceeding. This provision, however, does not apply to inns, hotels, restaurants, and other public houses, which are open to visitors at night, provided that the official entry be made within business hours.

Art. III.—The administrative authorities may cause a medical inspection of women convicted of secret prostitution, and direct them if necessary to be taken into hospital for medical treatment at their own expense, or that of their agent. If they are unable to meet the expenses, the same may be defrayed out of the local police funds. Restrictions as to the place of residence of those whose occupation requires special official control in the interests of public morals, shall be determined by Ordinance.

Art. IV.—The authorities may use any land or property, or impose restrictions for the use of the same, whenever they deem it necessary for the prevention of danger or enforcement of sanitary regulations, in cases of emergency or natural calamities, or in conformity with the provisions of Imperial Ordinance.

Art. V.—The administrative authorities may adopt the following measures for the compulsory carrying out of measures ordered in accordance with laws and ordinances :—

1. They may take upon themselves the carrying out of the work, or may cause a third party to perform it if necessary and collect the expenses incurred from the persons liable.

2. In case the work cannot be performed by a third party, or in case measures have been taken against regulations, a fine not exceeding 25 *yen* may be inflicted in accordance with the provisions of the ordinance.

The foregoing measures shall not be enforced without notice, except in case of urgent necessity. In no case, however, shall the authorities directly carry out such work, except under the pressure of circumstances, or when they are convinced that otherwise such work will not be carried out.

Art. VI.—The expenses specified in Articles III. and V., together with fines prescribed in Article V., shall be collected in accordance with the rules for the collection of national taxes.

The administrative authorities shall have a right of priority in the collection of the above expenses, after national taxes have been collected.

Art. VII.—In case any articles the possession of which requires official sanction or permission have passed into the custody of the administrative authorities, the same shall be transferred to the Treasury, provided that they are not of a nature to be legally held. In the case of articles under temporary seizure, the same procedure will be followed unless they are claimed within one year.

THE JAPANESE PRESS AND THE WAR.

THE leading Japanese newspapers comment on the successful progress of the war in the same spirit of friendly appreciation that has marked their attitude throughout. They speak with enthusiasm of the magnitude of the task undertaken by England and of the apparent ease with which she has performed it, and they are evidently much struck not only by the calm unflinching attitude of the British nation throughout, but also by the skilled diplomacy which averted all complications with foreign Powers in spite of the bitter hostility towards England shown by the nations of Continental Europe. They also regard as most important the effect that the struggle has had in displaying the patriotism of the British colonies and their profound devotion to the mother country, and they think that this consolidation of the British empire in every part of the globe furnishes an object lesson which the nations of the world can not misinterpret. The *Jiji Shimpo* believes that the immense sacrifices made by England will be amply rewarded by results. She will consummate her project of a railway from the Cape to Cairo; she will carry civilization into wide districts hitherto beyond the range of progressive influences; she will add military strength to the immense naval strength she was already known to possess; she will acquire fresh confidence in her destiny from the assurance that her sons in every part of the world are firmly knit into a great federation of force, and her spirit will rise into realms of fresh enterprise and faith.

Englishmen will not forget the unfaltering friendship towards their country and the confidence in her resources that the Japanese press has shown from the beginning to the end of this war. Not one of us feels any special pride in the war. If we had any desire to come to blows with the Boers, it was a desire born of the instinct which dwells in the breast of every strong nation, namely, that a beating can not be taken quietly. The Boers beat us in 1881. There is no denying the fact. Some our statesmen thought that we were big enough and strong enough to treat the beating as an insignificant accident which could be redressed at any moment, and that our failure to redress it would neither be misinterpreted by the Boers and the world, nor prove an unendurable memory to ourselves. The eminently false factor in that calculation was the intelligence of the Boers. They entirely misunderstood our temper. Publicists may find plenty of material for discussion in the circumstances directly responsible for the war, but in our own opinion the question of sentiment was largely responsible. The Boers treated us throughout as a despicable people from whom they had nothing to fear and nothing to gain. They thought, and they took no pains to conceal the thought, that at any moment they could repeat the successes they had achieved nineteen years previously. That mood of theirs was the chief obstacle to an understanding. That mood also betrayed them into assuming the aggressive. They are receiving a great deal of credit for entering the lists against a Power like England. Many critics are disposed to conclude that they wittingly engaged in a desperate struggle for the sake of striking a blow in the cause of freedom. But no critic has ventured to deny that the Boers were firmly convinced of their ability to beat England. The struggle did not present itself in a desperate light to their eyes. They struck, not for mere freedom, but for the overthrow of England's dominion in South Africa and the erection of a great Dutch republic on its ruins. A fight was therefore inevitable, but it is not a fight of which Englishmen are proud, and its unwelcome character has been accentuated by the temper of Continental Europe. A great English philosopher, writing forty years ago, said that one of the notable traits of French national disposition is ardent sympathy with every struggle for freedom in every part of the world. We believe that the romantic features of this war appealed from the first with irresistible force to the mind of the French people, and in that supposition we find a sufficient explanation of the attitude of their upper classes towards us, though not of the vulgar hysterics indulged in by the lower. Russia's animosity, too, is natural. We must expect a Rowland for our Oliver. But Germany's mood is beyond comprehension. It has astonished England, and it will not, we fear, be easily forgotten. These accompaniments have not mitigated the pain of the struggle, or helped to lessen the conviction that there was little glory to be gained out of it. We are glad to know, however, that on the profit side of the account, stands the unequivocal evidence Japan has given of her friendliness to Great Britain. She has brought herself very close to us, and we cherish the hope that she and England will always be found in the same camp when the big problems now rising above the horizon of Far-Eastern problems come up for final solution.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In writing on "Religion and Ethics," the *Seikyô Shimpô*, the Greek Church Organ, observes that during the first half of the nineteenth century European philosophers were engaged in discussing the nature of man's intellect and the kind of knowledge that he acquired by exercising it. But in recent years the subject of ethics and religion has attracted the attention of great leaders of thought. In Japan during the first twenty-five years of the *Meiji* era desperate efforts were made by our scholars to render educated readers familiar with the results of Occidental investigation of a pyschological kind. The intellectual part of man, however, was the chief subject of inquiry. It is only during the past 4 or 5 years that ethics have been earnestly and generally discussed. A large number of writers seem to be of opinion that ethics do not need religion as a basis. Prince Konoye returned from his European tour impressed with the conviction that morality in Europe has a better basis than it has in Japan and proposed that, since the immediate adoption of Christianity as a basis was impracticable, scholars should devise some substitute for it. Such utterances come from those who have studied human nature and philosophy to little purpose. Ethics can find no sure basis but religion, simply because nothing else can give man the power to perform the actions which ethical teaching has led him to regard as right and good.

* * *

The *Rikugô Zasshi* has a good deal to say on the tenets of Unitarians in Japan and their attitude toward various bodies and various questions at the present time. The occasion which called forth these remarks was the departure of Dr. Clay MacCauley several months ago. At the farewell entertainment which was given to him by his numerous Japanese friends and admirers Dr. MacCauley made a speech; in the course of which he related the history of the founding of the Unitarian Mission in Japan. From the report of the speech published in the *Rikugô Zasshi* we cull the followings particulars:—The Unitarians of America sent out Dr. Knapp as their representative on account of the action taken by some leading Japanese. About 16 years ago Mr. Fukuzawa Yûkichi repeatedly pointed out in the columns of the *Jiji Shimpô* and elsewhere that Japan would certainly derive many benefits from the introduction of some form of Christianity, could this be effected, and hinted that the least strict and the least bigoted form would be most acceptable. About the same time, Mr. Yano Fumio, then editor of the *Hôchi Shimbun*, took the same line, urging that Christianity minus dogma would furnish a suitable basis for Japanese ethics. The desirability of establishing a Unitarian mission in Japan was publicly admitted by such leaders of thought as Doctors Katô Hiroyuki and Toyama Masakazu. The mission was strongly founded. A very fine set of men were sent to this country to engage in school work. while they helped forward the Unitarian cause; Messrs. Droppers, Wigmore, Mac Cauley, Liscomb and Knapp will all be remembered as earnest Christian scholars. But the connection of these gentlemen with the mission was of short duration. Dr. MacCauley was the last to leave and his mission life did not exceed about ten years. The Unitarian body now entirely consists of Japanese. Dr. MacCauley, says the *Rikugô Zasshi*, was a faithful representative of Unitarian thought in the United States without any of the sectarianism that characterizesas certain Unitarians in America. He is of opinion that even the name *Kyôkai* (教會) church, had better he changed to (協會) *Kyôkai* (Association), if it is found that according to Japanese law the retention of the former title involves certain political disabilities, and this is also the view taken by the American Unitarians whom Dr. MacCauley represented.

The writer we are quoting next proceeds to discuss the tenets of Unitarianism in the following terms:—Is Unitarianism Christian? We answer, yes and no. Historically Unitarianism is closely connected with Christianity and has no relation to any other creed. But as regards the views which are held by the persons who call themselves Unitarians they are not distinctively Christian. It is impossible for me to regard the body as a religious sect. It is merely a club or association of men who have agreed that they shall all be allowed perfect freedom of thought and expression in religious matters. No test of suitability for membership is applied. . . . . Some

Digitized by Google Original from CORNELL UNIVERSITY

say that a body held together so loosely can not expect to effect much; that definiteness of teaching is essential to influence over others. This may be so. But experience has shown that a certain class of minds prefer to approach religion in a free and easy manner. The Unitarian net catches fish that avoid the meshes of other nets. . . . . If people object to our retaining the name "Unitarian," it would cost us no effort to give it up. Dr. MacCauley was a man of rare self-devotion. He has gone home without reaping the fruits of his own labours. He came to the conclusion that the Japanese get on best when not interfered with by foreigners. Would that other missionaries would follow his example! By so doing they would lessen the expense of mission work and remove many obstacles to the progress of the gospel.*

* * *

The *Taiyô* discusses the views of Dr. Murakami on Buddhism, as recently stated, and compares them with those of Dr. Inoue Tetsujirô. We gave a full summary of Dr. Murakami's article referred to by the *Taiyô* a few months ago. It will be remembered that Dr. Murakami laid great stress on the craving of human nature for a personal object of worship and predicted that the Budhhism of the future would certainly meet this want. Dr. Inoue, another great authority on Buddhism, we are told by the *Taiyô*, differs from Dr. Murakami on this point. Discussing the connection of religion with nature, personal objects of worship and ethics, Dr. Inoue says that of late years the feeling that the ethical side of religion is by far the most important has been growing, and that he himself does not think that the relation of religion to nature and the worship of personal embodiments of virtue are of vital moment. Dr. Murakami's view, says the *Taiyô*, seems to have originated in a desire to popularise religion. What he says about personality is a concession to human tradition, and not a rational deduction. This question concerning personality is one of the most crucial questions of philosophy and religion, says the *Taiyô*, and that two great leaders of Buddhist thought should differ on it is not surprising.

* * *

The *Taiyô* deprecates the part taken by ministers of the Gospel during the discussion of the "Religions Bill." It says that it is the duty of ministers to steer clear of all political questions and that the "Religions Bill" was one of these. It does not deny that the Buddhists were as much to blame as Christians and observes that the course followed by the former thoughout the agitation over the rejected Bill was both narrow-minded and selfish. Christians ought to be content with their own special sphere of influence and should not try to interfere with legislation. If those persons who teach religion feel that they must mix themselves with politics, then they should follow the course of the Unitarians and cut their connection with recognised sects, and enter the ranks of the laity.

* * *

The last number of the *Teikoku Bungaku*, under the title of "The World of Thought," passes in review the various opinions on the subject of religion which have been expressed by noted scholars during the past few months, beginning with those of Doctors Inoue Tetsujirô and Motora and ending with those of Professor Murakami, a writer in the *Taiyô* and Mr. Fukuzawa. The one point of agreement between all these essayists, says the *Teikoku Bungaku*, is the preeminence of the ethical element in religion. On the worship of nature or the recognition of a personal originator of its many operations opinion is divided. While the ideas of the learned have been expressed by one or other of these writers, Mr. Fukuzawa has come forward as the mouthpiece of practical men of the world who take things as they find them and try to discover a remedy for what they conceive to be fundamental weaknesses in the moral nature of the modern Japanese. The *Teikoku Bungaku* remarks that this principle of independence and self-esteem of Mr. Fukuzawa is the essence of Anglo-Saxonism, of which Mr. Fukuzawa is an ardent admirer. The *Teikoku Bungaku* then proceeds to quote two opposite opinions as to the merits of Mr. Fukuzawa's proposed system of ethics. The first of these is taken from the *Chûô-kôron* and is couched in the following terms:—Japan is by no means out of the wood as regards feudalism and its attendant evils. The spirit of slavish subjection to the wills of others still prevails to a very large extent. The bulk of the nation is ignorant of the meaning of independence and self-respect. Hence Mr. Fukuzawa's doctrine exactly suits the present time. It is a remedy that has been suggested by the disease it is intended to cure. Mr. Fukuzawa's followers will do well to proclaim this new ethical gospel on the housetops. In the same magazine Mr. Tsunashima, a Christian writer, tells us that he thinks Mr. Fukuzawa's *Shûshin Yôryô* to be full of egoism. To ask a people in whom regard for others is as yet an undeveloped feeling to pay more respect to themselves and to rely on this self-esteem as a means of making them more virtuous seems to me, says Mr. Tsunashima, like expecting a fire to go out after one has poured oil on it. Surely egoism needs checking and not encouraging. The *Tetsugaku Zasshi* writes in the same strain, as stated by us in last month's Summary. Turning to the *Kokumin Shimbun*, continues the *Teikoku Bungaku*, we find Mr. Aizan reviewing Mr. Fukuzawa's latest thoughts under the title of *Kinji no Fukuzawa-ô* in the following manner. That a man who has spent all his life in discoursing on the practical things of life should on the brink of the grave turn preacher and supply his followers with a creed; that a man who has despised philosophy and treated religion coldly should now endeavour to found a sect is, to say the least of it, a very striking phenomenon. When the silk-worm grows old it prepares its cocoon. When man grows old he seeks for the materials wherewith to build for himself a monument that shall perpetuate his memory. Here we have Mr. Fukuzawa following in the footsteps of the evangelists whom he has so often laughed at and providing solace for the weary. It would seem as though in solemnly reviewing his life he felt that it would not be complete without some definite expression of opinion on philosophy and religion. It looks as though the things which satisfied Mr. Fukuzawa in his vigorous days appeared insignificant to him on the threshold of the unseen world and that he, like so many others, feels that the deeper questions of life should be grappled with and if possible answered.

We have considerably curtailed Mr. Aizan's remarks. He writes as if Mr. Fukuzawa had given up his Utilitarianism and adopted something nearer Christianity, but surely the *Shûshin Yôryô* is utilitarian throughout.

L'Abbé Francois Ligneul has kindly forwarded to us his two latest works, the *Sekai Kwanken* 管見 (A Peep at the World) and the *Hôri Tetsugaku* (The Philosophy of Law). The former was issued on May 15th and sells at 14 *sen* a copy, and the latter appeared on May 19th and sells at 17 *sen* per copy. Both works are full of interest. The first is expository and didactic, the second controversial. From the prefaces to the two little volumes we learn what objects M. Ligneul had in view in preparing them. In his "Peep at the world," M. Ligneul, after observing that though travellers go over the same ground they see different things, tells us that what interests him most in his study of the world's affairs may be classified under three headings as follows:—(1) The distinction between civilisation and barbarism. (2) The difference between original religion (本教) and its off-shoots (支教) (3) The connection of race with the events of history. The *Sekai-kwanken* discusses these three subjects in a concise and attractive manner. M. Ligneul does not claim to have gone into the depths of the three branches of inquiry, but only to have shown that they are extremely interesting topics and topics on which thoughtful people ought to have definite opinions.

The *Hôri Tetsugaku*, though partly written before Dr. Katô Hiroyuki published his learned work entitled *Dôtoku Höritsu Shinkwa no ri*, is, M. Ligneul tells us, to a certain extent intended to be a counter-blast to Dr. Katô's treatise. M. Ligneul, as is natural enough, writes in regretful tones of Dr. Katô's career as a philosopher and a popular writer. The thought which seems to underlie M. Ligneul's remarks about Dr. Katô is, what grand things might have been accomplished by this talented man if he had only been a Christian! People have tried to detract from Dr. Katô's greatness, says M. Ligneul, by observing that he is "a man with one idea." But this rather adds to his fame, as all the great men of the world have stuck to one idea in the main, and it has been around this one idea that their fame has clustered. It will be found in reading the *Hôri Tetsugaku*, says M. Ligueul, that there are other people full of one idea besides Dr. Katô. A comparison of the two recently issued books on the same subject (the *Hôri Tetsugaku* and Dr. Katô's work) will show that the stones with which the two structures are built come from different quarries (他山の石). It often happens that sparks of truth are produced by the friction of ideas, says M. Ligneul, and hence persons interested in the subject will do well to peruse both works, though in point of style and general attractiveness there can be no comparison, says M. Ligneul, between my treatise and that of Dr. Katô.

Another work on religion recently published demanding a brief notice is Mr. Anezaki Masaharu's *Shûkyô-gaku-gairon*, which has been issued by the Tôkyô Semmon Gakkô, and which sells at 1 *yen* 50 *sen* a copy. This book claims to be a thoroughly up-to-date treatise on religion, treating it from various points of view and illustrating the author's theories by extensive quotations from history. Mr. Masaharu is now in Europe for the purpose of carrying on further investigations in the same line. In view of the new interest which religion has awakened in this country Mr. Masaharu published the *Shûkyô-gairon* before leaving for Germany.

* * *

The *Jiji Shimpô* on April 26th published an interesting account of an interview granted to one

* The policy here recommended has been largely adopted by the Greek Church, which, we believe, has only one foreign minister connected with its Japanese Church.—(WRITER OF THE SUMMARY.)

Digitized by Google Original from CORNELL UNIVERSITY

of its staff by Bishop Nicolai, during which the Bishop gave a concise history of his own career and of the founding of the Greek Church in Japan that is well worth transcription. The venerable prelate is represented to have spoken as follows:—I first came to Japan 39 years ago at the age of 25. At that time anti-foreign spirit was at its height and it is hardly necessary to say that my life was constantly in danger. As I came for a religious purpose, I hired a teacher and commenced to study the language. After spending some time over it, I commenced to read the *Nihon Gwaishi*, the *Kojiki*, and other books, and obtained some knowledge of Japanese religion and of Oriental thought generally—subjects that were quite new to me at the time and which interested me immensely. When I began to explain Christianity in a quiet way, the names, "Christian," "heretic," "magician" were hurled at me in bitter reproach. Since the majority of persons in those days thought that Christianity was a form of necromancy, people came to me with the strangest requests. I was asked to conjure up mountains and rivers in my house for their diversion, to call spirits from the unseen world, and even to make it rain silver and gold or to place myself over the fire without getting burnt. My first convert to Christianity was a young fencer in the employ of the Russian Consulate at Hakodate called Sawabe Kazuma. This young warrior at first scowled on me with the eye of a wild beast. He looked as though the very sight of me was loathsome to him, and when he began to speak to me I knew that this was the case. For one day he came to me and said, "You are one of those traitors who have come here to teach heresy. The sooner the like of you leave the country the better." I dealt with him gently, urging him to read the Bible for himself. This he refused to do. Then I pointed out that it was unreasonable to abuse what he knew nothing about, and I explained certain things to him. He took notes of what I said, and this led to his afterwards becoming a convert. He has spent his whole life in teaching Christianity.

Subsequent to the fall of the Tokugawa Shogunate I breathed the air of freedom, and, after returning to Russia and taking steps for the founding of a mission, I took up my quarters in Tôkyô in the spring of 1872, where I have remained ever since.

There are at present in Japan a very large number of different religious sects, more than a hundred. And even in the case of Christianity there are many different forms. Shintô lacks some of the chief characteristics of a religion, and therefore should not be so called. Buddhism is a form of pantheistic philosophy. It encourages the worship of nature, but since it is not founded on belief in one personal God, it can never prosper. Japan desires to made the civilisation of England, America, and Germany her own, and as these are Protestant countries is somewhat inclined to favour this form of belief rather than the Greek Church, which has its home in a country that occupies a lower stage of civilisation than that possessed by the three above-named nations. But, looking to the future, it seems certain that the numerous divisions among Protestants will undermine their influence altogether, and that hence final victory will lie with us. Even now there is a great demand for our teaching. The need of a higher tone of morality is felt everywhere, and this can only be obtained by basing it on the Christian religion.

We have spent more than 250,000 *yen* on Church building.* This sum was collected by me in Russia, and not supplied by the Russian Government, as some suppose. Russian Christians have given liberally, not a few princes being among the subscribers.

Our priests are all married with the exception of myself. Though at one time priests of the Greek Church were not allowed to marry, in the early days of the Christian Church marriage was permitted. During the first years of our mission in Japan, the Christians who applied for admission into holy orders aimed at celibacy, but failed and brought disgrace on the Christian cause. In view of this I made a rule that all priests should be married men.

I live one of the busiest of lives, rising before 6 in the morning and never retiring before 11. I have been working hard at the translation of the Scriptures from the Hebrew, Greek, and Latin versions. The New Testament is now finished, after being revised three times. It will be found to differ very considerably from any version of the scriptures in circulation in this country.

* * *

In reference to the translation of the Scriptures we read in the *Fukuin Shimpô* that the Baptists have a new translation in hand in which the Japanese word for immersing, *hitasu*, is used for baptism on every occasion. Mr. Takahashi Gorô has completed his translation of the Old and New Testaments for the Roman Catholic Mission. The Fukuin-Dômeikai talk of revising the Bible now in use by Protestants. In various directions dissatisfaction with the translation made by a Committee of Delegates many years ago is expressed. The *Fukuin Shimpô* is of opinion that there is plenty of room for improvement in what has hitherto been considered the Japanese authorised version of the Scriptures.

* * *

Under the heading of "The Urgent duty of the Christian Church" the *Tôkyô Maishû Shimpô* gives an account of an important meeting of Christians called together by Mr. Kataoka Kenkichi, the President of the House of Representatives, at which those present were asked to give their opinion of the present situation of Christian affairs and of the prospects of future success. Some urged the necessity of the Church's deciding on the educational policy to be adopted and of all Christians' supporting it. Others contended that more prayer meetings should be held. Others thought that attempts should be made to work up a revival. All were agreed that Christianity is about to enter on a new stage. What to us seems to be most important, says the *Tôkyô Maishû Shimpô*, is that each Church should set before it some definite object and strive to attain it. There is a great want of clearness in the minds of Christians as to what Christian belief and Christian life are. At so many of the meetings that are held there is too much indulgence in vague generalities that leave no impression on the minds of those who listen to them. Much of the profession of Christianity proves its hollowness by its failure to effect anything practical. Numerous evangelists are satisfied if numbers increase, taking no cognizance of the fact that the majority of their converts are persons of no strength of character whatever. Thus do they erect a building whose foundation is shaky. Their adherents prove too often to be mere hothouse plants that die when exposed to inclement weather. The urgent duty of the Church is to decide what kind of converts are needed and to set about getting them.

Another writer in the organ quoted above dwells on the difference that exists between the Christian religion as known to the world and the Christian religion as known to real believers or would-be believers. The first is the real gospel, the second is a modified form of Christianity adapted to the intelligence and taste of the people of any given age. Persons who take an interest in the latter very seldom care a straw for former. The ethical, political, and social side of Christianity interests them, but not its strictly religious side. To worship and faith in a Saviour of the world they are alike indifferent, and any attempt to preach them into devotion only repels them. They are ready to admit that Christianity confers certain ethical benefits on the world; beyond this they will not go. There are two classes of exponents of the creed of Christendom. The one class states the naked truths of the gospel, the other class dresses these truths up to suit the feelings of the persons who are asked to accept them.

* * *

To a recent number of the *Tôkyô Maishû Shimpô* Mr. Matsumura Kaiseki contributes an article entitled *Kirisuto-kyô ni tsuite no Chishiki*, the gist of which we give below. There is a great dearth of well-informed Christians. Many of the young men in the Church who pay special attention to the cultivation of the mind are averse to becoming evangelists. Many real believers who are willing to become preachers have not the knowledge necessary to make them successful. Even Christians who have a great deal of theoretical knowledge are quite ignorant of the state of the world's affairs and of the tendency of thought, and hence they waste effort fruitlessly. A case in point is Dr. Wright's attempt to influence Japanese by stating to them at great length the argument from design. It produced no impression whatever on the young men who listened to it. They are not in the state of mind to be affected by an argument of that kind. . . . The number of illogical and self-contradictory things that are uttered by Christians is very large. There are Christians that say the tobacco smoker cannot inherit the kingdom of God, while Dr. Verbeck habitually smoked. There are teachers that make out that orthodoxy and heresy are a mere matter of numbers. The teaching of the majority is to be considered orthodox, that of the minority heretodox. There are those who say that it is necessary for Japan to accept Christianity in order to save herself from invasion and annexation, thus indirectly justifying the action of Russia in Poland and of Spain in Mexico. People talk much about Christianity's abolition of slavery, but seldom mention the fact that in an earlier age slavery was preached from Christian pulpits as an institution pleasing to God.* Arguments that are not only quite inconclusive, but which if pressed by a skilful antagonist prove to be of a most destructive character, are ignorantly cited by ill-informed representatives of the Christian cause. Thus deficiency of knowledge in those who take upon themselves to explain Christianity to others frequently brings reproach on the creed.

man Catholic form of Christianity to Protestantism. The Roman Catholic Church, says this organ, as an eminent French Protestant, Guizot, remarked, has ever been a great school for the culture of respect for royalty. It is of the essence of Catholicism that due respect should be shown to all lawfully constituted authority. Since the Protestants are for ever preaching the doctrine of liberty and removing one restraint after another from the minds of their converts, it is not surprising that one of their number should commit such an offence as that perpetrated by the youth Yamakawa Hitoshi. The enemies of Christianity are doing their best to make use of the incident in the crusade against our faith, says the *Koye*. The best way to meet this is to explain that our Church lays special stress on the importance of subjection to authority and of showing deep respect for all civil rulers. In reply to these remarks Protestants would no doubt have much to say.

L'ABBE FRANCOIS LIGNEUL ON FREEMASONRY.

Damnantur Clandestinae Societates, wrote Pius IX. in 1864, in the Papal bull *Quanta Cura*. Former bulls had said some hard things against the order of Freemasons, but no previous utterances had expressed Papal ire in such trenchant terms. M. Ligneul has recently published in Japanese a work on Freemasonry which might well bear the above words on its title page. For throughout the 250 pages of which the book consists the author does nothing but denounce the whole system of Freemasonry as one of the greatest evils the world contains. Now there is no denying that as a compiler of books M. Ligneul has no equal among missionaries. The rapidity with which he produces volume after volume, the extent of the subjects treated, and the great vivacity which characterises everything he writes are most striking. We are informed that his books are very widely read. They have received favourable notice from all impartial Protestant literary organs, as well as from leading purely literary magazines. He has supplied to his Japanese readers so much information that is thoroughly reliable that it is with no small regret that we find among his works a volume which is a gross misrepresentation of the whole subject it undertakes to treat. Perhaps it may be too much to expect that so keen a controversialist as M. Ligneul should write impartially on any subject. One has to bear in mind that in war the common canons of life may be broken with impunity. The terms fairness and unfairness seem to be no longer applicable. Ardent Christian partisans seldom see any good in their foes. They denounce them *in toto*, and this course, it is considered, pays best in the long run from a controversial point of view. But M. Ligneul, as has already been pointed out in these columns, is a philosopher as well as a stalwart defender of the decisions of the Council of Trent, and as a philosopher it is not unreasonable to expect that he should take a broad view of men and things, as when writing on some other subjects he has invariably done. We would put the following question to M. Ligneul. If Freemasonry were the thing it is represented to be in the *Himitsu Kessha*, could it possibly find the support it does in England, America and Germany? In America the success of Freemasonry has been astonishing. The first lodge established at Boston dates from 1733. We have no recent statistics by us, but in 1870 there were in the United States no less than 5,000 lodges with nearly 200,000 members.

There are many evidences in M. Ligneul's treatise that he is acquainted with the history and tenets of French Freemasons only, and that even concerning these he has been guided rather by the utterances of the French clergy than by accounts penned by impartial writers. We are quite prepared to admit that the English Freemasonry which was introduced into France by Lord Derwentwater in 1725, perhaps owing to the fact that it was largely patronized by the nobility, who were mostly corrupt at the time, gradually lost all its high moral tone and in later years imbibed many ideas that were subversive of ecclessiastical authority. Without believing the slander, which M. Ligneul repeats and endorses, that French Freemasons are engaged in any definite conspiracy against the State, religion, and social order, we can admit that there is something in their fundamental principles and their indifference to theological belief which justifies their being regarded with a certain amount of suspicion by the Church. But what we have to bear in mind is that M. Ligneul's book does not profess to be an account of French Freemasonry and its relation to the Church of Rome only, but to be a description of Freemasonry the world over. However unfavourable to the Ultramontane party many of the lodges of France, Germany, Belgium, and Holland may be, it would be quite untrue to to say that Freemasonry in England and America is anti-religious. According to M. Ligneul, we are required to believe that the thousands of pious souls who belong to the fraternity are at heart opposed to order, religion, and family life. M. Ligneul, we observe, takes for granted that there is a real connection between modern Freemasons and such sects as the Essenes and Carmathites, though he does not go so far as the Rev. George Oliver, one of the most popular Masonic writers of the Nineteenth Century, who informs us that Moses was a grand master, Joshua his deputy, and Aholiab and Bezaleel grand wardens. It seems to us quite evident that the cosmopolitan brotherhood which forms the basis of Freemasonry to-day was impossible in the ancient world. The origin of Freemasonry, however, is comparatively an unimportant subject. It is the tenets and objects of Masons that most concern the Japanese, whom M. Ligneul is trying to guard so jealously from the pernicious influence of these so-called enemies of mankind. But the point we are concerned in making here is this, if, as M. Ligneul maintains, the fraternity has always been an evil sect, how does he explain the facts that in England the early mason mechanics, from whom, according to M. Ligneul, modern masons are descended, admitted into their body ecclesiastics of the highest rank, Roman Catholic abbots, prelates, and bishops, and that the artisans who belonged to the fraternity built churches and helped forward Christian work in various ways? For a long time the Freemasons of England were patronised by the clergy and smiled on by Popes. It is stated on competent authority that the very title "Free" to which Mr. Ligneul gives such a sinister meaning was first applied to those English builders who were exempted by several papal bulls from the laws which regulated common labourers, and exonerated from various burdens thrown on the working classes at large both in England and on the Continent. In those days the principal function of the craft was church building, so that its connection with the clergy was very close. But even before the Reformation the English Masons seemed to have excited the jealousy of the Church on account of their great influence and their impatience under control. We do not believe there is any real connection between these early masons and the modern fraternity, but M. Ligneul thinks there is, and hence to him this argument ought to appeal. It is not true to say that even ancient Masons were the enemies of the established Church.

In our opinion modern Masonry is neither connected with the building craft nor with architecture. It is of British origin and dates from the 17th century. In the phraseology of the masonic brethren it is founded in "the practice of moral and social virtue." Its distinctive characteristic is charity in its most extended sense. Brotherly love, relief, and truth are all enjoined by its precepts. The symbolism it uses, which is no essential part of the system, was borrowed partly from the Knights Templars and partly from the Rosicrucians. Charles II. and William III. were Masons, and, perhaps on account of his connection with operative Masonry, Sir Christopher Wren, the famous architect, was appointed Grand Master. A distinction was made in England between Masons and the members of ordinary secret societies. When in 1799 an Act was passed suppressing the latter, exception was made in favour of Freemasons. In 1717 a Grand Lodge was formed in London with power to grant charters to other lodges. In 1742 the Duke of Cumberland, was elected Grand Master of the Grand Lodge and he was succeeded by the Prince of Wales, afterwards George IV. The Grand Lodge of England had in 1870 more than a thousand lodges under its protection.

We have stated these facts in order to show how preposterous is the notion, which M. Ligneul adopts and presses upon the Japanese, that Freemasonry is an anti-government, anti-religious, anti-moral, and anti-domestic organisation. That Free-masonry has often been used for political purposes in all countries cannot be denied, but so has Roman Catholicism. Its employment for political objects is a violation of its constitution, which prohibits political, partisan, or sectarian discussions in the lodges. American readers will remember that the conflict between the lodges of Scotch origin calling themselves *Escoceses* and the lodges chartered by the Masons of New York which called themselves *Yorkinos* led to civil war. But this was not the fault of Masonry as a system, but is to be attributed to that deep-seated American tendency to make everything serve a political purpose, not excepting the pulpit and the altar of worship.* Freemasonry is not to be held responsible for the uses to which it has been put by unscrupulous persons. Even the holiest things are not proof against profanation. M. Ligneul makes much of the secrecy which enshrouds the doings of Freemasons, and in one of his chapters argues that shame can be the only reason for secrecy. M. Ligneul cannot be ignorant of the fact that just as secrecy is resorted to by those who are bent on the lowest forms of evil so it is adhered to by those who are performing acts which in all times and in all civilised countries have been pronounced to be highly virtuous and god-like. There are cases, and those not a few, where secret charity is the only possible charity, where any assistance offered openly would be spurned, though sorely needed. It is not mere silly pride that makes many a man and many a woman strive to the very utmost to keep up appearances with slender means, but the right kind of self-respect. Help given to such persons before the gaze of the cruel world would destroy their self-respect. The Freemasons help them in secret. They perform, do these maligned secret societies, a thousand acts of benevolence that would bear comparison with any of the works of charity of which even the Church of Rome can boast. And yet by M. Ligneul the Christ-like secrecy with which they work is quoted as though it were a reproach to them. Did not Christ say, "When thon doest alms, let not thy left hand know what thy right hand doeth: *that thine alms may be in secret!*" Persons who have not joined the brotherhood have from time to time demurred at the secrecy observed. Its origin was very simple. In the early days of the fraternity a set of pass-words, or a peculiar grip of the hand, enabled the initiated to recognise each other and gave zest to their meetings. There was no special significance about such secrecy. The secrecy that is significant, as far as English and American Masons are concerned at any rate, and probably as far as all Masons are concerned, is certainly never used as a cloak for evil. But secrecy is no longer observed by many lodges, for quite thirty years ago the Grand Master in England gave permission to the *Freemason's Magazine* to publish reports of the proceedings of grand and private lodges.

It would seem at first sight that the title M. Ligneul gives to his work, *Himitsu Kessha*, indicated that it was not Freemasonry specially that was to be made the object of his attack, but associations like the Nihilists and Anarchists in the West and the

* It is quite common for a man to reveal his political sympathies by the language he uses in prayer in various parts of the United States, and cases have been known where one supplicant has answered a praying opponent while addressing the Almighty by skilfully worded petitions.

Digitized by Google Original from CORNELL UNIVERSITY

numerous secret societies in China. But a perusal of the book dissipates this notion. It is on Freemasonry that M. Ligneul's assault is made, and it is of it that he writes in the following manner in Chapter IV:—The Freemasons assert in a most open manner that in order to deliver men from the thraldom to which they are subjected the following six delusions must be removed from their minds.

1. *Respecting the Family.*—The custom of one man marrying one woman is an old superstition that has been transmitted to us. It is a remnant of barbarism and must be got rid of.

2. *Property.*—The holding of property is to be regarded as a sin against society. It begets cruelty and oppression. The custom should be abolished.

3. *National Boundaries.*—To divide off one country from another and put barriers between them to prevent free intercourse is treating human beings as though they were sheep. It interferes with development and curtails the liberty to which man has a right. Such obstacles to human progress should be removed.

4. *Morality.*—The distinctions between virtue and vice, right and wrong, praise and blame, exaltation and humiliation, these are the chains which have kept man in prison long enough. They should be snapped and ground to powder.

5. *Authority.*—Whether in the case of fathers or masters, in the house and the State, the assumption of authority over others without their consent is an encroachment on the rights and an interference with the liberty of the many by the few. No one has a right to govern people unless they are appointed by the people they govern. The people alone possess power. All other kind of authority should be overthrown.

6. *Religion.*—This is a bad dream, a pernicious fiend, that makes sad the hearts of women, children, and weak-minded men and keeps them in a perpetual state of anxiety, which haunts and depresses them even in their hours of recreation and prevents them from fulfilling any high purpose in life. Hence no trace of religion should be left in the heart of man.

The above is a fair specimen of the Freemason dummy that M. Ligneul sets up as a target for his arrows. He entirely ignores the fact that in the ranks of Freemasonry there are thousands of devout Christians, who believe that Freemasonry is a handmaiden to the church. M. Ligneul is a powerful special pleader, but all the rhetoric at his command does not hide the fact that this time he has got hold of a bad brief and that the case must go against him in open court. The conclusion which he reaches, as stated in the last chapter of his work, is that Freemasonry is on the side of materialism, lawlessness, and atheism, and therefore is the mortal foe of all devoted Christians. Since, as M. Ligneul reminds us, the Japanese nation knows so little about the whole subject, we have deemed it our duty to point out that it would have been infinitely better that the Japanese should have been left in their ignorance rather than be treated to such a caricature of Freemasonry as it exists to-day as that which M. Ligneul has penned. We trust that before M. Ligneul brings out a second edition of his work he will take the trouble to study something beyond the account of French Freemasonry run wild that has fallen into his hands. For his scholarship, zeal, and single-mindedness we have the greatest admiration, but in the present case he has fallen a victim to partisanship. We recognise no longer the calm philosopher weighing the pros and cons of complex questions in his wonted style, but make acquaintance with a man who is so blinded by prejudice as to hurl anathemas at corporations which in the opinion of the thousands of upright men who belong to them possess the charity that suffereth long, and is kind, the charity that envieth not, that doth not behave itself unseemly, that thinketh no evil, that rejoiceth not in iniquity, but rejoiceth in the truth.

A telegram to the *Manila Times*, dated New York, June 1, states that the Venezuelan revolution is at an end. Hernandez, the revolutionary leader, has been captured.

HOKKAIDO.

According to the latest investigations, as published in the *Keizai Zasshi*, the population of Hokkaido has now grown to 853,000, the average increase per year being no less than 53,000. The island has an area of 5,100 square miles, of which 2,900,000 *cho* are available for cultivation. Supposing each *cho* to yield a profit of 7 *yen*, the total will be something like 203 millions of *yen*. At present the cultivated area does not exceed 245,000 *cho*, against 2,660,000 of unreclaimed land. This unreclaimed land, however, yields sleepers for railways to the amount of 660 millions *yen*, and offers prospects for the organisation of preservation forests to the extent of 3,600,000 *cho*, from which a profit of 28,800,000 *yen* might be realized annually. As to mining, statistics show that coal is obtainable in 116 districts comprising 63,950,000 *tsubo*. The districts under trial number 1370, comprising 708 million *tsubo*. Sulphur is obtained in 43 districts, extending over 5,110,000 *tsubo*; kerosene in 29 districts, with an area of 2,540,000 *tsubo*, together with 68 sections (36,800,000 *tsubo*) on which trial borings are being made. The gold fields cover 237 million *tsubo* in 123 mining sections, besides 36,800,000 *tsubo* in 68 sections where experimental works are being carried out. Manganese mines extend over 5,870,000 *tsubo*. It is said that the value of the productions of Hokkaido amounts to 34 millions of *yen* annually. Of this amount 880,000 *yen* is accounted for by match wood; 2,370,000 by works of art; 70,000 by silk cocoons; 260,000 by marine products; and 802,000 by agricultural produce. The fertility of the soil may be perceived from the following comparative figures:—

	Northern district of Japan proper. *Koku.*	Hokkaido. *Koku.*
Barley	1.00	1.14
Wheat	0.76	0.88
Panicum Frumentaceum	0.83	1.00
Beans	0.74	0.92
Red beans	0.57	0.67
Millet	0.65	1.49
Rape-seed plant	0.74	0.96
Indigo	0.27	2.26
Potatoes	1.66	0.98

There can be no second opinion as to the superiority of Hokkaido.

A NEW HOTEL AT KOWAKIDANI.

A number of eminent personages, among whom are Mr. Yokoyama Magoichiro, who, from his experience abroad, is familiar with the conditions of European life, Mr. Masuda Kotoku, and Mr. Yamagata Shinkichi, well known in commercial and industrial circles, and others, have under contemplation the construction of a large hotel at Kowakidani, Hakone. Kowakidani, as most foreigners know, lies in the centre of the Hakone mountain district between Miyanoshita and Ashinoyu, and is situated about 2000 feet above the level of the sea. To the west lies Kowaki mountain, and to the north and south is a fine view of distant hills and peaks. The whole district is delightfully fresh and verdant, and in the spring the mountains around have almost the appearance of a natural garden of cherry trees. In summer the district is swept with fresh breezes; the autumnal tints are fine; and even in winter the neighbourhood has a charm of its own. The climate is comparatively equable. In the hottest part of the year the thermometer does not rise above 80° F., while in winter the hot springs with which the region abounds rob the cold of much of its rigour. The springs are, as most foreigners know from experience, of great efficacy in many complaints, and are moreover much more pleasant for bathers than at some other resorts. The district has the advantage of easy accessibility from Tokyo and Yokohama. The Tokaido railway brings the traveller as far as Kozu, whence an electric railway conveys him to Yumoto at the foot of the hills, over which is to be carried at some future time. The only difficulty is a hilly path of about a mile leading from Miyanoshita to Kowakidani, but a practical survey has already been made for the construction of a carriage road, so that greater facilities may be secured at no distant date. A trip from Tokyo or Yokohama to Kowakidani and back can then be effected in one day. Kowakidani is well provided with foreign food and beverages, but so far the hotel accommodation has not been of the best, though the foreigner used to roughing it has found little to complain of. The promoters of the present scheme, however, apparently mean to do things thoroughly. They will purchase the existing buildings, together with adjoining land, extending over 20,000 *tsubo*, upon which a fine edifice suitable for foreigners is to be constructed as an annexe to the present establishment. It will be well furnished, and provided with means for indoor and outdoor games, sports, and exercises. Billiard rooms, and rooms for *yokyu* and other games will be included in the building, while a riding paddock, tennis court, and *daikyuba* (archery ground) will be formed outside. A fine garden is also to be laid out. Visitors will be divided into two classes. With regard to the foreign section arrangements will be made on purely western lines; for the Japanese section the best methods will be adopted. Special attention will be paid to cuisine and baths. The enterprise appears to be a hopeful one, and subscriptions to shares should be readily forthcoming. Arrangements have been made, as will be seen by the advertisement in another column, to receive applications for shares at various banks, or at the *Japan Mail* office. Any person interested in the scheme is requested to apply for particulars.

CHINESE NOTES.

The children of the British Minister have been sent to Chefoo, but Lady Macdonald remains in Peking. None of the ladies or children of the Russian Legation have left.

The *Universal Gazette* says that the Boxers having threatened to burn down the Tung Wen Kun College and the Peking University and murder the teachers and scholars, every one of them has left the college.

Regarding the recent troubles at Wei-hai-wei, a correspondent at Tientsin writes to the *N.-C. Daily News*:—"The opinion obtains here that it might have been obviated, had an experienced Consul, who was also *persona grata* to the Chinese, been sent to explain British intentions to the rustics. Our folks should have followed the old policy of the Indian frontier. The Consular official who is there is a most able and excellent man, but, as he is quite a junior and a stranger, he could hardly be expected to exercise considerable personal influence either with the British military and naval men or with the natives. In all probability Sir Claude had not a man to send, as the service is very short-handed just now."

The arrival of the British gunboats *Woodcock* and *Woodlark* at Chungking on 7th May was a spectacle to be remembered. A correspondent writes:—"The whole of the foreign community turned out to see the arrival, which was announced by a terrific salvo from the Chinese gunboats, which were all gaily dressed with flags; the gunboats returned the salute and then the Chinese began firing indiscriminately in their usual fashion and continued to do so all the morning. A number of the foreign community boarded the gunboats as soon as they had anchored off the Customs Pontoon and heartily congratulated the Captains upon the success of the trip. The ships were then dressed and the National Anthem sung, which was followed by three cheers for the Queen. The trip took exactly 33 days, but only 69 steaming hours, the delay being caused by the accident to the *Woodcock*.

Dispatches received in Shanghai from Tientsin state that Brigadier-General Yang, who was ambushed and murdered by Boxers at Laishui near Paoting-fu recently, while *en route* to investigate a case of reported murder of Christians at Kaoli, is to be "cashiered for disobedience of orders, in that he had been ordered 'to investigate' and not to come to blows with the mob." This, says the *N.-C. Daily News*, was the same

Digitized by Google Original from CORNELL UNIVERSITY

officer whom our correspondent at Tientsin in his last letter eulogised as a "fine old soldier." By rights Brigadier-General Yang's family should have been compensated by a grant of money and posthumous honours for him for having died doing his duty, but for the fact that he had "disobeyed orders." That the Boxers are secretly favoured by the powers that be in Peking has been again and again insisted upon in these columns and what clearer proof can there be of this than this censure of Brigadier Yang?

We find the following in *The Times* of April 28th:—

St. Petersburg, April 27.

The *Novoe Vremya* publishes news of the sitting of a committee in Peking to inquire into the claim of Messrs. Jardine, Matheson, and Co., to territory at Hankow which is disputed by the Russians. The manager of the Russo-Chinese Bank, M. Pokotiloff, and a tea merchant named Litvinoff attended on behalf of the Russians, and a Chinese lawyer was also present. The account states that, when the question came up as to the identity of the land claimed and taken possession of by Messrs. Jardine, Matheson, and Co., with the site described in their lease, Mr. Gardner, the English representative of the Hongkong and Shanghai Bank, explained that, by a mistake which had only just been discovered, the land claimed by the English firm was situated in quite another place, and not in the territory claimed by the Russians. This unexpected conclusion is described as having caused some little merriment, but the *Novoe Vremya*, fearing that Sir Claude MacDonald may not confirm the admission, advises the presence of a Russian gunboat at Hankow to ensure protection.

The Shanghai papers are full of the Boxer trouble in the north, of which the telegraph has kept us fully informed in Japan. It seems that the first Legation guards to enter Peking was the American contingent from the U.S.S. *Newark*; then came the Russians, the Japanese, French, British, and German in the order named. The Russians and the French, in the first week of June, had the largest number of marines. The Peking correspondent of the *Shanghai Mercury*, writing on June 2, said:—The slaughter and pillaging of the native converts goes on with increased violence. In one station of the American Methodists ten Christians were killed, most of them being women and children. A station of the American Board Mission is wiped out. A native woman of the Church of England has been killed. Wiring to his journal on June 7th, this correspondent announced that Madame Astier and Messieurs Ossent and Cades are reported as among the foreign victims of the "Boxers." The last news received in Tientsin from Paoting-fu was alarming, but the telegraph had since been interrupted. A British gunboat is guarding Peitaho.

We quote the following from a recent leading article in our senior morning contemporary:—Unlike impressionable Japan, China goes slowly. She imitates the road waggon rather than the stage coach. But her progress is, for her, as perfectly natural as was the rapid dash to the front of the Japanese. Japan learnt and adopted Western manners and customs as it were by intuition. Seeing and appreciating were one operation with her: imitation and experience have done the rest. With China, the experience has had to come first; seeing was not sufficient, and appreciation was hindered by conceit. But in a hundred different ways the effect of the tens of thousands of foreign object lessons is being felt, and the great wall of partition between native and outlander has been breached in scores of places. Year by year, too, the number of natives brought under foreign influence increases as trade and treaty ports increase. The original five ports have been multiplied many times over, missionaries have doubled and trebled, while the travelling Chinaman is comparatively common to what he was. There is thus a revolution actually going on amongst the people of this great land. It is not meteoric as was that of Japan, but it is in consonance with the genius of the Chinese race, and, being slow of growth, may from analogy be expected to be all the more thorough.

AMERICAN NOTES.

New York, says the *Literary Digest*, has the most expensive municipal government in the world. Last year, according to Controller Coler, the city received and paid out again, for all purposes, more than $200,000,000. The great city of London, with a million more inhabitants, was run at an expense of $20,000,000 less than New York; and Paris, with its vast and varied municipal services, pertaining to education, cleanliness, health, charity, banking, and its almost paternal care for its citizens, being far in advance of the American metropolis in this respect, cost $18,000,000 less than New York last year. Indeed, the combined expenses of Boston, Chicago, and Philadelphia in 1899 were only $1,000,000 more than those of New York. The city's expenses amounted to $19.56 per capita on the estimated population of 3,500,000. Mr. Coler, who gives these interesting facts in *Appleton's Popular Science Monthly*, says that "the combined annual expenditures of the six largest States in the Union are less than those of the city of New York, and the financial transactions of the latter are equal in amount to one-seventh of those of the national government." In spite of these enormous expenditures, however, the credit of the city is second only to that of the federal government.

The month of May was marked in the United States by pronounced activity on the part of the working classes throughout the country. Labour parades were held in the large cities, and several thousands of working-men, most of them in the building and cigar-making trades, went out on strike. Of these symptoms of labour's unrest, the strike among the building trades in Chicago attracted most attention. The labour troubles there are of long duration, and have arisen largely from the employment of non-union labour by the contractors and city authorities.

At Acworth and Grafton, N.H., very large crystals of beryl have been found. One from Grafton weighed 2,900 pounds, and another from the same locality was 45 by 24 inches and weighed by calculation about 2½ tons. In Utah crystals of gypsum, sulphate of lime, over 4 feet long have been found. What is probably, however, the largest crystal yet recorded, says *The Engineering and Mining Journal*, was mentioned in a paper by Mr. E. O. Hovey on the Harney Peak District, S. Dak., read before the New York Academy of Science, This was a crystal of spodumene, lithium-aluminum silicate, which, by actual measurement, was 30 feet in length.

All records in the broad jump have been broken by Captain Krenzlein, of the Pennsylvania University team. He cleared on May 15, in practice, 24 feet 8½ inches. This jump cannot stand as a record, as it was not made in a contest. The world's record is now held by Prinzlein, of Syracuse University, who cleared 24 feet 7¼ inches on April 28 last, beating Krenzlein's previous world's record of 24 feet 6½ inches, made May 26, 1899, on Manhattan field, New York.

In 1899 as many pianos were sold in the great wheat-producing States of the northwest as had been disposed of in the same territory during the previous six years. In the east the standard of luxury is diamonds, in the west it is top buggies, says the Chicago *Tribune*. In 1897 the total value of the diamonds imported into the United States was $72,000,000, in 1899 it reached the astonishing figure of over $12,000,000. In the matter of top buggies it is stated that during last year twice as many were made and sold as during any previous year in the history of the industry. Almost equally significant are the figures on imported millinery, which must surely be put down as an article of luxury. In 1899 the total value of milinery goods brought to the United States from abroad $2,650,000, an increase of more than $500,000 over the figures for 1897. In the same way imported pictures and other works of art increased from $2,300,000 in 1898 to $2,800,000 in 1899. Add to this demonstration of prosperity the figures furnished by the savings banks of the country, which show how the poorer classes of the people are progressing, and the picture is even more impressive. In 1889 there were in the United States in all 3,800,000 depositors in the savings banks of the country. Ten years later, in 1899, there were no less than 5,200,000 depositors, a gain of 1,400,000 in the ten years. In 1894 each depositor had an average of $369 in bank. In 1899 this had risen to $419.

Figures showing excessive fire losses last year were presented at the thirty-fourth annual meeting of the National Board of Fire Underwriters, recently held in New York. In his address the president, Mr. E. C. Irvin, of Philadelphia, said:—If we may judge from such records as are accessible, property in the United States is burning in greater proportion to values than in any other country. This is the more startling when the destruction goes on in a year like the one under review, when business is generally admitted to have been good. With an active demand and prices generally rising, so that goods cannot be replaced except at figures above their cost, the moral hazard is minimized. Everywhere the signs of prosperity have been abundant, yet fire insurance has suffered as it has not done in years. The loss in 1898 was $1,919,650, or 1½ per cent. on the premiums of $127,730,726. In 1899 the premiums were $134,450,639 and the losses $18,428,693—that is, 13$\frac{7}{10}$ per cent. of the premiums. Leaving out the increase in liabilities, it will be seen that the losses and expenses together exceeded the premiums received by $9,430.167."

The report of the Canadian Department of Railways and Canals for 1899 shows that the number of railways in actual operation in Canada, including the two government roads—the Intercolonial and the Prince Edward Island railways—was 153. The total number of controlling companies is 84, not including the Government railways. The number of miles of completed railway was 17,358, an increase of 488 miles, besides 2,402 miles of sidings. The number of miles in operation was 17,250. The paid-up capital amounted to $964,699,784, an increase of $23,462,737. The gross earning amounted to $62,243,784, an increase of $2,528,679, and the working expenses aggregated $40,706,217, an increase of $431,328 compared with those of the previous year, leaving the net earnings $21,537,567, an increase of $960,011. The number of passengers carried was 19,133,365, an increase of 689,316, and the freight traffic amounted to 31,211,753 tons, an increase of 2,425,750 tons. The total number of miles run by trains was 52,215,207, an increase of 1,526,924. Gross earnings of the Government roads in the past fiscal year amounted to $32,945,817, an increase of $631,970 over the preceeding year. The net profit on the operations of the year was $739,205.

A New York telegram, dated May 17 says:—Admiral Dewey returned to Washington from his western trip to-day, and while we will not talk politics it is understood by his friends that the Presidential nomination is admitted by him to be beyond his reach. The Admiral is highly elated by the popular ovation that met him at every step, is convinced that he has the love of his countrymen everywhere in the broad land, is satisfied with this and is indifferent as to the future. The statement of political principles that it was believed in some quarters would be forthcoming on the Admiral's return has not been prepared. It probably never will.

"Ben Hur" has proved a literary gold mine for General Lew Wallace, and the "pay streak" promises to last for many years. He has just received $30,000 from the theatrical firm of Klaw and Erlanger as the royalty earned during the six months that the popular book's dramatization has been running on Broadway. It is the intention to present the play in other American cities, and it is predicted that by the end of another year General Wallace's royalty will have amounted to another $30,000.

GERMAN NOTES.

The following remarkable facts appear in *The Times* :—

A report on the economic position of the German Empire in 1900 by Mr. Gastrell, Commercial Attaché at Berlin, giving some interesting comparisons between 1900 and 1872 was issued yesterday. The Report says :—

No exact comparisons of commerce in 1872 and 1900 can be made, as there have been several breaks in the continuity of statistics ; but the volume of commerce has gone on increasing rapidly, as may be judged from the following figures for "special" trade (*i.e.*, of imports for home consumption and of exports of domestic produce). In 1872 the total amounted to £279,000,000, consisting of £163,000,000 for "special" imports, and £116,000,000 for "special" exports. In 1890 it had reached £374,000,000, or £208,000,000 for imports, and £166,000,000 for exports. For 1899 the figures are (temporarily calculated on the 1898 values) a total of £459,421,500, being £259,850,500 for imports, and £199,571,000 for exports.

The development of the country's industries during the same period is a subject that cannot be entered into here. But it is characteristic of the general prosperity to note that the quantity and value of the imported raw materials for local manufacture are yearly increasing, and, at the same time, the quantity and value of exported manufactured articles are also steadily rising from year to yeal.

A recent official calculation states that at least 70 per cent. of all German commerce is now carried by sea. Moreover, in actual tonnage, German shipping now stands second in the world, with 1,594,596 tons, and its steam tonnage in 1899 was about ten times as great as that of 1872. During the last 25 years the relative proportion of the mercantile marine of Germany to that of the whole world has risen from about 5 to over 8 per cent.

With regard to the continuance of this rapid progress, the report finds three chief obstacles ahead. First, the labour problem—"every year the demand is louder for workmen . . . . wages are steadily rising, and the agricultural districts are daily more and more depleted of their labourers." Second is the question of the further opening up of foreign markets. And finally :—

There is a third factor that will, undoubted, seriously influence future expansion; and that is the want of available capital which has already arisen, to a considerable extent, in consequence of the recent prosperity of German industries and commerce which have absorbed such large sums, and which, nevertheless, continue to require still further investments. That there is already a tightness in the money market is shown by the abnormally high Imperial bank rate recently ; and, in the next few years, the demand for capital will be far greater still with the prospective large loans that the Imperial Government will be wanting for the project of an increased navy, and that the Prussian Government will be requiring for the projected Midland Canal. The stringency of the money market is, therefore, likely to become more acute in the near future, not only on account of the probable demands upon it for Government purposes, but also in consequence of the increasing drain due to the requirements of a normal development of industry and commerce.

The report further deals with the Imperial Budget, and debt, and the contributions of the federated States ; and gives some interesting figures concerning the naval programme :—

The total cost of this programme for the fleet alone, which it is supposed it will take 16 years to completely carry out, is put at £80,000,000, of which £30,150,000 is to be raised by loans and £49,850,000 is to come out of the ordinary yearly revenue. This expenditure is for the construction of ships (including the replacing of out-of-date vessels by new ones) and for their armaments. In addition, £13,050,000 is to be spent on dockyards and harbours, of which £8,282,000 will come out of loans and £4,768,000 out of the ordinary revenue. The grand total asked for from 1,901 to 1,916 is therefore £93,050,000, of which £38,432,000 is to be met out of loans year by year, and £54,618,000 out of the revenue during those 16 years ; there will, in addition, be an increased current expenditure for the maintenance of the navy, for the naval pension fund, and for the interest on loans.

The general ordinary recurring expenditure for the navy will, if this Bill is carried in its present form, be £7,040,000 in 1901, rising to £15,313,500 in 1916.

If the whole of the new naval plan be carried out there will in 1920 be a German navy of the following strength :—38 line-of-battle ships, 20 large and 45 small cruisers. This is without counting great numbers of torpedo-boats of all kinds, gunboats, training ships, &c.

The Times correspondent in Berlin wires this :—

Berlin, April 27.

The *Vossische Zeitung* protests this evening that the German Press has been misjudged by its English contemporaries. What has been regarded as hatred of Great Britain has, in the opinion of the Berlin Radical organ, been nothing more than a disapproval of English policy. "The justice of the distinction will be at once admitted. One can sharply reproach a good friend on account of one of his actions without ceasing to be his friend." The *Vossische Zeitung* states that, while there are, of course, people in Germany who hate Great Britain, these people mostly belong to the uneducated classes and have little influence, Great Britain is regarded with great friendliness by the educated classes, which recognize that she is ahead of Germany in a great many respects. "We have learnt much from England, and there still remains much that we might learn. That, indeed, does not alter the fact that we have reached a point where England has much to learn from us."

The Berlin journal goes on to state that the educated classes of Germany believe that there are many reasons why the two nations should live together in friendship, and that Germany has no inducement to adopt an attitude of hostility towards Great Britain. "When our Emperor and our Government endeavour to maintain such relations with England as are traditional between friendly nations, they only act as we all desire that they should." "But," adds the *Vossische Zeitung*, "we who are not bound by diplomatic considerations are compelled to express our true opinion of the policy of England, just as we are accustomed to discuss events which belong to the distant past." This opinion is, of course, that Great Britain has made a mistake in South Africa, and could have attained the justifiable objects of her policy by peaceful methods.

It is pleasant to find a German journal discussing Anglo-German relations and British policy in South Africa with such moderation and goodwill. The assurances of the *Vossische Zeitung* that Great Britain has still friends in Germany deserve to be set against the recent boast of the *Cologne Gazette* that it had succeeded in destroying all pro-English sentiment in Germany by the long series of attacks it made upon England and the English a few decades ago. There are still a number of journals which vigorously carry on the anti-British campaign. The *Berliner Neueste Nachrichte* this evening quotes with approval attacks made in the German Press upon those representatives of industry and finance who have founded an Indian Famine Fund in Berlin. England, says the Conservative organ, is perfectly well able herself to raise the millions necessary to assist her most important colony, and the incapacity of the Indian Administration is such that there is not the slightest guarantee for a proper use of the funds subscribed by private charity.

A gallant deed has been done at Berlin by Lieutenant-General Count Alexander von Wartensbeben. The Count was out riding, when, quite suddenly, a woman of about fifty years of age jumped from a bridge into a canal to drown herself. The Count, by no means a young man, at once sprang from his horse, plunged in full dress into the water, and, with a risk to his own life, saved the woman. The Count then silently mounted his horse and rode home.

A forest fire of such extent as has hitherto never been seen before in Germany, has been raging in the province of Hanover, near the town of Celle, where an area of over 5,000 acres of fine forest was laid bare by the destructive element. It was only by the prompt help of a battalion of infantry and pioneers at Celle, that the destruction did not spread much further, as an area of 100,000 acres was endangered. If the military help had arrived ten minutes later, the fine country and hunting seat of Mr. Loesener, of Hamburg (partner of Robert M. Sloman and Co.), would also have been destroyed. Much game, such as deer, boars, &c., have perished.

The following quotation from the *Reichswehr*, of Vienna, will assist people to form some idea of the kind of thing which is written—and believed—of England by a certain sort of foreigner :—

"A school-boy named Johann Puchta, aged fourteen, has disappeared from his home at Goeding. Before being missed, he was noticed in the company of a tall, blonde man. Probably this was an English recruiting agent seeking soldiers to carry on the campaign in South Africa."

Germany's commerce with the world in all commodities, except the precious metals, amounted last year to $2,186,744,000. Her imports the same year amounted to $1,236,816,000 ; exports, $949,858,000. The most pronounced decrease in imports in the last few years has been in wheat and rye on account of the gain in home production. Some lines of trade have suffered set-backs, sugar exports having fallen from $54,502,000 in 1897 to $45,695,000 in 1899. This decrease is said to be due to the lessened demand from the United States.

Five Japanese officers have arrived in Germany to do service in the German Army for military training. The gentlemen are Majors Arita, Matsuishi and Kurita, Captain Kawamura, and Lieutenant Kanematei. The first-named four gentlemen are to study military science, as they intend to become instructors of the Japanese army after their return, while Lieutenant Kanematei is to do service at the German field artillery. At present no less than twenty-seven Japanese officers are attached to the German army.

The German Emperor offers a prize of some £4,000 for the best automobile for military service. The Germans have been trying the motor car for this use and the prize indicates that the Emperor believes in its future. The French, however, saw its advantages in warfare before the Germans, and especially for colonial service, where there are no railways. They have already adopted it in Senegal and Madagascar for the quick supply of military posts and detachments. The automobile will also be useful in road and railway construction, as well as for postal and passenger traffic.

As the steamer *Koping* was passing the *Prinz Carl* at Koping, Sweden, on May 17th, a man sprang upon the deck of the latter vessel and shouted :—"If any one comes near I will shoot !" At the same moment a woman was seen hanging over the ship's side, shrieking for help. The man escaped in a boat. When the *Prinz Carl* was boarded it was found that twelve men on board had been shot, seven of whom, including the captain, were dead. The rest were found locked in their quarters. It appears that shortly after the *Prinz Carl* had passed Quicksund a man closed the doors of the cabins and saloons and then with a revolver in each hand he began firing at every one he encountered. He stabbed the captain in the back and a lady passenger in the breast with a dagger, and hacked a boy with a knife. He also shot the mate through the shoulder and of four gentlemen who were playing cards in the smoking-room, one was shot in the temple, because he moved when the murderer warned him not to stir. The man was afterwards arrested at a town 57 miles from Koping. He calmly confessed the crime, which he said he had deliberately planned. He regretted he did not kill more, and said that he committed the murders in order to revenge himself on mankind.

SAILING RACES.

On Saturday afternoon there were races for the 39 raters of the Yokohama Yacht Club, for the Commodore's Cup ; for the cruising class for the Spray Cup ; and for the 17 raters for the Wanderer Cup, with second prizes in each instance. The 39 raters and cruisers sailed over No. 2 course and the 17 Rater overs No. 8. There was a nice topsail breeze during the afternoon, and good times were made :—

39 RATERS.

	Rating.	Start.	Finish.	Cor. Time
Haidée	39	2.15.15	4.32.10	4.32.10
Kingfisher	39	2.15.10	4.28.10	4.28.10
Maid Marion	31½	2.15.13	4.27.15	4.24.29
Spray	—	2.15.14	4.34.10	4.27.19
May	—	2.15.12	4.19.50	4.18.13

May thus takes first prize and two record points and *Maid Marion* second prize and one record point.

17 RATERS.

	Rating.	Start.	Finish.	Cor. Time.
Wettinge	17	2.45.10	4.30.30	4.20.30
Eclair	17	2.45.05	4.23.30	4.23.30
Devonia	16½	2.45.03	4.29.45	4.28.21
Bonito	16½	2.45.02	4.33.15	4.31.51

Wettinge takes first prize and two points. There is a question of *Eclair* taking second prize, as a foul was claimed.

NEWS OF THE WEEK.

Earl de la Warr, who was supposed to have been captured at the time of the disaster that befell the squadron of Bethune's Horse, contrived to escape. He lay all night, with a wounded leg, behind an ant-heap, reaching the camp next day.

A plot of land of some 2,046 *tsubo* at Honmoku Dai-mura was sold on Tuesday afternoon at public auction by Mr. Jno. W. Hall. This lot is outside the Foreign Settlement and is the first public sale of land so made. It was bought by Mr. Durand for the sum of 3,700, a very low price considering that land in the same neighbourhood was sold last year at five and six *yen* per *tsubo*.

The Prince of Wales has now been at the head of the Freemasons of England for over a quarter of a century. He entered, at the annual meeting of the craft, upon his twenty-sixth successive year as their Most Worshipful Grand Master, being reinstalled with an enthusiasm specially cordial on account of his escape from the recent attempt on his life at Brussels. To commemorate the completion of his 25 years of Grand Mastership, the Prince conferred "past rank" on 25 of the brethren.

Abdul Hamid has been submitting the inmates of his harem to some violent discipline. It is said that he discovered that a number of his favorites were engaged in a political intrigue to an end that was unfavorable to his interests. He made an investigation, and as a result fourteen of the women were brutally flogged and nine others were exiled to Asia Minor. In addition to flogging the fourteen the Sultan ordered that they be degraded to the level of servants and forced to attend upon those whom they had formerly ruled.

The approach of the British General Election has put into circulation strange rumours. Among them is one published by the *Daily Express* which says:—It is more than whispered that a Rosebery-Chamberlain coalition will take place, the new party to fulfil the Rosebery formulae, as before 1885. Lord Rosebery's aspirations are to see Liberalism separated from so-called "Little Englandism," and Mr. Chamberlain's is to be Prime Minister. Should this coalition result, an exceedingly lively election will occur.

Judge Fujise continued in the Yokohama Chiho Saibansho, on Tuesday, the hearing of the case brought by Messrs. Bruhl Freres against Mr. M. Takashima for the payment of *yen* 250 on two promissory notes, given by the latter as bargain money in a sale of plush. Defendant's counsel stated that the promissory notes were invalid owing to their not being signed by the actual parties in the transaction, a clerk signing for the plaintiffs. The case, after several witnesses had been examined, was adjourned.

A brewery under German superintendence and run with Chinese capital is about to be started near Hongkong. We read that the working capital is over 5.000,000 dollars. The number of employées will be 120, of whom seven are foreigners. The output is estimated at 1,080,000 quart bottles a week. Mr. von Maslowsky, the Head Brewer, has sent ten Japanese coopers to Hongkong, who are now making 1,500 barrels, to hold 50 hectolitres each. Hops of the finest quality have been purchased from Kent (England), Canada, and Poland. The malt, made from special fine double barley, is also from the last-named country, and rice from the Caroline Islands.

The total losses—killed, wounded, and missing—during the war, as set forth in the official list issued by the War Office at the end of April, stood at 18,383. This includes 4,009 officers and men missing or prisoners, but does not include 4,745 officers and men sent home sick or wounded. The actual deaths in the field are only 2,228, while 1,909 have died of disease, deaths due to that cause now averaging 40 per cent. of the aggregate mortality. The bright feature of these figures is the extraordinarily low death-rate from wounds, little more than 4 per cent. having succumbed to their injuries. It must also be remembered that out of the total wounded—9,659—a large number have recovered and have rejoined their regiments at the front.

The cargo of the *Rosetta* and the belongings of the passengers and crew have been undergoing thorough disinfection at Nagahama. Apropos of the plague, it would appear to be a wise step for all shipping companies to place their washing in the hands of a mechanical laundry, where the extreme heat to which the clothes are subjected preclude the possibility of the survival of germs. Some of the shipping companies do observe this rule, but one or two do not. Those which patronise the Steam Laundry at Yokohama have the satisfaction of knowing that at least one bye-way for the plague bacillus has been stopped.

The removal of the late Duke of Argyll from the House of Lords leaves ten of the twenty-two Dukes who sit in that assembly without sons to succeed them. As things are at present, therefore, on the death of these ten present holders of Dukedoms, the titles will pass to brothers, uncles, nephews, or cousins. The Dukes who are without heirs-apparent are the present Duke of Argyll and the Dukes of Hamilton, Devonshire, Leeds, Manchester, Newcastle, St. Albans, Somerset, Wellington, and Westminster.

Sir Alfred Milner, speaking at Cape Town the other day, before an enormous assemblage, celebrating the relief of Mafeking, referred to the remark of a speaker, who had condemned the Boers as "cowardly scoundrels." He said: "There are many among our enemies, who are to be honoured for their bravery. Although cases of treachery and barbarity have occurred, they have been exceptional. The conduct of the enemy is that of brave men. They are fighting for a bad cause, but they are entitled to respect."

We take the following from the *Hongkong Daily Press*:—

We have received a telegram from our Singapore correspondent stating that the *Straits Times* had been sold by public auction to the highest bidder for $85,000. This includes the *Straits Budget*, which is the weekly summary of the *Straits Times*, and a small job-printing business attached. The profits of the business for 1899 were $26,576, so the price for which the paper is sold may be considered cheap, as at the rate of profit made on the last year's working the capital will be recovered in four years. Mr. Arnot Reid, who for some years past has so ably edited the paper, and occupied the position of part proprietor, leaves for home, and the sale of the paper was rendered necessary on the death of the other part-proprietor, Mrs. Cameron. Singapore will miss Mr. Reid. From the north we also learn that Mr. J.D. Clark has floated the *Shanghai Mercury* into a public company with a capital of Tls. 70,000, only two hundred shares being placed on the market, the rest being taken up by the vendor and others.

A very well-known old Shanghai resident writes to the *N.-C. Daily News* from Port Elizabeth, under date the 28th of April:—Our difficulties in South Africa are very great, as we cannot treat the Cape Colony as a hostile country, although its government is really hostile . . . It is in the hands of the Dutch party, really concealed enemies, and they manage the railways, and, I believe, obstruct the movement of troops and stores from the coast to the front. It was shameful to see the Guards (2nd Grenadiers), the finest battalion ever landed in South Africa, put into coal trucks exposed to rain and cold, while there were plenty of good carriages kept for the Easter holiday excursionists. The Colonial Government ought to be suspended, at least for the present, and we ought to have control of all the resources of the country. Every horse fit for military service in this colony or in the Free State should be requisitioned. Horses are more wanted than men, and if we don't take the horses the Boers get them, in many cases with their owners. Our stores, fodder, etc., can't be landed fast enough, as there is nowhere to store them. Steamers remain months waiting to discharge. It is the same at Cape Town and East London, whilst there are plenty of public buildings which should be requisitioned."

ANNUAL SURVEY OF THE AMERICAN BOARD'S JAPAN MISSION.

The Survey of the Field and Work of the American Board's Japan Mission and the Kumiai Churches for 1899, has just been published. Its Report contains some interesting notes which we quote:—

It is fitting that this report should begin with a reference to the new treaties which have brought the missionaries, in common with all other foreigners, under the immediate jurisdiction of the Japanese government. As is well known, these treaties, excepting those with France and Austro-Hungary, came into operation July 17th, 1899, those with the two powers mentioned becoming effective on the 4th of August. For many years past the sentiment of the missionary community has been decidedly favorable to the abolition of extra-territoriality, and the missionaries have accepted the new conditions with great cordiality. It was inevitable that the change should bring with it some inconveniences arising from unfamiliarity with the Japanese methods of governmental administration, but the transition has taken place without serious friction in any quarter, while the experience of our own mission certainly goes to show that the new order is much more favorable to healthful progress in every department of missionary work than the old.

If regard be also had to the broader interests of the whole body of foreign residents, in spite of certain more or less important questions now under discussion, a hardly less favorable report must be made. While there are certain features of the Japanese law which Anglo-Saxons, at least, might wish different, and some which they view with deep regret, the system as a whole promises to work well and to be in harmony with the interests of all law-abiding residents.

We may, therefore, heartily congratulate Japan both upon the recognition which has thus emphatically been given to her methods of legal administration, and upon the wisdom and tact which have made the transition, not merely so free from friction and annoyance, but also so suggestive of a speedy and natural adjustment of all concerned to their new obligations.

An impressive illustration of the liberal spirit of the Western branch of the great Shin sect of Buddhism is worthy of special mention. For some time past this branch (and indeed the Eastern also) has had a school for training prison chaplains. Lectures are given regarding the latest theories of prison discipline, instruction of prisoners, etc. At the earnest request of the authorities of this school, the Rev. K. Tomeoka, the foremost expert in such matters among the Christians, has arranged to give a course of lectures on the history of prison reform. Mr. Tomeoka was for several years chaplain in the Hokkaido and later at the model prison of Sugamo in the suburbs of Tokyo. He is now an instructor in the school for prison officials under the Prison Bureau of Japan. He was formerly pastor of a church in the Kyoto field of our mission and is still active in Christian work. This hearty invitation is a worthy tribute to Mr. Tomeoka's success as an advocate of prison reform, but it is rather as a token of the nobility of spirit which has of late especially marked this branch of the Shin sect that it demands a place in our record of the year.

It is often asserted that the Christians have gained very little prominence in Japanese society, but a very slight acquaintance with the facts will satisfy the most obstinate doubter that they have won an influence out of all proportion to their numbers. According to the latest statistics, the number of enrolled Christians was as follow:—

Protestants	41,808
Greek Catholics	25,231
Roman Catholics	53,924
	120,963

Here we have in round numbers 121,000 Christions, representing a Christian community, including children (which are not included in the Protestant rolls) and other dependents, of not far from 225,000 souls, or about one half of one per cent of the population of Japan outside of Formosa. This comparatively small body has already furnished one cabinet minister, two justices of the Court of Cassation (the national Supreme Court), two speakers of the Lower House of the Diet, one of them having been twice elected, two or three vice-ministers of State, not to speak of several heads of bureaux, judges of the Courts of Appeal, etc.

In the first Diet, besides the the Speaker, the Chairman of the Committee of the Whole and eleven other members were Christians, out of the 300 members of the House—nearly nine times the normal proportion. In subsequent Diets, the proportion has never been less than four times the normal. In the present Diet, besides the Speaker, thirteen members of the House are Christians, and among them are to be

Digitized by Google Original from CORNELL UNIVERSITY

found some of the most efficient men in the Diet. One of them was elected in a strongly Buddhist district by a majority of five to one.

In the Executive Committee of the great Liberal Part last year, two of the three members were Christians, while for the present year the ratio is one to three in the same Committee.

In the army, there are said to be 155 Christian officers, that is about three per cent. In the navy, too, it is noteworthy that the two 12,500 ton battleships, the largest, with one exception, now in commission, are under the command of Christian captains.

In the universities and Government colleges, both among the instructors and students, the Christians are found in abnormal numbers. The same is true of the students sent abroad at Government expense. There are, it is said, at the present time six graduates of one of the best Goverement colleges studying abroad, and among these, five are Christians.

Not less than three of the great dailies of Tokyo are under the control of Christian men, while in the case of several others, Christians are at the head of departments on the editorial staff.

The most successful charitable institutions are also under Christians leadership, and the volume of such work in Christian hands is very large. Among the most noticeable of these institutions are the Orphan Asylum of Okayama and Mr. Hara's home for released prisoners in Tokyo. Mr. Tomeoka's Family School for wayward children near Tokyo has been established, with one cottage, to which others will be added as experience warrants and the funds at his disposal permit. The largest public institution for the poor in all Japan is also greatly indebted to the wise counsel and efficient service which it has drawn from the same small fraction of the nation.

This prominence of Christian men in so many departments of life is not due—it cannot be due—to accident; it must be attributed to a certain stimulus which is the product of their Christian faith. They have made a deep impression upon society. They fill these numerous positions of influence because, in spite of much prejudice, they have proved themselves worthy and have won the confidence of their countrymen. The influence accorded them is an unconscious tribute to the faith which has made them what they are.

THE LATE REV. S. J. MILLIKEN.

The East Japan Mission of the Presbyterian Church, at a meeting held in the City of Tokyo on June second, entered the following minute on its record.

WILLIAM IMBRIE,
SECRETARY.

On the fifteenth day of May, the Rev. S. J. Milliken, an associate member of the Mission, entered into the rest of God.

Our beloved friend and fellow labourer was born in a home where Christ was honoured; and even from a child he accepted Him as his Master and made His commandments the rule of his life. Thus he ever kept himself in the love of God, and received the promise which the Lord made to his Disciples in the Upper Room. When the time had come for him to choose his course in life, he chose the ministry of reconciliation; and for many years in his own land he did the work of a good shepherd tending the flock of Christ, not of constraint but willingly and according unto God. As the evening of life drew on, in company with his beloved wife, he came to this land to visit the daughter whom they had cheerfully given up for the sake of Christ and the gospel, and to see how God had opened a door of faith unto the Gentiles. It had been his prupose to remain in Japan for only a single year; but the cords of kinship and friendship are not quickly broken; and his deep joy in the work of an evangelist constrained him to prolong his stay for nearly three full years. During all this time, as a good and faithful servant, he was ever busy even beyond his power to do whatsoever his hand found to do; and he was always more than ready to lighten the labour of others. He taught in the Joshi Gakuin; where he won the lasting respect and affection of the pupils. He went to various places in the city to meet classes of young men, and he received them into his own house; and while he was a faithful teacher of English, what always brought a flush of joy to his face was some sign that one or another of his pupils was being drawn to Christ. When these young man came to look upon him for the last time, one of them said in tones of grateful appreciation, "He was our teacher." On the Sundays following two of them confessed their faith before men. From time to time he preached in the churches and elsewhere; an evangelistic tour which he made with his daughter through the Island of Sado was always one of the brightest memories of his sojourn in Japan; and wherever he went he was always careful to redeem any little passing chance to do a possible good, nor was he ever hindered by the thought that his labour might be in vain. So he was an example to many and to some an inspiration. In the meetings of the Mission, over which for the past two years he presided, the same dignity and courtesy that marked him in all the relations of life were ever present. His reading of the Scriptures in the opening services was the reading of one who has read them in his closet long and reverently; and his prayer was the prayer of one who has come to know that in the name of Christ he may ask for what he will. If as a member of the Mission he had a fault, it was the fault of modesty. So there was no one in the Mission who did not look up to him and love him; and without the circle of the Mission, in the foreign community and in the churches of Christ in Japan, his genuine goodness won him many friends. During the winter and spring he was never in perfect health, and at last the time came when it was uncertain whether he should magnify Christ by life or by death; but to him also to live was Christ and to die gain. It was on the Lord's Day, the last Sabbath of the more than three score years and ten of his pilgrimage. The hours of the day were passed in sweet peaceful speech never to be forgotten by those who heard it. Already he had written parting messages to be sent to loved ones far away, if indeed they should prove to be the last that he should ever write to them. He committed himself and all whom he loved, the churches whom he had served at home and his converts in this land, in child-like trust to the keeping of Him whom he believed. On the next day but one he was called into the presence of the King.

The Mission inscribes this memorial in its record in affectionate remembrance. To the bereaved household it offers the tribute of sincere sympathy; a sympathy in which sorrow is crowned with praise.

THE INDIAN FAMINE FUND.

The Manager of the Hongkong and Shanghai Banking Corporation, in acknowledgment of a remittance of Rs. 5,000 from the contributions in Yokohama towards the Indian Famine Fund, has received the following telegram from Calcutta:—

"Grateful thanks for remittance
Chairman
Famine Fund."

The Hongkong and Shanghai Banking Corporation at Yokohama send us the following additional names of subscribers to the Indian Famine Relief Fund:—

Amount already acknowledged	¥3,634.87

INSURANCE NOTES.

The report and balance sheet of the National Assurance Company of Ireland has reached us, and from the pamphlet we take the following figures:—Life Department:—In the various sections of the life department the income and expenditure were as follows:—Premiums and considerations for annuities, £18,032 18s. 0d.; interest and dividends, and other receipts, £11,577 1s. 2d.; claims, including endowments matured and surrenders, £20,522 8s. 10d.; annuities, £6,985 16s. 11d.; expenses, commission and other payments, £2,572 1s. 2d. The funds at the end of the year were £252,387 4s. 9d. Accident Department:—The premiums, less re-assurances, received by the Company for the year amounted to £5,481 4s. 7d.; and the losses and expenses of magagement to £5,193 4s. 3d., leaving a balance of £288 0s. 4d., which has been carried to reserve fund. Fire Department:—The premiums, less re-assurances, for the year amounted to £377,992 11s. 2d.; the fire claims were £256,850 4s. 5d.; and the commission and expenses of management were £119,033 7s. 7d. profit and loss account:—The balance of the profit and loss account, after deducting the final dividend of 3 per cent. for 1898, and the interim dividend of 2 per cent. for 1899, paid in August last, will be £8,870 18s. 1d., out of which the directors recommend the payment of a further dividend of 3 per cent., being 1s. 6d. per share, making together 5 per cent. for the year, after payment of which £5,870 18s. 1d. will be carried forward to next year's account.

The local agents are Messrs. R. Isaacs & Bro., and Messrs. Samuel Samuel & Co.

The local agents, Messrs. Samuel Samuel & Co., send us the annual report of the Law Union and Crown Insurance Company for the year 1899. In all the departments of the company's business steady progress was made, so that the dividend for the year was increased to 6 shillings, per share, or 50 per cent on the paid-up capital, beside a bonus of 1 shilling per share—an excellent showing indeed.

The report of the directors of the Liverpool and London and Globe Insurance Company shows that the Fire Premium income for the year, after deducting the sums paid for re-insuring surplus risks, amounted to £1,509,038. The losses, inclusive of full provision for all claims that had arisen up to the close of the year amounted to £993,982. The account, after providing for expenses, shows, without the addition of interest, a deficit of £22,740, which amount had been carried to the debit of profit and loss account. With regard to the life department, the premiums on new assurances during the year amounted to £16,516 the total premium income, after deducting the amount paid for re-assurances, being £239,295. The net claims paid (including bonuses) amounted to £258,180, of which the sum of £8,058 was in respect of endowment assurance matured. Three hundred and twenty-seven annuity bonds was issued for a consideration of £223,327, granting annuities amounting to £20,726. One hundred and ninety-three annuities, amounting to £9,372 terminated in consequence of the deaths of the annuitants. The life and annuity funds were increased by £133,642 during the year, and now amount to £5,354,351. The profit and loss account showed a balance of £1,189,397. It is proposed, out of this amount, to pay on account of the fire department a dividend of 22s. per share, together with a bonus of 11s. per share, and out of the life profits carried for this purpose to this account at the end of the last quinquennium, a bonus of 3s. per share, making in all 36s. per share, free of income tax. The local Agents of the Company are Messrs. Mollison and Co.

CRICKET.

MR. CRAWFORD'S TEAM V. MR. H. A. STEWART'S.

A match between these sides took place on Saturday afternoon. Crawford's team went first to the cricket and compiled 120, A. W. Read's 32 and H. Kilby's 27 being the chief contributions. Stewart's side were dismissed for 104, E. W. Kilby's not out 36 being the best performance. H. W. Clarke bowled exceedingly well, taking 5 wickets for 8 runs. Score :—

YOKOHAMA CHARITY ORGANIZATION.

REPORT AND FINANCIAL STATEMENT, APRIL 1ST, 1899, TO MARCH 31ST, 1900.

The Committee beg to lay before the subscribers the following report and statement of finance.

The principal work, and that for which the association was founded, has been to provide for distressed seamen. During the above-named period tickets for 302 days' board and lodging at the Salvation Army Depot, No. 123 Settlement, have been issued. The great majority of the recipients were as usual seafaring men from Great Britain, the United States of America, Northern Europe and the British Colonies, the remainder hailing from Austria, China, France, Germany, Greece, Holland, Italy, and Syria. A few other avocations were represented, namely acrobat, apothecary, auctioneer, book-keeper, clerk, comedian, iron founder, machinist, miner, painter, policeman, stevedore, tallyman, tidewaiter, and telegraphist.

The accommodation afforded by the Salvation Army has been excellent, and the Manager, Mr. Ellis, has rendered valuable service in procuring employment for the men, and in shipping them off. He has also judiciously distributed parcels of clothing sent to him from time to time by the Honorary Secretary.

It will be noticed, on examination of the subjoined analysis of expenditure, that the operations of the Society have been extended to other local wants, such as the assistance of families in poor circumstances and broken-down men who have long resided in the port.

The thanks of the Organization are due to Sir Ernest Satow, K.C.M.G., and to the Committee of Entertainment of His Imperial Majesty for the handsome donations recorded in the annexed list.

The Committee note with regret the announcement of the death on April 3rd of Mr. Thomas Rose, one of their original colleagues.

They sincerely trust that the call for Subscriptions, which will shortly be made, will meet with the usual generous response.

JAS. DODDS, Chairman; B. C. HOWARD; J. COLE HARTLAND, Treasr; JAS MARTIN; W. F. MITCHELL; E. CHAMPNEYS IRWINE, Hon. Secy.

SILK.

Reports from various silk-producing districts are published in the *Nichi Nichi* as follows :—

Okayama town, Bizen.—New cocoons are just on sale. Some are quoted at 40 *yen*; others at 37. The tradal depression in Yokohama has seriously affected the prices.

Yokoshiba, Kazusa.—The quotation for raw cocoons stands at 4 *yen* per *kwan*. No considerable transactions have yet been made.

Hiratsuka, Sagami.—The quality of cocoons is excellent. Some 40 or 50 *kwan* at 4 *yen* per *kwan* have been sold every day since the 1st instant. Sales, however, are not brisk yet, and a fall in price is anticipated. The principal buyers at present are the Kairyosha, Seishinsha, Mochita, and Miyazuki, Sagami, Marumo of Shinshiu, and Izumikwan of Soshiu.

Kumamoto.—Of the total output seven-tenths is good.

Tatsugasaki, Joshiu.—Some business is now being done in new cocoons, the quality being extremely fine. Quotations stand at from 4 to 4.20 *yen*.

Gifu, Mino.—Extra fine is quoted at 4.30 *yen*, common at 3.70 *yen*, and inferior at 3.20.

Hachioji.—New banks are sold at the rate of 19.3 *momme* for first class and 21.5 *momme* for second. Raw cocoons are quoted at 7 *yen* for 1 to 6 *sho*.

Kumagai.—The Mikihara firm has recently bought new cocoons to the amount of 70 *kwan* at 3.80 *yen*.

Takegahana, Mino.—Prices are :—Extra fine, 4.50 *yen*; medium, 4.15 *yen*; lowest, 3.35 *yen*.

Asafuji, Owari.—Stocks have accumulated from the neighbouring districts to a greater amount than anticipated, the finest being quoted at 4.30 *yen* and medium at from 3.80 to 4.15 *yen*.

Tokai-mura, Chiba Ken.—Choicest are sold at present for 4 *yen*, but prices are expected to fall to something over 3 *yen* in a few days.

THE MAKING OF ARSENIC.

Engineering has an interesting article on the arsenic industry, *apropos* of the opening of a new mine in Cornwall, the district whence comes our supply of this product. The Devon Great Consols Mine, for instance, turns out, in addition to an insignificant quantity of copper ore, an amount of arsenic approximated to 2500 tons; while from 5000 to 8000 tons are annually produced by British mines. In the seventies the substance was produced and sold at a profit for 7*l.* per ton, and the present market price of 20*l.* per ton would indicate that there is demand for the supply, and *Engineering* very much doubts if calico-printers, potter manufacturers, and the makers of green pigments not to mention sundry other consumers (in a technical sense) of this chemical, will have the benefit of any substantial reduction in price. The ore, which is variously called arsenical pyrites, mispichel, or mundic—the last being its common designation in Cornwall—is composed of arsenic, sulphur, and iron, and contains, when pure, 46 per cent. of arsenic. The process of obtaining the arsenic is a very simple one, consisting merely in calcining the ore and collecting the volatilised oxide in long flues. The furnace is kept going night and day, and on Sundays, until a sufficient quantity of arsenic has collected in the flue, when it is cooled down, or in some cases connected with another flue. From 300 to 500 yards is a common length for these flues, though it is said that they have been made as much as a mile long. From the chimney at the end nothing should exude but sulphurous acid, and tests which have been made show that this is practically the case. The deposit in the flues from the calciner is commonly known as arsenic soot, though its colour approximates more closely to that of flour than to the tint of coal soot. But for market it must be quite white, and therefore it undergoes treatment in the refining furnace. The arsenic soot is here mixed with coke, and the volatilised product, which is now quite white—or should be so—is collected in flues similar to those of the first process. After this there only remains the grinding and packing into small casks, holding generally about 3 cwt., and the stuff is ready for market. Our readers, says *Engineering*, may naturally wonder what effect this well-known poison has upon the workpeople who have to deal with it, and it is reassuring to be able to say that the strict Government regulations which are now in force have done very much to lessen an evil which in earlier times was certainly one of some prominence. Where every precaution is taken in the way of preventing the inhalation of the dust, and where the change of clothes and bath are rigidly adhered to, the men do not seem to suffer to any material degree, though, as may be noticed in most industries where unpleasant, if not dangerous, processes have to be worked, the constitution of the individual workman is an important factor in the situation. It is in the periodical removal of the arsenic soot from the flues, and in the subsequent grinding and

Digitized by Google Original from CORNELL UNIVERSITY

packing, that the danger lies, and those engaged in these operations protect themselves by covering the face with fuller's earth, putting a cloth in their mouths, and by generally taking every precaution to prevent the irritant dust from settling on the skin, where, if allowed to lodge, it causes a peculiar eruption. The teeth, as in the case of the salt-cake furnacemen in the alkali districts, are peculiarly liable to attack, and it is said that dental troubles are very common in the populous town of Camborne, where there are generally traces of arsenic vapour in the air derived from the roasting of the arsenical tin ores. However, taking into consideration the poisonous nature of the substance, it must be a matter for congratulation that the industry is carried on with such comparative immunity to those engaged in it; and it is to be hoped that by strict enforcement of the Government regulations we shall hear no more of men in the prime of life "rotting away" as the result of their occupation.

COMMERCIAL PROGRESS OF GERMANY.

Some idea of the rapid progress of Germany in commerce and shipbuilding may be derived from figures that recently have been made public. Germany is now exporting products to the amount of $1,000,000,000 a year. In the 70's says the Chicago *Record*, the exports of the empire did not amount to much more than half this sum. The increase is due to an enlarged traffic in manufactured articles. The value of the products exported is due almost entirely to the handicraft of German artisans. At this time the exports of the United States amount to about $1,200,000,000 and consist mostly of unmanufactured agricultural products. Some of the exports of Germany are made from raw materials imported from the United States into Germany, manufactured there by German workmen and exported sometimes to the United States.

In shipbuilding and in the carrying trade of the seas Germany has made even more remarkable progress than in manufacturing pursuits. The empire has not much more than 1,000 miles of sea-coast, nearly all of which is unfavourably situated for general commerce with the world. But since 1871 it has risen from fifth place on the list of maritime nations, and is rapidly pushing to the front as a rival of England. In September of last year the merchant marine of the four great nations was as follows:

Country.	Net tons.	Country.	Net tons.
Great Britain	9,420,000	United States	1,963,000
Germany	1,714,000	France	825,900

In comparing the tonnage of the United States it must be taken into consideration that much of the American tonnage is engaged in traffic on the great lakes and in the coastwise trade. The American tonnage engaged in international trade on the high seas is much smaller than that of Germany. A comparison of shipbuilding statistics disclose that Germany has been steadily gaining upon England in the last four years. Here is a comparison made by a German authority:

Years.	Gross tons constructed Great Britain.	Germany.
1896	391,000	105,078
1897	316,000	115,369
1898	432,000	147,878
1899	335,000	187,575

It must be said in explanation of Germany's progress, however, that it is almost wholly due to a subsidy system for ships and a protection system for manufacturing. It might be claimed that Germany's progress in shipbuilding is an argument in favour of ship subsidies. This is not the fact. On the other hand, Germany's progress is detracted from by the fact that it is the result of stimulation. To the extent, therefore, to which Germany's ships rely on subsidies their business is unsound. This subsidized growth must be taken into consideration when a comparison of the growth of German shipping is made with that of other countries that have no ship subsidy system. During the last decade, without the aid of subsidies, American shipyards and shipbuilding have greatly increased, and with free materials for ship construction for American shipbuilders will undoubtedly continue to increase.

THE PRINCE OF WALES.

HIS LIKES AND DISLIKES.

A weekly paper has secured some extracts from an album in which the Duchess of Fife has kept the personal opinions, personal tastes, and impressions of nearly every member of the English Royal Family. The Prince of Wales's likes and dislikes are thus recorded:—"I am happiest when I can smoke a really good cigar and read (must I confess it?) a good novel on the quiet; when I can, like plain Mr. Jones, go to a race meeting without it being chronicled in the papers next day that 'His Royal Highness the Prince of Wales has taken to gambling very seriously, and yesterday lost more money than even he can afford to pay'; when I can shake hands with, and talk to Sir Edward Clarke, without it being rumoured that 'The Prince of Wales is violently opposed to the present war'; when I can spend a quiet evening at home with the Princess and my family. I am unhappiest when I have a raging toothache, and have to attend some social function, where I must smile as pleasantly as though I never had a pain in my life.'"

A TRADE DISPUTE.

The public hearing of a case instituted against Messrs. Kelley Raeburn and E. M. Angelo, No. 18, Maye Machi, Kobe, by Mr. Ed. Carlson, Acting Manager of the Russo-Chinese Bank, No. 26, Naniwa Machi, claiming a deposit of documentary credit amounting to yen 24,000, took place before Judge Kamada, Hiyama and Shimoyama at the Kobe Chiho Saibansho on Saturday last. The plaintiff was represented by Messrs. Masujima and Hirata and the defendants by Mr. Kusaka. At the opening of the court Mr. Masujima made a formal statement of his case and applied for an order against defendants for immediate payment of yen 24,000.

Mr. Masujima said that the defendants made a contract to draw a draft against 2,300 bales of cotton forwarded to them by Messrs. Marugesan & Co., Bombay, valued at *yen* 160,000, at their agency in British India, by paying *yen* 16,000 for the deposit of documentary credit, which was to be increased when the market quotation of the cotton went down. Since then the price of cotton had gone down steadily, and the present quotation, as compared with that ruling at the time the above agreement was made, represents a decline of some *yen* 24,000. The plaintiff requested the defendants to increase the deposit according to the first agreement; but they refused to do so. Hence the action.

Consul for the defence stated that the plaintiff was not entitled to sue the defendants directly in this case, as the defendants were not the parties directly concerned in the affair. The defendants would not admit that a loss of *yen* 24,000 had been sustained by the plaintiff if the goods arrived in this country to-day. The plaintiff did not suffer any loss till delivery of the goods was refused.

The case was adjourned.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

SOUTH AFRICA.

Shanghai, June 8.

Telegrams from South Africa are delayed, the cable being broken. Nothing is yet known as to the release of the British prisoners or the whereabouts of Botha's force.

The Times foreshadows the appointment of Roberts to be military governor of the new territories, Milner being subsequently their administrator.

BRITISH PRISONERS IN AN UNHEALTHY SPOT.

Later.

Reuter's agent telegraphs from Lourenzo Marquez under date of the 7th that the Boers are moving prisoners to Nooitgedacht, a most unhealthy spot. A thousand are already there. The Boers in the meanwhile are making a stand at Hatherley, in order to gain time.

CHINA.

A later telegram from Reuter says that it is learned that there is no question at present of any political action on the part of the Powers in China. The Ministers, Admirals, and Consuls are consulting relative to measures to protect life and property. There is no question of any one Power acting independently of the others.

RUSSIANS FOR THE FAR EAST.

Two thousand Russians with stores have left Odessa during May for the Orient, and six more transports are preparing.

PRINCE KOTOHITO.

Shanghai, June 9.

H.I.H. Prince Kotohito has arrived at Vienna, where he was met by Archduke Francis Ferdinand of Este and escorted to the Palace. The Emperor received him, and a banquet was given in his honour.

PRESIDENT KRUGER.

President Kruger has been interviewed by the *Daily Express* correspondent at Machadadorp. He says that the Burghers will never surrender as long as 500 armed men remain in the country. He declares that the Government is still effective, that he will not leave the country, and that the real struggle has only now begun.

COLONEL PLUMER.

Colonel Plumer has occupied Zeerust unopposed. General Baden-Powell is administering the Malmani-Zeerust districts.

THE YEOMANRY.

The casualties of the Thirteenth Battalion of Yeomanry at Lindley on the 1st of June were, killed, Captain Keith and Sir John Power and sixteen troopers; wounded, the Earl of Longford, three officers, and twenty-five troopers.

BANNERMAN ON SOUTH-AFRICA.

The Rt. Hon. Sir Henry Campbell-Bannerman, speaking at Glasgow, said that the conquered States in South Africa must belong to the Empire, and that, after securing the imperial power, we must aim at conciliation, and take the earliest possible opportunity to grant the rights of autonomy which content other colonists.

BULLER AT LAING'S NEK.

Shanghai, June 10.

General Buller has captured positions which he thinks will render the tenure of the Boers' positions impracticable at Laing's Nek.

H.M.S. "GOLIATH."

Her Majesty's ship *Goliath* has sailed from Gibralter for China.

THE POWERS AND CHINA.

A despatch from Washington says that the diplomats in Peking have decided to jointly call on the Empress Dowager to suppress the Boxers, otherwise the Powers will act.

CANADA AND JAPANESE IMMIGRANTS.

Sir H. Laurier, speaking in the Dominion Parliament, deprecated the adoption of the British Columbian law for preventing the influx of Japanese. He referred to possible complications with China, and said that it would be unwise to do anything to jeopardize British friendship with Japan.

PRINCE KANIN.

Prince Kotohito was present at the Emperor's review of troops in Vienna.

RUSSIA AND CHINA.

Reuter's agent telegraphs from St. Petersburg that Russia has decided to take immediate military action to repress the anti-foreign movement in China, but without dissociating herself from the joint action of the Powers.

AT THE SEAT OF WAR.

General Kelly-Kenny telegraphs from Bloemfontein that the telegraph-wires have been cut at Roodeval, to the north of Kronstad, by the Boers. Their force is estimated at 2,000 strong, with 6 guns. Kelly-Kenny is sending strong reinforcements.

BOERS REFUSING TO SURRENDER.

Shanghai, June 11.

Gen. Forestier Walker telegraphs from Cape Town, under date of the 10th, that the natives report that the Boers were in three columns early on the 9th, near Honningspruit, and that the railway between America and Roodeval stations has been almost completely destroyed.

Digitized by Google Original from CORNELL UNIVERSITY

The Boers curtly refused General Buller's proposal that they should surrender.

THE GRAND PRIX.

The result of the Grand Prix, run at Longchamps, near Paris, is as follows:—

Semandria	1
Lovegrass	2
Iago	3

BULLER.

Shanghai, June 12.

Buller's force is encamped close to the boundary of the Transvaal and the Orange Free State. He was opposed after marching eight miles. The Boers retreated when the heavy ordnance came into action. The enemy are making another stand on a ridge ahead of Gansolei.

THE ROODEVAL FIGHT.

Later.

An official despatch says that in the fighting at Roodeval on the 7th instant, 17 of the Fourth Derbyshires were killed, 96 wounded and the remainder taken prisoners. There is no explanation. Among the killed were Colonel David Douglas and Lieutenant Horley, and among the wounded Colonel Wilkinson and 4 officers. Methuen with the bulk of his Division was fighting early on the 8th ten miles south of Heilbron. The despatch leaves everything unexplained.

THE WAR.

The Boers have cut the railway at several places to the north of Kroonstad.

PRETORIA PRISONERS.

Shanghai, June 13.

One hundred and fifty officers and 3,000 men have been released at Pretoria.

The Boers removed 900.

BULLER'S ADVANCE.

Buller cables under date of the 11th that on that day he forced the Almond Nek, the last defile on the way to Charleston Flats. The enemy were in considerable force, with several guns of position. Gen. Hildyard directed the whole attack, and his dispositions were extremely good.

BOERS SURRENDER.

Fifteen hundred Boers have surrendered to Col. Brabant at Vicksburg.

BULLER'S POSITION.

Buller has encamped 4 miles north of Volksrust, the Boers having completely evacuated Laing's Nek and Majuba.

THE GERMAN NAVY BILL.

The Reichstag has finally passed the Navy Bill.

THE STRAITS EXECUTIVE COUNCIL.

Mr. Frizell has been gazetted a member of the Straits Executive Council.

PRINCE KANIN.

The Emperor of Austria-Hungary has conferred on Prince Kotohito the Grand Cross of St. Stephen, ranking with the Iron Crown (?).

LORD METHUEN.

Gen. Kelly-Kenny, telegraphing from Bloemfontein on the 11th, says that there has been no communication from Lord Methuen since the 7th. He was fighting on the 6th to the north of Vechtkop.

HONNINGSPRUIT.

Our troops from the north have reached Honningspruit, having defeated the enemy.

REPORTED DEFEAT OF A BOER COMMANDO.

Shanghai, May 14.

The *Daily Mail's* correspondent telegraphs from Bloemfontein that Gen. Hunter, after a brilliant march from the north-west, severely defeated a large Boer commando on the north of Kroonstad.

BOERS SURROUNDED.

Reuter's agent telegraphs from Maseru that the Boers occupy a very extensive position, but that Gens. Methuen, Rundle, and Brabant, with nearly 50 guns, completely surround them.

THE WEST COAST TROUBLE.

The Coomassie reliefs, after severe fighting, were compelled to retire, and await reinforcements.

COMPLETE VICTORY ON THE RHENOSTRE.

Later.

Field-Marshal Roberts telegraphs from Pretoria under date of the 12th that Lord Methuen gained a complete victory over the Boers on the Rhenostre river on the 11th inst. He captured the enemy's camp and scattered them in all directions.

The despatch adds that Lord Kitchener was sent to join Methuen, whom he met at Vredefort on the evening of the 10th. Lords Kitchener and Methuen marched towards Kroonstad on the 12th.

ATTACKING BOTHA.

Lord Roberts, on the 11th inst., ordered an attack on Botha, who held a strong position with an unassailable front, 15 miles to the east of Pretoria, on the Middleburg road. Generals French, Hamilton and Pole-Carew were engaged.

THE KILLED.

The Earl of Airlie, Major Fortescue, and Lieut. the Hon. F. Cavendish, of the Lancers, were killed.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

THE WAR.

Saigon, June 8.

On the 31st May the Boers captured near Lindley a battalion of Yeomanry.

CHINA.

A telegram from Tientsin says that the situation continues disquieting. Two hundred more foreign marines have been landed. Numbers of European ships-of-war are at Taku. The Tsung-li Yamên has refused the offer of Russia to cooperate in the repression of the troubles. It has given orders to the Chinese Generalissimo to suppress the Boxers.

THE PARIS EXHIBITION.

The President of the French Republic has visited all the Colonial Sections of the Exhibition.

THE FRENCH BUDGET.

Saigon, May 9.

The Bureaux of the Chamber of Deputies have nominated the Budget Commission. The great majority of those elected are favourable to the project of the Government. Among the commissioners are M.M. Le Myre de Vilers, Rouvier, Cochery, and Pelletan.

THE KING OF SWEDEN.

The King of Sweden has arrived at Paris to visit the Exhibition. The President of the Republic received his Majesty at the station. There was much cheering.

THE POWERS IN CHINA.

It is affirmed that the Powers are acting in accord in China for the protection of their nationals.

CHINESE AFFAIRS.

Saigon, June 10.

The Chinese Government has been warned that France will hold it responsible throughout the entire extent of China for the security of French citizens, and that France herself will provide for that safety if necessary.

THE BUDGET COMMITTEE.

M. Cochery has been elected President of the Budget Committee. M. Guilloin is Reporter General, and M. Le Myre de Vilers is Reporter for the Colonies.

THE SITUATION IN CHINA.

Saigon, June 11.

The Minister of France at Peking telegraphs that the situation continues grave. The Chinese Government refuses to take strong measures against the rebels.

THE PRESIDENT.

Saigon, June 12.

The President of the Republic was present at the race for the Grand Prix. He was much cheered. The crowd was enormous.

CHINESE AFFAIRS.

It is telegraphed from Tientsin that 1,500 additional foreign soldiers have started for Peking.

Four thousand Russians have landed at Tientsin.

CHINESE AFFAIRS.

Saigon, June 13.

M. Delcassé, Minister of Foreign Affairs, declared, amid the applause of the Chamber, that the Representatives of the Powers in Peking will warn China that unless she re-establishes order, the Powers will see to it. He adds that troops will be sent to meet the French citizens in Yunnan if the Consul asks for them. "We have not," says M. Delcassé, "any idea of conquest; we only desire to protect our economical interests."

THE DERBYSHIRES.

A telegram from London says that the Boers on the north of Kroonstad captured a battalion of the Derbyshires, of whom the Colonel and 16 men were killed and 77 wounded.

CHINESE AFFAIRS.

Saigon, June 14.

China has declared to the Representatives of the Powers in Peking that she will not oppose the entry of foreign detachments into the capital.

LORD METH UEN.

Methuen has beaten and dispersed the Boers on the Rhenoster River.

(FROM OUR CORRESPONDENT.)

THE SITUATION IN CHINA.

Shanghai, June 11.

A telegram from Tientsin, dated the 10th June, says that 1700 marines of all nationalities have left by rail for Peking. Reinforcements are arriving.

REPORTED LANDING OF 4,000 RUSSIANS.

It is reported that 4,000 Russians have landed at Peitaiho and are marching to Peking.

THE EMPRESS AND RUSSIA.

It is reported that the Empress Dowager has fled to the Russian Legation.

CHINESE AFFAIRS: MARINES RE-OPEN THE RAILWAY.

Shanghai, June 12.

A message from Tientsin, dated the 11th, says that the marines opened the line to Langfang to-day. They expect to reach Peking on the 12th.

A conflict is possible.

RUSSIAN ACTIVITY.

Four hundred Russian troops have joined the marines and more are landing.

Digitized by Google Original from CORNELL UNIVERSITY

EXODUS OF NATIVES.

The exodus of natives continues.

DROUGHT.

The drought is persistent.

THE CHINESE ANTI-FOREIGN OUTBREAK.

Shanghai, June 13.

The Marines marching to Peking found beyond Lang-fang that the Boxers were destroying the railway line and the bridges.

ENGAGEMENT WITH THE BOXERS.

There was a slight engagement and about 50 Boxers were killed. There were no foreign casualties. The damage to the line is so serious that the marines' further advance is delayed.

THE BOXERS' OUTBREAK.

JAPANESE OFFICIAL MURDERED.

Shanghai, May 14.

The Japanese Consul at Tientsin yesterday received news that a Secretary of the Japanese Legation at Peking had been killed by soldiers.

THE MARINES.

The marines' progress towards Peking is slow.

BOXERS MOVEMENT SPREADING.

The Boxers' movement is spreading.

(By Special Arrangement wilh the "Jiji Shimpo.")

THE TROUBLES IN CHINA.

Tientsin, June 14.

A force of from 2,200 to 2,300 Russians are now actually landing at Tientsin.

All trade and enterprise at Tientsin as well as throughout the north of China are interrupted in consequence of the insurrection.

The allied forces *en route* for Peking came into collision with the insurgents at Poh-tah.

Later.

There is no sign of the insurrection being quelled. The Foreign Representatives appear to be about to make a complete change of policy. The situation is growing more and more grave.

(From the "North China Daily News.")

THE BOXERS AND THEIR WORK.

Tientsin, June 2.

The Paotingfu refugees are coming to the river, having fought their way through, with a loss of four killed and four wounded.

The party is composed of British and American missionaries and Belgian engineers.

Many armed volunteers are starting from Tientsin to meet them.

(From "Der Ostasiatische Lloyd.")

Peking, June 3.

Some of the Belgian Engineers who were attacked by the Boxers near Paotingfu the other day reached Peking yesterday afternoon; they are in great distress. Four Belgians have been killed, several are wounded. Six are missing.

(From the "Manila Times.")

"CORINTHIA" LOST ON HAYTI.

New York, May 25.

News has been received here of the wreck of steamer *Corinthia* on the coast of Hayti. She was on a voyage to South Africa with a consignment of 1,450 American mules for the British army in the Transvaal. The mules were successfully got off the vessel and swam ashore; all the animals and the rest of the ship's cargo being saved.

WELLAND CANAL DYNAMITERS.

SENTENCED.

New York, May 29.

The three dynamiters arrested in connection with the blowing up of the Welland Canal locks, are alleged to be Fenians. They have each been sentenced to imprisonment for life.

(From the "China Mail.")

THE ENTRY INTO JOHANNESBURG.

London, June 1.

Particulars have been received of the capture of Johannesburg.

It appears that the force under Lord Roberts met with greater opposition than was anticipated, and the Commander-in-chief was unable to carry out his intention of formally entering the town at noon on Wednesday.

General Ian Hamilton's Mounted Division and the Gordon Highlanders and Yeomanry, in their advance on the Boer defences, met with a stiff resistance.

The Gordons, with the Yeomanry co-operating, charged up the kopjes under a withering fire and carried the positions in a most heroic manner. The Gordon Highlanders sustained considerable loss.

Lord Roberts entered at the head of the victorious army on Thursday.

A report by the *Daily Mail* correspondent, that the Boers have abandoned the forts at Pretoria, is unconfirmed, but it is officially believed to be correct.

(From the "Asahi Shimbun.")

THE FOREIGN GUARDS.

Tientsin, June 12.

Seventy-one marines were landed here from the Japanese cruiser *Suma*.

RUSSIAN ACTIVITY.

The Russian landed 1,746 troops; 277 horses, and 24 guns.

Two Russian war-ships, with 1,000 troops, have arrived at Taku.

BRITISH TROOPS.

A British force of 1,000 troops is said to have arrived at Taku from Hongkong.

FIGHTING THE BOXERS.

A collision occurred yesterday between the Boxers and the foreign marines at Lang-fang. Several Boxers were killed and ten were taken captive. The foreigners lost nothing.

ANTI-FOREIGN FEELING IN CHINA.

Peking, June 13.

In the Chinese Ministry the anti-foreign party is in the ascendant.

Four Chinese prisoners have arrived from Lang-fang to day.

LATEST FROM PEKING.

All the Foreign Legations are anxiously waiting the arrival of the troops.

The Tsung-li Yamên has asked that the Legation guards be camped outside the city, fearing a disturbance if they enter.

THE LATE MR. SUGIYAMA.

Tientsin, June 13.

Mr. Sugiyama's body was taken to the Japanese Legation from the Tsung-li Yamên, after the inquest.

COSSACK TROOPS.

Five hundred Cossacks have landed here and they proceed to Peking at once.

JAPANESE TORPEDO-BOAT DESTROYER.

The Japanese torpedo-boat destroyer *Kagero* has not yet arrived.

FOREIGN TROOPS.

The foreign troops are bivouacked near Lang-fang, repairing the damage to the railway line. It is not yet known when they will reach Peking.

(From the "Jiji Shimpo.")

FATAL MINE EXPLOSION.

Fukuoka, June 11.

An explosion of fire-damp occurred at the Kawamiya coal mine, Tagawa district, on the 8th inst. One coolie was killed and five severely injured.

BIG FIRES.

Niigata, June 11.

A big fire broke out at Tokamachi, in this prefecture, at one o'clock this morning, and continued until four. The police stations, post office, and about one hundred houses were destroyed. The telegraph being interruptul no details are known.

Utsumomiya, June 12.

Fire broke out at a kerosene oil godown belonging to the Ashio copper mine at 8 a.m. yesterday. Three godowns, and one office were burnt. The loss is estimated at about 60,000 *yen*.

Niigata, June 12.

Details of the loss by the fire at Tokamachi are as follows:—827 houses, 71 godowns, and 123 store houses. The total value of property distroyed is estimated at 700,000 *yen*.

CHESS.

(All communications should be addressed to the Chess Editor of the *Japan Mail*, No. 51, Main Street, Yokohama.)

PROBLEM 475.

We received a correct solution of this Problem from "W.H.S." too late for insertion in its proper place last week.

SOLUTION OF PROBLEM No. 476.

WHITE.	BLACK.
1—B to Kt 6	1—P takes B

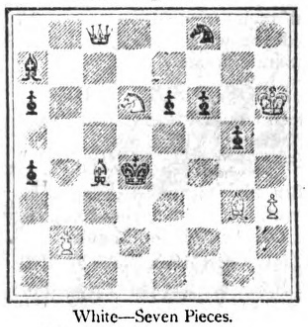
PROBLEM No. 478.

By Valentin Marin.

A Prize-Taker.

Black—Eight Pieces.



White—Seven Pieces.

White mates in three moves.

Game 590.

The Australian Opening.

The following is another specimen of the new colonial opening played recently in the Kolisch Tournament at Vienna. The winner, the well-known veteran Austrian expert, Herr Albin, is partial to this form of the defence, and by his clever conduct of this game he shared in the brilliancy prize offered by Baron Rothschild. The notes at the foot are by Herr Hoffer in the *Westminster Budget*:

THE CHARLICK COUNTER-GAMBIT.

White—A. Schwarz.	Black—A. Albin.
1—P to Q4	1—P to Q4
2—P to Q B4	
(To avoid the new counter-Gambit the first player must resort to the Zukertort Opening White—1. Kt to K B 3, or now play 2. Kt to K B 3.)	
	2—P to K 4!
3—Q P takes P	3—P to Q 5
4—P to K Kt 3	4—Kt to Q B 3
5—P to B 4	5—B to K B 4
6—P to Q R 3	6—P to K R 4
7—B to Kt 2	7—P to R 5
8—Kt to K B 3	8—P to R 6
9—B to B	9—R to R 4

Digitized by Google Original from CORNELL UNIVERSITY

10—P to Kt 3	10—B to B 4
11—B to Kt 2	11—Kt to R 3
12—P to K 3	12—Kt to K Kt 5
13—P takes P	13—Kt to K 6
14—Q to B	14—Kt to B 7 (ch)
15—K to Q	15—Q Kt takes Q P
16—Kt takes Kt	16—B takes Kt
17—Kt to Q 2	17—B to B 7
18—Q takes Kt	18—B takes Q (ch)
19—K takes B	19—B to Q 5
20—Kt to B 3	20—B takes B
21—K takes B	21—P to R 5
22—P to Q Kt 4	22—Q to Q 2
23—B to K 2	23—Q to B 3
24—Q R to Q B	24—Q to K 5
25—K R to K	25—Q to K 6
26—R to B 3	26—Q to B 7
27—R to B 2	27—Castles Q R
28—B to Q	28—Q takes R
29—Kt takes Q	29—R takes B
30—Kt to B 3	30—R to Q 6
31—Kt to Kt 5	31—P to K B 3
32—P takes P	32—P takes P
33—Kt to K 4	33—K R to Q
34—Kt to B 5	34—R to Q 7
35—Kt takes R P	35—R takes R (ch)
36—K takes R	36—R to Kt
37—Kt to B 5	37—R takes P

White resigns, for if P takes R the R P marches to promotion.

2—P to K 4 is a favourite variation of Albin. It cannot be recommended. White may continue with 3—P to K 3, which places him in the position of the French Defence with a move ahead, or he may continue as in the text up to White's 8—Kt to K B 3, which is a bad move. the correct continuation being being 8—P to K 4, B to K 3 (8—P takes P, e.p. is inferior); 9—Q to Q 3, P takes P; 10—P takes P, R takes R, 11—B takes R, P to K Kt 4; 12—Kt to K B 3 with a Pawn ahead and a good position. Obviously, after permitting 8—P to R 6, driving back the Bishop, he had the inferior game, which he could have somewhat improved with 10—P to K 3 (in fact, the latter move was imperative). Black's splendid final attack commenced with 11—Kt to R 3 and Kt to Kt 5, and the beautiful 17—B to B 7, which compelled White to sacrifice the Queen, for Black threatened 18—Kt to K 6 (ch); 19—K to K 3—Q to Q 6 (ch); 20—K takes B, Kt to Kt 5 (ch); 21—K to K, Q to K 6 (ch); 22—B to K 2, Q to B 7 (ch); 23—K to Q Kt to K 6 mate. Of course, after the sacrifice of the Queen, he might have resigned. Black, eventually giving back the Queen, remained with the Exhange ahead—more than sufficient to win. This is really a fine and brilliant game, deserving the whole of the brilliancy prize instead of having to share it with another.

GAME 599.

SIR FRANCIS DRAKE'S VICTORY.

THE STORY OF ENGLAND'S GREEEEST DANGER.

"Attend, all ye who list to hear our noble England's praise,
I tell of the thrice famous deeds she wrought in ancient days;
When that great fleet Invincible against her bore in vain
The richest spoils of Mexico, the stoutest hearts of Spain."

MACAULAY.

Long and dark was that memorable night in 1588 at Turnchapel where were assembled Sir Francis Drake, Admiral Lord Charles Howard, Hawkins, Frobisher, and a number of distinguished naval officers, who were impatiently awaiting the dawn of day to drive from England's shores the invader from Spain. Undaunted in courage and resolute of will, these men of war passed the time with their favourite amusement, chess. 'Twas little thought they gave to the carnage of to-morrow, and it was little they thought how complete would be their victory over the Spanish Armada, or how the fame of old England would, through their exertions, spread like wild fire throughout the world. On them, and on them alone, rested the honour, the glory, and the pride of their country, and that that confidence was not misplaced history to-day records. So they played on throughout that night. Sir Francis Drake and Lord Charles Howard sat at one table. Sir Francis played an ingenious game, and won in splendid style. On rising from the table Sir Francis exclaimed—"If we beat the Spaniards like that I will call the gambit after Plymouth." The condition was fulfilled; and "The Plymouth Gambit" became immortal.

THE PLYMOUTH GAMBIT.

White—Sir Francis Drake.	Black—Lord Charles Howard.
1—P to K 4	1—P to K 4
2—B to B 4	2—B to B 4
3—P to B 4	3—P takes P
4—Kt to K B 3.	4—P to K Kt 4
5—P to Q 4	5—B to Kt 3
6—R to B.	6—P to K R 3

Here if Black defended with 6—P to Kt 5, as usually played in some openings, White would win easily, e.g., 6—P to Kt 5; 7.—Q B takes P, P takes Kt; 8 Q takes P B takes P; 9—B to K 5, K Kt to R 3; 10—K B takes P (ch) and mates in a few moves. The opening had been very ably worked out by Mr. E. J. Winter Wood, of Plymouth, to whom is due its reintroduction.

7—P to K R 4	7—P to K B 3
8—P takes P	8—B P takes P
9—Kt to K 5	9—Q to B 3
10—Q to R 5 (ch)	10—K to B
11—Kt to Kt 6 (ch)	11—K to Kt 2
12—Kt takes R	12—K takes Kt
13—Q to K 8	

Threatening mate next move.

	13—Q to Kt 2
14—R to R	14—K to R 2
15—B takes Kt (ch)	15—Q takes B

If Black played 15. K to R mate could follow in four moves two different ways, one way commencing 16. B to K 6 (dis ch, and 17. B to B 5 (ch); the other by 16. R takes P (ch), and 17. B to B 7 (dis ch).

16—R takes P (ch)	16—K takes R

Black could not avoid the loss of his Queen.

17—Q takes Q	17—Kt to Q B 3
18—Kt to Q B 3	18—B takes P
19—Kt to Q 5	19—P to Q 3
20—Kt takes K B P	

A bold dash for victory.

	20—P takes Kt

White mates in two moves.

21—B takes P (ch)	21—K to R 4
22—Q to Kt 5 (ch) mate.	

As Sir Francis Drake arose from his seat there was heard a hissing sound in the air followed by a loud thunder clap—it was a shot fired as a signal that the enemy was in sight. Lord Howard put to sea in the *Ark Royal*, Drake in the *Revenge*, Hawkins in the *Victory*, and Frobisher in the *Triumph*. The huge vessels of the enemy were speedily seen ploughing the waves, drawn up in the form of a crescent, extending about seven miles from extremity to extremity. Their great dimensions gave confidence to the mariners of England in their own gallant craft, as being lighter and more manageable, and less exposed. Throughout the struggle the fire of the Spaniards proved comparatively harmless, owing to the height at which the guns were mounted, while that of their opponents told with destructive effect upon the colossal squadron, which turned and fled. Thus Drake's condition was fulfilled; and thus "The Plymouth Gambit" became immortal.—The *Dublin Mail*.

Crowther, and Capt. Bancroft, in cabin.

LATEST COMMERCIAL.

IMPORTS.

The Chinese complications have had a direful effect on the spinning industries, and extensive failures are not improbable. American middling cotton is quoted as low as 23 *yen*, and Bengal has been sold at 19 *yen*. The Japanese have entirely retired from the market, and in all lines quotations are nominal.

TEA.

The first crop is proving a short one, and country holders, believing prices will advance still further are holding back supplies. For some grades prices have advanced 3 *yen* per picul, and parcels of light liquoring teas are extremely scarce. Settlements for the whole of Japan are 30,000 piculs less than last year; for Yokohama they are 90,000 against 114,000.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 23RD, 1900.

BIRTH.

On June 16th, at No. 249, Bluff, Yokohama, the wife of HUBERT J. OWEN, of a Son.

SUMMARY OF NEWS.

THE war in South Africa continues, the Boers since the occupation of Pretoria having begun guerilla tactics.

LIEUT.-COL. JOHN S. MALLORY, U.S.A., has been ordered to Peking as Military Attaché at the American Legation.

KANSAS farmers, according to reports, have in sight the greatest wheat crop in its history, exceeding that of 1892, when they harvested 71,000,000 bushels of wheat.

THE total eclipse of the sun on May 28th was observed under most favourable conditions in the United States. In Europe and North Africa the conditions were equally fair.

IN a recent speech Lord Salisbury compared the Liberal-Imperial party suggested by Lord Rosebery, to a seidlitz powder, the constituents of the mixture being intended to neutralise each other.

IT is stated that the Carnegie Steel Company Limited, has secured a contract to furnish 75 per cent. of all the structural steel used by the new American bridge-builders' combine. It is said that the reported contract calls for supplies to the amount of $30,000,000 yearly, an unusually high figure to be sure.

THE condition of affairs in China is very critical. The most alarming intelligence has been sent to Japan by wire during the week, but the greater portion has to be rejected as untrustworthy.

IT is stated that the premises of the former Swiss Consulate, Yokohama, will be acquired by the Post Office at an early date, and a new building constructed on the site for the foreign mail and telegraph department.

SIR FRANK. A. SWETTENHAM, K.C.M.G., the Resident General of the Federated Malay States, was in Yokohama on Tuesday. He left for London *via* San Francisco, by the steamer *Rio de Janeiro*, on Wednesday.

IN the Yokohama Chiho Saibansho on Friday Sato Kanekichi and 8 others, ringleaders of the Honmoku disturbance which occurred a few months ago, were sentenced to imprisonment for terms ranging from 5 months to 11 days, in addition to a fine of 5 *yen*.

THE first six-master and largest schooner in the world is being built at Camden, Me., for a Taunton, Mass., firm. The vessel is built of wood and will be ready to be launched on the 1st of August. Her dimensions are 300 feet in length, 48 feet in beam, and 22 feet depth of hold. She is designed for service on the Atlantic coast.

THE Imperial Customs at Yokohama inform us that an explanation of the import tariff which will go into effect on and after 1st July has been issued by the Finance Department. As some alterations are made in the classification of goods, parties who desire to see the book can do so at the Appraiser's office in the Customs.

SIR HENRY IRVING, Miss Ellen Terry, and members of their company sailed for Europe on May 19, on the Atlantic transport liner *Menominee*. Their American tour was a very great success and a conservative estimate places the net earnings at $200,000, after a liberal allowance is made for the pay of the joint stars. It is doubtful if Miss Terry will ever appear in America again.

THE *Fiji* says the various spinning companies made large profits in connection with raw cotton purchased last year, but the fall in price seems to have involved no small loss. Below is a forecast as to dividends:—Kanegafuchi, 8 per cent.; Kanakin, 12 per cent.; Osaka, none; *Meiji*, 10; Union, 6; Settsu, 15; Amagasaki, 12; Fukuoka, 6; Kishiwada, 10. Sixteen other companies are not in a position to declare a dividend.

DR. NANSEN states that his voyage this summer will not be a Polar trip. His sole aim is the exact physical and biological examination of the Norwegian Sea, as deep as possible, between Norway, Iceland, and Spitzbergen. He will take out new and excellent instruments, especially for the accurate determination of the temperature and specific weight of the sea water. Dr. Nansen hopes that the results of his next voyage will complete and explain his former researches on board the *Fram*.

THE recent riots in Spain were of a serious character. The rioting was particularly severe in Barcelona, where a crowd threw up barricades in the streets and exchanged musketry fire with a body of gendarmes. Shots were also fired from verandas and balconies of a number of houses. Several gendarmes were hit. A number of rioters were arrested. At Seville a mob threw stones at the building of the military club, shattering the windows and the lamps. The gendarmes only succeeded in dispersing the rioters after a hard fight, during which several citizens, two gendarmes, a police inspector, and two members of the municipal guard were wounded. The object of the riots was to protest against the Government's taxation proposals.

VESUVIUS has been in eruption. No new crater has been formed, but the rumblings have been terrible. The lava flowed so near to Torre Delgreco that the population became terrified, and passed the night in the open air, praying that they might be saved from a catastrophe. Astronomers, however, declare that for the present there is no danger. Four Englishmen who ascended Vesuvius went beyond the limit indicated as dangerous by the guides and gendarmes. They had not gone far when they were struck by a mass of incandescent stone, and received most serious injuries.

THE general opinion on the Royal Academy seems to be that it is the best academy for years. There are at least two pictures of the highest order, a dozen others press them close, and the sculpture gallery contains one work which must appeal to every sympathetic visitor to the Academy—Mr. Brock's "Tomb of Lord Leighton." The two chief pictures are Mr. Orchardson's immense canvas, with its simple title, "Windsor Castle, 1890; portraits;" and Mr. Sargent's "Lady Elcho, Mrs. Adeane, and Mrs. Tennant." The former includes portraits of the Queen, the Prince of Wales, and Prince Edward of York.

SIR M. HICKS-BEACH in a recent speech referred to the enormous rate at which the public expenditure is growing in England. "The expenditure of the country," said Sir Michael, "is growing at an enormous, a dangerous, rate. I have always put a strong Navy as a primary necessity of the country, and it may be that assent will have to be given to a further expenditure in view of the hostile feeling toward England in some European countries. But I regard the country's increasing expenditure as the real danger. If we go on as we are going there may be very hard times in store for the country, particularly of the working classes."

THE N. D. L. steamer *Sachsen* arrived at Shanghai from Japan on the 8th. Soon after leaving Nagasaki, reports the *Shanghai Mercury*, as she was in the vicinity of the Goto Islands at about half-past-eight in the evening, fire broke out in the bunkers. At one time there was a considerable quantity of smoke in the alleyway. Other means failing to put out the fire the steamer slowed down and gradually stopped for a time, when holes were cut through the deck and a large volume of water pumped into the bunkers. This soon put the fire out and the ship proceeded on its voyage. Perfect discipline was observed by the crew and the passengers were quite collected throughout the anxious time.

"THEY ALL LOVE JACK," as the song very justly observes, says the *Pall Mall Gazette* of the 8th ult., referring to the reception of the *Powerfuls* in London. They all loved him so well that they went nigh to having some very serious accidents as he went by, particularly in the vicinity of Ludgate-circus. Fortunately the authorities had had the good sense to send the gallant defenders of Ladysmith along the Embankment instead of down the Strand, or the banks of the Thames might have been almost as fatal to human life as those of the Tugela. Never before has the value of a baby's head, used as a battering ram, been more triumphantly demonstrated than it was yesterday. British infantry will go through anything—and they did. It was a great demonstration. But what will it be when "Bobs" comes home, and the Guards, and the C.I.V.'s, and the rest of the gentlemen in khaki? Jubilees will be jokes to that. The L.C.C. had better hurry up and get the streets widened,

DISTURBED CHINA.

The Murder of Mr. Sugiyama.

Saturday, June 16.

The assassination of Mr. Sugiyama, the Chancellor of the Japanese Legation in Peking, has evidently created a profound impression in Japan. Had the murder been perpetrated by the insurgents, comparatively little importance would attach to it: a Japanese subject would then have suffered the fate that had befallen other foreigners in China, and another count would have been added to the charges against the Iho rioters, but the Government's culpability would not have been seriously increased. It appears to be beyond question, however, that Mr. Sugiyama was assassinated by the soldiers of General Tung. These troops, it was confidently believed, had been posted outside the Yung-ting gate of the city, not so much to guard against an irruption on the part of the Boxers, as to oppose the entry of foreign marines. We cannot tell how far that belief may have been correct, but certainly a general impression prevailed that if the foreign marines pushed on, their first serious collision would be with Tung's troops. A word of explanation is here necessary. Our readers doubtless remember that, several days ago, the Tsung-li Yamên, in deference to the representations of the Foreign Ministers, agreed that detachments of marines might enter Peking to guard the Legations, provided that their number did not exceed the force summoned thither for the same purpose at the time of the Kang *coup d'etât*. Immediate advantage was taken of that consent, and small bodies of marines marched into the city. But in proportion as the complication grew more serious, the necessity of increasing this meagre force presented itself more vividly. The Chinese Authorities, however, appear to have adhered to their original condition as to numbers, and thus a very menacing situation arose; namely, a considerable force of foreign marines actually *en route* from Tientsin, and the Peking Government declining to sanction their entry into the capital. We know now that the difficulty has been solved by the Tsung-li Yamên's agreeing to the proposed increase, but pending that expression of assent, it was natural that Tung's troops should be regarded as prepared to oppose the entry of foreign reinforcements. Mr. Sugiyama went by the Yung-ting gate towards the railway to receive the marines from the *Suma*, who were expected to arrive in the course of the day. It is not known, as yet, exactly how he got into trouble, but the sequel seems to be clear; namely, that the soldiers seized him, stripped him naked, hacked him with their swords, and then buried him, head downwards. His corpse is said to have been recovered. The affair is aggravated by the fact that these troops under General Tung's command were known to be bitterly anti-foreign. It was upon them that the Empress-Dowager chiefly relied at the time of her resumption of administrative power. The mere fact of having employed such soldiers nominally to quell the insurrection is sufficient to throw grave doubt upon the *bona fides* of the Peking authorities. At all events, the Chinese Government has now to answer a very grave accusation. Japanese newspapers are almost unanimous in demanding recourse to resolute measures. The *Nichi Nichi*, the *Jimmin*, the *Kokumin* and the *Hochi*, all write in more or less uncompromising terms, and the *Jiji* urges that the *Genro* (old statesmen) should come forward and assist the Cabinet in this difficult crisis. But no journal recommends independent action on Japan's part. The most determined in tone does not ask for anything more than that this country should exact just reparation, and should take care that the means employed by it to secure that end do not fall below those employed by any other Power. The *Nichi Nichi* thinks that unless the Chinese Government can give some pledges against the recurrence of anti-foreign outbreaks like the present, Japan should herself take measures to provide security.

The vernacular press does not comment upon the Imperial Decree issued in Peking on the 6th instant. We are curious to know what impression the language of the Decree conveys to Japanese scholars reading it in the original and having a clear knowledge of Chinese ways. If the *North China Daily News*' translation be correct—which we have no reason to doubt—the Decree not only declares that many evil characters are enrolled in the ranks of the native Christians, but also shows considerable hesitation in exonerating the foreign missionaries from connivance with the crimes and violences perpetrated by these people. Nevertheless, while thus attempting to palliate the excesses of the so-called Boxers, the Decree is sufficiently explicit in declaring that unless they refrain from disturbing the peace, strong measures will be adopted against them. Such a menace, to be sure, sounds somewhat belated on the 6th of June, when all sorts of outrages, including wholesale murders, had already been committed, and when Foreign Powers had considered it necessary to summon troops for the protection of their nationals. Nevertheless, if, even at this eleventh hour, the Peking Government acts up to the declarations made in the Decree, the most dangerous features of the situation will be removed. Japan's position is now the most difficult of all, for she will have to insist on the condign punishment of General Tung's force.

British Troops Ordered.

The British Government has ordered six companies of infantry and a battery of artillery to proceed from Hongkong to Tientsin. That means a force of about 800 men. France, also, is sending 600 from Saigon, but nothing is yet known definitely about the intentions of Germany and Italy, nor can we tell what force Japan proposes to despatch. Russia's two thousand men have landed without accident at Tong-ku. The latest news is that the numbers of the Boxers are swelling rapidly, and that the Government's troops continue to refrain from any active measures of repression. The additions just made to the Tsung-li Yamên have undoubtedly confirmed that body's conservatism. There is no longer any doubt that the Boxers have burned the summer bungalows of the British Minister and other foreigners in the hills near Peking.

The Out-look at Tientsin.

Monday, June 18.

The situation created by the isolation of Tientsin is very serious. The force of marines assembled there could scarcely suffice to protect the Foreign Settlement against the irruption of a Chinese mob from the north, south and west simultaneously, unless the officers in command have adopted vigorous and timely measures by throwing up entrenchments and converting some of the buildings into forts. On the east, or river side, there is comparative safety, but on the west the settlement gives on a wide plain very favourable to the operations of a crowd. Nevertheless, we do not think that much is to be apprehended from the Boxers alone. The danger lies in possible hostility on the Government's side. As to that, the most conflicting accounts reach Tokyo. Some correspondents allege confidently that the Empress-Dowager has issued positive orders that the northward advance of foreign troops shall be resisted, and that she has directed such movements of troops as may be necessary for that purpose. There appear to be at present five columns of Imperial troops in Chihli. They are, the Central Army of twelve thousand under the command of General Yung, having its headquarters in Peking; the Right Army of eight thousand, under Yuan Shikai, at Siau-chau (about 10 miles south-east of Peking); the Left Army of twelve thousand, under General Ma, at Shan-hai-kwan; the Advance Army, of twelve thousand under General Nieh at Lu-tai; and the Rear Army of about ten thousand under General Tung at Tung-chow—that is to say, a total force of about fifty-four thousand. Rumour says that the Empress Dowager's order is for Nieh to move down to Tong-ku—near the mouth of the Peiho on the east bank—, while General Tung moves to Tientsin; and that both Generals have secret instructions to prevent the northward march of foreign troops. The most serious phase of such proceedings would be that hostility on the part of the Government would bring the guns of the Taku forts into operation and the entry to the Peiho would then be effectually closed. Under such circumstances the situation would be extremely precarious for the foreign communities in Tientsin and Shanghai, for the marines and troops that have been landed and for the ships in the river. Japan has already at Taku one torpedo destroyer, the *Kagero*, and another, the *Murakumo*, started for the same place on the 17th inst. These craft will be invaluable for establishing communications between Tientsin and Taku, independently of the railway. But if the forts are employed against foreigners, no ship could venture to pass up or down the river: she would be assuredly blown out of the water. It is there that the Chinese have their strong card. If they are so minded, they can precipitate a terrible catastrophe and create a situation which could not be remedied without the employment of an army. The Japanese Consul at Tientsin took a wise step when he telegraphed to Chefoo to order that the *Higo Maru* should turn about and steam back to Tientsin as quick as possible for the purposes of taking off the women and children. The *Higo Maru* can cross the Taku Bar and go right up the Peiho. But she can not have reached Tientsin before Sunday night or Monday morning at soonest, and in the meanwhile events may have culminated.

It has to be remembered that though a strong fleet of foreign men-of-war is assembled at Taku, the great majority of the vessels have to lie five miles off the mouth of the River, and Tong-ku, the point where the railway communicates with the Peiho, would not even be visible from their decks. In fact, only gunboats and torpedo craft could get into the River, and they dare not make the attempt if the forts were hostile, for these are splendidly armed and of immense strength. It is therefore in the power of the Chinese to completely isolate Peking and Tientsin.

Meanwhile, some detachments of foreign marines are endeavouring to push on to Peking. They are instructed to repair the railway as they proceed. But their force is insufficient to guard the line behind them, and apparently the Boxers have got between

Digitized by Google Original from CORNELL UNIVERSITY

them and Tientsin, so that provisions and ammunition can not be conveyed to the column by rail. We do not regard that as a serious matter, so far as the troops are concerned, for the river route is always open. Indeed, it would have been an obviously prudent precaution to employ the river as an alternative line of communications, and we shall probably find that such a step has been taken. But if the column can not reach Peking, the foreign community in the latter city will be in great jeopardy. The legations in Peking are very strong buildings, standing in solidly walled enclosures and tolerably secure against incendiarism. The British Legation, especially, is capable of easy defence against everything except artillery. Nevertheless it is not agreeable to think of the contingencies involved in the isolation of Peking and the besieging of the whole Corps Diplomatique.

Direct telegraphic communication with Tientsin having been severed, it has become necessary to establish steam communication from Taku to Chefoo in order to tap a wire connected with the outside world, and even by that route news can not arrive with any celerity. As to the severing of the line between Tientsin and Taku, it is easy to understand. On Friday last news reached Tokyo that the insurgents threatened to destroy the railway station at Tientsin. They have probably carried out their design. The station lies on the opposite side of the Peiho from the Foreign Settlement and the Chinese town. It must have been entirely at the mercy of the Boxers. The same remark applies to the whole railway from Tientsin to Tong-ku; it runs along the eastern bank of the River through a country where not a soldier is to be seen until the Taku forts are reached. The Boxers evidently regard railways and telegraphs as the most palpable evidences of the civilization to which they object. Besides, they have doubtless discovered that if these means of rapid transit and communication are destroyed, the efficiency of foreign troops is enormously impaired.

On Saturday the Japanese Consul in Tientsin asked the Agent of the Nippon Yusen Kaisha at that port to provide steamers for carrying away the women and children from the settlement. The Agent wired to Tokyo, and an order was immediately issued for the *Higo Maru* to arrest her homeward voyage at Chefoo and return at once to Tientsin, whither she will be quickly followed by the *Genkai Maru*.

Li Hung-chang, Chang Chi-tung, Liu Kun-yi and Wang Chi-chun have memorialized the Empress-Dowager, urging that immediate steps be taken to suppress the insurrection. A memorial from these four magnates ought to influence her Majesty, but it is to be feared that she is completely under the control of the conservatives.

The firing of Tientsin by the Boxers will probably prove to have been a terrible catastrophe. The city resembles a bee-hive. Its seven hundred thousand inhabitants are packed together so closely that one marvels how they manage to exist, and the streets are so narrow that two wheel-barrows can scarcely pass each other. A conflagration in such a place could not possibly be checked and must cost a number of lives. It is possible, however, that the fire occurred outside the walled city, in which case the results were probably much less serious.

Mr. Sugiyama left a wife and five children in Tokyo. He has been absent in China for nearly four years, and one of his children was born after his departure. The Chinese appear to have hacked him to death.

It is urged by the *Jiji Shimpo* that a company of Japanese field engineers should be despatched to China for the purpose of laying an independent line of telegraph between Peking and Tientsin.

Six hundred troops left Hongkong for Taku on the 14th instant, and four hundred were to follow by the *Terrible* on the 16th.

It appears that three places of Christian worship, not one as originally stated, were wrecked and burned by the Boxers during the night of the 14th, the local officials making no effort whatever to restrain them.

Seven hundred American troops are to proceed from Manila to Taku at an early date.

The report that Liu Kun-yi had received orders to prevent the entry of British ships into the Yangtsze is contradicted.

There is a rumour that all the residences of foreigners in Yunnan have been burned. The French citizens with their Consul have taken refuge in a chapel and the other foreigners are in the Taotai's *Yamên*. This outrage is said to have been perpetrated by a mob hostile to railway construction.

Broadly speaking, the Japanese press is divided into two sections; one of which, headed by the *Jiji Shimpo*, advocates the immediate dispatch of a strong body of troops and the adoption of resolutely offensive measures; the other, headed, strange to say, by the *Nippon*, thinks that a defensive attitude will meet all the requirements of the case. The *Jimmin* attacks Viscount Aoki fiercely, but we fail to discover what accusation it has to bring against him.

The Progressists, after due deliberation, have passed a resolution to the effect that Japan should devote her efforts to securing complete cooperation among the Powers for the settlement of the Chinese complication. They hold that the very existence of China as an independent Power depends upon the outcome of this crisis and that it may also affect the safety of Japan. They also maintain that the procedure of the Japanese Government has been too tardy, and that no time should be lost in despatching such a force as shall suffice to preserve the balance between Japan and other Powers.

The cotton market is greatly disturbed by events in China. Indeed, as the *Kokumin Shimbun* points out, Japan's trade will suffer severely unless the commotion is soon quelled. Last year, this country's total trade with China was 68 million *yen*, of which 40 millions represented exports, and 28 millions imports. Of the exports no less than 23 millions stood to the credit of cotton yarns and fabrics. It will be a serious matter if such an important branch of the country's commerce is interrupted for any length of time.

Japan is evidently sending a regiment of troops,—that is to say, 2,000 men of all arms—under the command of Major-General Fukushima, the hero of the celebrated ride across Siberia. The Hiroshima garrison is to supply them, and five steamers appear to have been chartered for conveying them, the *Sakura Maru* and the *Kumamoto Maru* of the Nippon Yusen Kaisha, and the *Ikai Maru*, *Kamogawa Maru* and *Tatsutagawa Maru* of the Osaka Shosen Kaisha. It is not impossible that Japan may be called on to make a much greater effort. Indeed, if the rumours about the hostile intentions of the Chinese Government prove well founded, Japan must act the part of the *deus ex machinâ*. She alone will be in a position to repair the situation rapidly.

Count Itagaki is credited with having expressed an opinion which commends itself to thoughtful persons. He says that whatever measures of a defensive character may be taken by the Foreign Powers in China, they should refrain, as far as possible, from assuming the offensive against the Iho rioters. That, we can not doubt, is precisely the conviction upon which the *Chefs de Mission* in Peking are basing their action. If once the task of quelling the insurrection be removed from the hands of the Chinese Authorities and transferred to those of the Treaty Powers, there is no apparent limit to the operations that will have to be undertaken; and further the work will have to be done in the face of Chinese official and military opposition. It is quite plain that from the moment when foreigners step in between China and the exercise of her Sovereign rights; from the moment that they thrust her aside and saddle themselves with the discharge of duties properly devolving on her, she becomes antagonized, and her opposition rather than her co-operation has thenceforth to be reckoned with. One can not easily estimate the limits of such a situation. It could scarcely fail to involve the downfall of the Manchu dynasty and even the dismemberment of China. The crushing of the Iho in Chihli is not the only question. They would have to be attacked in Shantung, Yunnan, and many other parts of China. By whom would the business be performed, and is it conceivable that the Chinese Government could stand by idly while its provinces were being over-run by foreign troops? China has a wonderful faculty of passive endurance, but it can not possibly extend to all the contingencies arising out her extrusion from the management of her own affairs under the circumstances we are considering. It may be taken for granted that the Foreign Powers—and we include Japan in the term—will exhaust every resource before taking the law into their own hands.

We take the following from the *North China Daily News* of June 11th:—

Peking, June 9.

The Iho-Ch'uan crisis has come so acute and the Government is at such a loss to find a man able to deal with the society-men that, at a meeting of the Grand Council early this morning, Jung Lu suggested that Li Hung-chang be sent for to take over the Chihli Viceroyalty, the present Viceroy, Yü Lu, having yesterday tendered his resignation. Yü Lu has declared that he is forced to do this because all his measures for the suppression of the Iho-Ch'uan had been checkmated by Wang Pei-yu, Governor of the Imperial Prefecture (Peking and dependencies), who is a well-known chief of the Iho-Ch'uan himself and who was, the other day, promoted from a Censor to his present post by the Empress Dowager on that very account, in order to get the society moulded for the Empress Dowager's own future purposes. In opposition to Jung Lu's recommendation, Kang Yi strongly suggested the appointment of his friend, the notorious Li Ping-hêng, to take Yü Lu's place in Tientsin, the upshot of the council being that the question is in abeyance and Yü Lu's resignation is not accepted.

The whole country is ablaze now and there seems to be no present means of restoring order. The Iho-Ch'uan now hold Shênchou, Chochou, and several other cities near Peking, whilst their emissaries are spreading the incendiarist torch wherever they can get the chance. A great rebellion is at hand, for the Iho-Ch'uans have all the troops as allies, which would not have been the case had the Government more decision.

Peking, June 9.

The Decree of 6th inst., censuring the Chihli troops for attacking the people, had reference to a battle between General Nieh's corps and a large Iho-Ch'uan army on the 4th inst., in which the society men were defeated with a loss of 480 men, several of whom

Digitized by Google Original from CORNELL UNIVERSITY

were leaders from Shan-tung. Kang Yi complained to the Empress Dowager of this on the strength of a petition he had received, and the result has been a special censure strongly reprimanding General Nieh and ordering him to go back to Lutai headquarters near Kaiping colliery. This has greatly encouraged the society-men and no General cares now to act against the rioters for fear of bringing down punishment on himself and his officers. Three of General Nieh's officers are under arrest for having fought the Iho-Ch'uans and may have to suffer decapitation. General Tung Fuhsiang volunteered this morning to stop all further entrance of foreign troops into Peking with his own corps (Kansu) alone. It is nearly 35,000 strong, one half of whom are well provided with magazine rifles and machine guns and the other with two-men gingals, lances, swords, and bucklers. Jung Lu is disgusted with the turn of affairs and has asked for sick-leave, as his advice is never taken. Prince Ching, Prince Tuan, Kang Yi, and Chao Shu-ch'iao rule the Em-Dowager now and control her policy. The Heir-Apparent has now two Iho-Chuan "Masters" instructing him in their arts and system of fighting. He has four other young Princes to keep him company. Chao Shu-chiao, who was appointed by the Decree of 6th inst. to scatter the society-men and exhort them to return to their homes, returned to Peking yesterday reporting that he could not get in touch with any responsible leaders of the Iho-Ch'uan, and his only alternative was to cause copies of the Decree in question to be posted in every town and city of the Peking Prefecture and to distribute them to any one who would take them. Li Ping-hêng telegraphed to the Grand Council to-day asking to be allowed to return to Peking to fight the foreigners. This is supposed to be Kang Yi's doing. The ost ensible chief leader of the Iho-Ch'uans is a man named Han, but the real head is the Heir-apparent's father, Prince Tuan, who controls their movements from Peking.

Mr. Pelham Warren, H.B.M.'s Consul-General, received on Saturday the following important telegram from Sir C. Macdonald:—"The movement against foreigners has been allowed to grow to such an extent that it has resulted in the burning of railway stations, and interruption of railway communication for five days. Two British missionaries and several foreigners have been murdered in the district near Peking; in the country round, numbers of converts have been murdered and pillaged and the chapels destroyed, while in the capital itself British missionaries have been compelled to leave their houses and take refuge in the Legation, which is defended by 75 marines.

"The Chinese Government has been affected by these events so far as to send high officials to parley with the Boxers, but it does not show any intention to summarily suppress them. Probably it still has power to do so, but the Throne is strongly influenced by sympathy with the movement, and the spirit of the troops is doubtful. All well up to the present."

The Action of Japan.

Tuesday, June 19.

It appears that Japan is sending about 2,000 troops to China. Unless we assume that no credit attaches to the reports reaching Tokyo almost every hour about the dimensions that the disturbance has already attained, about its rapidly growing importance, and about the extremely perilous situation of the foreign communities, Japan's two thousand men must be regarded us quite insufficient. We have already stated our conviction, and we now repeat it, that Japan is the one and only Power competent to deal effectively with this complication. From no other source can troops be obtained in sufficient force to crush the insurrection without much loss of time. Great Britain, who generally acts the part of international constable, is not in a position to strike a blow immediately. Her inability is only partially due to the South-African war. Even had this complication occurred when her hands were otherwise entirely free, it is to India that she would have gone for troops, and she can go there still. Fifteen or twenty thousand men could be supplied by India without any special difficulty, since the South-African war has not made any demand upon the native army. But for obvious reasons England would not wish to draw largely on her Indian army at present, and, under any circumstances, two months at least would be required to mobilize and transport to China a force of efficient dimensions. Indeed, questions of transport might present a serious difficulty, and would at any rate entail much delay, for all the best ships are engaged in connexion with the South-African war. Hongkong can send a thousand men, and Admiral Seymour could organise a naval brigade of, perhaps, six or seven hundred. But that is about the limit. Germany might supply seven or eight hundred from Kiao-chou—she is said to be doing so,—and France, as many more from Saigon. All that, however, is quite inadequate for the purpose. Russia, perhaps, could do the most. We presume that she could send five thousand from Port Arthur, and ten thousand from Vladivostock if transports were available. Unfortunately, however, transports are not available. That is where Russia is palpably weak. She has gradually massed armies in Vladivostock and Liaotung, but since they are intended solely for service in those localities, there are no facilities for carrying them over sea. Thus, by a process of exhaustion, we arrive at Japan. This country can easily despatch thirty thousand men to Chili, and if the Peking Government really intends to throw in its lot with the *Iho* insurgents, thirty thousand foreign troops will certainly be required to deal with the emergency. We fully apprehend the embarrassments that the situation offers for Japan. She knows the suspicions to which she may expose herself by taking a vigorous initiative. But it is quite possible for her to employ her forces in accordance with a plan subscribed by all the Treaty Powers, or, at any rate, by a majority of them. She alone is within easy striking distance and can act speedily and effectually. We need scarcely dwell upon the increase of prestige she would win by stepping into the breach, nor need we point out that by espousing the cause of the Occidental communities in China at this juncture, she would effectually complete her differentiation from the Orient, and dispel any doubts that linger as to her sentiment towards the Occident. The opportunity presents to our eyes a very imposing aspect.

Count Okuma's Opinion.

Count Okuma finds the prime cause of the present *émeute* in the *coup d'état* of 1898, which raised conservative influence to a supreme position in China, and temporarily crushed the forces making for enlightened progress. He also thinks that Germany's action at Kiao-chou had a powerful effect in intensifying the anti-foreign feeling of the people. His apprehension is that unless the trouble is quickly quelled, China may be thrown into a state of anarchy; for the authority of the Central Government being, at all times, loose and ineffective, the disorderly elements among the population are barely kept in restraint and would break out into activity so soon as ever the hands of the Authorities were tied. The Count's views are being published by the *Hochi*. Doubtless the next installment will contain the course he recommends. His forecast of an anarchical condition is already receiving confirmation, for reports come that troubles have broken out in Anhui and elsewhere.

Japanese exporters of sleepers and cotton yarns to China are in a state of panic through the outbreak of the Boxer disturbance. Business is nearly at a standstill and there is a daily depreciation of shares.

The Osaka Shosen Kaisha has decided to suspend its service on the Tientsin line, no cargo being obtainable at present owing to the disturbances.

The Fight at Taku.

Wednesday, June 20.

It appears that China has been really visited by an access of the madness which precedes destruction. She has deliberately declared war against the world. There is something that commands our admiration in such an act. It is splendidly courageous. We no longer recognise the China that tamely allowed an important portion of her territories to be seized by a few hundreds of Germans; the China that has for years been helplessly submitting to every exaction on the part of Western Powers; the China that failed to raise a finger in self-defence when Russia practically annexed the whole of Manchuria. It may be that when the history of this great crisis comes to be written, the annalists will conclude that China's patience was overtaxed; that the accumulated weight of the exactions she has had to suffer became at last unendurable, and that even the most long-suffering and probably the most peace-loving people in the world could not endure the taunts perpetually levelled at their courage and patriotism. The exercise of a little intellectual sympathy should be possible to Europeans, Americans, and Japanese at this stage of the world's civilization. They should be able to see that what China has suffered, whether owing to her faults or her misfortunes, would long ago have roused any self-respecting Occidental nation to violent resistance; and they should also feel that, whatever may be her folly in throwing her gauntlet into the world's face, it is at all events a brave act which re-establishes her title of manhood.

As to the folly of the thing, it has been demonstrated at the very outset. The Taku forts are immensely strong. When they were built and armed, military experts unanimously agreed that they effectually closed the Peiho route to Peking, and that any foreign Power seeking to strike at the Chinese capital, must find some other road. Even after Japan had captured Port Arthur and Wei-hai-wei, she would have hesitated to make any direct assault on the Taku forts. But this nominally impregnable fortress has fallen at the first attack. Of course no such attack would have been planned had the naval and military authorities been in a position to make a choice. They would have proceeded by some much less hazardous method. They had no room for choice, however. The Chinese suddenly assumed the aggressive under circumstance which rendered the immediate capture of the forts an absolute necessity. To leave them in Chinese possession would have meant the complete isolation of Tientsin and Peking. Even now the situation is terrible for the foreign communities in those two cities. Gunboats and torpedo-destroyers can communicate with Tientsin direct, and we may take it for granted that every available craft was hurried up the river by the Admiral after the capture of the Taku forts. But the ascent of the river is a matter of 5 hours at least, and in the meanwhile an irruption of Chinese soldiers and Boxers may have taken place into the Concession at Tientsin. Possibly something of the kind occurred simultaneously with the commencement of hostilities at Taku. Tientsin, however, has some facilities for defence. Above all, the Concession is not in immediate contact with the Chinese town, and a concerted stand by the foreign residents is thus possible. But Peking's position is shockingly perilous. Not one of the Foreign Representatives has been

Digitized by Google Original from CORNELL UNIVERSITY

able to withdraw from the capital. The outbreak of war found them all with their flags flying and without any expectation of seeing themselves besieged and cut off from all communication with the outer world. They can not attempt to leave Peking. Every yard of the 80 miles between the capital and Tientsin would be fraught with danger. On the other hand, to remain shut up in their Legations in the midst of a hostile city until succour can reach them from the coast, is an alternative not to be contemplated without the gravest apprehensions. Naturally the whole of the Corps Diplomatique as well as the members of the Customs Service and the other foreign residents will assemble in one place. It will probably be the British Legation, which is at once the most spacious and the strongest of all. The buildings, standing in a large enclosure surrounded by high walls, are virtually safe against incendiarism, and the place could be held by a few hundreds of resolute men against an army of Chinese. But if the latter use artillery, they can of course crush any defensive resources available to the garrison. There is no parallel case in history; no instance of the Representatives of all the great Powers being shut up in an enemy's capital, imprisoned in their Legations and threatened at every moment with assassination and incendiarism.

What will Japan do?

The great question now is, how can the rescue of the Peking community be effected? Japan must strain every nerve to achieve the task. She has no longer any choice. We sincerely wish that she had risen to the occasion sooner, but up to the present there has been room for discretion, whereas now the duty devolves on her of endeavouring to prevent a terrible calamity. We doubt whether the allied Powers will feel justified in awaiting the arrival of her troops. They will consider it imperative to attempt the immediate relief of Peking even with the paltry and wholly inadequate force at their disposal. None of us doubts that four or five thousand European and American troops could hold their own against a Chinese army. But there is a vast difference between fighting a single battle and marching 80 miles through a hostile country, where constant touch must be kept with the base of operations. A conspicuously weak column moving out of Tientsin might merely become an addition to the beleaguered garrison of Peking. Russia will come to the rescue with all her strength, but, as we have already pointed out, Japan alone is capable of effectually saving the situation.

It will be observed that there are two versions of the origin of the fighting at Taku. One represents the Allies as having commenced the bombardment in consequence of their ultimatum having been rejected; the other alleges that the Chinese opened fire unexpectedly at 2 a.m. on Sunday. The latter account seems to us to be necessarily correct. Had the allied squadron deliberately commenced the bombardment, no gunboats would have been lying inside the bar. The *Algerine*, the *Iltis*, the *Atago*, the *Yorktown* and the *Mandjour* must have been within 2,000 yards of the forts which command the mouth of the Peiho from each side. They may have been nearer. They may have been at the very entrance of the River in order to have easy access to the railway station at Tong-ku. At all events they would never have been inside the bar had there been any idea of assuming hostilities. The evident inference is that the Chinese took the initiative. It would seem that the gunboats had not steam up, or they would have been able to slip their cables and run out before the Chinese gunners got their exact range. With regard to the troops that were on shore at the time of the bombardment, we now know that the *Toyohashi* landed 329 men on the 16th—the day before the fight—and that they were immediately followed by 180 Russians and 130 Germans. This force of 639 men was entrusted with the duty of guarding the station at Tong-ku, and doubtless it took part in the assault on the forts on the 17th.

The troubles in China will undoubtedly seriously affect trade in Japan. The greatest sufferers at the present conjuncture will be the spinners in Osaka, remarks the *Niroku*. Between the 4th and 16th instant the quotations for yarn had fallen by 15 *yen*. Below are detailed figures:—

	Price on the 4th instant.	Same on the 16th.	Fall.
	yen.	*yen.*	*yen.*
For June delivery.....	92.35 ...	85.95 ...	6.40
For July delivery	92.90 ...	77.55 ...	15.35
For August delivery...	93.55 ...	78.45 ...	15.10

Trade in raw cotton remains also in an unsettled condition. On the 1st instant American middling was quoted at 26.50 *yen* per picul; on the 15th the rate had fallen to 24.25. The figures for Indian cotton at the respective dates stood at 25.80 and 22, showing a falling off to the extent of 3.80, whereas a more serious depreciation was reported from Kobe on the 16th instant. The stocks accumulated in Kobe at present are:—Chinese cotton, 34,043 bales; Indian, 92,571; American, 35,359; Miscellaneous, 1,553; a total of 163,526. Cotton will probably still further depreciate.

The Storming of the Taku Forts.

It appears certain that Japanese marines took a principal part in the storming of the forts on one side of the Peiho last Sunday. As stated elsewhere in our columns, 329 Japanese marines—not blue-jackets but marines—landed from the *Toyohashi* on Saturday, and were told off to guard the Tong-ku station, together with 180 Russians and 130 Germans. This force of 639 men had only just taken the position assigned to it when the forts opened fire on the gunboats of the allied squadron, and there can be no doubt that the escalade of the square fort on the Tong-ku side was undertaken by the mixed column, while parties were landed from the ships to storm the fort on the Taku side. It is the first time in the history of Japan that her troops have fought side by side with those of Europeans nations, and we are glad to think that they found an occasion to distinguish themselves so signally.

Japanese Troops for China.

A battalion of Japanese infantry, together with a force of cavalry and engineers embarked yesterday at Hiroshima for China, and another battalion, with a battery of artillery, will embark on the 22nd. These forces, aggregating about 3,000 of all arms, were under orders before the receipt of the news that a collision had taken place between the allied squadron and the Taku Forts. Doubtless the number of troops will now be materially increased.

The Issue.

The general opinion in Japan seems to be that the Chinese Government will disavow the act of its troops at Taku, and will avoid anything like open war with the Foreign Powers. That, of course, is the only sensible course presenting itself. But it would be rash to predict at present that the Chinese Government will take a sensible course about anything.

Thursday, June 21.

There are various statements about the number of killed and wounded in the Taku engagement on the 17th instant, but the most trustworthy accounts are that 6 officers and 40 men were killed. As to the wounded, however, it is tolerably certain that the number was 35. The Japanese casualties seem to have been entirely among the detachment of 329 men who landed on the 16th instant and were engaged guarding the Tong-ku station. They were under the orders of Commander Hattori of the Imperial Navy, and that officer, together with three marines, were killed and five wounded in the assault on the square fort. The Russian losses were far heavier than those of any other force. The *Higo Maru*, with 35 wounded men of various nationalities, is *en route* for Saseho.

The Japanese Government has chartered nine steamers for transport service—the *Mukogawa Maru*, the *Ikai Maru*, the *Sakura Maru*, the *Kumamoto Maru*, the *Tosa Maru*, the *Asagao Maru*, and three others. The *Sakura* and the *Kumamoto* were both employed for a similar purpose in the war of 1894-5. They have large carrying capacities. The *Tosa Maru* is the biggest steamer in the Nippon Yusen Kaisha's fleet. She could easily accommodate two thousand men. It is plain that these vessels mean the probable despatch of a force much larger than the three thousand men already under orders. Rumour says that orders have been sent to the Sendai Division to hold itself in readiness for immediate service abroad, but that the Government has resolved not to despatch any more troops until the situation defines itself more clearly.

Several newspapers have affirmed, with much appearance of confidence, that Japan is entirely without money for warlike operations. They forget, it would seem, that the Treasury still holds a sum of 50 million *yen*, which was set aside for special purposes; namely, 30 millions as a naval maintenance fund; 10 millions as an education fund, and 10 millions as a famine relief fund. The whole of the money is available at a moment's notice. Further, there is a sum of 25 millions in the Deposit Department, and there is a considerable amount standing over from works not executed. Altogether the Treasury would have no difficulty in putting its hand upon about 100 million *yen* for immediate use. Money is not an obstacle.

The *Shogyo Shimpo* reproduces a rumour that the Foreign Powers have asked Japan to undertake the quelling of the disturbance in China; that she has assented, and that two Divisions, or about 40,000 men, will be employed for the purpose. We can not place credence in this rumour. No such step would be taken until the Chinese Government had definitely refused to assume the responsibility. But the Chinese Government has not refused. On the contrary, everything seems to indicate that it intends to act resolutely at last.

The war-ships *Takasago* and *Akitsushima* left Saseho three days ago *en route* for Taku.

The Tientsin correspondent of the *N.-C. Daily News*, wrote on the 3rd inst:—A party of thirty of the Lu-Han Railway engineers (including six ladies and one child) left Paoting in twelve boats under the escort of Director Chêng and a military force. They travelled for 150 li without disturbance, but in passing through a lake missed the proper channel out and got inveigled into a small creek, where they were

Digitized by Google Original from CORNELL UNIVERSITY

surrounded by Boxers and fired on—one of the guns being a preposterous wooden cannon, which however, wounded and hurt, if it did not kill. Just before fire was opened, the Chinese with them advised closing the windows, etc., and trying to sail past quickly, but the boats ran aground and the Boxers opened fire, led by men in coloured coats. The engineers at once lowered their windows and returned the fire with great effect, many men dropping at their guns and one man being clubbed to death as he tried to scale the boat. The foreigners jumped out and shoved the boats afloat and over to the other side, where the whole party landed. Mons. Ossent, their leader (Swiss), and his sister Madame Astier with two others J. Pezzaro (Italian) and Cadeis (Turkish) here got separated from the crowd. It is supposed that they acted on the advice of the interpreter and elected to try and return to Paotingfu. They have not been heard of by Europeans since (Wednesday, 31st May) and the very worst fears are entertained of their fate. The Chinese authorities both here and in Peking have telegrams saying Mons. Ossent was shot and his sister killed and mutilated dast all description. So much of the so-called news of the last week has been proved to be false that we hope this may be also, but the smallness of the party justifies fears. Their two companions are by the Chinese also reported to have been killed.

The twenty-six formed a square with the women inside and made due east towards Tientsin with all the speed they could, but ill-clad, ill-shod, and foodless. Water of sorts they got from pools and streams. They travelled as best they could, avoiding villages, towns, etc., for 3½ days and fighting all the way. They expended more than 2,000 cartridges and are confident they killed one hundred men. As they could speak no Chinese and their interpreter had by this time bolted in fear—he is now under arrest in Tientsin—they were utterly helpless, and unable to distinguish friends from enemies. The men all behaved like heroes and carried the women and child when the latter broke down, one lady being very close on maternity.

On Saturday when thirty or forty li from Tientsin five of them appear to have lost all control from suffering and excitement. They got separated from the rest and disappeared. Two, M. Papasse (Greek) and Albertazzi (Italian), turned up at our Bund at 1 this morning (Sunday). One was badly wounded on the head by a sword cut and both were utterly unable to account for themselves. The three others, Messrs. Devinoux, Bouillon, Dillon (French), are unaccounted for, making seven in all missing.

News of the awful plight of the refugees was wired by the Chinese yesterday, and an expedition of 25 mounted volunteers, and 10 men on foot with food and restoratives set out at 11 a.m. yesterday. The mounted men went round the city and so missed the fugitives. The others met them, and Dr. Dapasse at once got them into 'ricshas and brought them, in a deplorable state, into the Settlement.

Mr. Lipman is shot in the leg and has seven wounds in the shoulder and head; one of the ladies is shot through the shoulder, and several others have shot and other wounds. Their escape is really wonderful, and shows what determination and courage can do in adverse circumstances against men like the Boxers. The blackguards soon discovered the superiority of the foreign arms and kept a respectful distance, though they tried to snipe the party at night.

To-day most of the sufferers have recovered equanimity and strength, and an exact and coherent account of their experiences will be forthcoming. The relief mounted party came back at midnight, but the French and Belgian Consuls on hearing the exact localities where the five and four left the refugees rapidly arranged with the authorities that the thirty Cossacks, here as part of the Russian guard, should at once set out to search for them. It is understood that the Chinese have protested against this step, but they were told the time had passed for such protests. I need not point out the very grave political complication that may follow if the Cossacks are fired at, as they probably will be, by Boxers if not by the regular soldiery. We may be confident that there will be no half measures in the reprisals.

This is not all. The native Christians at the Church of England Mission at Langfang, halfway up the line between Tientsin and Peking, have been in grave danger from the Boxers. Messrs. Norman and Robinson refused to leave them, thinking that their departure would mean the massacre of their people. A telegram is in to-night stating that a native (Christian) has brought the news to Yangtsun that Mr. Robinson has been done to death, and Mr. Norman has been taken to the yamen at Yungching for safety. Mr. Robinson came out two years ago with the late Mr. Brooks, who was so barbarously murdered in Shantung in the winter.

Japanese Troops for China.

Friday, June 22.

It is a most singular fact that the public remains ignorant as to the actual force of troops that Japan is despatching to China. From the very outset secrecy has been observed in this matter. We only know that one battalion of infantry with a contingent of cavalry and engineers left Ujina on the 19th, and that another battalion with a battery of artillery is to leave to-day (22nd). That means a force of from two thousand to three thousand of all arms, and apparently they are to be under the command of Major General Fukushima, though that point is still obscure. On the other hand, it is confidently affirmed that the Authorities have chartered 15 steamers, the *Ikai Maru*, the *Kumamoto Maru*, the *Kamogawa Maru*, the *Tatsutagawa Maru*, the *Tairen Maru*, the *Asagao Maru*, the *Tosa Maru*, the *Sakura Maru*, the *Mukogawa Maru*, the *Kelung Maru*, the *Tainan*, the *Taichiu*, the *Taikoku*, the *Daito Maru* and one other. Fifteen steamers are not required to transport two or three thousand men. The *Tosa Maru* and the *Sakura Maru* would amply suffice for that purpose. It is obvious, therefore, either that the Government has decided to send a very much larger force, or that exceptional preparations are being made to meet any emergency. We can not but express surprise that any secrecy should be observed in such a matter. Every company of soldiers sent by the Japanese will be welcomed by the world, and the sooner the nature of her efforts are known, the better will the public be reassured. The British Government is perfectly open in such matters. A distinct statement has been made in Parliament as to the regiments, batteries and squadrons placed under orders. Why does Japan hide her candle under a bushel?

That a large number of Japanese men-of-war are proceeding to Taku is plain, if the statements appearing in Japanese journals be credible. There are already several ships at Taku, and we now hear of their being joined by the *Tokiwa* (9,855 tons), the *Takasago* (4,220 tons), the *Akitsushima* (3,117 tons), the *Yaeyama* (1,600 tons), the *Akashi* (2,800 tons) and the *Chitose* (4,836 tons). This formidable squadron will be under the command of Rear-Admiral Arima, whose flag-ship is the first-class cruiser *Tokiwa*. Evidently the Japanese ships would have no difficulty in landing a brigade of a thousand men.

A field-post for service between Taku, Tientsin and Peking is being organized in Japan. Each of the first-class post-offices throughout the empire is to furnish two clerks, making a band of over thirty, who will proceed to Taku at once.

The Sinews of War.

Somebody evidently well versed in Japanese finance has furnished to the *Kokumin Shimbun* a statement of the resources immediately available to Japan in the event of war. We have already laid before our readers a general idea on this subject, but it is of such importance, and there seems to be so much misunderstanding, that we make no apology for recurring to the matter. When the war with China broke out in 1894, the Treasury had in its possession accumulations of surplus revenue aggregating some 27 million *yen*, and it could also lay its hands on about the same amount which existed in the form of continuing funds appropriated for, but not yet spent on, public works. Altogether, some 55 millions were available, and the country has often been congratulated upon having such a store of money within reach. Now, on the contrary, the public has been repeatedly informed that impecuniosity would be a fatal obstacle to Japan's drawing the sword. Yet how does the case really stand? In the first place, the Treasury holds a sum of 50 million *yen* which was appropriated from the Indemnity to form three special funds; namely, a naval maintenance fund of 30 millions, a famine relief fund of 10 millions, and an education-assistance fund of 10 millions. Only 35 millions of this money is in coin, but the remainder is in securities available at short notice. The Government also holds other funds which could be realized quickly, so that a total of some 80 millions is forthcoming under these two headings. Then there are the sums appropriated but not yet required for public works. Even if these be put at the same figure as in 1894—which is considerably below the mark—we have an aggregate of 107 or 108 million *yen* ready for any emergency. The war of 1894-5 cost altogether 210 millions, but no such outlay would be needed for a campaign of the kind likely to be required in China at present. It may further be noted that the specie reserve held by the Treasury against its note issues represents 41 per cent. of the volume of the paper currency, whereas economists are agreed that 33 per cent. is sufficient. Here, therefore, another resource presents itself. The volume of the note issues might be increased by 50 or 60 million *yen* without seriously impairing the stability of the monetary system. These facts are a formidable answer to persons who imagine that Japan could not find money for warlike purposes. She would not experience any difficulty on that account.

The Wounded.

The fact that the wounded of all nationalities have been sent to Sasebo for treatment in a Japanese hospital, evidently appeals strongly to the sentiment of this nation as well as to its instincts of hospitality. Several of the leading Tokyo journals allude to the incident in warm language, heartily approving the action of the Powers, and promising that nothing shall be spared to make the wounded comfortable and to provide for their skilful treatment. It is wisely suggested that the hospital ships of the Red Cross Society, the *Hakuai Maru* and the *Kosei Maru*, should be despatched at once to Taku, so as to take off any invalids of the allied forces. There will certainly be many, apart from the wounded, in need of medical assistance, and even if suitable accommodation were available at Taku, which is not the case, the climate there at this season renders the place quite unfit for hospital purposes.

This incidents constitutes one illustration of the great value that Japan would possess as an ally in all Far-Eastern disturbances. People generally think of her dock-yards, her coal-mines, her troops and her ships when they estimate the assistance she could give, but they forget her hospitals, though these are a very important feature.

The Chinese Students.

The Chinese that have been studying military science in Japan are leaving the country rapidly. A party of twenty-four went away on the 20th in the *Saikyo Maru* for Shanghai, and the large establishment in Hirakawa-cho (Tokyo), which, by means of a conspicuous sign-board, proclaimed itself the *Kōhoku no Yureki-kwan*, has closed its doors, its inmates having resolved to return to their country at once. These gentlemen

Digitized by Google Original from CORNELL UNIVERSITY

may be assured that they have the full sympathy of thoughtful men of all nationalities. The present is a very bitter time for them; and we sincerely trust that a brighter day will soon dawn. The individual Chinese deserves at the hands of fate treatment very different from that received by his race collectively.

CAPTAIN HATTORI.

Captain Hattori has become a historic figure. It seems certain that he led his detachment of marines in the van of the assault on the Taku Forts, and that he was the first officer to fall in the first engagement where Japanese and British soldiers fought side by side. He and his men distinguished themselves conspicuously, and his fate derives a picturesque element from the fact that the Rising Sun and the Union Jack soon floated over the place where he met his death.

CONCERT OF THE MEIJI ONGAKU-KWAI.

On the afternoon of Sunday, June 24th, beginning at two o'clock, the Meiji Ongaku-kwai will give a concert at the Uyeno Hall, in Tokyo. Only the first half of the programme will, on this occasion, consist of foreign music, the native patrons of the Society having expressed a wish to hear a series of performances in the popular Japanese style, in addtition to the customary orchestral pieces. The foreign selections are mostly of a light and lively order, including a French overture, a concert polka, one of Lumbye's best waltzes, the dance episode from Mendelssohn's "Midsummer Night's Dream" music, and the Turkish March written by Beethoven for Kotzebue's "Ruins of Athens." It is of this last-named production that a story is told which, though possibly of the *ben trovato* class, has been accepted as a satisfactory legend. A Turkish ambassador, hearing it at Vienna, is said to have signified his desire to thank and reward the composer for giving him the pleasure of listening to one of the true melodies of his own land, which had been his (the ambassador's) favourite tune since boyhood. Whether the anecdote be authentic or not nothing is more common than the imaginary identification of music written to illustrate national characteristics with the actual music of the country represented. Spaniards are firm in the belief that Auber borrowed certain airs of the "Domino Noir" from their native minstrelsy; and Neapolitans will swear that the same composer took the finest themes of "Masaniello" from Italian sources; while to a patriotic Swiss the claim that Rossini invented the peasant episodes in "William Tell" is almost as damnable a heresy as the intimation of a doubt concerning the historical existence of the champion bowman himself. In a somewhat similar spirit, Americans are disposed to resent the perfectly accurate statement that the "Star-Spangled Banner" is a song from an old English opera. They consider that it typifies their national humour, and consequently must be a home production. Still more amusing is their recent appropriation of "God Save the King," which, by formal decree of the War Department, has been proclaimed the anthem of the United States to which all soldiers are required to show reverence by a ceremonious salutation whenever it is officially played. "God Save the King" is worthy of all the honour that can be bestowed upon it, either by soldiers or civilians; but to take possession of it as the national hymn, with no better warrant than the circumstance that an American clergyman once wrote a set of patriotic verses to the immortal air, is one of the most extraordinary instances of forcible annexation on record. What people wish to believe, however, they generally will believe, sooner or later; and it is quite possible that, in course of time, the American citizen will be as resolutely convinced that "God Save the King" sprang from Columbian soil as the Turkish diplomat was that, as a child, he had paraded the streets of Stamboul to the strains of Beethoven's march. Perhaps the vexed question as to the authorship of the noble melody may be definitely settled by a supplementary Government order to the effect that "America," as the embodiment of the highest republican principles, could never have existed before the Declaration of Independence, that the idea of its creation by an humble man of letters in the reign of George the Second is a mere delusion; and that the credit of its authorship will be duly assigned to some deserving son or daughter of the West by a future promulgation of executive authority. Thus endeth the lesson of the Turkish March,—acquaintance with which, as a spirited and ingenious composition of one of the greatest of modern musicians, may be made by all who attend the concert of the Meiji Ongaku-kwai, next Sunday afternoon.

LINGUISTIC CAPABILITIES.

The following note appears in the *Shanghai Recorder* and is re-produced by the *N.-C. Daily News*:—

When the student of Chinese comes to a particularly difficult phrase or word, either in his own language or in Chinese, it is a good plan to give it no rest until some way has been found of transferring the idea. One of the toughest of the many knots perpetually presenting themselves to those who have occasion accurately to render English terms into Chinese, is the group of words "condition," "on condition that," "conditionally," etc. When we meet them are generally look them squarely in the face and then "go around them," rightly judging that they simply cannot be transferred into Chinese (although they can be).

This was the experience of an officer in the British Consular service: Having to conduct some delicate negotiations, in the course of which it was found (or imagined) that the High Chinese official concerned was likely to be influenced by the almost unceasing stream of telegrams detailing the successes of the Boers, on receipt of an important message giving a different turn to South African events it seemed desirable to let the Chinese know that General Cronje had "surrendered unconditionally." In order to avoid the embarrassment of turning this into Chinese, the telegram was shown to the official interpreter (a graduate of the Tung Wen Kuan in Peking) with a request to pass it on in Chinese, which he did. The next day he was asked how he had rendered the word "unconditionally," and the British officer was greatly edified to learn that the Great Man had been told that General Cronje has surrendered "wu yuan wu ku ti!—in other words, "for no reason whatever!" This is certainly a remarkable statement. The Chinese must have learned long ago what is meant by unconditional surrender, and, for the rest, we have yet to discover an idea that can not be rendered with perfect accuracy into the Chinese language. It is by drawing upon Chinese that the Japanese have been able to find equivalents for all the terms of Occidental science, philosophy, and religion. This very word, unconditionally (*mujôken* 無條件) is now in the commonest of every day use. Did it not occur to the writer of the note in the *Shanghai Recorder* that the Chinese have had to consider the "conditions" of every treaty or convention concluded by them with foreign States? The plain truth is that the difficulty of rendering English terms into Chinese arises, not from the poverty of the Chinese language, but from the ignorance of the translator. It may safely be affirmed that no other language in the world has capabilities equal to that of the Chinese language.

KOREAN AFFAIRS.

The Tokyo press regards the Korean incident as closed.

The Korean Authorities have refused an application made by some enterprising Japanese to undertake at Fusan works of reclamation which would produce some 70 acres of building land.

News from Sōul is to the effect that the enemies of the Li have abandoned their attempt to procure the transportation of the Tai-wŏn-kun's son and the recall of his grandson from Japan.

The *Yomiuri Shimbun* alleges that Mr. Pablov, in an audience with the Emperor of Korea, has urged upon his Majesty the advisability of leaning on a great Power like Russia instead of on an upstart like Japan, and the danger of seeking advice about foreign affairs from an American youth (Mr. Sands), or a Japanese commercial speculator (Mr. Omiwa). A likely story!

On Thursday afternoon the Emperor of Korea gave audience to the Japanese Representative in Sōul. His Majesty expressed regret for the torturing and execution of Messrs. An and Kwŏn, and explained that it took place without his knowledge. He added that the responsible officials had been punished. We may assume that the incident is now closed.

Mr. Miura Chobei is said to have rendered material aid in bringing about a satisfactory settlement of the An-Kwŏn affair. We suppose that there is no choice save to call the settlement satisfactory, but the horror of the judicial murders has not been at all mitigated, and the only grain of consolation is that the incident may help to put an end to the use of torture in Korea. It is to be observed that the Russian Chargé d'Affairs has banquetted the Representatives of the United States and Japan in Sōul, so that the relations of the three diplomatists are evidently cordial, despite many rumours circulated to the contrary.

A very sad story is told by the *Yomiuri Shimbun*. It is that when the news of An's death reached his wife, she committed suicide, at the same time administering poison to her little daughter of seven. Our contemporary says that An sent from his prison a letter to his wife, in which, after lamenting that for nearly three years he had been separated from his family, he wrote that he was quite reconciled to die; that he felt it to be his fate, and that he begged his wife to lay his corpse in his study and summon all his relatives and friends to say farewell to it, for even though dead, his heart would respond to their affection. If he had been guilty of any crime, it was the crime of loving his country too much, and he did not doubt that when his spirit joined those of his ancestors they would pardon him for such an offence. He ended by entreating his wife to educate their little daughter carefully, and marry her to a man who would do honour to the family name. The *Yomiuri* adds particulars as to how the afflicted lady, after telling the child that she was going to join her husband and obtaining the little girl's consent to accompany her, shared a dose of poison with the child. It is a most painful tale, nor does the tragedy lose anything by the *Yomiuri's* manner of relating it.

NOTES ON CURRENT EVENTS.

It is stated that the Emperor has summoned Marquis Ito to advise with regard to the complications in China.

The *Jiji Shimpo* urges that a Naval Council should be formed after the British model, with the Prince Imperial at its head.

Three fresh cases of the pest were reported on the 16th instant. Two occurred in Osaka and one in Hamamatsu. All ended fatally.

The *Yashima* has been ordered to Taku. She will be the flag-ship of the squadron assembled there, and will fly the pennant of Rear-Admiral Dewa.

The Emperor and Empress have contributed a sum of a thousand *yen* for the relief of the sufferers by the recent conflagration at Toka-machi in Yechigo.

The editor and publisher of the *Shin Nippon* have been sentenced by the Tokyo Local Court to pay a fine of 200 *yen* each for publishing matter detrimental to public morality.

His Excellency the Governor of Hongkong and Lady Blake were received in audience by the Emperor and Empress on the 14th instant. Her Britannic Majesty's *Chargé d'Affaires* introduced them.

The Liberal leaders have adopted with regard to Chinese affairs two resolutions couched in very general terms. The first is to the effect that the national prestige must be preserved in Korea; the second, that Japan must work in cō-operation with the Foreign Powers in China.

Mr. Takahira, Vice-Minister of Foreign Affairs, is to proceed as Japanese Representative to Washington. He will be succeeded at the Foreign Office by Mr. Asada, Governor of Kanagawa, whose successor in the governorship will be Mr. Sufu Kohei.

It is stated that the Governor of Hawaii, ex-President Dole, has applied to the Courts to order the expulsion of 31 Japanese subjects, whose presence he declares to be detrimental to the preservation of good order. The Japanese residents have subscribed forty thousand dollars to defend their countrymen.

The Progressist leaders do not appear to have adopted any definite attitude, but they are understood to insist, first, that Japan must despatch to China a force equal to that employed by any other State; and secondly, that it should be her part to bring the Foreign Powers into line if they show any disposition to act independently.

Lieutenant-General Otsuki, after a painful illness of many years, has committed suicide. His mentally disordered condition was long ago recognised, and his physician ordered that all weapons should be kept beyond his reach, but on the 13th he succeeded in getting possession of a dagger with which he stabbed himself.

It has been found that 2,580 forged shares of the Osaka Shosen Kaisha have been put upon the market. Four banks—the Teikoku Shogyo Ginko, the Osaka Shogyo Ginko, the Inouye Ginko and the Omi Ginko—and the Osaka Stock Exchange hold the bulk of the forged paper. The utterer has been arrested.

The Department of Communications publishes an announcement that, as telegraphic communication between Chefoo and Tientsin is interrupted, all telegrams intended for Tientsin or Peking have to be sent by messenger from Chefoo, and it is therefore necessary that the address of the recipient should be clearly and accurately given.

Japanese consumers of kerosene are looking forward to a fine time when the competition between the oils of Yechigo, of Russia, and of America becomes keen. While Russia and America alone were in the field they joined forces at the expense of the consumer, but Yechigo well-owners contemplate competition, and the foreign companies will not be backward. That is the forecast mentioned in Japanese journals, but we are inclined to question its fulfillment.

It is stated that Baron Shibusawa has been actively interesting himself in the endeavour to bring about a satisfactory settlement of the dispute between Mr. J. R Morse and the Mayor of Kobe, and that, as the latter has been advised by influential persons to arrange the matter before it is carried to the Court of Appeal, there is now a strong probability of an understanding being arrived at. We sincerely trust that the rumour may prove well founded.

The slump in the share market continues. The following quotations show the prices quoted on the 14th and 15th respectively :—

	14th inst.	15th inst.	Fall.
Nihon Railway.....	68.10	66.50	1.60
Sanyô „	49.80	49.00	0.80
Kwansei „	36.40	35.50	0.90
Kiûshiû „	49.60	48.90	0.70
Tankô „	80.10	78.30	1.40
Sôbu „	74.50	72.30	2.20
Kyoto „	16.70	16.30	0.40
Nippon Yûsen Kaisha	58.80	57.60	1.20
Tôyô Kisen Kaisha...	24.10	23.50	0.60
Kanegafuchi-bôseki...	49.00	35.20	13.80

The *Asahi Shimbun* publishes a telegram to the effect that the Russian Representative in Sōul has protested personally to the Emperor against the language used by Mr. Sands in a recent memorandnm relating to the An-Kwŏn affair. It is impossible to attach any credence to this story. Recently we were told by one of the Japanese correspondents in Sōul that Mr. Sands had laid down the extraordinary proposition that a declaration made by the Sovereign of a country in his personal capacity to a Foreign Representative, has no nationally binding force. That was obviously untrue, and we think that the same may be assumed of the latest story.

Vernacular journals state that the authorities, having fully tested the beverage of which 3,000 casks were recently imported by a foreign firm in Yokohama, acting in cōoperation with three Japanese, and having concluded that it is not whiskey, as represented by the importers, but alcohol and water, decided to levy the alcohol-rate of import duty, namely, 250 per cent. *ad valorem*, instead of the whiskey-rate of 40 per cent. This decision, which involves a question of many thousands of *yen*, has caused consternation to the importers. They have in vain endeavoured to have the matter taken up officially, and nothing now remains except to send the stuff back to the place of shipment. Considering the name of the firm mentioned in connexion with this affair, we are inclined to receive the story with reserve.

Marquis Mayeda died on the 14th instant at the early age of 42. The deceased nobleman represented the great Kaga Daimiate, one of the wealthiest in Japan. He never took any active part in politics, but he distinguished himself more than once by the munificence of his contributions to public purposes. Thus, in 1876, he presented to the Government his beautiful park in the Hongo suburb of Tokyo, which thenceforth became the site of the Imperial University. In 1887, he contributed 50,000 *yen* for purposes of coast defence; in 1886, on the occasion of the failure of the Hokuriku Bank, he gave 80,000 *yen* to assist the persons who had suffered by the catastrophe; and he also subscribed 78,023 *yen* for the maintenance and establishment of the Fourth High School in Kanazawa. He was a Peer of the Musk Chamber, held the Third Class Order of the Rising Sun, and had received decorations from the Governments of Belgium, Austria, Germany and Italy.

From a report submitted by Baron Suyematsu at a recent meeting of the Liberal Party's Council, we gather that, contrary to our own information, Mr. Kwŏn did actually call on the Minister of Foreign Affairs in Tokyo to say farewell before leaving for Korea. It appears, further, that in reply to a suggestion as to the risk he would incur, Kwŏn avowed himself indifferent and implied that he considered his death likely to inure to the benefit of his country. In fact he asked the Minister of Foreign Affairs to advise the Korean Government to cut off his, Kwŏn's, head. It is difficult to judge how much of all this was genuine, but the facts seem authentic. The Japanese Government did not interfere in any way in Kwŏn's case, but according to Baron Suyematsu's account, the Emperor of Korea distinctly assured Mr. Hayashi, with regard to Mr. An, that he should be treated leniently, and that, as torture had been abolished in Korea, there need not be any uneasiness on that score.

The uncertainty of the political situation has affected the share market, as the following quotations show :—

Stock.	Market Price on June 13th. Yen.	Price on June 14th. Yen.
Sanyo Railway	51.90	48.80
Kwansei Railway	37.60	36.40
Kiushiu Railway	50.90	49.60
Tanko Railway	71.00	69.00
Sôbu Railway	75.80	74.50
Horse Tram (new shares)...	149.50	128.50
Horse Tram (old shares) ...	180.00	162.00
Yusen Kaisha	60.00	58.80
Tôyô Kisen Kaisha	24.70	24.10

The extraordinary fluctuation in the price of the Tokyo Tram Company's shares is chiefly attributable, of course, to its failure to obtain a satisfactory charter for changing its motive power. The other shares quoted, however, have suffered in consequence of the Chinese complication, the news of Mr. Sugiyama's murder being, doubtless, the proximate cause of their decline. Japanese journals speak of something like a panic in financial circles, and say that the banks have called upon borrowers to make up their margins, but the table given above does not furnish grounds for any special alarm.

Japanese securities seem to have been much more severely influenced in the London market. The five per cent. war bonds fell to £100 11s. ½d. on the 14th, a drop of £2 0s. 10d., and the four per cent. new loan fell to £79 15s., a drop of £1 5s. These sharp fluctuations may be assumed to have been caused by the news of Mr. Sugiyama's assassination, for to people in England the murder of a member of a Legation's Staff by the Chinese Government's troops must have appeared to be a complication of the most serious kind.

DISTURBED CHINA.

THE news that the Viceroy of Chili has been degraded and handed over to the Board of Punishments, and that General TUNG has been cashiered and sent as a convict to work on the post roads in consequence of the murder of the Japanese Chancellor of Legation, seems to establish the correctness of our first forecast that the Chinese Government will disavow the anti-foreign acts of all its agents and seek to amicably satisfy claims arising out of the Iho troubles. In that event, the issue will depend on a question of guarantees. The Foreign Powers can not possibly consent to expose their nationals to dangers such as those by which they have just been threatened, and as the guarantees hitherto obtained from China have proved quite ineffectual, it will be necessary to make a radically new departure. It is there that the difficulties of the Foreign Powers will become really acute. If they approach the settlement with an unique desire to secure its ostensible aims, a consensus will not be hard to reach. But such disinterestedness can scarcely be expected in the face of such opportunities. Nothing less will have to be considered than the fate of the Manchu dynasty. It has shown itself incapable of preserving peace and good order within the Chinese borders and of providing security for foreign life and property. The Boxers are not the only insurgents in the field. We hear of twenty thousand "Big Swords" having risen in Szechuan and of the burning of all Japanese residences by another mob of secret party men at Wu-hu. Moreover, LI HUNG-CHANG, LIU KUN-YI, and CHANG CHI-TUNG declare their inability to proceed to Peking since the peace of the districts they govern would certainly be disturbed in their absence. It is evident, in short, that unless some entirely new machinery of administration can be devised, the foreign residents in China must continue to hold their lives and properties at the mercy of insurgent mobs. Can such machinery be devised under Manchu control? The majority of observers will be disposed to answer in the negative. They will conclude that things have gone from bad to worse under the Manchus, that the Chinese nation has got completely out of hand, and that its discontent can not be allayed without a change of rulers. But the validity of that view evidently depends on the ultimate attitude of the Manchu Government towards the Boxers. The Peking Authorities have hitherto temporized to such an extent as to render themselves plainly responsible for conjunctures which resolute action could easily have averted. But they have not thrown in their lot definitely with the insurgents, and their recent actions seem to show that they intend to dissociate themselves from the Boxers and to maintain, if possible, an amicable attitude towards Foreign Powers. Under those circumstances it is unlikely that the latter will be found in agreement as to the necessity of removing the Manchus. The friends of the ruling dynasty will discover a specious argument in the plea that to depose the Manchus on account of an anti-foreign insurrection which, although not until the eleventh hour, they frankly employed all their strength to quell, would be to add another strong element to the section that favours national isolation. These politicians will argue that nothing is needed except to re-cast the administration, by recalling to power men whose competence has been proved, and whose sentiments towards foreigners and Occidental civilization are beyond suspicion. LI HUNG-CHANG is eminently such a man. Already it is understood that LI has been summoned to Peking, but that he has declined to go so long as Prince TUAN and KUNG YI are in office. Prince TUAN, father of the newly adopted heir-apparent, is believed to be the head of the Boxers, and KANG YI is said to have steadily opposed all the Government's inclinations to suppress them. The removal of these men and the restoration of LI to power would undoubtedly be one of the best guarantees of future peace. It is evident that any Foreign Powers advocating such an arrangement would secure the friendship of the Manchus and of their trusted statesmen—at whose head stands LI HUNG-CHANG—, and would establish a title to substantial marks of gratitude. The programme is enticing, nor should we be justified in attributing purely selfish motives to its advocates. But there is no difficulty in foreseeing how the Foreign Powers would group themselves towards such a proposition. Russia and France would certainly support it, whereas England, America and Germany would oppose it. As for Japan, many of her statesmen are convinced that the removal of the Manchus must precede any genuinely progressive departure in China; but others, and these by no means the least influential, believe firmly in LI HUNG-CHANG, and would accept his resumption of power in Peking as the best solution of the problem. That some compromise will be effected we do not doubt, but the preliminaries leading up to it will differentiate the Powers very sharply, and will probably have the effect of temporarily impairing England's influence. Much will depend on Japan's attitude. The situation is virtually in her hands. She will surely manipulate it cautiously, but we do not feel equal confidence about her resolution.

FREE-MASONRY.

WITH reference to the comments and correspondence recently published in these columns on the subject of Free-masonry, a correspondent has sent us a brochure of which the object is to expose that institution and prove it to be a devilish and most abominable system of immorality. Our correspondent considers the arguments "quite convincing." For our own part, after reading the pamphlet carefully, we are compelled to say that a weaker and more unsubstantial indictment we have never read. It is chiefly a report of addresses delivered by the Rev. ALEX. DOWIE in the Zion Tabernacle, Chicago. Mr. DOWIE firmly believes—we refrain from saying "pretends to believe"—in his own God-given power of working miracles. He thinks that he can cure the sick by the laying-on of hands. It will be plain, therefore, that he is not wanting in credulity. His accusations against Free-masonry may be very briefly summarized. They are that it encourages drunkenness and debauchery, and that it pledges its members to perform horrible crimes if required to do so. The latter charge is based on the fact that a Free-mason invokes dire penalties on himself if he violates his promises, and Mr. DOWIE contends that a society which calls upon its members to give such pledges, must have the power to enforce them in case of need. It would be equally rational to assert that when a man says, "may I be struck dead if I ever touch another glass of whisky," he confers the right to strike him dead on the person he addresses, or recognises that the latter is invested with such a right. It has been customary in all ages to administer oaths which derive something of their binding force from the appalling nature of the pains and penalties invoked on his own head by the person taking the oath. Whatever may be said, and justly said, against such formulæ, it remained for Mr. ALEX. DOWIE to propound the curious theory that the person who administers the oath arrogates to himself the function of inflicting the pains and penalties. In the "tabernacle" where Mr. ALEX. DOWIE lectured, and on the platform by his side, were several ex-masons who had deliberately violated their solemn pledges and exposed the secrets of the Order. Not one of them had suffered any physical punishment for his breach of faith. Yet this miracle-working Mr. ALEX. DOWIE asked his audience to believe that Free-masons arrogated the right to tear out these backsliders' hearts and cast their corpses into desolate places. It did not occur to him, apparently, that the absolute immunity enjoyed by the perjured individuals might be regarded as a pretty fair practical proof that Free-masonry places no reliance on any restraining force beyond the dictates of a man's conscience. As to the question of wine-bibbing and debauchery, Mr. DOWIE's only concrete evidence was the case of a man—a blasphemous, dissipated ruffian, according to the account given of him by the miracle-working pastor—who pretended that a long debauch which ultimately caused his death, was due to a glass of drugged liquor given to him at a Masonic Lodge, the object of his brother-masons being to involve him again in the paths of vice which he was vainly endeavouring to shun. Mr. ALEX. DOWIE knows his audience. He knows that if they believe in his miracles, they are pretty sure to credit any story he may lay before them, provided that he accompanies it with a sufficiently solemn prologue and apologue. He manufactures that kind of pudding with remark-

Digitized by Google Original from CORNELL UNIVERSITY

able fertility. His tiny shreds of evidence or tangible accusation are buried under mountains of asseveration about his own qualifications to be believed, the soaring height of his purposes, and the immaculate purity of his motives. The brochure is a mass of the shallowest cant from beginning to end. It pains us to think that Christianity should be so debased and degraded. As for Free-masonry, to defend it against such assaults would be to insult it, but for the sake of our own correspondent, who finds the arguments "convincing," we may go so far as to say—and we speak with knowledge—that Free-masonry's first object is charity, and that if the system of morality it inculcates were universally practised, the world would be a happy place, nor would any section of humanity be subject to accesses of hysteria such as render possible the exercise of a profession like that of the Rev. ALEX. DOWIE.

JAPAN AND RUSSIA.

There is unquestionably an active propaganda the object of which is either to create ill-feeling between Japan and Russia by persistently declaring that each Power distrusts and dislikes the other, or to injure Japan's credit by representing her in a truculent, aggressive light. Here, for example, is a paragraph taken from a contemporary's columns :—

The Odessa correspondent of the *Standard* telegraphed last month :—It is abundantly evident that the extraordinary activity lately observable in the Japanese arsenals and dockyards, and in the chief military centres, is causing not a little anxiety at St. Petersburg. In addition to the daily dispatches received by the Government from its own political agents in Japan every scrap of information reaching London from the Far East is collated and transmitted to the Asiatic section of the Russian Foreign Office. The grand naval manœuvres, fixed by the Tokyo Government to take place next week, are viewed with suspicious interest from the bank of the Neva, and are presumptively spoken of as being covertly intended to constitute a demonstration against Russia and Russian's lesser maritime power in the Far East. Orders have been telegraphed to the Admiral commanding the Russian squadron to keep a close observation upon the Japanese fleet in the waters lying between the Island of Tsushima and the Korean coast. It is not improbable, however, that the Japanese Admiral may, at the last moment, disappoint the Russians by suddenly changing the site of his evolutionary operations. It is significant that this possibility is taken into due consideration at St. Petersburg. It is no longer denied that Russian diplomacy has for some time past been outmatched by the astute Japanese, and the result is that this country now entertains the most lively distrust of its increasingly powerful Far Eastern neighbour, the further development of whose ulterior designs still remains an uncertain quantity. The Japanese learned a lesson at Shimonoseki which they are not likely to forget.

And here are two other paragraphs from recent American exchange :—

New York, May 25.

A special to the *Sun* from Washington says : In view of the reports that Japan is preparing for possible conflict with Russia a bit of news that has been received here is regarded as important. It is to the effect that live torpedoes are being placed in all the Japanese harbours. This is a measure adopted by nations only when war is imminent or hostilities are in progress. The only explanation offered for Japan's action here is that the Japanese expect that they will soon havo a condict on their hands.

Victoria (B.C.), May 25.

The steamer *Victoria*, which arrived this morning from the Orient, brings news that following on the recent naval manœuvres of Japan, which many regarded as a demonstration, military manœuvres are to be held on a large scale by the Japanese. Discussing the recent manœuvres and the contemplated military gathering of Japanese troops, the *Kobe Chronicle* says :—The Japanese War Office undoubtedly regarded the recent naval operations to some extent as a demonstration and an indication that the renewed activity of Russia in Korea was disapproved and could and would be resisted by force if Japanese interests were in any way threatened.

They are to be followed by military manœuvres, also on a scale unprecedented in Japan, and also having the very good excuse of being held with a view to test the efficiency of the new brigades and divisions organized within the last few years. Nevertheless, we do not think the Japanese Government is anxious to move or anxious to find a pretext for any aggressive action.

Call Headquarters, Wellington Hotel,
Washington, May 28.

Information has been received here from reliable sources which shows that Japan has taken rather peculiar action in connection with the naval manœuvres in which her fleet is now engaged. It is customary to place "dummy" torpedoes at mouths of harbours which are included in the plan of defense, but information given me to-day shows that live torpedoes instead have been planted. This fact has aroused considerable comment in naval circles, and has been accepted as an indication of preparations for war.

In diplomatic circles, however, a different impression prevails. A well known diplomat, who has justs eturned from Japan, said to-day that financially ther apanese Government was not in a condition to go toJ war although he stated that it undoubtedly was true that the Japanese people were willing and anxious to go to war with Russia, giving as an indication of their eagerness the effect of the report circulated for stock jobbing purposes, the announcement that a Russian man-of-war had fired upon a Japanese merchant steamer, as a result of which Japan was immediately in arms, the excitement disappearing only when the alleged occurrence was officially denied.

The Russian Government is said to be pursuing a very correct attitude in the East at this time. It does not wan twar with Japan, and its representatives in Japan and Korea are under instructions to pursue a most pacific policy. The Masampho dispute has been amicably arranged, and it is ruterated that there are at present no controversies between the two governments.

Whence do the compilers of such paragraphs obtain their materials? The *Standard's* Odessa correspondent avowedly records the feeling in Russia ; a feeling of uneasiness and even apprehension, and the writers in the American journals get their information apparently from a passenger travelling in the steamer *Victoria*. But these are only the proximate sources : there is evidently a deliberate attempt on the part of some intriguers to create an impression which can not fail to injure Japan's financial credit in Europe. Doubtless to these doings may be attributed the fact that Japan's securities have fallen sharply in the London market, precisely the result that the persons responsible for these rumours desire to bring about. It is scarcely necessary to say that no tangible basis whatever exists for such stories. The relations between Japan and Russia are excellent, and nothing likely to disturb the *entente* is apparent.

THE PEST.

The Pest seems to have again been subdued in Osaka. Since the 6th instant there has not been a fresh case in the Western Ward of the city where the disease had established its head-quarters, and during that interval only two seizures were reported elsewhere. Neither are there any patients suffering from doubtful symptoms. This record warrants a hope that the worst is over. The returns show that whereas out of 44 persons attacked during the pest's previous invasion, not one recovered, four are still living out of 41 attacked on this occasion.

FORMOSA.

The troubles in China seem to have affected Formosa. News is published about a junk smuggling a large quantity of arms and ammunition to a place on the coast in the neighbourhood of Takow, and about symptoms of renewed disturbance in the neighbourhood of Kagi. The Authorities appear to be dealing vigorously with this disquiet.

THE SILK CROP.

The returns published by the Department of Agriculture and Commerce indicate that the silk crop this year will be exceptionally good. At the *haki-tate* time, as the sweeping of the eggs off the cards is called, the number of cards was found to be greater than that of last season by 192,172, and now that the worms have entered their third sleep, their quantity is estimated at 118,354 *koku* in excess of last year's figure. In Saga and Ishikawa the supply of mulberry leaves has been deficient, but elsewhere the yield was good, so that, on the whole, the sericultural prospects are counted very bright.

REGULATIONS FOR THE CONTROL OF DEALERS IN NON-ALCOHOLIC BEVERAGES.

The following regulations have recently been published in the *Official Gazette* :—

Art. I.—The term "non-alcoholic beverages" includes lemonades of all descriptions (including fruit, peppermint, and quassia bark waters), soda water, and other carbonated liquids. By "dealers in non-alcoholic beverages" are to be understood manufacturers, sellers, or retailers of these beverages.

Art. II.—Any person desiring to undertake the manufacture of these beverages must receive the sanction of the local authorities. The local authorities shall, after giving such sanction, despatch sanitary experts to inspect the manufactory and the water to be used.

Art. III.—Dealers in refreshing beverages are not allowed to employ vessels or measures made of copper, lead, or lead alloy, which will come in contact with drinking water. This provision, however, does not apply to vessels or utensils coated with tin or rendered harmless to health by other means.

Art. IV.—Dealers are likewise forbidden to use any colouring compounds of tin, or saccharine, or injurious aromatics or antiseptics, in the manufacture of beverages.

Art. V.—No dealer is allowed to sell, or expose, or preserve, for purposes of sale, any of the liquids enumerated below :—

1. Turbid or spoiled liquids.
2. Liquids showing a sediment.
3. Liquids containing chloric, nitric, or sulphuric acid, or other injurious mineral acid.
4. Liquids mixed with arsenic, antimony, lead, zinc, copper, or tin.
5. Liquids coloured with constituents of tar.
6. Liquids containing saccharine, or injurious aromatics, or antiseptics.

Art. VI.—Manufacturers are required to seal the vessels containing beverages for sale, with labels indicating their name, the name of the company, and the place where business is carried on, as well as the date of manufacture.

The local authorities, however, are empowered to establish special rules in regard to vessels as well as processes of manufacture, in the case of beverages for which sealing is considered unnecessary.

Art. VII.—Dealers in beverages are required to keep clean the place of manufacture and utensils of all descriptions.

Art. VIII.—Dealers shall in no case allow persons suffering from consumption, leprosy, syphilis, or other contagious diseases, to engage in the manufacture or packing of beverages, or to enter the place of manufacture. This provision applies equally to dealers themselves.

Art. IX.—With regard to utensils specified in Article III. and to beverages prescribed in Article V., the local Governor may adopt measures as provided for in Article I. of Law No. 15 issued in February of the 33rd year of *Meiji* (1900). Similar measures may be taken with respect to dealers who have violated the present regulations.

Art. X.—The local Governor may exercise his authority for the enforcement of these regulations, in accordance with Article II. of the Law above referred to.

Digitized by Google
Original from CORNELL UNIVERSITY

Art. XI.—Dealers who have used, or caused others to use, sealing paper containing fraudulent statements, or who have altered, or caused others to alter, such paper in a fraudulent way, shall be liable to major imprisonment for a term not exceeding 25 days.

Art. XIII.—Persons guilty of offences specified below shall be liable to a fine not exceeding 25 *yen*:—

1. Persons engaging in occupations specified in Article II, without receiving official sanction.

2. Persons acting in contravenation to Articles III. and V.

Art. XIII.—Persons contravening Articles VI. or VIII. shall be liable to a fine not exceeding 10 *yen*.

Art. XIV.—These regulations shall come into operation from the 1st of September, 1900, except with reference to lemonades of all descriptions. In this case they are applicable from the 1st of July.

Art. XV.—The local Governor is empowered to establish special rules necessary for construction, furnishing, or superintendence of factories designed for the manufacture of beverages.

Art. XVI.—In Tokyo the functions of the local Governor in connection with the aforesaid matters shall be discharged by the Superintendent General of the Metropolitan Board of Police.

HARBOUR INVESTIGATION COUNCIL.

The following Regulations in regard to the Harbour Investigation Council have been published in the *Official Gazette*:—

Art. I.—The Council shall be under the direct control of the Home Minister and shall carry out the duty of supervision of all matters connected with ports and harbours. It shall also present its views to the Ministers concerned, on all the important topics relating to harbours.

Art. II.—The Council is empowered to forward memorials or representations to the Ministers of State concerned, in regard to all matters connected with harbours.

Art. III.—The Rules for meetings, as well as for the adjustment of affairs relating to the aforesaid Council, shall be issued by the Home Minister.

Art. IX.—The Council shall consist of a President and 16 members. The number of members however may be increased in cases of necessity.

Art. X.—The President shall be of *chokunin* rank. The members shall be composed as follows:—Three high officials from the Home Department; two each from the Commercial and Agricultural and Communications Departments; one each from the War Department, Foreign Department, Naval Commandants Office, Hydrographical Bureau, and Professors of the Engineering Department of Tokyo Imperial University. The Director of the Civil Engineering Superintendence Office may undertake necessary investigations as a commissioner, or attend the council and assist in decisions,

Art. VI.—The members of the Council shall be appointed by the cabinet upon the recommendation of the Prime Minister.

Art. VII.—The President shall supervise the affairs of the Council and report decisions to the Ministers concerned.

Art. VIII.—A director (Kanji) shall be appointed in the Council from among the high officials of the Home Department.

LAW OF CIVIL ADMINISTRATION.

An Ordinance for the enforcement of the Law of Civil Administration has recently been published in the *Official Gazette* as follows:—

Art. I.—The local Governor is required to make suitable arrangements in connection with medical inspection as specified in Article III. of the Law of Civil Administration.

The expenses shall be defrayed out of the local police funds.

Art. II.—In case it is deemed that danger to life or property is imminent, or means of communication by land or sea are endangered, necessary measures may be taken by the administrative authorities concerned, in accordance with Article IV. of the Law of Civil Administration.

Similar measures may be adopted in regard to land or property as specified below, whenever it is found that the laws and ordinances have been so violated as to create danger or produce results detrimental to the public health:

1. Any place or excavation with respect to which there are apprehension of collapse or of injury to employes.

2. Houses and buildings of all descriptions.

3. Ships, carriages, and appliances for communication.

4. Steam engines and machines as well as fittings thereof.

5. Land and property as specified by the Minister of State concerned, besides those mentioned above.

Art. III.—With regard to articles the inspection of which is deemed necessary for the prevention of danger or for sanitary purposes, any quantity of the same sufficient for purposes of examination may be taken by the authorities as specified by the Minister of State concerned.

Art. IV.—With regard to fines specified in Article V. of the Law of Civil Administration, the administrative authorities by whom such fines are to be inflicted shall not exceed the following limits:—

1. In the case of Department Minister, 25 *yen*.

2. In the case of Local Governor, 10 *yen*.

3. In the case of other administrative authorities, 2 *yen*.

Art. V.—The warning to be given in accordance with Article V. of the Law of Civil Administration must be accompanied by an intimation of the period fixed, together with a notice in writing.

Art. VI.—The collection of expenses specified in Article V. of the aforesaid law must be effected after the settlement of the account actually incurred. In no case shall measures to that effect be taken before the delivery of the official decision to the persons liable. The same procedure is necessary in regard to the infliction of fines.

Art. VII.—The expenses specified in Article V. of the Law of Civil Administration shall be defrayed from the Treasury or out of the local funds, according to the office by which they were instituted. All the receipts, as well as fines, shall, in the same way, be transferred to the Treasury or to local funds. The foregoing provision applies also to expenses specified in Article III. of the main regulations, except when the persons concerned or their agent are required to pay hospital fees.

Art. VIII.—In cases where warnings are given in regard to compulsory enforcement of measures on the part of the administrative authorities in accordance with the provisions of other laws and ordinances; or where the work is undertaken on behalf of the persons liable, or where orders are given for its performance by a third party, necessary expenses being collected from them; or where fines are imposed in regard to the compulsory execution of administrative measures; the provisions of Articles V., VI., and VII., shall apply.

TOKYO ELECTRIC RAILWAYS.

The electric railways to be constructed in Tokyo in accordance with the charter recently granted to Mr. Amenomiya and others are as follows:—

No. 1.—The line starts at Honshiba Shichome, and passing over the two bridges, Shinsaiwai-bashi and Kanda-bashi, turns the corner of Mitoshiro-cho, Kanda, to the right, and proceeds along Awaji-cho and over the new bridge, the terminus being at Hongo Shichome.

No. 2.—Starts at Saeki-cho, Kanda, and passing along Yanagiwara, crosses the Ryogoku bridge, the terminus being at the Kinshibori station Honjo.

No. 3.—Starts at Nishiki-cho Itchome, Kanda, turns to the right at the 3rd ward of the same street, crosses the Suido-bashi, and proceeds to the rural and urban boundaries in Naka-cho, Sugamo, via Hakusan.

No. 4.—Starts at Minami Jinbocho, Kanda, proceeds by way of Kudan Hill and Ichigaya Gate, and runs as far as Katamachi, Ichigaya.

No. 5.—Covers the distance from Yurakucho Itchome to Fujimicho Itchome along the castle moat.

No. 6.—The starting point is the foot of the Kudan Hill; thence the line crosses Iida-bashi, and, proceeding along the left side of the Edokawa turns to the left at Edobashi, and then passing through Kaguraka-dori with the corner of Tenjinmachi, Ushigome, on the left, enters the Ushigome Gate, the terminus being at Iidamachi Sanchome.

No. 7.—Starts at the Shinanomachi Station, on the Kobu Railway, and passing along Sugacho, Demmacho, and Arakicho, Yotsuya, turns at Kata-machi, Ichigaya, and proceeds along the right side of Yanagi-machi, Ichigaya, as far as Sakana-machi in Ushigome district.

No. 8.—The starting point is in front of the Hanzo Gate. Hence the road runs towards the Yotsuya Gate along Kojimachi, and traversing the main streets of Yotsuya, proceeds to the rural and urban boundaries of Okido.

No. 9.—The line runs from Nagata-cho Itchome to Minami-machi Rokuchome, Aoyama, passing through the Akasaka Gate and along the main streets of Aoyama.

No. 10.—Starts within the precincts of Shiba Park, passes the cross road of Higura, and proceeds to Minami-machi Itchome, Aoyama, by way of Roppongi-machi, Azaba.

No. 11.—The corner of Shinsaiwai-cho, Shiba, is the starting point. Thence the line runs along Kubocho as far as the boundaries of Kasumi-cho and Kogai-cho in Azabu, via Tameike and Enokizaka-machi.

No. 12.—Starts at Honshiba Shichome, runs to the right of Mita Kimizuke-machi, through Daimachi, and reaches the rural and urban boundaries of Shirokane Daimachi Nichome.

No. 13.—Starts at Yurakucho Itchome, passes over the Sukiya, Mihara, and Manner bridges, and, turning to the left at Tsukiji Nichome, and crossing the Yoroi and Okawa bridges, runs to the right at Adaka-machi, Fukagawa, and then to the left at the corner of Nishi Moto-machi, terminating at New Takabashi, a turn to the right being made at Nishi-machi, Fukagawa.

No. 14.—Starts at Tatsunokuchi, turns to the left at the corner of Eirakucho Nichome, passes over the Gofuku bridge to the right of Dosan-bashi, and then, running over Kaiun-bashi and another newly-built bridge on the right of Reigan-bashi, passes over the Eitai-bridge, emerging in front of the Fukagawa Park.

No. 15.—Commences at Kuroyecho, Fukagawa, and proceeds as far as Azuma bridge, passing over the Tomioka-bashi, Taka-bashi, and Ninohashi.

No. 16.—Runs from Kakigaracho, Nihonbashi-ku, as far as Uyeno Station, passing over Izumi-bashi bridge.

No. 17.—Starts at Omagari Edokawa turns to the left at Yamato-cho, Koishikawa and then, winding to the right in front of Dentsu, descends Tomizaka Hill in Koishikawa, passes along Yushima Kiridoshi, by way of Masagocho, Hongo, and, proceeding through Okachimachi in Shitaya and Shichikencho in Asakusa, crosses over the Umaya bridge and terminates at Sototemachi, Honjo.

No. 18.—Begins in front of Kaminarimon (Thunder Gate), Asakusa, and, passing over the Azuma bridge, proceeds along Takecho, and Motomachi in Nakanogo, Honjo, turning to the right at Hachikencho, and crossing over the Sannohashi bridge, reaches Nishimachi in Fukagawa Ku.

No. 19.—Starts at Hanakawado-machi, Asakusa, and, proceeding along Shoten-machi, reaches the rural and urban boundaries of Asakusa-machi.

No. 20.—Covers a distance from Gojomachi, Uyeno, to Minowa, via Sakamotocho, Shitaya.

No. 21.—Runs from Eiraku-cho Nichome to Yuraku-cho Nichome.

No. 22.—Starts at Edokawa bridge, Koishikawa and terminates at Otowa-cho Itchome.

No. 23.—Starts at Yokkaichi, Nihonbashi-ku, and passing over the Edobashi bridge, runs through Sumiyoshi-cho and Hama-cho, as far as the Ryogoku bridge, along the Okawabata road.

No. 24.—Starts at Sakura gate and passing through the Toranomon gate, proceeds through Higura in Nishikubo to Tamachi Shichome, Shiba, along the Mita route.

No. 25.—Starts in front of the Sammon, Shiba, and terminates at Hamamatsu-cho Itchome.

No. 26.—Starts at the corner of Kobiki-cho Nichome, Kyobashi-ku, and passing along Kobiki-cho to Mizuya-cho in Kyobashi-ku, and proceeding through the Naka-dori and Yokkaichi, eventually passes ever the Sujikai bridge, reaching Matsuzumi cho, Kanda.

No. 27.—Starts at Hatago-cho, Kanda, and proceeds to Mihashi, Uyeno, through Tenjin-machi, Yushima, and along Ikenohata.

The development of the tea-trade in Annam has been rapid during the last few years, though the quantity is of course still very small. The exportation to France, which amounted to 3,400 kilogrammes in 1894, reached 20,000 kilogrammes in 1898 and is estimated at 60,000 in 1899, the total consumption of tea in France being 800,000 kilogrammes. It is claimed for the Annamese tea that it is in no way inferior in quality to the best Chinese teas.

YOKOHAMA HARBOUR IMPROVEMENTS.

IMPROVED CUSTOMS ACCOMMODATION.

The proposed improvements in the Harbour accommodation of this Port, as published herewith, have been placed before us by the Foreign Chamber of Commerce by permission of the Director of the Customs. We are informed that the scheme is favourably considered by the Finance Department and that an Office under control of that Department has already been established in connection with the proposal. If carried out it would take from four to five years to complete and should provide adequate facilities for the trade of the Port even if it increased greatly over its present dimensions, as it would practically quadruple the space at present at the disposal of the Customs. The general scheme will be seen to be an island, directly communicating by rail with the present Railway Station, and with the present Pier and Customs Compound, and by bridges with Basha Michi and present Customs compound, with quays long enough and with sufficient depth of water to enable 10 large steamers to discharge at one time, each steamer being provided with its own landing shed, and other large three-storied godowns, with requisite offices, &c., being also built on the reclaimed land, whilst the whole of the quays and sheds will be lighted by electricity, thus facilitating discharge by night as well as by day. If the scheme is carried out, and we trust it will be, it should make Yokohama one of the best ports for handling cargo in the East and do away with the great complaints at present heard from shipowners and consignees alike. The proposed form of the island adapts itself to the formation of the bed of the harbour, it being comparatively shallow on the proposed site with deeper water round it, and such an island would doubtless be largely formed by dredging the other parts of the Harbour, which is much needed and would be quicker and more effective than as at present discharging the dredgings outside the harbour limits. Maps showing the proposed reclamation and buildings, &c., to be erected, can be seen on application to the Secretary of the Foreign Chamber of Commerce at No. 14, Bund.

DETAILS.

The outline on the Map shows a proposed extension of the Yokohama Custom House.

The basis of the extension is a work of reclamation with projecting quay, covering a surface measuring 48 5/32 acres, (more than 3 times as large as the present Customs Compound), which is to be isolated from the foreshore of the present Custom House in the form of an island, directly connected by means of bridges. —One, a fixed iron bridge to Basha Michi; the other, a swing bridge, moved easily by hydraulic power, to permit the free passage of barges, steam-launches, &c., to the present customs compound.

The height of the reclaimed land will be 13 feet above mean water level of ordinary spring tides.

Quay.—The frontage of the reclaimed land will be 5,460 feet, and of this 4,800 feet will be allotted to the mooring of 10 steamers alongside of the quays; the wharf No. 1 and the head of the quay will be specially prepared for the accommodation of passenger-boats. The height of quay walls will be 41 feet, except wharf No. 5, where the height is reduced to 37 ft., their foundations being 28 ft. and 24 ft. respectively below water level of ordinary spring tide. The walls below M. L. W. of O.S.T. will be built up by concrete blocks laid one upon another on the rock, which consists of sandy tufa; above that level they will be mass concrete faced with granite blocks.

Landing place and sheltering harbour for small boats:—On the shoreward side of the reclaimed land, a water surface of 8,169 acres will be available as a sheltering harbour for small vessels, and the side is utilized as a wharf for the loading and unloading of cargo from lighters, barges, &c.

Roadway:—The main roadway from the head of the pier to Shinhatoba (sheltering harbour), and a branch extending to the present Customs compound, will be paved with square blocks of granite and provided with brick side-walks.

The space along the quays, also the main branch roads passing in front of the warehouses or sheds, will be paved with the same, the rest being macadam roads.

The total length of roadways will be about 3½ miles.

Railways:—The trunk line extended on a causeway from the Yokohama Railway Station compound will be connected with all the lines of rails constructed on the reclaimed land, and the line will be further extended over the swing bridge, to be connected with the lines on the iron pier in the foreshore of the present Custom House Compound. These are to communicate with each other chiefly by means of turn-outs and crossovers, but traversers and turntables are also used to facilitate the transition of wagons where space is too limited to permit a curve to be laid. The length of railway on reclaimed land will be about 7 miles.

On the seaward side of the sheds, a broadgauge track will be specially provided for the travelling cranes, facilitating the loading and unloading of cargo.

Cranes:—Stationary steam cranes, ranging in capacity from 10 to 30 tons, will be distributed along the quays,—one of the latter at the head of the quay will have a capacity of 30 tons; the one on wharf No. 2, 20 tons; that on Wharf No. 5, 10 tons. Hydraulic cranes of from 1½ to 5 tons travelling on rails with a collective lifting power of about 82 tons will be placed along the quays at suitable intervals.

Besides cranes, hydraulic capstans will be placed, at intervals, along the quays arranged with several mooring posts and rings.

Warehouses:—Five fireproof bonded warehouses, altogether 99,000 sq. ft. in extent, will be built at the places marked on the map,—each being 72 ft. in width; and the lengths varying from 240 to 300 ft.

These buildings are to be of iron muscled brick of three stories, each block to be divided into compartments by intermediate brick walls built across the warehouse, and carried up through the roof; the largest area of a compartment does not exceed 3,600 sq. ft.

Access is to be provided to the various floors by iron staircases and by fixed hydraulic lifts inside, and cranes over the tiers of doors, outside, whereby the goods can be raised direct to any floor or lowered into wagons or shifted from one floor to another.

Sheds:—A long line of ten cargo sheds, altogether covering an area of 287,280 sq. ft., will be built along the quays, each being 84 ft. in width; the lengths varying from 300 to 420 ft. according to the length of the wharf; the height 18 ft. under eaves, and each steamer will discharge its cargo into the shed where it is moored.

The sheds are to be entirely of fireproof iron construction, enclosed by corrugated iron, and to be closed with a long series of iron doors sliding on rollers, both facing the wharf and on the opposite side, so that there may be no impediment to the conveyance of goods.

The floor of the sheds on both sides of the pier will be raised 2½ ft. above the quay, being chiefly used for the direct delivery of the goods in transit to Yokokama Railway Station, and that of the others, level with the quay.

An end of each shed will be partitioned off for keeping merchandise in custody; and for the convenience of incoming passengers, a space for the inspection of baggage is to be temporarily arranged, at the time of vessels' arrival, by means of movable iron fences.

Examiner's and Inspector's office:—Four iron muscled brick buildings of one story will be built at convenient places, in order to facilitate the superintendence and transaction of all business matters connected with the Custom House.

Electric lighting and sanitary arrangement.—The inside of the sheds, the quays and roadways will be lighted at night by electricity, while the sanitary arrangements on the reclaimed land will include all necessary appliances to be provided in accordance with a most complete system of modern improvements.

The above being a general scheme may be varied according to circumstances.

The map issued by the Director of Customs in connection with the harbour reclamation scheme also shows in faint lines other reclamation schemes which have been applied for, and in several instances granted, by various Japanese Companies, to an extent that foreigners generally are little aware of. They extend from Honmoku to the creek bordering the Settlement, from the present docks to the northern arm of the breakwater; on the other side of the northern arm of the breakwater the whole of the shallow water to the beach is included and again for more than a mile on the other side of the Kanagawa Forts. The present water frontage rights are preserved by canals, and the proposed reclamations are intersected by canals at intervals. It has been evident for years past that the trade of the port was outgrowing the land available, and these extensive reclamations will enormously increase the space available for building land, manufacturing premises, &c., and ought to further increase the volume of trade of Yokohama.

CORRESPONDENCE.

L'ABBE LIGNEUL ON FREEMASONRY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A propos de l'article intitulé: L'Abbé François Ligneul on Free-Masonry: permettez-moi de vous adresser non pas une réponse, mais quelques remarques.

L'auteur m'a donné dans cet article beaucoup plus d'éloges que je n'en mérite; cependant il y en a un dont je lui sais gré, c'est d'avoir reconnu mon amour sincère de la vérité et la droiture de mes intentions. Tel est bien en effet, autant que je puis me connaître, le fond de mon âme.

Quant aux idées que j'ai exprimées relativement à la Franc-Maçonnerie, je suis si éloigné de vouloir m'obstiner à les défendre que pour tout au monde, au contraire, je voudrais m'être trompé sur tous les points, autant que l'auteur me le reproche.

Malheureusement l'histoire de l'Europe depuis un siècle est trop claire (pour parler de l'Amérique, il faut encore attendre) et l'action de la Franc-Maçonneric, avec les societés qui s'y rattachent comme des branches à leur tronc, est trop évidente pour qu'il soit possible de ne pas la voir. Si quelqu' un était capable de s'y n'éprendre, c'est celui-là qui mériterait le titre "d'aveugle" dont l'auteur de l'article me gratifie.

Qu'il y ait d'honnêtes gens dans la Franc-Maconnerie, je ne le sais que trop. Qu'il s'y practique des œuvres de bienfaïsance et d'humanité, c'est incontestable. Tout cela est reconnu et exprimé à plusieurs reprises dans mon livre.

Ce que j'y déplore et ne puis m'empêcher de déplorer, c'est que le même nom de Franc-Maçonnerie désigne une chose si différente d'elle-même selon la notion que chacun en a. C'est de voir tant d'hommes généreux trompés, et leurs personnes et leurs œuvres servir de moyen pour couvrir un plan si loin de leur pensée, et concourir, sans même qu'ils s'en doutent, à l'exécuter.

Parmi les faits sans nombre que j'aurais pu citer, j'ai pris ceux que les Japonais connaissaient mieux ou qu'ils pouvaient plus aisément comprendre; parmi les volumes de témoignages que j'avais sous la main, j'ai choisi de préférence ceux qui exprimaient plus nettement les idées les plus répandues au Japon depuis dix ans, et les principes appliqués depuis le même temps, à la politique et à l'enseignement dans ce pays.

Si j'ai traité ce sujet avec plus de soin et avec plus de zéle qu'aucun autre, c'est parce que de ce côté je croyais et je crois encore le danger plus grand.

Il est possible que je me trompe et que mon honorable Adversaire ait raison; encore un coup je le voudrais, et je le désire autant que lui-même.

Par malheur, en présence de faits si éloquents, et de documents si lumineux, je ne puis pas réussir à me convaincre. Que le lecteur qui connaît l'état de l'Europe et celui du Japon, prenne le livre en main, qu'il examine par lui-même et qu'il juge.

Avoir raison est chose fort secondaire; l'important est de chercher à diminuer le mal qui existe, et de prévenir celui beaucoup plus grand qui se prépare.

Veuillez recevoir, MONSIEUR LE REDACTEUR,

l'expression de mes sentiments respectueux,

F. LIGNEUL.

Tokyo, 14 July, 1900.

"VERY RABID."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have neither time nor patience to make anything like a comment on such a rabid and extremely flagrant article as "A Coast-port View" reproduced in your to-day's issue. The name of the *China Mail*, in which it originally appeared, is enough to dissuade me from making the attempt. But, as the writer bases his conclusions almost exclusively on the foreign relations in Formosa, or more accurately, as his real object seems to attack the Japanese Authorities in the new territory for a certain reason of his own, I, as one who had been in the Civil Service in the island for many years and had frequent opportunities to post myself, both officially and privately, a good

Digitized by Google Original from CORNELL UNIVERSITY

deal on affairs affecting the foreign residents there, may perhaps drop a line for the benefit of some innocent readers.

That Japan "runs rough-shod over every article of her treaty with the foreign powers" in Formosa is a lie beyond expression. Foreigners fully enjoy the rights they acquired under the Chinese regime. Their leased lands which are rather vaguely marked out in reference to the old title deeds are most liberally recognized as valid. At all treaty ports except Kelung, every water frontage offering landing facilities is allowed to be monopolized by them. Previous to the new treaties' coming into operation, they were granted privileges to invest capital for camphor, sugar and tea, and even to establish depots or factories for these staples in the interior. These practices were of course against the Chinese treaty, still, for the sheer reason of their having been exercised for many years, they were countenanced by our Government. Far inland in the semi-savage district, the Spanish still remain in the ownership of a large tract of land. Jetties were permitted to be built. Lands were leased to the missionaries, or merchants, for their health or advantage; concessions absolutely withdrawn from the Japanese. Even coasting trade was granted to be carried on between the ports in Taiwan. In short, every consideration and courtesy were shown to the foreigners so far as they were not in direct violence with the spirit of the old treaty. It is rather hard to guess at what the correspondent intends to mean by "a gang of corrupt officials who are allowed to place differential duties, &c." He will oblige me if he can recite some concrete cases. That Chinamen are being squeezed if they do not travel by the Government subsidized line is simply nonsense. Besides, such a question, along with the one about the tea-trade channel, is too foolish to be raised by people whose motto is "fair field and no favour." The statement that "justice for Britishers in the Japanese Courts is un-obtainable" is one I should like him no prove; to prove which he will have to give some particular cases. I understand no noticeable suits have been instituted by foreigners in the Formosan Courts. Chinese servants employed by foreigners, contrary to what he asserts, have been treated as if they were as privileged as their masters. It has been the practice of these fellows, therefore, to enlist themselves as nominal employés and thus enjoy the immunities. Some of them were criminal enough under these advantages to secretly refine opium or to import the same, ammunition and guns for supply to the robbers.

British cemeteries, as well as those belonging to the French at Kelung and the Pescadores, have been and are, I understand, under the care of the Government to be kept clean and safe. As for the protection of foreign lives and properties, it will be superfluous for me to explain how they have been effected. The writer will probably not forget that the only damage done to foreign property at Takow during the war was more than compensated. I am not aware of any reasonable complaint raised by the foreigners during my long service there. Although the British Communities in that distant island are ridiculously small, there are some typical English gentlemen, whether merchant or missionary, well entitled to social positions in larger circles. Japanese relations with them are, I believe, smooth and cordial on the whole. But there are exceptions as usual. I extremely regret to observe among your compatriots a gentlemen who has not the courage to sign his own letter, or who is a *fin de siècle* example of that old and homely proverb "circumstances alter cases."

Apologising for encroaching so much upon your valuable space.

I am, sir, yours faithfully,

ONE WHO KNOWS.

Yokohama, June 15th, 1900.

A SWEET SINGER IN JAIL.

The "patriotard," as well as the patriot, has been in rather tiresome prominence since the war commenced, and his effusions in prose and verse have generally been execrable. The latest achievement in the line of patriotic poetry comes from British Columbia. It was written by a jail-bird, who, despite the depressing effects of Her Majesty's temperance hotel, sings melodiously in his cage. His effusion was sung with great fervour on the Queen's Birthday. It runs as follows :—

Be proud to-day that Britain's flag is waving, in its pride,
O'er rocky mounts, over fertile plains, and oceans' boundless tide.
Though we are held as bonded slaves, and pine in captive thrall;
Still we can honour Britain's flag, within the prison wall.

The flag that proudly floats above the noble and the brave,
That makes its prestige felt on land, and holds it on the wave;
That always spreads its folds abroad at truth's or honour's call,
May yet in triumph wave o'er us, without the prison wall.

Breathes there a man who ne'er has felt his pulses wildly thrill,
When gazing on the noble flag, that owns our homage still?
Then join as Britons should to-day, and let us, one and all,
Pay honour to our gallant flag, within the prison wall.

Though dark the future now may loom, and sad the past has been,
We yet are loyal to our flag, and love our gracious Queen.
Then banish thoughts that swathe the hearts with sorrow's gloomy pall,
We yet may stand beneath that flag, without the prison wall.

NOTES FROM CHINA.

Mr. W. J. Solly, for ten years chief clerk in the Hongkong Post Office, has been appointed British Postmaster at Shanghai.

The Hongkong Post Office, notwithstanding the penny rate to Great Britain and her colonies, made a profit last year of $80,006.60.

According to a Shanghai native paper, there has been a great amount of kidnapping at Hankow recently; in fact it has been a daily occurrence. A kidnapper was caught lately and sent to the Hsia-kow magistrate, who, however, inflicted no punishment. The next two caught, therefore, on the 30th ult., were promptly beaten to death by the inhabitants of Hankow.

Recently in the Mixed Court at Shanghai, before Mr. Wêng (magistrate), and Mr. M. Odagiri (Acting Consul for Japan), Messrs. Murai Bros., the well-known tobacco dealers of Kyoto, sued the sureties of their compradore for a defalcation of $26,000. It appeared in the agreement with the compradore that they were not to furnish him goods in excess of Tls. 6,000 at any time. Mr. T. R. Jernigan defended the sureties and argued that as Murai Bros. had violated the agreement they were not entitled to recover, or that, if they were entitled to recover, it could only be Tls. 6,000 less the credits due the compradore. The magistrate took the latter view and decided that the credits due the compradore amounted to Tls. 3,000, which he deducted and then gave judgment for Tls. 3,000, which he divided between the two sureties, and which Mr. Jernigan accepted for his clients. It appeared during the trial that after the compradore had run away the Japanese, without authority, went into the house of one of the sureties, searched it, and affixed their seals to the boxes and trunks.

Leading members of the Reform Party residing in Shanghai, representing no less than fourteen of the eighteen provinces of China, have drawn up a petition, says the *N.-C. Daily News*, addressed to the Chief Secretaries of State of Great Britain, the United States, and Japan, praying that the three Powers will unite and oppose any action of the other Treaty Powers pointing towards any division of the Empire; that efforts be made to rescue His Majesty Kuang Hsü from the hands of the Empress Dowager and her reactionary advisers through whose conduct the present troubles are alone due; and that His Majesty may be assisted in selecting a new capital of the empire where a Reform Government may be inaugurated. This, the petitioners claim, is the only means of restoring order and peace throughout China, which, so long as the Empress Dowager and her advisers are in power, will never happen. Finally the loyalty and patriotism of the people of China had been much strengthened by the Reform decrees enacted in 1898, hence the masses are most anxious to see the Emperor restored to power and independence.

Viceroy Liu of Nanking, says a Shanghai contemporary, has sent instructions to the various yamêns under his jurisdiction in the Liangkiang provinces to keep careful watch on the conduct of the members of the Tatao Hui or "Big Knife Society," who are known to abound in the vicinity of Kiangyin, Chinkiang, and up the Grand Canal, including Tsingkiangpu and Hsüchoufu, which is the home of the society. As soon as a suspicious character is arrested and found to be a "Big Knife man" he is to be summarily decapitated without first referring to Nanking for permission. It would be well here to inform readers that the Iho Ch'uan Society is merely an off-shoot of the Tatao Hui, the name of Iho Ch'uan having been adopted by Shantung and northern members as a cover, the Big Knives being too well known as a revolutionary society. The Iho Ch'uan first called themselves "Iho Ch'uan Hui," but owing to the character "Hui"—a secret society—being obnoxious to the Government and moreover prohibited by law, they dropped the designation "Hui," at the Empress Dowager's own suggestion, and assumed the character "T'uan"—militia body—as their suffix to "Iho Ch'uan." It will be remembered that the Imperial decree of the 6th inst. confirms this by saying that the Society men "simply trained themselves for self-defence," that is say, were changed from "Hui" to "T'uan," and therefore innocent of any intention to rebel against the Government.

The *North China Daily News* prints the following horrible tale without comment :—

Some time ago Detective-Inspector Armstrong made a clever capture of the chief of the ruffians who have made the name of Pootung notorious. The prisoner in question, besides being a well-known black-mailer and kidnapper, was guilty of the horrible atrocity of cutting two men's eyes out. He was found guilty at the Mixed Court and sent into the Chinese City for punishment. It was expected that he would be decapitated, but yesterday news came into the Settlement that he was to suffer death by slow strangulation. The process is one of a really barbarous nature, the prisoner standing, with a close fitting cangue round his neck, in a cage of wooden bars some 6ft. 10in. in height. On the bottom of the cage are flat slabs of stone on which his feet rest and from day to day these stones are removed until he is left hanging in the cangue. Yesterday the culprit, who was placed in a squalid evil smelling courtyard just inside the new North Gate, was visited by thousands of men, women, and children. A few runners, armed with canes, were the only visible guards, and they thrashed the yelling crowd right lustily as they pressed on the condemned man. On the walls and housetops about were large crowds. The principal actor appeared to be the least concerned of all. He was eating some rice cake and chatting cheerfully with some women close by, but directly he saw a couple of foreigners training their kodaks on him, he faced about and pulled his hat down over his eyes. A bribe of 50 cents induced him to let one photograph be taken of his features, but one only. Heavy irons encircle the prisoner's ankles, but with the guard on duty yesterday it did not look as if it would be a hard matter for a few desperate and armed men to effect a rescue. To-day the prisoner will be moved to the East Gate. It is estimated that the wretched creature will be strangled in about four days, after severe suffering.

The *North-China Daily News* says that the following telegraphic news was received by members of the Reform Party in Shanghai on June 15 :—"Prince Ching, and Liao Shou-hêng, President of the Board of Rites, have been dismissed

Digitized by Google Original from CORNELL UNIVERSITY

from the Tsungli Yamên as 'too timid,' and although Prince Tuan, father of the Heir-Apparent, was appointed the same day (10th inst.) to succeed Prince Ching as President of the Yamên, he strongly declined to take the post. The Empress Dowager, however, stood firm and further appointed Prince Na Yen-tu, Ch'i Hsiu, and P'u Hsing members of the Tsungli Yamên 'in order to assist Prince Tuan in inaugurating the new policy.'" If what the telegram above-noted says is true, and we have no reason to doubt its accuracy, we can easily imagine what this "new policy" of the Empress Dowager's Government will be, namely, that it will be more reactionist and more anti-foreign than any hitherto attempted by any Chinese government, even in its most conservative days. We have already given a slight, but nevertheless quite a sufficient sketch of the new President of the Tsungli Yamên in our issue of yesterday morning, and it is, therefore, only necessary to state that his "assistant," Na Yen-tu, is a Mongol Prince of the Alatsin Tribe, who has always been patronised by Prince Ching and others of the Empress Dowager's advisers, who lately got him promoted to the rank of a Minister of the Presence, in order to get as many of their own people as possible around the present usurper of the Throne. Ch'i Hsin, President of the Board of Rites, and P'u Hsing, the other two "assistants in the new policy," are Imperial Clausmen who are great friends of Kang Yi and who have lately come into greater prominence owing to their also being reactionists and violent anti-foreigners. P'u Hsing is a Vice President of one of the Six Boards who. it will be remembered, was sent to Shantung last year to investigate charges made against Chang Ju-mei, then Governor of Shantung, for bribing Li Hung-chang when the latter went to that province to investigate the Yellow River. Chang Ju-mei was dismissed but Li Hung-chang escaped through the friendship of the Empress Dowager.

THE MITA SYSTEM OF ETHICS AND ITS DETRACTORS.

(CONTRIBUTED.)

It is well-known that for over twenty years the Japanese have been searching for a new basis of ethics. Opinion on this subject may now be said to have settled down to three distinct lines of thought. (1) There are those who maintain that religion is the proper and the only sure basis for ethics. (2) There are those who believe that philosophy alone furnishes a satisfactory basis. (3) There is the practical school, which contends that morality, like all other things in the world, can only be judged by the benefits it confers on those who observe it, that the only ethical basis that has a chance of being understood and appreciated is one that appeals to the faculty that judges of moral facts, the internal consciousness.

(1). In reference to the first of these views it is necessary to observe that by religion we mean a creed based on a belief in miracles or a supernatural interference with the working of nature's laws. Speaking of the Japanese as a nation, after more than a quarter of a century's study of them we have no hesitation in saying that there is not the shadow of a chance of their accepting this basis for any system of national ethics that they may construct. From what we wrote more than twelve years ago on this subject we beg leave to make a short extract. The words represented the ideas of leading Japanese on the subject of the religious basis for ethics at the time they were written, but we venture to think that they have been strongly emphasized by the tendency of Japanese thought during the past four or five years. "The idea that morality, to be taught effectually, must be based entirely on religion has been for years in every part of the world the source of incalculable mischief. Religion, we use the term in its ordinary sense as applied to a system of faith and ceremony claiming to be based on some kind of supernatural revelation, has to do with things far off, mystic, incomprehensible—such as rewards and punishments in a future life, the need of semi-miraculous spiritual influences, the nature, attributes, and self-revelations of Gods and divinities. Morality, or Ethics, on the other hand, deals with what is near, lucid, practical, intelligible—such as rewards and punishments in this life, mental and physical; the grand practical reforms to be effected by a thorough application of admitted ethical principles; our duties as human beings, as members of society, and as citizens. To maintain that to induce a man to act rightly in matters which *immediately* concern him, the only plan is to direct him to something that *remotely* concerns him; that in order to persuade him to act in the best manner possible for this world, you must induce him to fear the punishments and expect the rewards of another world, appears to ordinary common sense illogical. With the old system a certain amount of progress was made. Men have in the past in certain countries and for a certain time been moral because they were superstitious, but that the Japanese, who in all other matters take delight in being abreast of the age, should, in their eagerness to attain a certain end, confine themselves to a set of means that, as Professor Huxley and others have shown, are being more and more discarded in the west, is too much to expect. . . . Instead of morality deriving strength from being based on religion, in as far as it rests on this basis it is weak and open to attack. About so-called religious doctrines very few people agree. But whether the man who speaks the truth or the man who lies is the man to be esteemed; whether kindly feeling is not preferable to malice; whether the honest, plain-speaking man is not to be chosen as a friend rather than the smooth-tongued, flattering, and double-faced; whether the man who maintains his family, helps his relations, and is always ready to serve his country is not better than the man who skulks out of all such duties, and the like—these are matters about which all civilised people are agreed." *

(2). Religion, divested of its supernaturalism, as Christianity, Buddhism, and Mohammedanism have been divested by certain sects and schools of thought, becomes a system of philosophy. As such we grant that it may form a basis for ethics to a select few. The trouble is that ethics founded on philosophy are quite unintelligible to the majority of those persons who most need guidance in morals. We know of no system of philosophic ethics that does not require very special talents and technical training in the student who aspires to understand and act upon it. We are then confronted with the fact that, though morality is of vital importance to the whole world, only a very small section of human society takes any interest in philosophic questions. Does not this fact put ethics founded on philosophy out of court in an inquiry such as we are conducting? It is not a basis of ethics that may suit a few highly cultured men that the Japanese are in search of, but a basis that can be understood and appreciated even by that very typical personage the "man in the street."

(3). Realising all the above-named difficulties and many more which we have not deemed it necessary to state, Mr. Fukuzawa has for a great many years been an earnest preacher of practical utilitarian ethics as the only system that possesses the two essential attributes of thorough intelligibility and great effectiveness. Until acts are considered right or wrong because of their proved consequences in this world, says Mr. Fukuzawa, there can be no universally satisfactory basis for morals. Many hard things have been said about utilitarianism as an ethical creed, but we have no hesitation in saying that in every case those who have represented utilitarianism as an ignoble belief have misunderstood the meaning of the word utility in some way or other. As Mill has observed, "questions of ultimate ends do not admit of proof in the ordinary acceptation of the term. To be incapable of proof by reason is common to all first principles; to the first premises of our knowledge, as well as to those of our conduct." Questions about ends resolve themselves into questions as to what things are desirable. Now the whole human race is agreed in thinking happiness to be desirable, and that is sufficient proof that it is desirable. Happiness may be said to have made out its title to be one of the ends of conduct and therefore one of the criteria of morality. This is held by all utilitarians, but no well-informed utilitarian will assert that happiness is the sole criterion of morality. He will admit that virtue also is desirable for itself and also as a means of happiness. Speaking broadly, the view of the utilitarian is that the welfare of the community and the welfare of individuals in every respect is the final object of all morality, as it is of all other existing enlightening agencies. He does not hold that morality is one and the same in all times and for all persons. He realises that in the different stages of progress through which individuals and nations pass different moral principles need to be enunciated. Certain general principles may be said to be fixed, but the application of these must depend on circumstances. Briefly stated, these are Mr. Fukuzawa's views. The Mita system of ethics, as it is now known in Japan, did not wholly originate with Mr. Fukuzawa, though doubtless it is in the main an embodiment of his views. The *Shûshin Yôryô*, in which the system is unfolded and explained, was compiled by certain teachers in the Keiôgijiku and afterwards received the sanction of Mr. Fukuzawa. A full outline of the contents of the *Shûshin Yôryô* was given in the March Monthly Summary of the Religious Press (March 9th). Owing to the way in which the Mita doctrines have been distorted by certain Christian writers on the one hand and by conservative writers like Dr. Inoue Tetsujirô on the other, a few days ago* a concise account of the sense in which the terms "Independence and Self-respect," the basis of the Mita ethics, are used in the *Shûshin Yôryô* was published in the *Jiji Shimpô*; which we translate below.

"Though it is not easy to convey in a few words all the breadth of meaning contained in the terms independence and self-respect, which form the basis of the system of morality propounded in the *Shûshin Yôryô*, the following explanation of the term, furnished to one or two of the students of the Keiôgijiku in response to inquiries on the subject, suffices to give some idea of their import.

(1.) A man of independence and self-respect mixes freely with his fellow-men and has no small regard for them, but on this account he does not in the slightest degree alter his own convictions.

(2.) A man of independence and self-respect exercises self-control and self-discipline.

(3.) A man of independence and self-respect holds truth and integrity in high esteem and neither deceives himself nor deceives others.

(4.) A man of independence and self-respect is anxious to help others to develop to the full their independence and self-respect.

(5.) Although a man may by his personal efforts make a living for himself and his family, if he does not fulfil his duties to society at large, he cannot be called a man of independence and self-respect.

(6.) A man of independence and self-respect observes all obligatory rules without waiting to be told to do so by others.

(7.) It goes without saying that a man of independence and self-respect should fulfil his duties to himself, his family, and his country, but he must also fulfil his duty to all mankind and to the lower animals.

(8.) He who is a slave to his own lusts and who has no control over himself, can neither be said to be independent nor to possess self-respect.

(9.) He who, instead of being controlled by the forces of nature, uses them as a means of making his life refined, useful, and happy is a man of independence and self-respect.

(10.) He who is so ill-acquainted with truth as to be swayed to and fro by the wind of superstition is not a man of independence and self-respect.

(11.) He who is so affected by the good or ill that may befall him as to lose his equanimity is not a man of independence and self-respect.

(12.) He who knows how to accumulate money, but knows not how to spend it, is not a man of independence and self-respect.

(13.) Arrogance is the result of a very despicable disposition of mind and is not entertained by a man who has self-respect.

(14.) He who respects himself respects others; and he who despises himself despises others.

These explanations undoutedly clear the Mita system of ethics from the charges formulated by Dr. Inoue Tetsujirô, and some Christian writers, to the effect that the "self" which is held up for esteem is an ignoble "self." We cannot understand how any careful reader of the *Shûshin Yôryô* could accuse its compilers of making an inferior type of human nature the basis of an ethical system. Throughout the 29 sections of which the work is composed a very lofty type of man is held up for imitation. The ideal man of the Mita school of ethics is a man who has cultivated to the full his moral nature (sec. 12), a man who respects the rights of others (sec. 14), a man who is averse to harbouring jealousy and hatred (sec. 15), a man who has a high sense of responsibility and who acts honestly and straightforwardly towards those to whom he is responsible (sec. 16), a man who trusts others and gives them good reason to trust him (sec. 17), a man who carefully observes the etiquette of life (sec. 18), a man who knows how to make allowance for the feelings of others (sec. 19), a man whose kindness of heart extends even to animals (sec. 20), a man who has been subjected to the refining and elevating influences of art and literature, a man who serves his country well, pays his taxes, and obeys the law (sec. 22, 23, 24 and 25), a man who treats foreigners as his equals (sec. 26), a man of progressive spirit who aims at transmitting to posterity the civilization he has inherited in an improved form (sec. 27).

Two distinct classes of objectors to Mr. Fukuzawa's ethics have come forward. One of these, led by Dr. Inoue, objects to it on philosophic grounds, the other repudiates it on religious grounds. The sentiments expressed in Dr. Inoue's Sendai speech, reported fully in these columns, have, we observe, been restated in Tôkyô, and have attracted a good deal of attention throughout the country. It seems to us that the objections to the Mita ethics stated in that speech will not bear examination. Let us take them in order. "A standard of morality," says Dr. Inoue, "ought to be universally applicable, and nothing can be plainer than the fact that Mr. Fukuzawa's standard is not universally applicable." Now in the first place it is only fair to state that the compilers of the *Shûshin Yôryô* make no pretensions to supply the country with a new standard of morality. All they do is to lay stress on the importance of certain moral principles. But is it true to say that the various standards of morality in use to-day are universally applicable? Does not every nation possess its own standard? And is not the standard constantly undergoing change? Is the standard the same in England to-day that it was fifty years ago? We are not now speaking of general abstract principles, but of that standard which each normal man and each normal woman has in his or her mind when considering actions, their own or those of others. Dr. Inouye has not given us his own standard and so we are not in a position to judge of it, but from many remarks that he has made we infer that it will be prove to be absolute, and therefore practically unusable. Mr. Fukuzawa's doctrine, says Dr. Inoue, is a reaction from the subjection taught in this country for so many centuries and therefore is not to be relied on. Have not all important doctrines on religious and moral subjects been reactions? Were not the doctrines of Shaka Muni and Christ reactions against the thraldom of prevailing ideas in India and Judæa respectively? Has not the world's progress been marked by perpetual reactious? "Could morality exist at all if the doctrine of subjection to lawful authority were abolished?" asks Dr. Inoue. Where in the *Shûshin Yôryô* is this course recommended? Does not the Mita system of ethics lay stress on the importance of obeying all lawful authority (*vide* secs. 11, 24 and 25)? Dr. Inoue proceeds to set up another dummy, absolute independence, and to demolish it to his own satisfaction. "Where in actual life," he asks, "is absolute independence possible?" From Mr. Fukuzawa's writings scores of passages could be quoted which would all give the answer "nowhere." Dr. Inoue next proceeds to argue that the Mita system of ethics is Rousseauism dished up afresh. We confess that we fail to see the resemblance. Mr. Fukuzawa is far too shrewd a man not to see that the doctrine of the equality of all men as it was understood in France at the time of the Revolution, even if proclaimed here, which as yet it has not been, would make no headway. The fault we have to find with Dr. Inoue's attack on the Mita ethics is that it entirely fails to represent them in their true light. The system is of course, imperfect and intended to fill a gap. But it is quite untrue to say that there is anything ignoble or demoralising in it. It is quite unfair to say that it is an ignominious "Self" that Mr. Fukuzawa exalts to the throne in his new kingdom. We have strong suspicions that Dr. Inoue's chief grudge against Mr. Fukuzawa is connected with what Dr. Inoue would call the pro-foreign bias of the Mita Sage. This stalwart apostle of western methods and western thought is an eyesore to men of conservative instincts like Dr. Inoue. Dr. Inoue holds Mr. Fukuzawa responsible for prevailing money-worship. We ourselves, after very careful scrutiny, have come to the conclusion that there is very little money-worship anywhere in Japan. If money-worship consists of spending money almost as fast as it is made, if not a little faster, as Count Matsukata has lately told us is the custom with the majority of the Japanese, then the nation is composed of money-worshippers. Most sensible people will see that Mr. Fukuzawa's views on the value of money are those of advanced western nations and that the premium put on poverty by Dr. Inoue is but the echo of a past state of thought that is in a fair way of being eradicated from the mind of the nation.

The chief objection brought against the Mita system of ethics by Christian writers has already been partly answered. But another objection demands consideration. A very shrewd writer in the *Koye* a short time ago maintained that human nature can not be considered noble if what Mr. Fukuzawa writes about it is true. Mr. Fuzukawa is a materialist, says this writer. "From the point of view of materialism there is very little difference between human beings and ordinary animals. Whence then comes the reason for man's self-esteem? Is not his life utterly insignificant? Dust he is and to dust he shall return. What is there in him that is worthy of honour? The view of human nature adopted by Mr. Fukuzawa ill accords with the elevation of self-esteem into a basis of morality. If the immortality of the soul be denied, man ceases to occupy a prominent place in the Universe. The Christian can appreciate all Mr. Fukuzawa says about self-esteem, because his view of the origin and of the destination of man ennobles human nature. But in the absence of Christian belief self-esteem is meaningless and ineffective as a motive power. Mr. Fukuzawa has adopted the conclusion to which Christians have come, namely, that human nature is noble and worthy of high honour, but he denies the premises on which that conclusion rests. Hence his system of morality is illogical and can never effect much good." This is certainly a very powerful argument and an argument that to a certain extent is irrefutable. As was pointed out in these columns some time ago, Mr. Fukuzawa's system of moral philosophy reveals serious inconsistencies. But the question is, do not the two views of human nature given by Mr. Fukuzawa represent the true condition of man? Is not his existence here regarded from one point of view utterly insignificant, while differently regarded it assumes great importance? Can it be truthfully said that the importance attached to life by the majority of people even in so called Christian countries to-day is dependent on belief in the immortality of the soul? We think that if a census of opinion could be taken on this point, the answer would be an emphatic, no. Men value life for what it yields of happiness, and invariably wish it to end when all hope of happiness is gone. Most of us are thoroughly convinced of the fact that the world can get on without us; that it is only those who depend on our work or our counsel that will really miss us. If we think it important to lengthen out our lives as much as possible, it is because we realise our responsibilities in one or other of life's many relationships to persons dependent on us. The importance of man on account of his high destiny or his divine origin may be said to be an exploded theory, that served a good purpose when man knew less about the universe and its laws than he does now. Now that we have discovered other planets and have pictured to ourselves the millions of beings that have inhabited or may in the future inhabit those distant regions, the old notion that the countless trillions of personal units that have appeared on this planet will have their separate individual existence perpetuated to all time, though it did good service in firing the imagination of a Dante or a Milton, is regarded by us as more serious but not more true than what Gulliver has written about Brobdignag, Laputa, and other places. Yet the fact remains, on which Mr. Fukuzawa lays stress, that man's life is, in all civilised countries, considered important. The argument of the defenders of religion, that you can have no satisfactory morality without religion, then falls to the ground; for while belief in a supernatural religion is daily on the wane, there is not a single community of any importance in the world but acknowledges the necessity of morality and possesses it own special standard.

Utilitarianism as a system of philosophy may be unintelligible to the masses, but Mr. Fukuzawa's adaptation of the leading principles of this system may be understood even by a man who has enjoyed few educational advantages. Of what does and what does not conduce to the welfare of society most people are very fair judges. What stamp of man and what stamp of woman Japan does need to possess in the Twentieth Century, when her competition with Western nations will yearly become keener? This is the question which the compilers of the *Shûshin Yôryô* have sought to answer. They have no doubt left many things unsaid and in our opinion have said some things that need not have been said. Among the latter insistence on independence of spirit, a quality which seems to us already developed to excess in most young men, must be included. But on the whole they are to be congratulated for having turned the discussion of ethics away from barren theories about abstract standards and centred it on practical life. They have appealed to common-sense and will not appeal in vain. As for their being any authority for moral teaching beyond that which the consensus of an ever changing opinion gives to it, the notion is antiquated in the extreme and has been dismissed by the Mita moralists as unworthy of a moment's consideration. The Mita, system is founded on the bed rock of bare fact and hence has a stability not possessed by the aerial structures that pose as its rivals. Mr. Fukuzawa knows well what are the conscientions feelings of his fellow-country-men. To these he has appealed, and in doing so has adopted the course which moral reformers of all times and all countries have followed with success.

AMERICAN NOTES.

According to United States Assayer Braden, the copper taken from the mine of Montana last year, was worth no less than $40,000,000. That is the largest amount of that metal ever produced in any State in a single year, and it takes no account of the revenue from other mineral resources.

The Methodist General Conference at Chicago on May 25 made the following appointments:—Chicago, Bishop Merrill; Philadelphia, Bishop Foss; Washington, Bishop Hurst; Denver, Bishop Warren; Minneapolis, Bishop Joyce: New York, Bishop Andrews; Boston, Bishop Mallilieu; Zurich, Bishop Vincent; Cincinnati, Bishop Fowler; Shanghai, Bishop Moore; San Francisco or Los Angeles, Bishop Hamilton; Portland, Or., Bishop Cranston; Detroit, Bishop Ninde; Chattanooga, Bishop Goodsell; St. Louis, Bishop Fitzgerald; Topeka, Bishop McCabe.

The agents of the Toyo Kisen Kaisha have given notice that the *Hongkong Maru*, which was due at Honolulu on May 29th, would be the last of that line of steamers that will carry

Digitized by Google Original from CORNELL UNIVERSITY

freight and passengers between Honolulu and the Pacific Coast, on account of the provisions of the Hawaiian bill extending the U.S. navigation laws to the islands. The *Doric*, due on June 12th, was the last of the Occidental and Oriental steamers which will carry freight or passengers between Honolulu and San Francisco.

By a decision of the Hawaiian Supreme Court the Queen's museum in Honolulu, founded by the late Queen Emma, loses practically all its endowment. The case turned on the meaning of issue. Queen Emma's father, an Englishman, left her a large fortune, with the condition that if she died without issue the estate should revert to his nephew in England. Queen Emma had a son, but the child died years before the mother. Yet this was regarded as fulfilling the provisions of the will. Now the Court holds that the testator meant living issue at the time of Queen Emma's death and it awards the estate to the English heir.

Miss Catherine Stauffer Clark, daughter of Mr. William A. Clark, the multi-millionaire of Montana, was married to Dr. L. R. Mouris at St. Thomas, New York, on May 28th. It was an expensive wedding for the bride's father, as the following figures show :—

	Yen.
Senator Clark's wedding gift.....	85,000
Trousseau	15,000
Wedding decorations and church fees...	6,000
Caterer's and engraver's charges.....	5,000
Honeymoon yacht for four months.....	10,000
Bride's gift to her attendants	150
Total cost	121,150

The cost of operating Columbia University, New York, from June, 1900, to June, 1901, will exceed $1,000,000. The trustees of the university at their last meeting appropriated $946,837 for prospective educational and administrative purposes during the coming year, $111,181.80 for interest on bonds and other indebtedness of the corporation, and $52,245.25 for the payment of interest, taxes and other charges on other property of the university. Other small additional appropriations were made, and it is estimated that about $1,200,000 will be used by the university during the next academic year. This sum is considerably larger than has ever been required before, and it is feared that the usual annual deficit may become exaggerated.

Price, McCormick & Co., one of the largest brokerage houses in New York, failed on May 24, with liabilities estimated at $13,000,000. The firm is a member of the Stock, Cotton and Produce Exchanges and of the Chicago Stock Exchange, and has branch offices in about thirty cities throughout the United States. The failure is ascribed to the fact that the firm was "long of cotton" in the face of a fast falling market. The firm is composed of Messrs. Theodore H. Price, William G. McCormick, R. G. M. Stewart-Wortley and Walter W. Price, with George Crocker of San Francisco a special partner on an investment of $500,000. Mr. McCormick is of the well-known Chicago family of agricultural implement fame, and Mr. Stewart-Wortley is a son-in-law of Rear Admiral Schley. The firm was organized on January 2, 1897. Of the partners, Mr. Crocker is now in Europe, and Mr. Stewart-Wortley is on his way back from Europe.

The following message from Honolulu, bearing date of May 13, appears in American papers :—The Parkhurst campaign against the Japanese procurers came to a sudden termination yesterday. In a test case made against one of sixteen who had been arrested, Justice Frear, sitting as an examining magistrate, decided that the evidence did not bring the defendant with the statute invoked. All the defendants were then discharged, and sixteen warrants in similar cases which had not yet been served were recalled. Theodore Richards, who was at the head of the movement, sought to have a large number of Japanese men who control the business of prostitution among the Japanese women declared vagrants and deported under a Hawaiian treaty with Japan authorizing deportation on conviction of vagrancy. The evidence adduced showed a species of slavery to exist, the women being slaves of this class of men. But Justice Frear held that it failed to show vagrancy. Much fear is entertained that violence may be done to some of the witnesses who appeared against the defendants.

The statue of General Grant, presented by the Grand Army of the Republic to the nation, was unveiled in the great rotunda of the Capitol at Washington, on May 19, and elaborate ceremonies commemorative of the event were held in the Hall of Representatives in the presence of a vast concourse of people, including the widow, daughter, and descendants of the hero of Appomattox, hundreds of his comrades in arms, the officers and committee of the Grand Army of the Republic, and many distinguished persons in military, political and social circles. The statue of the pre-eminent chief of the Union forces in the civil war represents the contributions of thousands of his comrades of the Grand Army of the Republic, none of whom was allowed to subscribe more than 15 cents, and is the result of a movement started shortly after General Grant's death, in July, 1885. It is the work of Mr. Franklin Simmons, an American sculptor. Of marble, of heroic size, it stands on a granite pedestal emblazoned with a bronze seal of the Grand Army of the Republic, representing the grim old hero in the full uniform of a general, equipped for the field with top boots and gauntlets, his cloak over his arm and his right hand resting on the hilt of his sword.

NEWS OF THE WEEK.

Information from Hongkong says that during the second week of June new cases of pest numbered 81 and deaths 75. The total number of cases from January were 457, and of deaths 389.

A fire broke out on Wednesday afternoon shortly after three o'clock at the residence of Mr. A. L. Bagnall, 45B Bluff. Part of the upper floor was damaged, and the roof suffered slightly. The dropping of an alcohol lamp was the cause of the fire.

The Russian flagship *Rurik* arrived at Yokohama on Tuesday morning, and exchanged the usual salutes. She is under the command of Captain Haupt, and has a displacement of 13,500 tons, with 48 guns and 18 knots speed. She had on board the new Minister to Japan, M. Iswolsky, who was met by Baron Rosen and the staff of the Russian Legation.

The American soldier costs his country no less than $1,502 a year. Great Britain, which has the smallest Army of all the great European Powers, expends, roughly, £65 a year on each of her soldiers. Austria, with an Army of over a million men, expends £45 a year for each soldier. Germany and France are equal, with an individual outlay of £43. Italy with the second smallest Army, spend £38 a year on each soldier; and the cost of the Russian soldier is estimated at £37.

It is only a few years since the Government railway workshops at Kobe put together the first locomotives built in Japan, and now comes news that the Tetsudo Sharyo Kaisha, of Atsuta, Owari, a private company, having set up a completely equipped shop, have turned out their first locomotive. The order is for three locomotives, and was given by the Tokushima Railway Company. The engine in its trials answered all expectations. It was built from the designs of Mr. J. McDonald, M. I. Mech. E., who also supplied all the working drawings.

The work of piercing the Simplon Tunnel, which was begun in the autumn of 1898, has proceeded uninterruptedly, and very satisfactory progress has been made, according to Mr. Consul Armstrong, in his report on Lombardy. At the end of 1899 the work done amounted to 1,748 yards on the south and 2,523 yards on the north side, making a total of 4,271 yards, which is 1,208 in excess of what the contractors had engaged to do in the time. The length of the tunnel will be 12 miles, 463 yards. No unforeseen difficulties have been encountered so far, and now it is very unlikely that any such should be met with. The system of ventilating the workings appears to be as perfect as could be desired.

The French fleet is to be provided with a new quick-firing gun, and an order has been given to the Ruelle Works, Charente, for the supply of 100 to the fleet before the end of the year. The gun, says the *Navy League Journal*, is of 6.3in. calibre, throws a projectile of 114lb., has a muzzle velocity of 2,952ft.-secs., and can be fired five times per minute. The projectile will pierce steel armour-plate 12.6in. in thickness. It is claimed that the English 6in. gun is much inferior to this, the comparative figures showing the British naval gun as of 6in., projectile 100lb., muzzle velocity 2,800ft.-secs.

The demand for kerosene is rapidly increasing. Government statistics show that in the 1st year of *Meiji* the import amounted to only 7,236 *yen*, but by the 20th year the figure had risen to 1,871,428, *yen*, and by the 30th year to 7,667,350 *yen*. At present the annual import does not fall short of 10 millions of *yen*. Comparative figures for the past three years are as follows :—1897, 7,552,880 *yen*; 1898, 7,667,350; 1899, 6,331,036. The import from Russia does not exceed 22 per cent of that from America, the figures for 1898 being, 1,133,807 *yen* and 5,910,774 *yen* respectively. In view of the increasing demand the *Nippon* urges that kerosene enterprises in Japan should be encouraged to the utmost.

The Imperial Geographical Society of Russia has just received a written report from M. Kosloff, the leader of the expedition which was dispatched across Central Asia to explore the Great Desert of Gobi or Shamo, in Eastern Turkestan and Mongolia. From east to west, this desert extends 1,500 miles, with a breadth from north to south varying from 500 to 700 miles. This practically unknown region lying between Andijan, the terminus for the present of the Central Asian Railway, and Peking is destined to become the sphere of Russian railway activity in the course of time. During the expedition M. Kosloff and his followers were obliged to traverse regions in which the winter temperature varied from 38° of cold to 17° of heat, Reaumur. Several hitherto unknown lakes have been discovered, and the members of the survey were the first Europeans to explore many districts. Foxes, wolves, and hares were met with at various points.

The past twelvemonth has been a period of literary surprises in the field of fiction. At least three novels by American authors have had within a period of a few months sales unprecedented in recent years, "Richard Carvel," "David Harum," and "Janice Meredith." And now comes a new and remarkably promising aspirant to popularity, Miss Mary Johnstone's "To Have and to Hold," a historical novel dealing with the settlement of Jamestown. Within two weeks and a half the sales, it is announced, reached 111,000 copies, and it has now touched 200,000. Even "Uncle Tom's Cabin" can not show such figures, for it took two months to reach a sale of 100,000 copies, and a year to reach 200,000. All these remarkable sales are believed to indicate a vast growth of recent years in the American reading public. At no time has so tempting a field been presented to the successful novelist.

The *Mainichi* publishes a report of the Finance Department with regard to the foreign trade of Japan for the past five years :—Below are the comparative figures :—

Merchandise.	1900.	1899.
Exports.....	79,846,861	75,285,932
Imports.....	141,758,172	73,292,549
Excess in imports	61,911,311	—
Specie.		
Exports.....	28,770,751	11,176,846
Imports.....	6,796,453	12,761,598
Excess of imports	—	11,584,752
Excess of exports.....	21,974,298	—

The export trade for this year shows an increase of only 4½ millions, *yen* or 6 per cent., in comparison with last year, whereas the import trade has nearly doubled, and in place of an excess of about 2 millions in exports last year, there is this year an excess of over 62 millions in imports. As to specie, the excess of exports exceeded 22 millions.

Digitized by Google Original from CORNELL UNIVERSITY

The future diminution of the exodus of gold depends chiefly, if not entirely, upon the revival of trade in raw silk, silk piece-goods and cotton fabrics.

The Gentlemen's Single Handicap Final was played off on the Tennis Ground, Kobe, on Tuesday afternoon, the result being as follows:—E. Buxton Forman (owes 40) beat S. Millward (owes 15) by 3 sets to 1, the sets being (6—3) (6—3) (5—7) (6—4).

Three Prussian officers have made a quick trip from Berlin to Prague in a balloon. They left at 2'clock in the afternoon, and came down at 5 o'clock the same afternoon, having risen to an altitude of 10,000 feet during a part of the journey. The distance between the two cities is covered by an express train in seven hours.

In the 30th year of *Meiji* the Formosa Government Office issued Opium Regulations by which the trade was virtually placed in the hands of officials. According to latest statistics, published in the *Keizai Zasshi*, the sales for last year amounted to 470,520lbs., valued at 4,219,604 *yen* approximately. Deducting various expenses, a profit of 1,120,000 *yen* was secured. At the end of February last statistics as to opium smokers and dealers, were as follows:—

Population	2,648,450
Opium smokers	140,139
Opium dealers	3,372
Percentage of smokers	5.29

The number of smokers shows an increase of 3,820 as compared with the previous month. That there are still many secret smokers, however, is beyond question.

Dr. W. S. Chaplin, formerly of the Imperial University, Tokyo, and now President of the Washington University of St. Louis, Mo., announces that on May 29, Messrs. Samuel S. Cupples and Robert S. Brookings transferred stock valued at $5,000,000 to the University, which will make it one of the best endowed educational institutions in the world. It already has an endowment of $2,000,000, and $2,000,000 more is in prospect now that something big has been done in this line. The benefactors are multi-millionaires who have built up their vast fortunes in wholesale business in St. Louis. Both started in moderate circumstances and rose to wealth through their own exertions. The stock transferred consists of 30,000 shares in the Cupples station, the largest private shipping station in the world. Through it passes most of the wholesale business of St. Louis, and centred about the station are the principal houses of the city, which occupy six blocks of the property belonging to the terminal association.

The *Keizai Zasshi* has an interesting article on Japanese agriculture. It shows that investments in land are far from being profitable at present. Banking money affords a higher return; 7 per cent. at least is allowed on fixed deposits, and the depositor is entirely free from trouble and anxiety. It is only in Kazusa, Shimosa and Iwaki, where population is scanty and a *tan* of wet fields can be bought for 100 *yen*, that the land yields a substantial profit to the landlords. As to the tenants or actual cultivators, their outlays consist only of their personal labour, fertilizers, domestic animals, and a few implements for husbandry. According to modern calculations, it is estimated that from seedtime to harvest 360 cultivators are required for every 10 *tan* of land. Putting the wages of each at 30 *sen*, a sum of 108 *yen* has to be paid, while board at 10 *sen* a day absorbs 36 *yen*, the total expenses being thus 144 *yen*. In these circumstances agriculture can never be carried on with any prospect of success, and a different system is being adopted according to which cultivators are hired for the whole year at comparatively low wages, although the number needed for each ten *tan* of fields remains the same as indicated above. A stout youth can be procured at 93.80 *yen*, 50 *yen* wages and 43.80 *yen* for clothing and board, while the price of seed and fertilizers is 5.52 and 40 *yen* respectively, thus making a total of 139.32 *yen*. The farmer, under these arrangements, receives ten *koku* of rice valued at 115 *yen*, which is much less than the capital invested. The only gain he can secure is by the labour of himself and his family. Agriculture in Japan is the least encouraging of all enterprises.

The Tokyo Chamber of Commerce, says the *Shogyo*, recently passed a resolution to the effect that, as the abnormal expansion of Government enterprises has brought about a general depression in commerce, a representation should be made urging the advisability of redeeming domestic loans to the extent of 100 millions of *yen* within three years. In order to accomplish this object one of two courses is recommended, either to curtail administrative expenditures and lengthen the period of the armament expansion programme and other enterprises, or to raise a foreign loan. Our contemporary, however, condemns both. Whatever steps are taken in the former direction the Government would be unable to set aside so large an amount as 30 or 40 millions of *yen* a year.

As to raising a foreign loan of 100 millions, the difficulty may be incalculably greater. This is clearly shown by the nature of the conditions imposed upon Count Matsukata, Minister of Finance, when he endeavoured to float a loan of 30 or 40 millions on the foreign market the year before last. Another illustration is furnished by the loan raised last year. Any further attempt to secure a loan would not only be attended with signal failure, but also would lead to great damage to Japan's credit. The resolution of the Tokyo Chamber of Commerce does not, our contemporary remarks, reflect much credit on its insight into practical affairs.

P. & O. S.N. Co. S.S. *Socotra*,
Shanghai, 6th June.

Dear Sir.—I beg to report that on our passage from Moji to Shanghai at 9.40 p.m. on 5th June we experienced two severe shocks as if the ship had struck ground. Our position at the time was Lat. 32.9 N. Long. 125.7 E. (from stellar observation at 7.53 p.m.) wind N.E. force 3.4, bright moonlight night with a moderate south-easterly swell, causing ship to rise and fall slightly and roll a few degrees either way. We sounded the ship's wells immediately, but found everything normal. I deemed it imprudent to turn round and sound as it was night time and discoloured water would of course not be visible. The depth on our chart Admiralty, No. 2412 (January 97) shows 23 fathoms at that position and is 7 miles north of Shanghai patch (9 fathoms 1896). It is quite possible the shocks may have been due to an earthquake, but the sensation was similar to grounding or a heavy collision. Will you kindly submit a copy of my letter to the Harbour Master who might ask a vessel passing in the vicinity of that position in daytime to take a few casts of the lead and verify the soundings on chart? It is possible that the Shanghai patch may be of greater extent than shown on the chart.

The soundings of the ship's well continue normal and I can detect no signs of any strain in the ship.

I beg to remain, Dear Sir,
Yours faithfully,
(Signed) THOMAS H. HIDE,
Commander.

The Agent P. & O. S. N. Co., Shanghai.

The draught of the *Socotra* at the time was 19 and 20 feet.—*N. C. D. N.*

The Supreme Court of the United States has decided that the Spanish naval force at the battle of Manila was not superior to Admiral Dewey's squadron, and hence his officers and sailors only get one-half as much prize money as they otherwise would. Under the law, if a naval victory is won from an inferior force the prize money is $100 per man in the enemy's fleet, if it is a superior force $200 per man, and in order to double their prize money Admiral Dewey and his officers claim that they were fighting both the land and naval forces of Spain at Manila, which is true; but the Supreme Court holds that the land forces did not count, and therefore Dewey's officers and sailors only get $100 for every man they captured. The Admiral is entitled to 20 per cent. of the amount, and, after deducting his share, the remainder of the prize money, which in this case is about $200,000, is divided among the vessels of the fleet in proportion to their fighting strength. The commander of each vessel receives one-tenth, and the residue is distributed among the officers and sailors in proportion to their pay.

In a recent number of *Punch*, three novelists who of late have come in for a good many hard knocks from the critics are made to give their own views of their literary output. The following letters (presumably autograph) are printed for the first time:—

"The principal impression produced upon me by the perusal of my own works is a splitting headache, especially acute in the case of my poems. I have a strong suspicion, amounting at times to a conviction, that I generally have meaning if only it can be found. In my more recent works, however, this feeling is less marked.

"A subsidiary impression is amazement at the number of people who read my works and profess to understand them. "G-RGE M-R-D-TH."

"A glow of satisfaction thrills me as I gaze upon the book-shelves which contain my works. There is really some very good stuff among them. I don't profess to know what I meant when I wrote some of them, *e.g.*, the 'Jungle Book'; but plain tales of Ortheris, Mulvaney & Co., were played out, and one had to strike out a different line somehow. I confess, when I read 'The Day's Work' I have an uncomfortable misgiving that I am running to seed, which, however, is instantly dispelled when I hear the barrel-organ outside my door discoursing the classic and familiar strains of that undoubted work of genius. 'The Absent-Minded Beggar.' R-DY-RD K-PL-NG."

"When I read some of the awful rot that I have undoubtedly written, I find myself wondering if I am quite responsible for my literary actions. Can it be that I am as mad as my last creation, 'The Worshipper of the Image'?

"R-CH-RD LE G-LL-NNE."

CRICKET.

BORN IN JAPAN v. BORN ELSEWHERE.

A match between sides as above was played on Saturday afternoon. The "outlanders" went first to the wicket, and compiled 72, Duff's 19 being the highest score. In fact they were quite outclassed both in batting and bowling by the "native-born," who put together 157. P. B. Clarke took six wickets for 24 runs. Score:—

SAILING RACES.

The 21, 17 and 12 raters of the Yokohama Yacht Club turned out in good force on Saturday afternoon. The 21 raters sailed over the No. 2 course, 9 miles, for the Vice-Commodore's Cup and a second prize; the 17 raters sailed No. 6 course, 5½ miles, for the Swiss Residents' Cup and a second prize; and the small craft over course No. 9, for two prizes. A fresh north-easterly wind blew during the afternoon and proved quite enough for the smaller craft. Times were as follow:—

21 RATERS.

	Rating.	Start.	Finish.	Cor. Time.
Yugao	20	2.15.3	4.36.46	4.36.46
Vixen	19½	2.15.5	4.26.18	4.24.42
Sodeska	19½	2.13.10	4.34.20	4.32.44
Abunai.....	19½	2.15.06	4.36.30	4.34.54

Vixen took first prize and two record points, and *Sodeska* second prize and one point.

17 RATERS.

Wettinge	17	2.30.20	3.40.27	3.40.27
Daisy May	17	2.30.10	3.47.14	3.47.14
Coogee	17	2.30.05	3.47.14	3.47.14
Bonito	16½	2.30.00	3.47.11	3.45.54
Devonia	16½	2.30.02	3.48.43	3.47.26

Wettinge took first prize and two record points and *Bonito* second prize and one point.

12 RATERS.

	Start.	Finish.
Madelaine	2.45.12	3.38.15
Titania	2.45.10	3.35.40
Dora	2.45.08	3.38.47
Lorna Doone	2.45.10	3.38.13

Titania took first prize and two record points, and *Dora* second prize and one point.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

Shanghai, June 15.

Mr. Schreiner has resigned and his resignation has been accepted. Sir Alfred Milner has summoned Sir Gordon Sprigg.

Buller's casualties on the 10th and 11th were 26 killed and 126 wounded. Methuen's loss at the Rhenoster was one killed and 18 wounded. The Derbyshires on the 7th had 36 killed and 104 wounded.

News from Coomassie dated the 4th says that all are on half rations; that the ammunition suffices only for purposes of defence, and that the rebels are in great force.

Mr. Brodrick made a long statement in the House of Commons with regard to events in China. He emphasised the complete accord between the Powers, and added that arrangements had been made to supplement the force in the Yang-tsze River.

Mrs. Gladstone is dead.

After a determined resistance General Botha evacuated his position, retiring eastward.

Methuen is now at Rhenoster.

Wakkerstroom has submitted to Buller.

Shanghai, June 16.

A telegram from Ottawa says that Sir Wilfrid Laurier has introduced a bill restricting Chinese immigration, by doubling the poll-tax. With regard to Japanese immigration he said that, in view of Imperial considerations, he was unprepared to impose restrictions, but that a royal commission would be appointed to inquire into the subject of immigration.

Klerksdorp has surrendered to General Hunter.

Baden-Powell reports on the 12th that, at about 30 miles south of Rustenberg, he arrested a hundred rebels who had entered the Transvaal with 800 Boers. He is now systematically restoring order, and collecting arms and supplies. 600 Boers have surrendered, and 23 prisoners were captured.

Shanghai, June 17.

Mr. Chamberlain has telegraphed to Jamaica asking the militia to volunteer for Ashantee with the West India Regiment. The response was enthuasistic.

Baden-Powell has been appointed Lieut.-General onthe Staff.

Baden-Powell has occupied Rustemberg. He reports that the districts traversed are settling down. Over 1,000 stand of arms have been surrendered.

Heidelberg will shortly be occupied, when the Orange Colony will be completely cut off from the Transvaal.

Shanghai, June 18.

The Boers attacked Ficksburg on the 14th, but were repulsed by the British artillery.

Buller is disbanding the Natal Volunteers.

Shanghai, June 19.

The Seventh Bengal Infantry have been ordered to Hongkong.

A Cabinet has been formed in the Cape Colony, Sir Gordon Sprigg becoming Premier and Treasurer, and Mr. Roseiches Attorney General.

President Kruger has removed his headquarters to Alumaar near Helspruit.

Shanghai, June 19.

Field Marshal Roberts wires from Pretoria, under date of the 16th inst., that 800 Boers attacked a post on the Zand river on the 14th inst. but were driven off by Gen. Knox, who marched for the purpose from Kroonstad.

The casualties include Major Seymour, of the Pioneers, and two men killed; one officer and eight men wounded.

Shanghai, June 20.

A force from India has been ordered to China consisting of the following:—1st Bengal Lancers; 1st Madras Pioneers; 22nd Bombay Infantry; 24th Punjab Infantry; 1st Sihks; 7th Bengal Infantry; 1st Field Battery; and 1 Company Madras Sappers. Two of these Regiments will do garrison duty.

The French press urges the dispatch of a strong expedition to China, in consequence of the capture of Consul François.

The *New York Tribune* publishes a telegram from Washington stating that President McKinley has ordered Gen. McArthur, the Governor-General of the Philippines, to send three regiments of Regulars from Manila to Tientsin, making 5,000 men altogether.

Admiral Reamey, Commander-in-Chief of the U. S. Fleet in Asiatic Waters, has been ordered to dispatch the *Oregon* to Taku.

Shanghai, June 20.

H.M.S. *Diadem* and *Furious*, now at Portland, have been ordered to China.

Mr. St. John Brodrick, speaking in the House of Commons, said that the latest information received at the Admiralty does not confirm the news of the return of Admiral Seymour to Tientsin.

Mr. G. J. Goschen, Secretary for the Navy, has arranged that additional forces be stationed at the chief ports of the Yangtze.

Two British torpedo-boat-destroyers have captured four Chinese destroyers in the Yalu river.

Shanghai, June 21.

France has ordered three men-of-war to China and also two battalions of marines and two batteries of artillery. Germany sends two battalions of marines.

A large force of Free-Staters is concentrating in front of Rundle with the intention of breaking through southward. The Transvaalers retiring before Buller are joining the Free-Staters.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

Saigon, June 15.

The French Chamber has commenced the discussion of a project of law relating to the defence of the Colonies.

Lord Roberts, after a sharp combat, dislodged the Boer Army from an entrenched position 15 miles east of Pretoria.

According to English news 30,000 Chinese soldiers will be ready to prevent the entry of foreign detachments into Peking.

Saigon, June 16.

The Senate has adopted the project of law for a colonial army, with modifications of little importance.

The Chamber of Deputies has voted the Government's project of law relating to the defence of the colonies. The measure opens a credit of 60 millions of francs.

It is telegraphed from Tientsin that the European soldiers and marines, being obliged to repair the railway before them as they proceed, have not yet arrived at Peking.

Saigon, June 17.

The European detachments, being obliged to repair the railway, have not yet arrived in Peking. English journals say that many Chinese converts and servants of Europeans were massacred on Thursday last by the Boers. The eastern quarter of Peking, in which are situated the Catholic Cathedral and the European residences, has been burned. Three churches and numerous foreign residences have also been burned in Tientsin.

Saigon, June 18.

The Chamber of Deputies has adopted the project of law for the defence of the Colonies.

The King of Sweden has left Paris. The President of the Republic bade him farewell at the station.

The Prince de Joinville has died.

The Legations in Peking have been attacked. The attack was repulsed.

Saigon, June 19.

France is sending additional vessels to China.

Intelligence from Tientsin says that the Legations in Peking have been captured.

The international squadron has bombarded and captured the Taku Forts.

Saigon, June 21.

On the demand of M. Delcassé, Minister of Foreign Affairs, the Chinese Minister in Paris, Mr. Yü K'heng, has telegraphed to the Viceroy of Yunnan that his, Mr. Yü's, life will answer for that of the French held prisoners at Yunnan-sen.

The capture of the Legations in Peking is not confirmed.

It was the Taku Forts that commenced to bombard the foreign men-of-war. The marines, by a magnificent bayonet-charge, killed or wounded the majority of the Chinese garrison. The losses of the allies were slight.

All the Powers are sending re-inforcements to China.

(FROM OUR CORRESPONDENT.)

Shanghai, June 15.

News from Peking, dated the 13th, says that Christian refugees are flocking into the City.

The attitude of the Government towards foreigners is uncertain, but rather defiant.

The Legations, the Customs buildings, and the Cathedral are barricaded, and other buildings are placed in the charge of the Government.

A telegram from Tientsin, dated the 14th, says the Chinese troops are concentrated at Feng-tai.

There are 7,000 Russians at Tientsin.

Shanghai, June 17.

On the night of the 13th there was a Boxer uprising at Peking.

The Boxers destroyed the foreign buildings in the east of the city, the old Catholic Cathedral, the London and American Board of Missions, and the Customs mess, and massacred hundreds of native Christians and foreigners' servants.

Further rioting is feared.

Telegraphic communication with Tientsin is interrupted.

Shanghai, June 18.

The Taku Forts opened fire on the allied gunboats at one o'clock on Sunday morning.

The firing continued six hours.

The allies blew up two forts after landing and taking them by assault.

The casualties are unknown.

Digitized by Google Original from CORNELL UNIVERSITY

There is no news of the relief column.

Shanghai, June 19.

Chinese official news, received in Shanghai under date of the 17th, says that in Peking on that day the situation was very serious.

[The state of affairs in Peking on the 17th could not have been known in Shanghai on the 19th. —ED. *J.M.*]

The telegraph station at Kalgan (Kirin) has been burnt and the staff have fled to Mongolia.

(FROM THE "ASAHI SHIMBUN.")

Tientsin, June 14.

A party of Boxers entered Tientsin city last night. A Roman Catholic chapel and two houses were demolished. The Boxers numbered between 500 and 600 men.

The villa of the British Minister and some other summer houses belonging to foreigners, which are situated in the hills at a little distance from Peking, have been burnt by the Boxers.

A large number of Boxers have appeared in the vicinity of Tientsin railway station, which they declare they will burn.

The Japanese cruiser *Suma Kan* arrived at Taku on the 11th inst. Five officers and 75 blue-jackets were landed and arrived in Tientsin the following day.

Great numbers of Boxers have entered Tientsin. They passed near the Taotai's Yamên and then moved off in the direction of the country. They were apparelled like those seen elsewhere—red cap, white belt, scanty vest, and foreign-cut trousers. All carried naked swords which they swung as they walked. They moved about in parties of 20 or 30, and as they passed through the streets not a single Chinese official did anything to disperse, much less arrest, them.

Hongkong, June 14.

The British authorities are prepared to send a force of seven companies of Infantry and a company of Artillery to the north.

The battleship *Terrible* will leave Hongkong for the north in a few days.

Shanghai, June 14.

The Russian Volunteer steamer *Orel*, with 1,000 Cossacks, left Woosung on the 12th inst.

(BY SPECIAL ARRANGEMENT WITH THE "JIJI SHIMPO.")

Shanghai, June 16.

The mixed force of 1,400 men under Admiral Seymour have a strong force of Chinese regulars in front and the Boxers in rear, and are isolated. They are short of provisions, the water is bad, and they have no place to sleep. The Chinese troops are excellently armed, and are likely to prove very troublesome.

Shanghai, June 17.

The *China Gazette* has a telegram saying that Baron Heyking, the German Minister in Peking, has been assassinated by the Boxers, and the German Legation burned.

There is a report that the foreign troops have attacked the Taku forts, and that they are actually fighting with the Chinese soldiers.

It is said that 7,000 additional Russians, with 26 pieces of artillery and 800 horses, have landed at Taku and proceeded direct towards Peking.

[Note.—We consider the announcement regarding the German Minister should be received with scepticism.—ED. *J.M.*]

Chefoo, June 18.

The Chinese having sunk torpedoes at the mouth of the Peiho and taken measures to prevent the entry of foreign ships, the Russian Admiral, who was the senior naval officer present, sent an ultimatum, requiring that the torpedoes should be removed by a given hour. The Chinese having failed to reply, all the ships assembled at Taku, with the exception of the American, and began to bombard the forts at 2 a.m. on the 17th and continued the bombardment until 8 a.m. The forts replied. Firing ceased at 8 a.m.

The torpedo depot ship *Toyohashi* has proceeded direct to Taku.

It is reported that the Empress-Dowager has fled to Jehol.

Shanghai, June 18.

At a meeting of the Foreign Consuls in Shanghai, it was resolved to take measures for the protection of the place.

The Taotai has despatched a force of troops to protect the French College at Siccaivei.

Shanghai, June 18, 4.25 p.m.

At one o'clock on Sunday morning, while the allied fleet were quietly anchored, without warning, China declared war against the world by opening fire from the forts at Taku upon the gunboats inshore—the British *Algerine*; German *Iltis*; Japanese *Atago*; American *Yorktown*; Russian *Maudjour*. The first shells were harmless, but afterwards many struck the *Algerine* and *Iltis*. The Fleet opened a terrible fire, blowing the forts to pieces. The Russians troops on the land side are reported to have cooperated.

Afterwards, at daylight, the forts were occupied by strong landing parties who drove the Chinese outside at the point of the bayonet, killing hundreds as they fled northward. It is reported that the *Algerine* and *Iltis* are damaged. There are many casualties but no list is available.

These particulars were brought by the *Kagero* (Japanese torpedo-destroyer) to Chefoo.

The Messrs. Mitsui have received a cable from Chefoo that a British gunboat was sunk.

The foreign men-of-war are flying their flags half-mast, in consideration, it is conjectured, of the loss of life caused by the attack on Taku.

[A strange supposition.—ED. *J.M.*]

There is a report that a foreign man-of-war was sunk at Taku.

Shanghai, June 18.

Li Hung-chang has been ordered to proceed to Peking with all despatch.

It is not true that the *Algerine* was sunk during the attack on Taku, but she suffered very severely.

According to a London telegram published by the *China Gazette*, France is organizing a battalion for service in China by taking drafts from her men-of-war.

The rumour that the German Minister has been killed is not believed in Berlin.

England is sending two regiments from India to Hongkong.

H.M.S. *Daphne* has left Shanghai for the north.

Li Hung-chang is said to have purchased 700 stand of arms in Macao.

(TELEGRAMS PUBLISHED IN TOKYO.)

Shanghai, June 18.

At a meeting of the Foreign Consuls it was decided that the Volunteers should be organised to oppose any attack by the Chinese, and various measures were arranged for the protection of foreign life and property. It was further decided that these steps should be communicated to the commanders of men-of-war in the river, and that they should be requested to land marines in case of an emergency.

Chefoo, June 18.

At the attack on the Taku Forts, the Japanese marines seem to have stormed the Square fort, which offered the most stubborn resistance.

The Mitsui Firm has received a telegram to the effect that a part of the Taku Forts was captured by the Russian soldiers.

A telegram from London says that the British Government has decided to undertake the task of protecting life and property at all the Yangtsze parts.

It is stated in London that, until some final decision is arrived at by the Powers in conference, Germany will continue to adopt the policy of endeavouring to restore order in China.

The Boxers are behaving with extreme violence in Tientsin, wrecking churches, cutting telegraph lines, and pulling down telegraph posts.

Telegraphic communication with Pao-ting has been interrupted.

There is a report in Chinese official circles that the Empress Dowager is dead, but nothing is said about the condition of the Emperor.

Shanghai, June 18.

The casualties at the attack on the Taku Forts are said to have been:—

	Killed.	Wounded.
British	1	4
French	1	1
Germans	3	7
Russians	16	45

A Chinese torpedo-boat has been captured.

General Tung has been told off for court martial in consequence of his troops having killed Mr. Sugiyama.

The Taotai of Tientsin has fled towards Peking.

Chefoo, June 19.

A mixed force of some 1,200 men, including 360 or 370 Japanese marines, assembled at the Tong-ku railway station and attacked the Taku Forts. The Japanese troops assaulted the strongest fort on the northern side of the River, and raised the Japanese flag over it. Commander Hattori and 3 men were killed and 5 were wounded, one severely, the others slightly. The heaviest casualties, aggregating 70, were among the Russians.

Russian troops numbering 3,000, English numbering 1,000, and German numbering 1,300 were to arrive at Taku on the 18th, and to be followed by a force of Cossacks on the 19th.

The bodies of those killed in the assault of the Taku Forts and the wounded, numbering 35, were placed in the *Higo Maru*, and sent to Saseho.

[There is a good naval hospital at Saseho, and full preparations have been made to accommodate the wounded. A band of surgeons and nurses have been sent from the Red Cross Hospital in Tokyo.—ED. *J.M.*]

Hiroshima, June 19.

The troops starting for China have had a farewell entertainment, and were escorted to Ujina by enthusiastic crowds.

Shanghai, June 20.

Intelligence received from a thoroughly trustworthy source is to the effect that 10 of the Foreign Representatives have been assassinated in Peking.

[No official news of this nature has been received, and it is obvious that, if the rumour presented any appearance of credibility, the Japanese Consul at Shanghai or at Chefoo would have wired it to Tokyo. Moreover, unless the Chinese troops joined the Boxers, the Legations could scarcely be captured. We regard the report as quite untrustworthy.—ED. *J.M.*]

Li Hung-chang has been charged with the duty of effecting an amicable arrangement with the Foreign Powers.

Digitized by Google Original from CORNELL UNIVERSITY

Yuan Shi-kai, Governor of Shan-tung, has been ordered to proceed to Peking with his troops.

[Yuan Shi-kai was for many years Chinese Resident in Söul. He is an able man, and there can be no question as to the direction of his sympathies in this crisis.—ED. *J.M.*]

The Taotai of Chefoo has been made prisoner by the English.

[This seems highly improbable. There has not been any disturbance at Chefoo.—ED. *J.M.*]

A telegram received by Mr. Pritchard Morgan's office in Shanghai says that an insurrection has broken out in Szechuan and that Ching-tu has been burned.

[Ching-tu is a big city. Its destruction by fire is most improbable.—ED. *J.M.*]

A telegram received by the Mitsui firm says that the casualties at the attack on the Taku Forts were five foreign naval officers and forty men killed; and thirty-five wounded.

It is generally believed in Shanghai that a member of the Legation staff has been murdered in Peking.

M. Delcassé declares that the Governor of Yunnan has accepted full responsibility for the protection of French life and property and the peaceful prosecution of trade.

The French Consul in Yunnan has been taken prisoner by the insurgents.

The Chinese Representative in London has been seized by the British Authorities.

[That is nonsense.—ED. *J.M.*]

The Chinese Representative in Paris has been seized and will be held as a hostage for the safety of the French Consul in Yunnan.

[That is nonsense.—ED. *J.M.*]

There is considerable disturbance in the neighbourhood of Newchwang. Two villages have been burned. At Chefoo all is quiet.

The English and Japanese Marines captured the forts on the north side of the Peiho; the French, the Russians, and the Germans assaulted those on the south bank.

The Taotai of Shanghai has declared to the British Consul-General that he assumes full responsibility for the security of foreign life and property.

Mr. Brodrick has stated in the Commons that no official news has been received of any attack upon the Legations, and that full authority has been given to the British Admiral to deal with the emergency.

Mr. Balfour has stated in the Commons that troops from India are under orders to garrison Hongkong.

The Tientsin merchants have held a meeting, and decided to defer all transactions for three months. They have also absolved the Insurance Companies from responsibility for the safety of goods in store.

The mixed force of foreign troops under Admiral Seymour is now entering Peking.

[This is obviously a mere invention. No such news can have been received.—ED. *J.M.*]

Chefoo, June 19.

The mixed brigade of foreign troops organized at Taku is now on its way to Tientsin.

It is alleged that a portion of the Foreign Settlement at Tientsin was burned down on the night of the 18th, but no particulars have been received.

The mixed brigade of marines under the command of Vice-Admiral Seymour is believed to have entered Peking on the evening of the 17th instant, and it is stated that all the Legations were found safe, but no certain news has been received.

The London Mission Church about a hundred miles from Tien-mun was burned by the insurgents on the night of the 14th, and all the property of the missionaries destroyed. A missionary doctor attached to the mission escaped to Tien-mun on the 17th. The Viceroy Chang has despatched a force of soldiers to the place.

Shanghai, June 20.

A telegram from Chunking says that there are no signs of any disturbance in Szechuan, but that, as trouble may occur at any moment, the British Consul has applied to the Admiral to have a man-of-war sent.

An official telegram from the Russian Admiral says that 3 Russian ships and 1 English, 1 French, 1 German, and 1 Austrian took part in the bombardment of Taku, but the Japanese and Americans were not engaged. Five Russian officers were wounded and 20 men were killed or wounded. The bombardment lasted 7 hours.

Although Li Hung-chang refused at first to proceed north so long as Prince Tuan and Kung Yi were in office, urgent representations have induced him to agree to go as far as Tientsin, where he will decide on his future course. He has set out in a Canadian Pacific steamer.

In consideration of the number of Russians among the wounded coming to Saseho, the naval authorities at that place have asked the Governor of Nagasaki to send a Russian interpreter. He has complied, sending also policemen and gendarmes who speak Russian.

(FROM THE "NORTH-CHINA DAILY NEWS.")

Chungking, June 13.

There has been a riot in Yunnanfu. The China Inland Mission is partly destroyed, and the Bible Christian Mission utterly. All the missionaries are in the yamên. There are French troops in Mêngtze. The riots are alleged to be due to opposition to French influence.

Later.

The Catholic mission in Yunnanfu is destroyed. Nothing is being done.

Tientsin, June 14, 10.5 a.m.

An imperial edict dated the 10th inst. appoints Prince Tuan head of the Tsungli Yamên.

Hongkong, June 14, 4.20 p.m.

Contingents of the Asiatic Artillery and the Hongkong Regiment are leaving for Taku to-day in the *Hinsang*.

The Fusiliers are leaving in H.M.S. *Terrible* on Saturday, Major Morris commanding.

The total strength is 970.

	1—Kt takes Kt
2—Q to R 7 mate	
	1—K takes Kt
2—Kt takes Kt, dis. mate	
	1—B takes Kt
2—Q to K 6 mate	
	1—R to Kt 3
2—Kt to B 5 mate	
	1—P to K 7
2—Kt to B 2 mate	
	1—R to B 4 ch
2—Kt takes R mate	
	1—Any other move
2—Kt to B 6 mate	

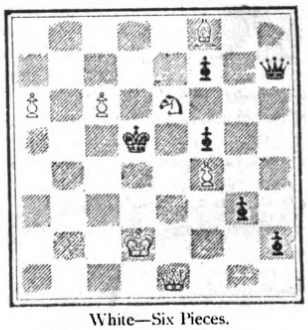
Correct solutions received from "W.H.S." and "P.A.H."

"W.H.S." inquires about his solution of Problem 475. Its receipt was acknowledged in our last issue. Owing to some accident, it failed to reach us in time for earlier publication.

PROBLEM No. 479.

By DR. TH. SCHAAD.

Black—Six Pieces.



White—Six Pieces.

White mates in three moves.

CHESS PLOBLEM SOLUTION COMPETITION.

The following is the result of our problem solution competition for the prize offered by Mr. W. H. Stone. It will be seen that "East Anglia" (Mr. W. B. Mason, of Tokyo) solved all the problems published in these columns during the year. The prize—a handsome silver cigarette case—has been presented to the winner.

GAME 600.

THE AUSTRALIAN OPENING.

Appended is another game played recently at this "debut" in the Old World. It is taken from the February number of the *British Chess Magazine* and the winner has been for several years the champion of the City of London Chess Club. The annotator, Mr. R. Teichmann, like Mr. Jas. Mason, condemns P to K 4, but proof is better than assertion, and our answer is that the new defence nearly always wins!

Digitized by Google Original from CORNELL UNIVERSITY

Played in the tournament at the City of London Chess Club.

(THE CHARLICK COUNTER GAMBIT.)

White—Mr. Curnock.	Black—Mr. Lawrence.
1—P to Q 4	1—P to Q 4
2—P to Q B 4	2—P to K 4!

This counter gambit is not good and should lead to a lost game.

3—P takes K P

3—P to K 3 gives White at least an even game, e.g., 3—P takes B P; 4—B takes P, P takes P; 5—P takes P, and the isolated Pawn is no weakness.

3—P to Q 5

4—P to Q R 3

A good move. White may also play P to K4 with advantage. P to K 3 is not good on account of B to Kt5 (ch), 5—B to Q2, P takes P, &c.

4—Kt to Q B 3

5—Kt to K B 3 5—P to K B 3

Black gives up the Pawn, but it would seem that B to K Kt5, in order to recover the Pawn, might have been played; if then 5. B to K Kt 5; 6. P to K 3, Kt takes P; 7. P takes P, B takes Kt; 8. P takes B, Q takes P with advantage; and if 6. B to B4, Kt to K2, followed by Kt to Kt 4.

6—P takes P	6—Kt takes P
7—P to K 3	7—B to K Kt5
8—B to K 2	8—B to Q 3

Black must either submit to the exchange of Queens, or lose a second Pawn. He chooses the latter alternative, and fortune favours his venture; but it is manifest that his attacking chances do not in any way compensate for the loss of two Pawns.

9—Kt takes P	9—B to Q 2
10—Kt to Q B 3	10—Castles
11—P to Q Kt4	

White's first mistake. He had a good development, and should simply have castled, after which it seems difficult to see how Black could have attacked with any prospect of success.

11—P to Q R 4

12—P to B 5	12—P takes P
13—P takes B	13—P takes Kt
14—P take P	14—Q takes P
15—Q to Kt 3 (ch	

A bad blunder. 15—Castles would still have left him with a very good game, since Black could not have saved his Pawn at Q B 6 in the long run.

15—K to R

16—Q takes Q B P	16—Kt to K 5
17—Q to B 2	17—Kt takes B P
18—R to B	

White seems to have overlooked at his 14th move that he could not play now 18—Castles on account of the rather amusing finish. 18—Kt takes Kt!: 19—Q takes Q, Kt takes B, mate.

18—Kt to Kt 5

19—R takes R (ch)	19—R takes R
20—Q to Q B 5	20—Q to Q
21—B takes Kt	

Here Kt takes Kt, P takes Kt; 22—B takes Kt, B takes B; 23—B to Kt 2 seems to have given fair chances of drawing, as Black could not have played the strong move Q to B 3.

21—B takes B

22—B to Kt 2	22—Q to R 5 (ch)
23—P to Kt 3	23—Q to B 3
24—K to Q 2	14—Kt takes Kt
25—B takes Kt	25—Q to B 7 (ch)
26—K to Q 3	26—Q to K 7 (ch)
27—K to K 4	27—Q to Kt 7 (ch)
28—K to Q 3	28—Q to Q 7
29—K to K 4	29—Q to B 6 (ch)
30—K to Q 3	30—B to B4
31—K to B 3	31—R to B

Black won.

GAME 601.

A REMARKABLE GAME.

In Pillsbury's recent exhibition of blindfold play against twenty opponents, his game with S. W. Bampton is a magnificent specimen of masterful Chess, and, Emil Kemeny says, "will go on record as one of the finest games played without sight of board or men."

BOARD NO. 1.

Rup Lopez.

White—Pillsbury.		Black—Bampton.	
WHITE.	BLACK.	WHIEE.	BLACK.
1 P K4	P K4	22 RxPch	Kt(B2) R3(e)
2 Kt KB3	Kt QB3	23 QxQch	RxQ
3 B Kt5	Kt B3	24 B K5	K Kt2

16 R K3	P KKt3	37 R B2ch	K Kt4
17 Q R4	R to K3(c)	38 B Q5	P B3
18 R K R3	P K R4	39 R Kt sq ch	Kt Kt5
19 KtxK BP(d)	Kt B4	40 B B3	R K6
20 Q Kt5	Kt B2	41 BxKt	BxB
21 QxKt P	QxKt	42 R(B2) Kt2	Resigns.

Notes by Emil Kemeny, in The Ledger, Philadelphia.

(a) The usual play is B takes Kt, followed by P takes P. The text move leads to more lively continuations, bnt involves the sacrifice of a Pawn.

(b) Brilliantly played. The sacrifice of the Q P strengthens the attack. White has the Kt to Q 5 and Kt takes Q B P continuation in view.

(c) P to K Kt 4 could not well be played. White answers B takes Kt, followed by B takes P ch or Q to K 6 according to Black's P takes Q or R takes reply.

(d) Another brilliant move, and quite deep, too. Black can not capture the Kt with Q or R, for White ultimately wins the Kt and the exchange.

(e) This enables White to continue Q takes Q ch; B K 5 and P to K Kt 4, etc., eventually winning the exchange. Better, perhaps, was Kt (B 4) to R 3.

(f) Which wins a Rook and White comes out the exchange ahead. Black can not well move his Kt from B4, for B takes R ch, and R takes Kt would follow.

(g) R to B4 would have been answered with K to Kt4, Black retaining the exchange.

(h) Guards the Kt takes B P mate.

(i) A neat trap. If White captures the Rook then Kt takes B P mate follows. White answers cleverly R (Kt sq). Black can not reply Kt takes B P mate and R takes R ch, for White captures the Kt with check.

THE PARIS TOURNAMENT.

The great International Tournament of 1900 began in Paris on Wednesday, May 16. Eight countries are represented: America—Pillsbury, Showalter, Marshall; Austria—Marco, Schlechter; Cuba—Sterling; France—Janowski, Didier, Rosen; Germany—Lasker, Mieses; Great Britain—Burn, Mortimer, Mason; Hungary—Brody, Maroczy; Russia—Tschigorin. This list composes the greatest exponent of Chess in the world. Three masters are conspicuous by their absence: The veteran Steinitz, who has played in every tournament of any importance, for many years; the renowned amateur, Tarrasch, one of the most profound and scientific players in the world, and the brilliant Blackburne, who has been for so long a time champion of England. Apropos of the great Englishman, it is noticeable that in the recent tourney of resident English players, Mr. Blackburne stood sixth in the list of thirteen. Reichelm, in *The Times*, Philadelphia, calls attention to this fact, and says: "Mr. Blackburne's low position is another evidence that he does not do well in a prolonged struggle, altho in single games he has downed such men as Lasker, Pillsbury, and Tarrasch. The reason for this irregularity is that players like those mentioned have a more thorough mastery of Chess-development in all its branches, whereas, Mr. Blackburne shows only in positions where a combination is perceptible. In situations of a dead calm, Lasker and Pillsbury will outwit him. In combinations he is almost a Morphy." These words of the witty Philadelphian should be taken *cum grano salis*. We believe that Mr. Blackburne has as thorough a knowledge of development as any man living, but he is an old man, and those who "outwit" him are in the flush and vigour of youth. Probably Mr. Blackburne's special weakness in tournament play is his predilection for combinations leading to brilliant continuations; while these other players rely chiefly upon a conservative, slow, pawn-winning game.

"THE ANTIQUITY OF CHESS.

A writer in *The Evening Post*, New York, finds a "curious notice on the game of Chess" in the Babylonian Talmud, compiled about the year 484 A.D. In it there is a report of discussions which took place as far back as 227 A.D. The question referred to is that concerning marriage contracts, and especially on the right of a wife to be free from all household work and "to sit in a chair." In the Talmud it is said she might play with little pups or at "Nadrshir." The writer of the article says that the word "nadrshir" is evidently a corrupt reading for Ardeshir and indicates a game in which a King plays the foremost part, and adds: "Rashi, the great commentator on the Talmud, a rabbi living at Troyes in central France, who died in 1102, and whose comment on this subject we may place about the year 1090, leaves no doubt on the question. He says *ad locum*, 'Nadrshir is what we call *escaques*,' the Old-French form of *échecs*, the German *Schach*, far *Shah*."

TEA.

The settlements in Kobe up to the evening of the 19th were 52,566 piculs, and 5,666 piculs were in stock; the figures for the corresponding date of 1899 being 61,840 and 11,323 respectively. For Yokohama the returns up to the evening of the 21st were:—Settlements 100,887 piculs; stock 3,307 piculs. Last year the figures up to the same date were: Settlements, 123,569 piculs; stock 7,527 piculs. The principal buyers have been Smith, Baker and Co. with 17,556 piculs; Hunt & Co. 12,314 piculs; Hellyer & Co. 11,507 piculs; and G. H. Macey & Co. 11,047 piculs. From the comparative figures given it will be seen that buying has been on a small scale. Prices are fully maintained, and the quality of the teas is worse. Leaf is poorer, and cup has gone off. The second crop as seen up to date is very poor in cup and leaf, and mixed with inferior leaf. With a few days' rain, which is much wanted, it may improve. The New York market is stagnant, many buyers there wanting to see samples as they are in the Yokohama godowns before operating.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. What is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 30TH, 1900.

MARRIAGE.

On Tuesday, June 26th, at the residence of the bride, Birmingham, Huntington County, Pennsylvania, U.S.A., GERTRUDE GRIER to FRD. TAYLOR GAUSE, of Yokohama, Japan.

DEATH.

On June 15th at Jesmond, Newcastle-on-Tyne, MRS. MARGARET KIRBY, aged 83 years.

SUMMARY OF NEWS.

THE Japan Red Cross Society sent fourteen nurses and doctors to Saseho, on the 21st inst.

GOVERNOR ASADA left Yokohama on Thursday, and Governor Sufu took over the seals the same day.

IN South Africa the war continues, various Boer commandos endeavouring to break through the British lines.

THE Formosan Trading Company of Yokohama, which has been principally engaged in the tea trade, has decided to dissolve.

A BASEBALL match between students of the Keiogijuku and the Yokohama school was played on Wednesday afternoon, Tokyo winning by 18 against 11.

THE mediation of Baron Shibusawa and Mr. Otani in the Water Works Loan case was a failure, says the *Kobe Herald*, and the Kobe City Sanjikai and the Water Works Committee will hold a conference to discuss what steps are to be taken in the future.

THE Chinese maintain that two foreigners, a man and a woman, lost their lives when the British Legation buildings at the Western Hills were burnt by the Boxers.

AN extraordinary number of earthquakes, more or less severe, have been felt in Yokohama the last week. There were at least seven well-defined shocks on Tuesday and Wednesday.

ACCORDING to the *Naval and Military Record*, H.R.H. Prince Abhakara of Siam has gone back to Siam with £27,000, paid by the British Admiralty for a submerged torpedo tube he recently invented.

THE baseball game on Saturday was very amusing, "The Boxers" defeating "The Allies" easily. It is rumoured in diplomatic circles that "The Allies" were handicapped by the inclusion of too many green-hands.

H.M.S. *Daphne*, which arrived at Shanghai on the 22nd inst., brought 400 Lee Mitford carbines and 60,000 rounds of ammunition for the local Volunteer force from Hongkong. Some of the weapons are to be distributed to the Police.

THE Queen has intimated to the Emperor William that she will confer the Order of the Garter upon the German Crown Prince when he pays his promised visit to England, as Her Majesty wishes herself to invest her great-grandson with the ribbon and insignia.

COLOSSAL sums have recently been collected in England by the Lord Mayor of London. On May 12, three Mansion House Funds stood at these figures:—Ottawa Fire Relief Fund, £46,000; Indian Famine Relief Fund, £229,600; South African War Fund, £902,400.

THE *Morning Post* learns from Ladysmith of an interesting incident which took place the other day. Both battalions of the Devons, who were camped within a mile of one another, paraded and were photographed together. This is their first meeting since the regiment was raised two hundred years ago.

THE post of first Governor-General to the Commonwealth of Australia has been offered to the new Duke of Argyll. It is, however, regarded as very improbable that he will accept, as the Princess Louise has objections to taking up residence in the Antipodes, and the Duke's own relatives are urging him to remain in England.

ON June 14th Honolulu was formally admitted into the American Union as a Territory. The American Consulate, which has been in existence for sixty years, closed on that date for ever. The records of the office, some of which have a very high historical value, will be sent to the State Department at Washington.

AFFAIRS in Northern China are still greatly disturbed and the most astonishing stories are reaching Japan anent the situation at Tientsin, Peking, and the adjacent country. The whereabouts of the Foreign Ministers is still unknown, but it is believed that they, as well as Admiral Seymour, are near Tientsin, but surrounded by rebels.

THE cricket match, Ladies v. Gentlemen, at Kobe ended in a win for the ladies, who made 27 and 189, against 50 and 68 by the inferior sex. Mrs. Lightfoot made the highest score, 14. The Ladies' bowling was very good, Mrs. Crombie being the best hand in this branch of the game. The gentlemen played under the usual handicap.

A BIG fire occurred at Nishi Kubiki-gori, Yechigo, Niigata prefecture, on the morning of the 29th inst.: 98 houses were destroyed, 7 badly damaged, one storehouse destroyed and one partly damaged, and 7 telegraph posts damaged or destroyed.

THE *Daily Express* publishes the following from Vienna:—A correspondent at Warsaw sends by mail an account of the rebellion of peasants in the Russian provinces of Kief, Pondolein and Charkov. The rising is supposed to have been organized by Nihilists. Martial law was proclaimed and large bodies of troops quickly suppressed the insurgents, killing many hundreds.

THE *Kobe Herald* reports that two cases of plague were reported from Osaka on Tuesday. The daughter of a dustman was taken ill on the 20th and died on the 23rd. The son of an ice dealer was affected on the 19th and died on Sunday evening. Both were certified as genuine cases of plague. Another case of plague is reported from Sakai near Osaka (on the Nankai Railway).

AT a meeting of the Committee of the International Association of Yokohama held on Saturday last it was unanimously resolved that a list should be circulated inviting members of the association to support a movement having for its object a farewell dinner to Mr. Asada Yasunori, Governor of Kanagawa Ken, who has recently been appointed to the Foreign Office.

THE Japanese battleship *Asahi* was surveyed in dock at Portsmouth on 14th May, when it was found that her keel had been buckled in for about 40ft. on the starboard and 20ft. on the port side under the fore barbette when she went ashore at Southsea Beach. It was also ascertained that the force of grounding was sufficient to bend the keel plates and to break the frames inside the ship. The damage was local and had no effect upon the structure of the vessel.

A BIG fire broke out on the 27th inst. at 2 p.m. at Nibancho, Takaoka, Toyama Prefecture. Altogether 5,000 houses were burnt, and 70 streets, with police station, post office, schools, town hall, tax office, two Shinto shrines, two newspaper offices, the Stock Exchange, &c., destroyed. The secretary of the Prefecture and the police are attending to relief works. The insurance is estimated at about 600,000 *yen*. About nine-tenths of the city was destroyed.

A MEETING of Chinese residents of Yokohama was held on Friday evening with the object of preparing a petition to the Japanese Government to use its best endeavours to replace the Emperor on the throne, remove the capital to the southward, and secure the inauguration of reforms. The promoters were Cantonese, and the meeting received no countenance from the Chinese officials. Kobe and Nagasaki co-operated in the movement, and Marquis Yamagata received the memorial.

THE British Ambassador filed on June 2nd in the American State Department a request from his Government for the extradition to England of Julian Biddulph Arnold, son of Sir Edwin Arnold, under arrest in San Francisco on a charge of embezzlement in London. The department also received a transcript of the testimony taken at the hearing in the case before the United States Commissioner in San Francisco, who committed Arnold for extradition. It is contended in behalf of the accused man that the alleged offence is not extraditable, but both embezzlement and breach of trust are made extraditable offences in the British-American treaty.

DISTURBED CHINA.

THE TRUE CAUSES OF THE TROUBLE IN CHINA.

Saturday, June 23.

"Miyaki Setsurei" is always interesting when he undertakes to discuss international politics, though very often his ideas tend to startle rather than to convince. He is both entertaining and sensational in his comments about the present complications in China. We entirely agree with him that an uprising of the Chinese nation against foreigners is not at all to be wondered at. The fashion at present is to abuse the Chinese, and to talk of treating them as though they had been guilty of some unpardonable crime against the civilized world. But when we sit down quietly and review the events of the past three or four years, we can not fail to remember that what we have all chiefly wondered at was China's long-suffering, and what we have all habitually sneered at was her apparent pusillanimity and want of patriotism. She has been undergoing a kind of vivisection. Her territories have been seized on ridiculously flimsy pretexts; her ports have been "rented" virtually by force; concessions for building railways and working mines have been wrested from her whether she would or not; she has been divided up into spheres of influence by Western States just as though she were a jelly or a cheese; she has been compelled to open her doors wide to foreigners of all complexions, while foreign nations, on their side, close their doors in the face of her people for reasons which are as insulting as the fact is irksome. We have watched her suffering all this tamely, and timidly, and we have flouted her for cowardice and ridiculed her for helplessness. If, then, her people have at length been goaded to desperation; have at length risen to assert their manhood and their patriotism, have we whose custom is to ridicule their submissiveness any right now to censure their wrath?

We understand that these thoughts were passing through the mind of "Miyaki Setsurei" when he wrote his last article in the *Nippon*, and we share his sentiments. But we are puzzled to trace the chain of reasoning which leads him to conclude that Germany has stirred up the *émeute* in China, and that England's efforts have been employed in the same direction. Let it be granted that Germany is anxious to divert the tide of international strife to Far-Eastern shores and to find fresh fields for colonization. Let it also be granted that England discovers in Chinese disturbances some means of relieving the pressure on India—though what that pressure is and how it could thus be relieved we do not pretend to understand—; let it be granted that Russia's comparative unreadiness constitutes an opportunity which the two European Powers are unwilling to forfeit, and let it be granted that the successful result of the South-African war has induced a mood of ambition on England's part. Let all these things be granted, and yet we still fail to see how either England or Germany could have stirred up the Boxers and promoted the disturbances in the Middle Kingdom. In fact, the idea appears to us quite comical, and we are sorry that such suspicions should warp Mr. Miyaki's generally robust judgment. So far from having willingly contributed to create this situation, England is not unlikely to be the chief sufferer by it, and so far from Russia's unreadiness having been exploited in German or English interests, the probability is that Russia will come out at the head of the poll, with the Manchu Government under a profound obligation to her, and Li Hung-chang, her great partisan, restored to paramount influence in the administration.

RUMOURS FROM CHINA.

Monday, June 25.

Nothing could be more perplexing and less trustworthy than the rumours that reach us at present from China. The chief cause of the confusion is that the lines of telegraph are interrupted and we are thus obliged to rely on that most unreliable source of information, hearsay. The telegraph between Chefoo and Tientsin, the telegraph between Taku and Tientsin, the telegraph between Tientsin and Peking, the telegraph between Tientsin and Shan-hai-kwan, the telegraph between Newchang and Shan-hai-kwan—all seem to have been cut. This wholesale isolation of the centres of disturbance furnishes an index of the wide-spread character of the *emeute*, and leaves the public completely at the mercy of every news-monger and sensationalist who has a mind to create excitement and consternation. At this moment of writing (Saturday morning) we are confronted by a positive statement that from the 17th inst. Tientsin was invested by the insurgents; that heavy artillery was employed against it, thus showing that the troops had thrown in their lot with the insurgents; that the place was finally captured; that 150 foreigners were killed, and that the settlement was reduced to ashes. The 17th instant was the day of the attack on the Taku Forts. When that news reached us, we saw very plainly, and pointed out, that Tientsin's position had become terribly perilous, and that "an irruption of Chinese soldiers and Boxers might have taken place into the Concession simultaneously with the commencement of hostilities at Taku." That danger must have been patent to every one, and thus, whether the apprehension was realized or not, it was pretty certain that rumours of an attack upon Tientsin would be circulated. We can scarcely doubt that there has been some attack, but should we be justified in assuming that its results have been truly stated? Let us see how the facts stand. The telegram announcing the investment of Tientsin is said to have been sent by Admiral Dewa, and to have reached Chefoo on the 22nd. Therefore it was despatched from Taku on the 20th. Thus, at the moment of sending it, Admiral Dewa is supposed to have known that Tientsin had been invested for three days. Now Tientsin is only 5 hours from Taku by river, and the Forts being in the hands of the allies, there is nothing to prevent gunboats and torpedo-destroyers from steaming a great ~~part of the~~ way to Tientsin. The river is not navigable by vessels of deep draught but a gunboat or torpedo-destroyer would have no difficulty in getting up. Now in the Japanese Squadron at Taku there are four gun-boats and three torpedo-destroyers—the gun-boats *Atago* (622 tons), the *Chinto*, *Chimpen* and *Chinchiu* (each 447 tons, namely, the alphabetical gun-boats built on the Tyne to China's order precisely for the purpose of navigating inland waters, and captured from China by Japan), and the torpedo-destroyers *Kagero*, *Usugumo* and *Shiranui*. In the British Squadron there are at least one gun-boat and two torpedo-destroyers, and in the German squadron, one gun-boat. We omit the Russian gun-boats as they seem to have been seriously damaged in the bombardment on the 17th. Thus there were at Taku on the 20th, six gun-boats and five torpedo-destroyers all capable of running up to Tientsin in half a day. Can we suppose that with such a force available the naval commanders left Tientsin unaided for three days after its investment? Apart from these considerations we have an official telegram dated Chefoo 21st, saying that Admiral Seymour had returned to Tientsin. Previous telegrams said that he had entered Peking on Sunday, the 16th. The statements are not irreconcilable. It is evident that Peking is not the place for Admiral Seymour. He would not remain there one moment longer than was absolutely necessary, but would hasten back at once to Tientsin and thence to Taku, leaving the mixed brigade of marines in charge of the Senior military officer. If he set out from Peking on the morning of the 17th, he must have reached Tientsin on the 18th, and if the fact of his return were conveyed from Taku on the 19th, it would have been known in Chefoo on the 21st. That is all consistent enough, but how are we to reconcile it with the report that Tientsin was invested from the 17th instant? In order to return to Tientsin from Peking Admiral Seymour would have had to pass through some four miles of Chinese city and through the lines of the investing force. It is not likely that he would have attempted anything of the kind if Tientsin were beseiged by the insurgents and the Imperial forces. Rumour appears to be playing with us. The most reasonable assumption seems to be that Tientsin has been bombarded by the Chinese troops, but that they have not made any attempt to carry it by assault, and that the casualties are by no means as great as rumour would have us believe. We do not think that the Settlement has been burned down, or that there has been any wholesale destruction of foreign life. A calamity of that magnitude would certainly have been telegraphed to London and would have been communicated thence to other places. We do not suggest, however, that the bombardment has been altogether ineffectual. The United States Consulate appears to have been burned, and some other buildings may have shared the same fate. But there is no reason to doubt that the foreign troops are still guarding the Settlement; a fact incompatible with the report that 500, or even 150, foreigners had been killed. A telegram received yesterday in Tokyo said that a column of 3,000 men had left Taku to attempt the relief of Tientsin, and there is every reason to hope that the expedition will be successful. Meanwhile, it is somewhat puzzling to understand what has become of the Russian troops concerning whose landing at Taku so much has been said. At least four thousand of them must have landed, and more than one half ~~of that number ought~~ to be in Tientsin. They have artillery, of course, ~~and one~~ imagines that they should be able to silence the Chinese guns, which, considering the nature of the country about Tientsin, must be almost as much exposed as the houses they are bombarding. Nothing need he said about the brutality of using artillery against a town inhabited by a purely commercial community. The Chinese do not take any account of such things, and really considering how often their own towns have been bombarded by foreign ships, we can not greatly blame their want of humanity.

M. DELCASSÉ AND THE CHINESE REPRESENTATIVES IN PARIS.

Tuesday, June 26.

Careful examination of the telegram published on Friday last with reference to action taken by the French Minister of Foreign Affairs suggests that the expanded interpretation given in these columns was incorrect. The original telegram ran thus:—*Sur demande Delcassé Ministre Chine Paris tele-*

Digitized by Google Original from CORNELL UNIVERSITY

graphia Vice Roi Yunnan sa vie répondrait celle Français prisonniers Yunnan-sen. This is somewhat vague, but it is obviously open to the construction that "his life" means the life of the Viceroy of Yunnan, not the life of the Chinese Representative in Paris. That construction is plainly more consistent with what might have been expected of M. Delcassé. It would have been natural that he should threaten to exact the severest reparation from the Viceroy of Yunnan in the event of the lives of French citizens being lost through his, the Viceroy's, failure to protect them as required by treaty. We can not question that detailed information will confirm this subsequent interpretation of the telegram.

General Gaselee, who is to command the British Forces in Northern China, served with the 93rd Highlanders in the Umbeyla campaign of 1863 (Medal with Clasp). Served as Staff Officer to the Director of Transports on the Highlands throughout the Abyssinian campaign in 1868, and was present at the capture of Magdala (mentioned in despatches, Medal). Served with the Hazara Field Force in 1868. Served with the 4th Punjaub Infantry at the surprise of the Bezotee village of Gara on the 25th Feb. 1869 (mentioned in despatches, and thanked by the Governor General). Served with the 4th Punjaub Infantry throughout the Jowaki Afridi expedition of 1877-78 (mentioned in despatches, Clasp). Served throughout the Afghan war of 1878-80 in the Quarter Master General's Department, and was present at the affair at Shahjui and in the engagements at Ahmed Kheyl and Oorzoo near Ghuzni (mentioned in despatches); accompanied Sir Frederick Roberts in the march to Candahar, and was present at the reconnaissance on 31st August and at the battle of Candahar, (mentioned in despatches, Brevet of Major, Medal with two Clasps, and Bronze Decoration). Served with the Zhob Valley Expedition in 1884 (mentioned in despatches). Served with the Hazara Expedition in 1891 in command of the 4th Sikh Infantry (mentioned in despatches, C.B. and Clasp); with the Isazai Expedition in 1892; and with the Waziristan Field Force under Sir William Lockhart in 1894-95 in command of the 5th Goorkhas, and during the latter part of the operations in command of the divisional troops (mentioned in despatches, Clasp).

An Edict.

The following edict, bearing the date 8th June, is translated by the *Shanghai Mercury*:—

1.—As the Boxers have created trouble not long ago near the vicinity of Peking which caused the people some excitement we have repeatedly issued orders to investigate. Recently, crowds of loafers armed with knives, etc., are gathering and loafing here and there in the streets and markets in the city of Peking and their appearances are uncertain as to whereabouts. If this is not put a stop to, the condition of affairs will be worse. The General Commanding the Gendarmerie, the Governor of Peking, and the Police Censors of the Five Cities of the Capital are responsible for such policing duties, and they ought not to allow these evil characters to assemble, infest and incite the people near the Imperial Court buildings. Now, we hereby order the Prince and Minister the Heir-apparent's father, (Prince Tuan) in command of the Peking Field Force, etc., to go round with the force to keep a strict watch day and night and to at once arrest and punish those ruffians who are seen to create disturbances. The General Commanding the Gendarmerie, Governor of Peking, and the Police Censors of the Five Cities of the Capital are also ordered to do the same. If met with those who are suspicious in movements, armed in person and inciting the people deserve to be captured and punished without the least leniency in order to suppress the rising, uproot the rebellion, and restore peace in the country.

2.—Appointing several Hanlins to be Special Grand Examiners and Assistants to the Provinces of Kwangtung, Kwangsi, and Fukien in the celebration of the Emperor's thirtieth birthday this year.

11th June.

Ching Feng is hereby appointed Junior Vice-President of the Board of Punishments and Na Tung is promoted to fill his post as Senior Vice-President of the Mongolian Superintendency.

Forces Engaged in the Attempt to Relieve Tientsin.

Wednesday, June 27.

News has been published in Tokyo which estimates that the allied forces garrisoning Tientsin and Taku or engaged in the attempt to relieve the former place, up to the 23rd instant, aggregated over 5,000 men; namely, 3,000 Russians, 1,000 British, 1,000 Germans, 360 Japanese and an unknown number of French. These figures are difficult to reconcile with those given by the telegrams received at the French Legation in Tokyo, which obviously contains the most trustworthy intelligence hitherto furnished. According to the French telegrams, the detachment by which the first attempt to relieve the place was made, numbered only 500, and another essay by two thousand men was to be made the same evening. If the allies had nearly six thousand men on shore, of whom one thousand are shut up in Tientsin and one thousand told off to garrison the Taku Forts, how did it happen that the duty of attempting to relieve Tientsin was assigned to only 500 men in the first instance? We do not believe that such a force had been landed at the time when the last accounts were despatched. Rumour had probably been more than usually liberal when it represented Russia as landing 3,000 men at first and 5,000 afterwards. Russia has considerable military strength in the Far East, but she has only a small number of transports, and it is highly improbable that she managed to land a brigade of several thousands at Taku within a few days from the first alarm. The only trustworthy accounts hitherto received suggest to us that, on learning the state of affairs in Tientsin, the commanding officers at Taku immediately took steps to organise a strong relieving column. They would have chosen the river route had the railway been quite unavailable. But since the railway could be utilized for at least half the distance, they decided to forward the troops by train and the provisions and munitions by water. Only a small quantity of rolling stock was at hand, and the massing of the troops for active operations could not be effected with much rapidity. But, so soon as the van was assembled, it moved forward at once, and naturally, on getting within range of Tientsin, it lost not a moment in engaging the town's assailants, so as to interrupt their bombardment of the Settlement. That was probably the attack reported by the French Legation telegrams. It may have been followed by similar efforts to divert the besiegers' attention rather than to break through them, and such efforts would naturally be regarded by outsiders as failures, though they really fulfilled their immediate purpose, pending the massing of an efficient column of assault. We know that the first instalment of Japanese troops, fully a thousand strong, reached Taku on the 23rd, and the Hongkong troops must have got there about the same time. Hence the relieving column received an accession of fifteen or sixteen hundred troops by the 25th, to say nothing of the blue-jackets and marines landed by the *Terrible*, the *Chitose*, and the *Yashima* (12,517 tons), which must have been at Taku by the evening of the 25th, and would have been able to undertake the task of garrisoning the Forts, thus freeing the latter's defenders for service at the front. We entertain very little doubt that at this time of writing the assailants of Tientsin have been dispersed and the foreign community is safe.

Since the above was in type, news comes that communication with Tientsin was restored on the 23rd.

The Operations at Taku.

The nature of the operations at Taku on the 17th of June and of the incidents preceding the fight, is made clear by despatches published in the *Official Gazette* from Captain Nagamine and Rear-Admiral Dewa. It appears that on the 15th instant a military council was convened by the senior naval officer, Vice-Admiral Hildebrand, on board the first-class cruiser *Rossia*. The facts which the council had to consider were that the insurgents, numbering about 2,000, showed a disposition to attack the Taku Forts, to destroy the railway, and to lay torpedoes in the Peiho. In view of these dangers, it was resolved that steps must be taken to guard the railway station, and to preserve communications with Tientsin. In carrying out this resolution, the allies determined to adopt a defensive attitude, and to refrain from assuming the offensive unless they were attacked, in which event they were to assault the forts and render them incapable of doing any mischief. It was further decided that a force of 300 Japanese marines should be landed and posted at the Tong-ku station, with orders to guard it until relieved.

On the 16th instant at 11 a.m. another council was held on board the *Rossia*. The facts before this second council were that although the Chinese Government had raised no objection to the Foreign Powers cooperating to preserve good order and secure life and property, and had undertaken to discharge its own duties in those respects, there was now every appearance that the Chinese troops were laying torpedoes to block the River and were advancing to destroy the railway in conjunction with the Boxers. The naval commanders found themselves obliged in consequence to adopt measures for preserving communications with the men already landed from the ships and to prevent Tientsin from being isolated. Therefore, they determined that the Governor of Chili must be called on to hand over the Taku Forts, and, if he declined to do so, they must be assaulted. An intimation inthat sense was forwarded to the Governor, as well as to the officer in command of the Chinese troops, 2 o'clock a.m. on the 17th being named as the hour by which hostilities would commence in the event of the Forts not being handed over. At 3.15 on the afternoon of that day (16th) a force of 180 Russians were landed; and at 4 p.m. they were followed by 250 British and 130 Germans. By 8 p.m. the situation had become very critical, and it was evident that hostilities might commence at any moment.

At 12.50 a.m. the Forts opened fire on the *Atago*, *Iltis*, *Algerine*, *Monocacy*, *Koreetz*, *Bobr*, *Silatch* and other foreign craft lying inside the bar, and a fierce cannonade at once commenced, lasting without intermission until 4.35 a.m., when a terrible explosion occurred, one of the Chinese magazines having been blown up. The Japanese torpedo-destroyer *Kagero* had meanwhile been steaming round and round the Chinese cruiser *Hai-yuen*, but, as the latter showed no sign of taking part in the hostilities, the *Kagero* was despatched at 5.20 a.m., to ascertain how matters were proceeding

Digitized by Google Original from CORNELL UNIVERSITY

on shore. Owing, however, to the low state of the tide, she could not cross the bar. Fifteen minutes later, namely, at 5.45 a.m., the Japanese flag was seen waving over one of the Forts on the northern bank of the River.

The report of operations on shore shows that at daybreak the forces for the assault of the Forts were marshalled, 200 Russians forming the van, 380 British and Germans the main body, and 300 Japanese the reserve force in the rear. The advance was commenced in echelon of columns, but, owing to the hot fire opened by the Chinese, a command was issued to take skirmishing order. Captain Hattori then perceived that the Russians in the van were making little progress owing to the heavy fire kept up by the Chinese, and that the advance of the British and the Germans was impeded by heavy ground. He himself was marching with two field-pieces at the head of his men, but, observing a short road of access to the Fort, he doubled his marines at each side of the guns and pushed on rapidly, leaving the rest of the allies behind. The Chinese troops still kept up a brisk fire, and Captain Hattori, seeing that a bayonet charge was the only resource, gave the necessary orders. He fell dead himself just as he reached the parapet, but Lieutenant Shiraishi led the men. Their charge was successful, and the rest of the troops followed immediately. Captain Nagamine pays a tribute to the gallant conduct of Lieut. Shiraishi, and adds that the Japanese received numerous congratulations. Their casualties were Captain Hattori and 2 men killed, 2 mortally wounded, 1 severely wounded, and 3 slightly wounded. The Russians had 2 officers and 16 men killed, and 2 officers and 37 men wounded. The casualties among the British and Germans are not clearly known.

With regard to the bombardment of the Forts, it appears that the *Atago* did not take part, being heavily laden with ammunition and provisions for the allies. The *Iltis* was struck by 8 shells. Her commander lost a leg, and her casualties were 1 officer and 6 men killed and 9 wounded. The *Silatch* was struck by 4 shells, one below the water-mark. She had 8 men killed and 2 officers and 46 men wounded. The *Léon* was struck once and set on fire. She had 1 man killed and 46 wounded. The *Korectz* received 5 shells and took fire. She had 5 killed and 21 wounded. The *Bobr* had 1 wounded, and the *Algerine*, though struck by 1 shell, had no casualties.

JAPAN MOBILIZES.

Thursday, June 28.

The Japanese Government is understood to have ordered the mobilization of one Division; which means, approximately, twenty thousand of all arms. The troops, it is said, will not embark immediately, but will hold themselves in readiness to do so at an hour's notice. We rejoice that Japan has taken this action. The occasion is eminently one calling for vigorous measures on her part, not only because China has to be saved from another era of anarchy and retrogression, but also because the issue of the present crisis, unless it is very carefully controlled, may affect the Chinese empire's integrity, a result which Japan, in common with several of the Western Powers, is anxious to avert.

The Fifth Division which has been ordered to mobilize for active service is under the command of Lieut. General Baron Yamaguchi, an officer who gained considerable distinction in the war of 1894-5. The old uncertainty evidently exists as to the strength of a Division. Some of our readers probably remember how numerous were the discussions that took place on this subject during the war with China. Doubtless the uncertainty is chiefly caused by the difference between the peace footing and the war footing of a military unit. In 1894, the Japanese army consisted of six Divisions and the Guards. Its peace strength was 65,000, in round numbers, and its war strength, 240,000. Hence a Division on a peace footing consisted of some 9,000 of all arms, and on a war footing the total became 35,000, approximately. In this latter figure were included the second reserves, who would not be called out except in case of great emergency. Roughly speaking, a Division on a war footing for foreign service aggregated 20,000 men of all ranks and arms, and this was about the ultimate strength of the Divisions sent to Manchuria, Liao-tung, and Shantung. There has not been any noteworthy change in the composition of a Division since that time, but the strength of the Army has been raised to 12 Divisions and the Guards. Thus the order issued on the 26th instant to the Fifth Division may be interpreted to mean that 20,000 troops will be mobilised, and that, if sent abroad, ten thousand will embark at once, the remainder following. Japan has already sent 3,000, so that, in the event of a campaign, she will take the field with 13,000 in her fighting line and 10,000 in her second line. Seventeen transports had been engaged before the decision to mobilise was taken, and nineteen more have now been chartered—thirteen from the Nippon Yusen Kaisha and six from the Osaka Shosen Kaisha,—so that thirty-six steamers will be available immediately.

Money for the purposes of this expedition, should its despatch become necessary, will be taken from the reserve of 50 million *yen* held by the Treasury for purposes of naval maintenance, famine relief, and educational assistance. Of that reserve, 15 millions are in specie, now lying in the Treasury; 15 millions are in foreign securities, quickly realizable, and 20 millions are in home securities. The silver still lying in the Treasury vaults will be available for payments in China, and as the provisions and munitions required by the forces can be furnished by Japan herself, there is no reason to anticipate any considerable exodus of money.

There has evidently been a great deal of impatience among the Japanese because the Government did not more quickly adopt vigorous measures with regard to the Chinese complication, and we ourselves have repeatedly urged the advisability of Japan's utilizing her strength and her position to save a very perilous situation. But we have always been fully sensible of a fact which, however, it was not our province to emphasize, namely, that many considerations indicated the wisdom of extreme circumspection on Japan's part. Any indication of precipitancy, any display of a disposition to utilize her preponderating force without the fullest regard to cooperative equilibrium, would assuredly have exposed her to injurious suspicions. Her reserve in the face of strong incentives must be taken as conclusive proof that she attaches paramount importance to preserving unity of action among the Powers, and that she does not wish to differentiate herself in any way. Her statesmen have given many evidences of prudent reticence and far-seeing self-restraint. It will certainly be agreed that their conduct in the present instance has strengthened the record.

The *N.-C. Daily News* learns that on the 14th instant, a telegram came to the railway officials at Tangku from Lutai, ordering engines and trucks to be sent to take 7,000 men and 60 guns to Tientsin. The captain of the German gunboat *Iltis* refused to allow them to go; on which word came back that the rolling stock was not wanted, as the troops would march. These troops, who are under General Nieh, are probably among those who have been bombarding Tientsin.

The *N.-C. Daily News* of the 23rd inst. publishes the following telegrams:—

H.E. LI HUNG-CHANG ON THE CRISIS.

Hongkong, 22nd June.

Mr. A. Cunningham specially interviewed H.E. Li Hung-chang yesterday at Canton on the subject of the crisis.

H.E. Li said he was ordered to Peking by the Empress Dowager to suppress the Boxers and make peace with the Powers. He believed the Boxers were only a fanatical anti-Christian rabble, and he thought the native converts and even the missionaries were to be blamed, the Catholics being very troublesome. He did not think the Boxers had any political motives and thinks the Empress Dowager has been entirely misled and misinformed as to the true state of affairs. It was not her intention that present events should take place. He was officially informed that the Taku forts fired because the Admirals presented an ultimatum demanding the dispersal of the soldiers and the fleet. He had not made preparations for war, because he has not been advised that war has been declared. He thinks it the duty of all Viceroys to protect life and property, foreign and native. His remedy would be to behead the leaders of the Boxers, send the people to their homes, and make peace with the Powers. He is confident he can do the last. He expects no serious rebellion in the Two Kuang during his absence, and is holding the officials responsible for the preservation of order.

The following telegram, dated Manila, 21st June, has been kindly handed to us:—

"One hundred and forty marines for the *Nashville* have sailed in the *Solace*, Waller commanding."

"Colonel Liseum with the Ninth Regiment will probably leave next week."

PRINCE TUAN IN SUPREME COMMAND.

Tientsin, via Chefoo, 21st June.—Just received news from friends who have come from Peking that Prince Tuan holds supreme power in the Capital. He has divided the Iho Chuan into eight corps or Banners after the Manchu style. The Emperor, Empress Dowager, Jung Lu, and several others of moderate policy are completely at Prince Tuan's mercy, so-called Imperial edicts since 18th instant having been issued on his sole initiative. A large body of the Hushêng corps (Manchus, under Prince Tuan) now guard the Palace gates, preventing ingress and egress of those not under Prince Tuan. Hence rumours of Emperor's and Empress Dowager's death.

THE CRISIS IN CHINA.

Friday, June 29.

The telegram published elsewhere, which reached Tokyo through the French Legation, removes all doubt as to the relief of Tientsin. Little room for doubt existed, indeed, in the face of the iterated messages received through other sources, but the facts that intelligence from Tientsin seemed slow in coming and that no accounts were forwarded about the state of the Settlement and of the Foreign community, were difficult to reconcile with the idea of effectual relief. We can not but think, however, that this is essentially a case of no news being good news. If Tientsin had been the scene of catastrophes anything like those announced again and again by rumour; if the whole Settlement had been burned down; if even half of the Settlement had been burned down; if 500 foreigners had been killed; if even 150 foreigners had been killed, it is scarcely conceivable that some details would not have been telegraphed so soon as ever the allied forces entered the place. Many persons probably found it difficult to imagine that nothing terrible had occurred, and they construed the absence of sensational intelligence as an indication that access to the Settlement had not yet been obtained. We have endeavoured from the first to point out the extreme improbability of the stories circulated as to wholesale in-

Digitized by Google Original from CORNELL UNIVERSITY

cendiarism and massacre, and it is our conviction that no shocking records are now published because there is nothing shocking to record. Very likely before these words are in type the horrors depicted by rumour will be proved mythical.

But the French telegram contains one startling piece of intelligence, namely, that the Foreign Ministers, returning from Peking —fugitives from Peking would be a correct expression—are guarded by foreign troops and surrounded by Chinese at a point some 20 kilometres from Tientsin. If that be the case, several inferences suggest themselves. The first is that Admiral Seymour's force reached Peking and that it has been serving as escort for the Foreign Ministers who decided to quit the capital. The second is that the Chinese troops have either been unable or unwilling to protect the Ministers effectually *en route*; and the third is that the Chinese Government has been reduced to a condition of administrative impotence. Apparently the route to Peking will have to be opened again at the point of the bayonet, as was done 37 years ago.

The *Nichi Nichi Shimbun* is prominent among those that question the truth of the relief of Tientsin. Our contemporary bases its scepticism on the fact that a telegram sent by Major-General Fukushima from Chefoo on the evening of the 25th said that communication with Tientsin was not yet restored, since which time no new intelligence has been received from that officer. Further, our contemporary alleges that in military circles there is great doubt about the possibility of Tientsin's having been so quickly relieved. We do not share these doubts. Before the news of the alleged relief reached Japan, we had indicated the 23rd instant as the day when communication would probably be restored, and we find no difficulty whatever in crediting the feat. The railway was evidently available for fully one half of the journey, and the resistance offered by the Boxers and their allies was not likely to be of such a nature as to seriously impede foreign troops advancing with the object of saving their countrymen and countrywomen from massacre.

With regard to Admiral Seymour's force and the heavy casualties he is said to have suffered—upwards of 60 killed and 200 wounded—, there seems to have been as much exaggeration as there was in the case of Tientsin. The working theory suggesting itself about Admiral Seymour is that he succeeded in reaching Peking without any very protracted delay, and that he had made his way back to within a few miles of Tientsin, escorting the Foreign Ministers and the Peking foreign community, when the relief of Tientsin was effected. One fact has to be carefully noted in estimating the situation. It is that to reach a point 12 or 13 miles from Tientsin *en route* from Peking, and to effect an entry into Tientsin, are two very different things. The last stage of the journey—the entering of Tientsin—would be incomparably the more difficult part of the task, for it would entail a march of some four miles through the middle of the Chinese town—not the walled city, but the huge congeries of habitations lying along both banks of the Peiho to the north of Tientsin. Admiral Seymour might have had strength to make his way to the neighbourhood of Peking, but when it came to safely escorting the Foreign Representatives and a number of women and children through four miles of crowded streets where the insurgents were collected in force, he probably deemed his force insufficient, and concluded that the only plan was to select the best position available, and watch for a favourable opportunity to enter Tientsin. Such an opportunity would be created so soon as communications were restored from the south by a relieving force, and that was doubtless the conjuncture for which Admiral Seymour waited. We can not imagine that having failed to reach Peking he remained "hung up" between that city and Tientsin for nearly three weeks. But it is very easy to imagine that having reached Peking his return journey to Tientsin, when acting as escort for a large number of foreign ladies and gentlemen, may have been interrupted owing to the investment and bombardment of Tientsin by the insurgents. If our theory be correct, it becomes evident either that the troops sent by the Chinese Government to guard the Ministers were virtually helpless, or that they declined to be helpful.

The Fighting at Taku on the 17th.

From a diagram forwarded by Rear-Admiral Dewa and published in the *Official Gazette*, we learn something of the positions occupied by the foreign gun-boats and torpedo-destroyers engaged in the attack on the Forts. Roughly speaking, the Peiho River takes the form of a letter *S* between the mouth and the railway station at Tong-ku. The Forts lie on both sides of the River at the lower extremity of the letter; Taku lies on the convexity of the upper curve; and if we suppose the upper end of the *S* prolonged so as to form the commencement of another similar letter, Tong-ku is situated at the convexity of the prolongation, being thus on the opposite side from Taku. All the foreign gun-boats and torpedo-destroyers had entered the river and anchored up-stream from the Forts before the action commenced. Nearest to the Forts in the lower arm of the *S* were two British torpedo-destroyers with a British gun-boat between them. Higher up, beyond the first convexity of the *S*, were a British gun-boat and a Russian gun-boat. Then, in the curve of the upper arm of the *S*, and therefore immediately opposite Taku, four Chinese torpedo-destroyers were lying, there being also a Chinese destroyer in the dock; and finally, in the immediate neighbourhood of Tong-ku, there were a German gun-boat, a Japanese gun-boat, a French gun-boat and a Russian gun-boat, in that order counting down stream. We can not tell whether the same order was maintained after the firing commenced. Probably not: probably the gun-boats moved about during the bombardment, for below Tong-ku the river is wide enough for manœuvering. At all events, when the Forts opened fire, the order must have been as above stated, and consequently the first group of British vessels, a gun-boat and two torpedo-destroyers, were only 700 yards from the Fort on the north side of the River; the second group, a British gun-boat and a Russian gun-boat, were a little more than 1 mile from the Forts; and the third group, in the neighbourhood of Tong-ku, was 2¼ miles away. It is evident that the British gun-boat and the two torpedo-destroyers lying farthest down-stream, must have contrived to find shelter under the banks, or they could not have long survived at such a range. All the vessels were within easy range of the big guns in the Forts, and they must have suffered even more than they did had the engagement taken place during daylight.

We gather that Colonel Wogack was in command of the troops at the assault of the Forts. The question of leadership in the event of an emergency calling for united action had been discussed at a council held on board the *Centurion* on the 6th instant, and the French seinor naval officer had proposed that the command should be assumed by the Russian Colonel Wogack, as the senior military officer present, and as the one who had most experience in the Far East. Admiral Seymour expressed the opinion that each unit of the forces should act under the orders of its own own officers unless a combined landing had to be effected, in which case a single command would of course be necessary. The point does not appear to have been definitely decided at the council, but it would be taken for granted that the officer senior in rank on any occasion of united action would assume the leadership. We do not doubt that it was Colonel Wogack.

The Russians lost very heavily: they had 18 killed and 39 wounded, or 57 casualties out of a total force of 200. That is 28 per cent. It is evident that they were checked, and no wonder. The British and Germans were impeded by the mud. It is a curious fact that the very same thing happened to a party of the British troops engaged in the assault of the old Taku Forts on the last occasion of their attack. The Japanese probably knew better than any of their allies how paddy-fields ought to be negotiated. They made their rush quickly and thus escaped with comparatively slight losses—only 5 killed and 4 wounded out of a force of 300.

It is remarkable that out of the six gun-boats engaged, five—namely, three Russian, one German and one French—had 21 killed and 125 wounded, whereas the British gun-boat had no casualties. The *Allacrity*, though lying in the River, naturally took no part in the engagement.

We presume that the gunboats managed to effect a breach in the up-stream face of the northern fort. Possibly the explosion of the powder-magazine made a practicable point of entry. As to that, the Japanese despatches are silent. The southern fort does not appear to have been escaladed. The guns of the north fort were trained on it, and its garrison fled.

The list of casualties seems large at first sight, but we have to remember that a fairly resolute detachment of troops defending such a position with modern weapons ought to have been practically invincible, there being no cover whatever for troops advancing to the assault. In fact, no commanding officer would have ventured to essay the operation had the garrison consisted of any troops except Chinese. But the gunners of the Forts showed no mean skill. They managed to get 19 shells home, though they had to lay their guns during the night. That is not a bad record. Altogether the taking of the forts cost the allies 44 killed and 168 wounded.

The Chinese Residents in Japan.

We have read with much pleasure an article in the *Jiji Shimpo* of the 25th instant with reference to the six thousand Chinese subjects that reside in Japan. The *Jiji* assures them that, though this country is necessarily hostile to the insurgents whose arms are directed against the lives of foreigners in China, there is no quarrel with the Chinese nation. On the contrary, there is a feeling of pity. Therefore every Chinese subject residing in Japan may count on the full protection of the Japanese Authorities, and any Chinese that desire to take refuge here from the disturbances in their own country, will meet with a hearty welcome. Our contemporary goes even so far as to advise

Digitized by Google Original from CORNELL UNIVERSITY

that ships be sent to China to take off refugees, but it is not easy to see how such a proposal could be carried into practise.

The Chinese residents in the four ports—Yokohama, Kobe, Nagasaki and Hakodate—have addressed to Marquis Yamagata a petition urging that the Emperor be restored to power and that the capital be moved to the south. The petitioners set out by recounting briefly the course of recent events, and avowing their shame and sorrow that such excesses should have been perpetrated. They then go on to assert that the origin of the trouble is to be found in the evil influences permeating official circles, and that no valid hope of restoring peace and good order exists unless these influences be completely removed. They speak in high terms of the Emperor, describing him as a man of enlightenment and genuinely progressive impulses, and they contend that his restoration to administrative power and the removal of the capital to the south are essential to the salvation of the Chinese nation. They also allude to Russia, not by name, but under the thin disguise of the "Great Northern Power," which has already carried its aggressions into the whole Manchurian regions and now seeks to extend them still further westward. Japan is not asked by the memorialists to undertake single-handed the task of restoring the Emperor and removing the capital. What they suggest is that she should use her influence to persuade Foreign Powers of the necessity of that course, and of the advisability of applying their strength to consummate it.

The Chinese residents have also addressed a telegram to the Viceroy Chang Chi-tung. They urge him to put down the Boxers with a strong hand and to protect foreign merchants and missionaries, in the interests of China, and also in the interests of the petitioners' position in Japan, which otherwise will become intolerable.

JAPANESE PUBLIC OPINION ON THE CHINESE CRISIS.

Monday, June 25.

The Japanese press is virtually unanimous in urging that resolute action should be immediately taken by this country for the restoration of peace in China. The *Jiji Shimpo* maintains that no reason exists for reserve or hesitation. The occasion is imperative, and no Occidental Power will misconstrue Japan's action if she puts forth her strength, or suspect her of sinister motives. The *Nippon* takes virtually the same line, but is inclined to think that the crisis has been precipitated by the attack on the Taku Forts, which, it alleges, was commenced by the allies, the insurgents not having made any hostile demonstration. Such points, however, need not now be discussed. The absorbing question is the nature of the settlement that must be made. The Chinese Government is in a dilemma closely resembling that which confronted the Tokugawa Administration at the time of the Restoration. It finds itself between the Devil and the deep blue sea: fearful of opposing its own people, but threatened with the consuming wrath of Foreign Powers unless it does so. There is no warrant for supposing that the Chinese Government is in sympathy with the insurgents, or that it approves the action of its own soldiers in defying the world, but it can not control either the rebels or its own troops. The obvious inference is that it has ceased to be a government suited to the times, and that some other administrative machine must be set up. The *Jimmin* recommends immediate and vigorous action, but is much perplexed about the final issue. That the Chinese Governmental system requires to be radically amended, there can be no doubt, but can it be hoped that Foreign Powers will agree as to the form of amendment? They may work together to quell the insurrection, but when it come to exacting pledges for the future, they are pretty sure to fall out, for their interests differ. It is not to be expected that England and Russia will be found in the same camp. The *Kokumin Shimbun* takes a very similar view. It is convinced that the Chinese Government is not a party to the mad doings of its troops, but, since it can not restrain them, it must bear the responsibility. Already, however, there are several indications of serious rivalry between England and Russia. Their spheres of influence are supposed to be different, but, although England has announced her intention of guarding the Yangtze Valley, Russia is reported to have sent troops to Hankow to protect the Liu-han Railway. The two Powers will not be able to preserve unanimity in their treatment of the complicated problem which will soon present itself. The *Yomiuri's* tone is virtually identical with that of the *Jiji*, and the *Shogyo Shimpo* considers that to open a path to Peking and save the beleaguered garrisons in that place and in Tientsin is a duty imposed by heaven on Japan. Finally, the *Asahi*, while persuaded that the Chinese Government does not endorse the action of its troops, says that it has to accept the responsibility, and that complete administrative reconstruction will be necessary. A state of war practically exists now, and will doubtless be seen declared publicly, but it is when the latter step has been taken that the worst complications will ensue. The *Chuo* is chiefly concerned about the probability of a serious insurrection in the south if Li Hung-chang, Chan Chi-tung, and Liu Kun-yi have to go to Peking.

Thursday, June 28.

The *Jiji Shimpo*, the *Yomiuri*, and the *Asahi* unite in urging the Government to lose not a moment in sending a powerful military force to China. The *Jiji* is particularly emphatic. It takes the view that at any moment a terrible catastrophe may be consummated, all the foreigners being assassinated, and the women and children subjected to shocking indignities and cruelty. Japan's duty is to strain every nerve to avert such a calamity. Some people contend that to take strong measures might only exasperate the Chinese and thus precipitate the catastrophe. It is too late, in the *Jiji's* opinion, to think of such things. The *Asahi* goes further. The line recommended by it is directed towards the safeguarding of Japan's special interests. The action of the Powers has already indicated their intention of being guided by such considerations. England is left alone to preserve order in the south of China, and Russia has occupied Peh-ta-ho and Shan-hai-kwan so as to roll back the tide of insurrection from her own sphere of influence. Thus there are finger-posts to indicate the path Japan should tread. The *Asahi* refrains from being explicit, but there is no difficulty in interpreting its meaning.

JOURNALISM IN JAPAN.

In an article published in *The Forum*, Mr. Nakagawa discusses the origin and progress of journalism in Japan. He falls into a curious mistake; a mistake which leads us to doubt whether, having lost his direct touch with his country's newspapers, he may not have been obliged to rely on his memory for his facts. "The first really successful daily newspaper," he writes, "was the *Mainichi Shimbun*, issued at Yokohama in 1871, and later in Tokyo. This is now owned by Baron Miyoji Ito." Mr. Nakagawa confounds the *Mainichi Shimbun* and the *Nichi Nichi Shimbun*, a not uncommon mistake, but one which we do not expect from a Japanese. Under any circumstances the journal he has in his thoughts was not called either *Nichi Nichi* or *Mainichi* but *Nisshin Jisshi*. That is a mere matter of detail, however, whereas on another point Mr. Nakagawa's opinion invites a different kind of criticism. "Japan also has its yellow press," he says, "although the Oriental variety is not so touched with yellow as that of the Occident." If Mr. Nakagawa alludes to unscrupulous lying, we are disposed to agree with him that the yellow journals of Japan are not so degraded as those of the West. But if the nature of the matter published be in question, the palm of immorality belongs to Japan. Of course she can not show anything so hopelessly prurient and indecent as some of the Paris periodicals. But the so-called "revelations" that disfigure the columns of some Japanese newspapers, and the tales they insert, belong to a stratum even below that of ordinary yellow journalism.

DOMESTIC POLITICS.

For some days rumours have been circulated that an understanding is at length on the verge of being arrived at between Marquis Ito and the Liberals. These rumours have now become so persistent and have assumed such a form that they seem to deserve a measure of credence. Their gist is that although the Marquis can not be persuaded to accept the leadership of the Liberals as at present constituted, he realizes the importance of party cooperation in constitutional government and will consent to throw in his lot with the Liberals provided that they proceed to re-organise their party, changing its name and admitting to its ranks any element desirous of joining and desirable as associates. The Liberals have agreed and the work of re-casting is already under discussion. Baron Ito is credited with having been chiefly instrumental in bringing about this settlement. Such is the gist of the rumours. We do not vouch for their accuracy. One journal adds that Marquis Ito, while quite willing that numbers of the Progressists should join the Liberals, wishes to avoid anything like a coalition which would entail the troublesome and wearisomely familiar problem of a division of power. He wants a working party, not a party that will dissipate its energies scrambling for office.

Alfred Humes, British subject, aged 45, was arrested on Thursday afternoon by the Kagacho Police, charged with obtaining money under false pretences. He had tiffin and several glasses of whiskey at a saloon, but on the bill being presented refused to pay, saying he was a Chief-of-Police and was therefore absolved. The police were called in, and found on him the sum of two *sen* only. He was accordingly arrested. He had been engaged by some villagers near Kyoto as a teacher of English, but was dismissed. He came to Yokohama on the 14th, and since that date has visited various saloons in and around the Settlement, and has on all occasions represented himself to be a Chief-of-Police.

CONCERT IN TOKYO.

The Meiji Ongaku-Kwai gave a concert on Sunday, 24th instant, in which the programme was divided into two distinct series. Part I.—Foreign Orchestral Music. Part II.—Japanese Music. The first portion was conducted by Mr. E. H. House, and the performance showed improvement in some respects upon those given earlier in the year. As before the lighter numbers gave the best result, while No. 3 (Mendelssohn) and No. 5 (Beethoven) require more study before they can be considered perfect.

The *timbre* and blending of the different instruments were excellent, and the execution of individual performers was highly satisfactory; but in the *ensemble* there were evident signs of insufficient rehearsal of the band as a whole. Now we are quite sure that this did not arise from any laxity on the part of the conductor or from a lack of opportunity for *ensemble* practice. It must therefore have arisen from the fact that *each* and *every* performer did not regularly and punctiliously attend *each* and *every* rehearsal, or practice, when called. Now, gentlemen of the Ongaku-Kwai, we have applauded, and do applaud, your wonderful success in the domain of Western musical art. But if you think that you are so perfect that you can afford to neglect proper rehearsal, you are wofully mistaken: and with such ideas your present attainments will soon fall to the ground. Go on and prosper, gentlemen!—but do not forget that *work*, *constant* and *intelligent* work, under the guidance of a master who knows his business, is the only road to a permanent and lasting success.

The full programme was as under: we are not competent to analyse and criticise the second part of the concert. That must be left to men who are experts in that particular branch of the noble art of Music:—

PROGRAMME.

PART I.

FOREIGN ORCHESTRAL MUSIC.

1. Overture; "Le Roi d'Yvetot".....A. Adam.
2. Concert Polka; "Les Fauvettes"...N. Bousquet.
3. Dance: from "Midsummer Night's Dream...F. Mendelssohn.
4. Waltz; "Kroll's Ball Klänge".....Lumbye.
5. Turkish March.....Beethoven.

Conductor.....Mr. E. H. House.

PART II.

JAPANESE MUSIC.

6. Koto "Saigo-Zakura"...by S. Sato, and M. Uehara.
7. Itchubushi "Dojioji"...by Miyako Itchu and others.
8. Nagauta "Kanjincho"...by Matsunaga and others.
9. Koto "Inaka-mushiuri"...by S. Sato & M. Uehara.
10. Nagauta "Genroku hanamiodori" by Matsunaga and others.

JAPANESE ACTORS IN LONDON.

The art critic of the *London and China Express* is not fortunate in sharing the generally accurate knowledge possessed by that journal about Japanese matters. He tells us that a certain Mme. Sado Yacco, who is shortly to appear on the London stage in conjunction with Mr. Kawakami Otojiro, "belongs to one of the noblest families in Tokyo," and that "her action in going upon the stage largely aided in revolutionizing theatrical principles in that country, where it had been usual for feminine parts to be interpreted by men." There are some folks who evidently imagine that Japan is a seed-plot of princes, princesses, and nobles of all degrees, for never a Japanese goes abroad courting publicity without a fiction as to his or her aristocratic relations being circulated. Perhaps this is merely an outcome of the snobbism that attaches such paramount importance to questions of lineage in the West; a mood which the Japanese have learned to appreciate and exploit. But we suspect that Mr. Kawakami has been romancing just a little too freely in this instance. For the lady called "Sada Yacco" is his wife and before she had the honour of sharing his lot she had acquired some notoriety—we can not conscientiously say fame—— in the role of a Shimbashi *Geisha*. Miss Yakko was in truth a very well-known little person, pretty, accomplished, and vivacious, but as to her noble birth, it is the purest fiction; and as to her having revolutionized theatrical principles by going on the stage in Japan, we are compelled to say that she has done nothing of the kind, for the prejudice against actresses remains as rooted as ever, and, since the performances of the *Soshi* troupe, headed by Mr. Kawakami, have never been recognised as representing the stage proper in Japan, it is to be apprehended that the acting of the pretty and versatile Miss Yakko, now Mrs. Kawakami, will not exercise any sensible effect.

KOREA.

The *Nichi Nichi* publishes a telegram from Sōul saying that some apprehensions are entertained in Korea lest the example of the Boxers should find imitation there.

It is reported from Korea that the Russian ship *Vladimir Monomak* has been engaged surveying another bay, and has marked out an area of over 800 acres on shore, at the same time extending the survey to an island lying nearly three miles from the coast.

The *Yomiuri Shimbun* publishes a strange telegram to the effect that Japan has asked Korea to appoint Japanese subjects to the posts of advisers in the War Office, the Foreign Office, and the Department of Finance. The amusing point is that Russia is similarly represented as seeking to have a protégé of hers nominated adviser to the Foreign Secretary.

Mr. Sands, Adviser to the Korean Foreign Office, has become the subject of various paragraphs in Japanese papers, and many silly rumours are circulated about him. So far as we can perceive, he has merely recommended the Korean Government to avoid complications obviously threatening its independence. That is his duty. Copies of memoranda said to have been submitted by him are published, and it is pointed out that their language lacks discretion. To us it appears that if there is any want of discretion it is on the part of officials who publish documents evidently intended for confidential perusal.

Rumours continue to be circulated about the land purchased by Russia at Masampho. It is now stated that instead of paying the stipulated price for it, she declared that the money must be set off against an indemnity due from Korea in connexion with the detention of a Russian whaling vessel. Korea, exasperated by the declaration, is said to have intimated that she considered the bargain at an end. The price fixed for the land was to be 39,600 *yen*, with a yearly rental of 1,950 *yen*, and it was understood that the land was to be used as a site for a coal depot and a naval hospital. Of course we can not for a moment suppose that Russia will allow the bargain to lapse owing to any question of money, but undoubtedly the conduct attributed to her must be classed as "smart."

Korean statesmen do not appear to have yet become induced to close the An-Kwŏn episode. It is stated that the King's elder brother, Li Chai-nyŏn, who is the son of the late Tai Won-kun, and whose son Li Chung-yong is now in Japan, will be sentenced to banishment; and that Kim Yun-sik, who held the portfolio of Foreign Affairs at the time of the conspiracy to depose the Emperor in favour of the Crown Prince, is to be condemned to death. Another account avers that Li Chai-nyŏn also will be included in the death penalty, and adds that, in view of his impending fate, he has received from the Emperor a packet of poison with a recommendation to commit suicide. These men are understood to have been involved by the confessions extorted from An and Kwŏn.

According to statistics published in the *Official Gazette* the number of Japanese residing in Inchhon, Korea, at the end of last month was 4,258—2,447 males and 1,811 females, or 962 families. These figures show an increase of 42 in population, but a decrease of 4 families, in comparison with the previous month. In Sōul the respective figures were 1,088 and 893, a total of 1,979, the number of families being 546. Compared with the previous month the population had increased by 42 and the number of families by 16. In Chinnampo the figures were 381, 255 males and 125 females, comprised in 100 families. The increase in population was 16 and in families 4, compared with the figure for the previous month. Pyongyang had 88 males and 52 females, a total of 140, the number of families being 52. There were only three families more than in the previous month.

Telegrams from Korea say that the judicial officials and the Chief of Police who were concerned in the trial of the unfortunate An and Kwŏng have been already pardoned. They had been deprived of office and sentenced to transportation, it will be remembered, but now within a few days of the announcement of that punishment, they are pardoned. The Korean Government apparently deems itself strong enough, or is mad enough, to indulge in these farces.

There is a rumour that the notorious Li Il-sik, whose connexion with the murder of Kim Ok-kyun was clearly established six years ago, has been taken into favour by the Russian Chargé d'Affaires in Sōul, and is an inmate of the Russian Legation. We do not believe it.

FRACAS AT NAGOYA.

There are some serious inaccuracies in the version originally published of a collision between Methodist Christians and Japanese navvies in Nagoya. It was stated that a foreign missionary had used fire-arms, and had wounded one or two Japanese. That is incorrect. The broad facts seem to be that, as an outcome of the disturbance caused in certain circles of business by missionary endeavours to protect girls against being detained for debt in houses of ill-fame, four or five roughs were employed to proceed to the house of a Japanese pastor and intimidate him into abandoning the crusade. What happened in the early part of this interview we can not clearly discover, but it may be fairly presumed that the discussion was not of an amicable character, and was never intended to be amicable. At all events, a servant of the pastor discharged a pistol. He did not wound any one, but the use of fire-arms so exasperated the roughs that they proceeded to assault the pastor, and, when an American Missionary interfered, they laid violent hands on him also. No one seems to have sustained much injury, owing to the exertions of the police, but there is evidently a strong feeling among brothel-keepers against the reforms for which the missionaries are working. We trust that the Christians will not relax their efforts.

Digitized by Google Original from CORNELL UNIVERSITY

WAR FUNDS.

Japan possesses war funds to the amount of over 100 million *yen*, but the figure can easily be expanded to 150 million by the addition of other funds now available, asserts the *Niroku*. Below are details :—

		Yen.
Gold coin held in London	8,900,000	
Exchange funds (whether this is already spent is uncertain)	9,760,000	
Deposits in the Bank of Japan.	17,590,000	
Total (excluding Exchange funds)		26,490,000
English bonds (these may have been already sold)	1,410,000	
Chinese bonds.....	1,000,000	
War bonds	1,970,000	
4 per cent bonds.....	34,140,000	
Total		86,000,000
Capital fund for warships	30,000,000	
Reserves in connection with national calamities	10,000,000	
Capital fund for education.....	20,000,000	
Total		60,000,000
Indemnity reserve.....		12,000,000
Grand Total		147,200,000

The people of this country may entertain no anxiety.

TOKYO HARBOUR.

At a meeting of the City Improvement Committee held in the Department of Home Affairs on the 27th, it was decided that the work of constructing the Tokyo harbour should be undertaken. A slight change was made, however, in Mr. Furuichi's plan, in deference to the opinion of a naval officer. It referred to the aspect of the mouth of the advanced harbour, but did not affect the general scheme. A committee was then appointed, under the presidency of Mr. Komatsubara, Vice-Minister of Home Affairs, for the purpose of conducting further investigations. It looks as if the harbour were likely to become an accomplished fact after all these years of waiting.

MAIL MATTERS.

According to the *Official Gazette*, the mail matters dealt with at the various Post Offices in the empire during April last totalled 358,457, showing an increase of 7,668,216, or 18 per cent., as compared with the figure for the corresponding period of the previous year. Below are details :—

	April, 19 0.	Corresponding period of last year.
Letters	13,340,141	11,977,527
Post cards.....	24,926,430	21,119,988
Newspapers & magazines.	9,515,769	7,476,276
Books	732,500	549,240
Samples and specimens...	101,282	71,534
Seeds	42,358	37,545
Letters containing money.	5	7
On Government Service...	1,700,012	1,458,164
Total.....	50,358,497	42,690,281

The above table does not include figures concerning the six offices in Ogasawara island, three in the upper regions of Hokkaido, and some in Kumamoto and Kagoshima.

NOTES ON CURRENT EVENTS.

The Osaka Shosen Kaisha has received news of the burning of its office in Tientsin.

There has been a serious fire in Otaru. It broke out on the 23rd instant, and destroyed sixty-three houses.

Japan is sending a large number of ships to Taku. She had ten there, including 3 torpedo-destroyers, at the time of the bombardment, and four were *en route*. Four more have been ordered to proceed thither, namely, the *Chitose* (4,836 tons,) the *Akashi* (2,800 tons), the *Miyako* (1,800 tons), and the *Yashima* (12,517 tons).

Prince Shimazu Chiusei, of Satsuma, and Prince Tokugawa Keiki—the "last of the *Shoguns*"—have been appointed Peers of the Musk Chamber.

Japanese loan-bonds continue to fall in the London market. The five-per-cent. war bonds are now quoted at £99 0s. 5d., and the four per cent new loan at £78 10s.

The President of the Imperial University and other charitable persons in Tokyo have organised a committee for the purpose of collecting subscriptions to relieve the sufferers by famine in India.

After all, the *Higo Maru* did not bring any wounded foreigners to Saseho for treatment. She was to have done so, but during a delay caused by inclement weather at Taku, other arrangements were made.

Baron Rosen, Russian Representative, was received in audience by the Emperor on the 22nd instant to present his letters of recall, and his successor, Mr. Iswolsky, had audience on the same day to present his credentials.

It is stated that the Government has given orders for the coining of a quantity of silver dollars, in view of the demand for them that is caused by events in China. The receipt of the Chinese indemnity enabled Japan to place her currency on a gold basis, and in Chinese complications she seems likely to find a means of getting rid of her remaining stores of the white metal.

The Japanese Government is making arrangements to establish telegraphic communication with Taku *viâ* Korea. The line would be from Japan to Fusan, thence to Sôul, Wiju, Mukden and Newchwang. From Newchwang to Taku by steamer is only 16 hours, and the sea route might be chosen pending the repair of the wires between Newchwang and Shanhai-kwan.

Count Okuma's opinion about the Chinese complication seems to be that the Manchu conservatives should be driven out of office in Peking, and their places given to Li Hung-chang, Chang Chi-tung, Liu Kun-yi, Kang Yu-wei, and the leading Progressists. Apparently, if that were done, these statesmen would have to be kept in power at first by foreign bayonets.

We learn from the *Shogyo Shimpo* that the loans made by the Bank of Japan now aggregate 101 million *yen*, and that the legal limit of note-issuing power has been exceeded by six or seven hundred thousand *yen*. It has become necessary, therefore, to seek the Finance Minister's authority for a still further issue, and the impression is that the Bank will be required to pay 8 per cent. for the privilege. If that be so we presume that the notes will not find their way into the public hands at a lower rate than 10 or 11 per cent.

Russia has decided to carry her wounded to Inasa, where she has a naval hospital, instead of leaving them to be treated at the hospital in Saseho. In either case she may rely on receiving the fullest assistance from the Japanese, whether in medical aid or in nurses. We believe, however, that the Russian hospital at Inasa is a spacious and well equipped institution, and the wounded will have the advantage there of being able to communicate directly with those about them.

Tokyo residents have a special interest in Washington University, since among its professors are two gentlemen to whom the cause of education in Japan owes a large debt, Mr. J. M. Dixon and Mr. Chaplin. It will be learned, therefore, with considerable satisfaction that a magnificent gift of three million dollars worth of property has just been made to the University, the donor being Mr. Samuel Cupples and Mr. Robert S. Brookings. This benefaction makes the Washington University one of the most powerful educational institutions in the States. It is interesting to note that the property, though having a face value of three millions and an estimated value of four millions, is assessed at only $1,616,510 for purposes of taxation, and that it has been paying a tax of seventeen thousand dollars, or a little over 1 per cent. of the assessed value, and about one-half per cent. of the market value. If urban lands in Japan paid a tax of one-half per cent. of their market value, the State would receive a very substantial access of income.

Professor Mommsen and Professor Max Müller have concluded their controversy about the rights and wrongs of the Boer War. The impression left by the discussion is that there is much to be said on both sides, a fact which might have been admitted without any demonstration. Professor Mommsen says that "Jameson was a criminal of the basest kind," but he regards the Boers as heroes. Thus does the aspect of the same thing differ according to the medium through which it is viewed. Jameson struck for the privileges that free men have learned to regard as their right. He and his friends considered that in an appeal to arms lay their only hope of raising themselves from the position of political inferiority to which they were condemned by the uncivilised bigotry of the Boers. When has a protest of that kind been counted a crime of the basest kind; a protest made at the risk of the protesters' lives? Perhaps Professor Mommsen's charge against Jameson is based on the fact that the raid took place in a time of peace. The modern practice of Germany herself does not lend force to such a principle.

The following figures relating to the four most successful banks in Japan are published by a Tokyo contemporary :—

	Capital. Yen.		Deposits. Yen.
First Bank	4,874,377	.....	6,144,435
Fifteenth Bank...	18,000,000	.....	10,768,770
Yasuda Bank ...	1,000,000	.....	8,845,126
Mitsu Bishi	2,400,000	.....	7,315,713
	Loans. Yen.		Reserve. Yen.
First Bank	7,555,580	.....	718,865
Fifteenth Bank...	14,523,218	.....	811,117
Yasuda Bank ...	—	.....	520,711
Mitsu Bishi	—	.....	508,080

Hitherto the Mitsu Bishi Bank has invariably pursued the policy of declaring only a small dividend and carrying its surplus profits to the reserve fund, but it is expected to declare a dividend of 10 per cent. at its general meeting next month.

The Yasuda Bank has been singularly successful. Its deposits are now greater by 2,200,000 *yen* than they were at the corresponding period last year. From the 1st of next month it becomes a *Gômei Kaisha* instead of a *gôshi-kaisha*, the liability of the shareholders will be unlimited and the capital will be doubled.

Digitized by Google Original from CORNELL UNIVERSITY

THE EMPRESS-DOWAGER.

BITTER hostility to the EMPRESS-DOWAGER continues to be the key-note of the English journals of Shanghai. It is charged against her that all the present troubles are a direct outcome of her "new policy" and that she insisted on Prince TUAN's assuming the presidency of the Tsung-li Yamên in order to carry out that policy, although the Prince himself was most reluctant. It appears to us that this harsh estimate of her Majesty's disposition can not be reconciled with facts. No one will deny that the EMPRESS-DOWAGER has never wavered in her friendship for LI HUNG-CHANG. There was a time, and that not so many years ago, when the relations between the imperial lady and the Viceroy were constantly referred to in terms highly complimentary to her intelligence. She was then counted an advocate of progress, and LI was regarded as the active exponent of her convictions. A great many vague charges have been preferred against LI since that time, the principal and most tangible of them being that he sold his country to Russia. Those that can credit such accusations on the evidence of pure suspicion must be left to exercise their credulity. But LI remains an incontestible fact. He has not been permanently shaken by all these hostile rumours. He has steered his country through difficulties of the gravest nature. He has again and again been obliged to assume sole responsibility for the conduct of State affairs under circumstances such as would have proved fatal—if precedents may be believed—to any Chinese politician whose intelligence or morality was open to the slightest question. Yet now, in the last years of an exceptionally prolonged career, he occupies one of the highest posts within reach of a Chinese subject, and to him his country turns once again as the only possible saviour of a nearly desperate situation. LI never could have survived such vicissitudes had the EMPRESS-DOWAGER wavered in her fidelity to him. But she never did waver. She befriended him at every crisis with unfaltering staunchness. How are we to reconcile that solid fact with the theory that the EMPRESS-DOWAGER is the head and front of the anti-foreign, anti-progressive policy represented by the present insurrection? Would she not long ago have dropped LI's hand and left him to the tender mercies of his enemies, the conservatives, had not her sympathies been with his principles and his aspirations? It seems to us that there can be only one answer. Historians have never agreed to attribute to a sovereign a political creed wholly different from that uniformly professed and followed by the statesmen that have ceaselessly enjoyed the royal confidence and support. Circumstances may have proved too strong to be moulded by the EMPRESS-DOWAGER. Is it not possible that she has been their victim rather than their director?

THE CHINESE AFFAIR.

June, Tuesday, 26.

GENERAL NIEH, whose head-quarters are at Lu-tai, on the north-east of Tientsin, is the officer who commanded the Chinese troops sent to Korea in 1894, nominally to quell the insurrection in that country. He pitched his camp at Ya-shan, and was there attacked and defeated by a force of Japanese who marched against him from Sōul. That was the first military affair in the China-Japan war. NIEH with a remnant of his force effected a retreat to Pyōng-yang, where he joined the bulk of the Chinese Army, and as it was the fashion in some quarters at that time to extol the Chinese, he was much praised for running away successfully. His subsequent conduct showed that running away was his chief accomplishment, and as he practised it monotonously it ceased to be impressive. However, it has to be confessed that NIEH did as well as the majority of the Chinese commanders. We refer to his record here merely for the sake of the confirmation it lends to a theory that NIEH himself is not a party to the course adopted by a body of the troops nominally under his command. What has happened, we think, is that some of the Chinese "braves" have broken away from control, have thrown in their lot with the Boxers, and are attacking foreigners, while those that have not actually defied the authority of their commanding officers are so disaffected, or, at any rate, in such an uncertain mood, that they can not be safely called on to make any effort for the restoration of order. The situation thus resolves itself into this—that the Peking Government has altogether ceased to be effective. It has no means of quelling the disturbance, and it dreads being obliged to choose between throwing in its lot definitely with the insurgents, or helplessly defying them. Possibly there still remains, in or about Peking, a sufficient force to successfully resist any attack upon the palace itself. The fact—if it be a fact—that the Government was strong enough to punish General TUNG for his soldiers' crime in murdering a Japanese Chancellor of Legation goes to prove that although the Authorities dare not risk their official existence by openly opposing the Powers, they are still competent to maintain an attitude of responsibility and correctness. One of two things must very soon happen, however: either the Boxers will receive at the hands of foreign troops such a lesson as will deprive them of all stomach for further fighting, or they will be able to dictate a policy to the Government in Peking. It seems to us that the former result may fairly be anticipated. The Boxers and their military allies have not effected anything of importance against Tientsin. They have destroyed some property, but they have not caused any appreciable loss of foreign life, and that they have themselves suffered severely is beyond question. We may look at any moment to receive news of the relief of Tientsin. The period of probable success for the insurgents was limited to about a week, from the 17th to the 24th. By the latter date a strong stream of re-inforcements had begun to flow from Taku towards the beleaguered Settlement, and we entertain no doubt that if its relief has not been already effected, its besiegers are at any rate so seriously menaced that they can not devote much attention to aggressive tactics. The Peking Government will consequently see itself saved from being obliged to openly defy the world. But it will have to answer for its incompetence, and the real trouble will begin when the terms of its answer come to be dictated. Evidently no administration can be trusted to govern from Peking without the guardianship of foreign bayonets. Upon whom is the function of armed guardian to devolve? We do not venture to formulate any final opinion. The wisest statesmen of the time are already considering the problem, and, if they can not solve it amicably and satisfactorily, well then an amicable and satisfactory solution is not possible. Meanwhile one striking phase of the situation is becoming more and more prominent, namely, that without any disruptive action on the part of Foreign Powers, the Chinese empire seems to be spontaneously splitting up into two parts. All the southern half, under the three progressive Viceroys, remains in a comparatively orderly condition; all the northern is completely out of hand. The northern Chinese are well known to be more warlike and stouter than their southern compatriots, and, moreover, it is in the northern districts that Foreign States have displayed object lessons of a startling and exceedingly provocative character. We may not assume, therefore, that because LI, CHANG, and LIU succeed in maintaining order in the south, they would be equally successful were the north their sphere of operations. Undoubtedly the north will have to be garrisoned by foreign troops for some years to come. Who is to undertake the task? The answer seems very plain.

SILK.

The *Shōgyō* publishes the Agricultural and Commercial Department's forecast of the output of cocoons for this year. Below are the figures:—

	Number of silk-worm egg-cards taken for rearing.	Estimated amount of cocoons in koku.	Increase in comparison with last year. Koku.
Tokyo	69,616	60,774	3,509
Hyogo	64,929	53,369	6,140
Gumma	299,245	231,168	522
Niigata	70,731	51,800	2,466
Ibaraki	68,295	59,884	4,104
Shiga	57,995	54,171	12,501
Nagano	213,607	216,894	16,066
Miyagi	52,571	216,894	—
Fukushima	—	142,963	—
Yamagata	107,038	88,404	1,988
Akita	15,388	12,450	1,624
Fukui	30,534	25,407	4,019
Hiroshima	9,891	7,913	914
Yamaguchi	6,329	4,634	1,006
Ehime	13,745	12,161	973
Hokkaido	2,594	2,131	—

It is added that the total number of cards taken for rearing in the various cities and prefectures in the empire reached 2,290,981 and the output of cocoons is estimated at 1,935,422 *koku*. The unsettled condition of the weather, however, seems to have created some doubt of the correctness of the above forcast.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

Commenting in the *Gwaikô Jihô*, on the Treaty that Japan has recently made with the Congo Free State, Dr. Ariga says that it was drawn up at the suggestion of Leopold II., but adds that it is difficult to see what advantages are to be reaped by the existence of such a treaty, Japan not being in a position to engage in trade in Central Africa. Dr. Ariga is of opinion that very few Japanese know anything about Africa, and hence his article is largely taken up with the history of exploration and colonization in various parts of the great continent. He thinks that Belgium's connection with Japan is likely to become closer than heretofore owing to the privileges granted to the Belgian railway syndicate in China.

* * *

The *Dai-Nihon*, whose resuscitation has already been noticed in these columns, in get-up, size, and general contents at present takes the first place among Japanese magazines, under the able editorship of Dr. Matsumoto Kumpei. No. 5 has an article on the influence of newspapers on international questions, of which the following is a brief epitome :—It is true to say that the Press has more power than is wielded by the clergy, the nobility, and the people all combined. The Press not only represents public opinion, but it moulds it. No country can afford to treat the Press with indifference. We found this to our cost during our war with China. As a result of the comments of the *New York World* on what were called the Port Arthur atrocities, the American Senate seriously contemplated refusing to sanction the revision of our treaty with the United States, and on this account our Foreign Office was greatly embarrassed for some time. Then the interference of the three Powers with our action in China was foreshadowed in the Press before it occurred, though our authorities failed to observe the fact. In the Anglo-Transvaal war the part played by the European Press has been very significant, and England has taken note of it. So great is the importance that Germany attaches to the influence of the Press that she has gone to the length of appointing as part of her Diplomatic Staff an agent whose special duty it is to keep in touch with the Press and report thereon to his superiors. Germany is the first country that has adopted this measure. It is questionable, however, whether she has gone far enough. A newspaper agent should not, in our opinion, be subject to the Foreign Representative, since if he is going to do any real good he ought to be an abler man than one usually finds at the head of legations. The example set by Germany is likely to be followed by other great Powers of the west and Japan will find out that she cannot afford to be left in the lurch in this respect.

In the *Dai-Nihon* the comments of Mr. Katô Takaaki, the late Minister at the Court of St. James, on the English nation are reproduced. Mr. Katô says that he was very much struck by the calmness of the English people compared with Continentals during the China-Japan war. At that time he had only lately arrived in London and he soon found that the British were a cool-headed race. They watched the conflict in a business-like manner, thinking chiefly of its probable influence on trade. Nothing tempted them into a great display of feeling. When it was known that three European Powers had interfered on China's behalf, they still kept quiet and thought more of England's permanent interests than of gratifying the feelings of the Japanese people. Any kind of offensive and defensive alliance with Japan was repudiated as likely to be fraught with danger. . . . . The English are a very proud people, continues Mr. Katô, and think themselves unequalled by any nation. Though I do not wish to pose as a champion of their cause, yet I cannot but point out that they have much of which to be proud. There is no country in the world that could have managed this Transvaal business as England has done. Even had the required number of troops been ready, the cost of the transport to the seat of war of some 300,000* men, and their maintenance there month after month in the way that England has done would have overtaxed the resources of any other country. Then the fact that England at the present moment, without laying upon her people the burden of conscription, finds herself in possession of as many brave troops as she can possibly require, is certainly very striking.

* * *

In the *Tenchijin* the writer of an article entitled "The Imperial Diet and Modern Society," argues that the members of the Diet have almost everywhere done more harm than good. They are not, according to this authority, men who have the welfare of the country at heart, but adventurers who aim at nothing more than personal advancement. In the provinces a class of agitators known as *Yûshisha* (有志者) has been created, who profess to be ready to undertake almost anything in the political line, but who are as a rule anything but reputable members of society. According to the views of the writer whom we are quoting, the members of the Diet are responsible for an enormous amount of corruption thoughout the country, for extravagance, idle talk, dissension, and various other forms of evil. All local assemblies have been defiled by the introduction of Diet methods and abuses. Certain members of the Diet have already taken the part of capital against labour by receiving bribes from capitalists engaged in industrial enterprises. This will provoke retaliation on the side of labour.

* * *

A new magazine called the 明義, *Meigi*, has made its appearance, edited by two University graduates called Ueno and Iwata. It is opposed to Party Cabinets and has on this account drawn upon itself a storm of abuse from all quarters. Its editors have been pronounced to be "perverters of learning and flatterers." In the pages of the *Tenchijin* a law graduate signing himself K.N. writes partly in their defence and partly condemning them. If the *Meigi* had been anxious to flatter the powers that be, it would have done as so many other students do, taken office under the Government at once instead of spending money in starting a magazine. Then again, how can views that are in direct opposition to popular notions at the present time be pronounced flattery? There is no doubt that the editors are sincere and that they have a good deal to say in favour of their view. Their success, however, is more than doubtful. They have made a mistake in trying to represent themselves as champions of the rights of sovereigns, as by so doing they figure as the defenders of despotism. We are not at one with them, says K.N., as regards the evil likely to result from Party Cabinets, nor do we think that the twentieth century will witness the growth of irresponsible monarchical power.

* * *

The Kinkôdô has recently published 2 volumes entitled *Kinsei Meikabun* (Extracts from Modern Classics), which have been prepared by the Gakushûin and the First Higher School. The get-up of the work is excellent and the extracts made seem to be wisely chosen. With the exception of those cited in the appendix, all the writers quoted belong to the Tokugawa era. These volumes are designed to be a continuation of the Kôtô-kokubun Series, books which have found a good deal of favour as text-books. The style of the Tokugawa classical writers the authors of these volumes desire to see revived, they tell us, it being in their opinion superior to that in general use to-day. The type used is large (No. 4) and the spacing of the characters is done so as to catch the eye. The pieces quoted have been carefully edited. Vol. I. covers 137 pages and Vol. II. 145. The price is 50 *sen* per vol. They may be recommended to students of the Japanese language as good specimens of modern classical Japanese.

* * *

A book called "Capital and Labour adjusted to each other" has been published by the Kwaishinrô, Tôkyô, the author of which is Mr. Toyohara Matao. The work sells at 30 *sen* per copy. In reviewing it the *Taiyô* says that its chief value consists in the account it gives of the manner in which labour is protected by the system followed at the Krupp works and in the history of labour legislation and recent agitation in England. The author does not fulfil the expectations raised by the title of the work. He does not propose nor discuss at any length schemes of adjustment of the claims and rights of both parties concerned.

* * *

The *Jiji Shimpô* is much concerned about the ever-growing deficiency of primary school teachers and in a leading article published in a recent issue discusses the whole question anew. This is the gist of what our contemporary has to say on the subject:—The number of elementary schools is on the increase and the attendance at each school grows more numerous every year. While this is so the teachers not only do not increase but, according to some, are actually growing less. This state of things cannot be allowed to continue, says the *Jiji*. Its cause must be found out and this weakness in our educational system promptly remedied. Among the alleged causes of the present phenomenon, the lowness of the salaries paid and the status of the teachers employed are the chief. According to statistics published in 1898, the average salary of an Elementary School teacher is 10 *yen* 87 *sen* 5 *rin* or 36 *sen* 2 *rin* 5 *mon* per day. The table of statistics for which these figures are quoted informs us that the average pay of carpenters was 43 *sen* 4 *rin* per day and that of masons 43 *sen* 6 *rin*. Now, in view of the position that a school teacher has to keep up, his pay is ridiculously low. But the above average is struck on the salaries of duly authorised teachers in receipt of a full salary. If assistant teachers and what may be called stop-gaps are included the average pay is only about 20 *sen* per day, not half the wages of an artizan. While this is so any proposal to raise the salaries of primary school teachers made in a local assembly is almost sure to be negatived. Thus the mass of the people may be said to attach more importance to house-building than to the training of their children. The supply of teachers has run low on account of the mere pittance offered as remuneration for arduous services, and nothing but the raising of salaries to an adequate figure will save the situation. Another cause for the distaste with which the profession of teaching is regarded is the way in which primary school teachers are treated by ignorant local officials. Although in theory only the head of a Prefecture has the right to dismiss a teacher, in practice the head of a district or a ward effects the business, Governors being content to ratify the decision of subordinate officials. Consequently it frequently happens that a teacher who is thoroughly devoted to his work finds that his position becomes quite untenable owing to the thick-headedness of some local official who persistently interferes with his manner of conducting the school under his charge. To be poorly paid, say these teachers, is bad enough, but to lose all one's independence and self-respect in the bargain is more than human nature can bear. To such men the cause of education is sacred and they naturally resent its vulgarisation by ignorant official upstarts. According to the *Jiji*, then, two things only are needed to supply the country with any number of good teachers, namely, the payment of an adequate salary and the removal of teachers from all local official control and interference.

* * *

In the *Shakai Zasshi*, Mr. Yamagata Tôkon discusses at some length the effects of parliamentary government in Japan. The gist of his remarks can be stated in a few words. The connection of the Government with all important and industrial enterprises is an undesirable state of affairs, and has not been altered by parliamentary interference. The only difference is that the Government is now approached through the Diet instead of directly as formerly. . . . The chief question on which opinion in political circles differs is party government. A very large number of officials are opposed to the idea of party Cabinets and the new magazine the *Meigi*, is likely to receive support from this class of politicians. The *Jiyu-tô* and the *Shimpo-tô* have steadily advocated party government. The *Tei-*

* The numbers are somewhat over-stated; 231,000 was the figure given in London a few weeks ago. (WRITER OF THE SUMMARY.)

Digitized by Google Original from CORNELL UNIVERSITY

koku-tô is a supporter of whatever Government exists without denouncing proposed changes. Supposing that the opponents of party government win, they will form a party by themselves, and if they are able to defy opposition will grow despotic. It matters little to the country what form of government is established if the administration be effective. But looking back at the years during which the Diet has been in existence, it is very difficult to point to any good which it has accomplished, while the abuses to which it has given rise are in everybody's mind. It is impossible to sum up in a few words all the evils which electioneering has brought in its train. It has divided families on every hand. The custom of settling every question by majorities has led to endless jobbery and corruption. . . . . The class of men chosen to represent boroughs has made it easy for capitalists to lobby bills to any extent. The intelligence of the ordinary member of the Diet is below that of the ordinary official. While this continues it is hard to see what good the Diet can effect. But notwithstanding all this and much more that may be alleged against representative government in Japan, the talk of returning to despotism is absurd, says Mr. Yamagata. There is no way back and the new system must be made to work by the choice of a better class of representatives of the nation.

* * *

Commenting on the progress of historical investigation, the *Teikoku Bungaku* says the *Shigaku Zasshi* and the *Shigakkai* are both connected with the Imperial University. The only independent historical magazine is the *Chiri to Rekishi* (Geography and History). The *Shigaku Zasshi* has of late departed from its usual custom of printing dry material and has given us some interesting matter. The *Shigakkai* makes it its province to publish material to prove certain disputed points, and hence is characterised by a wearisome monotony. A new historical publication called *Denki* (Biography), promises to provide suitable reading for young persons. Text books on history increase at a rapid rate. It is not these that are needed as much as exhaustive critical works on history. The Semmon Gakkô has done good service in recent years in publishing a number of books on diplomacy and international subjects of various kinds. That institution now purposes to treat history in the same way. .

* * *

The last months of Dr. Toyama's life were spent in preparing two works on education. One of these, the *Hambatsu no Shôrai*, was published some weeks before his death, and the other, the *Kyôiku Seidoron*, was, we believe, a posthumous work. The object of the *Hambatsu no Shôrai* (the Future of Clannism) was to show that the power of the Satsuma and Choshû clans is to be traced to the attention they have paid to education. The book is full of statistics showing the amount of money laid out on education by each province, the number of men sent to high class schools, the number of schools established in various parts of Japan, &c. The title of the work is misleading as "The Future of Clannism" is hardly discussed at all. The work is divided into two parts. Part I. has 5 chapters and Part II. 10 chapters, and there is an Appendix. The subjects treated are given in the following headings of chapters :—Part I. Chap. I. The rise of Clannism, its various kinds, and measures for its preservation. Chap. II. The Greek and Roman Eras and Education. Chap. III. The Rise of Universities in Europe and Educational Work in Prussia. Chap. IV. The United States and Education. Chap. V. The Politician and Education in Japan; the Sat-chô clans and the Revolution. Part II. Chap. I. A Comparison of the Yamaguchi-ken Elementary and Middle School pupils with those of other prefectures. Chap. II. The same comparison in respect of High Schools and University Preparatory Schools. Chap. III. The same comparison as regards University students Chap. IV. The University graduate and rank in society. Chap. IV. The students from Yamaguchi compared with those from other Prefectures in other schools than those mentioned above. (The schools referred to are Military and Naval Academies, Industrial and Commercial Schools, &c.) Chap. VI. A comparison of Yamaguchi with other prefectures as regards the production of writers and soldiers. Chap. VII. Money subscribed for Education and the results of the adoption of superior methods of education. Chap. VIII. Other Prefectures and Cities should follow the lead of Yamaguchi in establishing High Schools. Chap. IX. The Proper Function of the Education Department in future. Chap. X. Conclusions reached. Appendix: A table showing the extent to which each Prefecture has been represented at the Imperial University in years past and the extent to which it is represented now; also tables showing the state of education in each province at the present time.

Nothing could exceed the care with which the various tables of statistics have been drawn up. The figures given tend to show that in all matters connected with education the Yamaguchi, Fukuoka and Saga prefectures are a very long way ahead of all other parts of Japan. Dr. Toyama recommends the establishment of a High School in every prefecture. Many of the facts stated by Dr. Toyama are of considerable interest and the book is worthy of being carefully perused by all persons interested in education. The later work deals specially with the necessity of preserving a high standard of learning at the Imperial University. The sentiments expressed in it have been backed by Dr. Inoue Tetsujirô in an article recently published in the *Tôyô Gakugei Zasshi*, entitled "A Perusal of Dr. Toyama's *Kyôiku Seidoron* and the impressions received from it."

* * *

The following comments on current literature are taken from various sources. Writing on newspapers, the *Shakai Zasshi* says that in the matter of general news it is impossible for papers to wait for verification in all cases and therefore the custom of contradicting to-morrow what has been asserted to-day is excusable, but the practice of manufacturing personal items of news of a damaging character connected with the relations of the sexes, giving the names and addresses of the people concerned and then quietly contradicting the whole 4 or 5 days later, which is now so common, is a mean and cowardly device, and something should be done to put a stop to it.

The number of indecent papers published in Osaka is much larger than in Tôkyô. The *Banzai Shimbun* led the way with its supplements containing pictures of nude women, and its popularity brought forward a crowd of imitators. Numbers of improper advertisements are to be seen in the columns of newspapers. The publication of scandal of all kinds is unsurpassed anywhere. One of the chief reasons of these liberties being taken in Osaka, says the writer we are quoting, is the chicken-hearted nature of the inhabitants, who are ready to bribe newspaper agents into silence rather than boldly threaten them with the law. While the *Mainichi Shimbun* is writing up the subject of "Tôkyô Charity," the *Yorodzu Chôhô* is publishing details about Yokohama houses of assignation. The *Tenchijin* is publishing an account of Count Itagaki's scheme of prison reform and discussing labour questions. The *Taiheiyô* is interesting itself greatly in the export of Japanese girls for immoral purposes, which this paper asserts is still carried on under various pretences. The *Mainichi Shimbun* is also writing on this subject under the title of *Shakai-gwai no Shakai* (Society outside Society). The *Kokuryoku* and the *Yorodzu Chôhô* are at daggers' drawn over social questions, which the *Kokuryoku* contends should be treated in quite an opposite manner to that adopted by the *Chôhô*. The latter paper was suspended by the authorities some little time ago on account of the details that it published on the alleged dealings of the daughters of respectable families with actors. This sheet has published so many falsehoods that no reliance can be placed on it.

* * *

The following books have all been recently published.

The 故事大辭典, *Koji-dai-jiten* by Mr. Kondô Gensui is a most useful work covering 1,200 pages and selling at 1 *yen* 20 *sen* per copy. It is a reference book on Japanese and Chinese antiquities. Old customs, proverbial sayings, and the like are explained and traced back to their origin. These sayings are arranged alphabetically under the sectional headings of the work. This dictionary is issued by the Suzandô, Tôri, Itchôme, Nihonbashi, Tôkyô. One of the most gigantic undertakings of modern publishing houses the Hakubun-kan now has in hand. It is no less than the issue of the Chinese dictionary of phrases known as the 佩文韻府 (Treasury of Good Sentences) which title is here pronounced *Haibun-inpan*. This work covers some 12,600 pages and its price will be 40 *yen* per copy later on. It is now offered to subscribers at 30 *yen* per copy. This Chinese thesaurus dates from the Kôki era (1662-1722) during which it was carefully compiled. The Chinese edition of it consists, we are told by Dr. Williams, of no less than 110 volumes. Some years ago the Hôbun-kan, a defunct publishing house, spent 50,000 *yen* in preparing copper plates for the printing of this work. About one hundred copies were struck off, but the Hôbun-kan lost heavily over the venture and shortly after drifted into bankruptcy. The Hakubun-kan having obtained possession of these plates at a nominal figure, is able to embark on its new enterprise with a fair prospect of success. Dr. Mishima, the late Mr. Kurimoto, and Messrs. Oku and Ishikawa have all taken part in the editing of the work.

The Biographical Dictionary published by the *Keizai Zasshi* office, entitled *Dai Nihon Jimmei Jisho*, noticed in a former Summary, has now reached its fourth edition. It sells at 10 *yen* per copy. The same publishers have in hand another bulky work for which they are soliciting subscriptions, called the *Nihon Shakai Ji-i*. Dr. Taguchi is the chief editor and it is said that the work will contain almost everything worth knowing on government, law, economy, commerce, industry, and social customs. It is to consist of two huge volumes, each covering about 1,500 pages, the first of which will be ready next February, the other appearing 5 months later. The subscription price for this work is only 8 *yen*, just half of what it will cost when actually issued.

Justin McCarthy's "History of Our Own Time," 3 vols, which is advertised by Maruya at $8.50 may be purchased in Japanese for 2 *yen* 30 *sen*. The work has been translated by Messrs. Takata Sasai and Yoshida Minosuke and published by the Waseda Semmon Gakkô. The translation covers 1,100 pages. As is known to our readers, Mr. McCarthy's history begins with the accession of Queen Victoria and comes down to the Diamond Jubilee.

The (東邦小鑑) *Tôhô Shôkan* is designed to give a short history of various Oriental countries, and its compilation has been undertaken on account of the ever-growing interest taken in neighbouring foreign countries by Japanese readers. Notwithstanding the modesty displayed in its title, it covers 900 pages. It is issued by the Tôhôkyôkai (Oriental Association) Ginza, 4 chôme, and sells at 80 *sen* per copy.

The *Shinatetsugaku-shi*, History of Chinese Philosophy, is a work which was prepared by Mr. Endô Ryûkichi of the Higher Normal School, and revised by Dr. Inoue Tetsujirô. It is said to give a good account of the development of thought in China subsequent to the death of Confucius. It is published by the Kinkô-dô, Tôkyô, and sells at 1 *yen* 20 *sen* per copy.

The *Shakaigaku*, lately published by the Hakubunkan as one of the Hyakkwazensho series, is a translation of an American work by Mr. Fairbanks on Sociology. It sells at 30 *sen* per copy.

The Waseda Semmon Gakkô publishes translations at a wonderfully rapid rate. Among its recently issued works are the *Kokusaihôron* (International Law), a translation of a modern French treatise, highly recommended by Dr. Ariga, who contributes a preface to the translation; the *Jûku Seiki Oshû Seijishiron* (A History of European politics in the Ninenteenth Century), a translation of an English work by Mr. Sakai Yûzaburô, and the *Doitsu Shôhôron* (German Commercial Law) a translation of the work of a German Professor whose transliterated name we cannot identify, by Messrs. Horiuchi, Furukawa and Nakamura, which covers 1,200 pages and

Digitized by Google Original from CORNELL UNIVERSITY

has the original of the German Commercial Code printed as an appendix for convenience of reference.

The *Dai Eikoku Manyû Jikki* is an account of Mr. Mizuta Shigeo's three years' sojourn in England and his impression of English life. Its price is 70 *sen*, issued by the Hakubunkan.

The *Sekai Dainenkei* consists of chronological tables and other statistics bearing on the relations of various countries to each other. It contains some 21 different tables. It is issued by a Kyôto bookseller called Murakami Kambei and contains a short history of the chief events of eleven different countries.

The Hakubunkan published last year a very handy little reference book called the *Sakubun Jukugo Jiten*, which contains a preface written by Dr. Inoue Tetsujirô. This work has now reached its second edition. We can recommend it to foreign students of the Japanese language as a very accurate desk or pocket dictionary. It sells at 1 *yen* per copy. The *Jukuji* are arranged alphabetically. Classical passages are quoted, showing the sense in which the combined ideographs were originally used. It covers nearly 900 small pages and the characters are very clearly printed.

NEWSPAPER ETHICS.

The Rev. C.M. Sheldon, whose experiment in editing the *Topeka Capital* recently attracted much attention, writes thus in the *Outlook*:—

"For the last three years a large number of prominent daily newspapers have printed falsehoods about my books, my daily habits, my family life, my church, and my parish in general. I have never, except once, to a reporter from my own home paper, been interviewed for publication in a daily paper, and yet scores of supposed interviews purporting to come from me have been published in daily papers. One large New York daily a few weeks ago published two letters purporting to come from me, and signed my name to them. I never wrote such letters, and never made the statements attributed to me. Yet these letters were reprinted in papers all over the country, and in religious weeklies, and, with two exceptions, none of the editors asked me whether the statements were really mine or not. A prominent religious paper sent a correspondent to Topeka to 'write up' everything connected with the Topeka *Capital* the week I was asked to take the editorship of it. He sent to his paper several pages of matter, including several columns of 'interviews' and accounts of my personal habits and family life, nearly all of which might, without any reservation, be characterized as falsehoods of the most serious character. When the statements made about my church or my daily life or the conduct of the paper were not actual lies, they were so grossly exaggerated as to be absolutely misleading. . . . . .

"Several times during the last three years representatives of large daily papers have said to me in my church study, where they had come to secure 'interviews,' 'If you do not give us anything, if you refuse to talk about yourself, we shall send on something.' And they have sent on 'something,' and I have wondered a good many times lately whether the modern system of newspaper invasion of a man's personal and private life, even the most sacred and holy sanctuaries of his home and his church, has not assumed a tyranny that employs as merciless a method of extortion as the old-time rack or fagot pile. . . . . .

"Is it not time that the people of this country began to demand of the daily press that it tell the truth first of all? As it is now, I believe that no more serious charge can be brought against a certain proportion of the press of this nation than the charge of lying, of gross exaggeration, and of a failure to verify the statements which it is every day printing as 'news.'"

Mr. Sheldon might have generalized his comments by saying that just as there is a special system of international morality which acknowledges no obligation to the principles governing the intercourse of civilized individuals, so there has come to be a system of journalistic morality which, if practised by any man in private life, would lead to his expulsion from society. Yet, it must be assumed that a taste for the outcome of such ethics exists, or it would not find a market.

"THE GERMAN MANUFACTURERS' ADVERTISER FOR EASTERN ASIA."

This attractively bound, beautifully printed, and carefully compiled volume illustrates the activity of German enterprise in the East. The advertisements are in German, but the greater part of the text is in English and German, a combination which is not without its consolations for Englishmen in the face of the keen competition to which they are exposed by their German rivals. The volume contains one paragraph which invites a word of comment:—

In Japan the use of bicycles is still now largely restricted to resident foreigners owing to their cost, though they slowly being adopted by Japanese. Two or three small shops in Japan turn out an inferior imitation of foreign cycles, but the principal supply is obtained from the United States and England. There is a demand for a cheaper machine, and therefore a considerable reduction in price would enable the Japanese to purchase them. It is quite evident that there is a large potential market in the Far East, and it is for the German merchants to meet the conditions required and claim the fair share of Germany in this trade.

Our readers will agree with us that this is a very misleading statement. To say that the use of bicycles is still largely restricted to resident foreigners, and that they are slowly being adopted by the Japanese is to convey an impression quite contrary to facts. We should say that for every bicycle owned by a foreign resident, several thousands are owned by Japanese. Even the post-boys ride bicycles, and there is probably not one town of any importance in Japan that has not two or even three bike stores. Tokyo has at least a hundred.

TRANS-PACIFIC STEAMSHIP CHARGES.

The *Official Gazette* publishes a report from the Japanese Consul in San Francisco, with regard to the revision of freight and passenger fares arrived at at a meeting of representatives of steamboat and railway companies interested in trade between oriental ports and the Pacific coast. The companies represented were the Canadian Pacific R.R. Co., the Great Northern R. R. Co., the Northern Pacific R.R. Co., the Oregon Railroad and Navigation Co., the Union Pacific R.R. Co., the Chicago and Northern R.R. Co., Rio Grande Western R.R. Co., the Denver and Rio Grande R.R. Co., the Rock Island R.R. Co., the Santa Fe R.R. Co., the Southern Pacific R.R. Co., the Canadian Pacific Steamship Co., the Nippon Yusen Kaisha, the Northern Pacific S.S. Co., the Pacific Mail S.S. Co., the Occidental and Oriental S.S. Co., the Toyo Kisen Kaisha, and the California and Oriental S.S. Co.

The conference lasted for about a week, and the following resolutions were passed:—

That freight for tea from the Orient to any part of the Pacific coast shall hereafter be raised to $1.50 American gold currency per 100 lbs., the minimum rate being fixed at $1.25.

That freight for fancy matting shall also be increased to $1.25 per 100 lbs.

That in regard to raw silk the former rate of $6 per 100 lbs. shall be maintained.

That for silk textiles freight shall be $20 a ton, with an additional 1 per cent on the original value.

That the rates for ordinary cargo shall be from $8 to $12 per ton.

That cargo to the Orient from any of the ports on the Pacific coast shall be transported according to former rates of freight.

With regard to the Nippon Yusen Kaisha and the Canadian Pacific Steamship Company, a special privilege has been granted of carrying on business at a reduced scale of freight, on the ground that the two companies mentioned are plying under special conditions not applicable to the other companies. The reduction allowed for them is 50 cents per 100lbs. of raw silk, 5 per cent. *ad valorem* for silk textiles, and 10 per cent. in ordinary fares for 3rd class passengers.

The representatives of the Canadian Pacific Railway and Steamship, the Pacific Mail Steamship, the South Pacific Railway, and the Oriental Steamship Companies were elected as a committee, and by them the passenger fares were revised.

Fares for 1st class passengers from the various ports of the Orient to the Pacific coast have hitherto been much lower than those for passengers from the Pacific coast to the Orient (for instance, while the fares from San Francisco to Hongkong are fixed at $225 the same from Hongkong to San Francisco are only $150). In future the same rate will be charged for a passage either way. The fares from the various ports of Japan to San Francisco will be raised accordingly, the rates being fixed at $200 for a passage from Yokohama, $207.50 from Kobe, and $218 from Nagasaki.

At the same time, the passage to London via ports on the Pacific coast will be increased from £57 to £62.

It is recommended that third class fares from Japan to San Francisco and beyond should be raised to 50 *yen* in Japanese gold. As, however, competition by "outside" vessels has to be encountered it may be impossible to strictly enforce a rate of 50 *yen*, and the only course to be taken by the various companies will be to impose such an amount as may seem suitable to them, for the time being. As the Japanese Government is now taking active measures towards the restriction of emigration to America, the competition is likely soon to subside, and then it will become practicable to enforce and maintain the rate of 50 *yen* as determined on by the committee.

CHINESE COMPLICATIONS AND TRADE.

The effect of the present insurrection in China upon the stock market and the spinning industry justifies unusual precautions on the part of bankers, remarks the *Jimmin*. The banks which have issued loans on fixed capital will greatly suffer, and those which have attempted to secure exorbitant interest on accommodation given on the security of stocks will probably also incur serious losses. The leading banks, however, are not so hard hit as the public has imagined. With the exception of the Mitsui and Imamura banks, they have had considerably increased deposits. The 15th Bank in particular has had an increase from 6 million *yen* to 10 millions. Similarly marked progress is noticeable in regard to the Third, the Yasuda, and the Imperial Banks. Below are comparative figures:—

Bank.	Amount of deposits on May 15, 1900. Yen.	Increase of decrease in compprison with the corresponding periods of last year. Yen.
1st	7,567,428	1,194,290
3rd	7,548,624	2,105,842
15th	10,909,913	3,916,197
100th	537,089	96,798
Mitsui	8,059,144	*2,192,790
Mitsubishi	9,085,618	11,167
Yasuda	8,726,468	2,360,877
Imperial Commercial	7,657,711	1,799,721
Meiji Commercial	2,345,430	824,605
Kawasaki	1,621,197	474,481
Tokai	3,010,814	515,908
Imamura	393,839	*1,160,560

* Represents decrease.

It is added that the banks contemplate raising the rate of interest on deposits.

GIFTS TO EDUCATION.

We commend to the observation of Japanese men of wealth the following paragraph relating to gifts made by American citizens for educational purposes, and in reproducing it we note what an enormous advantage in the race of civilized competition the possession of wealth confers:—

Mr. Rossiter Johnson, editor of "Appleton's Annual Cyclopædia," has lately gathered data relating to the public gifts and bequests of 1899. A summary of these statistics from the advance sheets of the Cyclopædia is presented in the New York *Times* (April 7), from which it appears that the contributions for educational and benevolent purposes amounted last year to $62,750,000. This does not include gifts under $5,000, ordinary denominational contributions,

Digitized by Google Original from CORNELL UNIVERSITY

nor municipal, state, and national appropriations. The following table indicates the increase in private gifts for the past seven years :—

1893	$29,000,000
1894	32,000,000
1895	32,800,000
1896	27,000,000
1897	45,000,000
1898	38,000,000
1899	62,750,000
Total	$266,550,000

Of the private benefactions to purely educational purposes during 1899, the largest are the Carnegie and Rockefeller gifts, each of which run up into the millions, and—greatest of all—Mrs. Leland Stanford's gift to the Leland Stanford Junior University, conveying the bulk of her wealth in stocks and real estate.

"The first transaction, May 31, transferred property of a face value of $38,000,000 and a cash market value of $15,000,000, and the second, June 15, comprised two large tracts of recently purchased grazing land, with valuable water rights, which were incorporated with the famous Vina Ranch, now owned by the University. These gifts swell the endowment of the University to $45,000,000, calculated on the basis of a 5 per cent. return from the properties in which the Stanford fortune was invested. The face value of the securities constituting the bulk of the investments is about $80,000,000, and any increase in their market price will enhance the total endowment, already the largest of any privately established institution in the world."

THE LATE MR. A. J. WILKIN.

Resolutions concerning the death of A. J. Wilkin, Esq., passed by the Board of Elders of the Yokohama Union Church :—

Whereas intelligence has reached us of the death of Mr. A. J. Wilkin at his home in England on May 7th last, the Board of Elders, representing the Yokohama Union Church, desire to place on record some memorial of their esteem for the departed and their gratitude for his protracted and useful service in connection with this church and congregation.

Mr. Wilkin has been long so well and honourably known in the foreign, and especially the mercantile, community here that we do not feel called upon to add our testimony to the tributes to his worth that have already appeared in the public press. The fact that on almost every public occasion he was chosen to voice the sentiments of the community towards distinguished public servants, and the implicit trust placed in his probity and integrity by foreign and native merchants alike show the estimation put upon his character as a representative and reliable man.

But his loss is most keenly felt by those who knew him in his relations with religious interests, such as the Bible Societies' Committee for Japan, and the English, and Union Churches of Yokohama. He had an active and long service in the latter Church as an Elder and Sabbath School Superintendant, and was Treasurer of the Bible Societies' Committee. His constant and unostentatious benevolence to the poor and needy among the Japanese endeared him to them also.

We cannot but feel grateful to the Great Head of the Church for the bestowment of such a model Christian merchant and Christian worker in this far-eastern community. To the Christian community, a large body of missionaries, and to scores of former and present Sunday School scholars, his example and precepts will ever remain as a sweet memory and constant inspiration.

To the bereaved family we extend our heartiest sympathy. We feel thankful that after a lapse of several years we were permitted to renew our acquaintance with his daughters, which privilege makes us feel all the more keenly the sense of their great loss. At the same time we do not forget those of the family whom we have not met for many years. Let us comfort one another with the remembrance that for him to die was unspeakable gain.

Resolved, that a copy of these resolutions be sent to the bereaved family with the assurance of that sympathy which makes their loss ours also.

H. Loomis, Elder.
Jas. H. Ballagh, Elder.
J. C. B. Cambier-Holland, Clerk.
E. S. Booth, Pastor.

June 15th, 1900.

DEPARTURE OF EX-GOVERNOR ASADA.

Mr. Asada, ex-Governor of Kanagawa Prefecture, took his official departure from Yokohama on Thursday, leaving by the 10.5 a.m. train for Tokyo to take up his appointment in the Foreign Office. Mr. Asada's popularity was shown by the large attendance at the station both of foreigners and Japanese. The following representatives of the Consular body were present :—Mr. Bonilla, Spanish Consul ; Mr. Steenackers, French Consul ; Mr. Forster, British Acting Consul ; Mr. Hobart-Hampden, British Pro-Consul ; Mr. Klingen, Dutch Acting Consul ; Dr. Coates, German Consul-General ; Mr. Hagen, German Vice-Consul ; Dr. Boye, German Vice-Consul ; Mr. Jelalitschka, Austro-Hungarian Consul ; Mr. Casati, Italian Interpreter ; Mr. McLean, U. S. Acting Consul-General ; Mr. Scidmore, U. S. Deputy Consul-General ; Dr. Parra, Mexican Consul ; Mr. Izquierdo, Chilian Consul-General ; Mr. Gielen, Brazilian Consul ; and the Chinese Vice-Consul. Mr. Holm, chairman of the International Committee, Mr. E. Flint Kilby, President of the Foreign Chamber of Commerce, Mr. James Dodds, Mr. Pors, Mr. Lindsley, Mr. Reiffenger, and Mr. V. R. Bowden were also present, while the employes of the Kencho and representatives of other local bodies, as well as native merchants, made a large muster. On the departure of the train Dr. Coates, the German Vice-Consul, called for cheers for the ex-Governor, which were heartily given. Mr. Holm and the other unofficial gentlemen afterwards proceeded to the Kencho to pay their respects to Mr. Asada's successor, Mr. Suhu Kohei, and congratulated him on his appointment. The Governor in reply expressed the hope that the cordial relations existing between foreigners and Japanese under Mr. Asada would continue during his tenure of office.

The International Committee propose a complimentary dinner to Mr. Asada at an early date.

MISCELLANEOUS TOPICS.

The *Nippon* continues to discuss the subject of kerosene. It remarks that in the 8th year of *Meiji* (1875), the total output in Japan did not exceed 4,830 *koku*, but in the 10th year the figure had increased to 10,114, and by the 16th year (1883) it had swelled to 21,659. From 1883 till 1888, the annual average stood at 20,000, though occasionally the amount had reached 40,000. From 1889 to 1891 the annual yield varied from 50,000 to 60,000, but has subsequently steadily increased until it reached 140,000 in 1894 and 230,000 in 1898. Below are details :—

RESULT OF INVESTIGATION AT THE END OF 1898.

	Output in *koku*.	Sales in *koku*.
Hokkaido	140	8
Akita	251	108
Niigata	227,735	216,343
Nagano	323	323
Shizuoka	2,758	1,528
Total	231,221	217,640

Of the above total 26,300 *koku* was refined oil, the rest being crude. Since then a rage for kerosene speculation has set in and it is impossible to make an exact estimate of the output without statistics taken at the close of last year. According to investigations completed by the Japan Petroleum Company in December last, the monthly output in Echigo does not fall short of 70,000 *koku*, of which 28,000 are for lamps, 5,000 for machinery, and 30,000 for combustible purposes. If the monthly rate of production is 70,000 *koku*, the annual output will be no less than 840,000, valued at 3,360,000 *yen* at 4 *yen* per *koku*. That is startling progress, as the amount is four times that of 1898. Of the 84,000 *koku* annual output, only 40 per cent., or 336,000 *koku*, is available for lamps, and this does not cover more than 30 per cent., of the imports from abroad. The figure is insignificant when compared with the extent of the American or Russian trade.

According to the *Nippon* the foreign trade of Japan for the first half of this month shows an excess in imports of 2½ millions of *yen* approximately, the total from January being 64½ millions. Below are the details :—

	1st half of June 1900. Yen.	Total from January. Yen.	Increase in comparison with corresponding period last year. Yen.
Exports	8,502,968	88,392,868	5,786,225
Imports	11,051,550	152,943,730	71,391,218
Total	19,554,518	241,336,598	77,177,513

As to specie and bullion, the amount of excess in exports does not fall short of 1 million *yen*, the total from January being 23 millions. Following are the figures :—

Exports	1,324,074	30,094,473	28,796,561
Imports	141,545	6,937,994	—
Excess of exports	1,182,429	23,156,479	—

The figures for the nine principal ports of the empire were as follows :—

	Exports 1st half June, 1900. Yen.	Imports for same. Yen.
Yokohama	3,390,066	4,167,092
Kobe	3,390,066	5,945,664
Osaka	264,804	264,398
Nagasaki	344,954	408,475
Hakodate	199,370	44,813
Niigata	5,131	—
Moji	198,684	53,624
Shimonoseki	194,811	164,487
Kuchinotsu	261,450	2,988

An article in the *Formosan Daily News*, reproduced in the *Keizai Zasshi*, says the gross amount of camphor to be sold to special contractors by the Formosa Government Office this year is from 3 to 5 million catties. The result of investigations carried on by the Formosa Government Office is so discouraging that it is certain the maximum world's supply of camphor cannot exceed 4 millions, while the average demand for five years from 1893 to 1897 was a little over 6 millions a year. Prices therefore must be raised. As to the productive capacity of the island, it is stated that Taichiu prefecture alone is in a position to yield 2,240,000 catties, although it is doubtful whether this enormous amount can be kept up permanently. Taipeh produced about 1,100,000 last year—a figure far below the original estimates. Still it is expected that the average yield in this prefecture will not fall short of 1,750,000. There will be no difficulty in supplying the market with 4 million catties. The camphor oil produced from 4 million catties amounts to 1,400,000 catties, and can be remanufactured into camphor to the same amount, so that the total output will be no less than 5,400,000, which figure shows a deficiency of only 600,000 catties in the world's demand. This deficiency, it is supposed, will be supplied by productions from Sumatra and other countries. The Formosan authorities appear to have now determined to take 4 millions as the limit of production, and to make necessary arrangements accordingly.

The *Keizai Zasshi* publishes statistics showing the amount of cotton yarns exported from Bombay to China and Japan during the past ten years as follows :—

Year.	China.—Bales.	Japan.—Bales.
1890	325,060	37,722
1891	365,038	10,939
1892	385,711	21,445
1893	297,572	14,198
1894	338,703	10,743
1895	374,119	2,515
1896	471,023	2,467
1897	361,221	645
1898	437,645	475
1899	579,619	250

The import of yarns from Bombay to Japan is clearly a thing of the past.

Commenting upon the increased taxation and the revenue realized for the 32nd fiscal year, the *Nichi Nichi* says that the land tax alone proved 700,000 *yen* below the estimate, in consequence of inundations and other natural calamities ; while in business tax there was a falling off of 100,000 *yen*, as the result of conflagrations in Yokohama and Toyama. As to the *saké* tax, the estimate was verified, but in the case of soy there was a shrinkage of 390,000 *yen*. The tonnage dues showed an actual shrinkage of 76,000 *yen*, owing

Digitized by Google Original from CORNELL UNIVERSITY

to the rates being reduced by half by the Diet. The decrease in duties on alcohol and imported tobacco was no less than 770,000 *yen*. Moreover, the laws in regard to the manufacture of *sake* for domestic use having been rescinded at the 13th session of the Diet, revenue from this source shows a decrease of over 72,000 *yen*, while the revision of the law regarding commerce in spirituous liquors brought about a dimunition in tax to the extent of 36,000 *yen*. In other items, however, there was more or less increase. For instance, there was an excess of 980,000 *yen* in income tax, 210,000 *yen* in imposts upon various Exchanges, and 180,000 *yen* in mining taxes. The greatest increase was in revenue stamps, the figure being 1,870,000. The country ought to be congratulated on these facts.

The *Keizai Zasshi* publishes an official report from Hawaii showing the trade with Japan for 1899. Exports from Japan to Hawaii amounted to $671,410 in value, showing almost 90 per cent increase in comparison with the previous year, and over 130 per cent as compared with the figure for three years ago. This increase has been out of proportion to the increase in the number of Japanese immigrants to the Islands. The rate of increase in respect of the latter did not exceed 67 per cent as compared with 1898, and 111 per cent in comparison with three years ago. A remarkable increase is noticeable in rice, *saké*, soy, and other food stuffs, peculiar to the Japanese, so that it may be assumed that the prosperity of the Japanese settlers has advanced. Among the imports to Hawaii rice showed a sudden and striking increase during last year. This may be owing to the unsettled state of the crop in Hawaii, while the steady growth of the sugar industry has brought about the conversion of rice fields to sugar cultivation. Below are the details of imports from Japan for last year:—

	Amount. Yen.
Rice	73,259
Saké	66,471
(Foods made of wheat flour)	10,888
Other food stuffs	72,318
Soy	5,401
Fish	16,176
Shirtings	12,003
Cotton manufactures	24,577
Yarns	14,484
Silk textiles	17,658
Cotton *chijimi*	12,388

According to the investigations of the Finance Department the number of banks throughout the empire at the end of last month totalled 2,166, with an aggregate capital of 471,274,669 *yen*. Compared with the figures for April last there was an increase of 20 banks and 8,583,000 *yen* in capital. Below are the details:—

Banks.		Capital in yen.
Nippon	1	30,000,000
Specie	1	24,000,000
Industrial	1	10,000,000
Agricultural and Industrial	45	27,970,000
Formosa	1	5,000,000
Colonial	1	3,000,000
Savings { domestic	376	41,953,300
Savings { foreign	1	1,250,000
Joint stck { domestic	1,423	294,317,315
Joint stck { foreign	6	2,964,450
Ordinary partnerships	60	11,270,940
Limited partnerships	137	10,337,184
Limited Joint Stock Companies	1	452,000
Individuals	111	8,547,320

Rice experienced serious fluctuations in the beginning of this month, and some of the licensed brokers in Tokyo and Osaka were obliged to suspend transactions on account of inability to pay the increased amount of security. Various causes may have cooperated to bring about the present depreciation; but the contraction of the currency must certainly be regarded as the chief factor. The convertible notes in circulation towards the close of last year amounted to 250 millions of *yen*, but the figure now stands at 194 millions only, the reduction effected during the half year being 56 millions. This could not fail to affect the prices of commodities. In March symptoms of general depreciation became apparent, and developed themselves to a most alarming extent. The second cause of falling off, however, lies in the bright prospects of the wheat crop for this year, the total output being estimated at 19,317,978 *koku*, showing an increase of 573,157 *koku* as compared with the figure for ordinary years. There seems to be no question as to the success of the crop, and this alone is sufficient to cause rice to fluctuate.

THE BOOKSHELF.

"*Village Life in China, a Study in Sociology*," by the Rev. Arthur H. Smith, D. D., author of "Chinese Characteristics." Edinburgh and London, Oliphant, Anderson and Ferrier. Yokohama, Messrs. Kelly and Walsh.

This is an excellent book. It would be interesting reading, alike to the "general" and the ethnological student, at any time, but is particularly so now, when the vast, loosely-jointed, inarticulate monster we call the Chinese Empire is in the throes of a calaclystic struggle. To those who have read "Chinese Characteristics" it is needless to speak in eulogy of the thorough and scholarly methods of Dr. Smith, of the mass of information which he has brought together, or of the lucid and attractive character of his writing. To no foreigner, probably, is it given to thoroughly understand the complexities of Chinese life, but the present author seems to have devoted an immense amount of study to the question, with exceedingly satisfactory results.

The thoughtful reader rises from the perusal of of a volume of this kind with a certain sense of hopelessness. He begins to realise the gulf that divides China from the western world, to recognise the inert weight of conservatism comprehended in those ages of isolated national existence, and to comprehend the difficulty of permeating the huge mass with the leaven of Western civilisation. As Mr. Colquhoun aptly puts it, "the product resulting from duration multiplied by numbers must be immense, and if to this we add a third factor, isolation, we have no right to be surprised either at the complex character of Chinese civilisation, or at its peculiarly conservative form." It is the village life that Dr. Smith describes that is the basis of China; it is in villages that the mass of her enormous population is bestowed; and unless we know something of that village life it is impossible to realise the immense task that has to be undertaken before China can be regenerated. The literary globe-trotter, who passes through Hongkong, sojourns a few weeks in Shanghai, and takes a peep at Peking, living always in comfortable European hotels, airily discusses the question as if it required only twenty years of enlightened Government to transform China into a second Japan. One who, like the present author, knows the country, is rather less sanguine of the advent of a bowler-hatted and tweed-clad millennium for the vast tract of earth which at present nominally obeys the sway of Peking.

A squalid life it is, to European eyes, that is lived in these Chinese villages. In fact, life in China altogether is, except for the few, a grimy struggle, soulless and sordid, with few material pleasures, and apparently none of the higher and more spiritual kind. Well, indeed, might Tennyson esteem twenty years of Europe above a cycle of Cathay. Had he known more of Chinese life his language would probably have been even more emphatic. Take for example the life of the village tradesman, as Dr. Smith describes it. He is up long before daylight, he is at the grindstone all day, even at meals he has to discuss business, he spends his evening untying strings of cash with the view to the discovery of any rare coins which may be sold at a special price, and he retires at an hour so late as to leave him no chance of bestowing any thought on a thing more elevating than the struggle for the meat which perisheth. Most truly does Dr. Smith say:—"If the time should ever come, as come it may, when the far distant west comes into close and practical communication with the patient Chinese for the right to exist, one or the other will be behind-hand in the race, and it is safe to venture the prediction that it will *not* be the Chinese."

The chapter on "The Village Ferry" is an interesting one, not so much for the quaint scenes described, but because it affords a simple instance of the difficulties in the way of any improvement in the slipshod methods of the present day. After dwelling on the dangers and inconveniences of the passage, the author says:—

It is not unnatural for the Occidental whose head is always full of ideas as to how things *ought* to be done in the East, to devise a plan by which all this wild welter should be reduced to order. He would, to begin with, have a fixed tariff, and he would have a wide and gently sloping path to the water's edge. He would have a broad and smooth gang-plank, over which both animals and carts could pass with no delay and no inconvenience. He would have a separate place for human passegers and for beasts, and in general shorten the time, diminish the discomforts and occidentalize the whole proceedings.

Now stop for a moment and reflect *how* any one of these several "reforms" is to be made a fact accomplished. The gently sloping banks will wash with the first rise of the river; who is to repair them? Not the boatman, for "it is not the business of the corncutter to pull off the stockings of his customers." If the ferry is an "official" one, that only means that the local magistrate has a "squeeze" on the receipts, not that there are any corresponding obligations toward facilitating travel. Who is to provide those wide gang-planks over which the passage is to be so easy? Not the boatman. Not the passenger, whose only wish is to get safely over for that single time. Not the swarm of loafers whose interest it is not to have any gang-planks at all, or as nearly as possible none.

And even if the roads were made, and the gang-planks all provided by some benevolent despot, it would not be a week before the planks would be missing, and all things going on as they have been since the foundation of the Chinese world. The appointment of inspectors, police, etc., etc., would do no manner of good, unless it should be to their interest to further the reform, which would obviously never be the case.

No Chinese can for a moment comprehend such a conception as is embodied in the phrase *Pro bono publico*. He never heard of such a thing, and what is more he never wants to hear of it.

We have wasted an undue amount of time in crossing a Chinese river, for it is a typical instance of flagrant abuses which the Chinese themselves do not mind, which would drive Occidentals to the verge of insanity—if not over the brink—and which it seems easy, but is really impossible to remedy. *Mutatis mutandis*, these things are a parable of the empire. The reform must come. It must be done from within. But the impulse can come only from without.

Those sentences might be applied to almost any project of reform in the Chinese Empire.

The chapter on "Village Schools" is an illuminative one. School life is as wearisome as coolie or trade life in this tedious land:—

The scholars in a Chinese school are expected to be on hand at an early hour, and by sunrise they are, perhaps, howling vigorously away. When it is time for the morning meal they return to their homes, and, as soon as it is finished, again return. About noon they are released for dinner, after which they go back as before to school. If the weather is hot, every one else—men, women, and children—is indulging in the afternoon siesta, but the scholars are in their places as usual, although they may be suffered to doze at their desks as well as they can, for half the rest of the day. In this way the discipline of the school is supposed to be maintained, and some allowance made at the same time for poor human nature. Were they allowed to take a regular nap at home, the teacher feirs with excellent reason that he would see no more of them for the day.

If Chinese pupils are to be pitied in the dog-days, the same is even more true of the dead of winter, when the thermometer hovers between the freezing-point and zero. The village school will very likely have either no fire at all, or only such as is made by a pile of kindling or a bundle of stalks lit on the earth floor, modifying the temperature but for a few moments, and filling the room with acrid smoke for an hour. Even should there be a little brazier with a rudimentary charcoal fire, it is next to useless, and is mainly for the behoof of the master. The pupils will be found (if they can afford such luxuries) enveloped in long winter hoods, sitting all day in a state of semi-congelation.

They generally do not leave the schoolhouse until it is too dark to distinguish one character from another. When at length the scholars are released, it is not for a healthful walk, much less for a romp, but to return to their homes in an orderly and becoming manner, like so many grown Confucianists. In some schools the scholars are expected to come back in the evening to their tasks, as if the long and wearisome day were not sufficient for them, and this is, perhaps, universally the case in the advanced schools where composition is studied.

The nature of the instruction given is elaborately foolish, and calculated, one would imagine, to benumb the faculties even of an intelligent youth. What brains there are in China exist in spite of the educationists. A Chinese scholar, according to Dr. Smith, is the most useless of all beings, especially if he is to opoor to obtain advancement. Labour is beneath him. "He has nothing, he can do nothing, and in more cases he is unwilling to do anything. In short, viewed from the standpoint of political economy, he is good for nothing."

A certain scholar of this description was so poor that he was obliged to send his family back to his wife's mother's house, to save them from starvation. The wife, being a skillful needle-woman, was employed at good wages in a foreign family, but when her husband heard of it he was very angry, not because he was unwilling to have her associate with foreigners, who he was kind enough to say were very respectable, but because it was very unsuitable that she, the wife of a scholar, should work for hire. The wife had the sense and spirit to reply that, if these were his views, it might be well for him to provide his family with something to eat, to which he replied with the characteristic and ultimate argument for refractory wives, namely, a sound beating.

History is little taught, especially that of the reigning dynasty, which is not a "proper object of knowledge," histories generally ending at the close of the Ming Dynasty 250 years ago. Multitudes of Chinese scholars know nothing about matters of which we should consider ignorance positively disgraceful. An old teacher once remarked to Dr. Smith that he had never understood the allusions in the Trimetrical Classic (which stands at the very threshold of Chinese study) until at 60 years of age he read a Universal History written by a Missionary. When, indeed, we consider that most of the scholar's studies consist of an absorption of the dismal platitudes of Confucius and Mencius we can hardly dissent from the description of the whole plan of Chinese pedagogism as intellectual infanticide.

It is marvellous that in a mercantile country like China even arithmetic is not taught in the schools.

There is scarcely a man, woman or child in China, who will not spend a considerable fraction of life in handling brass cash, in larger or smaller quantities. It is a matter of great importance to each individual, to be able to reckon, if not rapidly, at least correctly, so as to save trouble, and what is to them of far more importance, money. It seems almost incredible that for instruction in this most necessary of arts, there is no provision whatever. To add, to subtract, to divide, to multiply, to know what to do with decimal fractions, these are daily necessities of every one in China, and yet these are things that no one teaches. Such processes, like the art of book-keeping in Western lands fifty years ago, must be learned by practical experience in shops and places of business. The village schoolmaster not only does not teach the use of the abacus, or reckoning board, but it is by no means certain that he understands it himself.

The Chinese reckoning board is no doubt a very ingenious contrivance for facilitating computation, but it is nevertheless a very clumsy one. It has the fatal defect of leaving no trace of the processes through which the results have been reached, so that if any mistake occurs, it is necessary to repeat them all, on the reiterative principle of the House that Jack Built, until the answer is, or is supposed to be, correct. That all the complicated accounts of a great commercial people like the Chinese, should be settled only through such a medium, seems indeed singular. An expert arrives at his conclusions with surprising celerity, but even those who are familiar with ordinary reckoning, become puzzled the moment that a problem is presented to them beyond the scope of the ordinary rules. If one adult receives a pound of grain every ten days, and a child half as much, what amount should be allotted to 227 adults and 143 children, for a month and half? Over a problem as simple as this, we have seen a group of Chinese, some of whom had pretensions to classical scholarship, wrestle for half an hour, and after all no two of them reached the same conclusion. Indeed, the greater their learning, the less fitted do the Chinese seem to be, in a mathematical way, to struggle with their environment.

The higher education is merely a more elaborate system of futilities. There was a prospect in 1898 of better things, but the conservative reaction extinguished the faint glimmer of enlightenment, and it is doubtful if China, as an Empire, will have a second chance.

The chapters on religious customs and observances deal with more or less familiar facts. More interesting to the student are those dealing with the capacity of the Chinese for co-operation in business, which contrasts curiously with their absolute indifference to any objects connected with the public good. The sections dealing with family life and the status of women are saddening reading, familiar as the facts are. Dr. Smith hopes much—more probably than the fact justifies—from the influence of Christianity.

It should be added that the book is well illustrated.

Lutherans in Japan, by the Rev. R. B. PEERY, A.M., PH.D.; Newberry, S.C., Lutheran Publication Board of the United Synod.

THIS is a pleasantly written book, telling of the founding of the Lutheran Mission at Saga, Kiushu, early in January, 1893, by the Rev. J. A. B. Scherer and the Rev. R. B. Peery, upon appointment by the United Synod of the South, U.S.A., and its subsequent career. Both men were under thirty years of age when they arrived on these shores and with all the ardour of youth threw themselves into the work of the mission field. After a few years of steady application, the Rev. J. A. B. Scherer's health broke down, and he had to return to America, where he has since been called to a pastorate at Charleston. Mr. Peery has now been joined by the Rev. C. L. and Mrs. Brown, and by the Rev. J. M. T. and Mrs. Winther. Their work is progressing steadily and the future of the Mission appears full of bright promise. In this connexion the following extract from the book should interest our readers:—

Doubtless there are people among the friends of the Lutheran Mission in Japan who think the work ought to grow much more rapidly than it does. It would seem that two missionaries and two native preachers working for seven years ought to have gathered more than seventy-five converts.

Before coming to the mission field I used to think that Christianity was so vastly superior to all other religions, and such a blessed thing in itself, that the only thing necessary to its general acceptance by the ethnic races was a proper presentation of it to them. If they could but hear of the great love of Christ, and the free and perfect salvation He has provided, why, of course, they would at once accept Him. All that was necessary was to carry the message to them, and they would all become Christians. But such is by no means the case. In every land there are many things which hinder non-Christian people from accepting the Gospel. When we come to a full realization of the number and power of these antagonizing influences we cease wondering why the work does not go faster, and come to wonder how it makes any progress at all.

That the church at home may realize what these militating influences are I will set down here in their order the chief hindrances to the more rapid spread of the Gospel in Japan. Our difficulties are not peculiar to us, but are common to this whole field.

(1) Perhaps the most potent influence that opposes Christian work here is the *Extreme Nationalism* that has sprung up within recent years. The Japanese have always been a patriotic people, but recently this patriotism has almost grown into a fanaticism. Modern Japan is young and immature, and she has all the conceit and self-assertion natural to spoiled youth. Contact with foreign nations has made her very sensitive, and strengthened the feeling of *jingoism*. Everything new is looked at from the standpoint of its effect on the nation. When the claims of Christianity are presented the first question is, What will be its effect upon Japan? That question is being asked by thousands of men to-day, and the enemies of the Gospel are careful to circulate the reply that its effect will be bad. They also point to facts that, to a superficial observer, appear to support their claim. Christianity undoubtedly antagonizes many of the time-honoured customs of this country, and its general acceptance would necessarily lead to a complete social revolution. History is also cited in proof of the assertion that Christianity is an enemy of Japan, as three hundred years ago the Catholic Christians rose in rebellion against the government.

Loyalty and filial piety are considered the chief virtues here, and the Gospel is said to be antagonistic to both, for it teaches a common brotherhood of men, and makes obedience to Christ superior to obedience to parents. The Buddhists have recently circulated far and wide the charge that while Christianity has a God, it has no Prince, and no Parent. In this way our work is made to appear hurtful to Japan, and the strong national spirit at once condemns it.

The second hindering influence, says Mr. Peery, is the sceptical character of the education imparted in the Government schools and colleges; the third is the grossly materialistic spirit of the times; the fourth, Buddhism; the fifth, the social ostracism that is visited upon professing Christians; the sixth, the dense ignorance of the lower classes; the seventh, many national customs, which Mr. Peery elaborates in detail.

A suggestive chapter is that entitled "A missionary's life in Saga." It draws away the veil that hides the missionary's life from the perception of the home-staying folk as well as of many of the dwellers in the former foreign Settlements, and helps one to realise the great sacrifices these devoted men and women make in order to spread among the Japanese the message of the Gospel of Peace. After referring to the manner of their daily life in Saga, and the isolation which necessarily exists for missionaries in a remote country town, the entire lack of suitable playfellows for their tiny children, etc., Mr. Peery goes on to observe:—

The environment here is not conducive to intellectual growth and development. In the first place, nearly all the time we can give to study must be spent on the language, and, aside from a little mental discipline, this acquirement does not advance a man's store of knowledge or intellectuality one whit. There is little here to stimulate one to hard and patient research; there is not that intellectual society that is necessary to call out a man's best powers. The contact with thinking men, which is one of the great privileges to be enjoyed at home, is largely wanting here. True, there are some educated Japanese that we occasionally come into contact with, but their interests and studies are generally far different from ours. So our opportunities for mental growth are poor; and our development, in so far as it does proceed, is apt to be one-sided. Certain it is that long residence in the mission fields puts one out of touch with society at home. The missionary returning to America is often surprised to find that he is no longer one of the people. His interests are different; his viewpoint is different; even his language is belated. It is perfectly natural that he should fail to keep up with the forward march of the world, because his life is spent in an intellectual environment unconducive to mental growth and development.

Some people seem to think that a missionary is necessarily a very spiritual man, and that to give up all and go out to work for heathen people is bound to advance him in his own spiritual life. But this is not usually the case. Our opportunities for growth in piety, in spirituality, and in all Christian graces are not so good here as are yours at home. We live in an environment of moral and spiritual deadness, of abject irreligion, which unconsciously but surely exerts its influence upon us. We do not have the helps in the Christian life that you have. There is no sustaining Christian sentiment in the community; no church bells calling to praise and prayer, where we can be encouraged and strengthened by contact with godly men and women. At home we receive spiritual help from our friends and leaders, but here we can get little human help. We must constantly give away from our ever-diminishing stores, and there is no one to help us replenish them.

We are sorry to see that Mr. Peery's experience with household servants has been unfortunate. He condemns the whole class, with one exception, as "impudent and impertinent." "The servants as a body are dishonest, and I have confidence in none of them." Therein perhaps lies the root of the evil. Confidence begets confidence and Japanese servants are only human when they repay in the coinage they receive. Many a foreign resident in Japan could add his or her testimony to ours when we say that we have always found among the servants whom we have had to deal with, rare courtesy, ever-ready willingness, an all pervading cheerfulness, and, in the case of families who have long resided in Japan, devotion and faithfulness to the household's interests that is to be equalled rarely elsewhere.

We can commend "Lutherans in Japan" to all who wish to gather an insight into the work and aspirations of those who labour in the mission-field in the Empire of the Rising Sun.

In the Yokohama Chiho Saibansho on Wednesday afternoon, before Judge Sato, Akiyama Chiyo, a girl of 15, was sentenced to life imprisonment on the charge of murdering a baby, the remains of which were discovered at a temple at Kitagata, Bluff. A woman named Takanashi Masa, aged 24, the mother of the baby, was sentenced to modified penal servitude for instigating the minor to commit the crime.

CORRESPONDENCE.

"THE STORMING OF THE TAKU FORTS."

SIR,—In your to-day's issue under the above heading, you mention that the Japanese took a principal part in storming the forts at the north side of the Peiho—*in conjunction with the European troops.* You compliment the Japanese marines on the fact that they had a chance to distinguish themselves. I appreciate your remark and thank you heartily.

Your version, however, requires a little correction in view of the official telegram published to-day. It is dated 19th inst., Chefoo. According to it, about 1,200 allied forces, including 360-370 Japanese marines, took stand at the Railway Station (Tong-ku) and fired on the forts. The Japanese troops, first of all (*dai ichi ni*), occupied the strongest fort on the north side and hoisted the rising sun flag. From this it appears that the escalade was simply effected by the Japanese *alone*. The incident is, perhaps, trivial in itself, but it is not fair to those noble fellows, who fell in the action, that their brave deed should be obscured by cooperation of others. Apologizing for trespassing on your space.

I remain, Sir, yours obediently,

A JAPANESE CITIZEN.

Tokyo, June 20th, 1900.

L'ABBÉ LIGNEUL ON FREEMASONRY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with great interest the review of L'Abbé Ligneul's recent book "Himitsu Kessha," which appeared in your columns on the 11th inst., and his reply to that review which you published on the 16th inst. I regret that the book itself, being in the Japanese language, is a sealed volume to me, so that I cannot ascertain what are the "volumes de témoignage" to which he refers, or what weight they carry. I have, however, at various times read and studied four or five other books written by French ecclesiastics with the same object and aim, all of which reproduce, with remarkable unanimity, the same threadbare and baseless slanders, in support of which I have never seen any evidence adduced which would pass muster in any impartial court of justice.

Your reviewer might have added to his remarks that at the present time (and for a quarter of a century past) H.R.H. the Prince of Wales is Grand Master of the Grand Lodge of England, under which some 2,500 Lodges hold their warrants; that Her Most Gracious Majesty Queen Victoria has been Grand Patroness of the same body for a considerably longer time; that the Prince of Wales is also Patron of the Scotch and Irish Grand Lodges, comprising within their jurisdiction nearly 2,000 Lodges; and also of the various Grand Lodges of Canada, Australia, Tasmania, etc., as to the extent and influence of which I cannot at this moment give full particulars. Add to these the 5,000 American Lodges mentioned by your reviewer, and we obtain an aggregate representing an overwhelming majority of the total Masonic bodies throughout the world.

Now, all these bodies are in constant correspondence and in thorough unison as to the principles on which Freemasonry is based; and if a small minority—not by any means representing even a majority among the remainder—have gone astray from the genuine principles of the Order, while still asserting their claim to belong to it, can that minority be accepted as a fair sample of the whole? Would it be fair to judge of Christianity, including the Roman, the Greek, and the various Protestant Churches, by the doctrines preached by the Latter-day Saints, or some of the ultra-fanatic Russian sects?

M. Ligneul is kind enough to grant that within our order may be found a few honourable and well-meaning men (the proportion being somewhat smaller than the ten righteous men who would have saved Sodom) and he deplores the fact that they have been so misguided as to stray into such perilous company, and unwittingly to give it their countenance and support; but is there not (to put it mildly) the bare possibility that he may be mistaken as to the relative proportions of the two elements, and that it is the preponderance of the good, and the small precentage of the bad (certainly not exceeding the average to be found in any other benevolent or religious association), which have rendered our Order so popular and so deservedly successful in every country where religious and political freedom exist side by side with a genuine and earnest respect for public and private morality? None of his predecessors have yet succeeded in proving, nor, I confidently assert, can M. Ligneul himself prove, that either Freemasonry as a body, or any individual Mason faithful to the traditions of his Order, have ever taught, or even suggested, any one of the atrocious doctrines which he parades in Chapter IV. of his book, and which are quoted by your reviewer. I regret extremely that I cannot ascertain for myself from his book upon what foundation he bases those charges. I should also be extremely interested to ascertain to what extent he has been victimized by the extraordinary series of hoaxes chronicled in "Appleton's Popular Science Monthly" for March and April last, under the appropriate title of "A Survival of Mediæval Credulity." Your readers will find it upon their club tables, and I strongly commend it to them, and to M. Ligneul's notice, if he has not already seen it. He will find it eminently useful for his second edition, apropos of which your reviewer has expressed the hope that before M. Ligneul brings it out, he "should study something beyond the accounts of French Freemasonry run wild that have fallen into his hands." May I suggest that he commences by a study of the "Book of Constitutions" published by the Grand Lodge of England, with which the other Masonic bodies which I have named above are in thorough accord. I shall be very pleased to lend him a copy, if he really cares to study the other side of the question. From it he will be astonished to learn that every Initiate, on his first entrance into Freemasonry, is charged in the following terms:—

"As a citizen of the world, I am to enjoin you to be exemplary in the discharge of your civil duties by never proposing, or at all countenancing, any act that may have a tendency to subvert the peace and good order of society—by paying due obedience to the laws of any State which may for a time become the place of your residence, or afford you its protection; and above all, by never losing sight of the allegiance due to the Sovereign of your native land; ever remembering that Nature has implanted in your breast a sacred and indissoluble attachment towards that country whence you derived your birth and infant nurture."

He will also learn that all topics of political and religious discussion are forbidden in our Lodges; and further, that before any Mason can be installed as Master of his Lodge, (and year by year he, if he is re-elected, or his successor, has to repeat the same solemn pledge in the presence of the assembled Brethren), he has to signify his unqualified assent to the following, among other, obligations, and to promise that he will "support and uphold them, as Masons have done in all ages."

1.—You agree to be a good Man and true, and strictly to obey the Moral Law.

2.—You are to be a peaceable subject, and cheerfully to conform to the Laws of the country in which you reside.

3.—You promise not to be concerned in plots or conspiracies against Government, but patiently to submit to the decisions of the Supreme Legislature,

4.—You agree to pay a proper respect to the Civil Magistrates, to work diligently, live creditably, and act honourably by all men.

And so on. I could easily flood your columns with similar pronouncements, all authentic and authoritative, and I trust that M. Ligneul will have the candour to verify these statements for himself, and to admit—unless he can disprove—their correctness.

As regards its aims and objects, Freemasonry is not, in the commonly accepted and very comprehensive sense of the term, a "secret society." It does not attempt to conceal its existence, its aims, or its objects. Its rites and ceremonies are no more immoral or objectionable than those by which a candidate is admitted into the Roman Catholic Church, either as a layman or cleric, and their object is to confine its benefits to worthy and deserving men, and to prevent the intrusion of those who would use its organization for unworthy purposes, subversive of law, order, and morality.

Lastly; M. Ligneul speaks of "societies attached to Freemasonry, as branches to a trunk." There are no such societies, although there are many which have adopted or copied certain details of our organization, and make spurious claims to belong to our Order; but we, the genuine Freemasons, refuse to recognize or own them, to any, even the smallest, extent.

Yours truly, W. SILVER HALL.

9, Tsukiji, Tokyo, June 19th, 1900.

MEIJI ONGAKU-KWAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your criticism of the Meiji Ongaku-kwai's last concert was fully justified by some of the performances on that occasion. For the first time since I have known anything of this society, signs of carelessness and negligence were visible. It is true that only one or two members were at fault. The majority were, as they always have been, faithful to the work they have undertaken. But the movements of an orchestra must be as accurately regulated as those of a watch. If the smallest wheel goes wrong all the machinery is thrown out of order. Such lapses as those of last Sunday's cannot happen again while the present directing authority is recognized, but it is unfortunate that they should have happened once, for the Meiji Ongaku-kwai is the only body in Japan that can keep alive even a spark of public interest in foreign music, and, if its standing is impaired, this service cannot be effectively performed. It is only a little skeleton of an orchestra, and its capacity is limited by the paucity of its forces; but it is not too small or too weak to interpret a great deal of good music correctly and agreeably, or to give Japanese audiences opportunities of becoming acquainted with an art the importance of which they may dimly imagine, but can never begin to realize except through such gradual processes as these young volunteers are endeavouring to institute. If the Meiji Ongaku-kwai fails in its purpose, no other organization is likely to succeed for a long time to come. No other, indeed, appears ambitious to succeed,—not even the Government establishment which in former years showed praisworthy activity, but the officers of which now take scarcely any pains to diffuse musical intelligence or to stimulate musical progress among their countrymen. All thaf is done in this direction is due to the independent exertions of a self-sustaining association, which has hitherto worked hard and well, and which, it is hoped, will not again deviate from the pledges ot diligent and earnest study by which all its members are bound. E.H.H.

Tokyo, June 27th, 1900.

TIENTSIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Knowing Tientsin and its neighbourhood thoroughly well, and having made a study of the defensive capacities of the native city and settlement during the months of September, October, November, and December, 1894, perhaps the following notes from me may not come amiss to you at this juncture.

The Tientsin Settlement (British and French) lies along the South and West banks of the Peiho. On the North and East banks are a number of large buildings, such as the Railway Station and workshops. There are besides huge mounds of salt belonging to the Chinese Government Salt Intendant, covered by earth to protect it from the inclemency of the weather. All these places are only too likely to be in the hands of the rebels, and from the shelter they could obtain it is probable they would direct their fire upon the Settlement at a range varying from 300 to 1,000 yards—a very deadly range even for such poor marksmen as the Chinese have so often proved themselves to be. On the South and West side of the Settlement, and inland from it and the river, lies a considerable space of fairly open country. The foreign cemetery, gas works, and one or two small hamlets inhabited by the poorest of Chinese dependent upon the foreigners in the Settlement for a living, are situated thereon. Beyond and partly encircling this space, and therefore the Settlement as well, runs the old wall that was erected by the native authorities in order to keep the Taepings from out the City and Settlement in the troublous days of the Taeping rebellion. This wall is of mud, from twelve to twenty feet thick at base and from six to ten feet broad on top, and in extensive stretches some eight or so feet high. Though much out of repair, even to the extent of being breached level in many places, it yet is capable of affording excellent shelter to guns and men from the fire of such artillery as the Naval Brigade is likely to have landed. The distance this wall lies from the settlement varies considerably. Some of the foreign houses situated on what is known as the "Race Course Road" lie within a stone's throw of it. But it must here be noted that such houses are properly speaking outside of the Settlement proper, though for the purpose of defending foreign life and property they would be included in any defensive schemes as belonging to the Settlement. The United States Consulate, which is said to have been burnt, lies about 300 yards from the wall mentioned, and in 1894-95 the space intervening was perfectly open. Beyond the wall and somewhat more than two miles from the Settlement lies the arsenal. The tall chimney if in the possession of the rebels would give them an excellent look-out station, and the arsenal buildings shelter.

The extensive area covered by the wall, the salt mounds, the Railway Station and workships, is as can easily be conceived, entirely in favour of an attacking force. Especially so in the present case where the defenders are so few and with women and children to think of, and where the Chinese rebels and soldiers so outnumber them.

There is another very weak point in the defensive capabilities of the Settlement. I refer to the fort situated to the north of the city and along the banks of the river at a point from whence the guns could be brought to play upon the Bund and Settlement in a most effective manner. Li Hung-chang started building that fort some years prior to the China-Japan war, but because of the representations made by the Foreign Representatives at Peking, he shortly afterwards ceased building operations. However, the fear of a Japanese advance upon Peking via Tientsin gave him an excuse to accomplish his design of having a fort that would command that short stretch of water along which runs the Tientsin bund. By December, 1894, that fort was built and

Digitized by Google Original from CORNELL UNIVERSITY

guns of a sufficient calibre to cope with such as gunboats usually carry were mounted. I am not quite sure what the calibre of those guns were, but I think it was either 4.7 or 6-inch. In any case, guns in the neighbourhood of such calibres, if properly served, would not only knock the Settlement to pieces, but overpower the fire of such small guns as the Naval Brigade is only too likely to have with it. It was intended to mount three big guns and a number of small ones, but whether they were mounted or not I do not know. I cannot say for certain just what calibre and number of guns it was intended to mount on the fort. On some three or four occasions I went over the fort, examining things as carefully as I could, and I remember being particularly struck by the massiveness of the walls—of mud faced with a plaster not unlike that used by Japanese on their *kura*, and for exactly the same purpose too. I may as well here state that the distances given are approximate, for unfortunately I have not my notes and sketches with me, not caring to carry such valuables about when knocking around the interior, and living in a Japanese hotel as I am now doing.

One more matter before I close this already ~~over long letter~~, for it may be of interest to certain of our American cousins. As a monument to the late General Gordon, and to commemorate the good work done by him in North China during and after the Taeping rebellion, the present Gordon Hall was erected in Tientsin. It is used as a library, and for all such purposes as a Public Hall is generally used. The building is far and away the highest in Tientsin, and from its roof flash light communication can be kept up with ships lying off Taku, provided the weather be fine. The Chinese have no special love for the building, for they say that it interferes with the *Fengshin* of the surrounding country. At any rate, there is no doubt that they would do their best to destroy it. Now should the guns from the fort fire upon it, and miss it, there would be every likelihood of their hitting the American Consulate lying some half-a-mile further on. For that building is in the same line of fire from the port as is the Gordon Hall. This fact was during 1894-95 constantly being made a joke of by the friends of Mr. Reed, the late genial United States Consul at Tientsin.

I remain, yours sincerely, F. J. NORMAN.

Kei-ki-kan, Inage, Chiba-ken, 26th June, 1900.

CHINA NOTES.

Placards were posted up on June 14th at Wuhu calling for all the people to rise up and exterminate all the foreigners and burn their houses.

The *China Gazette* reports that there was some little unpleasantness when the Japanese went to join the other foreign forces at the forts. This paper is generally most unreliable.

The troops and rowdies at Nanking are said to have been growing very menacing towards the few foreigners there, though the Viceroy is well disposed. The wife of the German drill-instructor has come to Shanghai for safety.

This is a sample of the writing on the China side with reference to the present situation :—

If Shen Taotai's telegraph lines from Peking are all "down," as he asserts, he must certainly be congratulated upon the expedition with which he has been able to devise a perfect system of Marconi telegraphing which reaches from Peking to Canton. After the news of the fall of the Taku forts on Sunday morning had reached Peking, (between which and Tientsin we are officially asked to believe all the lines are down) a decree was able to be transmitted to Canton by the usurping Government ordering Li Hung-chang to proceed post haste to the capital to assist in straightening out the terrible mess things have got into, and so rapidly was this command conveyed that Li left Canton last evening (Monday, or within 36 hours after the fight at Taku) for Hongkong *en route* for Peking. Sheng is a smart man, but he would be improved by a short treatment with a strong piece of rope for increasing the length of the neck.

The *N.-C. Daily News* gives the following extract from a private letter from a lady now visiting Peking, dated the 10th instant :—. . . "I have no doubt that you know the condition of affairs, and that I am really a prisoner in Peking. . . There has been no train in or out since last Sunday (3rd June), and the wire is cut, so we only know the fearful rumours of damaged bridges, burning villages, etc., and the situation has beome more serious every day. An overland courier has been sent as far as Tientsin and I am writing that way. . . . Personally I have not felt any fear, but, to satisfy our host, I had to go last night and sleep in the British Legation. Other troops are expected up to-day, and they say by rail, but I have given up expecting. The two poor missionaries, Norman and Robinson, are undoubtedly killed, but they are the only Europeans we know of. . . . The people in the city seem quiet enough."

The northern part of Hupeh is very unlike the southern in its general attitude towards foreigners. It is rare to hear of incivilities offered to missionaries or others, resident or travelling about there. Lately, however, several parties travelling up from Hankow have been attacked at night by robbers. A few days ago a murderous attack was made upon Mr. Masoni of the Norweigian Mission. He was returning to his newly rented house in Yünyangfu. The boat anchored at a lonely spot in the mountains not far below Yunyang when they were attacked by eighteen armed robbers. Mr. Masoni and his servant defended themselves as best they could—a pigtail being lost on each side—and several wounds from knives were inflicted. The robbers carried off money, a gold watch, and other things. Mr. Masoni immediately reported himself at the yamên covered with blood and his clothes all torn. The Hsin at once sent 40 men to arrest the robbers. The ringleader has been caught. There is no reason to believe that the attack indicates any widespread anti-foreign feeling.

A correspondent writes to a Shanghai paper from Tsing-kiangp'u :—

Troops are daily arriving here from the south. Three weeks ago 10,000 men were sent north to Hsuchow-fu and Suchien-hsien, where the officials evidently fear trouble. There are now more than 10,000 men at this place under the command of General Chang of Hupeh. The braves are held in readiness to go wherever there is an uprising, as little trouble is expected here. Tsing-kiang-pu is to be a base of operations, daily receiving large numbers of Hunan and Hupeh men. The temples and public buildings are full of soldiers. The discipline is characteristic. The behaviour of the men has changed for the worse in the last two weeks. There are daily altercations between soldiers and shop-keepers. Foreigners are followed and cursed, missiles thrown and threats freely made to beat and kill the foreign devils. So far it is only words, but the tow is easily set aflame and that exactly describes the rabble of a Chinese city after a word from headquarters. The *I-Ho-Chuan* exists in large numbers in this province, chiefly in the Hsuchow prefectnre, but in this district and to the south they are now found and are said to be drilling. There is no word yet of an outbreak in Kiangsu, but it may be expected any day near the Shantung line. There is much restlessness among the people, who are in expectatiun of great trouble this summer. The masses are losing confidence in the governing classes and nothing but the timidity of the populace and the lack of co-operation prevent a general uprising.

AMERICAN NOTES.

Boston is pluming itself on the fact that the plan for providing poor people with small patches of land on which to raise vegetables to enable them to live has had to be abandoned because there were no applications for allotments.

Mr. Stephen Crane, the famous novelist and war correspondent, who was removed to the Black Forest of Germany in the hope that it would improve his health, died on June 4, aged 30 years. His wife was at his bedside.

The latest official Roman Catholic census, which is very carefully prepared, shows a surprising strength of that church in America. There are altogether 10,129,677 Roman Catholics in the United States. In the archdiocese of New York alone (not the provinces) there are 825,000—more than all the Protestant Episcopalians in the United States, more than all the Congregationalists by 200,000, and much more than any of the Lutheran bodies.

The will of the late Jones G. Clark, the founder of Clark University, who made his fortune in California in 1849, leaves $1,000,000 and the residue of his estate to the institution, providing the people of Worcester raise a fund of $500,000. If they raise only $250,000 he bequeaths $500,000 to the University. He also leaves $100,000 for the University library and $100,000 for the department of art. In case a public fund is not raised within three years the residue of the estate reverts to his heirs at law. In the original will Clark made his gift to Clark University conditional upon the resignation of President G. Stanley Hall within a year of the filing of the will for probate. This condition is revoked in a late codicil.

The first report from Klondike to reach Tacoma is to the effect that the clean-up is well under way and will reach $25,000,000. From all the creeks reports are that the clean-up will be 50 per cent. greater than last year. All creeks are turning out better than expected, except Sulphur creek, from which great returns were looked for, but the rich strike made there was found to be only a pocket. The yield from the Sulphur diggings will not exceed $60,000.

President Jordan and Instructor J. O. Snyder of the zoology department of Stanford University are visiting Japan, where they will make a study of the fish of that country and also collect some specimens for the zoology department. A collection of fresh-water fish will be made at Lake Biwa. The collection will be made in the interests of the university, and part of the expenses will be defrayed by Timothy Hopkins. Dr. Jordan and Mr. Snyder have been making a study of Japanese fish for two years and have several papers on the subject in press now. The expedition will return to America about the first week in September.

The Rev. Dr. Richard Salter Storrs, whose death occurred on June 5, after a wonderfully successful pastorate of fifty-three years, resigned less than a year ago his position as spiritual head of the Church of the Pilgrims in Brooklyn. Dr. Storrs was known wherever the Christian church has carried its name. He was in his prime when Henry Ward Beecher was electrifying the nation with his eloquence. He was a contemporary of Dr. T. L. Cuyler and Dr. T. de Witt Talmage. He worked in hearty co-operation with Dr. Lyman Abbott. Beecher is dead, and Talmage, Abbott, and Cuyler have resigned. Dr. Storrs was, therefore, the last of the famous Brooklyn galaxy of preachers. Dr. Storrs was a very old man, being near his seventy-ninth birthday at the time of death.

The reception accorded the Boer commissioners by President McKinley and Mr. Secretary Hay met with almost unanimous approval from the press of the U. S. It is generally conceded that the policy of strict neutrality definitely announced by the President, and ratified by the Senate in its refusal to extend to the Boer emissaries the privilege of the floor, was the only course that could consistently be pursued. Says the Chicago *Record* (Ind.):—"It is safe to say that there will be little difference of opinion among the people generally concerning the wisdom of the answer made to the Boer envoys. Even the critics of the Administration, if in power themselves, would not undertake to involve the United States in hostile complications with Great Britain. . . . No other answer could reasonably have been expected. It would be an unprecedented course for the United States to take a hand in the settlement of a controversy raging in a distant part of the globe. . . . Such a course on our part would be most unwise, and would be opposed to our traditional policy."

On June 2 Mrs. M. T. Patterson, wife of the chief officer of the ill-fated steamship *Pelican*, which sailed from Port Townsend on October 12, 1897, with a cargo of railroad ties for the Siberian Railroad, received the following message, picked up February 8, 1900, by Augustus Wyman on Ukomk island. The message was forwarded by M. F. Wright, the Alaska Commercial Company's agent at Kodiak :—

"Latitude 50 degrees north, Longitude 175 degrees west, October 24 1897.—To whom it may concern: Steamship *Pelican* is about to sink. We are leaving in frail boats. We realize our fate. God bless my darling wife.

"M. T. Patterson, Chief officer.

"Port Townsend, Wash., is my home."

This is the second message from Mate Patterson received by Mrs. Patterson. The first message was not dated. According to the date on the above message the *Pelican* met her fate twelve days after leaving port, and shipping men say it is strange that no wreckage from the *Pelican* has ever been found.

NEWS OF THE WEEK.

An action has been commenced in the Chiho Saibansho by the Eagle Flinching Ink Company of New York, against Mr. John F. Wagen, the claim being 952.53 *yen*, the cost of goods supplied to him by the Company.

The Rev. J. W. Adams, B.A., vicar of Stow Bardolph, Norfolk, who has been appointed honorary chaplain to the Prince of Wales, is the only Anglican clergyman who wears a Victoria Cross. This very unusual decoration for a clerk in Holy Orders he won by the gallant rescue of a

Digitized by Google Original from CORNELL UNIVERSITY

party of Lancers when serving under Lord Roberts in Afghanistan.

A Japanese named Takahashi Kintaro (43) jumped from a train at Fujisawa at 7.30 a.m. on the 27th inst. His right leg was cut off and he received other severe injuries.

Miss Frederica Elizabeth Perceval, youngest daughter of the late Right Hon. Spencer Perceval, M.P., who has just died, remembered perfectly her father's assassination in the House of Commons by Bellingham in 1812, the victory of Waterloo, the festivities which followed it, the Thames being frozen over, and numberless other events of interest in the early part of the century.

The Fairfield Shipbuilding Company, of Glasgow, successfully launched on 16th May the first-class armoured cruiser *Aboukir* for the British Navy. She is 440 feet long, giving a displacement of 12,000 tons. Her engines develop 21,000 horse-power, the guaranteed speed being 21 knots. Steam is supplied by thirty grouped water-tube Belleville boilers. Her armament is of especially hardened steel. She is strongly armed with the latest pattern guns, and will carry 750 officers and men.

From St. Petersburg comes the news of the death of the veteran Professor W. Wassiljew, many years Professor of Chinese in the University and member of the Imperial Academy of Sciences. Wassiljew's great work on Buddhism was written as long ago as 1856, but, being founded on original Tibetan and Chinese authorities, it retains its importance. This was translated into French and German. Among the chief of his other works are "History and Antiquities of the Eastern Portion of Central Asia" (1857), "Mahomedan Movement in China" (1867), Manchurian Chrestomathy and Dictionary (1863-66), and "Materials for a History of Chinese Literature" (1187). Wassilijew was born in 1818 at Nijni Novgorod.

For nearly a quarter of a century John Kendo Fudikichi has been verger of St. Bartholomew's, Brighton, of which Mr. Cocks, a relative of the late Lady Salisbury, is the vicar. He was born in Japan in 1828, and was employed in the Emperor's stables at Tokyo. In 1866 he left Japan with the first performing troupe of Japanese which visited Europe, and after performing in many capitals settled in England, and was employed in building a Japanese village at the Alexandra Palace. There he came under the influence of the Rev. W. H. F. Garrett, who was just going on a mission to Japan, and was baptised by the late Rev. Dr. West at St. Mary Magdalene's, Paddington. Soon after he went to Brighton, where he has been an indefatigable official, whose striking figure always arrested the attention of strangers at St. Bartholomew's.

Stephen Crane, the American author and war correspondent, died at Baden-on June 5th, aged 30 years. Stephen Crane four years ago made a great hit with "The Red Badge of Courage." It was cast in the form of a romance and is a detailed study of the development of a raw recruit in the American Civil War under the fire of the enemy. What made it noteworthy was that Crane could have had no real experience of what he described with a masterly force and graphic realism not surpassed by Tolstoi in his sketches of Sebastopol. The great Russian described, from his own experience, the sensations of the man under fire, yet Mr. Crane, without any actual service under arms, produced more vivid sketches of the horror of war and the triumph of courage over fear than anything that Tolstoi has written. The same effects Crane succeeded in producing in verse, though his poetry, being written without rhyme and in peculiar metre, did not meet with the same favor as his prose. The only work that Crane had done in the last four years that approached his best book was "The Open Boat," a short sketch of the wreck of a filibuster on the Florida coast. Crane was in the Cuban war, and before his last illness was writing some sketches of his Army experience before Santiago.

CRICKET.

YOKOHAMA VERSUS THE P. & O.

The very rare occurrence of two P. & O. Mail steamers being in port together at Yokohama was taken occasion of to make up a match with the Y. C. & A. C., and the affair came off in broiling summer weather. The sailors were badly beaten by the home eleven, as the scores below will show :—

SAILING RACE.

On Saturday afternoon, the 39-and 32-raters of the Y. Y. C. had a race to Uraga (16 miles) for the Norddeutscher Lloyd Cup, and second and third prizes by the Club. During the afternoon there was a nice light south-easterly breeze. The start was at 2 p.m. and the times at the Lightship and finish were as follows :—

	Rating.	Light-ship.	Finish.	Allowance.
Haidee	39	2.12.53	5.43.26	10 min.
Mary	37½	2.11.19	5.15.28	scratch.
Maid Marion	36½	2.12.02	5.33.24	8 min.
Spray	34	2.12.15	5.45.40	20 ,,
Wanderer	32	2.17.02	not taken	40 ,,
Daimyo	29½	2.16.14	,,	80 ,,
Svanhild	22½	2.17.47	,,	40 ,,

Mary takes first prize, *Maid Marion* second and *Spray* third.

The Mosquito Yacht Club had a race on Saturday afternoon, *Nandeska* won with *Kodesu* second, *Yugao* third, *Sodeska* fourth, and *Abunai* last.

THE INDIAN FAMINE FUND.

The Hongkong and Shanghai Banking Corporation at Yokohama send us the following additional names of subscribers to the Indian Famine Relief Fund :—

Sincerely, V. W. HELM.

Tokyo, 3, Mitoshiro-cho, Kanda, June 28th, 1900.

TELEGRAMS.

(REUTER'S SPECIAL SERVICE.)

THE WAR IN SOUTH AFRICA.

Shanghai, June 21.

General Hunter's advance column occupied Krugersdorp unopposed.

METHUEN DEFEATS DEWET.

Lord Methuen, while escorting a convoy o Heilbron, routed D ewet, who endeavoured o prevent his entry i nto Heilbron.

GUNS CAPTURED.

General Hunter captured two guns between Pretoria and Rustenburg.

COMMUNICATIONS RESTORED.

Railway and telegraphic connections between Capetown and Pretoria have been restored.

THE CHINA COMPLICATION.

Shanghai, June 21.

France has ordered three men-of-war to China, also a battalion of marines and two batteries of artillery.

Germany is sending two battalions of marines.

GUERRILLA TACTICS.

A large force of Free-Staters are concentrating in front of General Rundle with the intention of breaking through southwards. The Transvaalers are retiring before Gen. Buller with the object of joining the Free-Staters.

THE BOER WAR.

A telegram from Sandspruit Station dated the 20th says that Buller's head-quarters are two miles north-west of the railway.

An informal armistice for five days has been made with Botha, at the expiration of which time Lord Roberts will take vigorous action.

THE McKINLEY PLATFORM.

The Republican Convention has been held at Philadelphia. It has declared a platform strongly approving of McKinley's domestic and foreign policy and declaring steadfast adherence to the gold standard.

Digitized by Google Original from CORNELL UNIVERSITY

DEATH OF COUNT MURAVIEFF.

Shanghai, June 22.

The death is announced of Count Muravieff, the Russian Foreign Minister of State.

STRENGTHENING THE CHINA SQUADRON.

H.M.S. *Isis* and *Dido* (cruisers) have been ordered to China.

PRESIDENT McKINLEY RE-NOMINATED.

The Republican Convention have unanimously hominated President McKinley for President, with Mr. Theodore Roosevelt (Governor of New York State) for Vice-President.

MORE BLUE-JACKETS FOR CHINA.

Shanghai, June 23.

A thousand blue-jackets and a strong force of marines have been ordered to China. General Sir Alfred Gaselee, K.C.B. (late D.A.G. Bengal) commands the India contingent.

THE WAR IN SOUTH AFRICA.

General Buller, telegraphing from Katbosch on the 22nd inst., says that the Infantry have arrived there. The Cavalry have occupied Standerton unopposed. The enemy exploded the railway bridge.

A later telegram says that Gen. Hamilton's column reached Springs Station on the 21st, and is going on to Heidelberg, where it will join Buller, who has reached Paardekop, thus opening communication between Pretoria and Natal.

Gen. Baden-Powell has returned to Rustenburg where he found the leading Boers very pacific.

MOROCCO AND FRANCE.

Shanghai, June 24.

Morocco has formally demanded of France that European arbitration be resorted to for settling the questions in dispute.

DEWET.

Reuter's agent telegraphs from Pretoria under date of the 21st that the net is being gradually drawn around Dewet by Buller, Brabant, Rundle, and Methuen.

BOTHA.

It is stated that Botha is willing to surrender, but that he is prevented by Kruger, who insists upon being allowed to remain in the country.

PRINCE KANIN IN GERMANY.

Later.

Prince Kanin has visited Prince Henry at Kiel and has dined on board the *Hohenzollern*.

THE WAR IN SOUTH AFRICA.

Buller telegraphs from Standerton under date of the 24th that 461 Yeomanry and 180 Highlanders who were captured at Lindley and Heilbron arrived at Standerton on the 18th, the majority of them in good health.

AMERICAN WARSHIPS FOR CHINA.

The American warships *Brooklyn* and *Monadnock* have been ordered to China.

RUSSIAN PREPARATIONS.

Shanghai, June 26.

An order has been issued by the Czar raising the Amur troops to a war footing and calling out the reserves in the Siberian and Amur military districts.

AMERICAN PREPARATIONS.

America is actively preparing to meet every contingency in China.

BRITISH PREPARATIONS.

The Indian force for China has been increased as follows:—Two brigades each of four battalions with divisional troops; one cavalry regiment; one regiment of pioneers; three companies of Sappers and Miners; a field battery and two battalions for the line of communications. (This represents about 10,000 of all arms, and with the troops already under orders makes a total of about 17,000 men).

SOUTH AFRICA.

Shanghai, June 27.

Clements yesterday engaged a body of Boers near Winburg, driving them with loss northward of the Zand River.

The mounted infantry had a successful skirmish with Boer patrols a few miles south-east of Pretoria yesterday.

PRINCE KANIN.

H.I.H. Prince Kotohito attended the unveiling of the monument to William the First at Holtenan and was received in the afternoon by the Emperor on board the *Hohenzollern*.

ASHANTI.

Shanghai, June 28.

London, 27th June—The latest telegram from Prahsu(?) dated the 26th says that heavy rains are delaying the Kumassi relief expedition. The rivers are almost impassable.

THE BOERS AND THE BASUTOS.

A telegram from Maseru dated the 26th of June says that the Boers attacked the Basutos working under the Royal Engineers near Kroonstad, killing and wounding 20 and capturing 200.

OLIVIER.

It is reported that Olivier has broken through the British lines and is advancing south.

A SHARP FIGHT.

Later.

The Boers unsuccessfully attacked the entrenched camp of the Shropshires and the Canadians and intercepted a Pretoria train carrying troops southward. A number of the released Waterval prisoners under the command of Bullock, armed with Mausers, came to the assistance of the train. Bullock refused a demand by the Boers to surrender and resisted for seven hours under a shell and rifle fire. Major Hobbs, of the West Yorkshires, who had been for eight months a prisoner, was killed. Lieuts. Smith and Glovar were wounded. Five men were killed and 14 wounded. Reinforcements arrived from Kroonstad and the Boers fled.

A WINTER CAMPAIGN.

The Government is making extensive preparations to supply winter clothing, including fur caps, for the troops in the event of a winter campaign.

CHINA.

With regard to China Mr. Balfour has stated that the British Government will welcome the despatch of troops by any Power which owing to its proximity is able to act immediately for the suppression of the disturbances.

V.C.

Major Phipps Hornby and three men have been gazetted to the V.C. for gallantry shown on the occasion of the Kroonspruit disaster.

(TELEGRAMS RECEIVED AT THE LEGATION OF FRANCE.)

CHINA.

Saigon, June 22.

The Paris press calls for vigorous measures to secure respect for French life and property in China.

Two battalions of marine infantry and two batteries of artillery will leave Toulon before the 29th instant.

Saigon, June 23.

The Admirals at Taku await reinforcements to march to the succour of Tientsin.

No official news has been received from Peking or Tientsin for eight days. The most contradictory rumours are circulated.

TIENTSIN.

Saigon, June 24.

Fifteen thousand Chinese have been bombarding the foreign quarter of Tientsin for several days. Considerable damage has been caused, but the casualties among the foreigners are slight.

PEKING.

It is affirmed that the Legations in Peking are intact.

Later.

One hundred American soldiers and 400 Russians have sailed to break through the investment of Tientsin. Two thousand are about to renew the attack.

All is calm in the Yangtsze Valley.

FRENCH SENATORIAL ELECTION.

M. Charles Dupuy has been elected Senator for Haute Loire.

FRENCH PREPARATIONS.

Saigon, June 26.

A third battalion of Marine Infantry has been mobilized at Toulon for service in China.

RELIEF OF TIENTSIN.

Saigon, June 27.

The foreign troops have entered Tientsin after a violent contest. They have set out again from Tientsin to succour the detachment which accompanies the Foreign Ministers who are returning from Peking and are surrounded by the Chinese at a point 20 kilometers from Tientsin.

(TELEGRAMS RECEIVED IN TOKYO.)

DISTURBED CHINA.

Shanghai, June 21.

The Foreign Consuls have held a meeting, and have resolved that inasmuch as several thousands of Chinese troops and persons of doubtful character are in and about Shanghai, constituting a menace to the security of foreign life and property, application must be made to the Admirals for four more vessels to guard the place.

Chefoo, June 21.

There is a rumour that 150 foreigners have been assassinated in Tientsin.

There are now seven thousand foreign troops at Taku; 900 English from Hongkong and 200 Chinese under English officers from Wei-hai-wei are expected in a day or two, and Russia will shortly increase her force.

Hongkong, June 21.

Li Hung-chang has given out publicly that he has been summoned to the north. He will leave Hongkong by the *Empress of India* on the 27th, and change into a Chinese vessel at Chin-kow.

Sascho, June 22.

The *Higo Maru*, having the wounded on board, arrived here at 6 a.m. to-day.

Rear-Admiral Dewa telegraphs that the officers commanding the foreign vessels at Taku have decided to inform the Governors of provinces and the local officials that their sole object is to succour their nationals who are shut up in Peking, and that they will not treat as enemies any persons except soldiers or insurgents who oppose the consummation of that object.

The Japanese standing squadron has arrived at Taku.

[Apparently this refers to the *Tokiwa* (9,855 tons), the *Takasago* (4,278 tons), the *Akitsushima* (3,172 tons), and the *Tatsuta* (864 tons)

Digitized by Google Original from CORNELL UNIVERSITY

which left Saseho on the 19th instant. The Japanese ships already at Taku were the *Kasagi* (4,978 tons), the *Suma* (2,700 tons), the *Atago* (622 tons), the *Yoshino* (4,225 tons), the *Chinto* (447 tons), the *Chimpen* (447 tons), the *Chinchiu* (447 tons), and the torpedo craft *Toyohashi*, *Kagero*, *Usugumo*, and *Shiranui*.—ED. *J.M.*]

Russian subjects and peaceable Chinese are escaping from Chefoo and Newchwang to Port Arthur, under the protection of Russian men-of-war.

Several Chinese men-of-war have left Chefoo, steering southward.

The Japanese steamer *Kwanko Maru* has been sent up the Yangtsze to take away missionaries whose lives are threatened.

Everything is quiet about Chefoo.

The Chinese troops attacked Tientsin and Taku, and sank a tug-steamer lying in the river.

The officer of the *Iltis* who was wounded in the attack on the Taku Forts has died.

The Viceroys Liu Kun-yi and Chan Chi-tung have applied for British assistance to preserve order in the Yangtsze Valley.

Li Hung-chang has changed his mind and will not proceed to the north.

Orders have been issued to the Second Division to hold itself in readiness to embark at a moment's notice.

The commander of the *Genkai Maru* states that, although the Japanese contingent under Commander Hattori were not nearest to the Forts at Taku when the order to assault was given, they advanced so quickly that they obtained the lead and were the first to enter the Forts.

(FOREIGN OFFICE TELEGRAMS.)

Chefoo, June 22.

An Italian military officer has returned to Taku from Tientsin. It is rumoured that the foreigners' settlement has been set on fire. Some 130 American troops, with 100 Russians, proceeded to Tientsin on the night of the 20th inst.

Shanghai, June 24.

The Chinese Government is reported to have requested the Representatives of the foreign Powers to leave Peking at once. It is not known when this request was made.

According to a telegram from Pao-ting, the guns used by the insurgents for bombarding the foreign settlement in Tientsin were borrowed from the local Government office.

A telegram from Russia received by the Government, under date of the 22nd instant, announces that Count Lamsdorf has been appointed to take charge of his country's foreign affairs temporarily.

Newchwang, June 23, 8.44 p.m.

Intelligence has been received to the effect that the foreign troops now engaged at the defence of Tientsin will be unable to maintain the post for any length of time, the attack is so hot.

The Taku forts are still occupied by the allied troops, but the critical situation in Peking renders it necessary to adopt every precaution for defending the forts, as the Chinese may come to attack them at any moment. The troops garrisoning them seem too insignificant to make any efficient resistance.

A variety of news has been received with regard to the condition of Peking. One account says that foreigners in the city have all been massacred. Although this intelligence is not at all credible it must be admitted that affairs in the city have become highly perilous.

The men-of-war now at Taku are, 7 Russian under Vice-Admiral Korniloff; 8 British; 5 French; 5 German; 1 American; 2 Italian, and 1 Austrian; or 29 in all. There are, further, a number of Japanese warships, together with the Chinese ship *Haiyuen*, and 4 others which have been captured.

Shanghai, June 24, 10 a.m.

The Military School has been occupied and demolished by the allied forces. The beleaguering troops are still holding their ground. The Russians have sustained heavy casualties. They were hard pressed, and the French settlement has been set on fire.

A telegram received by the Naval Department announces the arrival in Taku of the Japanese torpedo-destroyer *Murakumo* at 9 a.m. on the 23rd inst., and of the transport *Ikai Maru* at noon.

Hokchiu, June 27.

Governor-General Min was telegraphed to from Peking on the 26th instant, to the effect that as the insurrection of the Boxers has now assumed such dimensions as to endanger the integrity of the Chinese empire, he should send forward 3,000 troops with a large sum for war expenses.

The General in command at Tswan-chiu arrived here yesterday with 1,000 troops. Hokchiu, however, remains quiet, and the attitude of the inhabitants towards foreigners is as peaceful as ever.

[OFFICIAL TELEGRAMS.]

A telegram from Saseho addressed to the Chief of the Naval Department confirms the occupation of the northern fort of Taku by Japanese, English, and American forces proceeding from Tungku, and that of the southern fortress by the Russian, German, and French troops. The capture of 4 Chinese torpedo catchers by the *Algerine*, *Fame*, and *Whiting* is also confirmed.

A telegram addressed to the Minister of the Navy by the Commander of the warship *Toyohashi* states that the *Atago Kan* could not proceed up the river without great difficulty on account of her draught. She was therefore used to store arms and ammunition belonging to the Powers, and refrained from participating in the bombardment. The Japanese troops occupied the western fort on the northern bank of the Pehho, and raised the national flag, and then, utilizing the cannon in the fort, attacked the central fortifications. The various forts on the southern bank were taken by the English, Russian, and German troops. On the 18th instant the Japanese were called upon to garrison the Tungku railway station, leaving the defence of the fort to the English.

Another telegram confirms the casualties sustained by the Russian and German vessels at the time of the bombardment of Taku, and adds that the Japanese warship *Atago* did not take part in the conflict, while the American vessel *Monocacy* took on board women and children. The total land force of English, Russian, and French troops numbered something over 150. These landed at Tungku on the 16th, and attacked the rear of the fortress, in conjunction with Japanese from the *Toyohashi*.

NAVAL DEPARTMENT.

The following telegram has been received from the cruiser *Akitsusu*, which left Taku on the 24th instant and arrived in Chefoo on the forenoon of the 25th:—

The condition of Peking and Tientsin is not yet known with any degree of certainty. Communication between Taku and Tientsin has been possible since the 25th instant, but it might be again interrupted if any large force of Chinese took the field.

The Japanese fleet is assisting in the landing of troops.

The torpedo-boat *Hayafusa*, which arrived in Chefoo from Taku on the night of the 25th instant, gives information to the effect that communication between Taku and Tientsin was opened on the 23rd instant.

Trustworthy news has been received to the effect that the combined forces of the Powers entered Tientsin on the 23rd instant. No details, however, are yet known.

Chefoo, June 26.

The gunboat *Hayafusa* will leave for Taku on the forenoon to-morrow. That large numbers of ruffians and loafers have entered the place appears to be a fact. Additional guns of small calibre have been mounted in the western fort. The people in the city are reported to be in a state of excitement.

Troops under General Sung to the number of 10,000 have been put in motion, but with regard to the object of their operations, as well as their destination, nothing is known with certainty. Rumours of the above kind are circulated in various places. People resembling Boxers are occasionally seen in the neighbourhood of Taku, but nothing in the nature of a disturbance has occurred since the capture of the Forts.

In order to ensure unbroken communication between Taku and Chefoo, it has been resolved that a despatch ship shall be sent in turn by the five Powers, Japan, England, America, Germany, and France.

Chefoo, June 26, 9 p.m.

As information was received from the Commander-in-chief of the American squadron on the night of the 24th instant, to the effect that the combined forces had reached Tientsin, the torpedo-boat destroyer *Hayabusa* was immediately despatched to Chefoo to report the fact by telegraph. But on the forenoon of the 25th the American Commander came on board, and cancelled the above information.

(FROM THE "JIJI SHIMPO.")

Shanghai, June 22.

Tientsin is being bombarded, and the foreign settlement has been set on fire. The railway station is occupied by Russians, who, however, are sore pressed by the insurgents. They are anxiously awaiting the arrival of reinforcements. They appear to have suffered a great number of casualties.

The railway is open from Tongku to Chunghang-cheng, about 14 miles from Tientsin.

News from Peking, dated the 14th, announces the destruction by fire of all the Legations except those of England, Austria, and Belgium. The Legation Guards had had frequent encounters with Chinese troops, and the populace was in a state of dangerous excitement.

Russian soldiers to the number of 10,000 have arrived at Taku from Vladivostock, and landed. It is stated that 4,000 more are on their way.

Two English cruisers of 5,600 tons each, drafted from the Mediteranean Squadron, are under orders to proceed to China. An English transport with 800 marines is expected at Shanghai within 48 hours.

Saseho, June 22.

Five Chinese men-of-war have arrived in Shanghai from Chefoo.

The English battleship *Undaunted*, now at anchor at Woosung, is cleared for action.

Saseho, June 22, Noon.

Further telegrams from Taku show that the Tungku fort was attacked by the combined forces of the Powers—consisting of 300 Russians, 200 English, 200 Germans, and 300 Japanese. The troops of the three first-named Powers, however, could not advance,

Digitized by Google Original from CORNELL UNIVERSITY

and the Japanese, who were at the outset in the rear, came forward and occupied the fortress, besides taking two other positions of less importance. It was in this fight that Capt. Hattori received his death wound. The gallant man exclaimed *"Daijobu"* several times before he died.

The gun-boats in the river opened fire at the fort. In the engagement the commander of the German boat lost a leg.

In another version the events leading up to the fight are described as follows. The Russian Admiral, as Commander-in-Chief of the United Forces, forwarded a representation to the Governor of Chihli on the 16th instant demanding that the Taku forts should be evacuated by 12 midnight. This step was taken in consequence of the receipt of alarming news from Peking of havoc caused by the rioters, and of the nonchalant attitude of the Imperial troops. The Governor declined to evacuate the forts, and the Admiral retired with the resolution of taking such vigorous steps as should be required. He intended, however, to wait till morning to commence operations. The initiative came from the Chinese. They opened fire at 12.50 midnight on the warships as they lay at anchor. The allies replied vigorously, and a terrific cannonade was soon in progress. The flash of the guns could be seen at a distance of six miles. Between 4 and 5 a.m. the gunpowder magazine at the fort exploded, and by 8 a.m. the fighting was over. The Japanese torpedo-destroyer *Kagero*, which was at anchor at Taku, proceeded to the vicinity of the fort, and found the Japanese flag waving above it.

The land attack had been made by 180 men belonging to England, Germany, and Russia, together with 300 Japanese. The Chinese fled in all directions, and the fire was only continued by a few who were in hiding in buildings some 30 *ken* from the fortress. The chief casualties were sustained at this time. The Japanese commander was Captain Shiraishi, of the Saseho naval station.

The American ship *Monocacy* did not take part in the bombardment, as she had on board the foreign ladies and children of the settlement.

The *Atago*, which was at anchor in front of the railway station, also took no part in the firing, as she was serving as a storeship for arms of all kinds.

Two English vessels are reported to have captured four Chinese torpedo boats.

The Japanese warship *Yoshino* arrived at Taku at 5 a.m. on the 22nd.

Telegraphic communication north of Chefoo is interrupted. There is some appearance of unrest in the intermediate district.

Saseho, June 22, 6 p.m.

The Chinese warship *Kaiyo*(?) left Tungku at noon on the 17th. When she had proceeded about a mile she was warned by the Russian admiral not to leave. A Russian officer went on board.

The *Toyohashi*, which arrived here to-day, reports meeting the German *Irene*, with 400 men, off the coast of Chefoo, as well as English and Russian ships.

The vessels which took part in the bombardment of the Taku forts were: English, 1 gunboat and 2 torpedo boats; Russia, three gunboats; France, 1 gunboat; Germany, 1 gunboat. Twenty-six other vessels, belonging to England, Russia, Japan, France, Italy, and Austria, took no part.

Chefoo, June 23.

The troops under General Nieh number 8,000. A part of them went from Lu-tai to Tientsin and have been fighting with 3,000 Foreign troops since the 18th inst.

Information has been received that rioting has been taking place in Peking and that massacres have been perpetrated.

The Taku forts are still in the possession of the foreign troops.

Communication with the district north of Tongku is interrupted and it impossible to ascertain the state of affairs at Tientsin.

The first detachment of Japanese troops from Ujina arrived at Chefoo on the 20th instant.

Shanghai, June 23.

The Viceroy Chang Chih-tung has declined to permit the landing of Cossacks at Hankow, stating that he will himself assume the responsibility for the protection of foreign life and property. Women and children are coming to Hankow for shelter.

Japanese and American volunteer companies have been organized for the protection of Shanghai.

The Russian commander states that 4,000 Russians are at present on the way from Tientsin to Peking.

It is notified that Li Hung-chang will remain at Canton at the instance of the British Consul.

No disturbance has as yet occurred at Shanghai but there is much apprehension.

It is rumoured that a small band of Europeans who attempted to return to Tientsin, cutting their way through the rioters at a point 40 miles west of the city, are fighting desperately. It is supposed that this band may be Admiral Seymour and his men.

Many foreign women and children are fleeing to Japan for refuge.

The Japanese cruiser *Akitsushima Kan* has arrived at Chefoo, thus relieving the anxiety that was felt there.

Chefoo, June 23.

According to intelligence brought by the English cruiser *Orlando*, which arrived here to-day, the assailants of Tientsin appear to have been repulsed once, but they were to attack again last night. An English officer was killed, and another officer, together with two marines, were wounded. Further, some of the men of the foreign detachment were either killed or taken prisoners. The largest casualties were sustained by the Russians. The garrison from the military college are still engaged in the defence. Information has been received to the effect that Peh-tai-ho and Shan-hai-kwan are occupied by Cossacks.

Newchwang. June 23.

Steamers can discharge or ship cargo in this port as usual. The Chinese merchants, however, have been thrown into great consternation by the latest war news from Taku.

Shanghai, June 23.

Considerable excitement prevails. Many of the Chinese merchants have closed their stores and removed to some other place. The principal trade is really at a standstill. Mexican dollars were lately quoted at 820 *mon* in Chinese cash, but a few days ago the rate rose to 950, and the figure stands at 850 at present.

In the western fort of Chefoo 4 cannon have been added and 1,000 troops are stationed. It is reported that some reinforcements have arrived from the interior.

Yesterday a force 3,000 strong proceeded from Taku towards Tientsin.

The special correspondent of the *Jiji* gives the latest information from the American Consul in North China as follows:—

Shanghai, June 23, 9.49 a.m.

The American Consul in this place is in receipt of the following information from Colonel Wise, under date of 1 p.m. on the 20th inst.:—This morning the marines arrived here (Tong-ku); I have therefore caused fires to be lighted in the locomotives, and have loaded two field pieces into the train, which now contains 400 Russians and 130 marines. The train is about to start. A number of French officials have also arrived and gone to the front. At 7 p.m. yesterday (19th) the Government troops in Tientsin attacked the foreigners, and demolished the American Consulate. The Americans are in a critical situation.

The Chinese have placed new pattern field-pieces in position and are firing against the foreign entrenchments.

It is rumoured that railway communication is available from this place to a point mid-way between Taku and Tientsin.

A few Russians are known to be stationed there. I have reason to apprehend that I may be attacked by the rioters to-night, but being able to make suitable provision for defence, I have sent all the marines to the mid-way point, lest it should be re-captured by the rioters.

These marines are to proceed by the railway as far as possible, and will thenceforth march on foot, but the train which carries them being absolutely indispensable for my purposes, it is to be run back here at once. I am prepared to send more reinforcements by train so soon as they arrive here. To-day I captured a despatch ship which entered the port secretly. If I had a greater number of stokers and drivers, I should be able to run many more trains, but the men under me who have some experience of locomotives do not exceed 2 at present.

(Signed) Wise, *Monocacy*.

Another telegram in the *Jiji* refers to the latest despatch from an American Lieutenant in North China. Thus:—

Shanghai, June 23, 9 a.m.

The following information was received by the American Consul from Lieutenant Clue in Tientsin at 1 p.m. on the 20th inst:—

It is advisable that reinforcements should speedily be despatched hither, the losses sustained by foreigners having reached a large figure. Arms and ammunition are also extremely scanty. Machine guns or field pieces are absolutely indispensable. Precautions must be taken by the re-inforcements as there may be ambuscades in the neighbourhood of Tientsin.

Rumour has it that Colonel Wright has been severely wounded. The Russians now garrisoning the railway station in Tientsin are fiercely attacked. The Chinese troops are constantly firing heavy guns at the foreign settlement which has been almost completely burnt.

Shanghai, June 26, 6 p.m.

The relief column of the Powers, having rescued Tientsin, advanced towards Peking on the 24th instant.

Shanghai, June 26, 10 p.m.

The allied forces have succeeded in establishing connection with a detachment of troops under Admiral Seymour at a point 9 miles from Tientsin. The detachment in question had been sorely pressed by the insurgents, and a number of men fell sick or were wounded. Fortunately there were comparatively few deaths. They are still confronted by a large force of the enemy.

The united troops and marines now stationed in the neighbourhood of Taku and Tientsin number about 10,000, the greater portion being Japanese.

Shanghai, June 26, 3.49 p.m.

Viceroys Chang and Liu have despatched Tou Shing-ko as a commissioner to Shang-

Digitized by Google Original from CORNELL UNIVERSITY

hai, with a view to confer with the foreign consuls in regard to the state of affairs in the districts along the Yangtsze-kiang.

Shanghai, June 26, 6 p.m.

The foreign consuls held a conference today with the Shanghai Taotai and the Superintendent of Railways, as a preliminary to receiving the commissioner despatched by Chang and Liu.

A telegram from Ujina, Hiroshima, announces that the Office commanding the 5th Military Division has issued orders to the First Reserves to join by the 29th inst.

(OFFICIAL GAZETTE.)

The following telegrams were received by the Government yesterday (24th) from Tonkin :—

Shanghai, June 23.

A number of ringleaders of the insurrection in Yunnan have already been executed. The authorities of Yunnan have represented to the English Consul, that the riot originated in French imports of shells.

The English Consul has entrusted the duty of carrying on negotiations with the local authorities to missionaries in the district. He insists upon retiring from the capital, but the local officials are endeavouring to persuade him to remain.

Hankow, June 23.

No disturbance has so far occurred in this district or in the province, nor are there any palpable signs of unrest. It has been resolved, however, that a telegraphic request should be made to the Commander-in-chief of the united squadron at Taku, with a view to having a vessel despatched hither.

Shanghai, June 23.

The Commandant of the Woosung forts is making preparations to oppose the foreign troops. The warships now at anchor in Shanghai are reported to have received instructions from their respective governments to prepare their ships in readiness for evolutions.

[FROM THE "ASAHI SHIMBUN."]

Saseho, June 22.

At the Taku bombardment on 17th inst. a fire broke out in the warship *Lion* while the *Koreetz* was struck by a shell which caused the death of two officers and four others, including two petty officers. As to the *Iltis*, the casualties were one officer and six men killed, the Commander being wounded.

No further information has been received about the murder of Chancellor Nishiyama and the burning of his house.

The foreign troops stationed for the protection of the various Legations in Peking are apparently too few to repel the attacks of the Boxers, but the Ceinese troops do not appear disposed to render any assistance.

Chefoo, June 22.

Tientsin is still fiercely attacked by the Boxers who are continuing their work of havoc with a view of affecting the wholesale massacre of the people in the Settlement. Over 500 foreigners have already been killed by them, and rest are in imminent danger.

Saseho, June 22.

It appears that the representatives of the Powers in China have come to the conclusion that as there is no alternative in their present situation but to declare war against the Chinese, they will try to obtain telegraphic instructions to that effect from their respective Governments.

Shanghai, June 22.

The Boxers and the Chinese troops besieging Tientsin are firing only from a distance, and do not attempt to advance. Many of the foreigners, however, appear to have been injured.

Nankin, June 22.

Foreigners are protected by the Chinese Government, and are forbidden to go out at night.

Saseho, June 22.

The Japanese warship *Miyako* sailed for Fusan last night, while the *Akashi* left for Fukuoka at 7 a.m.

It is reported that the English Consul in (?) Kinryo, Nankin, wished to see Governor Liu on the 14th instant to make representations for the protection of the district with the aid of English warships. The local authorities appear, however, to have expressed the opinion that such assistance was quite unnecessary, the garrison being sufficient for purposes of protection. The execution of five criminals outside the castle on the 12th seems to have been the origin of a rumour that some Boxers who had entered Kinryo had been arrested and put to death. Much excitement was caused, but order was subsequently restored. Governor Liu is taking steps to raise recruits with a view to employ them as a reserve.

Shanghai, June 25.

The Governor-General Liu Kung-i and the Police censors of the three provinces are reported to have resolved to send their troops to the north at once, without awaiting imperial sanction of their memorial.

Prince Tuan is to answer Liu's memorial, and it is supposed that he will negative its proposals.

Two missionaries, one German and the other French, belonging to the International Mission in Chihli, have been murdered.

Saseho, June 25.

The warship *Matsushima* sailed to Kure this afternoon.

Shanghai, June 26.

Chung Chihtung and Liu Kung-i have despatched a delegate to the Japanese Consul-General Odagiri in Shanghai, with a formal declaration that they guarantee the strict neutrality of the territories under their jurisdiction.

A telegram from Shanghai received by the Mitsui Bussan Kaisha, under date of the 26th instant, announces that the Governor, by telegraphing to the Chinese Minister in London with regard to the adoption of measures for preserving neutrality in Shanghai, has obtained the consent of the English Premier.

Chefoo, June 27.

The Japanese land-troops now stationed in the foreign settlement at Tientsin have had only one officer killed and 8 men wounded.

General Fukushima was expected to enter Tientsin on the 26th instant.

The Japanese troops were advancing between Tientsin and Taku on the 25th, and communication between the two places was opened.

Taipeh, June 28.

The Consuls in Amoy have held a conference to arrange measures of protection against the insurrection in North China.

The Formosa garrison is ready to move at a moment's notice.

One French war-vessel and two transports are expected to arrive in Amoy to-morrow.

Chefoo, June 27.

The following telegram was received from the Japanese 3rd Secretary in Tientsin under date of the 25th instant :—

According to the latest information from Peking the various Representatives in the city were requested by the Tsung-li Yamen, on the 19th instant, to leave the capital within 24 hours. They accordingly left the city on the 20th instant.

Admiral Seymour's troops to the number of 2,300 attempted to return from a place some distance beyond Tientsin, but, having been assailed by greatly superior forces of Chinese, they failed to reach Tientsin. The allied forces, 2,000 strong, left Tientsin to rescue them on the night of the 24th inst. It is reported that the foreign Representatives did not take the same route (? This part of the telegram is obscure). The Japanese Minister Baron Nishi was expected to arrive in Tientsin on the 25th.

The foreign settlement in Tientsin was fiercely attacked on the 17th instant at 2.30 p.m., and the allied forces fought desperately in defence of the place. The casualties on the Japanese side were very insignificant, only one officer being killed and a few marines wounded.

The Consulate in Tientsin is safe. One of the residents in the fort was killed and another severely wounded.

A number of soldiers under the command of one officer arrived in Tientsin from Taku on the 25th instant, being charged with the duty of inspecting the road between Taku and Tientsin. They report that the road is free from danger.

The railway from Tientsin to Tong-ku has been repaired, but a Christian Church has been destroyed by the Boxers.

No information has been received as to the safe arrival in Tientsin of the Representatives of the Powers.

A communication from a certain gentleman in Canton under date of the 20th inst. says that the inhabitants are quiet and apparently indifferent to the insurrection.

Li Hung-chang received telegraphic instructions from Peking on the 17th instant, to the effect that he should repair at once to the capital. It is reported that he is determined to proceed to the north, entrusting his duties to the Police Censor.

[FROM THE "NICHI NICHI SHIMBUN."]

Chefoo, June 23, 3 p.m.

The Chinese troops are bombarding the foreign settlement with 60 cannon. The combined forces of the Powers now number about 300, including 150 Japanese. A fierce conflict is going on. The Japanese warships *Tokiwa* and *Atago*, of the standing squadron, have arrived here. The *Akitsushima*, which followed them, is now at anchor in Chefoo.

The 1st class English cruiser *Terrible* arrived at Taku yesterday. The first transport which left Ujina with troops from Japan is expected to reach Taku on the night of the 23rd instant. Major-General Fukushima is supposed to be on board.

The total force landed from Japanese ships has reached 500 men.

(FROM THE "KOKUMIN.")

Shanghai, June 26, 4 p.m.

Tientsin is now under the jurisdiction of the Japanese military officials.

Shanghai, June 26, 4.05 p.m.

Yuen Shih-kai has telegraphed to one of the Consuls in Shanghai, that a messenger be sent to Peking to ascertain the condition of the city, was murdered by the Boxers on the way, but the Representatives of the Powers were quite secure up to the 20th instant.

Various telegrams are published by the Japanese newspapers with reference to affairs in China, but they are chiefly bewildering repetitions. It is asserted that two or even three unsuccessful attempts have been made

Digitized by Google Original from CORNELL UNIVERSITY

to relieve Tientsin, one by Russian troops and one by German, but as there is no apparent reason that these troops should act independently we doubt the truth of the story.

The three Viceroys, Li, Chang, and Liu, are said to have memorialised the throne in the sense that as the present crisis threatens the integrity of the Chinese Empire they desire to raise 50,000 troops each for the suppression of the Boxers.

Another rumour has it that the Legations in Peking have been attacked and that the 300 foreign guards have had a desperate combat.

There is talk of a plot in Korea actuated by motives similar to those of the Boxers, the idea being to expel all missionaries who are residing outside they limits. The plotters are said to have applied for permission to the Emperor, and have naturally been refused.

Shanghai, June 25.

Liu Kung-i has issued orders to the Northern Squadron now in this port to proceed up the River. The precautionary measures taken by him are highly appreciated by the people.

A telegram from the Japanese Settlement in Nankin announces that Liu Kung-i has sent his family to Honan, and that the Chinese in the city believe themselves quite secure.

Chefoo, June 25.

Communication between Taku and Tientsin was restored on the 23rd instant. Rumour has it that Admiral Seymour is surrounded at a place about 10 miles from Tientsin, and that the foreign Representatives have left Peking under guard of Chinese troops. It is not known where they are now.

Hankow, June 26.

It is desired that a man-of-war should be despatched here for the protection of Japanese residents in the various ports along the upper Yantsze. Chang Chih-tung has proposed that he should assume the responsibility of protecting the foreigners, but it is feared that some of the soldiers under his command are disposed to join the Boxers.

The gunboat *Linnet* is now lying at anchor in this port. English marines and foreign volunteers are guarding the settlement day and night.

Chefoo, June 26.

The combined forces, 2,000 strong, relieved Tientsin at noon of the 23rd instant. The English and American troops were the first to enter the city, and were soon followed by the troops of other Powers. The casualties among the Russians were 4 killed and 30 wounded, those of the other troops being very slight.

Admiral Seymour has been surrounded by Chinese troops and Boxers, and has experienced serious difficulties on account of his sick and wounded.

A communication brought by a steamer from Taku is to the effect that the casualties as well as injuries sustained by the allied troops were not so serious as had been imagined.

AN EYE-WITNESS OF THE TAKU FIGHT.

A very full and graphic account of the situation in Tientsin is given in the *N.-C. Daily News* under the signature of Mrs. James Jones. She says she arrived there on Friday, June 15th, and was surprised to find the place swarming with sailors and marines. She proceeds :—

After having dined, a party of us, escorted by a naval officer, took a short walk before retiring to rest, and then we saw what precautions had been taken for our safety. At every few yards we were challenged by a sentry. There was not a single Chinaman to be seen about and the whole place seemed still and deserted and very unlike Tientsin, especially the Taku Road, which is as a rule, I believe, one constant flow of traffic. Just as we were returning we heard seven shots fired in rapid sucession, but feeling quite safe with so many protectors near we retired to rest. Not, as it happened, for long. At about midnight an officer came with the news that the whole of the Chinese city was in flames, that the Boxers were advancing and were then actually fighting at the Tientsin Railway station, which place they had also attempted to fire. We were told to get up and dress, so as to be in readiness to rush off to the Town Hall on the alarm being sounded.

The fire was a tremendous blaze and a really grand sight. It is reported that the city was fired in fourteen different places, and if the wind had been in the other direction Tientsin would have stood but a poor chance. When ready, we spent most of our time in the garden (the alarm not having sounded) beside the ammunition, which had been carried out there in case of the buildings being fired. Ten men were left to guard us, and the rest went off with their officers to meet the Boxers. It was about three o'clock when we were at last told we might safely retire again, as all was quiet, the Boxers having been driven off. We heard about 60 or 70 had been killed, but the number is uncertain. The firing had been very frequent since about 11 p.m. and that and the barking and howling of dogs round gave one an unsettled feeling, so that we did not retire but just lay down as we were.

It was fortunate we did so, as at 4 a.m., we were hurriedly called up and informed that the Boxers were close upon us, advancing towards the back of our dwelling, and we were to go off at once to the Town Hall. As you can imagine, in a very short space of time we were on our way there. The poor children were taken out of bed and hurriedly put into thick coats and shoes, and off we rushed to the Town Hall, where we found others similarly attired. It was a truly pitiful sight, there were so many little ones, some only a month old, and although they were very quiet and good, there were a few little white scared faces. Very few amahs were there, as most of the servants have run away, in some cases not one being left in the house. We remained at the Hall until about 7.30 a.m. not knowing quite what was happening or had happened during the time we had been there. Of course all sorts of rumours were going round which did not tend to improve matters. At last word came that it was safe to return to our homes. The Boxers had withdrawn but would return that night, and they expected to have a big fight. All the women and children were strongly advised to leave, but then the difficulty arose of how to get away. The lines had been tampered with and the trains were not running. The damage to the lines, however, was evidently not as bad as reported, as it was quickly repaired, and at 2 p.m. as many as could get away left for Tongku, a pilot engine going on ahead. Later on another train arrived, also with a number of ladies and children, and made for the various ships in port.

Even here our troubles were not at an end. We seemed to have fallen "out of the frying pan into the fire," for soon after getting on board we heard there was a probability of the Taku Forts being taken that night. It appears that the naval captains had called on the General of the forts, taking Mr. Johnstone, a good Chinese scholar, as interpreter, and informed him that unless they surrendered by 12 o'clock that that night, they intended to bombard the forts at 2 a.m. it having transpired that thousands of soliders were entering them and also laying mines across the channel during the day. In consequence of this the residents of Taku received orders at 6 p.m. to leave within an hour's time and take refuge on board U.S. S. *Monocacy*, lying at the railway wharf. About 1 a.m. the Chinese opened fire, the first shot passing harmlessly throuugh the *Algerine's* rigging. From this time till about 6.30 a.m. was an increasing bombardment, the roar of the cannon being almost deafening. The first fort taken was the North, by, we presume, the Japanese, as that was the first flag we saw hoisted, followed shortly after by the British on the outer North fort.

After taking these Forts the men-of-war steamed towards the mouth of the river and soon after the German and Russian flags went up on the South Forts. Shortly after daylight we saw four torpedo boats being towed in stern first by the *Whiting* and *Fame*, flying the British flags. During the time of bombardment we and the ships at Tongku were right in the line of fire and had anything but a pleasant time, the shells whistling above and around us in all directions, and the marvel is that the *Monocacy* was the only one struck, she receiving a shot right through her bows. The *Lienshing*, lying at Jardine's, besides running the risk of shells from the forts, was attacked by a party of Chinese who were looting the cargo, but the return fire from the *Lienshing* eventually drove them away. A shell falling into one of the Tongku hotels near the railway station killed three Chinese, the only ones that were in the house at the time.

About 10 a.m. when all was quiet some of the officers of our ship went off to explore, Mr. Conley going to the North Fort, Mr. Burgess to the South, and Mr. Miller to Taku, to see how the foreign residences had fared. On their return they had most ghastly tales to relate. The forts were a mass of ruins, rivers of blood, with headless and armless bodies everywhere, which the blue-jackets were gathering together and cremating in heaps.

Several of the houses at Taku were complete wrecks and nearly all had suffered in some way. As soon as it was daylight we saw in the distance a black mass of Chinese hurrying from the Forts and the villages round about. It is feared they will make for Tientsin and join the Boxers. As we passed down the River on our return we noticed the Russian flag was flying at the Imperial Dock at Taku, also on a destroyer lying in the Dock. We do not know how many Chinese were killed, but near Tientsin Railway Station we saw several corpses lying around, the result of Friday night, a night none of us are ever likely to forget.

On passing through the Fleet outside the Taku Bar on our return it made us all feel very sad to see the flags on every ship half-mast. It brought before us the horrors of the previous night, and made us think, not only of the poor fellows who had lost their lives but also of the unfortunate ones left in Tientsin. The difficulty there is getting away, as it is impossible to leave on either boat or train without a guard. A few residents did start for Tongku but soon after leaving the crews deserted them. The trains are most uncertain and it is not always possible for people to leave, owing to the many attempts to wreck them.

An armoured train that ran during the night for the protection of the line, on the night of the bombardment did not arrive as usual nor had they heard any thing of it in Tientsin up to the time of our leaving. Great uneasiness was felt both there and at Tongku at its non-arrival.

Another trouble is the scarcity of food, it being impossible to get any fresh meat, all the Chinese stores being closed, tinned provisions from the Foreign ones seem to be the only things procurable.

Before closing I should like to express my gratitude to all those who showed us such very great kindness. To Capt. Indrach and Lieut. Lachanovchy of the *Zenta*, who when our servants deserted us, sent sailors to wash and cook and did everything in their power to cheer us up and help us. To Capt. Wise of the *Monocacy* who met as at the Tongku Station and whose servant looked after our baggage, and last but not least to Capt. Warwick and his Officers, who readily gave up their cabins and have been kindness itself all through these trying times.

ANOTHER ACCOUNT OF THE FIGHTING.

In the course of an interview with an officer of the C. M. S. *Hsingfung*, which arrived from Taku, a representative of the *North China Daily News* was informed that the vessel had a very warm experience during the bombardment. "We were right in the thick of the fight, the shot and shell just clearing our awning boom," said the officer.

There were no big ships in the action, he went on, only gunboats or small craft, comprising three Russians, one English, one French and one German.

One of the Russians got a shot in her bow and is now aground in shallow water. She was hit five times in all and another of the Russians was hit three times. They *Algerine*, the British vessel, sustained no serious damage and only took two shots through her stoke-hold ventilators. The heavy loss of the Russians is accounted for by the fact that a shot or shell fell in the magazine causing an explosion of ammunition.

An ultimatum had been sent ashore to the effect that if the Boxers were not checked other steps would have to be taken. Then some of the naval officers went to see the General at 12 o'clock on Saturday night, to ask what he intended doing. The General replied that he meant to fight, and a bombardment by the fleet was arranged for 2 o'clock that morning. The Chinese, however, began firing a little before 1 a.m., using the searchlight. The U.S.S. *Monocacy* had been up river on patrol work, and as she came down men on shore near the wharves opened fire on her with rifles but they were soon silenced.

It was one of the Russian torpedo boats that silenced the fire of the riflemen along the creeks near the river, the work being done in very short time.

On the inner side of the forts the British and Japanese flags are flying, on the outer side the British and Russian flags, and on the south side the German and Russian colours fly. The Russian flag flies at the Navy yard and the docks. The four captured torpedo destroyers, are all under the British flag.

A report was current at Taku, that the Empress Dowager has issued an edict, and had it published in the local papers, to the effect that all foreigners were to be killed.

The forts do not show much damage from the outside, but on entering them a very vivid idea is gained

Digitized by Google Original from CORNELL UNIVERSITY

as to be effect of modern shell fire. The place was wrecked, and mutilated men and horses were thickly strewn over the blood-stained ground. The visitors, after the fight, made quite a harvest of mementoes, and we were shewn yesterday a drum, a sword bayonet, and packets of gun fittings, portions of shell and other grim relics of the affray. These were taken from the fort, including also a crystal cap button and red tassel, that were lying near one of the dead.

The C.M.S. *Yunching*, during the early part of the fight, found that the big projectiles fell unpleasantly near her, and her capitain thought it wise to shift his moorings and get out of the line of fire.

The effect of the shell-fire from the ships was terrific. A number of foreign houses ashore suffered severely—one indeed, that of Mr. Limberg, being entirely destroyed. One shell went right through one of the Tongku hotels. The shell that smashed Mr. Limberg's house also killed three people presumably Chinese.

The U.S.S. *Monocacy* had one shot that went through her pinnace and her bulwarks.

THE ATTACK ON TIENTSIN.

Tientsin, 16th June.

An attack was made on Tientsin last night. The Roman Catholic Cathedral, all the preaching places, and the greater part of the city were burned. The Boxers then made a rush on the station and actually came within 50 yards of the Russian troops, who fired fifteen rounds with a big gun. They reported that they had killed between 300 and 400, though there is no proof of this yet. They attacked the Settlement from two sides, and but for 2,000 Russians we should have done badly, as 200 of our men had been sent down to guard the line to Tongku on which Chinese troops were reported marching. Everything is dislocated here, the wires cut, and the mail service off.

WU TING-FANG ON CHRISTIANITY AND THE CHINESE.

Wu Ting-fang, Chinese Minister to the United States, who has been attracting considerable attention by his speeches concerning trade in China, now comes forward with some interesting views on the influence of Christianity and missionaries upon the Chinaman. The Chinese, he says, are nominally all Confucians, who embrace the simple creed of "belief in goodness," but at the same time they recognize the value of lessons from other teachers. Of Christianity, he writes in *The Journal* (New York):—

"I must acknowledge that the teachings of Jesus Christ seem to establish a standard of conduct as highly ethical as that established by the doctrine of Confucius. Jesus Christ, in fact, goes a little further than Confucius. If your enemy smites you on one cheek, he bids you turn the other also. Confucius is more practical. He says:—'Requite justice with justice, favours with favours.' 'If we requite our enemy with kindness, how, indeed, can we reward our friend?' he asked.

"Christianity will make people good, if they live up to it. But how many do? What Christians repay evil with good? Show me them. It must, however, be remembered that Christianity has done immense good in this world. I have no quarrel with any religion that is based on a foundation of virtue. If they all bid one do good and deter one from doing evil, I say let them all go on. If there is a reward in some future life for the good deeds on earth, if there is a heaven for the righteous, there must surely be many ladders leading up to it, just as there may be many staircases in a house. To say that there is only one ladder is too narrow for me. If there is reward for any, I believe it will be for all good people. Some Christians say that except you believe in Christ you can not be saved. I am broader than that doctrine. My religion comprehends all.

"I have read the history of Europe during the Middle Ages, and the account there given of persecutions caused by difference in religious belief has filled me with horror. We have no such records in China. Jews, Mohammendans, Buddhists have lived peaceably side by side. It is only when indiscreet Christian missionaries go to extremes and excite the people that they ever have any trouble. They say:—'Oh, you Confucians! You are all wrong. You worships idols, Tear them down.' This is idle, and does not appeal to the Chinese as consistent, for they know that all Roman Catholics have idols in some shape in their churches. The missionaries should go about their work more quietly if they hope for success. No one ever heard of the Chinese rising against the Mohammedans, although Mohammed was a conspicuous enemy of idols,

"It seems to me that Christians often forget that Jesus Christ was an Asiatic and a Jew. The religion that he founded has gained most of its adherents in Europe and America, and yet some Western people are not very kindly disposed toward Asiatics.

"Christianity owes most of its converts in China to the fact that it is more alluring than any religion we have there. The idea of a future life and rewards for the righteous is tempting to many. Confucius teaches no such doctrine. He was once asked if he believed in a future life, and he answered:—'If I don't know what will take place to-morrow, how can I know anything about a more remote future?' He exhorted men to do their best to-day with no thought of reward. That seems to me the higher view."

THE CROWN PRINCE OF GERMANY.

It is not of much use to speculate on the character of the German Crown Prince, who has just been proclaimed of age, interesting figure though he is as a man who in due course of nature, be it to-morrow or be it forty years hence, must wield so vast a power. Prussians would hardly recognise themselves without a King, and an upset of the Imperial throne of Germany, though not an unthinkable, is a most improbable event. Public estimates of Heirs-Apparent are seldom, if ever, trustworthy, and if they were would help us little, for the weight of the crown, the sudden change in all duties, surroundings, advisers, and, above all, interests, radically modify the character. Henry V. was not Prince Hal in a new robe, but another than Prince Hal, and the scoffing tyrant Frederick, "without fear, without faith, and without mercy," whom, nevertheless, one is forced to call "Great," was supposed as Heir-Apparent to be a flute-playing, ease-loving poetaster. Who, again, can recognise in the Francis Joseph of our day the fierce young tyrant who ascended the throne in 1848, who tried to play steamroller over eighteen States, and who did not court-martial Haynau? William III. may be a very different man from the Imperial and Royal Crown Prince Frederick, and the fact that he is a Hohenzollern gives the world no guidance. The steady rise of the Hohenzollerns, their success as land grabbers, and the heroism of those among them who were fighting men, have produced in the general mind a natural illusion. They are supposed to have been all soldier-statesmen with strong wills, imperious ways, and great ability for affairs. The Hohenzollerns, in truth, have been no more all alike than any other family, than the Hapsburgs, for instance, among whom the strong men have resembled the Julian Cæsars—Wallenstein's master was just Tiberius over again—while the weak have been singularly feeble. The first Hohenzollern King, Carlyle's "most expensive Herr," was an extravagant *poseur*, always wanting to seem grand because he was deformed, though, as it chanced, his mad desire for the "barren title" of King was the making of his house and of Prussia. Potentialities lurk in "barren titles," as Rudolf of Hapsburg knew, and as our poorer nobles know when they go to America, and the Elector might have been swept away when the King emerged from the flood. Indeed, William II., the vacillating voluptuary who invaded Revolutionary France, could but for his kingship hardly have kept his throne. The Hohenzollern, again who was crushed by Napoleon's side, was by nature a *fainéant* who did his one great act for his dynasty and his people when he married Louise of Mecklenburg, a lady sprung from a race that saw and survived Charlemagne and with the heart of a great man. The Hohenzollern of the Crimean time, again, was, a dreamy pietist, who latterly so suffered from absence of mind that a false rumour spread of his drinking habits; while the late Emperor Frederick, though a considerable soldier with the bearing of a Paladin, belonged essentially to the reflecting type of humanity. He purposed rather than acted, and his people loved him because they instinctively discerned his purposes. To be a Hohenzollern is not therefore necessarily to be a strong, swift-cutting, "heady" man, and this Crown Prince may be as unlike his father as the present Emperor is to the Monarch who accepted the Imperial throne. The accounts of him are all pleasant, which may be taken as evidence that he is courteous, and he has been sedulously trained, which means that he will not be hampered in life, as Alexander III. of Russia was, by sheer ignorance of facts. He is said to be "reserved," too, which implies that he can think; reserve, which in the old is often only a cover for indecision, being in the young usually evidence that there is a mind, and that it is not precipitately made up.

There is a disposition to believe that the future Emperor has been over-educated, but the idea is probably ill-founded. Boys, even of the reflective kind, have a most healthy power of refusing to take in more knowledge than they can assimilate, or, on taking it, of throwing it up again. We can remember but one considerable man of our time, John Stuart, Mill, who was over-educated, and his inclination towards priggishness may have arisen from an hereditary tendency rather than over-culture. Sir Robert Peel was trained to be a statesman, and became one of the first order, and the sons of the English clergy, who are generally more carefully trained than other men, because if they were not they would starve, show among them an unusual proportion of successful men with independent minds. Though Charles V. did not know grammar, and Clive never learned an Indian tongue, the belief that ignorance begets strength is only a survival of the old superstition that culture impairs manliness. As a matter of fact, the new officers who are trained are as eager to be first in a charge as the old officers who were not, and though Staff College men blunder like their neighbours, nobody has ventured to accuse them of shirking the shot. Princes, we may rely on it, will not be enfeebled by training, even though their position involves a dissipation of attention which used to be considered injurious. A Crown Prince in our day to play his part reasonably well must speak in at least three languages besides his own, must learn all that a good scientific officer learns, must get up enough history not to make blunders and to recognise what is possible and not possible, must know something of treaties and diplomacy, must be sufficiently scientific to comprehend what a new discovery means, and must be able without too great a strain to extract the essence out of an official report. This is a good deal to require when one remembers that after all the most useful of kingly powers is accurate judgment of others' character; but still the present Emperor has acquired it all, and much seamanship besides, and as his mind has neither been weakened nor stiffened in acquiring it one does not see why the Crown Prince of Germany or the King of Spain should not acquire it too without any injury to his powers. As Heir-Apparent the duties of the former will not be severe, but will leave ample time for study; and the waiting, of which so much is often made, is, after all, what every professional man goes through. Success does not come to politicians, or barristers, or doctors while they are young, and waiting for a throne must be much the same as waiting for success. We see no reason why the Crown Prince should not carry on his great line in a great way,—perhaps reconcile the existence of a strong Monarchy possessing both veto and initiative with the most perfect individual liberty of the subject. That is the work now to be done all over Europe, and if it can be done true Monarchy with right of leadership in the Monarch may last a long while yet. The masses care little for abstract ideas; the arming of the nations has accustomed them all to discipline; and we doubt whether the self-confidence which makes government seem easy really increases in Europe. As education advances, a sense of the complexity of all things filters down among the peoples, and with it a desire for a strong, clear leadership by some one who is not exactly like themselves. Nothing is more singular in a democratic age than the willingness, as well as the completeness, with which the nations leave foreign policy, which concerns their bones as well as their taxes, in the hands of an Executive often, as, for example, in all the Continental Monarchies, not even elected by themselves. The peoples, in fact, perceive that of this subject they know little, and are not vain-glorious enough to act as if they knew much. Everybody used to expect great changes, but for our part we feel great doubt whether a hundred years hence Germany will be so situated that the character of the next Hohenzollern will be of little interest and no importance. In the last five hundred years only two dynasties have even appeared to go out of history; and while the house of France has lost two thrones, it still retains one; and though the Stuarts have disappeared, one of the heiresses of the Stuarts is Queen of Great Britain, sovereign lady of more than a fourth of the inhabitants of the world. Little things are always changing, but the great features of Europe last, and among those features are the dynasties for whose continuance philosophers say they are unable to account.—*The Spectator.*

RAILWAY TIME TABLES.

YOKOHAMA AND SHIMBASHI.

YOKOHAMA—5.30, 6.10, 6.45, 7.19, 8.30, 8.55, 9.35, 10.05, 10.50, 11.35, a.m.; 12.20, 12.57, 1.30, 2, 2.36, 3.10, 3.55, 4.33, 5.15, 5.33, 6,20, 7.21, 8, 9.13, 10, 10.50, and 11.15 p.m.

ITCHING SKIN HUMOURS

INSTANTLY RELIEVED BY CUTICURA.

A hot bath with CUTICURA SOAP and a single application of CUTICURA ointment, the great skin cure, followed by a full dose of CUTICURA RESOLVENT, to cool and cleanse the blood, will afford instant relief, permit rest and sleep, and point to a speedy, permanent, and economical cure of the most torturing of itching, burning, bleeding, scaly, and crusted skin, scalp, and blood humours, rashes and irritations, when all other remedies and even the best physicians fail.

MOTHERS to know that CUTICURA SOAP, is the greatest of skin purifiers and beautifiers as well as purest and sweetest of toilet and baby soaps.

Sold throughout the world. British depot: F. NEWBERY & SONS, London. French depot: L. MIDY, Paris. Australian depot: R. TOWNS & Co., Sydney. POTTER DRUG AND CHEM. CORP., Sole Props., Boston, U. S. A.
